

Natural for Ajax

Natural Web I/O Interface

Version 9.3.3

October 2025

This document applies to Natural for Ajax Version 9.3.3 and all subsequent releases.

Specifications contained herein are subject to change and these changes will be reported in subsequent release notes or new editions.

Preface

This documentation explains how to configure Natural for Ajax so that it can be used in a Natural runtime environment. The following topics are covered:

About the Natural Web I/O Interface

Natural Web I/O Screens

Natural Web I/O Style Sheets (in section *Configuration and Administration*)

About this Documentation

■ Document Conventions	2
■ Online Information and Support	2
■ Data Protection	3

Document Conventions

Convention	Description
Bold	Identifies elements on a screen.
Monospace font	Identifies service names and locations in the format <i>folder.subfolder.service</i> , APIs, Java classes, methods, properties.
<i>Italic</i>	Identifies: Variables for which you must supply values specific to your own situation or environment. New terms the first time they occur in the text. References to other documentation sources.
Monospace font	Identifies: Text you must type in. Messages displayed by the system. Program code.
{ }	Indicates a set of choices from which you must choose one. Type only the information inside the curly braces. Do not type the { } symbols.
	Separates two mutually exclusive choices in a syntax line. Type one of these choices. Do not type the symbol.
[]	Indicates one or more options. Type only the information inside the square brackets. Do not type the [] symbols.
...	Indicates that you can type multiple options of the same type. Type only the information. Do not type the ellipsis (...).

Online Information and Support

Product Documentation

You can find the product documentation on our documentation website at <https://documentation.softwareag.com>.

Product Training

You can find helpful product training material on our Learning Portal at <https://learn.software-ag.com>.

Tech Community

You can collaborate with Software GmbH experts on our Tech Community website at <https://tech-community.softwareag.com>. From here you can, for example:

- Browse through our vast knowledge base.
- Ask questions and find answers in our discussion forums.
- Get the latest Software GmbH news and announcements.
- Explore our communities.
- Go to our public GitHub and Docker repositories at <https://github.com/softwareag> and <https://hub.docker.com/publishers/softwareag> and discover additional Software GmbH resources.

Product Support

Support for Software GmbH products is provided to licensed customers via our Empower Portal at <https://empower.softwareag.com>. Many services on this portal require that you have an account. If you do not yet have one, you can request it at <https://empower.softwareag.com/register>. Once you have an account, you can, for example:

- Download products, updates and fixes.
- Search the Knowledge Center for technical information and tips.
- Subscribe to early warnings and critical alerts.
- Open and update support incidents.
- Add product feature requests.

Data Protection

Software AG products provide functionality with respect to processing of personal data according to the EU General Data Protection Regulation (GDPR). Where applicable, appropriate steps are documented in the respective administration documentation.

2 About the Natural Web I/O Interface

■ What is the Natural Web I/O Interface?	6
■ Components of the Natural Web I/O Interface	6
■ Executing a Natural Application in a Web Browser	7
■ Client-Server Compatibility	8
■ Terminology	8
■ Restrictions When Using the Natural Web I/O Interface with Natural Applications	9

This chapter describes the purpose and the functions of the Natural Web I/O Interface.

What is the Natural Web I/O Interface?

The Natural Web I/O Interface is used to execute Natural applications in a web browser. It fully supports the following:

- The display and input of Unicode characters. See *Unicode Input/Output Handling in Natural Applications* in the *Unicode and Code Page Support* documentation which is part of the Natural documentation for the different platforms.
- Rich internet applications developed with Natural for Ajax.

Components of the Natural Web I/O Interface

The Natural Web I/O Interface consists of a server and a client.

Server

The Natural Web I/O Interface server enables you to use a browser as the I/O device for Natural applications. The server does the user authentication, creates the Natural session and handles the I/O between Natural and the client. The Natural Web I/O Interface server is installed on the same machine as the Natural application. For further information on the Natural Web I/O Interface server, see the Natural documentation for the different platforms.

Client

The client handles the communication between the user's web browser and the Natural Web I/O Interface server. It converts the output from the Natural application to web pages, and returns the user input to Natural.

Two types of client are supported:

- Natural Web I/O Interface client for displaying character-based applications in the web browser. Maps with GUI controls are not supported in this case. For further information on this type of client, see the Natural documentation for the different platforms.
- Natural for Ajax for displaying rich internet applications in the web browser.

The client is installed on a web/application server. This can be done on any machine in the network.

Executing a Natural Application in a Web Browser

The Natural Web I/O Interface receives data from a Natural application and delivers web pages to the user's web browser. This is illustrated in the following graphic:

The communication steps for executing a Natural application in the web browser are:

1. The user enters the address (URL) of a logon page in the web browser. The client then displays the logon page in the web browser.

Note: For information on how to invoke and configure the logon page, see *Client Configuration*.

2. The user enters all required information for starting a Natural application into the logon page. This information is sent to the client.
3. The client asks the Natural Web I/O Interface server to start the requested Natural application for this user.
4. The Natural Web I/O Interface server checks the supplied user ID and password, creates a Natural session for the user and starts the Natural application.

5. The Natural application returns the first application screen which is then transferred via the Natural Web I/O Interface server to the client and finally as a web page to the web browser.

Different web browsers are supported. Note that cookies and JavaScript must be enabled in the web browser. For a list of the currently supported web browsers, see the browser prerequisites for the type of client that you are using.

Client-Server Compatibility

The following rules apply:

- The Natural Web I/O Interface server can work with any client that has the same or a higher protocol version.

If the server detects that the client is using a version that is lower than the server version, the server replies that the client is too old and the connection is closed.

- The client can work with any server that has the same or a lower protocol version.

If the client detects that the server is using a version that is lower than the client version, the client switches to the server version. However, new client functionality is not supported in this case.

- The Natural Web I/O Interface server must have the same protocol version as the Natural process that is started by the server. If Natural detects that the server is using a different protocol version, an error message is sent to the user and the connection is closed.

Terminology

On the different Natural platforms for which the Natural Web I/O Interface is supported, different techniques are used for implementing the server part of the Natural Web I/O Interface. On Natural for Linux, it is implemented as a daemon. On Natural for Windows, it is implemented as a service. On z/OS, it is implemented as a server. In this documentation, the general term “server” is therefore used for all different kinds of implementation.

Restrictions When Using the Natural Web I/O Interface with Natural Applications

There are several restrictions when using the Natural Web I/O Interface with Natural applications on Linux, z/OS or Windows hosts.

Note: The term “application” refers to application software. It does not refer to system software or software for development.

The following restrictions apply:

- **GUI controls**

GUI controls are not supported: dialogs, buttons, radio buttons, list boxes, list views, check boxes etc. The Natural Web I/O Interface only supports Natural applications developed without GUI controls.

- **File transfer**

File transfer (for example, with the `DOWNLOAD` statement) is not supported by the Natural Web I/O Interface.

- **Runtime errors**

This restriction applies to older Natural versions on Linux and Windows. As of version 6.3.3, this restriction no longer applies.

Runtime errors in Natural applications are not handled by the Natural Web I/O Interface. This leads to a loss of the session. Bypass: use the Natural system variable `*ERROR-TA` to handle the error.

```

DEFINE DATA
LOCAL
1 ERR_INFO
  2 ERR_NR(N5)
  2 ERR_LINE(N4)
  2 ERR_STAT(A1)
  2 ERR_PNAM(A8)
  2 ERR_LEVEL(N2)
END-DEFINE
INPUT ERR_INFO
DISPLAY ERR_INFO
TERMINATE
END

```

■ **Terminal commands**

Terminal commands are not supported. They do not work when entered in the Natural for Ajax client.

■ **Natural system variable *INIT-ID**

When using the Natural for Ajax client with Natural applications on Linux, z/OS or Windows hosts, the Natural system variable *INIT-ID will not be filled with a value for the terminal type. On Linux and Windows, it will contain the value "notty". On z/OS, it will contain a session ID that is unique on that server.

The following restrictions apply to Natural on Linux and Windows hosts (z/OS does not have these restrictions):

■ **Return to the Natural main screen**

You must not use Natural applications that return to the Natural main screen as this leads to wrong screen display and a loss of the session.

■ **Natural editors and utilities**

You must not use Natural utilities such as SYSMAIN or SYSDDM and editors such as the program editor as this leads to wrong screen display and a loss of the session.

■ **Natural system commands**

You must not use any Natural system command such as CATALL, FIND, GLOBALS, HELP, KEY, LIST, RETURN, SCAN, SETUP or XREF as this leads to wrong screen display and a loss of the session.

3

Natural Web I/O Screens

■ Copying Screen Content in Web I/O mode	12
■ Switching to Another Style Sheet During the Session	13

Whenever you display character-based Natural application screens in Natural for Ajax, they are rendered as web I/O pages:

The screenshot shows a web browser window titled "Natural Web I/O Output". Inside, there is a form for "EMPLOYEE MANAGEMENT". The form has a header section with "SOFTWARE A.G.", "BMCOL01", "*** EMPLOYEE MANAGEMENT ***", "Standard Map: Color default", "06/07/15", and "14:58:19". Below this is a section for "VEHICLE DATA" with fields for "Registration" (Site Tour 12345), "Make" (Top questionsTop que), "Model" (Download_ownloadDown), "Colour" (Your balance and oth), and "Year Manufactured (YYYY)" (2005). There is also an "ADMINISTRATIVE DATA" section with fields for "Employee" (Payments), "Class (E/P)" (A (Employee/Private)), "Date Acquired (DD-MM-YYYY)" (10 12 2005), "Currency" (Top), and "Expenses" (123456). At the bottom of the form are three buttons: "Help", "Canc", and "Conf."

In web I/O mode, certain basic functions behave differently for technical reasons.

Copying Screen Content in Web I/O mode

To copy selected lines or the complete screen to the clipboard in the web I/O mode, you have to switch from the standard web I/O screen to a copy mode output screen. This can be done by clicking on the following icon on the top right of the web I/O output screen:

Alternatively, you can use the shortcut **CTRL+Y** to activate the copy mode.

When the web I/O output is in the copy mode, it is possible to select and copy the output text and use the standard **CTRL+C** combination or the browser's **Copy** menu item to copy the selected text to the clipboard. When the web I/O output is in copy mode, the icon on the top right of the screen switches to the following:

After copying the text to the clipboard, you may again click on the copy icon on the top right or use the shortcut **CTRL+Y** to return to the regular web I/O mode.

Switching to Another Style Sheet During the Session

If enabled in the configuration file for the session, a user can switch to another style sheet during a running session. In this case, the user can open the **Style Sheet** control in the output window.

To switch to another style sheet, the user has to select it from the drop-down list box and then choose the **Apply** button.
