## Preface

---

This document describes the Open Print Option (OPO) component of Entire Output Management. It covers the following topics:

**Starting the Open Print Option** Describes how to start OPO.

**Managing Printouts** Describes the functions available to manage the printouts listed in the OPO print queue.

The installation of OPO is described in the section *Installing the Open Print Option* of the *Installation and Customization* documentation

---

## Document Conventions

---

Convention	Description
<b>Bold</b>	Identifies elements on a screen.
Monospace font	Identifies service names and locations in the format <i>folder.subfolder.service</i> , APIs, Java classes, methods, properties.
<i>Italic</i>	Identifies:  Variables for which you must supply values specific to your own situation or environment. New terms the first time they occur in the text. References to other documentation sources.
Monospace font	Identifies:  Text you must type in. Messages displayed by the system. Program code.
{ }	Indicates a set of choices from which you must choose one. Type only the information inside the curly braces. Do not type the { } symbols.
	Separates two mutually exclusive choices in a syntax line. Type one of these choices. Do not type the   symbol.
[ ]	Indicates one or more options. Type only the information inside the square brackets. Do not type the [ ] symbols.
...	Indicates that you can type multiple options of the same type. Type only the information. Do not type the ellipsis (...).

## Online Information and Support

---

### Software AG Documentation Website

You can find documentation on the Software AG Documentation website at <http://documentation.softwareag.com>. The site requires credentials for Software AG's Product Support site Empower. If you do not have Empower credentials, you must use the TECHcommunity website.

### Software AG Empower Product Support Website

If you do not yet have an account for Empower, send an email to [empower@softwareag.com](mailto:empower@softwareag.com) with your name, company, and company email address and request an account.

Once you have an account, you can open Support Incidents online via the eService section of Empower at <https://empower.softwareag.com/>.

You can find product information on the Software AG Empower Product Support website at <https://empower.softwareag.com>.

To submit feature/enhancement requests, get information about product availability, and download products, go to [Products](#).

To get information about fixes and to read early warnings, technical papers, and knowledge base articles, go to the [Knowledge Center](#).

If you have any questions, you can find a local or toll-free number for your country in our Global Support Contact Directory at [https://empower.softwareag.com/public\\_directory.asp](https://empower.softwareag.com/public_directory.asp) and give us a call.

### **Software AG TECHcommunity**

You can find documentation and other technical information on the Software AG TECHcommunity website at <http://techcommunity.softwareag.com>. You can:

- Access product documentation, if you have TECHcommunity credentials. If you do not, you will need to register and specify "Documentation" as an area of interest.
- Access articles, code samples, demos, and tutorials.
- Use the online discussion forums, moderated by Software AG professionals, to ask questions, discuss best practices, and learn how other customers are using Software AG technology.
- Link to external websites that discuss open standards and web technology.

## **Data Protection**

---

Software AG products provide functionality with respect to processing of personal data according to the EU General Data Protection Regulation (GDPR). Where applicable, appropriate steps are documented in the respective administration documentation.

## 2 Starting the Open Print Option

---

The installation procedure automatically creates a desktop icon for the Open Print Option (OPO).

➤ To start OPO:

- Double-click this icon.

The **OPO print queue** will be displayed.

## Managing Printouts

---

■ What is an OPO Printout? .....	8
■ The OPO Print Queue .....	8
■ Commands for OPO Printouts .....	9
■ Cancelling an OPO Printout .....	9
■ Displaying the Properties of an OPO Printout .....	9

This section covers the following topics:

## What is an OPO Printout?

---

An OPO printout is the output of a Windows application which has been sent to Entire Output Management via the Open Print Option (OPO) and has been queued for printing.

## The OPO Print Queue

---

The OPO print queue is displayed when you start OPO. From here, you invoke all OPO functions available for the handling of OPO printouts.

The print queue lists all printouts which you have sent to be printed, but which have not yet been printed.

For each printout, the following information is displayed:

Field	Explanation
Name	The name of the file to be printed; or (depending on the meta data passed to Entire Output Management) the title of the document to be printed.
Print ID	An internal ID uniquely identifying the printout.
Status	The status of the printout.
Owner	The source/sender of the printout. <ul style="list-style-type: none"><li>■ Source is your PC name. If you are logged on to a domain, it is the domain name.</li><li>■ Sender is your user ID.</li></ul>
Lines	The number of lines to be printed (for text documents only).
Kbytes	The size of the printout in KB (for binary printouts only).
Sent	The date and time when the printout was sent to Entire Output Management.
Properties	The properties of the printout.

---

## Commands for OPO Printouts

---

➤ To list the commands available for printouts:

- Select a printout from the print queue, and invoke the context menu.

A list of available commands is displayed. These are:

Command	Key	Function
Cancel	Del	Cancel a printout.
Properties	---	Display the properties of a printout.

---

## Cancelling an OPO Printout

---

➤ To cancel one or more printouts:

- 1 In the print queue, select the printout(s) to be cancelled.
- 2 Invoke the context menu and choose **Cancel**.

Or:

Invoke the **Document** menu and choose **Cancel**.

---

## Displaying the Properties of an OPO Printout

---

➤ To display the properties of a printout:

- 1 In the print queue, select the desired printout.
- 2 Invoke the context menu and choose **Properties**.

Or:

Invoke the **Document** menu and choose **Properties**.
