

SHIFT

Description

Shift the contents of the global or local parameter variables PARM2 through PARM9 down into PARM1 through PARM8 in order to set PARM9 to a null value.

This command is useful, for example, with interactive procedure files (or a set of nested procedure files) which pass an external value to +PARM1. If the value of +PARM1 is to be changed dynamically for each iteration, you pass the values for the variables +PARM1 through +PARM9 and execute the SHIFT command prior to each iteration.

Syntax

```
SHIFT {GLOBALS|LOCALS}
```

Examples

- Shift all global parameter values:

```
SHIFT GLOBALS
```

- Shift all local parameter values:

```
SHIFT LOCALS
```

Procedure File Example

Vars.ncp

Variables Returned

None

Usage

Procedure File:	Yes
Command Line:	No
Key:	No
API:	No
