

SLEEP

Description

Suspend procedure file processing for a specific period of time.

Unlike the PAUSE command, SLEEP does not check whether data is received from the host.

Syntax

```
SLEEP milliseconds
```

milliseconds can be in the range from 0 through 32000 (i.e. 0 thousands of a second through 32 seconds). The value 1000 is equal to 1 second.

Examples

- Suspend procedure file processing for 1 second (1000 milliseconds):

```
SLEEP 1000
```

- Suspend procedure file processing for the number of seconds that is defined by the variable #CNT1:

```
SLEEP #CNT1
```

Variables Returned

None
