

# CONNECT

## Description

Open a host session.

When the session is opened, the \*COMMTYPE variable contains the session name.

The session name is displayed in the title bar of the terminal application window.

## Syntax

```
CONNECT sessionname
```

*sessionname* is the name of a session that was defined in the session properties.

## Example

- To open the host session named MYIBM:

```
CONNECT MYIBM
```

## Variables Returned
