

RENAME

Description

Rename or move a file.

Syntax

```
RENAME path-1 path-2
```

path is as follows:

```
{[[drive:]\directory\...\]filename[.extension]}
```

To move a file, specify a different directory for *path-2* (the drive must be the same). When you move a file, you can also rename it (optionally). To do so, specify a new file name and/or extension.

Examples

- Rename the file *Test.ncp* to *Test.xyz*:

```
RENAME Test.ncp Test.xyz
```

- Move the file *Test.ncp* to the directory *\SAG\NCP*:

```
RENAME Test.ncp \SAG\NCP\Test.ncp
```

- Move the file *Test.ncp* to *\SAG\NCP* and rename it to *Down.ncp*:

```
RENAME Test.ncp \SAG\NCP\Down.ncp
```

Variables Returned

#RC (SUCCESS if RENAME was successful. FAILURE if RENAME was not successful.)
