

TOGGLE

Description

Toggle between two possible states of a system variable.

These are the system variables for which only the values ON/OFF, YES/NO or TRUE/FALSE can be set.

Syntax

```
TOGGLE systemvariable
```

Examples

- Set variable LOGON from ON to OFF or from OFF to ON:

```
TOGGLE LOGON
```

- Set variable STATUS from ON to OFF or from OFF to ON:

```
TOGGLE STATUS
```

Procedure File Example

```
Vars.ncp
```

Variables Returned
