Document Conventions

Convention	Description
Bold	Identifies elements on a screen.
Monospace font	Identifies service names and locations in the format <i>folder.subfolder.service</i> , APIs, Java classes, methods, properties.
<i>Italic</i>	Identifies: Variables for which you must supply values specific to your own situation or environment. New terms the first time they occur in the text. References to other documentation sources.
Monospace font	Identifies: Text you must type in. Messages displayed by the system. Program code.
{ }	Indicates a set of choices from which you must choose one. Type only the information inside the curly braces. Do not type the { } symbols.
	Separates two mutually exclusive choices in a syntax line. Type one of these choices. Do not type the symbol.
[]	Indicates one or more options. Type only the information inside the square brackets. Do not type the [] symbols.
...	Indicates that you can type multiple options of the same type. Type only the information. Do not type the ellipsis (...).

Online Information and Support

Product Documentation

You can find the product documentation on our documentation website at <https://documentation.softwareag.com>.

Product Training

You can find helpful product training material on our Learning Portal at <https://learn.software-ag.com>.

Tech Community

You can collaborate with Software GmbH experts on our Tech Community website at <https://tech-community.softwareag.com>. From here you can, for example:

- Browse through our vast knowledge base.
- Ask questions and find answers in our discussion forums.
- Get the latest Software GmbH news and announcements.
- Explore our communities.
- Go to our public GitHub and Docker repositories at <https://github.com/softwareag> and <https://hub.docker.com/publishers/softwareag> and discover additional Software GmbH resources.

Product Support

Support for Software GmbH products is provided to licensed customers via our Empower Portal at <https://empower.softwareag.com>. Many services on this portal require that you have an account. If you do not yet have one, you can request it at <https://empower.softwareag.com/register>. Once you have an account, you can, for example:

- Download products, updates and fixes.
- Search the Knowledge Center for technical information and tips.
- Subscribe to early warnings and critical alerts.
- Open and update support incidents.
- Add product feature requests.

Data Protection

Software AG products provide functionality with respect to processing of personal data according to the EU General Data Protection Regulation (GDPR). Where applicable, appropriate steps are documented in the respective administration documentation.

2 User's Guide

This documentation covers the following topics:

<i>Introduction</i>	Provides an overview of the Entire System Server functionality.
<i>Getting Started</i>	Contains information necessary to communicate with the various operating system services provided by the Entire System Server.
<i>Online Tutorial</i>	Serves as a starting help for users and contains available views, a help text for each view specific to each operating system, and a sample program for each view.
<i>View Descriptions</i>	Explains how the description of each view is organized, describes global fields and provides an overview of available views according to their functional area.
<i>Related Literature</i>

Note: Support for z/VSE is deprecated. Support for BS2000 is also deprecated, except in conjunction with the ESM adapter. Features that are z/VSE and BS2000 specific will be removed from future releases.

This chapter covers the following topics:

Contents of this Documentation

This documentation contains all information relevant to Entire System Server users. Before you start reading the following sections, you are advised to read the background information contained in the Entire System Server Concepts and Facilities documentation.

For the sake of convenience, however, a brief system overview and a description of how Entire System Server works is given in the following subsections. Some hints as to how the different types of Natural users can make use of Entire System Server are also included.

Subsequent sections cover the following topics:

■ Getting Started

Describes the statements to access the Entire System Server, and gives some examples illustrating the use of the Entire System Server.

■ Online Tutorial

Describes the online tutorial delivered with the Entire System Server.

■ View Descriptions

Lists the Entire System Server views and gives a detailed description of addressable fields.

■ Operator Commands

Describes the operator commands that can be used to control the Entire System Server.

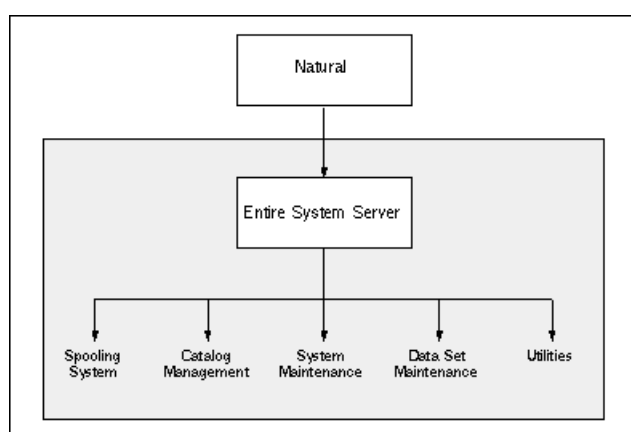

System Overview

The Software AG product Entire System Server is a self-contained software package that provides operating system services in a Natural environment. When installed on computers that are linked up in an Entire Net-Work, the Entire System Server supports distributed computing environments that can encompass heterogeneous operating systems.

The Entire System Server makes data center management facilities available to Natural users (system programmers, application developers, computer operators), who now have access to network data not available before in a Natural environment. Entire System Server services include:

- access to jobs in input and output queues;
- submission of batch jobs;
- access to system console and operator command input;
- disk management;
- catalog management;
- read and write access to conventional files;
- utility functions (IDCAMS, AMASPZAP, IEBCOPY, ARCHIVE);
- network operations.

The following figure illustrates how Entire System Server enhances the Natural environment:

How the Entire System Server Works

Entire System Server provides operating system information and services in the form of views. Depending on the type of service requested, displayed items can be further processed using operator commands, or used by a Natural program.

Entire System Server views consist of fields which are given a name. A Natural program can use this name to reference the associated item.

For example, Entire System Server provides a view of VTOC information, in which the various items are identified by field name. You can use the Natural `FIND` statement in a Natural program to select VTOC information. In the request, you can specify a volume serial number to identify the volume, and a node number to identify the particular Entire System Server in a computer network. Individual items are requested by specifying their field names. The following Natural program illustrates this for Volume `VOL001` and Node 148:

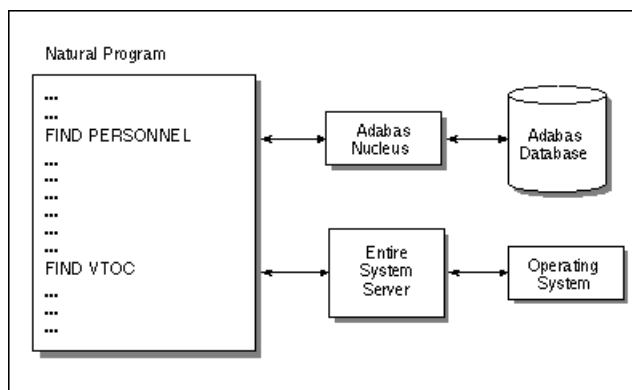

```
FIND VTOC WITH VOLSER='VOL001'  
          AND NODE=148  
  SORT BY DSNAME  
  DISPLAY DSNAME DSORG LRECL BLKSIZE PERCENT-USED  
LOOP  
END
```

Internally, the presentation of such operating system information is implemented as follows:

Each Entire System Server in the network is assigned a database ID (node number) which is specified for the views it provides.

The Natural `FIND` statement (as in the above example) results in an Adabas call which the Entire System Server recognizes and intercepts based on the database ID. The Adabas call is passed to a special region, which serves Entire System Server requests: instead of database records, operating system information and system services are returned.

In other words, Natural behaves as if the view addressed by the `FIND` statement were an Adabas file: Natural builds the various Adabas control blocks and issues Adabas calls. The Entire System Server handles Adabas calls in the same way as Adabas itself. The following figure illustrates this concept:

Whereas the first `FIND` statement in the above figure returns personnel data from an Adabas database, the second `FIND` statement accesses operating system information.

In order to make the Entire System Server more efficient, the Adabas calls are intercepted to provide buffering between the Natural program and the Entire System Server nucleus. Natural places the requested service into the Adabas format, search and value buffers, and the result is returned to the record buffer.

How to Access Operating System Services

Natural programs can access the Entire System Server using either of the following statements:

Natural Statement	Meaning
FIND	Select operating system information for the specified view(s).
PROCESS	Perform operating system activities using the specified view(s).

The Entire System Server in turn accesses the requested operating system service. Each operating system service is presented as a view defined to the Entire System Server.

- When directed at Entire System Server, the Natural statements listed above can be used with some additional options. These are described in detail in section [Getting Started](#).
- A detailed description of each view available through Entire System Server is given in the section [View Descriptions](#).
- Example Natural programs with calls to the Entire System Server can be found in the online tutorial delivered with the Entire System Server.

How a Natural User Benefits from the Entire System Server

The additional information and services provided by the Entire System Server are accessible via views as appropriate to each supported operating system. It is therefore not difficult to see how the Entire System Server can benefit the Natural user, whether a system programmer, a computer operator or an application programmer. A brief outline follows in the subsections below.

System Programmers and Computer Operators

The computer operator benefits especially from the access to job management items; these include job variables, job switches and the job queue, `SYSLIST` files and spool information, as well as the access to the console and active job information. Applications can be realized to allow an operator to perform functions with an easy-to-use Natural tool.

With the Entire System Server, the system programmer has a very powerful instrument for maintaining and monitoring network-wide system resources and information from a single location. A special benefit is the ability to further process information retrieved through Entire System Server in the Natural environment.

For example, a system programmer can write programs to give statistics about disk usage, monitor spooling systems, inspect job address space, run the `ARCHIVE` utility, use inter-task communication (ITC), etc. The names of the views described in this documentation speak for themselves, and any

experienced system programmer will recognize the many possibilities that the Entire System Server offers for the work in this particular environment.

Application Programmers

The range of file management views provided by the Entire System Server are of special importance to the application programmer. Names of operating system files can be assigned dynamically at execution time (batch and online). With the `FILE-ALLOCATE` view, an operating system file can be created at any time.

Another benefit for application programming is the group of views that make batch processing available to online applications. Using the `SUBMIT` view, application programmers can run jobs on any computer in the network and monitor them using the `ACTIVE-JOBS` view. The results can be inspected from within the application using the `SPOOL-QUEUE`, `READ-SPOOL` or `READ-FILE` views as appropriate.

One useful feature for application programmers is the access to information stored in sequential files. Using the views `READ-FILE` and `WRITE-FILE`, application programmers can work with sequential files in a synchronized way. This even holds true in TP environments which otherwise would not support access to sequential files.

Integration

The Entire System Server is fully integrated into the Entire technology, Software AG's concept for realizing Open Enterprise Computing. This means that the Entire System Server can operate in a computer network if the different computers are interlinked with Software AG's Entire Net-Work. Different physical machines are addressed by using different Entire System Server node numbers. This enables one Entire System Server application to control a multi-CPU environment which may include heterogeneous operating systems.

As the logical companion of Natural, the Entire System Server is fully compatible with other tools available for the Natural environment such as:

- Predict
- Natural Security
- Super Natural
- Entire Connection

Entire System Server also interfaces with security packages such as RACF, ACF2 and TOP SECRET, etc.

Entire System Server can be used with Natural in batch mode, when using Natural with a TP monitor such as Com-plete, CICS, IMS or *open*UTM, when using Natural with TSO or TIAM, or with a program that uses Adabas direct commands.

Calls from UNIX platforms are supported, for example, for Entire Operations.

4

Getting Started

▪ Syntax Used to Access Entire System Server	16
▪ Using Entire System Server in a Multi-Computer Environment	19
▪ Using Entire System Server Update View Processors	19
▪ Examples	23

Note: Support for z/VSE is deprecated. Support for BS2000 is also deprecated, except in conjunction with the ESM adapter. Features that are z/VSE and BS2000 specific will be removed from future releases.

This section contains information necessary to communicate with the various operating system services provided by the Entire System Server. The examples included show the use of the Entire System Server in heterogeneous environments running operating systems such as z/OS, z/VSE, BS2000. The examples consist of Natural programs that reference Entire System Server views, and show the resulting output.

An example program for every available view is contained in an online tutorial delivered with the Entire System Server (see Section [Online Tutorial](#) for more information).

This chapter covers the following topics:

Syntax Used to Access Entire System Server

Entire System Server views can be accessed from any Natural program using the Natural statement `PROCESS` or `FIND`. Which statement you will use depends on the type of view accessed, the access mode required, and the number of records selected.

- The `PROCESS` statement is intended for use only for views related to performing an activity.
- The `FIND` statement can be used to retrieve information, which may consist of a set of records.

PROCESS Statement

The `PROCESS` statement is used to request a function (for example, allocate, update, or delete system data, issue operator commands,) using the appropriate operating system service.

```
PROCESS view-name USING field-name=value  
      GIVING field-name
```

Example:

```
PROCESS FILE-ALLOCATE USING  
      DSNAME = 'USER.123',  
      VOLSER = 'SAG001',  
      NODE   = 151  
      GIVING ERROR-CODE
```

Using the view `FILE-ALLOCATE`, a dataset named `USER.123` is allocated on a volume with the serial number `SAG001`, on the machine identified by the Entire System Server node ID 151, and a code is returned.

FIND Statement

The `FIND` statement can be used to display data from views that require specification of fields. Selectable fields are indicated in the view descriptions by a `D` in the `Descriptor` column (see [View Descriptions](#)).

```
FIND ... view-name WITH ... search criteria
```

Data is selected based on the specified search criteria (see next subsection).

Example:

```
FIND ACTIVE-JOBS WITH NODE      = 151
                        AND  JOB-NAME = COMPLETE
....
END-FIND
```

Using the `ACTIVE-JOBS` view, the job named `COMPLETE` on the machine identified by the Entire System Server node ID 151 is selected for display.

Search Criteria with the FIND Statement

When `FIND` is used to access the Entire System Server, search criteria can be used to specify values for alphanumeric fields. Two search criteria are available:

- `*` Acts as placeholder for one or more characters in the position;
- `_` Acts as placeholder for one character.

The following examples demonstrate the use of these search criteria:

Example 1:

```
FIND VTOC WITH VOLSER = 'V3380A' AND DSNAME = 'L99*LOAD*'
```

All datasets on volume `V3380A` whose names start with `L99` followed by anything, followed by `LOAD`, followed by anything, are selected; for example:

- `L99COM.LOAD.NPR`
- `L99.SAG.LOAD.DOCS`
- `L99NPROC.LOAD`

Example 2:

```
FIND VTOC WITH VOLSER = 'V3380A' AND DSNAME = '*SOURCE'
```

All datasets on volume V3380A whose names end with SOURCE are selected; for example:

- A1234.SOURCE
- SAG.PP.SOURCE
- AB.MYSOURCE

Example 3:

```
FIND ACTIVE-JOBS WITH JOB-NAME = 'L_ _AB*'
```

All jobs whose first characters are L, followed by any 2 characters, followed by AB, followed by anything are selected; for example:

- L12ABJOB
- LAAABX
- LXXAB2YC

Example 4:

```
FIND ↵
```

```
NATPROC-USERS WITH USER-ID = '_ _ _ _ _'
```

All users of the Entire System Server whose identifiers contain exactly 5 characters are selected.

The **FIND** statement does not create an ISN list as in the case of Adabas. Therefore, all functions related to ISN lists are not supported; for example, **RETAIN**, ***NUMBER**.

As Entire System Server does not support ISN lists as it is done in Adabas, the meaning of the field ***NUMBER** is different.

There are in general 3 possibilities:

1. ***NUMBER = 0** means for Natural: fall in **NO RECORDS FOUND** clause and Entire System Server did not find any record which fulfilled the search criteria.
2. ***NUMBER = 1** means for Natural one record found. It will be returned for views with one wanted action such as **FILE-ATTRIBUTES**, **CATALOG-UPDATE**.
3. ***NUMBER = large value**: there are different large values for different views such as **CATALOG**, **READ-FILE** and **READ-SPOOL**

Using Entire System Server in a Multi-Computer Environment

If you have more than one computer at your installation, you may have more than one Entire System Server node installed (ask your system programmer). Note that the node ID identifies each Entire System Server node uniquely.

It is possible to direct a Entire System Server request from a Natural program to a specific node. To do this, specify `NODE=nnn` in the appropriate `FIND` statement; for example:

```
FIND VTOC WITH VOLSER='DISK01' AND NODE=151
```

This statement is executed in Node 151. If the `NODE` field is not specified, the default node is used (DBID specified in the DDM).

An alternative method is to use the `NODE-NAME` field when referencing Entire System Server nodes on other machines. `NODE-NAME` is a character field and allows programs to be written without regard to a specific node number. If a particular machine needs to have its node changed, the only update that is required is to the mapping module `ESYNODTB` (see also Entire System Server *Installation and Customization* documentation). No Natural programs need to be changed and restowed.

An example of `NODE-NAME` is

```
FIND VTOC WITH VOLSER='SMS236' AND NODE-NAME = 'PROD'
```

If both `NODE` and `NODE-NAME` are specified, the `NODE` specification takes precedence.

A Natural program can even access multiple nodes. For example, using the `COPY-FILE` view, you can copy a file from one node to another.

Using Entire System Server Update View Processors

General

Most of the views provided by ESY obtain data from the Operating System and return these data to the Natural program. Those views belong to the group of retrieval views. Another group of views allows you to modify Operating System objects in a certain way. These views belong to the group of update views.

All multi-record views with an Adabas file number greater than or equal to 200 belong to update views. These views require a special programming technique. A number of other update views support a single record request only (for example, `CATALOG-UPDATE`, `VTOC-UPDATE`) and do not need special programming considerations.

The field `FUNCTION` is provided in all update views. It should contain blanks while creating the object, and the value `CLOSE` if the object has been properly created. If no `CLOSE` has been requested, the object is still in open state and not completely built.

We recommend using the Natural statement `PROCESS` to request update view services.

```
PROCESS update_view USING
    NODE = #NODE
    , FUNCTION = #FUNCTION
    ...
```

A Session with Multiple `PROCESS` Statements

If more than one `PROCESS` statement is implemented in a Natural program and the requests are related to one session only, for example, to create a single dataset, the `PROCESS` statements must be indicated as belonging together.

A typical example is the `PROCESS WRITE-FILE USING FUNCTION=' '` in one subroutine to create several records and `PROCESS WRITE-FILE USING FUNCTION='CLOSE'` in a different subroutine. The field `IDENTIFIER` must be used and filled with the same 8-byte character string to indicate a session dealing with the same dataset in different locations of a Natural program.

Another issue is implementing nested loops requesting update view services. A separate `IDENTIFIER` must be used in every loop level to make the calls linked to several sessions if for example `WRITE-FILE` is used in different loop levels. If no `IDENTIFIER` is provided, unpredictable results might occur in nested loops.

Segmenting Data

If records have to be written to a dataset, the view `WRITE-FILE` must be used to do it. The field `RECORD` is defined as an alphanumeric field with a maximum length of 253 bytes only. Datasets probably contain records larger than 253 bytes. Therefore, the pieces of such records have to be delivered in segments.

Setting fields `SEGMENT-NUMBER` and `SEGMENT-LENGTH` allows you to create records longer than 253 bytes. Assuming a record length of 500 bytes, two view calls are needed.

`SEGMENT-NUMBER=1, SEGMENT-LENGTH=250, RECORD bytes 1-250` filled with data, create the first part of the record, `SEGMENT-NUMBER=2, SEGMENT-LENGTH=250, RECORD bytes 1-250` the second part of the record.

Smaller segments could also be used (for example, 5 segments each 100 bytes long) but this would increase the number of calls and reduce the performance.

Sample WRITE-FILE Program

The following sample program reads an LMS element on one node and copies the data to another LMS element on another node. It deals with segments returned by the view `READ-FILE`. If an error occurs, the copying is stopped immediately.

```

DEFINE DATA LOCAL

Examples

Example programs and their results are shown below for each of the functional areas of Entire System Server. The programs are taken from the Entire System Server online tutorial. A full list of field names for the various operating systems is contained in the view descriptions; see [View Descriptions](#).

Note: Programs whose names start with **M** are taken from an z/OS environment, those beginning with **D** from a z/VSE environment, and those beginning with **B** from BS2000.

File Management: COPY-FILE

Program **MCOPYFI** uses the **COPY-FILE** view to copy files from one node to another within a computer network:

```

* Program    MCOPYFI
* View       COPY-FILE
*
* Function    Copy files from node to node
*
* -----
*
DEFINE DATA
    GLOBAL USING TUTO
    LOCAL  USING COPYFI-L
END-DEFINE
*
REPEAT
    INPUT (AD=MI'_' ZP=OFF)
           // ##TITLE (AD=OI IP = OFF)
           // '  from' (I)
           // '      Dataset....:' COPY-FILE.FROM-DSNAME

```

```

/ '      Member.....: ' COPY-FILE.FROM-MEMBER
/ '      Volser.....: ' COPY-FILE.FROM-VOLSER
/ '      Node.....: ' COPY-FILE.FROM-NODE
// ' to' (I)
// '      Dataset....: ' COPY-FILE.TO-DSNAME
/ '      Member.....: ' COPY-FILE.TO-MEMBER
/ '      Volser.....: ' COPY-FILE.TO-VOLSER
/ '      Node.....: ' COPY-FILE.TO-NODE
PROCESS COPY-FILE USING FROM-DSNAME = COPY-FILE.FROM-DSNAME
                        , FROM-MEMBER = COPY-FILE.FROM-MEMBER
                        , FROM-VOLSER = COPY-FILE.FROM-VOLSER
                        , FROM-NODE   = COPY-FILE.FROM-NODE
                        , TO-DSNAME = COPY-FILE.TO-DSNAME
                        , TO-MEMBER = COPY-FILE.TO-MEMBER
                        , TO-VOLSER = COPY-FILE.TO-VOLSER
                        , TO-NODE   = COPY-FILE.TO-NODE
                        , NODE      = ##NODE
REINPUT ERROR-TEXT
*
END-REPEAT
END

```

This program prompts you for specification of the source and destination names, and notifies you of the successful copy function with a message:

```
ESY5000 COPY COMPLETED SUCCESSFULLY
```

System Maintenance: NET-OPER

Program MNETOPR executes certain operator commands and displays system response:

```

* Program    MNETOPR
* View       NET-OPER
*
* Function   Execute NET operator commands and display response
*
* -----
*
DEFINE DATA
  GLOBAL USING TUTO
  LOCAL  USING NETOP-L
END-DEFINE
*
REPEAT
  INPUT (AD=MI'_' )
  // ##TITLE (AD=OI IP=OFF)
  // 'Command:' / ' ' NET-OPER.COMMAND (AL=79)
  // 'Purge previous messages ?' NET-OPER.PURGE-PREVIOUS '(y/n)'
*
  FIND NET-OPER WITH COMMAND          = NET-OPER.COMMAND

```

```

                AND NODE                = ##NODE
                AND PURGE-PREVIOUS = NET-OPER.PURGE-PREVIOUS
*
    IF ERROR-CODE > 0
        ASSIGN ##MSG-NR = 1000
        ASSIGN ##MSG-TXT1 = ERROR-TEXT
        STOP
    END-IF
*
    IF LINE-STATUS NE 'YES'
        NEWPAGE
    END-IF
*
    WRITE NOTITLE TIME-STAMP LINE (AL=70)
*
    END-FIND
END-REPEAT
END

```

Example output from the program MNETOPR using input D NET,LINES:

```

Spool Management: JOB-SWITCHES

Program BSW allows the user to specify certain items in job switch handling:

```
* BS2000 Job-switches maintenance
*
DEFINE DATA GLOBAL USING TUTO
      LOCAL USING BSW----L
      LOCAL
01  #DISPLAY      (32)
    02  MARK              (A1)
    02  SWITCH          (N2)
    02  REDEFINE SWITCH
        03 SWITCH-A      (A2)
    02  STATUS          (A3)
*
01  #OPERATION      (A6)
01  #LIST-OF-SWITCHES (A64)
01  #SWITCH-TYPE    (A7)
01  #FUNCTION        (A8)
01  #USERID          (A8)
*
01  #I              (P2)
END-DEFINE
ASSIGN #USERID = *INIT-USER
FOR #I = 1 TO 32
    COMPUTE SWITCH (#I) = #I - 1
END-FOR
*
REPEAT
    PERFORM SCREEN-IO
    FIND JOB-SWITCHES WITH NODE          = ##NODE
                                AND OPTION      = #OPERATION
                                AND SWITCH-NUMBERS = #LIST-OF-SWITCHES
                                AND SWITCH-TYPE    = #SWITCH-TYPE
                                AND FUNCTION      = #FUNCTION
                                AND USERID        = #USERID
        IF ERROR-CODE NE 0 OR SYSTEM-CODE NE 0
            INCLUDE BERR---C
        END-IF
    END-FIND
END-REPEAT
*
* ----- SCREEN-IO -----
*
DEFINE SUBROUTINE SCREEN-IO
IF ##MSG-NR = 0

Online Tutorial

■ Online Tutorial Menu	36
■ Online Tutorial Function Keys	37
■ Online Tutorial Commands	37
■ Online Help	38

Note: Support for z/VSE is deprecated. Support for BS2000 is also deprecated, except in conjunction with the ESM adapter. Features that are z/VSE and BS2000 specific will be removed from future releases.

The Entire System Server is delivered with an online tutorial as a starting help for users. It contains available views, a help text for each view specific to each operating system, and a sample program for each view. All sample programs can be displayed, edited and executed. They illustrate the use made of the Entire System Server, and can be taken as starting points for more elaborate applications.

Note: When using the Entire System Server online tutorial, the Natural session parameter LE, which controls the action to be taken if the limit of retrieved records was exceeded in a database access statement processing loop, must be set to OFF.

This chapter covers the following topics:

Online Tutorial Menu

You can activate the online tutorial by logging on to the library SYSNPE in your Natural environment and issuing the MENU command.

This displays the online tutorial menu, and you are prompted for the Entire System Server node number. You will usually leave the default (but see the subsection [Using Entire System Server in a Multi-Computer Environment](#)).

The content of the menu may vary according to your particular operating environment: the online tutorial provides those views relevant to your site.

Press Enter to select the node number in the prompt window.

Meaning of the information in the columns:

Column Heading	Meaning
View	Name of the view.
Program	Name of the sample program that illustrates use of the view.
Program Description	Description of the program's function.

Online Tutorial Function Keys

The PF key line at the bottom of the online tutorial provides the following functions:

PF Key	Function	Description
PF3	Exit	Leave the online tutorial.
PF5	User	Display user-defined view and program names.
PF7	Up	Scroll the list of views backwards.
PF8	Down	Scroll the list of views forward.
PF10	Lang	Select the tutorial in another language from a prompt window.
PF12	Node	Select another Entire System Server node by typing the node number in the prompt window.

Online Tutorial Commands

From the online tutorial menu, you can display view definitions and sample programs. You can also edit the programs and execute them to see the result. Additionally, you can display a help text for each view and select the text as relevant to the supported operating systems.

These functions are performed by means of line commands. Available line commands are listed at the bottom of the online Tutorial Menu, above the PF key line. You can perform a function by entering the appropriate line command in the input field preceding the view name.

The table below lists the available line commands:

Line Command	Function	Description
E	Edit	Edit the example program. You can see the results of your edited program using the line command X.
H	Help	Display an explanation of the selected view's function; see the subsection Online Help .
L	List	Display the example program (no modification possible).
V	List Userview	Display the selected view description (names and attributes of the fields). For a comprehensive description of views and fields, see View Descriptions .
X	Execute	Display the results of the example program.

Online Help

The online tutorial provides online help for each view.

To display the online help text, issue the line command **H** in the input field preceding the view name.

The online help texts all have the same format, containing information on the purpose of the view, supported operating systems, and some additional information.

The following functions can be performed from this screen by pressing the appropriate PF key:

PF Key	Description
PF3	Leave the help screen and return to the tutorial menu.
PF5	Display general help text, that is, information relevant to all supported operating systems.
PF6, PF7, PF8	Display operating system specific information.

6

View Descriptions

■ General Information	40
■ View Summary	45

This section gives a detailed description of every view available through Entire System Server. The section is structured as follows:

- The selection box below lists all view descriptions in alphabetical order. Each view description subsection gives a full description of the view, listing first all field names according to operating system. An overview of error messages relevant to the view is given, followed by a detailed description of each field in alphabetical order.
- The subsection *General Information* explains how the description of each view is organized, and describes global fields (that is, fields relevant to each view).
- The subsection *View Summary* provides an overview of available views, listing them according to their functional area.

Alphabetical List of Specific View Descriptions

<i>ACCOUNTING</i>	<i>ACTIVE-JOBS</i>	<i>ADDRESS-SPACE</i>	<i>ALLOCATIONS</i>
<i>ARCHIVE</i>	<i>AUTHORIZED-LIBRARIES</i>	<i>CATALOG</i>	<i>CATALOG-UPDATE</i>
<i>CHECK-SECURITY</i>	<i>COMMON-DATA</i>	<i>CONSOLE</i>	<i>CONSOLE-LOG</i>
<i>COPY-FILE</i>	<i>DEVICE-NAMES</i>	<i>ENTER-PROCEDURE</i>	<i>EVENTING</i>
<i>FILE-ALLOCATE</i>	<i>FILE-ATTRIBUTES</i>	<i>FILE-MAINTENANCE</i>	<i>HELP-INFO</i>
<i>IDCAMS</i>	<i>IEBCOPY</i>	<i>ITC</i>	<i>JOB-SWITCHES</i>
<i>JOB-VARIABLES</i>	<i>LIB-DIRECTORY</i>	<i>LIB-UPDATE</i>	<i>LIB-ZAP</i>
<i>LOADED-MODULES</i>	<i>LOAD-MODULE</i>	<i>MAIN-STORAGE</i>	<i>NATPROC-LOGON</i>

		<i>TASK-INFO</i>	<i>TCB</i>
	<i>UNIX-DIRECTORY</i>	<i>VTOC</i>	<i>VTOC-UPDATE</i>
<i>WRITE-SPOOL</i>	<i>WRITE-UNIX-FILE</i>		

This chapter covers the following topics:

General Information

- *Global Fields*
- *Global Error Codes*

■ Order of Information returned by Views

Note: Support for z/VSE is deprecated. Support for BS2000 is also deprecated, except in conjunction with the ESM adapter. Features that are z/VSE and BS2000 specific will be removed from future releases.

The description of each view in this section begins with a header subsection containing the following general information about the view:

Item	Meaning
File	The file number assigned to the view within Entire System Server. This number must not be changed.
Opsys	Operating system(s) to which the view applies.
Statement	The statement you must use in your Natural programs to access the view. This is either <code>FIND</code> or <code>PROCESS</code> , depending on the view and the required function.
Task	A short description of the purpose of the view. This description is based on the online help text provided for each view in the online tutorial (see Online Tutorial).

Note: The view name may be changed by the Entire System Server Administrator. The file number and access statement cannot be changed.

Example:

You will find this header subsection for the view `ACTIVE-JOBS`:

Item	Meaning
File	29
Opsys	z/OS, z/VSE, BS2000
Statement	<code>FIND</code>
Task	Retrieve the tasks that are currently active in the system and get information about them (for example, the amount of CPU time already used by the tasks). BS2000: corresponds to BS2000 command <code>/sta p</code> : retrieve tasks of Type 2 or 3.

Each view description contains the following information for fields defined to the view:

Item	Meaning	
Dictionary Field Name	The name of the field in Natural.	
F/L	Field format and length:	
	A	Alphanumeric
	B	Binary
	D	Date

Item	Meaning	
	N	Numeric
	T	Time
Mu	For fields that can be specified more than once, this column gives the maximum number of occurrences.	
DE	Descriptor. D in this column means that this field name can be specified in the WITH clause of the FIND statement or the USING clause of the PROCESS statement. These fields support the search criteria available for the FIND statement (see Getting Started) where this is appropriate.	
Remarks	General remarks concerning the field, for example, whether it is required, or whether it is dependent on a particular function.	

Example:

The following table is the overview of some fields common to all operating systems for the view COPY-FILE:

Dictionary Field Name	F/L	Mu	DE	Remarks
Common Fields for all Operating Systems:				
ERROR-CODE	N3			
ERROR-TEXT	A58			
NODE	N3		D	
NODE-NAME	A16		D	
SYSTEM-MESSAGE-CODE	A10			
FROM-DSNAME	A54		D	Required
FROM-PRODUCT	A1		D	
FROM-PASSWORD	A32		D	
TO-DSNAME	A54		D	Required

Global Fields

Note: Support for z/VSE is deprecated. Support for BS2000 is also deprecated, except in conjunction with the ESM adapter. Features that are z/VSE and BS2000 specific will be removed from future releases.

Certain fields are common to all views. These are known as *global fields* and do not appear in the full description of each field in this section (though they are included in the field overview for each view). The global fields are:

Field Name	Type/Length	Operating System
ERROR-CODE	(N3)	z/OS, z/VSE, BS2000

Message code returned. For the meaning of message codes, see the Entire System Server *Messages and Codes* documentation.

Field Name	Type/Length	Operating System
ERROR-TEXT	(A58)	z/OS, z/VSE, BS2000

Message text. For the meaning of message, see the Entire System Server *Messages and Codes* documentation. .

Field Name	Type/Length	Operating System
NODE	(N3)	z/OS, z/VSE, BS2000

Number of the Entire System Server node to be addressed. Typically, the node number is required if you are working in a distributed environment and you wish to perform a function on a different computer in the network (see also *Using the Entire System Server* in the Entire System Server *Installation and Customization* documentation).

Field Name	Type/Length	Operating System
NODE-NAME	(A16)	z/OS, z/VSE, BS2000

Name of the Entire System Server node to be addressed. This field is optional. For further information, see [Using Entire System Server in a Multi-Computer Environment](#) in the section [Getting Started](#).

Field Name	Type/Length	Operating System
SYSTEM-CODE	(B2)	BS2000

Original system error code.

Field Name	Type/Length	Operating System
SYSTEM-MESSAGE-CODE	(A10)	BS2000, z/OS, z/VSE

System error code specific to the operating system. A code returned in the ERROR-CODE field can translate to any of a number of operating-system-specific system codes.

If any call to Entire System Server gets an error code of 508 with the error text ESY5508 ADABAS response code :1: returned from ESY, then the field SYSTEM-MESSAGE-CODE is filled with the appropriate Adabas response code in the form ADAnnn, where *nnn* is the Adabas response code.

Global Error Codes

Certain error codes may be returned with any view. These are known as *Global Error Codes*. Each view description in this section contains a table with possible error codes relevant to the view. The table below contains a list of global error codes. A full explanation of error codes is given in the Entire System Server *Messages and Codes* documentation.

Code	Text	z/OS	z/VSE	BS2000
0	Request completed successfully	X	X	X
507	Too many parallel ESY requests.	X	X	X
508	Adabas response code xxx returned from ESY.	X	X	X
510	Logon required.	X	X	X
520	No core available (ASIZE).	X	X	X
521	NATPNI/NATPNIP unresolved.	X	X	X
530	Access denied by Security Facility.			X*
774	No core available.	X	X	X
776	Request was cancelled.	X	X	X
777	Request has abended.	X	X	X
999	Entire System Server node <i>nnn</i> not active.	X	X	X

*

Note: In BS2000, if error code 799 (Entire System Server internal error) is returned, check the field `SYSTEM-MESSAGE-CODE` for additional information.

Order of Information returned by Views

Unless otherwise noted, the default return order of information returned by view processors accessed by `FIND` (but not `FIND (1)` for reading views) is not guaranteed to be in any specific order. The views that have a guarantee of default order are:

- `CONSOLE`
- `CONSOLE-LOG`
- `IDCAMS`
- `IEBCOPY`
- `LIB-DIRECTORY`
- `LIB-ZAP`
- `NET-OPER`
- `READ-FILE`
- `READ-SPOOL`

■ SYSTEM-COMMAND

More information regarding a specific order of returned information can be found in the appropriate view description.

If information needs to be returned in a specific order, the Natural `Sort` statement can be used. See the Natural Statements manual for more information.

All views accessed by `PROCESS` or `FIND (1)` (update views) will deliver data in the order received by the program.

View Summary

- [File and Catalog Management](#)
- [Spool / Job Management](#)
- [System Maintenance](#)
- [Miscellaneous](#)

This subsection summarizes Entire System Server views according to their functional area. Together with the view name, the operating systems to which the view applies is given. The third column gives a short description of the view's function.

File and Catalog Management

View Name	Supported Operating Systems	Description	File No.
ARCHIVE	BS2000	Run ARCHIVE utility.	211
CATALOG	z/OS, z/VSE, BS2000	List catalog information.	8
CATALOG-UPDATE	z/OS, BS2000	Perform catalog maintenance. Under BS2000: modify file attributes.	10
COPY-FILE	z/OS, z/VSE, BS2000	Copy files. Under z/OS and z/VSE, copying can be performed from node to node.	37
FILE-ALLOCATE	z/OS, z/VSE, BS2000	Allocate dataset to disk.	9
FILE-ATTRIBUTES	z/OS, z/VSE, BS2000	Display attributes of a dataset.	1
FILE-MAINTENANCE	z/OS, BS2000	Compress dataset or release unused space.	18
IDCAMS	z/OS	Run IDCAMS utility.	14
IEBCOPY	z/OS	Run IEBCOPY utility.	17
LIB-DIRECTORY	z/OS, z/VSE, BS2000	Read directory entries.	3
LIB-UPDATE	z/OS, z/VSE, BS2000	Perform operations on directory.	5

View Name	Supported Operating Systems	Description	File No.
LOAD-MODULE	z/OS	Read information on load module.	44
READ-FILE	z/OS, z/VSE, BS2000	Read records from a dataset.	2
READ-UNIX-FILE	z/OS	This view makes it possible to read data from files in the z/OS UNIX file system.	96
UNIT-ATTRIBUTES	z/OS, z/VSE	Read information on I/O units.	6
UNIX-DIRECTORY	z/OS	This view makes it possible to display directory information related to a z/OS UNIX file system.	97
VTOC	z/OS, z/VSE, BS2000	Read VTOC entries for a volume.	4
VTOC-UPDATE	z/OS, z/VSE, BS2000	Maintain VTOC entries. Under BS2000: erase or rename file.	7
WRITE-FILE	z/OS, z/VSE, BS2000	Write records to a dataset.	204
WRITE-UNIX-FILE	z/OS	This view makes it possible to write data to files in the z/OS UNIX file system.	215

Spool / Job Management

View Name	Supported Operating Systems	Description	File No.
ACTIVE-JOBS	z/OS, z/VSE, BS2000	Read information on active jobs.	29
ALLOCATIONS	z/OS	Read allocations for a job.	22
ENTER-PROCEDURE	BS2000	Enter procedure	217
JOB-SWITCHES	BS2000	Perform operations on user and process switches.	81
JOB-VARIABLES	BS2000	Perform operations on job variables.	82
READ-SPOOL	z/OS, z/VSE	Read spool records for a job.	12
SPOOL-FILES	z/OS, BS2000	Read and maintain spool files for a given job.	36
SPOOL-QUEUE	z/OS, z/VSE, BS2000	Read entire spool queue. Under BS2000: Read all jobs in any system queue.	11
SPOOL-UPDATE	z/OS, z/VSE	Change status of job.	13
SUBMIT	z/OS, z/VSE, BS2000	Submit job.	200
TASK-INFO	BS2000	Read information for a task.	113
WRITE-SPOOL	z/OS, z/VSE, BS2000	Write records to spool. Under BS2000: Print records or dataset.	203

System Maintenance

View Name	Supported Operating Systems	Description	File No.
ACCOUNTING	z/OS	Read accounting information.	34
ADDRESS-SPACE	z/OS	Read address space information.	21
CONSOLE	z/OS, z/VSE, BS2000	Perform operations on operator console.	35
CONSOLE-LOG	z/OS, z/VSE	Read console log.	25
DEVICE-NAMES	z/OS	Read generic device names.	30
LIB-ZAP	z/OS	Run superzap utility (AMASPZAP).	16
LOADED-MODULES	z/OS	Read modules loaded by a job.	23
MAIN-STORAGE	z/OS, z/VSE, BS2000	z/OS:	Read main storage content for a job.
		z/VSE :	Read storage of the ADDRESS-SPACE in which the Entire System Server partition is defined.
		BS2000:	Read content of common memory pool.
NET-OPER	z/OS, z/VSE	Execute VTAM operator commands and display results.	15
SYSTEM-INFO	z/OS, z/VSE, BS2000	Read system information.	26
TCB	z/OS	Read task information for a job.	24
USER-ATTRIBUTES	BS2000	Read user information.	86

Miscellaneous

View Name	Supported Operating Systems	Description	File No.
AUTHORIZED-LIBRARIES	z/OS	Display a list of APF authorized data sets in z/OS.	50
COMMON-DATA	z/OS, z/VSE, BS2000	Perform operations on shared main storage data.	33
CHECK-SECURITY	z/OS	Query external security system as to whether user is allowed to access resource.	45
EVENTING	z/OS, z/VSE, BS2000	Perform program-to-program communication.	40
HELP-INFO	BS2000	Display help text for an error message.	84
ITC	BS2000	Execute INTERTASK COMMUNICATION macros.	80
NATPROC-LOGON	z/OS, z/VSE, BS2000	Perform logon/logoff to Entire System Server.	190

View Name	Supported Operating Systems	Description	File No.
NATPROC-USERS	z/OS, z/VSE, BS2000	Read Entire System Server users currently active and optionally cancel users.	191
PRINT-DOCUMENT	BS2000	Print document.	213
RECEIVE-EMAIL	z/OS	This view provides the support for receiving e-mails using IMAP protocol	70
RESOURCE-CONTROL	z/OS	Manage resources using ENQ/DEQ.	32
SEND-EMAIL	z/OS, z/VSE, BS2000	This view provides the support for sending electronic mails.	212
SEND-MESSAGE	z/OS, z/VSE, BS2000	Send message to console and/or Com-plete, TSO or TIAM user.	19
SYSTEM-COMMAND	z/OS	Execute TSO commands.	46

Field Descriptions

Field Name	Type/Length	Operating System
ACTIVE	(A3)	

Relevant for FILE-ID='LIST'. Possible options:

Option	Explanation
NO	This is not the active SMF file.
YES	This is the active SMF file.

The individual types, lengths and operating systems for the fields are as follows:

Field Name	Type/Length	Operating System
DATE	(N5)	

The date of the record in the format *YYDDDD*, taken from the SMF record prefix.

Field Name	Type/Length	Operating System
DATX	(D)	

The date in internal format, taken from the SMF record prefix.

Field Name	Type/Length	Operating System
DIRECTION	(A1)	

Retrieval direction. Possible values:

Value	Explanation
F	Read forward (default).
B	Read backwards.

The individual types, lengths and operating systems for the fields are as follows:

Field Name	Type/Length	Operating System
DSNAME	(A44)	

- For FILE-ID='LIST', the names of the SMF data sets are returned in this field.
- For FILE-ID='MANX', specify the name of the SMF data set from which the SMF records are to be read.
- For FILE-ID='LOGS', specify the name of the SMF log stream from which the SMF records are to be read.
- For FILE-ID='SEQ', specify the name of the sequential data set from which the SMF records are to be read.

Field Name	Type/Length	Operating System
FILE-ID	(A8)	

Possible values:

Value	Explanation
LIST	Return a list of SMF data sets and other relevant data.
MANX	Read records from the SMF data set specified in DSNAME.
LOGS	Read records from the SMF log stream specified in DSNAME.
SEQ	Read dumped SMF records from the sequential data set specified in DSNAME.

The individual types, lengths and operating systems for the fields are as follows:

Field Name	Type/Length	Operating System
JOB - NAME	(A8)	

This field follows the SMF record prefix. For most record types, it contains the job name.

Field Name	Type/Length	Operating System
RBA	(N9)	

Relative byte address of the record.

Field Name	Type/Length	Operating System
RECORD	(A253)	

The SMF record / segment.

Field Name	Type/Length	Operating System
RECORD - LENGTH	(N5)	

Length of the entire record (not the segment length).

Field Name	Type/Length	Operating System
RECORD - TYPE	(N3)	

The type of the record, taken from the SMF record prefix.

Field Name	Type/Length	Operating System
SEGMENT - NUMBER	(N5)	

Segment number within the record.

Field Name	Type/Length	Operating System
SEGMENT - LENGTH	(B2)	

Length of the segment.

Field Name	Type/Length	Operating System
START - RBA	(N9)	

The relative byte address of the first record to be read. If omitted, the file is read from the start or end, depending on the setting of `DIRECTION`.

Field Name	Type/Length	Operating System
SUB-TYPE	(N3)	

SMF subtype.

Field Name	Type/Length	Operating System
SYSTEM-ID	(A4)	

System ID, taken from the SMF record prefix.

Field Name	Type/Length	Operating System
TIME	(N6)	

The time of the record in the format *HH:MM:SS*, taken from the SMF record prefix.

Field Name	Type/Length	Operating System
TIMX	(T)	

The time of the record in the format *YYDDDD*, taken from the SMF record prefix.

Field Name	Type/Length	Operating System
TOTAL-BLOCKS	(N7)	

Relevant when `FILE-ID='LIST'`. Number of blocks allocated to the SMF file.

Field Name	Type/Length	Operating System
USED-BLOCKS	(N7)	

Relevant when `FILE-ID='LIST'`. Number of blocks used in the SMF file.

Field Name	Type/Length	Operating System
VOLSER	(A6)	

Relevant when `FILE-ID='LIST'`. Volume serial number of the SMF file.

988	Invalid task type detected.			X

Field Descriptions

Field Name	Format/Length	Operating System
ACCOUNT - NUMBER	(A8)	BS2000

Account number of the job.

Field Name	Format/Length	Operating System
ADDRESS	(B4)	z/OS, z/VSE

ASCB address.

Field Name	Format/Length	Operating System
ASID	(N4)	z/OS

Address space identifier.

Field Name	Format/Length	Operating System	
CLASSES	(A6)	z/OS	Relevant when TYPE=JOBS: batch initiator classes
		z/VSE	CLASSES assigned to the partition.

Field Name	Format/Length	Operating System
CPU-USED	(N7.2)	z/OS, z/VSE, BS2000

The amount of CPU time consumed by the job/address space. Format: *SSSSS.HH*.

Field Name	Format/Length	Operating System
CPU - MAX	(N7.2)	BS2000

The CPU time limit for the job.

Field Name	Format/Length	Operating System
DISPATCHABLE	(A3)	z/OS

Dispatchability of address space. Possible values:

Value	Explanation
NO	Address space is not dispatchable
YES	Address space is dispatchable

Field Name	Format/Length	Operating System
DISPATCHING-PRIORITY	(B1)	z/OS, z/VSE, BS2000

Dispatching priority given by the operating system. For BS2000, the run priority of the task.

Field Name	Format/Length	Operating System
ECPU-USED	(N7.2)	z/OS

The amount of CPU consumed by the address space / task including preemptable-class CPU time (format *SSSSS.HH*).

Field Name	Format/Length	Operating System
HOLD	(A3)	BS2000

Indicates if a job is in HOLD status. Possible values:

- NO
- YES

Field Name	Format/Length	Operating System
JES-INIT-ID	(A4)	z/OS

Relevant when TYPE=JOB: JES batch initiator identifier.

Field Name	Format/Length	Operating System
JOB-ID	(A8)	z/OS, z/VSE, BS2000

Job number in alphanumeric format. Must be used for BS2000 V10 with alphanumeric TSNs. In case of numeric job numbers, the job number will also be returned in field `JOB-NUMBER`.

Field Name	Format/Length	Operating System
JOB - NAME	(A8)	z/OS, z/VSE, BS2000

Name of the job. In z/OS, z/VSE, this is taken from the job card.

Field Name	Format/Length	Operating System
JOB - NUMBER	(N7)	OS390 z/VSE, BS2000

Column Heading	Meaning
z/OS	JES job identifier
z/VSE	POWER job identifier
BS2000	TSN (task sequence number), if numeric. This field will contain zero in case of alphanumeric TSN.

Field Name	Format/Length	Operating System
PARTITION	(A2)	z/VSE

Partition identifier.

Field Name	Format/Length	Operating System
PROC - NAME	(A8)	z/OS, z/VSE

Name of the procedure currently being executed.

Field Name	Format/Length	Operating System
QUIESCE	(A3)	z/OS

Quiesce Indicator (YES/NO) (indicates if address space is quiesced). Relevant when TYPE=JOB: JES batch initiator identifier.

Field Name	Format/Length	Operating System
REGION	(N7)	z/OS, z/VSE

Amount of real storage used by the address space in Kbytes.

Field Name	Format/Length	Operating System
REGION-ALLOCATED-BELOW	(N7)	z/OS, z/VSE

Amount of virtual storage allocated below the 16 MB line (in KB).

Field Name	Format/Length	Operating System
REGION-LIMIT-BELOW	(N7)	z/OS, z/VSE

Amount of virtual storage that can be allocated below the 16 MB line (in KB).

Field Name	Format/Length	Operating System
REGION-ALLOCATED-ABOVE	(N7)	z/OS, z/VSE

Amount of virtual storage allocated above the 16 MB line (in KB).

Field Name	Format/Length	Operating System
REGION-LIMIT-ABOVE	(N7)	z/OS, z/VSE

Amount of virtual storage that can be allocated above the 16 MB line (in KB).

Field Name	Format/Length	Operating System
REPLY-ID	(A3)	z/VSE

Field Name	Format/Length	Operating System
RESOURCE-GROUP	(A8)	z/OS

Resource Group Name .

Field Name	Format/Length	Operating System
SERVER	(A8)	z/OS

Server indicator (YES/NO) indicates whether or not resource goals are being honored.

Field Name	Format/Length	Operating System
SERVICE-CLASS	(A8)	z/OS

Service class name .

Field Name	Format/Length	Operating System
SERVICE-CLASS-PERIOD	(N3)	z/OS

Service class period .

Field Name	Format/Length	Operating System
SIO-COUNT	(N11)	z/OS, z/VSE

Number of I/O operations performed so far.

Field Name	Format/Length	Operating System
STATUS	(A8)	z/OS, z/VSE, BS2000

Status of the address space. In BS2000, this is the same as field TYPE.

Possible values for z/OS:

Value	Explanation
<i>blank</i>	Address space is swapped in.
NON-SWAP	Address space is non-swappable.
SWAP-OUT	Address space is swapped out.
TERM	Address space is terminating.
V=R	Running in real memory.

Possible values for z/VSE:

Value	Explanation
ACTIVE	Partition has active job.
UNBATCH	Partition has no job.
STOPPED	Partition will not accept new jobs.

Field Name	Format/Length	Operating System
STEP-NAME	(A8)	z/OS, z/VSE

Name of the step currently being executed.

Field Name	Format/Length	Operating System
TCB	(B4)	z/OS

TCB address of first ready task for this address space.

Field Name	Format/Length	Operating System
TYPE	(A6)	z/OS, z/VSE, BS2000

Type of job. Possible values:

Option	Job Type	Explanation
Z/OS	JOB INI STC TSU	Batch job JES initiator started task TSO user
BS2000	BATCH DIALOG TP	Batch job dialog task batch job with TP privilege
Z/VSE	JOB	Batch job

Field Name	Format/Length	Operating System
TYPE - NUMBER	(N1)	BS2000

Numeric job type identifier as used in BS2000, for example, 2 for batch jobs, 3 for dialog tasks.

Field Name	Format/Length	Operating System
USER	(A8)	BS2000

User ID of job.

Field Name	Format/Length	Operating System
VSIZE	(N5)	Z/VSE

Partition size.

Field Name	Format/Length	Operating System
WORKLOAD	(A8)	z/OS

Workload name .

Field Name	Format/Length	Operating System
ZIIP-USED	(N7.2)	z/OS

[Normalized] Enclave zIIP time - the amount of time the enclave has run on zIIP (format SSSSS.HH).

To reset the zIIP times at job step, reset the fields in the job step initiation exit IEFUSI. An example is supplied by IBM in SYS1.SAMPLIB(IEEUSI). You can reset the zIIP time at job step with any program running in Key 0.

Field Name	Format/Length	Operating System
ZIIP-GP-USED	(N7.2)	z/OS

Eligible zIIP time on GP - the amount of time the enclave has run on GP, which was eligible to run on zIIP (format SSSSS.HH).

Examples

The following example applies to all operating systems:

```

...
  FIND ACTIVE-JOBS WITH NODE = 148
                        AND CPU-USED < 1000
*
  IF ACTIVE-JOBS.ERROR-CODE NE 0
    WRITE ACTIVE-JOBS.ERROR-TEXT
    ESCAPE ROUTINE
  END-IF
*
  DISPLAY ACTIVE-JOBS.JOB-NAME
          ACTIVE-JOBS.JOB-ID
          ACTIVE-JOBS.TYPE
          ACTIVE-JOBS.STATUS
          ACTIVE-JOBS.CPU-USED
  END-FIND
...

```

Result for z/OS:

ACTIVE-JOBS

JOB-NAME	JOB-ID	TYPE	CPU	STATUS
...				
XCOM148	2975	STC	68.04	NON-SWAP
INIT		INI		IDLE
DELINDEX	2988	JOB	13.45	
WKK	2802	TSU	2.95	SWAP-OUT
...				

Result for BS2000:

JOB-NAME	JOB-ID	TYPE	CPU	STATUS
...				
DB01	1UFN	BATCH	179.51	BATCH
ASF	1URL	DIALOG	12.78	DIALOG
...

PAR-OPERATOR	A3		D	Default is NO.
PAR-WRCHK	A3		D	Default is NO.
PAR-SNR	A3		D	Default is YES.
PAR-DESTROY	A3		D	Default is NO.
PAR-CATID	A3		D	Default is NO.

Dictionary Field Name	F/L	Mu	DE	Remarks
PAR-STREAM	A3		D	Default is NO.
PAR-OLS	A3		D	Default is NO.

Relevant Error Codes

Code	Text	BS2000
530	Access denied by Security Facility.	X
531	Password missing or incorrect.	X
565	Syntax error in dataset name.	X
658	Dataset is not cataloged.	X
722	Requested dataset not found.	X
733	User ID does not exist.	X
734	ARCHIVE run with errors.	X
750	Invalid operand within operand list.	X
756	Job variable name missing or invalid.	X
798	Task was not started under TSOS.	X
799	Entire System Server internal error.	X
853	Retention cycle unexpired / NEWNAME exists.	X
881	Error occurred while opening file.	X
984	Server is not authorized to access.	X
992	Requested job variable not found.	X

Field Descriptions

For detailed information, refer to documentation of SNi's product ARCHIVE. Some field descriptions simply refer to the corresponding ARCHIVE command to avoid duplicate explanations.

Field Name	Format/Length	Operating System
FUNCTION	(A8)	

The possible values for this field relate to the corresponding ARCHIVE command to be executed, unless stated otherwise:

Value	Explanation
FILES	
FILESC	Continuation of FILES for more file definitions than are possible in one call with FILES function.
JOBVAR	
JOBVARC	Continuation of JOBVAR for more job variables than are possible in one call with JOBVAR function.
DELETE	
EXPORT	
IMPORT	
INQUIRE	
LIST	
POOL	
PROCESS	
PURGE	
RESTORE	
SAVE	
STATUS	
CLOSE	This must be the last call and starts the ARCHIVE execution.

Field Name	Format/Length	Operating System
BACKUP-TYPE	(A1)	

Relevant for function SAVE. Minimum backup level.

Field Name	Format/Length	Operating System
CAT-ONLY	(A3)	

Relevant for functions SAVE, EXPORT.

Option	Explanation
NO	Default. Files are saved including catalog entry.
YES	Only catalog entries are saved.

Field Name	Format/Length	Operating System
CHANGED	(A12)	

Relevant for function `SAVE`. Possible values:

Value	Explanation
YES	Default. Only changed files are saved.
YES , LARGE	Only changed LARGE files are saved.
YES , <i>n</i>	Same as YES , LARGE, where <i>n</i> is the minimum file size in PAM pages.
NO	Save all objects.

Field Name	Format/Length	Operating System
COMPRESS	(A3)	

Relevant for functions `SAVE`, `EXPORT`. Specifies whether a compress is to be done with save. Possible values:

Value	Explanation
NO	Default. Compress is not performed.
YES	Compress is performed.

Field Name	Format/Length	Operating System
CONTINUE	(A13)	

Relevant for functions `SAVE`, `EXPORT`. Continuation of a previous `SAVE/EXPORT` run. Possible values:

Value	Explanation
SVID	SAVE - ID must be given.
SVID , VSN - LIST	SAVE - ID and CONTINUE - VOLSER - ARRAY must be given.
VSN - LIST	CONTINUE - VOLSER - ARRAY must be given.

Field Name	Format/Length	Operating System
CONTINUE-VOLSER-ARRAY	(A6)	

Relevant for functions SAVE, EXPORT. Maximum of 5 volumes if keyword VSN-LIST is specified in field CONTINUE.

Field Name	Format/Length	Operating System
CONVERSION	(A4)	

Relevant for functions RESTORE, IMPORT. PAM key conversion required to import or restore files to non-key disks. Possible values:

Value	Explanation
NO	Default.
CONV	
STD	

Field Name	Format/Length	Operating System
DAYS-UNUSED	(N5)	

Relevant for functions SAVE, EXPORT. Number of days the object to be saved must have been unused.

Field Name	Format/Length	Operating System
DEVICE	(A8)	

Relevant for functions SAVE, EXPORT, RESTORE, IMPORT, POOL, LIST. Device type (for example, T9G).

Field Name	Format/Length	Operating System
DIRECTORY	(A54)	

Relevant for functions SAVE, EXPORT, RESTORE, IMPORT, POOL, LIST, PURGE, INQUIRE. Name of directory file. Default is NONE.

Field Name	Format/Length	Operating System
DRIVES	(N2)	

Relevant for functions SAVE, EXPORT, RESTORE, IMPORT, LIST. Number of drives to be used in parallel.

Field Name	Format/Length	Operating System
ERASE	(A7)	

Relevant for functions `SAVE`, `EXPORT`. Specifies erasing of objects after `SAVE` or `EXPORT`. Possible values:

Value	Explanation
NO	Default. Objects are not erased.
ALL	Objects are erased regardless of access and retpd.
ALLP	For TSOS only: objects are erased regardless of access, retpd and passwords.
ALLCNS	Same as ALL, but also for CNS files.
ALLCNP	For TSOS only: same as ALLCNS, regardless of passwords.
YES	Objects are erased, if allowed by access, retpd and password definition.

Field Name	Format/Length	Operating System
EXCEPT-FILE-ARRAY	(A61)	

Relevant for functions `FILES`, `FILESC`. Maximum of 20 file expressions for `EXCEPT` option of `ARCHIVES FILES` command. Same syntax as for `FILE-ARRAY`.

Field Name	Format/Length	Operating System
EXCEPT-JOB-VARIABLE-ARRAY	(A61)	

Relevant for functions `JOBVAR`, `JOBVARC`. Maximum of 20 JV expressions for `EXCEPT` option of `ARCHIVES JOBVAR` command. Same syntax as for `JOB-VARIABLE-ARRAY`.

Field Name	Format/Length	Operating System
FILE-ARRAY	(A61)	

Relevant for functions `FILES`, `FILESC`, `INQUIRE`. Maximum of 20 file expressions, where a file expression can be a file name of a file name prefixed by `THRU=` or `RENAME=`.

Field Name	Format/Length	Operating System
FORCE-PURGE	(A3)	

Relevant for function `PURGE`. Specify to force purging of saved versions. Possible values:

Value	Explanation
NO	Default. Saved versions are not purged.
YES	Saved versions are purged.

Field Name	Format/Length	Operating System
FROM-OPTION	(A24)	

Relevant for functions RESTORE, IMPORT, LIST. Possible values:

- LATEST
- LATEST, STATE
- SVID
- SVID, STATE, *yymmdd.hhmmss*
- SVID, VSN-LIST
- VSN-LIST
- *yymmdd.hhmmss*
- *yymmdd.hhmmss*, STATE

If SVID is specified, the field SAVE-ID must be specified. If VSN-LIST is specified, the VOLSER-ARRAY field must be specified.

Field Name	Format/Length	Operating System
INQUIRE-POOL-OPTION	(A14)	

Relevant for function INQUIRE. Possible values:

- POOL
- POOL, AVAILABLE

Field Name	Format/Length	Operating System
JOB-VARIABLE-ARRAY	(A61)	

Relevant for functions JOBVAR, JOBVARC, INQUIRE. Maximum of 20 JV expressions, where a JV expression can be a JV name or a JV name prefixed by THRU= or RENAME=.

Field Name	Format/Length	Operating System
LIST	(A10)	

Relevant for functions SAVE, EXPORT, RESTORE, IMPORT, PURGE, LIST, INQUIRE. Destination for ARCHIVE report. Possible values:

- BOTH
- NONE
- SYSLST
- SYSOUT

Some functions allow the adding of ,ALL, see the ARCHIVE documentation.

Note: If ARCHIVE is called with the Entire System Server in multi-user mode, the destinations SYSLST and SYSOUT will be those of the Entire System Server task.

Field Name	Format/Length	Operating System
NEW-DIRECTORY	(A3)	

Relevant for functions SAVE, EXPORT, POOL.

Value	Explanation
NO	Default. DIRECTORY field specifies existing directory.
YES	DIRECTORY field specifies new directory.

Field Name	Format/Length	Operating System
NOW	(A3)	

Relevant for functions SAVE, EXPORT, RESTORE, IMPORT, POOL, PURGE, LIST. Possible values:

Value	Explanation
YES	Default. Start immediately after function CLOSE is specified.
NO	Put ARCHIVE command to file for later execution with function PROCESS (or cancel with DELETE).
<i>t</i>	Time in seconds: same as NO, where the time specified is an execution time limit for an ARCHIVE task started later.

Field Name	Format/Length	Operating System
PASSWORD-ARRAY	(A8)	

Relevant for functions `SAVE`, `EXPORT`, `RESTORE`, `IMPORT`, `POOL`, `PURGE`, `LIST`, `INQUIRE`. If files or job variables are password-protected, maximum of 10 passwords. Only the first password will be used with function `INQUIRE`.

Field Name	Format/Length	Operating System
POOL-OPERATION	(A6)	

Relevant for function `POOL`. Possible values:

- `ADD`
- `REMOVE`

Field Name	Format/Length	Operating System
REPLACE	(A4)	

Relevant for functions `RESTORE`, `IMPORT`. Possible values:

Value	Explanation
<code>NO</code>	Default. Objects are not replaced.
<code>ALL</code>	Objects are replaced regardless of access and <code>retpd</code> .
<code>ALLP</code>	For <code>TSOS</code> only: objects are replaced regardless of access, <code>retpd</code> and passwords.
<code>YES</code>	Objects are replaced, if allowed by access, <code>retpd</code> and password definition.

Field Name	Format/Length	Operating System
RETENTION-PERIOD	(N5)	

Relevant for functions `SAVE`, `EXPORT`. Retention period for save version in number of days.

Field Name	Format/Length	Operating System
SAVE-ACL	(A3)	

Relevant for function `SAVE`. Only for `SECOS/FACS`. Save ACL entries. Possible values:

Value	Explanation
NO	Default. ACL entries are not saved.
YES	ACL entries are saved.

Field Name	Format/Length	Operating System
SAVE - DIRECTORY	(A3)	

Relevant for functions SAVE, EXPORT. Possible values:

Value	Explanation
NO	Directory is not saved.
YES	Save directory also.

Field Name	Format/Length	Operating System
SAVE - ID	(A15)	

Relevant for functions SAVE, EXPORT, PROCESS, DELETE. ARCHIVE Save Identifier, in case the keyword SVID was specified in field FROM-OPTION or CONTINUE.

Field Name	Format/Length	Operating System
SAVE - PASSWORD	(A8)	

Relevant for functions SAVE, EXPORT, RESTORE, IMPORT. Password for the SAVE run.

Field Name	Format/Length	Operating System
SHARE	(A3)	

Relevant for functions SAVE, EXPORT. Possible values:

Value	Explanation
NO	Saved objects and volumes are not sharable.
YES	Saved objects and volumes are sharable.

Field Name	Format/Length	Operating System
SPACE	(A5)	

Relevant for functions RESTORE, IMPORT. Possible values:

Value	Explanation
REORG	Default.
KEEP	

Field Name	Format/Length	Operating System
STATUS-TYPE	(A6)	

Relevant for function STATUS. Type of ARCHIVE tasks for which status information is required.
Possible values:

Value	Explanation
LATER	Default.
ACTIVE	

Field Name	Format/Length	Operating System
STATUS-USER	(A8)	

Relevant for function STATUS. Only for TSOS: user ID for which status information is required.

Field Name	Format/Length	Operating System
SV-OPTION	(A100)	

Relevant for functions INQUIRE and PURGE. For possible values, see the SV option of the corresponding ARCHIVE commands.

Field Name	Format/Length	Operating System
TAPE-BLOCK-SIZE	(N2)	

Relevant for functions SAVE, EXPORT. Block size in number of PAM pages. Maximum is 15.

Field Name	Format/Length	Operating System
TAPES	(A8)	

Relevant for functions SAVE, EXPORT. Possible values:

Value	Explanation
OPERATOR	Volumes are required from operator.
POOL	Volumes are taken from pool of directory.
VSN-LIST	Volumes are specified in field VOLSER-ARRAY.

Field Name	Format/Length	Operating System
VOLSER-ARRAY	(A6)	

Relevant for functions SAVE, EXPORT, POOL. A maximum of 10 volumes can be specified. Required also for functions RESTORE, IMPORT, UST when field FROM-OPTION=VSN-LIST.

Example

The following ARCHIVE commands are created by the example program shown below:

PARAM UNLOAD=YES
FILES NAME=(MYFILE.1,MYFILE.2,MYFILE.SHARE.), NAME=(BADFILE,RENAME=NICEFILE)
EXPORT SHARE=YES,DEVICE=T-C1,LIST=BOTH, TAPES=(MYTAPE)

```

DEFINE DATA
    LOCAL USING ARCHIV-L
END-DEFINE
*
* --- build first part of FILES command and set PARAM options ---
*
PROCESS ARCHIVE
    USING NODE          = 148
        , FUNCTION      = 'FILES'
        , PAR-UNLOAD    = 'YES'
        , FILE-ARRAY    = 'MYFILE.1'      /* FIRST FILE
        , FILE-ARRAY    = 'MYFILE.2'      /* SECOND FILE
        , FILE-ARRAY    = 'MYFILE.SHARE.' /* ALL FILES STARTING *
            WITH THIS PREFIX
*
IF ERROR-CODE NE 0
    WRITE ERROR-TEXT
    ESCAPE ROUTINE
END-IF
*
* --- continue FILES command ---

```

```

*
PROCESS ARCHIVE
  USING NODE          = 148
    , FUNCTION        = 'FILESC'
    , FILE-ARRAY      = 'BADFILE'          /* rename this file
    , FILE-ARRAY      = 'RENAME=NICEFILE' /* .. with this name
*
IF ERROR-CODE NE 0
  WRITE ERROR-TEXT
  ESCAPE ROUTINE
END-IF
*
* --- build EXPORT command ----
*
PROCESS ARCHIVE
  USING NODE          = 148
    , FUNCTION        = 'EXPORT'
    , LIST            = 'BOTH'
    , SHARE           = 'YES'
    , DEVICE          = 'T-C1'
    , VOLSER-ARRAY    = 'MYTAPE'
*
IF ERROR-CODE NE 0
  WRITE ERROR-TEXT
  ESCAPE ROUTINE
END-IF
*
* --- ready to go ---
*
PROCESS ARCHIVE
  USING NODE          = 148
    , FUNCTION        = 'CLOSE'          /* execute ARCHIVE
*
IF ERROR-CODE NE 0
  WRITE ERROR-TEXT
  ESCAPE ROUTINE
END-IF
END

```

Relevant Error Codes

Code	Text	z/OS
782	CSVAPF LIST <retcode>< reason-code>	X

Field Descriptions

Field Name	Format/Length	Operating System
DSNAME	(A44)	z/OS

Name of the data set or its prefix.

All APF authorized data sets are returned as an unordered list.

Field Name	Format/Length	Operating System
VOLSER	(A6)	z/OS

Volume of the data set, or *SMS* if the volume resides on an SMS controlled device.

Example: Using AUTHORIZED-LIBRARIES View

Assume the following datasets exist:

The example program ...

```
FIND AUTHORIZED-LIBRARIES WITH  
    DSNAME=PPEX.*
```

```
DISPLAY DSNAME VOLSER
```

... returns the following information:

DSNAME	VOLSER
PPEX.IAF901.LOAD	*SMS*
PPEX.IAF901.LOAD.DEV	*SMS*
PPEX.IMS.RESLIB	DBDC10
PPEX.MLC124.LOAD	*SMS*

File	8
Op-Sys	z/OS, z/VSE, BS2000 Note: Support for z/VSE is deprecated. Support for BS2000 is also deprecated, except in conjunction with the ESM adapter. Features that are z/VSE and BS2000 specific will be removed from future releases.
Statement	FIND
Task	This view displays the catalog information of a specified file. In BS2000, the information retrieved is the same as returned by the BS2000 system command /FSTAT or /SHOW-FILE-ATTRIBUTES. In z/VSE, if either VSAM-CATALOG or USER-CATALOG is specified, or OPTION='MASTER', information is returned from the appropriate VSAM catalog. Otherwise, information is returned only for files currently known to Entire System Server in its internal table - files in standard and partition standard/class labels, temporary labels defined before the // EXEC card, and files accessed during the current Entire System Server session.

Field Descriptions

Field Name	Format/Length	Operating System
ACCESS-TYPE	(A5)	BS2000

List all files accessible by READ or WRITE. Possible options:

- R or READ
- W or WRITE

Field Name	Format/Length	Operating System
BACKUP-TYPE	(A11)	BS2000

Search criteria only, this field is returned unchanged. Files of the specified type(s) are listed. Possible types: A, B, C, D, E. Multiple types must be given as: A, B, C.

Field Name	Format/Length	Operating System
BLOCK-CONTROL-OPTION	(A21)	BS2000

Search criteria only, this field is returned unchanged. Retrieves files with specified control type. Possible values:

- DATA
- NO
- NONE
- PAMKEY

Multiple values must be separated by commas and enclosed in brackets, for example:
(PAMKEY, DATA).

Field Name	Format/Length	Operating System
CLASS	(A4)	z/OS, z/VSE

Device class (for example, DASD).

Field Name	Format/Length	Operating System
CREATION-RANGE	(A19)	BS2000

Further defines ranges for catalog entries. Lists all files with a creation date as follows:

Creation Date	Explanation
(, YY-MM-DD)	Files created before the specified date.
(YY-MM-DD ,)	Files created since the specified date.
(YY-MM-DD , YY-MM-DD)	Files created between the specified dates.
YY-MM-DD	Files created on the specified date.

Field Name	Format/Length	Operating System
DEVICE	(B4)	z/OS

The internal UCBTYP device code which identifies the device type on which the dataset resides.

Field Name	Format/Length	Operating System
DEVICE-TYPE	(A4)	z/VSE

The type of the device where the NONVSAM file resides.

Field Name	Format/Length	Operating System
DSNAME	(A54)	z/OS, z/VSE, BS2000

Dataset name or dataset name prefix.

z/OS	<p>If the value specified is a prefix, information on all datasets with that prefix (including DSNAME itself) is retrieved (see the field PREFIX).</p> <p>As an extension to the search criteria described in Search Criteria with the FIND Statement in Section Getting Started, a double asterisk (**) may be used to represent zero or more qualifiers, whereas a single asterisk is used to specify either a qualifier or one or more characters within a qualifier. A double asterisk cannot precede or follow any characters; it must be preceded or followed by either a period or a blank.</p> <p>Note: Dataset names are returned in the order of their corresponding catalog records, i.e. not necessarily in ascending order.</p>
BS2000	<p>This field specifies the file name.</p> <p>An asterisk * can be used as wildcard as in the /FSTAT command.</p>

Field Name	Format/Length	Operating System
EXPIRATION-RANGE	(A19)	BS2000

Further defines ranges for catalog entries. List files with an expiration date as follows:

Expiration Date	Explanation
(, YY-MM-DD)	Files expired before specified date.
(YY-MM-DD ,)	Files expired since specified date.
(YY-MM-DD , YY-MM-DD)	Files expired between the specified dates.
YY-MM-DD	Files expired on the specified date.

Field Name	Format/Length	Operating System
EXTENT-RANGE	(A13)	BS2000

Further defines ranges for catalog entries. List files with number of extents within a given range.

(, <i>n</i>)	Files with fewer extents than specified number.
(<i>n</i> ,)	Files with more extents than specified number.
(<i>n</i> , <i>m</i>)	Files with extents between specified numbers.
<i>n</i>	Files with <i>n</i> extents.

Field Name	Format/Length	Operating System
FCBTYPE	(A11)	BS2000

Search criteria only, this field is returned unchanged. List all files with specified type(s). Possible options:

- B or BTAM
- I or ISAM
- N or NONE
- P or PAM
- S or SAM

Specification of multiple types is possible, for example, (P , I).

Field Name	Format/Length	Operating System
FILE-NAME	(A7)	z/VSE

File name as specified in the DLBL statement for the dataset.

Field Name	Format/Length	Operating System
FILE-SIZE	(N10)	BS2000

Number of PAM pages allocated by a file.

Field Name	Format/Length	Operating System
FREE-SIZE-RANGE	(A19)	BS2000

Further defines ranges for catalog entries. List files with a number of free PAM pages expressed as follows:

(, <i>n</i>)	Files with fewer free pages than specified number.
(<i>n</i> ,)	Files with more free pages than specified number.
(<i>n</i> , <i>m</i>)	Files with free pages between specified numbers.
<i>n</i>	Files with <i>n</i> free pages.

Field Name	Format/Length	Operating System
FILE-SYSTEM	(A3)	z/OS

Indicates if the catalog entry describes a z/OS UNIX file system data set (HFS or #). Possible values:

<i>blank</i>	Not a file system data set.
HFS	HFS data set.
zFS	zFS data set.

Field Name	Format/Length	Operating System
GEN	(A3)	BS2000

Specify YES to list the files of a generation group.

Field Name	Format/Length	Operating System
LABEL - AREA	(A8)	z/VSE

Indicates the LABEL AREA where the LABEL is situated. Possible values:

Value	Explanation
PARSTD	Partition standard.
STD	Standard.
TEMP	Temporary.

Field Name	Format/Length	Operating System
LAST - ACCESS - RANGE	(A19)	BS2000

Further defines ranges for catalog entries. List files with last access date within a time range given as follows:

(, YY-MM-DD)	Files accessed before specified date.
(YY-MM-DD ,)	Files accessed since specified date.
(YY-MM-DD , YY-MM-DD)	Files accessed between the specified dates.
YY-MM-DD	Files accessed on the specified date.

Field Name	Format/Length	Operating System
LIBRARIAN	(A3)	z/VSE

Possible options:

Option	Explanation
NO	If dataset is not a z/VSE LIBRARIAN file.
YES	If dataset is a z/VSE LIBRARIAN file.

Field Name	Format/Length	Operating System
NUMBER-OF-VOLUMES	(N3)	z/OS, z/VSE

Number of volumes of dataset.

Field Name	Format/Length	Operating System
OPTION	(A8)	z/OS, z/VSE

Possible options:

Option	Explanation
LONG	Scan entire catalog. This is required if a file name value such as *MACLIB* is specified. The catalog whose name is given in USER-CATALOG is scanned. If the user catalog name is not specified, the system catalog is scanned (z/OS only).
MASTER	Indicates that data is to be retrieved from the VSAM master catalog (z/VSE only).
USERCAT	Return names of all user catalogs in the USER-CATALOG field (z/OS only).

Field Name	Format/Length	Operating System
PASSWORD-OPTION	(A9)	BS2000

List the files with password options expressed as follows:

- E or EXPASS
- N or NONE
- R or RDPASS
- W or WRPASS

Multiple options can be specified, for example: (R,N).

Field Name	Format/Length	Operating System
PREFIX	(A3)	z/OS

Possible options:

Option	Explanation
YES	Default. Information on datasets with the value of the DSNAME field as prefix is retrieved.
NO	Value of the DSNAME field is taken as absolute dataset name, not a prefix.

Field Name	Format/Length	Operating System
SERIES	(A8)	z/OS

Device series (for example, 3330-1).

Field Name	Format/Length	Operating System
SHARE	(A3)	BS2000

Possible options:

Option	Explanation
NO	List non-shareable files.
YES	List shareable files.

Field Name	Format/Length	Operating System
SIZE - RANGE	(A19)	BS2000

Further defines ranges for catalog entries. List files with size within a given range. Size means number of PAM pages:

(, <i>n</i>)	Files smaller than specified number.
(<i>n</i> ,)	Files larger than specified number.
(<i>n</i> , <i>m</i>)	Files with size between specified numbers.
<i>n</i>	Files of size <i>n</i> .

Field Name	Format/Length	Operating System
STATE	(A6)	BS2000

Search criteria only, this field is returned unchanged. Specifies state of file. Possible options:

Option	Explanation
<i>blank</i>	List all files.
NOCL0S	List all open files.

Field Name	Format/Length	Operating System
SUPPORT - TYPE	(A9)	BS2000

Active search criteria. List all files that are on public or private disks or on tapes. Possible options:

Option	Explanation
PRV	Private.
PUB	Public.
TAP	Tapes.

These values can also be combined, for example: (PUB,PRV) for public and private.

The following values are returned: PUBLIC, PRDISC, MIGRAT or TAPE. MIGRAT indicates migrated files.

Field Name	Format/Length	Operating System
TYPE	(A8)	z/OS, z/VSE , BS2000

Dataset type. Possible values:

z/OS	ALIAS	Alias.
	AIX	Alternate index
	CLUSTER	VSAM cluster.
	DATA	VSAM data component.
	GDG	Generation data group.
	GDS	Generation dataset.
	INDEX	VSAM index component.
	NONVSAM	Non-VSAM dataset.
	PATH	VSAM path.
	USERCAT	User catalog.
BS2000	FGG	File generation group.
z/VSE	DA	Direct-access dataset.
	ISAM	ISAM dataset.
	SAM	SAM dataset.
	VSAM	VSAM dataset.

Field Name	Format/Length	Operating System
USER-CATALOG	(A44)	z/OS, z/VSE

z/OS only: name of the user catalog in which the dataset is cataloged (see also OPTION field).

z/VSE only: name of the VSAM catalog from which data is to be retrieved. VSAM-CATALOG takes precedence over USER-CATALOG.

Field Name	Format/Length	Operating System
VOLSER	(A6)	z/OS, z/VSE, BS2000

Volume serial number of dataset. In BS2000, this field supports search criteria. In z/VSE , when returning information from the internal file table, the field will be blank for VSAM files.

Field Name	Format/Length	Operating System
VOLUME-SEQUENCE	(N3)	z/OS, z/VSE

Volume sequence (tape datasets only).

Field Name	Format/Length	Operating System
VSAM-CATALOG	(A8)	z/VSE

For internal file table requests, the DLBL for the VSAM catalog for a VSAM file. It will be blank for a non-VSAM file.

For VSAM catalog retrieval requests, the DLBL for the VSAM catalog from which data is to be retrieved. VSAM-CATALOG takes precedence over USER-CATALOG.

Example: Using CATALOG View

Assume the following datasets exist:

- A.B.C
- A.B.C.D
- A.B.C.E

The example program ...

```
FIND CATALOG WITH
  DSNAME=<...>
  PREFIX=<...>
DISPLAY DSNAME
```

... returns the following information:

DSNAME	PREFIX	RETURNED DSNAMEs
A.B.C	NO	A.B.C
A.B.C	YES	A.B.C A.B.C.D A.B.C.E
A.B	YES	A.B.C A.B.C.D A.B.C.E
A.B	NO	(none) Error 5562 - Catalog entry not found.

DSNAME	PREFIX	RETURNED DSNAMEs
A.B.C	NO	A.B.C
A.B.C	YES	A.B.C A.B.C.D A.B.C.E
A.B	YES	A.B.C A.B.C.D A.B.C.E
A.B	NO	(none) Error 5562 - Catalog entry not found.

Field Descriptions

Field Name	Format/Length	Operating System
ACCESS-TYPE	(A5)	BS2000

Specifies authorized access type. Possible options:

Option	Explanation
READ	Read-only access is authorized.
WRITE	Read and write access is authorized.

Field Name	Format/Length	Operating System
ARCHIVE-OPTION	(A1)	BS2000

Specifies the ARCHIVE options:

Option	Explanation
L	Long. This is the default. The whole file is saved.
S	Short. Only changed PAM blocks are saved.

Field Name	Format/Length	Operating System
AUDIT-TYPE	(A4)	BS2000

Fixes the level of control of file access. Possible values:

Value	Explanation
NONE	Default. No accesses are monitored.
ALL	All accesses are monitored.
FAIL	Unsuccessful accesses are monitored.
SUCC	Successful accesses are monitored.

Field Name	Format/Length	Operating System
BACKUP-TYPE	(A1)	BS2000

Specifies when a file is saved by ARCHIVE. Possible options:

Option	Explanation
A	Default. File is saved with every ARCHIVE run.
B	Saved with run for Level B, C and D.
C	Saved with runs for Level C and D.
D	Saved with runs for Level D.
E	Not automatically saved.

Field Name	Format/Length	Operating System
DESTROY	(A3)	BS2000

Possible options:

Option	Explanation
NO	Default. The file is not automatically destroyed when erased.
YES	Space used for file is written with X '00 ' when the file is erased.

Field Name	Format/Length	Operating System
DEVICE	(A8)	z/OS

Device code, for example, 3400-3. For BS2000, this only applies to file generation groups (see the STATE field).

Field Name	Format/Length	Operating System
DSNAME	(A54)	z/OS, BS2000

Fully qualified dataset name. BS2000: fully qualified file name.

Field Name	Format/Length	Operating System
EXECUTION-PASSWORD	(A8)	BS2000

EXECUTION password to be defined for the file. Use *NONE to reset existing password. See also the PASSWORD field.

Field Name	Format/Length	Operating System
FGG-BASE	(B2)	BS2000

File generation groups only: base for relative access to files of FGG.

Field Name	Format/Length	Operating System
FGG-DISPOSITION	(A8)	BS2000

File generation groups only: describes what to do, if maximum number of generations is reached.
Possible values:

Value	Explanation
CYCLE	(Default)
DELETE	
KEEP	
REUSE	

Field Name	Format/Length	Operating System
FGG-GENERATIONS	(B2)	BS2000

File generation groups only: number of generations.

Field Name	Format/Length	Operating System
FILE-SEQUENCE	(N3)	z/OS

Used for tape files. This value is used for the first volume only.

Field Name	Format/Length	Operating System
FUNCTION	(A8)	z/OS

Function to be performed. Possible values:

Value	Explanation
CATLG	Catalog new entry.
RECATLG	Recatalog an existing entry.
UNCATLG	Remove a catalog entry.

Field Name	Format/Length	Operating System
PASSWORD	(A8)	BS2000

If the file is already password-protected, the actual password needed for write access must be specified here.

Field Name	Format/Length	Operating System
READ - PASSWORD	(A8)	BS2000

READ password (4 bytes) to be defined for the file. Use *NONE to reset existing password. See also the PASSWORD field.

Field Name	Format/Length	Operating System
RETPD	(N4)	BS2000

Number of days the file must remain unchanged. Default is 0.

Field Name	Format/Length	Operating System
SHARE	(A3)	BS2000

Specifies whether other users can access files. Possible options:

Option	Explanation
NO	Other users are not authorized.
YES	Other users are authorized.

Field Name	Format/Length	Operating System
VOLUMES	(A240)	z/OS

Volume list. The maximum is 40 entries of 6 bytes each.

Field Name	Format/Length	Operating System
WRITE - PASSWORD	(A8)	BS2000

WRITE password to be defined for the file. Use *NONE to reset existing password. See also the PASSWORD field.

Field Name	Format/Length	Operating System
NUM-OF-BACKUP-VERS	(N3)	BS2000

Number of versions of a file saved in a backup archive.

15

CHECK-SECURITY

■ Common Fields for all Operating Systems	120
■ Additional Fields Supported for z/OS	120
■ Field Descriptions	120

File	45
Op-Sys	z/OS
Statement	PROCESS
Task	Asks an external security system (RACF, ACF2, TOP-SECRET) whether user is authorized to use a given resource, for example, a dataset.

Common Fields for all Operating Systems

Dictionary Field Name	F/L	Mu	DE	Remarks
ERROR-CODE	N3			
ERROR-TEXT	A58			
NODE	N5		D	
NODE-NAME	A16		D	
SYSTEM-MESSAGE-CODE	A10			

Additional Fields Supported for z/OS

Dictionary Field Name	F/L	Mu	DE	Remarks
ENTITY	A200		D	
CLASS	A8		D	
ATTRIBUTE	A8		D	
INSTALLATION-PARMS	A250		D	
ALLOWED	A8			

Field Descriptions

Field Name	Format/Length	Operating System
ALLOWED	(A8)	z/OS

Output field. Access allowed indicator. One of these values will appear in this field:

Value	Explanation
ERROR - <i>nn</i>	Error returned by security system.
NO	Access not allowed.
NOSEC	Security not installed.
YES	Access allowed.

Field Name	Format/Length	Operating System
ATTRIBUTE	(A8)	z/OS

Entity attribute. Check whether user is allowed to access the resource with one of the following attributes as defined in the security system:

Attribute	Explanation
ALTER	Permission to change external attributes of resource.
CONTROL	Permission to create resource.
READ	Permission to read resource.
UPDATE	Permission to update resource.

Field Name	Format/Length	Operating System
CLASS	(A8)	z/OS

Class of entity, for example DATASET. Default is FACILITY.

Field Name	Format/Length	Operating System
ENTITY	(A200)	z/OS

Entity to be security checked.

Field Name	Format/Length	Operating System
INSTALLATION-PARMS	(A250)	z/OS

Installation parameters to be passed to security system.

Dictionary Field Name	F/L	Mu	DE	Remarks
SYSTEM-CODE	B2			

Relevant Error Codes

Code	Text	z/OS	z/VSE	BS2000
600	Unknown function.	X	X	X
621	Identifier missing / duplicate / not found.	X	X	X
622	NUMBER-OF-ENTRIES missing or invalid.	X	X	X
623	ENTRY-LENGTH missing or invalid.	X	X	X
624	ENTRY-NUMBER missing or invalid.	X	X	X
625	Cannot allocate area.	X	X	X
626	DATA missing.	X	X	X
627	Field position + length > 250.	X	X	X
629	Area is protected.	X	X	X
746	Serialization running in error.	X	X	X

Field Descriptions

Field Name	Format/Length	Operating System
CURRENT-ENTRIES	(N5)	z/OS, z/VSE, BS2000

Output field. The value of CURRENT-ENTRIES is set from the functions CLOSE, MODIFY, GET and LIST.

Field Name	Format/Length	Operating System
DATA	(A250)	z/OS, z/VSE, BS2000

Relevant for the functions MODIFY and GET. The contents of the entry.

Function MODIFY is expecting the input record in DATA.

Function GET provides the contents of the record in output field DATA.

Field Name	Format/Length	Operating System
DATA-ID	(A12)	z/OS, z/VSE, BS2000

DATA-ID identifies the name associated with an area of records in the COMMON-DATA. Required as input field in all functions except LIST.

Function LIST returns all existing DATA-IDs.

Field Name	Format/Length	Operating System
DELETE-ENTRY	(A3)	z/OS, z/VSE, BS2000

Only used in the function MODIFY as input field.

Functions MODIFY and DELETE-ENTRY='YES' are used to remove the requested record identified by ENTRY-NUMBER.

Field Name	Format/Length	Operating System
ENTRY-LENGTH	(N3)	z/OS, z/VSE, BS2000

The length of each entry in the area. Required input field in the function CREATE. Used as output field in functions CLOSE, MODIFY, GET, LIST.

Field Name	Format/Length	Operating System
ENTRY-NUMBER	(N5)	z/OS, z/VSE, BS2000

Relevant for functions MODIFY and GET.

ENTRY-NUMBER is required as input field if the function MODIFY and DELETE-ENTRY='YES' is used. Otherwise it is not required and is determined implicitly.

The example program below exploits this feature. ENTRY-NUMBER is omitted for the function MODIFY to write all data records and for function GET to read all data records.

Field Name	Format/Length	Operating System
FUNCTION	(A8)	z/OS, z/VSE, BS2000

Function to be performed. Possible options:

Option	Explanation
CLOSE	Free unused space in a given area.
CREATE	Create a new area identified by DATA-ID with size (NUMBER-OF-ENTRIES * ENTRY-LENGTH).
DELETE	Delete area identified by DATA-ID.
GET	Get record from given area.
LIST	Generate list of active areas.
MODIFY	Add, modify or delete a record in a given area.

Field Name	Format/Length	Operating System
NUMBER-OF-ENTRIES	(N5)	z/OS, z/VSE, BS2000

The maximum number of entries in the area. Required as input field in function CREATE.

Used as output field in functions CLOSE, MODIFY, GET, LIST.

Field Name	Format/Length	Operating System
PROTECT	(A8)	z/OS, z/VSE, BS2000

Field used to set or display protection attributes of an area in COMMON-DATA.

It is an input field when function CREATE is requested. It is an output field to display protection attributes via function LIST. If protection is omitted, all users are permitted to issue all functions to that area.

The following options are available to restrict the use of an area for other users:

Option	Explanation
DELETE	Area is DELETE protected. The functions GET, LIST and MODIFY are permitted. Other users can read and modify area but cannot delete it.
MODIFY	Area is MODIFY protected. Functions GET and LIST are permitted. Other users can issue function GET to read that area. It is not possible to modify and to delete it.
READ	Area is READ protected. Other users cannot issue any function except LIST. It is not possible to read, modify and delete that area.

Example

The following example illustrates the usage of the different COMMON-DATA functions.

It consists of the following steps:

- list existing COMMON-DATA areas and status information FUNCTION='LIST'
- create an area in the COMMON-DATA pool FUNCTION='CREATE'
- write 5 records into the area FUNCTION='MODIFY'
- remove the third record FUNCTION='MODIFY'
- compress the area to the used size of 4 records FUNCTION='CLOSE'
- list the area and status information FUNCTION='LIST'
- display the contents of the records in the area FUNCTION='GET'
- remove the area and all records FUNCTION='DELETE'

Entry-number Data
-----
1      Message number 1
2      Message number 2
3      Message number 4
4      Message number 5

```

Five records have been written to the area MSGBOX1. After removing the third record and compressing the area, four records are available containing the messages 1, 2, 4, 5.

Supplementary Information about COMMON-DATA

What does COMMON-DATA do?

COMMON-DATA allows you to establish areas to save data records with a fixed record length. These records can be accessed from different applications. The usage is determined by the applications only, for example, when to create and to destroy data records. It is a service for an effective data exchange. The areas are labeled with unique names provided in field DATA-ID.

Which Natural statements must be used with the various FUNCTIONS?

The functions LIST and GET should be requested with a FIND statement. All other functions (CLOSE, CREATE, DELETE, MODIFY) are designed as single requests and should be performed with a PROCESS statement.

How does writing to COMMON-DATA work?

The function MODIFY is used to write records into the data area. The records will be saved in sequential order. The ENTRY-NUMBER can be omitted for writing records with the function MODIFY. The creation of the COMMON-DATA records with explicitly defined entry numbers requires an ascending sequential order. For example, it is not possible to write a record with Entry Number 3 if only Entry Number 1 has been written already.

TIME-STAMP	A8		D	Relevant with FUNCTION=DIS-WTOR.

Relevant Error Codes

Code	Text	z/OS	z/VSE	BS2000
530	Access denied by Security Facility.	X		X
537	Time limit reached.			X
600	Unknown function.	X	X	X
630	Console not defined or inactive.	X		X
688	Return code <i>xx</i> HCF function <i>xxxxxxxx</i> .		X	
699	GETVIS failed.	X	X	
750	Invalid operand within operand list.			X
778	Not APF authorized.	X		
799	Entire System Server internal error.			X
809	Subsystem not active.			X
986	No or not enough space for COMMAND IN MP.			X

Field Descriptions

Field Name	Format/Length	Operating System
CONSOLE-ID	(B1)	z/OS

Only relevant for the `DISPLAY` function. The identifier of the console to be displayed. If the identifier is omitted, the master console is displayed. The field is ignored in BS2000.

Field Name	Format/Length	Operating System
DESCR-CODE-STRING	(A16)	z/OS, z/VSE

Descriptor codes for the console message. Each byte of the string corresponds to one of the descriptor codes 1-16. A byte contains 1 if the corresponding descriptor code is assigned, or 0 if it is not assigned.

Field Name	Format/Length	Operating System
FUNCTION	(A8)	z/OS, z/VSE, BS2000

The function to be performed. Possible values are:

Value	Explanation
DISPLAY	Display console screen image.
DIS-WTOR	Display pending operator replies.
OP-CMD	Issue operator command.
WTO	Write to operator.
WTOR	Write to operator with reply (not for z/VSE).

The default length of a command line is 80 characters. However, it can be expanded up to 120 characters if field `TEXT-LENGTH` is accordingly specified as displayed in the following sample code for function `OP-CMD`:

```
PROCESS CONSOLE USING NODE = #NODE
, FUNCTION = 'OP-CMD'
, TEXT = #COMMAND-LINE
, TEXT-LENGTH = 120
GIVING ERROR-CODE ERROR-TEXT
```

In BS2000, the functions `DISPLAY`, `DIS-WTOR` and `OP-CMD` require that the `UCON` interface task of the Entire System Server is active.

Field Name	Format/Length	Operating System
HOLD-FLAG	(A1)	z/OS, z/VSE

Indicates if message is held by the system (has descriptor codes 1, 2, 3 or 11). Possible values:

Value	Explanation
N	No
Y	Yes

Field Name	Format/Length	Operating System
JOB-ID	(A8)	z/OS, z/VSE, BS2000

Only relevant for function `DISPLAY` and `DIS-WTOR`. Job number (TSN) of job for which the message was created.

Field Name	Format/Length	Operating System
JOB-NAME	(A8)	z/OS, z/VSE, BS2000

z/OS/z/VSE	BS2000
Only relevant for function DIS-WTOR. The job that issued the WTOR.	Only relevant for the function DIS-WTOR or DISPLAY. The job for which the console message was created if the job is still active.

Field Name	Format/Length	Operating System
JOB-TYPE	(A6)	z/OS, z/VSE, BS2000

Only relevant for function DISPLAY and DIS-WTOR. Type of job for which message was created, if this job is still active.

Field Name	Format/Length	Operating System
NETTO-TEXT	(A253)	z/OS, z/VSE, BS2000

Only relevant for function DISPLAY and DIS-WTOR. Message text without the additional information added by the operating system at the creation of the console message.

Field Name	Format/Length	Operating System
READ-DIRECTION	(A1)	z/OS, z/VSE, BS2000

Only relevant for function DISPLAY. Direction for reading console messages. Possible values:

Value	Explanation
B	Default. Backwards (that is, towards oldest message).
F	Forwards (that is, towards message last received).

The starting position of READ-DIRECTION can be specified in the RECORD-NUMBER field.

Field Name	Format/Length	Operating System
RECORD-NUMBER	(N9)	z/OS, z/VSE, BS2000

Only relevant for function DISPLAY. The number of the console message is returned in this field. If used as input (descriptor), a start position can be given. Possible values:

Value	Explanation
0 :	Start with latest record.
<i>n</i> :	Start with record <i>n</i> .
- <i>n</i> :	Start with latest record minus <i>n</i> records.

If the last record + 1 is selected and the value of the field `WAIT-TIME` is greater than 0, the system waits for the next message.

If the specified start position lies before the oldest available record, the oldest record is taken as the start position.

Field Name	Format/Length	Operating System
REPLY	(A80)	z/OS, BS2000

Only relevant for function `WTOR`: the operator reply.

Field Name	Format/Length	Operating System
REPLY-FLAG	(A1)	z/OS, z/VSE, BS2000

Only relevant for function `DISPLAY` and `DIS-WTOR`. Possible values:

Value	Explanation
N	Message requires no reply.
Y	Message requires a reply.

Field Name	Format/Length	Operating System
REPLY-ID	(A8)	z/OS, z/VSE, BS2000

Only relevant for function `DIS-WTOR`. The identifier which must be used to reply to a write-to-operator-with-reply.

Field Name	Format/Length	Operating System
RESPONSE-FLAG	(A1)	z/OS, z/VSE

Indicates whether message text is the response to a command. Possible values:

Value	Explanation
N	No
Y	Yes

Field Name	Format/Length	Operating System
ROUTE-CODE-STRING	(A28)	z/OS, z/VSE

Routing codes for the console message. Each byte of the string corresponds to one of the routing codes 1 - 28. A byte contains 1 if the corresponding routing code is assigned, or 0 if it is not assigned.

Field Name	Format/Length	Operating System
SEQUENCE-NUMBER	(A8)	z/OS, z/VSE

Sequence number of the message since the last IPL.

Field Name	Format/Length	Operating System
TEXT	(A253)	z/OS, z/VSE, BS2000

The command to be entered for function OP-CMD (operator command), default length = 80 characters.

Field Name	Format/Length	Operating System
TEXT-FLAG	(A1)	z/OS, z/VSE

Describes the type of message text. Possible values:

Value	Explanation
C	Control text (multi-line)
D	Data text (" ")
E	End text (" ")
L	Label text (" ")
M	First line (" ")
N	Normal text (single line)

Field Name	Format/Length	Operating System
TEXT-LENGTH	(N3)	z/OS, z/VSE, BS2000

Length of field TEXT, maximum value = 120 characters. Note that using this field an operator command can exceed the default length (80 characters) up to a maximum length of 120 characters.

Field Name	Format/Length	Operating System
TIME-STAMP	(A8)	z/OS, BS2000

Only relevant for function DIS-WTOR (z/OS). Time stamp of the console message in format *HH:MM:SS*.

Field Name	Format/Length	Operating System
TIMX	(T)	z/OS, z/VSE, BS2000

Time stamp in Natural internal format.

Field Name	Format/Length	Operating System
WAIT-TIME	(B4)	z/OS, z/VSE, BS2000

Only relevant for function DISPLAY. Time in seconds to wait for the next message (see also the field RECORD-NUMBER). If no message arrives within the specified time, ERROR-CODE 537 is issued.

Up to ten delimiter characters to be used for tokenizing the record.

Field Name	Format/Length	Operating System
TEXT-PART2	(A3)	BS2000

Bytes 254 - 256 of the text line.

Field Name	Format/Length	Operating System
NETTO-TEXT-PART2	(A3)	BS2000

Bytes 254 - 256 of the NETTO-TEXT.

Default Order of Data Returned

Messages are returned in timestamp order (oldest to newest).

18

Field Descriptions

Field Name	Format/Length	Operating System
CONSOLE - TYPE	(A8)	z/VSE

Possible type of console:

Console	Explanation
HCF - ONLY	Hard copy facility only.
LOCAL	Local console.
REMOTE	Remote console.
REPLY	Reply console.

Field Name	Format/Length	Operating System
DATE	(A6)	z/VSE

Date the message was issued.

Field Name	Format/Length	Operating System
DATA - SET	(N5)	z/OS, z/VSE

Requested dataset number of job SYSLOG.

Field Name	Format/Length	Operating System
DATA - SET - KEY	(N1)	z/OS

Unique dataset identification, offering much faster access than the dataset number. The dataset key can be obtained from the `SP00L - FILES` view using job name `SYSLOG`.

Field Name	Format/Length	Operating System
LOG-DATX	(D)	z/OS

Date in Natural internal format.

Field Name	Format/Length	Operating System
LOG-JOB-NAME	(A8)	z/OS

Job name corresponding to the job number contained in the record. This only applies if the job is still active at calling time.

Field Name	Format/Length	Operating System
LOG-JOB-NUMBER	(N7)	z/OS

Job number, if contained in record.

Field Name	Format/Length	Operating System
LOG-RECORD-TYPE	(A1)	z/OS

Possible values:

Value	Explanation
N	Single-line message.
W	Single-line message with reply.
D	Data line of multi-line message.
E	Data/end line of multi-line message.
L	Label line of multi-line message.
M	The first line of a multi-line message.
O	Log command input.
S	Continuing previous line.
X	Entry from a source other than hardcopy or log command.

Field Name	Format/Length	Operating System
LOG-SOURCE	(A8)	z/OS

Source of the CONSOLE-LOG: SYSLOG or OPERLOG. SYSLOG is the default.

Field Name	Format/Length	Operating System
LOG-REPLY-ID	(A8)	z/OS

Reply ID of WTOR.

Field Name	Format/Length	Operating System
LOG-REQUEST-TYPE	(A1)	z/OS, z/VSE

Possible values for z/OS:

Value	Explanation
C	Command issued by operator.
R	Command response.
I	Command issued internally.

Under z/VSE , this field contains the message level.

Field Name	Format/Length	Operating System
LOG-ROUTE-CODE	(A8)	z/OS

Route codes.

Field Name	Format/Length	Operating System
LOG-TEXT	(A128)	z/OS

The pure log record.

Field Name	Format/Length	Operating System
LOG-TIME	(A8)	z/OS

Time stamp in log record.

Field Name	Format/Length	Operating System
LOG-TIMX	(T)	z/OS, z/VSE

Time in Natural internal format.

Field Name	Format/Length	Operating System
MESSAGE-TYPE	(A8)	z/VSE

Possible message types:

- ACTION
- CONT
- E-ACTION
- DECISION
- INFO
- IPL

Field Name	Format/Length	Operating System
NUMBER-OF-TOKENS	(N3)	z/OS, z/VSE

Number of tokens in record.

Field Name	Format/Length	Operating System
PARTITION	(A2)	z/VSE

Partition which issued the message.

Field Name	Format/Length	Operating System
POSITION	(B1)	z/OS, z/VSE

Offset in log record. The RECORD field will contain log record starting at this offset.

Field Name	Format/Length	Operating System
RECORD	(A253)	z/OS, z/VSE

Log record.

Field Name	Format/Length	Operating System
RECORD-LENGTH	(N3)	z/OS, z/VSE

Length of log record.

Field Name	Format/Length	Operating System
RECORD-NUMBER	(N9)	z/OS, z/VSE

Retrieve records from log starting at this relative record number. If a negative value (-nnnnnnnn) is specified, the nnnnnnnn most current log records are retrieved.

In z/VSE, RECORD-NUMBER may take one of two positive sets of values:

- If the value is greater than or equal to the INTERNAL-RECORD-NUMBER of the first record in the hardcopy file, the records returned are based on INTERNAL-RECORD-NUMBER.
- If the value is less, then the value is considered a logical record number and records are returned based from the beginning of the hardcopy file.

Field Name	Format/Length	Operating System
SCAN	(A3)	z/OS, z/VSE

Specify YES to return the first record that meets the selection criteria and all the following records.

Field Name	Format/Length	Operating System
SCAN-COLUMN-FROM	(N3)	z/OS, z/VSE

Relevant if SCAN-TYPE=A. Specifies the column number where the scan is to start. Default is 1.

Field Name	Format/Length	Operating System
SCAN-COLUMN-TO	(N3)	z/OS, z/VSE

Relevant if SCAN-TYPE=A. Specifies the column number where the scan is to end. Default is the end of the record.

Field Name	Format/Length	Operating System
SCAN-LENGTH	(N3)	z/OS, z/VSE

Relevant if SCAN-TYPE=A. Specifies the length of the scan string in field RECORD.

Field Name	Format/Length	Operating System
SCAN-LIMIT	(N7)	z/OS, z/VSE

Specifies the maximum number of records to be scanned before the record is selected. If the limit is reached and no record found, error code 533 is issued.

Field Name	Format/Length	Operating System
SCAN-TYPE	(A1)	z/OS, z/VSE

Specify A to perform an absolute scan. The wildcard symbols asterisk (*) and underscore (_) are treated as normal characters.

Field Name	Format/Length	Operating System
TIME	(A8)	z/VSE

Time the message was issued.

Field Name	Format/Length	Operating System
TOKEN-VECTOR	(A225)	z/OS, z/VSE

Tokenized log record (15 tokens each with a length of 15 bytes).

Field Name	Format/Length	Operating System
TOKEN-DELIMITERS	(A10)	z/OS, z/VSE

Default Order of Data Returned

Messages are returned in the order in which they are found in the console hardcopy file.

Op-Sys	z/OS, z/VSE , BS2000 Note: Support for z/VSE is deprecated. Support for BS2000 is also deprecated, except in conjunction with the ESM adapter. Features that are z/VSE and BS2000 specific will be removed from future releases.
Statement	PROCESS
Task	Copy files or library members. The copy operation can be done without restrictions, that is, across operating systems, with the exception of executable items (e.g., copying a z/OS load module to a z/VSE phase is prohibited). Both source and target files must exist before this function is executed. z/OS: Load modules can only be copied from PDS to PDS, while program objects can only be copied from PDSE to PDSE. Mixing of PDS and PDSE formats is unavailable due to IBM restrictions. BS2000: Copying to a BS2000 target can only be performed, if the target is locally available.

998	Member not found	X	X	

Note: Any possible return code from READ-FILE, WRITE-FILE, LIB-DIRECTORY, LIB-UPDATE, SYSTEM-INFO and NATPROC-LOGON may also be returned.

Field Descriptions

Note: Specification of user ID and password are only required if they are different from the local user ID and password.

Field Name	Format/Length	Operating System
DSORG	(A4)	BS2000

For copy of LMS element to file: DSORG of target file. Possible values:

Value	Explanation
CAT	DSORG as defined within catalog entry of file.
SAM	DSORG = SAM
ISAM	DSORG = ISAM

The default is the default of the LMS.

Field Name	Format/Length	Operating System
ERROR-NODE	(N5)	z/OS, z/VSE , BS2000

If an error occurred during processing, this contains the node which returned the error code.

Field Name	Format/Length	Operating System
ERROR-VIEW	(N3)	z/OS, z/VSE , BS2000

If an error occurred during processing, this contains the view number (called internally by COPY-FILE) which returned the error code. If it is zero, then the error was not returned by a called view.

Field Name	Format/Length	Operating System
FROM-BLKSIZE	(B2)	z/VSE

Block size of file to be copied.

Field Name	Format/Length	Operating System
FROM-DSNAME	(A54)	z/OS, z/VSE , BS2000

Fully qualified input dataset name.

Field Name	Format/Length	Operating System
FROM-ELEMENT	(A64)	BS2000

Name of LMS element to be copied.

Field Name	Format/Length	Operating System
FROM-ELEMENT-PASSWORD	(A8)	BS2000

Password for protected input element.

Field Name	Format/Length	Operating System
FROM-ELEMENT-TYPE	(A8)	BS2000

Type of LMS element to be copied.

Field Name	Format/Length	Operating System
FROM-ELEMENT-VERSION	(A24)	BS2000

Version of LMS element to be copied.

Field Name	Format/Length	Operating System
FROM-LIBRARY	(A8)	z/VSE

Library name from which to copy.

Field Name	Format/Length	Operating System
FROM-LRECL	(B2)	z/VSE

Record length of file to be copied.

Field Name	Format/Length	Operating System
FROM-MEMBER	(A8)	z/OS, z/VSE

Name of the member to be copied.

Field Name	Format/Length	Operating System
FROM-MEMBER-TYPE	(A8)	z/VSE

Type of the member which is to be copied.

Field Name	Format/Length	Operating System
FROM-NODE	(N5)	z/OS, z/VSE

Entire System Server node ID from which to copy.

Field Name	Format/Length	Operating System
FROM-PASSWORD	(A8)	z/OS, BS2000

Password for input dataset.

Field Name	Format/Length	Operating System
FROM-PRODUCT	(A1)	z/OS, z/VSE , BS2000

Specify access method with FROM-LIBRARY:

Value	Explanation
L	CA-Librarian
M	LMS (BS2000)
P	CA-Panvalet

Field Name	Format/Length	Operating System
FROM-RECFM	(A2)	z/VSE

Record format of file to be copied.

Field Name	Format/Length	Operating System
FROM-SUB-LIBRARY	(A8)	z/VSE

Sublibrary from which to copy.

Field Name	Format/Length	Operating System
FROM-TAPE-DDNAME	(A8)	z/OS, z/VSE

The DD name of the input tape as specified in the view FILE-ALLOCATE.

Field Name	Format/Length	Operating System
FROM-TAPE-FILE-SEQUENCE	(B2)	z/OS, z/VSE

The file number of the dataset to be read.

Field Name	Format/Length	Operating System
FROM-USERID	(A8)	z/OS, z/VSE

User ID in FROM-NODE.

Field Name	Format/Length	Operating System
FROM-USER-PASSWORD	(A32)	z/OS

User password in FROM-NODE.

Field Name	Format/Length	Operating System
FROM-VOLSER	(A6)	z/OS, z/VSE

Volume serial number of the input dataset.

Field Name	Format/Length	Operating System
FROM-VSAM-CATALOG	(A7)	z/VSE

Name of the VSAM catalog where the FROM-LIBRARY is kept.

Field Name	Format/Length	Operating System
REPLACE	(A3)	z/OS, z/VSE , BS2000

Possible options:

Option	Explanation
NO	Add object to library. If an object with the same name already exists, issue error code.
REP	Replace object of the same name. If it does not exist, issue error code.
YES	Default. Add object to library. If an object with the same name already exists, replace it.

Field Name	Format/Length	Operating System
SAME	(A3)	BS2000

Specify YES for the output file to have the same security and save options as the input file.

Field Name	Format/Length	Operating System
TO-DSNAME	(A54)	z/OS, z/VSE , BS2000

Fully qualified output dataset name.

Field Name	Format/Length	Operating System
TO-ELEMENT	(A64)	BS2000

Name of target LMS element.

Field Name	Format/Length	Operating System
TO-ELEMENT-PASSWORD	(A8)	BS2000

Password for protected output element.

Field Name	Format/Length	Operating System
TO-ELEMENT-TYPE	(A8)	BS2000

Type of target LMS element.

Field Name	Format/Length	Operating System
TO-ELEMENT-USER-DATE	(A14)	BS2000

User date for output element. Format: *YYYY-MM-DDaaaa*, where *aaaa* can be any 4-character string.

Field Name	Format/Length	Operating System
TO-ELEMENT-USER-TIME	(A8)	BS2000

User time for output element. Format: *HH:MM:SS*.

Field Name	Format/Length	Operating System
TO-ELEMENT-VERSION	(A24)	BS2000

Version of LMS element to which is to be copied.

Field Name	Format/Length	Operating System
TO-LIBRARY	(A8)	z/VSE

Library name to which to copy.

Field Name	Format/Length	Operating System
T0-MEMBER	(A8)	z/OS, z/VSE

Name to be assigned to the member in the output dataset. By default, the name of the input member is taken.

Field Name	Format/Length	Operating System
T0-MEMBER-TYPE	(A8)	z/VSE

Type of the copied member in T0-LIBRARY.

Field Name	Format/Length	Operating System
T0-MSHP	(A3)	z/VSE

Indicate MSHP bypass required when copying members. Possible values:

Value	Explanation
NO	No MSHP bypass required.
YES	MSHP bypass to be performed.

Field Name	Format/Length	Operating System
T0-NODE	(N5)	z/OS, z/VSE

Entire System Server node ID to which to copy.

Field Name	Format/Length	Operating System
T0-PASSWORD	(A8)	z/OS, BS2000

Password for output dataset.

Field Name	Format/Length	Operating System
T0-PRODUCT	(A1)	z/OS, z/VSE , BS2000

Specify access method for T0-LIBRARY:

Value	Explanation
L	CA-Librarian
M	LMS (BS2000)
P	CA-Panvalet

Field Name	Format/Length	Operating System
T0-SUB-LIBRARY	(A8)	z/VSE

Sublibrary from which to copy.

Field Name	Format/Length	Operating System
T0-TAPE-DDNAME	(A8)	z/OS, z/VSE

The DD name of the output tape as specified in the view FILE-ALLOCATE.

Field Name	Format/Length	Operating System
T0-TAPE-FILE-SEQUENCE	(B2)	z/OS, z/VSE

The file number of the dataset to be written.

Field Name	Format/Length	Operating System
T0-USERID	(A8)	z/OS, z/VSE

User ID in T0-NODE.

Field Name	Format/Length	Operating System
T0-USER-PASSWORD	(A32)	z/OS

User password in T0-NODE.

Field Name	Format/Length	Operating System
T0-VOLSER	(A6)	z/OS, z/VSE

Volume serial number of the output dataset.

Field Name	Format/Length	Operating System
T0-VSAM-CATALOG	(A7)	z/VSE

Name of the VSAM catalog where the T0-LIBRARY is kept.

Field Descriptions

Which fields are relevant with which statement depends on the `FUNCTION` specified (see the description of the `FUNCTION` field, below).

Field Name	Format/Length	Operating System
ACCOUNT - NUMBER	(A8)	BS2000

Account number for the job.

Field Name	Format/Length	Operating System
CARD	(A80)	BS2000

Procedure record to be sent from Natural to the temporary file.

Field Name	Format/Length	Operating System
COMMAND - RESPONSE	(A253)	BS2000

ENTER-PROCEDURE command response.

Field Name	Format/Length	Operating System
DSNAME	(A54)	BS2000

Name of the list to be entered.

Note: `FUNCTION=CLOSE` is required to enter the procedure.

Field Name	Format/Length	Operating System
ELEMENT	(A64)	BS2000

Name of the LMS element to be entered.

Field Name	Format/Length	Operating System
ELEMENT - PASSWORD	(A8)	BS2000

Password for protected LMS element.

Field Name	Format/Length	Operating System
FUNCTION	(A8)	BS2000

Function to be performed. Possible options:

Blank Pass a JCL card or the name of the dataset or element to be submitted to the Entire System Server.

CLOSE All cards have been submitted. Specify this on the last request.

Field Name	Format/Length	Operating System
JOB-CLASS	(A8)	BS2000

Name of the job class where the job is to run.

Field Name	Format/Length	Operating System
JOB-ID	(A5)	BS2000

This field is returned after a call with `FUNCTIONS=CLOSE`.

Field Name	Format/Length	Operating System
JOB-NAME	(A8)	BS2000

Name of the job to be entered.

Field Name	Format/Length	Operating System
JOB-PRIORITY	(A3)	

Scheduling priority for job. Possible values are between 9 and the maximum of the job class, or STD. STD is the default.

Field Name	Format/Length	Operating System
JOB-VARIABLE-PASSWORD	(A4)	BS2000

Password for protected monitoring job variable.

Field Name	Format/Length	Operating System
MONITOR-JOB-VARIABLE	(A54)	BS2000

Specifies the name of a monitoring job variable that always contains the job status. For an explanation, see the description of the `MONITOR-JOB-VARIABLE` parameter of the view [SUBMIT](#).

Field Name	Format/Length	Operating System
PARAMETER-SET-1	(A253)	BS2000

Extra operands for command ENTER-PROCEDURE.

Field Name	Format/Length	Operating System
PARAMETER-SET-2	(A253)	BS2000

Extra operands for command ENTER-PROCEDURE.

Field Name	Format/Length	Operating System
PASSWORD	(A8)	BS2000

Password of protected file.

Field Name	Format/Length	Operating System
REPEAT-OPTION	(A17)	BS2000

Specifies repeated job runs. For an explanation, see the description of the `REPEAT-OPTION` parameter of the view [SUBMIT](#).

Field Name	Format/Length	Operating System
REPEAT-TIME	(A5)	BS2000

Specifies time for repeat runs. For an explanation, see the description of the `REPEAT-TIME` parameter of the view [SUBMIT](#).

Field Name	Format/Length	Operating System
RUN-PRIORITY	(A3)	BS2000

Priority during job execution. The value can be between job class maximum and 255, or STD. STD is the default.

Field Name	Format/Length	Operating System
START-DATE	(A8)	BS2000

Start date value in format *YY-MM-DD*.

Field Name	Format/Length	Operating System
START-DATX	(D)	BS2000

Start date of the entered procedure in Natural format.

Field Name	Format/Length	Operating System
START-OPTION	(A17)	BS2000

Specifies start of job. For an explanation, see the description of the START-OPTION parameter of the view [SUBMIT](#).

Field Name	Format/Length	Operating System
START-TIME	(A5)	BS2000

Start time value in format *HH:MM*.

Field Name	Format/Length	Operating System
START-TIMX	(T)	BS2000

Start time of entered procedure in Natural format.

Field Name	Format/Length	Operating System
TIME	(A5)	BS2000

Maximum CPU time the job may consume. For an explanation, see the description of the TIME parameter of the view [SUBMIT](#).

Field Name	Format/Length	Operating System
USERID	(A8)	BS2000

User ID under which the job is to be submitted.

Field Name	Format/Length	Operating System
USER-PASSWORD	(A32)	BS2000

Password belonging to the user ID under which the job is to be started.

ENTER-PROCEDURE Programming Notes

ENTER-PROCEDURE is an UPDATE view, that is, data is transmitted from the Natural program (client side) to ESY (server side).

The Entire System Server view ENTER-PROCEDURE returns codes and messages that describe whether the requested operation has been executed successfully or not.

Therefore, the DEFINE DATA section of the Natural program should only contain the fields shown in the following example:

```
1 ENTER-PROCEDURE VIEW OF ENTER-PROCEDURE
2 ERROR-CODE
2 ERROR-TEXT
2 SYSTEM-MESSAGE-CODE
2 SYSTEM-CODE
2 COMMAND-RESPONSE
2 JOB-ID
2 START-DATX
2 START-TIMX
```

These fields in DEFINE DATA statement are the fields returned from the ENTER-PROCEDURE view in Entire System Server to the calling Natural program.

Defining other fields in DDM is not critical, but the access to these fields may lead to unpredictable results.

22

EVENTING

■ Common Fields for all Operating Systems	180
■ Additional fields Supported for BS2000	181
■ Relevant Error Codes	181
■ Field Descriptions	181

File	40
Op-Sys	z/OS, z/VSE, BS2000 Note: Support for z/VSE is deprecated. Support for BS2000 is also deprecated, except in conjunction with the ESM adapter. Features that are z/VSE and BS2000 specific will be removed from future releases.
Statement	FIND or PROCESS, depending on value in FUNCTION field.
Task	Allows communication between Natural programs or Natural applications. This DDM enables Natural programs to send data to and receive data from other Natural programs, even if the partner program is located on another system running a different operating system. In BS2000, this view is only available in multi-user mode.

Field Descriptions

Which fields are relevant with which statement depends on the `FUNCTION` specified (see the description of the `FUNCTION` field, below).

Field Name	Format/Length	Operating System
EVENT - NAME	(A8)	z/OS, z/VSE, BS2000

Name of the event.

Field Name	Format/Length	Operating System
FUNCTION	(A8)	z/OS, z/VSE, BS2000

Specifies the action to be performed. Possible values:

Value	Explanation
DEFINE	Define an event
DELETE	Delete an event
LIST	List events
POST	Post event
RECEIVE	Receive messages from event
SEND	Send message to event
WAIT	Wait for post of event (or timeout)
SENDPOST	Both SEND and POST.

Matrix of statements, fields and functions:

Key: R=Required, U=Unique, D=Descriptor

PROCESS Statement	Functions				
Fields	DEFINE	DELETE	SEND	WAIT	POST
EVENT-NAME	RUD	RUD	RUD	RUD	RUD
MAX-TIME				UD	
MESSAGE-ARRAY			RUD		

FIND Statement	Functions	
Fields	RECEIVE	LIST
EVENT-NAME	RUD	D
NUMBER-OF-WAITERS		D
MESSAGE-ARRAY	D	
NUMBER-OF-MESSAGES		D

Field Name	Format/Length	Operating System
MAX-TIME	(B4)	z/OS, z/VSE, BS2000

Maximum time (in seconds) you want to wait for a message to arrive. If no message arrives within this time you will get ERROR-CODE 891 (timeout).

Field Name	Format/Length	Operating System
MESSAGE-ARRAY	(A250) M7	z/OS, z/VSE, BS2000

Array of maximum 7 messages for SEND/RECEIVE functions.

Field Name	Format/Length	Operating System
NUMBER-OF-MESSAGES	(N5)	z/OS, z/VSE, BS2000

Number of messages waiting to be received.

Field Name	Format/Length	Operating System
NUMBER-OF-WAITERS	(N5)	z/OS, z/VSE, BS2000

Number of tasks waiting to be posted.

Field Descriptions

Field Name	Type/Length	Operating System
ALLOCATION-TYPE	(A4)	z/OS, BS2000

Space allocation type. Possible values:

z/OS		BS2000	
BLK	Block.	NSTD	Non-standard blocks (tape files).
CYL	Cylinder.	PAM	PAM pages (default).
TRK	Tracks (default).		

Field Name	Type/Length	Operating System
BLKSIZE	(N5)	z/OS, BS2000

z/OS	BS2000
Block size. The default is 0.	Number of PAM pages for a block if the field ALLOCATION-TYPE is PAM. The default is 1.

For non-STD blocks, block size in bytes (only valid for tape files).

Field Name	Type/Length	Operating System
BLOCK-CONTROL	(A6)	BS2000

Block control type for this file (depending on disk type K or NK). Possible options:

Option	Explanation
DATA	PAM key information in data (NK disks only)
NO	No PAM key information (NK disks only)
PAMKEY	Default. PAM key separate from data.

Field Name	Type/Length	Operating System
CATALOG	(A3)	z/OS

Specifies whether and how the dataset is cataloged. Possible options:

Option	Explanation
NO	Default. Dataset is not cataloged.
YES	Dataset is cataloged. If you specify generation dataset name (DATASET(+1)), the dataset is always cataloged. The dataset must already have been cataloged (see the view CATALOG-UPDATE, especially the field NUMBER-OF-GENERATIONS).

Field Name	Type/Length	Operating System
CONTIG	(A3)	z/OS

Specifies contiguous allocated space. Possible options:

Option	Explanation
NO	Default. Space is not allocated contiguously.
YES	Space is allocated contiguously.

Field Name	Type/Length	Operating System
CREATE-JOBNAME	(A8)	z/OS

Job name used to create the data set described by its format 8 DSCB.

Field Name	Type/Length	Operating System
CREATE-STEPNAME	(A8)	z/OS

Step name used to create the data set described by its format 8 DSCB.

Field Name	Type/Length	Operating System
DDNAME	(A8)	z/OS

Internal DD name used by the Entire System Server. It must be specified on calls to `READ-FILE` and `WRITE-FILE` when allocating tape units.

Field Name	Type/Length	Operating System
DSNTYPE	(A8)	z/OS

The type of data set to be allocated. Possible values:

OptionValue	Explanation
BASIC	Basic format sequential data set (default).
LARGE	Large format sequential data set.
LIBRARY	Partitioned data set extended (PDSE).

Field Name	Type/Length	Operating System
DSNTYPE-VERSION	(N1)	z/OS

The data set version number for a library (PDSE). Possible values are 1 or 2.

Field Name	Type/Length	Operating System
DENSITY	(A1)	z/OS

Tape density. Possible options:

Option	Explanation
3	1600 BPI
4	6250 BPI

Field Name	Type/Length	Operating System
DIRECTORY-BLOCKS	(N7)	z/OS

Number of directory blocks for PDS.

Field Name	Type/Length	Operating System
DISP	(A3)	z/OS

Disposition of the dataset. Possible values:

Value	Explanation
NEW	Allocate new dataset.

Field Name	Type/Length	Operating System
DSNAME	(A54)	z/OS, z/VSE , BS2000

Fully qualified dataset name. For BS2000, fully qualified file name.

Field Name	Type/Length	Operating System
DSORG	(A4)	z/OS, z/VSE, BS2000

Dataset organization. Possible options:

z/OS		z/VSE		BS2000	
P0	Partitioned dataset (PDS).	SD	Default. Sequential dataset.	I SAM	Default. Indexed Sequential Access Method.
				PAM	Block oriented file organization handled by User Primary Access Method (UPAM).
PS	Default. Sequential dataset.			PLAM	Program Library Access Method for LMS Libraries.
				SAM	Sequential Access Method.

Field Name	Type/Length	Operating System
EATTR	(A3)	z/OS

Extended attributes. Possible values:

Value	Explanation
OPT	Data set can support extended attributes (format 8 and 9 DSCBs).
NO	Data set does not support extended attributes (default).

Field Name	Type/Length	Operating System
EXPIRATION-DATE	(A8)	z/OS, z/VSE

Expiration date in the format *YYDDD* or *YYYYDDD*. If *EXPIRATION-DATE* is specified with format *YYDDD*, it will be converted to the *YYYY/DDD* format using a fixed window from 1964 to 2063.

For z/OS, z/VSE, there is no default (i.e., no expiration date).

For BS2000, the default is the current date.

Field Name	Type/Length	Operating System
EXPIRATION-DATX	(D)	z/OS, z/VSE

Expiration date in internal format.

Field Name	Type/Length	Operating System
EXTENDED-TEXT	(A250)	z/OS

Text lines (up to 3) containing error description.

Field Name	Type/Length	Operating System
EXTENT-SIZE	(N10)	z/VSE

Size of the extent.

Field Name	Type/Length	Operating System
EXTENT-START	(N10)	z/VSE

Defines start of extent. For FBA, it is the block number. For CHD, it is the track number.

For allocating free space on any location, specify `EXTENT-START = -1`.

Field Name	Type/Length	Operating System
FREE	(A3)	z/OS

Specify YES to free the allocation for DDNAME.

Field Name	Type/Length	Operating System
ISAM-KEY-LENGTH	(N5)	BS2000

Gives the key length. Default is 8, maximum value is 253.

Field Name	Type/Length	Operating System
ISAM-KEY-POSITION	(N5)	BS2000

Gives the position of the first byte of the key within the record.

Default: 5 for RECFM=V, 1 for RECFM=F.

Field Name	Type/Length	Operating System
LABEL	(A4)	z/OS, BS2000

Type of label processing.

Field Name	Type/Length	Operating System
LRECL	(N5)	z/OS, BS2000

Logical record length. The default is 0.

Field Name	Type/Length	Operating System
MAXGENS	(N9)	z/OS

Maximum number of member generations for a PDSE version 2.

Possible values are 0 (no generations) or a value between 1 and the upper limit specified as MAXGENS_LIMIT in parmlib member IGDSMSxx.

Field Name	Type/Length	Operating System
PASSWORD	(A8)	BS2000

Password for write access, if existing file must be replaced.

Field Name	Type/Length	Operating System
PRIMARY-ALLOCATION	(N10)	z/OS, BS2000

- z/OS: Primary space allocation (default is 0).
- BS2000: Number of PAM pages for primary allocation (default is system default).

Field Name	Type/Length	Operating System
PRODUCT	(A1)	BS2000

Access method used. Possible options:

- M = LMS (BS2000)
- ' ' = default

Provide the following fields to create an LMS PLAM library:

Example:

```
FIND FILE-ALLOCATE WITH NODE = node
  AND DSNAME = 'dsname'
  AND DSORG = 'PLAM'
  AND PRODUCT = 'M'
  AND REPLACE = 'NO'
  ...
```

Field Name	Type/Length	Operating System
RECFM	(A4)	z/OS, BS2000

Record format.

For z/OS, the default is FB.

For BS2000, the default is V, N.

Field Name	Type/Length	Operating System
REPLACE	(A3)	BS2000

Specifies whether file with the same name is to be overwritten. Possible options:

Option	Explanation
NO	Default. Allocate only if file does not exist.
YES	Overwrite existing file.

The value YES is not possible for PLAM libraries.

Field Name	Type/Length	Operating System
RLSE	(A3)	z/OS

Specifies whether unused space is released after the dataset is closed. Possible options:

Option	Explanation
NO	Default. Unused space is not released.
YES	Unused space is released after dataset is closed.

Field Name	Type/Length	Operating System
ROUND	(A3)	z/OS

Specifies whether one or more whole cylinders are to be allocated. Possible options:

Option	Explanation
NO	Default. Allocated space need not be whole cylinders.
YES	Allocate one or more whole cylinders.

Field Name	Type/Length	Operating System
SECONDARY-ALLOCATION	(N10)	z/OS, BS2000

z/OS: Secondary space allocation (default is 0).

BS2000: Number of PAM pages for secondary allocation (default is system default).

Field Name	Type/Length	Operating System
SHARE	(A3)	BS2000

Defines whether a file can be shared. Possible options:

Option	Explanation
NO	Default. File cannot be shared.
YES	File can be shared.

Field Name	Type/Length	Operating System
SMS-DATA-CLASS	(A8)	z/OS

Data class of SMS managed file.

Field Name	Type/Length	Operating System
SMS-MANAGEMENT-CLASS	(A8)	z/OS

Management class of SMS managed file.

Field Name	Type/Length	Operating System
SMS-STORAGE-CLASS	(A8)	z/OS

Storage class of SMS managed file.

Field Name	Type/Length	Operating System
UNIT	(A8)	z/OS, BS2000

Generic unit name on which the dataset is to be allocated, for example, SYSDA.

For BS2000, this field is relevant only for tape files.

Field Name	Type/Length	Operating System
VOLSER	(A6)	z/OS, z/VSE, BS2000

Volume serial number where the file is to be located.

In BS2000, for multi-volume tape files, use the field VOLSER-ARRAY.

Field Name	Type/Length	Operating System
VOLSER-ARRAY	(A6) M5	BS2000

For multi-volume tape file: list of maximum 5 volumes.

Field Name	Type/Length	Operating System
VOLUME - COUNT	(N2)	z/OS

Maximum number of output volumes to be allocated. Required if writing multiple reels.

Field Name	Type/Length	Operating System
VOLUME - SEQUENCE	(N2)	z/OS

When a tape dataset is cataloged, you can supply a value of greater than 1 if processing is not the start with the first reel.

24

File	1
Op-Sys	z/OS, z/VSE, BS2000 Note: Support for z/VSE is deprecated. Support for BS2000 is also deprecated, except in conjunction with the ESM adapter. Features that are z/VSE and BS2000 specific will be removed from future releases.
Statement	FIND
Task	Display attributes for a given file, for example, record format, block size, record length.

Common Fields for all Operating Systems

Dictionary Field Name	F/L	Mu	DE	Remarks
ERROR-CODE	N3			
ERROR-TEXT	A58			
NODE	N5		D	
NODE-NAME	A16		D	
SYSTEM-MESSAGE-CODE	A10			
VOLSER	A6		D	Required in z/VSE. In BS2000, no descriptor.
DSNAME	A54		D	Required.
DSORG	A4			
CREATION-DATE	A8			
EXPIRATION-DATE	A8			
LAST-TTR	B3			Not for z/VSE.
LAST-TTTR	B4			Not for z/VSE.
FILE-SIZE	N10			
SECURITY	A5			Not for z/VSE.
SERIES	A8			
CREATION-DATX	D			
EXPIRATION-DATX	D			
PRODUCT	A1

996	Volume not online		X	

Field Descriptions

Field Name	Type/Length	Operating System
ACCESS-NUMBER	(N4)	BS2000

Shows how many times the file was accessed.

Field Name	Type/Length	Operating System
ACCESS-TYPE	(A5)	BS2000

Shows whether the access mode is READ or WRITE.

Field Name	Type/Length	Operating System
ALLOCATION-TYPE	(A4)	z/OS, BS2000

Allocation type specified. Possible values:

z/OS		BS2000	
ABS	Absolute	FGG	File generation group
BLK	Block	NONE	Undefined
CYL	Cylinders	NSTD	Non-standard blocks (tape files)
TRK	Track	PAM	PAM blocks (standard)

Field Name	Type/Length	Operating System
AUDIT-TYPE	(A4)	BS2000

Shows which type of access to the file must be controlled.

Field Name	Type/Length	Operating System
BACKUP-INFO	(A19)	BS2000

Additional information about backup status:

LARG	LARGE = YES
MIGR	MIGRATED = YES
OPEN	OPEN BACKUP
PART	PARTIAL RESTORE

Field Name	Type/Length	Operating System
BACKUP-TYPE	(A1)	BS2000

Shows how often the file should be saved by ARCHIVE.

Field Name	Type/Length	Operating System
BACKUP-VERSION-NUMBER	(N5.0)	BS2000

Internal attribute for change save with the ARCHIVE or HSMS utility routine.

Field Name	Type/Length	Operating System
BLKSIZE	(N5)	z/OS, z/VSE, BS2000

Block size.

Field Name	Type/Length	Operating System
BLOCK-CONTROL	(A6)	BS2000

Possible values:

Value	Explanation
DATA	PAM key information within data (NK disks only)
NO	No PAM key information (NK disks only)
NONE	Block control undefined
PAMKEY	PAM key separate from data

Field Name	Type/Length	Operating System
CODE	(A6)	BS2000

Code of tape file.

Field Name	Type/Length	Operating System
CREATE-JOBNAME	(A8)	z/OS

Job name used to create the data set described by its format 8 DSCB.

Field Name	Type/Length	Operating System
CREATE-STEPNAME	(A8)	z/OS

Step name used to create the data set described by its format 8 DSCB.

Field Name	Type/Length	Operating System
CREATION-DATE	(A8)	z/OS, z/VSE, BS2000

Creation date in the format *DD/MM/YY*. If no creation date is specified, this field is filled with asterisks
****.

Field Name	Type/Length	Operating System
CREATION-DATX	(D)	z/OS, z/VSE, BS2000

Creation date in Natural format.

Field Name	Type/Length	Operating System
CYLINDERS-ALLOCATED	(N7)	z/OS, z/VSE

Number of integral cylinders allocated.

Field Name	Type/Length	Operating System
DSNAME	(A54)	z/OS, z/VSE, BS2000

Fully qualified dataset name.

Field Name	Type/Length	Operating System
DSNTYPE	(A8)	z/OS

Data Set Type Specification.

Field Name	Type/Length	Operating System
DSNTYPE-VERSION	(N1)	z/OS

The data set version number for a library (PDSE). Possible values are 1 or 2.

Field Name	Type/Length	Operating System
DSORG	(A4)	z/OS, z/VSE, BS2000

Dataset organization.

In z/OS, for example: PS, PO, VS.

In z/VSE : VS, DA, SD, SD/L, UN (undefined) VS/L (where *xx/L* indicates that the file is a z/VSE Librarian file).

In BS2000, this is the FCBTYPE.

Field Name	Type/Length	Operating System
EATTR	(A3)	z/OS

Extended attributes. Possible values:

Value	Explanation
OPT	Data set can support extended attributes (format 8 and 9 DSCBs).
NO	Data set does not support extended attributes. (default).

Field Name	Type/Length	Operating System
EXEC-PASSWORD	(A8)	BS2000

If caller is TSOS and Entire System Server is running under TSOS, the EXEC password of the file is returned, if one exists (see field SECURITY).

Field Name	Type/Length	Operating System
EXPIRATION-DATE	(A8)	z/OS, z/VSE, BS2000

Expiration date in the format *DD/MM/YY*. If no creation date is specified, this field is filled with asterisks ****.

Field Name	Type/Length	Operating System
EXPIRATION-DATX	(D)	z/OS, z/VSE, BS2000

Expiration date in Natural format.

Field Name	Type/Length	Operating System
EXTENTS	(A192)	z/OS, z/VSE

Extent information, 16 entries of 12 bytes each. Each entry contains:

- Low cylinder and head (track) address of extent (binary CCHH)
- High cylinder and head (track) address of extent (binary CCHH)
- Number of cylinders in extent
- Number of additional tracks in extent

Field Name	Type/Length	Operating System
EXTENTS-ARRAY	(A192) 59	z/OS

Array of extents for multi-volume datasets. Each element reflects one volume.

Field Name	Type/Length	Operating System
FILE-SEQUENCE-NUMBER	(N3)	BS2000

Only for tape files: file sequence number on tape.

Field Name	Type/Length	Operating System
FILE-SIZE	(N10)	z/OS, z/VSE, BS2000

Number of tracks currently allocated. (CYLINDERS-ALLOCATED in tracks + TRACKS-ALLOCATED).

In BS2000, this field contains the number of allocated PAM pages.

Field Name	Type/Length	Operating System
KEY-LENGTH	(N4)	BS2000

Key length for ISAM files.

Field Name	Type/Length	Operating System
KEY-POSITION	(N5)	BS2000

Position of the first byte of the key within a record.

Field Name	Type/Length	Operating System
LABEL	(A7)	BS2000

Type of label (tape files only).

Field Name	Type/Length	Operating System
LAST-REFERENCE	(A8)	z/OS, BS2000

Last reference date in format *DD/MM/YY*. If the last reference date is null, this field is filled with asterisks ****.

Field Name	Type/Length	Operating System
LAST-REFERENCE-DATX	(D)	z/OS, BS2000

Last reference date in Natural format.

Field Name	Type/Length	Operating System
LAST-TTR	(B3)	z/OS, BS2000

z/OS: Last track.

BS2000: Last used page of the file.

Field Name	Type/Length	Operating System
LAST-TTTR	(B4)	z/OS, BS2000

- z/OS: Last used track and block on track (TTTR).
- BS2000: Last used page of the file.

Field Name	Type/Length	Operating System
LRECL	(N5)	z/OS, z/VSE, BS2000

Logical record length.

Field Name	Type/Length	Operating System
MAXGENS	(N9)	z/OS

Maximum number of member generations for a PDSE version 2.

Possible values are 0 (no generations) or a value between 1 and the upper limit specified as MAXGENS_LIMIT in parmlib member IGDSMSxx.

Field Name	Type/Length	Operating System
MIGRATE	(A9)	BS2000

Indicates whether the file may be migrated: ALLOWED | INHIBITED.

Field Name	Type/Length	Operating System
MODIFICATION-DATX	(D)	BS2000

Date of last modification.

Only available for BS2000 V11 (OSD V1) or above.

Field Name	Type/Length	Operating System
MODIFICATION-TIMX	(D)	BS2000

Time of last modification.

Only available for BS2000 V11 (OSD V1) or above.

Field Name	Type/Length	Operating System
NUMBER-OF-EXTENTS	(N3)	z/OS, BS2000

Number of extents.

z/OS: Values are 1 - 16

BS2000: Values are 1 - 255.

Field Name	Type/Length	Operating System
NUMBER-OF-MEMBERS	(N7)	z/OS

Number of members in the dataset. If the dataset is not a partitioned dataset, this field shows 0.

Field Name	Type/Length	Operating System
OPTIONS	(A80)	z/OS

Options for CA-Panvalet, CA-Librarian, etc.

Field Name	Type/Length	Operating System
PAGES-USED	(N10)	z/OS

The number of pages allocated for members and directory information in a PDSE.

Field Name	Type/Length	Operating System
PASSWORD	(A8)	z/OS

Specify password for protected datasets.

Not required in BS2000.

Field Name	Type/Length	Operating System
PERCENT-USED	(N3)	z/OS, BS2000

Tracks used / tracks allocated.

BS2000: PAM pages used / total PAM pages allocated.

Field Name	Type/Length	Operating System
PRIMARY-QTY	(A10)	z/OS

Primary allocation quantity in unit of allocation type.

Field Name	Type/Length	Operating System
PRODUCT	(A1)	z/OS, z/VSE, BS2000

Access method used. Possible values:

Value	Explanation
L	CA-Librarian
M	BS2000 LMS (only for PLAM lib)
P	CA-Panvalet
S	z/VSE SAM (SD) file

Field Name	Type/Length	Operating System
READ - PASSWORD	(A8)	BS2000

If caller is TSOS and Entire System Server is running under TSOS, the READ password of the file is returned, if one exists (see field SECURITY).

Field Name	Type/Length	Operating System
RECFM	(A5)	z/OS, z/VSE, BS2000

Record format.

Field Name	Type/Length	Operating System
SECONDARY - QTY	(N10)	z/OS, BS2000

Secondary allocation quantity in Unit of Allocation type.

Field Name	Type/Length	Operating System
SECURITY	(A5)	z/OS, BS2000

Security status. Possible values:

Value	Explanation
NONE	Not password-protected.
READ	Password-protected for read and write operations.
WRITE	Password-protected for write operations.

Field Name	Type/Length	Operating System
SHORT - INFO	(A4)	z/OS

This enables calling file attributes also for PDS data sets without RACF read access for which some users might not have permission.

Value	Explanation
YES	The following values are not be returned for PO / POE data sets: TOTAL-DIRECTORY-BLOCKS UNUSED-DIRECTORY-BLOCKS NUMBER-OF-MEMBERS DSNTYPE-VERSION MAXGENS TOTGENS PERCENT-USED for HFS data sets: PERCENT-USED.
NO	Default.

Additional values for BS2000

Value	Explanation
EXEC	Password-protected for execute operations.
R/E	Password-protected for read and execute operations.
R/W	Password-protected for read and write operations.
R/W/E	Password-protected for read, write and execute operations.
W/E	Password-protected for write and execute operations.

Field Name	Type/Length	Operating System
SERIES	(A8)	z/OS, z/VSE, BS2000

Device series for the unit, for example, 3380.

In BS2000, an example is D3480.

Field Name	Type/Length	Operating System
SERIES-ARRAY	(A8) 30	BS2000
SERIES-ARRAY	(A8) 59	z/OS

List of device series (multi-volume file). The first SERIES is also given in the field SERIES.

Field Name	Type/Length	Operating System
SHARE	(A4)	BS2000

Shows whether the file is accessible to other users.

Field Name	Type/Length	Operating System
SMS	(A3)	z/OS

Specifies whether the dataset is SMS-managed YES or NO.

Field Name	Type/Length	Operating System
SMS-DATA-CLASS	(A8)	z/OS

Data class of SMS-managed dataset.

Field Name	Type/Length	Operating System
SMS-MANAGEMENT-CLASS	(A8)	z/OS

Management class of SMS-managed dataset.

Field Name	Type/Length	Operating System
SMS-STORAGE-CLASS	(A8)	z/OS

Storage class of SMS-managed dataset.

Field Name	Type/Length	Operating System
STORAGE-LEVEL	(A2)	BS2000

Indicates the storage level for migrated files: S0 | S1 | S2 | ...

Field Name	Type/Length	Operating System
TOTAL-DIRECTORY-BLOCKS	(N5)	z/OS

Number of directory blocks. If the dataset is not a partitioned dataset, this field shows 0.

Field Name	Type/Length	Operating System
TRACKS-ALLOCATED	(N3)	z/OS, z/VSE

Number of remaining tracks allocated in addition to CYLINDERS-ALLOCATED.

Field Name	Type/Length	Operating System
UNIT	(A3)	z/OS, z/VSE

Unit on which the dataset is currently mounted.

Field Name	Type/Length	Operating System
UNUSED-DIRECTORY-BLOCKS	(N5)	z/OS

Number of unused directory blocks. If the dataset is not a partitioned dataset, this field shows 0.

Field Name	Type/Length	Operating System
UPDATED-SINCE-BACKUP	(A3)	z/OS

Specifies whether the dataset has been updated since the last backup: YES or NO.

Field Name	Type/Length	Operating System
VERSION-NUMBER	(N4)	BS2000

Version number of the file.

Field Name	Type/Length	Operating System
VOLSER	(A6)	z/OS, z/VSE, BS2000

Volume serial number. If not specified, the catalog entry for the dataset is used.

In BS2000, only relevant for tape files. Returns first VOLSER. For multi-volume file, see VOLSER-ARRAY.

Field Name	Type/Length	Operating System
VOLSER-ARRAY	(A6) 30	BS2000
VOLSER-ARRAY	(A6) 59	z/OS

List of volumes (multi-volume file). The first VOLSER is also given in the field VOLSER.

Field Name	Type/Length	Operating System
WRITE-PASSWORD	(A8)	BS2000

If caller is TSOS and Entire System Server is running under TSOS, the WRITE password of the file is returned, if one exists (see the field SECURITY).

Field Name	Format/Length	Operating System
NUM-OF-BACKUP-VERS	(N3)	BS2000

Number of versions of a file saved in a backup archive.

Field Descriptions

Field Name	Type/Length	Operating System
COMPLETION-CODE	(B2)	

IEBCOPY completion code.

Field Name	Type/Length	Operating System
FROM-DSNAME	(A54)	

Fully qualified input dataset name.

Field Name	Type/Length	Operating System
FROM-MEMBER	(A10)	

Name of member to be copied. Select all members in the dataset by specifying an asterisk *.

Field Name	Type/Length	Operating System
FROM-PASSWORD	(A8)	

Password for input dataset if the dataset is password protected.

Field Name	Type/Length	Operating System
FROM-VOLSER	(A6)	

Volume serial number of input dataset. Required if the dataset is not cataloged.

Field Name	Type/Length	Operating System
LINE	(A121)	

IEBCOPY output line.

Field Name	Type/Length	Operating System
REPLACE	(A3)	

Specifies whether the member in the output dataset is to be replaced. Possible options:

Option	Explanation
NO	Do not replace member if it already exists in the output dataset.
YES	Replace member if it already exists in the output dataset.

Field Name	Type/Length	Operating System
TO-DSNAME	(A54)	

Fully qualified output dataset name.

Field Name	Type/Length	Operating System
TO-MEMBER	(A10)	

Name to be assigned to the member in the output dataset. If omitted, the output member name is used.

Field Name	Type/Length	Operating System
TO-PASSWORD	(A8)	

Password for output dataset if the dataset is password protected.

Field Name	Type/Length	Operating System
T0-VOLSER	(A6)	

Volume serial number of output dataset. Required if the dataset is not cataloged.

Default Order of Data Returned

Each line of the output listing is presented in order.

Statement	FIND / PROCESS
Task	Allows the execution of INTERTASK COMMUNICATION macros OPCOM, REVNT, SEVNT, RELBF, CLCOM via logical functions such as OPEN, RECEIVE. This view is available only for single-user mode.

Common Fields for all Operating Systems

Dictionary Field Name	F/L	Mu	DE	Remarks
ERROR-CODE	N3			
ERROR-TEXT	A58			
NODE	N5		D	
NODE-NAME	A16		D	
SYSTEM-MESSAGE-CODE	A10			
SYSTEM-CODE	B2			
FUNCTION	A8		D	
INTER-TASK-COMMUNICATION-NAME	A8		D	
ERASE	A3		D	
MESSAGE-LENGTH	N6		D	
MESSAGE-TEXT	A250		D	
WAIT-TIME	B4		D	
MESSAGE-ARRAY	A250	M / 5	D	

Relevant Error Codes

Code	Text	BS2000
600	Unknown function.	X
699	Not enough main storage available.	X
735	Logical error using ITC.	X
750	Invalid operand within operand list.	X
752	Message/message length missing.	X
753	ITC name missing.	X
983	MULTI USER MODE not supported by ITC.	X

Field Descriptions

Field Name	Type/Length	Operating System
ERASE	(A3)	

Specifies erasing of message from queue after receipt. Possible values:

Value	Explanation
YES	Default. Erase message.
NO	Retain message.

When the function is `CLOSE`, specifies whether all waiting messages should be erased `YES` or `NO`.

Field Name	Type/Length	Operating System
FUNCTION	(A8)	

Possible values:

Value	Explanation
<code>CLOSE</code>	Delete an ITC.
<code>DELETE</code>	Delete the first message in the queue.
<code>OPEN</code>	Build an ITC.
<code>RECEIVE</code>	Receive message from ITC partner.
<code>SEND</code>	Send message to ITC partner.

Field Name	Type/Length	Operating System
INTER-TASK-COMMUNICATION-NAME	(A8)	

Function-dependent field. Meaning per function:

Function	Meaning
CLOSE	Own ITC name.
OPEN	Own (new) ITC name.
RECEIVE	ITC name of sending ITC partner.
SEND	ITC name of destination.

Field Name	Type/Length	Operating System
MESSAGE-ARRAY	(A250) M5	

Array of max. 5 messages for SEND and RECEIVE functions.

Field Name	Type/Length	Operating System
MESSAGE-LENGTH	(N6)	

Message length for functions SEND and RECEIVE.

Field Name	Type/Length	Operating System
MESSAGE-TEXT	(A250)	

Message text. For messages longer than 250 bytes, use the MESSAGE-ARRAY field.

Field Name	Type/Length	Operating System
WAIT-TIME	(B4)	

Maximum time (in seconds) to wait for a message. Possible values: 0 - 21599. Default is 600.

30

JOB-SWITCHES

■ Common Fields for all Operating Systems	240
■ Relevant Error Codes	240

File	81
Op-Sys	BS2000 Note: Support for z/VSE is deprecated. Support for BS2000 is also deprecated, except in conjunction with the ESM adapter. Features that are z/VSE and BS2000 specific will be removed from future releases.
Statement	PROCESS
Task	Query the user switches for a specified user ID. When running in single-user mode, switches belonging to your own user ID can be reset, and the job switches of the same task can also be queried, set and reset.

Common Fields for all Operating Systems

Dictionary Field Name	F/L	Mu	DE	Remarks
ERROR-CODE	N3			
ERROR-TEXT	A58			
NODE	N5		D	
NODE-NAME	A16		D	
SYSTEM-MESSAGE-CODE	A10			
SYSTEM-CODE	B2			
OPTION	A6		D	Relevant when FUNCTION=WRITE.
SWITCH-NUMBERS	A64		D	Relevant when FUNCTION=WRITE.
SWITCH-TYPE	A7		D	
SWITCH-VALUES	A32		D	
USERID	A8		D	Relevant when FUNCTION=READ.
FUNCTION	A8		D	Required.

Relevant Error Codes

Code	Text	BS2000
530	Access denied by Security Facility	X
600	Unknown function	X
733	User ID does not exist	X
750	Invalid operand within operand list	X
755	Invalid or no SWITCH-TYPE specified	X

Code	Text	BS2000
799	Entire System Server internal error	X
983	Function not supported by multi-user mode	X

Field Descriptions

Field Name	Type/Length	Operating System
FUNCTION	(A8)	

Specifies the function to be performed on the switches. Possible options:

Option	Explanation
READ	Read switch status.
WRITE	Set switches given in field SWITCH-NUMBERS according to OPTION field.

For restrictions, see the field SWITCH-TYPE.

Field Name	Type/Length	Operating System
OPTION	(A6)	

Operation when FUNCTION=WRITE:

Operation	Explanation
INVERT	Invert value of the switches given in the list.
OFF	Set switches in the list to OFF.
ON	Set switches in the list to ON.

Field Name	Type/Length	Operating System
SWITCH-NUMBERS	(A64)	

Relevant when FUNCTION=WRITE. Gives the list of switches to be handled. Each switch must be specified as a 2-digit number between 00 and 31. There is no delimiter between switch numbers.

Example:

The value 031229 means switches 3, 12 and 29.

Field Name	Type/Length	Operating System
SWITCH-TYPE	(A7)	

Defines whether the switches are `USER` switches or `PROCESS` switches. Query and modification of `PROCESS` switches is only possible when the Entire System Server runs in single-user mode. The same goes for `WRITE` of `USER` switches. In multi-user mode, the function is executed by the Entire System Server server task and the switches would be set there for the user ID of the server task.

Field Name	Type/Length	Operating System
SWITCH-VALUES	(A32)	

Returns the status of all switches. Possible values:

Value	Explanation
N	Switch is off.
Y	Switch is on.

Field Name	Type/Length	Operating System
USERID	(A8)	

Valid only when `FUNCTION=READ` and `SWITCH-TYPE=USER`: user ID for which switches are to be read.

31

CREATION-DATX	D			Relevant when FUNCTION=ATTRIB.

Dictionary Field Name	F/L	Mu	DE	Remarks
EXPIRATION-DATX	D			Relevant when FUNCTION=ATTRIB.
REPLACE	A3		D	Relevant when FUNCTION=ALLOC.
FROM-SUBSTRING-START	N3		D	Relevant when FUNCTION=WRITE.
FROM-SUBSTRING-LENGTH	N3		D	Relevant when FUNCTION=WRITE.

Relevant Error Codes

Code	Text	BS2000
530	Access denied by Security Facility.	X
531	Password missing or incorrect.	X
600	Unknown function.	X
626	DATA missing.	X
699	Not enough main storage available.	X
733	User ID does not exist.	X
747	LENGTH or SUBSTRING-LENGTH invalid.	X
756	Job variable name missing or invalid.	X
798	Task was not started under TSOS.	X
799	Entire System Server internal error.	X
987	Job Variable already exists.	X
992	Requested job variable not found.	X

Field Descriptions

Field Name	Type/Length	Operating System
ACCESS	(A5)	

Specifies whether access to the job variable is READ or WRITE. WRITE is the default. Valid with FUNCTION=MODATTR as input field. With ALLOC and ATTRIB, it is an output field.

Field Name	Type/Length	Operating System
CREATION-DATE	(A8)	

Only for FUNCTION=ATTRIB: The creation date of the job variable.

Field Name	Type/Length	Operating System
CREATION-DATX	(D)	

Creation date in Natural format.

Field Name	Type/Length	Operating System
DATA	(A253)	

Usage of this field depends on the function.

When FUNCTION=READ, contents of job variable or part of it (substring).

When FUNCTION=WRITE, value to be written (it is also possible to copy contents or substring from another job variable instead of data. Fields SECOND-NAME, FROM-SUBSTRING-START, FROM-SUBSTRING-LENGTH are relevant in this case).

Field Name	Type/Length	Operating System
DATA-APPENDIX	(A3)	

This field contains bytes 254-256 of job variable. Refer to DATA field for more details.

Field Name	Type/Length	Operating System
EXPIRATION-DATE	(A8)	

Only for FUNCTION=ATTRIB: The date after which the job variable can be erased.

Field Name	Type/Length	Operating System
EXPIRATION-DATX	(D)	

Expiration date in Natural format.

Field Name	Type/Length	Operating System
FROM-SUBSTRING-LENGTH	(N3)	

Only for function WRITE: Length of substring to be copied from job variable specified in SECOND-NAME. Required if FROM-SUBSTRING-START is specified.

Field Name	Type/Length	Operating System
FROM-SUBSTRING-START	(N3)	

Only for function WRITE: Start of substring to be copied from job variable specified in SECOND-NAME. If this is omitted, the entire job variable is copied.

Field Name	Type/Length	Operating System
FUNCTION	(A8)	

Function to be performed. Possible options:

Option	Explanation
ALLOC	Define a job variable.
ATTRIB	Retrieve information about a job variable.
DELETE	Delete a job variable.
LIST	Retrieve list of job variables (only NAME is valid for this function).
MODATTR	Modify characteristics of a job variable.
READ	Read value of a job variable.
WRITE	Set value of of a job variable, or copy from one job variable to another.

Field Name	Type/Length	Operating System
JV-TYPE	(A10)	

The type of job variable is returned in this field when FUNCTION=ATTRIB. Possible values are NUMERIC, NON-NUMERIC.

Field Name	Type/Length	Operating System
LENGTH	(N3)	

Usage of this field depends on the function.

When FUNCTION=ATTRIB, the size of the job variable (length of JV value).

When FUNCTION=READ, real length of data read.

When FUNCTION=WRITE, length of data to be written. This can also be specified in the field SUBSTRING-LENGTH. If DATA is given, both can be omitted.

Note: SUBSTRING-START + LENGTH must not exceed 257.

Field Name	Type/Length	Operating System
NAME	(A54)	

Name of the job variable to be handled. With function `LIST`, the name can contain wildcards, but a name cannot start with an asterisk `*`. Wildcards in catalog ID or user ID of the JV name are only allowed for user TSOS.

Field Name	Type/Length	Operating System
PASSWORD	(A8)	

Valid for all functions except `FUNCTION=ATTRIB`. If the job variable specified in `NAME` is password-protected, the appropriate password must be specified here.

Field Name	Type/Length	Operating System
READ - PASSWORD	(A8)	

Usage of this field depends on the function. Possible values:

When `FUNCTION=ATTRIB`:

Value	Explanation
NONE	No password is defined.
YES	Read password is defined for job variable. If caller is TSOS and Entire System Server is running under TSOS, the password itself is returned.

When `FUNCTION=ALLOC` or `MODATTR`:

Value	Explanation
<i>blank</i>	Default. No read password.
<i>password</i>	New read password to be defined for job variable
*NONE	Reset existing password.

When `FUNCTION=WRITE`:

When copying from another job variable which is password-protected, the appropriate password for that job variable.

Field Name	Type/Length	Operating System
REPLACE	(A3)	

Only for function ALLOC. Possible values:

Value	Explanation
IGN	Default. Allocate job variable if it does not already exist and ignore allocate for existing job variable (corresponds to BS2000 command DCLJV).
NO	Allocate job variable only if it does not already exist. If it already exists, Error 987 is returned.
YES	Allocate job variable and replace any existing job variable with the same name. The existing job variable is erased before allocation.

Field Name	Type/Length	Operating System
RETENTION-PERIOD	(N5)	

Only for FUNCTION=MODATTR. Specifies how many days the job variable must remain unchanged.

Field Name	Type/Length	Operating System
SECOND-NAME	(A54)	

When FUNCTION=MODATTR, new name when renaming job variable. No user ID can be specified.

When FUNCTION=WRITE, input name when copying job variable.

Field Name	Type/Length	Operating System
SHARE	(A3)	

Specifies whether the job variable is accessible to other users.

Valid with FUNCTION=MODATTR as input field.

The value is returned with FUNCTION=ATTRIB or ALLOC. Possible options:

Option	Explanation
NO	Default. The job variable is not accessible to other users.
YES	The job variable is accessible to other users.

Field Name	Type/Length	Operating System
SUBSTRING-LENGTH	(N3)	

Usage of this field depends on the function.

When FUNCTION=READ, the length of substring to be read.

When FUNCTION=WRITE, the length of the substring to be written. This can also be specified in the field LENGTH. If DATA is given, both can be omitted.

Note: SUBSTRING-START + SUBSTRING-LENGTH must not exceed 257.

Field Name	Type/Length	Operating System
SUBSTRING-START	(N3)	

Valid only with FUNCTION=READ or WRITE. Start position of substring, if only substring of the job variable is to be read or written. Maximum value is 256.

Field Name	Type/Length	Operating System
WRITE-PASSWORD	(A8)	

Usage of this field depends on the function. Possible values:

When FUNCTION=ATTRIB:

Value	Explanation
NONE	No password is defined.
YES	Write password is defined for job variable. If caller is TSOS and Entire System Server is running under TSOS, the password itself is returned.

When FUNCTION=ALLOC or MODATTR:

Value	Explanation
<i>blank</i>	Default. No write password.
<i>password</i>	New write password to be defined for job variable.
*NONE	Reset existing password.

Field Descriptions

Field Name	Type/Length	Operating System
ALIAS	(A8)	z/OS

Possible values:

Value	Explanation
YES	Member name is an alias name.
NO	Member name is an original name.

Field Name	Type/Length	Operating System
ALIAS-ORIGINAL	(A8)	z/OS

If ALIAS=YES, original name of the member (load libraries only).

Field Name	Type/Length	Operating System
BLOCK-COUNT	(N5)	z/VSE

Number of blocks used by the member.

Field Name	Type/Length	Operating System
CREATION-DATE	(A14)	BS2000

Creation date of element.

Field Name	Type/Length	Operating System
CREATION-TIME	(A8)	BS2000

Creation time of element.

Field Name	Type/Length	Operating System
DATE-CHANGED	(A6)	z/VSE

Date of last change made to the member in format *YYMMDD*.

Field Name	Type/Length	Operating System
DATE-CREATED	(A6)	z/VSE

Creation date of member in format *YYMMDD*.

Field Name	Type/Length	Operating System
DATX-CHANGED	(D)	z/VSE

Date of last change made to the member in Natural format.

Field Name	Type/Length	Operating System
DATX-CREATED	(D)	z/VSE

Creation date of member in Natural format.

Field Name	Type/Length	Operating System
DSNAME	(A54)	z/OS, z/VSE, BS2000

Fully qualified dataset name.

Field Name	Type/Length	Operating System
ELEMENT	(A64)	BS2000

Name of LMS element.

Field Name	Type/Length	Operating System
ELEMENT-TYPE	(A8)	BS2000

Type of LMS element.

Field Name	Type/Length	Operating System
ELEMENT-VERSION	(A24)	BS2000

Version of LMS element.

Field Name	Type/Length	Operating System
EXEC-PROTECTION	(A5)	BS2000

Protection attributes of element for EXECUTION.

Possible values are Y (yes) or N (no).

Protection Attribute	Meaning
Byte 0:	Special protection.
Byte 1:	OWNER can access.
Byte 2:	GROUP can access.
Byte 3:	OTHERS can access.
Byte 4:	Password defined.

Field Name	Type/Length	Operating System
GENERATION	(N9)	z/OS

Generation number of member (only valid for PDSE version 2).

Field Name	Type/Length	Operating System
LIBRARY	(A8)	z/VSE

Name of library.

Field Name	Type/Length	Operating System
LIBRARY-BLOCKS-USED	(N7)	z/VSE

Relevant when LIST-SUBLIBS=YES. Number of blocks used by the library.

Field Name	Type/Length	Operating System
LONG-ALIAS	(A3)	z/OS

If set to YES, will return member alias names longer than 8 bytes in length (see [MEMBER-LONG-NAME](#)). Default is NO.

Field Name	Type/Length	Operating System
MEMBER	(A10)	z/OS, z/VSE

Name of member.

Field Name	Type/Length	Operating System
MEMBER-COUNT	(N5)	z/VSE

Relevant when LIST-SUBLIBS=YES. Number of members in sublibrary.

Field Name	Type/Length	Operating System
MEMBER-LONG-NAME	(A253)	z/OS

If LONG-ALIAS is set to YES, then this field will contain the first 253 bytes of member names, including those members whose name length is less than or equal to 8. If LONG-ALIAS is set to NO, then this field is equivalent to MEMBER.

Field Name	Type/Length	Operating System
MEMBER-TTR	(B4)	z/OS

Field Name	Type/Length	Operating System
MEMBER-TYPE	(A8)	z/VSE

Member type.

Field Name	Type/Length	Operating System
MODIF-DATE	(A14)	BS2000

Date of last modification to the element.

Field Name	Type/Length	Operating System
MODIF-TIME	(A8)	BS2000

Time of last modification to the element.

Field Name	Type/Length	Operating System
MODULE-ATTRIBUTES	(A253)	z/OS, z/VSE

The module's attributes in keyword format. The relevant keywords are separated by one blank.
Possible values:

1PAGE	First segment is page aligned.	AMODEANY	Phase has AMODE ANY.
2PAGE	Second segment is page aligned.	AMODE24	Phase has AMODE 24.
1RMODE31	First segment is RMODE 31.	AMODE31	Phase has AMODE 31.
2RMODE31	Second segment is RMODE 31.	MSHPBYP	Member is MSHP bypassed.
AMODE24	Phase has AMODE 24.	MSHPCTL	Member is MSHP controlled.
AMODE31	Module/alias is AMODE 31.	RECTYPEF	Member has fixed record format.
AMODE64	Module/alias is AMODE 64 (z/OS only).	RECTYPEU	Member has undefined record format.
AMODEANY	Module/alias is AMODE ANY.	RECTYPEV	Member has variable record format.
AUTH	APF-authorized.	RMODEANY	Phase has RMODE ANY.
COMPRESSED	Module is in COMPRESSED format.	RMODE24	Phase has RMODE 24.
FETCHPACK	Module is FETCHOPT PACK.	RMODE31	Phase has RMODE 31.
FETCHPRIME	Module is FETCHOPT PRIME.	SYSIPT	Member contains SYSIPT data.
FILLx	FILL option is set. The character following FILL is the value. Note: It may not be printable (a MOVE EDITED would be needed to convert the value to hexadecimal).		
LOADONLY	Only loadable.		
MAMODE31	If alias, main EP is AMODE 31.		
MAMODE64	If alias, main EP is AMODE 64 (z/OS only).		
MAMODEANY	If alias, main EP is AMODE ANY.		
NOTEXEC	Not executable.		
OVLY	Overlay.		
PAGE	Module is page aligned.		
REFR	Refreshable.		
RENT	Reentrant.		
REUS	Reusable.		
RMODE24	Phase has RMODE 24.		
RMODE31	Phase has RMODE 31.		
RMODEANY	Module is RMODE ANY.		
SCTR	Scatter.		
SSI	Module has SSI data.		
TEST	Test option (TSO).		

Field Name	Type/Length	Operating System
MODULE - LENGTH	(N11)	z/OS

Length of module in bytes.

Field Name	Type/Length	Operating System
NUMBER-OF-OCCURRENCES	(N7)	z/OS

Number of records which contain the requested string.

Field Name	Type/Length	Operating System
OPTIONS	(A80)	z/OS

Option	Explanation
ARC	Get list of archived members (CA-Librarian access method).

Field Name	Type/Length	Operating System
PASSWORD	(A8)	z/OS, z/VSE, BS2000

Password for protected datasets.

Field Name	Type/Length	Operating System
PRODUCT	(A1)	z/OS, BS2000

Access method used. Possible options:

Option	Explanation
L	CA-Librarian
M	BS2000 LMS
P	CA-Panvalet

Field Name	Type/Length	Operating System
RECORD	(A200)	z/OS

String for which SCAN is to be performed.

Field Name	Type/Length	Operating System
READ-PROTECTION	(A5)	BS2000

Protection attributes of element for READ. Possible values are Y (yes) or N (no).

Protection Attribute	Meaning
Byte 0:	Special protection.
Byte 1:	OWNER can access.
Byte 2:	GROUP can access.
Byte 3:	OTHERS can access.
Byte 4:	Password defined.

Field Name	Type/Length	Operating System
RECORD-COUNT	(N7)	z/VSE

Number of records in member.

Field Name	Type/Length	Operating System
STORE-FORM	(A1)	BS2000

Store form of element. Possible options:

Option	Explanation
D	Delta
V	Full

Field Name	Type/Length	Operating System
SUB-LIBRARY	(A8)	z/VSE

Name of sublibrary.

Field Name	Type/Length	Operating System
SUB-LIBS	(A3)	z/VSE

Specify YES to return sublibrary names.

Field Name	Type/Length	Operating System
TIME-CHANGED	(N7)	z/VSE

Time of last change made to the member.

Field Name	Type/Length	Operating System
TIME-CREATED	(N7)	z/VSE

Creation time of member.

Field Name	Type/Length	Operating System
USER-DATA	(A120)	z/OS, z/VSE

User data for the member.

z/OS: ISPF statistics entry (if any). For further information, refer to *ISPF statistics entry in a PDS directory* under *ISPF Messages and Codes Manual > Diagnostic Tools and Information > Diagnostic information* in the [z/OS ISPF BookShelf](#).

Field Name	Type/Length	Operating System
USER-DATA-HEX	(B120)	z/OS, z/VSE

User data for the member in hexadecimal format.

Field Name	Type/Length	Operating System
USER-DATA-LENGTH	(N3)	z/OS, z/VSE

Length of user data for the member.

Field Name	Type/Length	Operating System
USER-DATE	(A14)	BS2000

Date the user specified for the element.

Field Name	Type/Length	Operating System
USER-DATX	(D)	BS2000

Date the user specified for the element in Natural format.

Field Name	Type/Length	Operating System
USER-TIME	(A8)	BS2000

Time the user specified for the element.

Field Name	Type/Length	Operating System
USER-TIMX	(T)	BS2000

Time the user specified for the element in Natural format.

Field Name	Type/Length	Operating System
VERSION	(A2)	z/OS

Version of CA-Panvalet access method.

Field Name	Type/Length	Operating System
VOLSER	(A6)	z/OS, z/VSE

Volume serial number.

Field Name	Type/Length	Operating System
VSAM-CATALOG	(A8)	z/VSE

Name of the VSAM catalog where the library is kept.

Field Name	Type/Length	Operating System
WRITE-PROTECTION	(A5)	BS2000

Protection attributes of element for WRITE.

Possible values are Y (yes) or N (no).

Protection Attribute	Meaning
Byte 0:	Special protection.
Byte 1:	OWNER can access.
Byte 2:	GROUP can access.
Byte 3:	OTHERS can access.
Byte 4:	Password defined.

Default Order of Data Returned

In z/OS, members are presented in ascending order.

In z/VSE, members are presented in ascending order, grouped by member type.

Field Descriptions

Field Name	Type/Length	Operating System
ALIAS	(A8)	z/OS

Relevant with FUNCTION=ALIAS. Name of alias to be created.

Field Name	Type/Length	Operating System
ALIAS-EP	(B4)	z/OS

Relevant with FUNCTION=ALIAS. Entry point address to be assigned to the alias.

Field Name	Type/Length	Operating System
ALIAS-AMODE	(A3)	z/OS

Relevant with FUNCTION=ALIAS. AMODE to be assigned to the alias. Value can be one of 24, 31, 64 or ANY.

Field Name	Type/Length	Operating System
DSNAME	(A54)	z/OS, z/VSE, BS2000

Dataset name of the library to be updated.

Field Name	Type/Length	Operating System
ELEMENT	(A64)	BS2000

Element name.

Field Name	Type/Length	Operating System
ELEMENT-PASSWORD	(A8)	BS2000

Password for protected elements.

Field Name	Type/Length	Operating System
ELEMENT-TYPE	(A8)	BS2000

Type of element.

Field Name	Type/Length	Operating System
ELEMENT-VERSION	(A24)	BS2000

Version number of element to be updated.

Field Name	Type/Length	Operating System
FUNCTION	(A8)	z/OS, z/VSE, BS2000

Function to be performed. Possible options:

Option	Explanation
ALIAS	Assign alias to existing member. (z/OS only)
RENAME	Rename member/element.
SCRATCH	Scratch member/element.

Field Name	Type/Length	Operating System
GENERATION	(N9)	z/OS

Generation number of member (only valid for PDSE version 2 with MAXGENS > 0).

Field Name	Type/Length	Operating System
LIBRARY	(A8)	z/VSE

Name of library.

Field Name	Type/Length	Operating System
MEMBER	(A10)	z/OS, z/VSE

Name of member to be processed.

Field Name	Type/Length	Operating System
MEMBER-PASSWORD	(A8)	z/OS

Password for protected CA-Librarian member.

Field Name	Type/Length	Operating System
MEMBER-TYPE	(A8)	z/VSE

Type of member.

Field Name	Type/Length	Operating System
NEWNAME-ELEMENT	(A64)	BS2000

Relevant with FUNCTION=RENAME. New element name.

Field Name	Type/Length	Operating System
NEWNAME-ELEMENT-PASSWORD	(A8)	BS2000

Relevant with FUNCTION=RENAME. Password, if an existing, password-protected element has to be overwritten with RENAME.

Field Name	Type/Length	Operating System
NEWNAME-ELEMENT-TYPE	(A8)	BS2000

Relevant with FUNCTION=RENAME. New element type.

Field Name	Type/Length	Operating System
NEWNAME-ELEMENT-USER-DATE	(A14)	BS2000

Is written as element information into the LMS library.

Format: YYYY-MM-DDaaaa, where aaaa can be any 4-character string.

Field Name	Type/Length	Operating System
NEWNAME-ELEMENT-USER-TIME	(A8)	BS2000

Is written as element information into the LMS library. Format: HH:MM:SS.

Field Name	Type/Length	Operating System
NEWNAME-ELEMENT-VERSION	(A24)	BS2000

Relevant with FUNCTION=RENAME. Version of new element.

Field Name	Type/Length	Operating System
NEWNAME-MEMBER	(A10)	z/OS, z/VSE

Relevant for FUNCTION=RENAME. New name of member.

Field Name	Type/Length	Operating System
NEWNAME-MEMBER-TYPE	(A8)	z/VSE

Type of new member when FUNCTION=RENAME.

Field Name	Type/Length	Operating System
OPTIONS	(A80)	z/OS

Options for CA-Librarian access method.

Field Name	Type/Length	Operating System
OVERWRITE	(A3)	BS2000

Relevant with FUNCTION=RENAME. Possible options:

Option	Explanation
NO	Default. Do not overwrite target element with the same name.
EXTEND	Extend target element with this element.
ONLY	Target element must exist.
YES	Overwrite target element with the same name.

Field Name	Type/Length	Operating System
PASSWORD	(A8)	z/OS, BS2000

Password for protected dataset or file.

Field Name	Type/Length	Operating System
PRODUCT	(A1)	z/OS, BS2000

Access method used. Possible options:

Option	Explanation
L	CA-Librarian
M	BS2000 LMS
P	CA-Panvalet

Field Name	Type/Length	Operating System
SUB - LIBRARY	(A8)	z/VSE

Name of sublibrary.

Field Name	Type/Length	Operating System
VOLSER	(A6)	z/OS, z/VSE

Volume serial number.

Field Name	Type/Length	Operating System
VSAM-CATALOG	(A8)	z/VSE

Name of VSAM catalog where the library is kept.

34

LIB-ZAP

■ Common Fields for all Operating Systems	276
■ Field Descriptions	276
■ Default Order of Data Returned	277

File	16
Op-Sys	z/OS
Statement	PROCESS
Task	Apply Zaps to load modules using AMASPZAP, without having to submit a batch job.

Common Fields for all Operating Systems

Dictionary Field Name	F/L	Mu	DE	Remarks
ERROR-CODE	N3			
ERROR-TEXT	A58			
NODE	N5		D	
NODE-NAME	A16		D	
DSNAME	A54		D	Required.
VOLSER	A6		D	Required if dataset is not cataloged.
LINE	A121		D	
COMMAND	A253		D	Required.
PASSWORD	A8			Required if dataset is password-protected.
COMPLETION-CODE	B2			

Field Descriptions

Field Name	Type/Length	Operating System
COMMAND	(A253)	

Input cards to AMASPZAP. Use a semicolon (;) to delimit cards. For example:

```
NAME MODULE;  
VER 2A 4700;  
REP 2A 47F0
```

If no command is specified, temporary file &TEMP.SI is read. In this manner, Zap cards can be written into the temporary file using the WRITE-FILE view, and AMASPZAP is invoked using the file as input.

Field Name	Type/Length	Operating System
COMPLETION-CODE	(B2)	

Completion code returned from AMASPZAP.

Field Name	Type/Length	Operating System
DSNAME	(A54)	

Fully qualified dataset name.

Field Name	Type/Length	Operating System
LINE	(A121)	

AMASPZAP output line.

Field Name	Type/Length	Operating System
PASSWORD	(A8)	

Password for dataset, if dataset is password protected.

Field Name	Type/Length	Operating System
VOLSER	(A6)	

Volume serial number. Only required if dataset is not cataloged.

Default Order of Data Returned

Each line of the output listing is presented in order.

35

STATE	A7		D	

Relevant Error Codes

Code	Text	z/OS
805	Invalid TCB address.	X

Field Descriptions

Field Name	Type/Length	Operating System
ENTRY-POINT	(B4)	

Entry point of the module.

Field Name	Type/Length	Operating System
JOB-NAME	(A8)	

Name of the job.

Field Name	Type/Length	Operating System
LENGTH	(B3)	

Length of the module.

Field Name	Type/Length	Operating System
LOAD-ADDRESS	(B4)	

Load address of the module.

Field Name	Type/Length	Operating System
MODULE	(A8)	

Name of load module, interpreted by the fields TYPE, LOAD-ADDRESS and LENGTH.

Field Name	Type/Length	Operating System
PSW	(B4)	

Current Program Status Word for a program (does not apply, if TYPE=LOAD).

Field Name	Type/Length	Operating System
STATE	(A7)	

Run state of the program (does not apply, if TYPE=LOAD). Possible values:

Value	Explanation
RUN	Program is running.
SUSPEND	Program is suspended.
WAIT	Program is in wait state.

Field Name	Type/Length	Operating System
TCB-ADDRESS	(B4)	

Address of Task Control Block.

Field Name	Type/Length	Operating System
TYPE	(A4)	

Module type. Possible values:

Value	Explanation
IRB	Interrupt Request
LOAD	Module was loaded.
PRB	Program Request.
SIRB	System Interrupt Request.
SVRB	SuperVisor Request for SVC routines.
TIRB	Task Interrupt Request.

Field Name	Type/Length	Operating System
USE-COUNT	(N3)	

Use count of the module.

36

534	File is not a load library.	X		
580	Binder API :1: call, rc :2:, rsn :3:	X		
600	Unknown function.	X		
998	Member not found.	X		

Field Descriptions

Field Name	Type/Length	Operating System
BLOCK-OFFSET	(B4)	

This field is the offset of the first returned byte in SEGMENT into the load module.

Field Name	Type/Length	Operating System
CSECT-OFFSET	(B4)	

The offset of this segment in the current CSECT.

Field Name	Type/Length	Operating System
ESD-ADDRESS	(B4)	

Relevant with FUNCTION=ESD. Address of the external symbol.

Field Name	Type/Length	Operating System
ESD-AMODE	(A3)	

Relevant with FUNCTION=ESD. The AMODE assigned to the CSECT.

Field Name	Type/Length	Operating System
ESD-ID	(N5)	

Relevant with FUNCTION=ESD. The ID of the external symbol.

Field Name	Type/Length	Operating System
ESD-LENGTH	(N11)	

Relevant with FUNCTION=ESD. Length of the external symbol.

Field Name	Type/Length	Operating System
ESD-LR-ID	(N5)	

Relevant with FUNCTION=ESD. The ID of the label reference (LR) symbol.

Field Name	Type/Length	Operating System
ESD-NAME	(A8)	

Relevant with FUNCTION=ESD or IDR. The external symbol name.

Field Name	Type/Length	Operating System
ESD-NAME-LONG	(A253)	

Relevant with FUNCTION=ESD or IDR or DATA. Returns up to 253 bytes of a long ESD name.

Field Name	Type/Length	Operating System
ESD-RMODE	(A3)	

Relevant with FUNCTION=ESD. The RMODE assigned to the CSECT.

Field Name	Type/Length	Operating System
ESD-TYPE	(A2)	

Relevant with FUNCTION=ESD or VCON. Possible values:

FUNCTION=ESD		FUNCTION=VCON	
CM	Common.	ER	External symbol is unresolved.
ER	External reference.	SD	External symbol is resolved.
LR	Label reference (i.e. Entry name).	WX	External symbol is unresolved (weak).
PC	Private code.		
PR	Pseudo reference.		
SD	Section definition (i.e. CSECT).		
WX	Weak external reference.		

Field Name	Type/Length	Operating System
DSNAME	(A54)	

Fully qualified dataset name.

Field Name	Type/Length	Operating System
FUNCTION	(A8)	

Function to be performed. Possible options:

Option	Explanation
ATTR	Return module attributes.
DATA	Return data on CSECTs.
ESD	Return names of external symbols and other related information as it appears in the external symbol dictionary.
IDR	Return information on applied Zaps and linkedit date/version.
VCON	Return information on external symbols as they appear in the relocation dictionary.

Field Name	Type/Length	Operating System
IDR-CALLER-ID	(A80)	

Relevant with FUNCTION=IDR. Identifies the caller-ID for the Binder IDR data.

Field Name	Type/Length	Operating System
IDR-DATA	(A40)	

Relevant with FUNCTION=IDR. The IDR data.

Field Name	Type/Length	Operating System
IDR-DATE	(A8)	

Relevant with FUNCTION=IDR. The date of the Zap/linkage in format *DD/MM/YY*.

Field Name	Type/Length	Operating System
IDR-DATX	(A8)	

Relevant with FUNCTION=IDR. The date of the Zap/linkage in internal format.

Field Name	Type/Length	Operating System
IDR-TYPE	(A4)	

Relevant with FUNCTION=IDR. Possible types:

Type	Explanation
LANG	Data produced by the language translator to identify the compiler or assembler.
LINK	Linkage entry. The IDR-DATA field contains linkedit name followed by version.
USER	User data created by IDENTIFY statement. The IDR-DATA field contains data (max. 40 bytes).
ZAP	AMASPZAP entry. The IDR-DATA field contains IDRDATA (length 8).

Field Name	Type/Length	Operating System
IN-CSECT	(A8)	

Relevant with FUNCTION=VCON. Name of the CSECT in which the reference to the external symbol appears.

Field Name	Type/Length	Operating System
IN-CSECT-LONG	(A253)	

Relevant with FUNCTION=VCON. Returns up to 253 bytes of a long CSECT name.

Field Name	Type/Length	Operating System
MEMBER	(A10)	

Member name.

Field Name	Type/Length	Operating System
MODULE-ATTRIBUTES	(A253)	

Relevant with FUNCTION=ATTR. The module's attributes in keyword format. The relevant keywords are separated by a blank. See the description for [MODULE-ATTRIBUTES](#) in the [LIB-DIRECTORY](#) view for values returned in this field.

Field Name	Type/Length	Operating System
MODULE-LENGTH	(N11)	

Relevant with FUNCTION=ATTR. The module's length in bytes.

Field Name	Type/Length	Operating System
MODULE-SSI	(B4)	

Relevant with FUNCTION=ATTR. The module's SSI data.

Field Name	Type/Length	Operating System
PASSWORD	(A8)	

Password for protected dataset.

Field Name	Type/Length	Operating System
SEGMENT	(A253)	

Relevant with FUNCTION=DATA. Contains the data segment with length SEGMENT-LENGTH.

Field Name	Type/Length	Operating System
SEGMENT-LENGTH	(B2)	

The length of the record segment to be returned. At the end of the block/CSECT/module, the segment may be smaller.

SEGMENT-LENGTH might sometimes have a value greater than 253. This indicates the presence of a large area of the FILL character specified when binding the load module or program object (almost always X'00'; different values are indicated in the data returned by the MODULE-ATTRIBUTES field).

Programs should interpret this as indicating that the `FILL` character is present for `SEGMENT-LENGTH` - 253 bytes beyond `CSECT-OFFSET + 253`.

Field Name	Type/Length	Operating System
VOLSER	(A6)	

Volume serial number. Only required if the dataset is not cataloged.

699	Not enough main storage available.	X	X	
799	Entire System Server internal error.			X
801	Job not found.	X		
803	Cannot access data.	X	X	X

Field Descriptions

Field Name	Type/Length	Operating System
ADDRESS	(B4)	z/OS, z/VSE, BS2000

Starting main storage address. The actual address displayed is specified by a combination of the **ADDRESS** and **OFFSET** fields.

In BS2000, address relative to memory pool start.

Field Name	Type/Length	Operating System
ADDRESS-64BIT	(B8)	z/OS

Starting main storage address in 64-bit format (used to display storage above 4 GB). The actual address displayed is specified by a combination of the **ADDRESS-64BIT** and **OFFSET** fields.

Field Name	Type/Length	Operating System
AREA	(A250)	z/OS, z/VSE, BS2000

Location to which the storage block is returned.

Field Name	Type/Length	Operating System
JOB - NAME	(A8)	z/OS

Name of job which serves as address space identifier. This field is required.

Field Name	Type/Length	Operating System
LENGTH	(N3)	z/OS, z/VSE, BS2000

Length of main storage to be retrieved (maximum is 250).

Field Name	Type/Length	Operating System
OFFSET	(B4)	z/OS, z/VSE, z/VSE , BS2000

Offset related to address to be displayed. The actual address displayed is specified by a combination of the ADDRESS and OFFSET fields.

Field Name	Type/Length	Operating System
POOL - ID	(A54)	BS2000

Name of the memory pool.

Field Name	Type/Length	Operating System
SCOPE	(A6)	BS2000

Scope of memory pool. Possible values:

Value	Explanation
GLOBAL	Name valid system-wide. Default.
GROUP	Name valid for user ID.
LOCAL	Name valid for task.

509	Logon failed - check LOGON - ID / PASSWORD	X	X	X
511	Function must be LOGON/LOGOFF	X	X	X

Field Descriptions

Field Name	Type/Length	Operating System
CPU	(N5.2)	z/OS, z/VSE, BS2000

Amount of CPU consumed (format *SSSSS.HH*), returned with FUNCTION=LOGOFF.

Field Name	Type/Length	Operating System
FUNCTION	(A8)	z/OS, z/VSE, BS2000

Possible options:

Field Name	Type/Length	Operating System
IO-COUNT	(N7)	z/OS, z/VSE, BS2000

Number of I/O operations so far, returned with FUNCTION=LOGOFF.

Option	Explanation
LOGOFF	Logoff from the system.
LOGON	Logon to the system.

Field Name	Type/Length	Operating System
LOGON-ID	(A8)	z/OS, z/VSE, BS2000

System user ID.

Field Name	Type/Length	Operating System
NEW-PASSPHRASE	(A100)	z/OS

New password phrase for user ID.

Field Name	Type/Length	Operating System
NEW-PASSWORD	(A32)	z/OS, z/VSE

New password for system user ID.

Field Name	Type/Length	Operating System
PASSPHRASE	(A100)	z/OS

Password phrase for user ID.

Field Name	Type/Length	Operating System
PASSWORD	(A32)	z/OS, z/VSE, BS2000

Password for system user ID.

Field Name	Type/Length	Operating System
RACF-GROUP	(A8)	z/OS

Group to which the user ID is defined in RACF or security interface.

Field Name	Type/Length	Operating System
SECURITY-MESSAGE	(A80)	z/OS

Message returned by security interface.

Relevant Error Codes

Code	Text	z/OS	z/VSE	BS2000
600	Unknown function.	X	X	X
649	Entire System Server User not found or cannot be cancelled.	X	X	X

Field Descriptions

Field Name	Type/Length	Operating System
ADABAS-EXTENDED-ID	(B28)	z/OS, z/VSE, BS2000

Extended Adabas user ID (28 bytes).

Field Name	Type/Length	Operating System
ADABAS-ID	(B4)	z/OS, z/VSE, BS2000

The Adabas user ID.

Field Name	Type/Length	Operating System
CORE-FREE	(N7)	z/OS, z/VSE

Amount of free storage in the address space (in Kbytes). This value is only returned for the `MAIN` entry.

Field Name	Type/Length	Operating System
CORE-USED	(N7)	z/OS, z/VSE

Amount of storage used by task (in Kbytes).

Field Name	Type/Length	Operating System
CPU	(N5.2)	z/OS, z/VSE, BS2000

Amount of CPU consumed (format: `SSSSS.HH`).

Field Name	Type/Length	Operating System
FUNCTION	(A8)	z/OS, z/VSE, BS2000

Possible options:

Option	Explanation
CANCEL	Cancel user with the specified NATPROC-ID.
LASTERR	Get last error message.

If no function is specified, a list of Entire System Server users is given.

Field Name	Type/Length	Operating System
FULL-SCAN	(A3)	z/OS, z/VSE, BS2000

FULL-SCAN is considered for FUNCTION = ' ' only (display list of ESY users). If FULL-SCAN is set to YES, all internal Entire System Server tasks are returned additionally. If NO or blank is supplied, only ESY users are returned.

Field Name	Type/Length	Operating System
INTERNAL-TASK	(A3)	z/OS, z/VSE, BS2000

Possible values:

- YES if data of internal ESY task is returned.
- NO if data of NATPROC-USER is returned.

Field Name	Type/Length	Operating System
IO-COUNT	(N7)	z/OS, z/VSE, BS2000

Number of I/O operations so far. Under BS2000, this field always contains zero, if a Natural subtask is returned (see FULL-SCAN='YES').

Field Name	Type/Length	Operating System
JOB-ID	(A8)	BS2000

TSN of internal task in alpha format.

Field Name	Type/Length	Operating System
LAST-ACTIVITY	(N5)	z/OS, z/VSE, BS2000

Time elapsed since last activity (in seconds). Under BS2000, this field always contains zero, if a Natural subtask is returned (see FULL-SCAN='YES').

Field Name	Type/Length	Operating System
NATPROC-ID	(A10)	z/OS, z/VSE, BS2000

The unique internal ID in the Entire System Server.

Value 'Task' is returned for an internal task, value NAT for a Natural subtask.

Field Name	Type/Length	Operating System
ORIGIN-JOBNAME	(A8)	z/OS

Name of TP system or batch job from which the user calls originate.

Field Name	Type/Length	Operating System
TASK-ID	(A16)	z/OS, z/VSE, BS2000

ID of the internal task is returned. This is usually the name of the load module or, if a NATURAL-SUB-TASK is returned, the NAT-USER data.

For z/VSE internal tasks, the phase name is returned in positions 1-8, and the task number is returned in positions 9-12.

Field Name	Type/Length	Operating System
TCB-ADDRESS	(B4)	z/OS

TCB address of the subtask.

Field Name	Type/Length	Operating System
USER-ID	(A8)	z/OS, z/VSE, BS2000

Possible values:

Value	Explanation
<i>userid</i>	The user ID.
-----	The user is not logged on.
****main	Entry for the Entire System Server main task.

Example:

```
FIND NATPROC-USERS WITH NODE      = 199
                        AND FULL-SCAN = 'YES'
                        AND FUNCTION  = ' '
*
IF ERROR-CODE EQ 0
  IF #FIRST EQ 1
    WRITE 'LogonID  ESY  Task-ID          TSN   LastAct CPU used'
        'IO count INTERNAL'
    WRITE '_____ '
        '_____'
    ASSIGN #FIRST = 0
  END-IF
*
WRITE USER-ID NATPROC-ID TASK-ID JOB-ID LAST-ACTIVITY (NL=6)
```

CPU (NL=4.2) IO-COUNT (NL=7) INTERNAL-TASK

...

The following output is created:

LogonID	ESY	Task-ID	TSN	LastAct	CPU used	IO count	INTERNAL

Field Descriptions

Field Name	Type/Length	Operating System
COMMAND	(A80)	z/OS, z/VSE

VTAM command.

Field Name	Type/Length	Operating System
LINE	(A126)	z/OS, z/VSE

Output line from VTAM. This line is split into segments, known as tokens. The field **NUMBER-OF-TOKENS** contains the token count, the **TOKEN-1** to **TOKEN-20** fields contain the corresponding tokens.

Field Name	Type/Length	Operating System
LINE - LENGTH	(N3)	z/OS, z/VSE

Length of output line.

Field Name	Type/Length	Operating System
LINE - STATUS	(A3)	z/OS, z/VSE

Line status. Possible values:

Value	Explanation
NO	No line has been returned. This means that no VTAM messages are currently queued for this user.
YES	A line has been returned.

Field Name	Type/Length	Operating System
NUMBER - OF - TOKENS	(N3)	z/OS, z/VSE

Number of tokens in line.

Field Name	Type/Length	Operating System
PURGE - PREVIOUS	(A3)	z/OS, z/VSE

Action to be performed on messages. Possible options:

Option	Explanation
NO	The messages for this user are not purged.
YES	Purge any messages queued for this user before issuing a new command.

Field Name	Type/Length	Operating System
TERMINATE - TIME	(N5)	z/OS, z/VSE

Terminate processing loop if no real lines have been returned within the specified period. The default is 60 seconds.

Field Name	Type/Length	Operating System
TIME - STAMP	(A8)	z/OS, z/VSE

The time the message was received from VTAM in the format: *HH:MM:SS*.

Field Name	Type/Length	Operating System
TOKEN - <i>n</i>	(A15)	z/OS, z/VSE

Tokens 1 to 20. These are returned in a multiple field (20 tokens of 15 bytes each).

Field Name	Type/Length	Operating System
TOKENS	(A15)	z/OS, z/VSE

Tokenized VTAM output line (20 tokens with a length of 15 bytes each), see field TOKEN - *n*.

Field Name	Type/Length	Operating System
TOKEN-VECTOR	(A225)	z/OS, z/VSE

Tokenized VTAM output line (15 tokens of 15 bytes each).

Default Order of Data Returned

Records are returned in the order that VTAM issues messages.

See the description of the `CHARACTER-SETS` parameter of the `BS2000` command `PRINT-DOCUMENT`.

Field Name	Type/Length	Operating System
COMMAND-RESPONSE	A253	BS2000

`PRINT-DOCUMENT` command response.

Field Name	Type/Length	Operating System
DELETE-AFTER-PRINT	A3	BS2000

Delete file after print: YES or NO.

Field Name	Type/Length	Operating System
DSNAME	A54	BS2000

Name of the file to be printed out.

Note that `FUNCTION=CLOSE` is required to start the printout.

Field Name	Type/Length	Operating System
ELEMENT	A64	BS2000

Name of the LMS element to be printed out.

Field Name	Type/Length	Operating System
ELEMENT-PASSWORD	A8	BS2000

Password for protected LMS element.

Field Name	Type/Length	Operating System
ELEMENT-TYPE	A8	BS2000

Type of LMS element to be printed out.

Field Name	Type/Length	Operating System
ELEMENT-TYPE	A24	BS2000

Version of LMS element to be printed out.

Field Name	Type/Length	Operating System
FACE-SIDE	A8	BS2000

Face side identifier.

See the description of the `FACE-SIDE` parameter of the BS2000 command `PRINT-DOCUMENT`.

Field Name	Type/Length	Operating System
FORM-NAME	A8	BS2000

Name of form.

See the description of the `FORM-NAME` parameter of the BS2000 command `PRINT-DOCUMENT`.

Field Name	Type/Length	Operating System
FUNCTION	A8	BS2000

Function to be performed.

Possible options:

`blank` Default. Print a record.

`CLOSE` All records have been written. Specify this on the last request.

Field Name	Type/Length	Operating System
HEADER-PAGE-TEXT	A32	BS2000

Used for system exits.

See the description of the `HEADER-PAGE-TEXT` parameter of the BS2000 command `PRINT-DOCUMENT`.

Field Name	Type/Length	Operating System
JOB-ID	A5	BS2000

Returned for `FUNCTION=CLOSE`.

Field Name	Type/Length	Operating System
JOB-NAME	A8	BS2000

Name of the job under which the output is to be printed.

Field Name	Type/Length	Operating System
LEFT-MARGIN	A4	BS2000

Left margin of text.

```
LAYOUT-CONTROL=*PARAMETERS(LEFT-MARGIN=value_1)
```

See the description of the `LEFT-MARGIN` parameter of the BS2000 command `PRINT-DOCUMENT`.

Field Name	Type/Length	Operating System
LINE-SPACING	A64	BS2000

File contains ASA print control characters.

```
DOCUMENT-FORMAT=*TEXT(LINE-SPACING=value)
```

For an explanation, see the description of the `LINE-SPACING` parameter of the BS2000 command `PRINT-DOCUMENT`.

Field Name	Type/Length	Operating System
PAGE-DEFINITION	A8	BS2000

Page definition to be used for print.

PAGE-DEFINITION=*STD/<integer_1...50000>/<alphanum_name_1...8>

For an explanation, see the description of the PAGE-DEFINITION parameter of the BS2000 command PRINT-DOCUMENT.

Field Name	Type/Length	Operating System
PARAMETER-SET-1	A253	BS2000

Extra operands for command PRINT-DOCUMENT.

Field Name	Type/Length	Operating System
PARAMETER-SET-2	A253	BS2000

Extra operands for command PRINT-DOCUMENT.

Field Name	Type/Length	Operating System
PASSWORD	A8	BS2000

Password of protected file.

Field Name	Type/Length	Operating System
RECORD	A253	BS2000

Record to be printed out.

Field Name	Type/Length	Operating System
RECORD-LENGTH	N3	BS2000

Length of record.

Field Name	Type/Length	Operating System
USER-RESOURCES-FILE	A54	BS2000

Fully qualified name of a user file containing all resources.

USER-RESOURCES-FILE=*STD/<filename_1...44>

PRINT-DOCUMENT Programming Notes

PRINT-DOCUMENT is an UPDATE view, that is, data is transmitted from the Natural program (client side) to ESY (server side).

The Entire System Server view PRINT-DOCUMENT returns codes and messages that describe whether the requested operation has been executed successfully or not.

Therefore, the DEFINE DATA section of the Natural program should only contain the fields shown in this example:

```
1 PRINT-DOCUMENT VIEW OF PRINT-DOCUMENT
2 ERROR-CODE
2 ERROR-TEXT
2 SYSTEM-MESSAGE-CODE
2 SYSTEM-CODE
2 COMMAND-RESPONSE
2 JOB-ID
```

These fields in a DEFINE DATA statement are the fields returned from the PRINT-DOCUMENT view in Entire System Server to the calling Natural program.

Defining other fields in DDM is not critical, but the access to these fields can lead to unpredictable results.

Field Descriptions

Field Name	Type/Length	Operating System
BLKSIZE	(B2)	z/VSE

Block size of dataset.

Field Name	Type/Length	Operating System
BLOCK-LENGTH	(N5)	z/OS, z/VSE, BS2000

Length of block.

Field Name	Type/Length	Operating System
BLOCK-NUMBER	(N9)	z/OS, z/VSE

Number of block.

Field Name	Type/Length	Operating System
BLOCK-TTR	(B3)	z/OS

TTR of the block which was read.

Field Name	Type/Length	Operating System
BLOCK-TOKEN	(B4)	z/OS

Token value of the block which was read.

For a large format sequential data set, the token is in the format *TTTR* where *TTT* is the relative track address and *R* the number of the block on that track.

Field Name	Type/Length	Operating System
DIRECT	(A3)	z/OS, z/VSE, BS2000

Possible options:

Option	Explanation
NO	Default. The block is not read directly.
YES	If REFM=F and DSORG=PS or DA, the block is read directly according to RECORD-NUMBER and BLOCK-NUMBER. In BS2000: SAM files with RECFORM=F are read directly according to RECORD-NUMBER. PAM files and LMS elements are always read directly, if a RECORD-NUMBER is specified.

Field Name	Type/Length	Operating System
DIRECTION	(A1)	BS2000

Possible values:

Value	Explanation
B	Read backwards (ISAM files only)
F	Read forward

Field Name	Type/Length	Operating System
DSNAME	(A54)	z/OS, z/VSE, BS2000

Fully qualified dataset name.

Field Name	Type/Length	Operating System
ELEMENT	(A64)	BS2000

Name of LMS element to be read.

Field Name	Type/Length	Operating System
ELEMENT-TYPE	(A8)	BS2000

Type of LMS element to be read.

Types C and L are currently not supported.

Field Name	Type/Length	Operating System
ELEMENT-PASSWORD	(A8)	BS2000

Password, for protected LMS element (LMS V2 or above).

Field Name	Type/Length	Operating System
ELEMENT-RECORD-TYPE	(N3)	BS2000

Record type (LMS only)

Field Name	Type/Length	Operating System
ELEMENT-VERSION	(A24)	BS2000

Version of LMS element to be read.

Field Name	Type/Length	Operating System
END-OF-FILE	(A3)	z/OS, z/VSE, BS2000

Contains YES, if the end of record is reached. The RECORD-NUMBER field then contains the number of records in the dataset.

Field Name	Type/Length	Operating System
GENERATION	(N9)	z/OS

Generation number of member (only valid for PDSE version 2 with MAXGENS > 0).

Field Name	Type/Length	Operating System
KEY	(A253)	z/OS, BS2000

ISAM or VSAM key.

Field Name	Type/Length	Operating System
LIBRARY	(A8)	z/VSE

Name of library.

Field Name	Type/Length	Operating System
LRECL	(B2)	z/VSE

Required with RECFM=F. Logical record length. Default is 80.

Field Name	Type/Length	Operating System
MEMBER	(A10)	z/OS, z/VSE

If the dataset is a PDS, member name.

Field Name	Type/Length	Operating System
MEMBER-TYPE	(A8)	z/VSE

Member type.

Field Name	Type/Length	Operating System
OPTIONS	(A80)	z/OS

Specify X to cause expansion of all ++INCLUDE statements for CA-Panvalet.

Field Name	Type/Length	Operating System
PASSWORD	(A8)	z/OS, z/VSE, BS2000

Password for protected dataset.

Field Name	Type/Length	Operating System
POSITION	(N5)	z/OS, z/VSE, BS2000

Starting position within record. The `RECORD` field contains input record starting at this position.

Field Name	Type/Length	Operating System
PRODUCT	(A1)	z/OS, BS2000

Access mode used. Possible values:

Value	Explanation
L	CA-Librarian
M	BS2000 LMS
P	CA-Panvalet

Field Name	Type/Length	Operating System
RECFM	(A2)	z/VSE

Record format of dataset. Default is `F`.

Field Name	Type/Length	Operating System
RECORD	(A253)	z/OS, z/VSE, BS2000

Gives the retrieved record. The length of this field as it appears in the format buffer determines the portion of the record retrieved each time a record is requested. Field `SEGMENT-NUMBER` contains the segment number within the record. For example, the record is 240 bytes long and the calling program requests 80 bytes (in Natural reporting mode: `OBTAIN RECORD (A80)`). The calling program will then receive three segments.

Field Name	Type/Length	Operating System
RECORD-LENGTH	(N5)	z/OS, z/VSE, BS2000

Length of entire record (not the segment length).

Field Name	Type/Length	Operating System
RECORD-NUMBER	(N9)	z/OS, z/VSE, BS2000

Record position within the dataset.

For BS2000, in case of a PAM file, the PAM block number must be specified here.

Field Name	Type/Length	Operating System
SCAN	(A3)	z/OS, z/VSE, BS2000

Specify YES to return the first record that meets all selection criteria and all subsequent records.

Field Name	Type/Length	Operating System
SCAN-COLUMN-FROM	(N5)	z/OS, z/VSE, BS2000

Relevant if SCAN-TYPE=A. Specifies the column number where the scan is to start. Default is 1.

Field Name	Type/Length	Operating System
SCAN-COLUMN-TO	(N5)	z/OS, z/VSE, BS2000

Relevant if SCAN-TYPE=A. Specifies the column number where the scan is to end. Default is the end of the record.

Field Name	Type/Length	Operating System
SCAN-LENGTH	(N3)	z/OS, z/VSE, BS2000

Relevant if SCAN-TYPE=A. Specifies the length of the scan string in field RECORD.

Field Name	Type/Length	Operating System
SCAN-LIMIT	(N7)	z/OS, z/VSE, BS2000

Specifies the maximum number of records to be scanned before the record is selected. If the limit is reached and no record found, Error Code 533 is issued.

Field Name	Type/Length	Operating System
SCAN-TYPE	(A1)	z/OS, z/VSE, BS2000

Specify A to perform an absolute scan. Wildcard symbols * (asterisk) and _ (underline) are treated as normal characters.

Field Name	Type/Length	Operating System
SEGMENT-LENGTH	(N3)	z/OS, z/VSE, BS2000

Length of segment.

Field Name	Type/Length	Operating System
SEGMENT-NUMBER	(N5)	z/OS, z/VSE, BS2000

Segment number within record.

Field Name	Type/Length	Operating System
SPANNED	(A8)	z/OS

Spanned records, when RECFM is VBS or VS. Possible options:

Option	Explanation
FIRST	Record returned is the first part.
LAST	Record returned is the last part.
MIDDLE	Record returned is the middle part (not FIRST and not LAST).
NO	Record is not spanned.

Field Name	Type/Length	Operating System
SUB-LIBRARY	(A8)	z/VSE

Name of sublibrary.

Field Name	Type/Length	Operating System
TIME-LIMIT	(N5)	z/OS, z/VSE, BS2000

Specifies the maximum number of seconds a given record is to be scanned for.

Field Name	Type/Length	Operating System
VOLSER	(A6)	z/OS, z/VSE

Volume serial number (not relevant for BS2000).

Field Name	Type/Length	Operating System
VSAM-CATALOG	(A8)	z/VSE

Name of VSAM catalog where the library is kept.

If you want to read a given dataset / member it may happen, that the dataset / member is empty. Then the following applies:

- If field END-OF-FILE is in DEFINE DATA clause, then exactly one record is returned also for empty datasets / members containing END-OF-FILE=YES.

- If field `END-OF-FILE` is NOT in define data clause, then no record are returned and the `NO RECORDS FOUND` clause apply.

Default Order of Data Returned

Records are returned in order from the start of the file.

Programming notes BS2000

Sequential files currently in creation are exclusively locked for the creating task and cannot be read by any other task. However, locked files can be accessed if the Entire System Server startup parameter `READ-LOCKED-FILE` is set to `YES` or was not specified, and class 2 system parameter `SVC79` allows the usage of `SVC 79`. The Entire System Server will make a copy of the original data and use this file for `READ-FILE`. This technique is currently implemented for SAM files only.

Field Descriptions

Field Name	Type/Length	Operating System
CONTROL-RECORDS	(A3)	z/VSE

Specifies whether control records are to be returned. Possible options:

Option	Explanation
NO	Control records are not returned.
YES	Default. Control records are returned.

Field Name	Type/Length	Operating System
DATA-SET	(N5)	z/OS

Requested dataset number (see also the DATA-SET-KEY field).

Field Name	Type/Length	Operating System
DATA-SET-KEY	(N11)	z/OS, z/VSE

Unique dataset identification. This offers much faster access than the dataset number. The dataset key can be obtained using the SPOOL-FILES view.

Field Name	Type/Length	Operating System
INTERNAL-RECORD-NUMBER	(N7)	z/VSE

Internal record number as returned by POWER.

Field Name	Type/Length	Operating System
JOB - NAME	(A8)	z/OS, z/VSE

Name of job. If you do not specify a job name, you must specify the JOB - NUMBER field.

Field Name	Type/Length	Operating System
JOB - ID	(A8)	z/OS, z/VSE

Job number in alphanumeric format.

Field Name	Type/Length	Operating System
JOB - NUMBER	(N7)	z/OS, z/VSE

Job number assigned by the spooling system. If you do not specify a job number, you must specify the JOB - NAME field.

Field Name	Type/Length	Operating System
POSITION	(B1)	z/OS, z/VSE

Offset in spool record (the RECORD field contains spool record starting at this offset).

Field Name	Type/Length	Operating System
RECORD	(A253)	z/OS, z/VSE

Spool record to be searched (see also the POSITION field).

Field Name	Type/Length	Operating System
RECORD - LENGTH	(N5)	z/OS, z/VSE

Length of entire spool record (not the segment length).

Field Name	Type/Length	Operating System
RECORD - NUMBER	(N7)	z/OS, z/VSE

Relative record number from start of dataset.

Field Name	Type/Length	Operating System
RECORD-TYPE	(B1)	z/VSE

Record type of spool record. This field is relevant if `CONTROL-RECORDS=YES`. This field contains the type of record returned. Possible values:

Option	Explanation
X'00'	Normal data record.
X'05'	Control command record.

Field Name	Type/Length	Operating System
SCAN	(A3)	z/OS, z/VSE

If you specify `YES`, the first record which meets the selection criteria and all subsequent records are returned.

Field Name	Type/Length	Operating System
SCAN-COLUMN-FROM	(N3)	z/OS, z/VSE

Specifies the column number where the scan is to start. Default is column 1.

Note: Only relevant if `SCAN-TYPE=A`.

Field Name	Type/Length	Operating System
SCAN-COLUMN-TO	(N3)	z/OS, z/VSE

Specifies the column number where the scan is to end. Default is the end of the record. Only relevant if `SCAN-TYPE=A`.

Field Name	Type/Length	Operating System
SCAN-LENGTH	(N3)	z/OS, z/VSE

Specifies how much of the string in the `RECORD` field is to be scanned. Only relevant if `SCAN-TYPE=A`.

Field Name	Type/Length	Operating System
SCAN-LIMIT	(N7)	z/OS, z/VSE

Maximum number of records to be scanned before a record is found that matches the search criteria. If this limit is reached and no matching record is found, `ERROR-CODE 533` with the appropriate text is returned.

Field Name	Type/Length	Operating System
SCAN-TYPE	(A1)	z/OS, z/VSE

Specify A for an absolute search. Note that wildcard symbols (* and _) are then treated as normal characters.

Field Name	Type/Length	Operating System
SEGMENT-LENGTH	(N3)	z/OS

Length of segment of spool record. If this field is not specified or zero, only the first segment will be returned, even if the spool record is longer than the RECORD area.

Field Name	Type/Length	Operating System
SEGMENT-NUMBER	(N3)	z/OS, z/VSE

Segment number of spool record to be retrieved, if the output is segmented.

z/OS: Segment number within record.

z/VSE: Segment number of spool record to be retrieved, if the output is segmented.

Field Name	Type/Length	Operating System
TIME-LIMIT	(N5)	z/OS, z/VSE

Specifies the maximum number of seconds that a record can be scanned. If this limit is exceeded and no match is found, ERROR-CODE 537 is returned.

Field Name	Type/Length	Operating System
TYPE	(A2)	z/OS, z/VSE

Spool dataset type. Possible values:

z/OS	
AL	Read all SM/SO files as one file.
CC	Summary of job steps and completion codes.
JL	Input JCL.
SI	SYSIN data.
SM	System messages.
SO	SYSOUT data.

z/VSE	
CC	Summary of job steps and completion codes.
LS	List queue.
PU	Punch queue.
RD	Reader queue.
XM	Transmit queue.

Default Order of Data Returned

Records are returned in order from the start of the SYSOUT data set.

Field Name	Type/Length	Operating System
NODE	(N5.0)	z/OS

D Node ID (DBID).

Field Name	Type/Length	Operating System
ERROR-CODE	(N3.0)	z/OS

Message code.

Field Name	Type/Length	Operating System
ERROR-TEXT	(A58)	z/OS

Text describing error.

Field Name	Type/Length	Operating System
NODE-NAME	(A16)	z/OS

LPAR where node is running.

Field Name	Type/Length	Operating System
SYSTEM-MESSAGE-CODE	(A10)	z/OS

Code of system message.

Field Name	Type/Length	Operating System
PATH	(A128)	z/OS

Path of file to be read.

Field Name	Type/Length	Operating System
RECORD	(A253)	z/OS

Record to be read.

Field Name	Type/Length	Operating System
RECORD-LENGTH	(N3.0)	z/OS

Length of record. Required.

RECEIVE-EMAIL

■ Fields	346
■ Relevant Error Codes	347
■ Field Descriptions	347

File	70
Op-Sys	z/OS
Statement	FIND
Task	This view provides the support for receiving e-mails using IMAP protocol

Fields

Dictionary Field Name	F/L	Mu	DE	Remarks
DATE	A64		D	Date and Time a mail was transmitted to the sender's mail server.
FUNCTION	A8		D	Function to be performed.
LIST-NUM-MAILS	N3.0		D	Number of mails to be processed by one call of the LIST function. Also defined as startup parameter.
LIST-NUM-MAILS-START	N6.0		D	Sequence number the LIST function starts on its second or n th call.
MAIL-SEQUENCE-NUMBER	N6.0			Internal number; can change after call.
MAILSERVER-RESPONSE	A128			Response of mail server in case an error had occurred.
MESSAGE-ID	A128		D	Internal identifier.
NUMBER-MAILS	N5.0			Number of mails in inbox.
NUMBER-NEW-MAILS	N5.0			Number of unread mails in inbox.
PASSWORD	A64		D	Password of caller.
RECIPIENTS	A250		D	List of recipients.
RECORD	A253		D	Mail body.
SENDER-MAIL	A64		D	E-Mail address of sender.
SENDER-NAME	A64		D	Name of sender.
STATUS	A4		D	NEW for unread mails, SEEN for mails already read.
SUBJECT	A128		D	Subject of e-mail.
TRACE	A4		D	YES/NO. If set to YES, the contents of the mail is traced.
UID	N12.0		D	Unique identifier. Key to read or delete a mail.
USERID	A64		D	User ID of caller or e-mail address.

Relevant Error Codes

Code	Text
600	unknown function
927	init error
928	LOGON error
929	no connection with remote host
930	LIST-NUM-MAILS greater max
931	error with command
932	record length invalid
933	UID missing
934	Mail not found

Field Descriptions

Field Name	Type/Length	Operating System
DATE	(A64)	z/OS

Time and date at which an e-mail was sent. The format of this field depends on the data of mail sender.

Field Name	Type/Length	Operating System
FUNCTION	(A8)	z/OS

Function to be performed. Possible options:

Option	Explanation
DELETE	Delete a mail. See example.
LIST	Display directory data of mails such as STATUS, SENDER-MAIL, SENDER-NAME, SUBJECT, RECIPIENTS, MESSAGE-ID, UID or DATE. See example.
READ	Read a mail. See example.
STATUS	Request total number of mails (NUMBER-MAILS) and/or number of new mails (NUMBER-NEW-MAILS). See example.

Field Name	Type/Length	Operating System
LIST-NUM-MAILS	(N3.0)	z/OS

Number of mails displayed by function LIST. This field is also defined as startup parameter which defaults to 20. The maximum to be specified is controlled by startup parameter LIST-NUM-MAILS-MAX. The default is 100. The maximum is 999.

Field Name	Type/Length	Operating System
LIST-NUM-MAILS-START	(N6.0)	z/OS

This field is used for function LIST to control the position from which to read in mails, by default the position of the latest mail. Note that mails are ordered according to the date they have been received.

Field Name	Type/Length	Operating System
MAIL-SEQUENCE-NUMBER	(N6.0)	z/OS

Number indicating the current position of the mail in the mailbox. If a mail is deleted or a new mail arrives the MAIL-SEQUENCE-NUMBERS are recomputed.

Field Name	Type/Length	Operating System
MESSAGE-ID	(A128)	z/OS

A unique world-wide reference for e-mails. However, a MESSAGE-ID cannot be used to read or delete a mail. Use UID instead.

Field Name	Type/Length	Operating System
MAILSERVER-RESPONSE	(A128)	z/OS

The message of the mail server if an error has occurred.

Field Name	Type/Length	Operating System
NUMBER-MAILS	(N5.0)	z/OS

Number of mails contained in the mailbox

Field Name	Type/Length	Operating System
NUMBER-NEW-MAILS	(N5.0)	z/OS

Number of mails that have not been read yet that is those with attribute `NEW`.

Field Name	Type/Length	Operating System
PASSWORD	(A64)	z/OS

Password for the e-mail account, handed over in the Natural program.

Field Name	Type/Length	Operating System
RECIPIENTS	(A250)	z/OS

The list of recipients of a mail. This can be one recipient indicated by a name and an email address, multiple recipients or a mailing list. Note that the list can only contain 250 characters and that the list is truncated if this limit is exceeded. This field is optional.

Field Name	Type/Length	Operating System
RECORD	(A253)	z/OS

Lines of text contained in the body of a mail. We recommend to use plain text / 7-bit ASCII because there is only a basic ASCII-EBCDIC conversion and no character encoding recognition to recognize for example UTF-8. An HTML mail will be displayed without formatting that is with HTML codes.

Field Name	Type/Length	Operating System
SENDER-MAIL	(A64)	z/OS

The e-mail address of the sender of a mail. This field is optional.

Field Name	Type/Length	Operating System
SENDER-Name	(A64)	z/OS

The name of the sender of a mail. This field is optional.

Field Name	Type/Length	Operating System
STATUS	(A4)	z/OS

Specifies either `NEW` for a mail that is new or `SEEN` for a mail that has already been read. This field is optional.

Field Name	Type/Length	Operating System
SUBJECT	(A128)	z/OS

Specifies the subject of the mail. This field is optional.

Field Name	Type/Length	Operating System
TRACE	(A4)	z/OS

If Software AG support

If set to YES, a trace also includes net data from a mail. If set NO (default) or if left blank, tracing includes technical data.

Field Name	Type/Length	Operating System
UID	(N12.0)	z/OS

Specifies the unique identifier of a mail. A UID is displayed using the LIST function. A UID is needed to uniquely identify a mail so it can be read or deleted. The MAIL-SEQUENCE-NUMBER cannot be used for this.

Field Name	Type/Length	Operating System
USERID	(A64)	z/OS

User ID for the e-mail account, handed over in the Natural program.

614	Resource is in use	X

Code	Text	z/OS
615	Resource held by another task	X
616	Error in GQSCAN routine	X

Field Descriptions

Field Name	Type/Length	Operating System
ASID	(N4)	

The address space ID that enqueued.

Field Name	Type/Length	Operating System
CONTROL	(A1)	

Type of control. Possible values:

Value	Explanation
E	Default. Exclusive control.
S	Shared control.

Field Name	Type/Length	Operating System
FUNCTION	(A8)	

Possible values:

Value	Explanation
DEQ	Release resource.
ENQ-TEST	Test whether resource is available.
ENQ-USE	If resource is available, get control of it. Any resources held by a user or application are released at logoff.
LIST	List all ENQs

Field Name	Type/Length	Operating System
JOB - NAME	(A8)	

The job that enqueued.

Field Name	Type/Length	Operating System
QNAME	(A8)	

The major name of the resource. This name may not begin with `SYS`. See example below.

Field Name	Type/Length	Operating System
RESERVE - UNIT	(A3)	

The UCB address of the `RESERVE`.

Field Name	Type/Length	Operating System
RNAME	(A250)	

The minor name of the resource. See example below.

Field Name	Type/Length	Operating System
RNAME - LENGTH	(N3)	

Length of the minor name of the resource (1 - 250).

Field Name	Type/Length	Operating System
SCOPE	(A8)	

Possible values:

Value	Explanation
RESERVE	
RESPEND	Reserve pending.
STEP	
SYSTEM	
SYSTEMS	

Field Name	Type/Length	Operating System
STATUS	(A4)	

Possible values:

Value	Explanation
OWNS	Owner of resource.
WAIT	Waiting for resource.

Field Name	Type/Length	Operating System
TCB-ADDRESS	(B4)	

The TCB address of the task that enqueued.

Example:

The following Natural program displays the minor names of the resources with major name SPFEDIT enqueued for job XCOM148.

```

FIND    RESOURCE-CONTROL WITH FUNCTION = 'LIST'
AND QNAME = 'SPFEDIT'
AND RNAME = '*'
WHERE JOB-NAME = 'XCOM148'
DISPLAY RNAME (AL=79)
END

```

Example output from the above program:

RNAME	

SYSM.PROCLIB	LC370LR
USAKXH.SOURCE	DL0DTXGL
WKK.SYSF.SOURCE	ASMJ3
BROKER.IV100.SAGNA.JCL	\$README
BF.COMN.C.SOURCE	WRTR
BF.COMN.C.SOURCE	CCLA
USARMK.SAGNA.SOURCE	COPYPDS

986	No or not enough space for <i>E-mail Control Block</i> .			X
986	No or not enough space for <i>E-mail Data Block</i> .			X

Field Descriptions

Field Name	Type/Length	Operating System
ATTACHMENT-SUFFIX	(A4)	z/OS, z/VSE, BS2000

The field has a maximum length of 4 characters, so for example if the user sets ATTACHMENT-SUFFIX := 'html' or ATTACHMENT-SUFFIX := 'txt', .html resp. .txt will be appended to the attachment name, making it a valid file extension for e.g. Windows. Also, whole web pages, stored in a DS/Member, can be sent with ATTACHMENT-SUFFIX := 'html' for easier access in a web browser directly from the mail client.

Field Name	Type/Length	Operating System
BCC-RECIPIENT	(A128) M20	z/OS, z/VSE, BS2000

Field Name	Type/Length	Operating System
BCC-RECIPIENT	(A128) M20	z/OS, z/VSE, BS2000

Array of max. 20 recipients receiving a “blind carbon copy” of this mail.

If blank, no “blind carbon copy” will be sent. This field is optional.

Field Name	Type/Length	Operating System
CC-RECIPIENT	(A128) M20	z/OS, z/VSE, BS2000

Array of max. 20 recipients receiving a “carbon copy” of this mail.

If blank, no “carbon copy” will be sent. This field is optional.

Field Name	Type/Length	Operating System
DSNAME	(A54)	z/OS, z/VSE, BS2000

Fully qualified data set name that is attached to this mail as a text file.

Field Name	Type/Length	Operating System
EXTENDED-TEXT	(A250) M60	z/OS, z/VSE, BS2000

Array of max. 60 SMTP reply codes and texts from mail server in case of rejected [CC-/BCC-]RECIPIENTs.

Field Name	Type/Length	Operating System
HOST-CODE-PAGE	(A8)	z/OS, z/VSE, BS2000

This field identifies the host code page of all SEND-EMAIL input fields provided by the user.

If this startup parameter is not specified, Entire System Server uses the internal default U.S. English Code Page (code page number 037/1).

Possible options for BS2000:

Option	Explanation
EDF03DRV	Coded character set (CCS) EBCDIC.DF.03 ISO-7-bit German
EDF03IRV	Coded character set (CCS) EBCDIC.DF.03 ISO-7-bit International
EDF041	Coded character set (CCS) EBCDIC.DF.04 ISO-8-bit International
EDF04DRV	Coded character set (CCS) EBCDIC.DF.04 ISO-8-bit German

Possible options for z/OS, z/VSE:

Option	Explanation
1140	EBCDIC code page 1140 (Brazil, Canada, Netherlands, Portugal, U.S.)
1141	EBCDIC code page 1141 (Austria, Germany.)
1142	EBCDIC code page 1142 (Denmark, Norway)
1143	EBCDIC code page 1143 (Finland, Sweden)
1144	EBCDIC code page 1144 (Italy)
1145	EBCDIC code page 1145 (Latin America, Spain)
1146	EBCDIC code page 1146 (United Kingdom)
1147	EBCDIC code page 1147 (France)
1148	EBCDIC code page 1148 (International)
1149	EBCDIC code page 1149 (Iceland)
114A	EBCDIC code page 114A (Israel) z/OS

Field Name	Type/Length	Operating System
FUNCTION	(A8)	z/OS, z/VSE, BS2000

Function to be performed. Possible options:

Option	Explanation
<i>blank</i>	Default. Write a mail record.
CLOSE	All mail records have been written. Specify this function for the last SEND-EMAIL request.

Field Name	Type/Length	Operating System
FROM-NAME	(A128)	z/OS, z/VSE, BS2000

`last_name` and `first_name` as additional sender information. Field must not contain any quotation marks. The required quotation marks in the mail header will be added automatically.

Field Name	Type/Length	Operating System
IDENTIFIER	(A8)	z/OS, z/VSE, BS2000

Required for nested SEND-EMAIL requests. All requests for the same mail must have the same identifier.

Field Name	Type/Length	Operating System
IGNORE-RCPT-REJECT	(A3)	z/OS, z/VSE, BS2000

Possible values:

Option	Explanation
YES	The e-mail is sent even if a specified RECIPIENT is rejected by the SMTP server.
NO	The e-mail is not sent if a specified RECIPIENT is rejected by the SMTP server (default).

Field Name	Type/Length	Operating System
PASSWORD	(A8)	z/OS, z/VSE, BS2000

Password for protected dataset.

Field Name	Type/Length	Operating System
RECIPIENT	(A128) M20	z/OS, z/VSE, BS2000

Array of max. 20 recipients receiving this mail.

At least one recipient is required for the first SEND-EMAIL request to send this mail.

Field Name	Type/Length	Operating System
RECORD	(A253)	z/OS, z/VSE, BS2000

Mail record to be written as line in the message body.

Note: If the first RECORD starts with the string "<html" or "<!DOCTYPE HTML", the e-mail is sent with an indication that it contains text in HTML format, otherwise it will be sent as plain text.

Field Name	Type/Length	Operating System
REPLY-TO	(A128)	z/OS, z/VSE, BS2000

The specified mail address is sent to all mail recipients to provide a specify reply address. This field is optional. If omitted, user ID and host name are taken to compose the reply address.

Field Name	Type/Length	Operating System
SUBJECT	(A253)	z/OS, z/VSE, BS2000

Specifies the subject of the mail.

Field is required for the first SEND-EMAIL request.

Supplementary Information about SEND-EMAIL

The SEND-EMAIL view implements a text-based mail client. The message body is created based on text lines specified in field RECORD. To support a varying number of text lines, SEND-EMAIL was designed as an update view. The mail message body is closed by specifying FUNCTION='CLOSE'.

RECORD is defined as a 253-byte character field. The data specified in the RECORD field will be terminated by carriage return and line feed in the message body.

A zero ERROR-CODE is returned from SEND-EMAIL if the e-mail has been accepted by the SMTP server. This does not necessarily mean that the e-mail could be delivered to the specified RECIPIENT(s) and CC-RECIPIENT(s).

A character set translation is needed before sending all mail data to the configured SMTP target host. Therefore, the input EBCDIC data will be converted to ASCII code page ISO 8859-1. No special characters are supported as RECORD data.

Currently, the SEND-EMAIL view does not support data encryption. The maximum size of one e-mail is limited to 1MB on BS2000.

If startup parameter and user field `HOST-CODE-PAGE` are omitted, the `SEND-EMAIL` view uses the U.S. English Code Page (code page number 037/1) as character set for input data. The at-sign @ as part of various mail addresses can be supplied as (a) (left bracket, lower case a, right bracket) to simplify the input procedure. If you encounter problems with the @ character, use (a) instead. Error ESY5879 Mailer response: Send RCPT TO failed with RC 550 indicates problems with the `RECIPIENT` field.

For more information about e-mail administration, see the subsection *Run E-Mail Client* in *Common Entire System Server Features* in the Entire System Server Administration documentation. See the subsection *E-Mail Client Requirements* in the section *Installation for z/OS* (Step 15) in the Entire System Server *Installation and Customization* documentation for additional information about e-mail installation requirements.

Field Descriptions

Field Name	Type/Length	Operating System
DESTINATION	(A8)	z/OS, z/VSE, BS2000

Destination, depending on DESTINATION-TYPE.

For type Com-plete, TSO and TIAM, the message is sent to the user ID.

For type APPL, the message is sent to the application name.

Specify *CONSOLE here to send the message to the console only.

For BS2000, the destination can also be a TRANSDATA station. This must be specified in the TERMINAL-NAME and PROCESSOR-NAME fields.

Field Name	Type/Length	Operating System
DESTINATION-TYPE	(A8)	z/OS, z/VSE, BS2000

Type of destination to which the message is to be sent:

Destination	Explanation
APPL	To the application specified in the field DESTINATION.
COMPLETE	To Com-plete user only.
TSO	To TSO user only.

BS2000:

Destination	Explanation
TIAM	To TIAM user only.

Default in z/OS is TSO and Com-plete user (if the user is not logged on to Com-plete, the message is sent to TSO).

Default in BS2000: TIAM.

Field Name	Type/Length	Operating System
MESSAGE	(A79)	z/OS, z/VSE, BS2000

Message text to be sent. This text will be prefixed by: *Message from userid* (see the PREFIX field).

Field Name	Type/Length	Operating System
NOLOG	(A8)	z/OS, z/VSE, BS2000

Specify `CONSOLE` in this field to send the message to the console if the TSO or TIAM user is not logged on.

Field Name	Type/Length	Operating System
PREFIX	(A3)	z/OS, z/VSE, BS2000

Message prefix indicator. Possible values:

Value	Explanation
NO	Messages have no prefix.
YES	Messages will be prefixed by the string <i>Message from userid</i> .

Field Name	Type/Length	Operating System
PROCESSOR-NAME	(A8)	BS2000

Processor name as defined in TRANSDATA. Together with the field `TERMINAL-NAME`, the processor name identifies the station within TRANSDATA, if the destination is a terminal. Field `DESTINATION` must be left blank in this case.

Field Name	Type/Length	Operating System
STATUS	(A8)	z/OS, z/VSE, BS2000

Possible values returned to this field:

Value	Explanation
LOG	The TSO or TIAM user is logged on and has received the message.
NOLOG	The TSO or TIAM user is not logged on.

Field Name	Type/Length	Operating System
TERMINAL-NAME	(A8)	BS2000

Name of the station in TRANSDATA to which the message is to be sent. The station must be connected to TIAM (see also the field `PROCESSOR-NAME`).

Field Name	Type/Length	Operating System
URGENT	(A3)	z/OS

Urgent message indicator. Only relevant if your site runs Software AG's VTAM session manager Net-Pass or a similar VTAM session manager. Possible values:

Value	Explanation
NO	Default. Message class is not urgent. The message is displayed on the receiver's terminal the next time he presses Enter or any PF/PA key.
YES	Message class is changed to urgent. It is displayed on the receiver's terminal immediately. Any data the receiver has typed in since he last pressed Enter may be lost.

988	Invalid task type detected		X

Field Descriptions

Field Name	Type/Length	Operating System
ACTION	(A20)	z/OS

If the FUNCTION field value was DELETE, CHANGE or RELEASE, the result of the command is returned in this field. If only one dataset is processed, the result is also returned in the field ERROR-TEXT.

Field Name	Type/Length	Operating System
BURST	A3	z/OS

Possible values:

- YES: Printed output is to be burst into separate sheets.
- NO: Printed output is to be in a continuous fanfold.

Field Name	Type/Length	Operating System
COMPACT	A8	z/OS

The symbolic name of a compaction table.

Field Name	Type/Length	Operating System
CHARS	(A16)	z/OS, BS2000

Four groups of four bytes each taken from JCL: (CHARS=AAAA,BBBB,CCCC,DDDD).

Field Name	Type/Length	Operating System
CLASS	(A4)	z/OS, BS2000

Output class. For valid classes, ask your system programmer.

Field Name	Type/Length	Operating System
CONTROL-OPTION	(A16)	BS2000

CONTROL parameter of spool-out job.

Field Name	Type/Length	Operating System
COPIES	(N3)	z/OS, BS2000

Number of copies.

Field Name	Type/Length	Operating System
DATA-SET	(N5)	z/OS

Dataset number.

Field Name	Type/Length	Operating System
DATA-SET-KEY	(N11)	z/OS

Dataset key.

Field Name	Type/Length	Operating System
DDNAME	(A8)	z/OS

DDname of this dataset given in the JCL.

Field Name	Type/Length	Operating System
DESTINATION	(A8)	BS2000

Name of device pool.

Field Name	Type/Length	Operating System
DESTINATION-NODE	(N5)	z/OS

Node number of the destination JES system.

Field Name	Type/Length	Operating System
DESTINATION-REMOTE	(N5)	z/OS

Destination ID on the destination node.

Field Name	Type/Length	Operating System
DEVICE	(A8)	BS2000

Output device.

Field Name	Type/Length	Operating System
DIA	(A2)	BS2000

Name of slide for laser printer.

Field Name	Type/Length	Operating System
DSNAME	(A54)	z/OS, BS2000

Name of spool output dataset. In BS2000: name of printed file.

Field Name	Type/Length	Operating System
FCB	(A4)	z/OS

Forms control buffer.

Field Name	Type/Length	Operating System
FLASH	(A4)	z/OS

Flash for 3800.

Field Name	Type/Length	Operating System
FORM	(A8)	z/OS, BS2000

Form of the dataset to be printed.

Field Name	Type/Length	Operating System
FORMDEF	A6	z/OS

Name of library member containing statements to specify forms properties for Print Services Facility (PSF).

Field Name	Type/Length	Operating System
FORM-OVERLAY-BUFFER	(A8)	BS2000

Name of form overlay buffer.

Field Name	Type/Length	Operating System
FORM-OVERLAY-BUFFER-SIZE	(N3)	BS2000

Size of form overlay buffer.

Field Name	Type/Length	Operating System
FUNCTION	(A8)	z/OS

Function to be performed on the spool file(s). Only JES SYSOUT data sets (TYPE SM or SO) can be deleted, changed or released. Spool data sets of TYPE JL or SI are not SYSOUT data sets and can only be displayed.

Possible options:

Option	Explanation
<i>blank</i>	Display information.
DELETE	Delete file(s).
CHANGE	Change output class.
RELEASE	Release from HOLD and, if NEW-CLASS is specified, also change output class (only possible for files in HOLD).

Field Name	Type/Length	Operating System
GROUP-ID	(A20)	z/OS

Output group id for SYSOUT data set (returned for JES2 only).

Field Name	Type/Length	Operating System
HOLD	(A3)	z/OS

Possible values:

Value	Explanation
NO	Dataset is not held.
YES	Dataset is held.

Field Name	Type/Length	Operating System
IDENTIFIER	(A44)	z/OS

Unique identifier for the specified dataset.

Field Name	Type/Length	Operating System
JOB-ID	(A8)	BS2000

TSN of job.

Field Name	Type/Length	Operating System
JOB-NAME	(A8)	z/OS, BS2000

Name of job from job card.

Field Name	Type/Length	Operating System
JOB-NUMBER	(N7)	z/OS, BS2000

Job number assigned by the spooling system.

Field Name	Type/Length	Operating System
LINECT	N3	z/OS

The maximum number of lines JES2 is to print on each page.

Field Name	Type/Length	Operating System
LRECL	(N3)	z/OS

Record length of the spool file.

Field Name	Type/Length	Operating System
NEW-CLASS	(A1)	z/OS

New class specified with the `CHANGE` or `RELEASE` function.

Field Name	Type/Length	Operating System
NEW-DESTINATION	(A8)	z/OS

New destination for a `SYSOUT` dataset. Relevant with `FUNCTION=CHANGE`.

Field Name	Type/Length	Operating System
NEW-FORM	(A8)	z/OS

New form for `SYSOUT` dataset. Relevant with `FUNCTION=CHANGE`.

Field Name	Type/Length	Operating System
NEW-USERID	A8	z/OS

New user ID for `SYSOUT` dataset. Relevant with `FUNCTION=CHANGE`.

Field Name	Type/Length	Operating System
NEW-WRITER	(A8)	z/OS

New writer program name for `SYSOUT` dataset. Relevant with `FUNCTION=CHANGE`.

Field Name	Type/Length	Operating System
NUMBER-OF-PRINTED-LINES	(N6)	BS2000

Number of printed lines.

Field Name	Type/Length	Operating System
NUMBER-OF-PRINTED-PAGES	(N6)	BS2000

Number of printed pages.

Field Name	Type/Length	Operating System
ORIGINATOR-JOB-ID	(A8)	BS2000

TSN of originator task.

Field Name	Type/Length	Operating System
ORIGINATOR-TSN	(N5)	BS2000

TSN of originator task.

Field Name	Type/Length	Operating System
OUTDISP	(A8)	z/OS

Output disposition for SYSOUT data set (returned for JES2 only). Possible values are WRITE, HOLD, KEEP, LEAVE and PURGE.

Field Name	Type/Length	Operating System
PAGEDEF	A6	z/OS

Name of library member containing statements to specify page properties for Print Services Facility (PSF).

Field Name	Type/Length	Operating System
PRINT-ELEMENT	(A64)	BS2000

Name of printed element.

Field Name	Type/Length	Operating System
PRINT-ELEMENT-TYPE	(A8)	BS2000

Type of printed element.

Field Name	Type/Length	Operating System
PRINT-ELEMENT-VERSION	(A24)	BS2000

Version of printed element.

Field Name	Type/Length	Operating System
PRINT-ERROR-MESSAGE	(A10)	BS2000

Error message issued during PRINT. Only relevant for task type 7.

Field Name	Type/Length	Operating System
PRINT-MODE	A4	z/OS

Possible values:

- LINE
- PAGE

:

:

Field Name	Type/Length	Operating System
PRIORITY	(N3)	BS2000

Task scheduling priority.

Field Name	Type/Length	Operating System
PROCNAME	(A8)	z/OS

Name of procedure invoked.

Field Name	Type/Length	Operating System
RECFM	(A3)	z/OS

The record format of the spool file.

Field Name	Type/Length	Operating System
RECORD-COUNT	(N7)	z/OS

Number of records in this dataset.

Field Name	Type/Length	Operating System
ROTATION	(A8)	BS2000

Used page rotation.

Field Name	Type/Length	Operating System
SIZE	(A6)	BS2000

Size of SPOOLOUT file.

Field Name	Type/Length	Operating System
STATUS	(A9)	BS2000

Task status (category).

Field Name	Type/Length	Operating System
STEPNAME	(A8)	z/OS

Name of step invoked.

Field Name	Type/Length	Operating System
TRC	(A3)	z/OS

YES means byte 2 in record is used for CHARS (3800). (DCB=OPTCD=J is specified).

Field Name	Type/Length	Operating System
TYPE	(A2)	z/OS

Spool file type. Possible options:

Option	Explanation
CC	Summary of job steps and completion codes.
JL	Input JCL.
SI	SYSIN data.
SM	System messages.
SO	SYSOUT data.

Field Name	Type/Length	Operating System
TYPE - NUMBER	(N1)	BS2000

Task type.

Field Name	Type/Length	Operating System
UCS	A4	z/OS

The universal character set (UCS) image JES is to use in printing the sysout dataset.

Field Name	Type/Length	Operating System
USER	(A8)	BS2000

User ID.

Field Name	Type/Length	Operating System
WRITER	(A8)	z/OS

External writer program which gets control if the dataset is printed.

Example 1:

This little program displays a list of spool files for the job WKKC:

```
FIND SPOOL-FILES WITH JOB-NAME = 'WKKC'  
DISPLAY TYPE DATA-SET-KEY DDNAME STEPNAME WRITER FCB RECFM LRECL TRC  
END
```

Output from the above program:

TYPE	DATA-SET-KEY	DDNAME	STEPNAME	WRITER	FCB	RECFM	LRECL	TRC
---	-----	-----	-----	-----	---	-----	-----	---
JL	1	\$JCL			****	F	80	NO
SM	2	\$JES2LOG	JES2		****	UA	133	NO
SM	3	\$JCLIMG	JES2		****	F	132	NO
SM	4	\$SYSMSG	JES2		****	VA	133	NO
SI	101	SYSIN	COPY		****	F	80	NO
SO	102	SYSPRINT	COPY		****	FBA	121	NO

Example 2:

The following program deletes from HOLD class system message file number 1 (dataset key 2), and displays the message returned.

```
PROCESS SPOOL-FILES USING JOB-NAME      = 'WKKASM'
                        '  DATA-SET-KEY = 2
                        '  FUNCTION       = 'DELETE'

DISPLAY ACTION
END
```

Output from the above program:

```
          Action
-----
DELETE    OK
```

Field Descriptions

Field Name	Type/Length	Operating System
ACCOUNT - NUMBER	(A8)	z/VSE, BS2000

Account number of user who submitted the job.

Field Name	Type/Length	Operating System
CARD - COUNT	(N7)	z/OS

Number of cards submitted to internal reader.

Field Name	Type/Length	Operating System
CLASS	(A8)	z/OS, z/VSE

Job class. For valid classes, ask your system programmer.

Field Name	Type/Length	Operating System
COPIES	(N3)	z/VSE, BS2000

Number of copies of job.

Field Name	Type/Length	Operating System
CPU-MAX	(N7.2)	BS2000

CPU time limit for the job.

Field Name	Type/Length	Operating System
CPU-USED	(N7.2)	BS2000

CPU time already used by the job.

Field Name	Type/Length	Operating System
DATE-ON-READER	(A8)	z/OS

Date when job was submitted to the internal reader.

Field Name	Type/Length	Operating System
DATE-XEQ-START	(A8)	z/OS, z/VSE

Date when job or queue entry started executing.

Field Name	Type/Length	Operating System
DATE-XEQ-STOP	(A8)	z/OS, z/VSE

Date when job or queue entry finished executing.

Field Name	Type/Length	Operating System
DATX-XEQ-START	(A8)	z/OS, z/VSE

Date when job or queue entry started executing - in internal format.

Field Name	Type/Length	Operating System
DATX-XEQ-STOP	(A8)	z/OS, z/VSE

Date when job or queue entry finished executing - in internal format.

Field Name	Type/Length	Operating System
DESTINATION	(A8)	z/OS, z/VSE

z/OS: JES destination of job.

z/VSE: POWER target user name.

Field Name	Type/Length	Operating System
DEVICE	(A8)	BS2000

Name of output device, if available.

Field Name	Type/Length	Operating System
DISP	(A1)	z/VSE

Job disposition. Possible values:

Value	Explanation
*	Active
D	Delete.
K	Keep.
L	Leave.

Field Name	Type/Length	Operating System
FORM	(A8)	z/VSE

Form ID.

Field Name	Type/Length	Operating System
GROUP-ID	(A20)	z/OS

Unique identifier defined by JES.

Field Name	Type/Length	Operating System
HOLD	(A3)	z/OS, z/VSE, BS2000

YES indicates job is in hold.

DUP indicates a temporary hold because of a duplicate job in the system.

Field Name	Type/Length	Operating System
JOB-CLASS	(A1)	z/OS

JES job class where the job is to be executed.

Field Name	Type/Length	Operating System
JOB-ID	(A8)	z/OS, z/VSE, BS2000

Job number or TSN of job in alphanumeric format.

Field Name	Type/Length	Operating System
JOB-NAME	(A8)	z/OS, z/VSE, BS2000

Name of the job.

Field Name	Type/Length	Operating System
JOB-NUMBER	(N7)	z/OS, z/VSE, BS2000

Job number assigned by JES (z/OS) or POWER (z/VSE).

Under BS2000, TSN of job.

Field Name	Type/Length	Operating System
MAX-RETURN-CODE	(A10)	z/OS

Return code information for the job. The information is returned in one of the following formats:

CC <i>nnnn</i>	Job ended normally or by CC <i>nnnn</i> .
ABEND <i>Sxxx</i>	Job abended with system abend code <i>xxx</i> .
ABEND <i>Unnnn</i>	Job abended with user abend code <i>nnnn</i> .
CANCELED	Job was canceled.
CONV ABEND	Converter abended.
JCL ERROR	Job failed due to JCL error.
SEC ERROR	Job failed due to security error.

Field Name	Type/Length	Operating System
MESSAGE-CLASS	(A1)	z/OS

Output message class.

Field Name	Type/Length	Operating System
ORIGIN	(A8)	z/OS, z/VSE

JES3 job origin.

Field Name	Type/Length	Operating System
ORIGINATOR-JOB-ID	(A8)	BS2000

For print jobs: alphanumeric TSN of task where print job was started.

Field Name	Type/Length	Operating System
ORIGINATOR-TSN	(N5)	BS2000

For print jobs: TSN of task which started the job.

Field Name	Type/Length	Operating System
OUTDISP	(A6)	z/OS

Output disposition. Possible values are WRITE, HOLD, KEEP or LEAVE.

Field Name	Type/Length	Operating System
PAGE-COUNT	(N5)	z/VSE

Number of pages.

Field Name	Type/Length	Operating System
PROGRAMMER-NAME	(A20)	z/OS

Name of the user who submitted the job to identify the person or group responsible. This value is inherited from the job card.

Field Name	Type/Length	Operating System
PRIORITY	(N3)	z/OS, z/VSE, BS2000

Priority of job.

Field Name	Type/Length	Operating System
QUEUE	(A3)	z/OS, z/VSE

Queue in which the job resides. Possible values:

z/OS	IN	Input queue.
	NJE	NJE receive/transmit queue.
	OUT	Output queue.
	XEQ	Job is executing.
z/VSE	CRE	Create queue.
	LST	List queue.
	PUN	Punch queue.
	RDR	Reader queue.
	XMT	Transmit queue.

Field Name	Type/Length	Operating System
REAL-RECORD-COUNT	(N9)	z/VSE

Record count for segment or job (including control records).

Field Name	Type/Length	Operating System
RECORD-COUNT	(N9)	z/OS, z/VSE

Number of records in spool.

Field Name	Type/Length	Operating System
ROOM	(A4)	z/OS

Room number of user who submitted the job.

Field Name	Type/Length	Operating System
SEGMENT-NUMBER	(N3)	z/VSE

If the output is segmented, segment number of spool output.

Field Name	Type/Length	Operating System
SIZE	(A6)	BS2000

Size for print jobs in PAM pages.

Field Name	Type/Length	Operating System
SPOOL-UTILIZATION	(B1)	z/OS

Percentage of spool used.

Field Name	Type/Length	Operating System
STATUS	(A9)	z/OS, z/VSE, BS2000

In BS2000, task category.

In z/OS, z/VSE, status of job.

Possible values:

BS2000	BATCH	Batch
	DIALOG	Dialogue
	D0	Dormant
	TP	Teleprocessing
	WT	Wait

For explanations and information on further parameters, see BS2000 documentation.

z/OS	ACTIVE	Job has been selected.
	AVAILABLE	Job is available.
	WAITING	Job is waiting (JES3 only).
z/VSE	ACTIVE	Job has been selected.
	AVAILABLE	Job is available.
	CRE	Job is in creation queue.
	XMT	Transmit queue.

Field Name	Type/Length	Operating System
SUBMITTER	(A8)	z/OS (JES3 only)

The submitting user ID of the job.

Field Name	Type/Length	Operating System
SYSTEM-ID	(A4)	z/OS, z/VSE

ID of the system on which the job is/was processed.

Field Name	Type/Length	Operating System
TIME-ON-READER	(N6)	z/OS

Time of day when job was submitted to the internal reader.

Field Name	Type/Length	Operating System
TIME-XEQ-START	(N6)	z/OS, z/VSE

Time of day when job or queue entry started executing.

Field Name	Type/Length	Operating System
TIME-XEQ-STOP	(N6)	z/OS, z/VSE

Time of day when job or queue entry finished executing.

Field Name	Type/Length	Operating System
TIMX-XEQ-START	(N6)	z/OS, z/VSE

Time of day when job or queue entry started executing - in internal format.

Field Name	Type/Length	Operating System
TIMX-XEQ-STOP	(N6)	z/OS, z/VSE

Time of day when job or queue entry finished executing - in internal format.

Field Name	Type/Length	Operating System
TYPE	(A3)	z/OS

Type of job. Possible values:

Value	Explanation
JOB	Batch job.
STC	Started task.
TSU	TSO user.

Field Name	Type/Length	Operating System
TYPE - NUMBER	(N1)	BS2000

Numeric job type identifier used in BS2000 (for example, 2 = batch, 3 = dialog).

Field Name	Type/Length	Operating System
USER	(A8)	z/VSE, z/OS, BS2000

Owner of the job. In BS2000, user ID of the job.

Field Name	Type/Length	Operating System
WLM-QUEUE-POSITION	(N7)	z/OS

Position on the WLM queue for the job.

Field Name	Type/Length	Operating System
WLM-SERVICE-CLASS	(A8)	z/OS

WLM service class name.

Note

For z/OS JES2 or JES3, the following fields are only obtained from the spool queue if JOB-NAME or JOB-NUMBER have also been specified with the FIND request:

```

PROGRAMMER-NAME
ROOM
MESSAGE-CLASS
CARD-COUNT
RECORD-COUNT
TIME-ON-READER,  TIMX-ON-READER
DATE-ON-READER,  DATX-ON-READER
TIME-XEQ-START,  TIMX-XEQ-START
DATE-XEQ-START,  DATX-XEQ-START
TIME-XEQ-STOP,   TIMX-XEQ-STOP
DATE-XEQ-STOP,   DATX-XEQ-STOP

```

Consequently, these fields can only be used as search criteria in combination with JOB-NAME or JOB-NUMBER.

51

SPOOL-UPDATE

833	You are not allowed to alter this job.	X	
834	Command failed, MGCRE RC =:1:.	X	

Field Descriptions

Field Name	Type/Length	Operating System
CLASS	(A1)	z/OS, z/VSE

New job class or output class to be assigned when FUNCTION=CHANGE or RELEASE.

Field Name	Type/Length	Operating System
COPIES	(N3)	z/VSE

Number of copies needed (1 - 255). Valid only if FUNCTION=CHANGE.

Field Name	Type/Length	Operating System
DISP	(A1)	z/VSE

Disposition needed. Valid only if FUNCTION=CHANGE.

Field Name	Type/Length	Operating System
FUNCTION	(A8)	z/OS, z/VSE

Command to be executed. Possible options:

Option	Explanation
CANCEL	Cancel job.
CHANGE	Change one or more spool-queue attributes. For z/OS: CLASS, NEW-DESTINATION. For z/VSE: CLASS, COPIES, DISP, NEW-DESTINATION, PRIORITY, USER.
HOLD	Set job in HOLD status.
RELEASE	Release job.

Field Name	Type/Length	Operating System
GROUP-ID	(A20)	z/OS, z/VSE

Identification of JES SYSOUT group.

Field Name	Type/Length	Operating System
JES3-CLASS	(A1)	z/OS

Valid for JES3 only. Specifies the output class of the SYSOUT data sets that should be modified.

Field Name	Type/Length	Operating System
JES3-QUEUE	(A4)	z/OS

Valid for JES3 only. Specifies the output queue of the SYSOUT data sets that should be modified. Possible values are HOLD and WTR.

Field Name	Type/Length	Operating System
JOB-ID	(A8)	z/OS, z/VSE

Job number in alphanumeric format.

Field Name	Type/Length	Operating System
JOB-NAME	(A8)	z/OS, z/VSE

Name of job.

Field Name	Type/Length	Operating System
JOB-NUMBER	(N7)	z/OS, z/VSE

Job number assigned by JES (z/OS) or POWER (z/VSE).

Field Name	Type/Length	Operating System
NEW-DESTINATION	(A8)	z/OS

New destination for a given GROUP-ID. This GROUP-ID may be read using the view SPOOL-QUEUE. Valid only if FUNCTION=CHANGE.

Field Name	Type/Length	Operating System
PRIORITY	(N1)	z/VSE

New priority needed (0 - 9). Valid only if FUNCTION=CHANGE.

Field Name	Type/Length	Operating System
QUEUE	(A3)	z/VSE

Queue in which the job resides. Possible values:

Value	Explanation
LST	List queue.
PUN	Punch queue.
RDR	Reader queue.
XMT	Transmit queue.

Field Name	Type/Length	Operating System
SEGMENT - NUMBER	(N3)	z/VSE

Segment number of output to be deleted.

Field Name	Type/Length	Operating System
USER	(A8)	z/VSE

New user needed. Valid only if FUNCTION=CHANGE.

Field Descriptions

Field Name	Type/Length	Operating System
ACCOUNT - NUMBER	(A8)	BS2000

Account number for the job.

Field Name	Type/Length	Operating System
CARD	(A80)	z/OS, z/VSE, BS2000

JCL record to be sent from Natural to the internal reader.

Field Name	Type/Length	Operating System
DSNAME	(A54)	z/OS, z/VSE, BS2000

Fully qualified dataset or file name containing the JCL to be submitted. To perform the submit, a second SUBMIT request with FUNCTION=CLOSE is required.

Field Name	Type/Length	Operating System
ELEMENT	(A64)	BS2000

Element from which cards are to be submitted.

Field Name	Type/Length	Operating System
ELEMENT-PASSWORD	(A8)	BS2000

Password for protected LMS element (LMS V2 or above).

Field Name	Type/Length	Operating System
ERASE-AFTER-RUN	(A3)	BS2000

Value	Explanation
NO	Do not erase Enter file after run.
YES	Erase Enter file after run.

Field Name	Type/Length	Operating System
FROM-NODE	(N5)	z/OS, z/VSE

Entire System Server node on which the JCL for the job is to be read. Ignored if it matches the USING node or the node where the user is already logged in.

Field Name	Type/Length	Operating System
FROM-USERID	(A8)	z/OS

User ID in the FROM-NODE.

Field Name	Type/Length	Operating System
FROM-USER-PASSWORD	(A32)	z/OS

User password in the FROM-NODE.

Field Name	Type/Length	Operating System
FUNCTION	(A8)	z/OS, z/VSE, BS2000

Function to be performed. Possible options:

Option	Explanation
<i>blank</i>	Default. Pass a JCL card or the name of the dataset or member/element to be submitted to the Entire System Server.
CLOSE	All cards have been processed - perform the submit. You must specify this function for the last SUBMIT request.

Field Name	Type/Length	Operating System
GENERATION	(N9)	z/OS

Generation number of member (only valid for PDSE version 2 with MAXGENS > 0).

Field Name	Type/Length	Operating System
IDENTIFIER	(A8)	z/OS, z/VSE, BS2000

Required if multiple submit calls are executing in parallel, as requests for the same job to be submitted must have the same identifier.

Field Name	Type/Length	Operating System
JOB-CLASS	(A8)	BS2000

Name of the job class where the job is to run.

Field Name	Type/Length	Operating System
JOB-ID	(A8)	z/OS, z/VSE, BS2000

Same as JOB-NUMBER, only in alpha format.

Field Name	Type/Length	Operating System
JOB-NAME	(A8)	z/OS, z/VSE, BS2000

Name of job to be submitted.

Field Name	Type/Length	Operating System
JOB - NUMBER	(N7)	z/OS, z/VSE, BS2000

This field is returned after a call with FUNCTION=CLOSE.

z/OS & z/VSE:	Job number assigned by the JES (z/OS) or POWER (z/VSE). If JOB - NUMBER=0, no valid job card was sent.
BS2000:	This field contains the TSN of the submitted job, if the TSN is numeric. In case of error, the field contains 0.

Field Name	Type/Length	Operating System
JOB - PRIORITY	(A3)	BS2000

Scheduling priority for a job. Possible values are between 9 and the maximum of the job class, or STD. STD is the default.

Field Name	Type/Length	Operating System
JOB - VARIABLE - PASSWORD	(A4)	BS2000

Password for protected monitoring job variable.

Field Name	Type/Length	Operating System
LIBRARY	(A8)	z/VSE

Name of library.

Field Name	Type/Length	Operating System
MEMBER	(A10)	z/OS, z/VSE

Name of member that contains the JCL to be submitted.

Field Name	Type/Length	Operating System
MEMBER - TYPE	(A8)	z/VSE

Member type.

Field Name	Type/Length	Operating System
MONITOR-JOB-VARIABLE	(A54)	BS2000

Specifies the name of a monitoring job variable that always contains the job status:

Job Status	Explanation
\$A	Job abended.
\$R	Job is running.
\$S	Job is in input queue.
\$T	Job terminated normally.

Field Name	Type/Length	Operating System
OPTIONS	(A8)	z/OS

Specify X to expand all ++INCLUDE statements.

Field Name	Type/Length	Operating System
PASSWORD	(A8)	z/OS, BS2000

Password for protected dataset.

Field Name	Type/Length	Operating System
PRODUCT	(A1)	z/OS, BS2000

Access method for dataset containing the JCL. Possible options:

Option	Explanation
L	CA-Librarian
M	LMS (BS2000)
P	CA-Panvalet

Field Name	Type/Length	Operating System
REPEAT-OPTION	(A17)	BS2000

Specifies repeated job runs. Possible options:

Option	Explanation
AT-STREAM-STARTUP	Job is repeated at every scheduler startup.
DAILY	Job runs daily.
NO	Job is not repeated.
PERIOD	Specifies time interval for repeat runs.
STD	Default. Take the job class default.
WEEKLY	Job runs weekly.

Time given in REPEAT-TIME.

Field Name	Type/Length	Operating System
REPEAT-TIME	(A5)	BS2000

Specifies time for repeat runs (see REPEAT-OPTION).

Field Name	Type/Length	Operating System
RUN-PRIORITY	(A3)	BS2000

Priority during job execution. The value can be between job class maximum and 255, or STD. STD is the default and is also used if the RUN-PRIORITY value is invalid.

Field Name	Type/Length	Operating System
START-DATE	(A8)	BS2000

Start date value in format *YY-MM-DD*.

Field Name	Type/Length	Operating System
START-DATX	(D)	BS2000

Start date in Natural format.

Field Name	Type/Length	Operating System
START-OPTION	(A17)	BS2000

Specifies start of job. Possible options:

Option	Explanation
AT	Start at given time and/or date.
AT-STREAM-STARTUP	Start job at the start of the scheduler.
EARLIEST	Do not start before this date and/or time.
IMMEDIATELY	Start now.
LATEST	Do not start after this date and/or time.
SOON	As soon as possible.
STD	Default. Use job class default.
WITHIN	Specifies a time range.

The starting date and/or time are given in the fields `START-DATE` and `START-TIME`.

Field Name	Type/Length	Operating System
START-TIME	(A5)	BS2000

Start time value in format *HH:MM*.

Field Name	Type/Length	Operating System
START-TIMX	(T)	BS2000

Start time in Natural format.

Field Name	Type/Length	Operating System
SUB-LIBRARY	(A8)	z/VSE

Name of sublibrary.

Field Name	Type/Length	Operating System
TARGET-NODE-NAME	(A8)	z/VSE

Name of the node to which the POWER output is to be spooled.

Field Name	Type/Length	Operating System
TARGET-USER-REMOTE-ID	(A8)	z/VSE

Name of the user/remote to which the POWER output is to be spooled.

Field Name	Type/Length	Operating System
TIME	(A5)	BS2000

Maximum CPU time the job may consume. Possible values:

Value	Explanation
t	Time value in seconds
NTL	No Time Limit
STD	Default. As defined in the job class.

Field Name	Type/Length	Operating System
USERID	(A8)	BS2000

User ID under which the job is to be submitted.

Field Name	Type/Length	Operating System
USER-PASSWORD	(A32)	BS2000

Password belonging to the user ID under which the job is to be started.

Field Name	Type/Length	Operating System
VOLSER	(A6)	z/OS, z/VSE

Volume serial number. Required only if the dataset is not cataloged.

Field Name	Type/Length	Operating System
VSAM-CATALOG	(A8)	z/VSE

Name of VSAM catalog where the library is kept.

SUBMIT Programming Notes

SUBMIT is an UPDATE view, i.e., data is transmitted from the Natural program (client side) to ESY (server side).

The Entire System Server view SUBMIT returns codes and messages that describe whether the requested operation has been executed successfully or not, and the JOB-NUMBER of a submitted job.

Therefore, the DEFINE DATA section of the Natural program should only contain the fields shown in the following example:

```
1 SUBMIT VIEW OF SUBMIT
2 ERROR-CODE
2 ERROR-TEXT
2 SYSTEM-MESSAGE-CODE

2 SYSTEM-CODE
2 JOB-NUMBER
```

These fields in `DEFINE DATA` are the fields returned from the `SUBMIT` view in Entire System Server to the calling Natural program.

Defining other fields in the DDM is not critical, but the access to these fields may lead to unpredictable results.

BS2000

If system is configured to work with encrypted passwords (class 2 system parameter `ENCRYPT`), the Entire System Server requires startup parameter `JOBENT=YES` to submit jobs for password protected users. Class 2 system parameter `SVC79` must be enabled also.

53

SYSTEM-COMMAND

■ Common Fields for all Operating Systems	426
■ Additional Fields Supported for z/OS	427
■ Field Descriptions	427
■ Relevant Error Codes	428
■ Default Order of Data Returned	431

File	46	
Op-Sys	z/OS, BS2000 Note: Support for z/VSE is deprecated. Support for BS2000 is also deprecated, except in conjunction with the ESM adapter. Features that are z/VSE and BS2000 specific will be removed from future releases.	
Statement	FIND	
Task	BS2000:	Any batch mode command can be executed. Startup parameter SYSTEM-COMMAND-USER defines the list of users who are permitted to use this view. User exit USERSSEC is called if the parameter SYSTEM-COMMAND-USER was not defined. If the user exit is not found in the Entire System Server Load Library, any system command will be rejected in multi-user mode.
	z/OS:	Execute TSO commands online or in batch. TSO commands can be issued in Natural environments from TP monitors other than TSO. Up to 50 commands and sub-commands are allowed.

Common Fields for all Operating Systems

Dictionary Field Name	F/L	Mu	DE	Remarks
ERROR-CODE	N3			
ERROR-TEXT	A58			
SYSTEM-MESSAGE-CODE	A10			
NODE	N5		D	
NODE-NAME	A16		D	
LINE	A132			
COMMAND	A80	M20	D	

Additional Fields Supported for z/OS

Dictionary Field Name	F/L	Mu	DE	Remarks
SUB - COMMAND	A80	M50	D	Command line for an FTP server. Up to 50 Sub-Commands are allowed. z/OS only.

Field Descriptions

Field Name	Type/Length	Operating System
LINE	(A132)	z/OS, BS2000

Output line. If more than one output line is expected, a `FIND` loop is required to retrieve all of them.

Field Name	Type/Length	Operating System
COMMAND	(A80) (M20)	z/OS, BS2000

z/OS	Commands to be executed by TSO.
BS2000	<p>The values specified with the field occurrences are taken without any changes and concatenated to a single command which is passed to the system.</p> <p>Remember that the command is executed under the BS2000 user ID where the Entire System Server is running.</p>

Field Name	Type/Length	Operating System
SUB - COMMAND	(A80) (M50)	z/OS

For `COMMAND` FTP, commands specific to FTP are set up in field `SUB - COMMAND`. Up to 50 `SUB-COMMANDS` are allowed. `SUB-COMMANDS` are only allowed for `ONE` `COMMAND` in a `FIND` or `PROCESS` statement.

As an example see section [How to run an FTP from Mainframe Natural Using Entire System Server](#). Using the new sub-command key `PASSWORD` will prevent the password to appear unencrypted, e.g. in traces or outputs.

Relevant Error Codes

Code	Text	z/OS	BS2000
530	Access denied by security.		X
699	Not enough main storage.		X
750	Invalid operand.		X
772	BS2000 command returned error.		X
799	Internal error.		X

Example:

z/OS: The following program issues the TSO command `LIST` and requests a list of all datasets that start with the string `WKK`:

```
FIND      COMMAND WITH  COMMAND = 'LISTC LVL (''WKK'')'  
  DISPLAY LINE (AL=79)  
END
```

Output from the program:

```

How to run an FTP from Mainframe Natural Using Entire System Server

Using the view SYSTEM-COMMAND, you may execute an FTP from Natural to anywhere, as shown in the example below. First, ask your TCP/IP administrator for the configuration information required by the TCP/IP client programs. This dataset/member is allocated dynamically with a special DDNAME SYSTCPD. The dataset/member name will of course be different at your installation.

Then, code the command FTP, and the subsequent FTP commands are coded here as SUB-COMMANDS.

In the following example, you logon as an anonymous user to the Software AG FTP server and read a list of directories or files available at this moment.

```
DEFINE DATA LOCAL
01 SYSTEM-COMMAND  VIEW OF SYSTEM-COMMAND
  02 LINE
END-DEFINE
FIND      SYSTEM-COMMAND  WITH NODE = 148
  AND COMMAND = 'alloc f(systcpd) da(''sysm.daef.parmlib(tcpdata)'') shr'
  AND COMMAND = 'FTP'
  AND SUB-COMMAND = 'ftp.softwareag.com'
  AND SUB-COMMAND = 'anonymous'
  AND SUB-COMMAND = 'PASSWORD=abc@softwareag.de'
  AND SUB-COMMAND = 'dir'
  AND SUB-COMMAND = 'help'
  AND SUB-COMMAND = 'quit'
  PRINT  LINE(AL=132)
END-FIND
END  ↵
```

The output looks like this:

```
PROFILE PREF(WKK      )

READY
ALLOC F(SYSTCPD) DA('SYSM.DAEF.PARMLIB(TCPDATA)') SHR
READY
FTP
>EZA1736I FTP
>EZY2640I Using /etc/ftp.data for local site configuration parameters.
>EZA1450I IBM FTP CS V1R8
>EZA1456I Connect to ?
>EZA1736I ftp.softwareag.com
>EZA1554I Connecting to: server21.softwareag.com 193.26.193.60 port: 21.
>220 Software AG FTP Server ready
>EZA1459I NAME (ftp.softwareag.com:WKK):
>EZA1701I >>> USER anonymous
>331 Anonymous login ok, send your complete email address as your password.
>EZA1789I PASSWORD:
>EZA1701I >>> PASS
>230-
```

[illegible]

Default Order of Data Returned

Each line of the output listing is presented in order.

Relevant Error Codes

Code	Text	z/OS	z/VSE	BS2000
799	Entire System Server internal error.			X

Field Descriptions

Field Name	Type/Length	Operating System
APF	(A3)	z/OS

Possible values:

Value	Explanation
NO	Entire System Server is not running APF-authorized.
YES	Entire System Server is running APF-authorized.

Field Name	Type/Length	Operating System
AUTO-LOGON	(A3)	z/OS, z/VSE, BS2000

Automatic logon option for the Entire System Server. If YES is specified in the corresponding startup parameter, the Entire System Server will perform an automatic logon to the active security system using *INIT-USER as user ID.

Field Name	Type/Length	Operating System
CONFIGURATION-NAME	(A21)	BS2000

Hardware type (for example, 7500-H60-F).

Field Name	Type/Length	Operating System
CPU-ID	(A12)	z/OS, z/VSE

Bytes 1-8 contain the CPU identification number, bytes 9-12 the machine-type number of the CPU. Both provide a unique CPU identification that can be used in associating results with an individual machine.

Field Name	Type/Length	Operating System
CPU-UTILIZATION	(N3)	z/OS

Percentage of time the CPU is busy.

Field Name	Type/Length	Operating System
DATE-FORMAT	(A3)	z/VSE

DATE-FORMAT returns the value specified in the VSE JCS card //STDOPT DATE =. The values returned are DMY or MDY. Used to determine default date format as displayed in z/VSE.

Field Name	Type/Length	Operating System
ESY-VERSION	(A8)	z/OS, z/VSE, BS2000

The version number of this Entire System Server, for example, 3.3.1.

Field Name	Type/Length	Operating System
FIRST-CPU-SERIAL-NUMBER	(A6)	BS2000

The serial number of the first CPU.

Field Name	Type/Length	Operating System
GMT-DIFFERENCE	(N3)	z/OS, z/VSE

Time difference in hours between local time and GMT.

Field Name	Type/Length	Operating System
JOBNAME	(A8)	z/OS, z/VSE, BS2000

Job name of the Entire System Server node.

Field Name	Type/Length	Operating System
JOBVAR	(A3)	BS2000

Possible values:

Value	Explanation
NO	Software product Job Variables not available.
YES	Software product Job Variables is installed.

Field Name	Type/Length	Operating System
LAST-IPL-DATX	(D)	z/OS, z/VSE

Date in Natural format of last system IPL.

Field Name	Type/Length	Operating System
LAST-IPL-TIMX	(T)	z/OS, z/VSE

Time in Natural format of last system IPL.

Field Name	Type/Length	Operating System
LMS-VERSION	(N3)	BS2000

LMS version which must be used by this Entire System Server node as specified in the startup parameters.

Field Name	Type/Length	Operating System
LOCAL-DATX	(D)	z/OS, z/VSE, BS2000

Current date in Natural format.

Field Name	Type/Length	Operating System
LOCAL-TIMX	(T)	z/OS, z/VSE, BS2000

Current time of day in Natural format.

Field Name	Type/Length	Operating System
LOGON-ID	(A8)	BS2000

Returns the current user ID of the caller. This value is changed after NATPROC-LOGON.

Field Name	Type/Length	Operating System
MEMORY-SIZE	(A8)	BS2000

Available system main storage in bytes.

Field Name	Type/Length	Operating System
MODE	(A8)	BS2000

Indicates the user mode of Entire System Server. Possible values:

- MULTI
- SINGLE

Field Name	Type/Length	Operating System
NODE-ID	(A50)	z/OS, z/VSE, BS2000

Logical identifier of the node. This value is defined for the node using the startup parameter IDENTIFIER.

Field Name	Type/Length	Operating System
NODE-NAME-LIST	(A16)	z/OS, z/VSE, BS2000

Lists entries of Entire System Server Nodes.

Field Name	Type/Length	Operating System
OPERATING-SYSTEM-ID	(A8)	BS2000

Program name of the BS2000 where the Entire System Server is running.

Field Name	Type/Length	Operating System
OPERATING-SYSTEM-TYPE	(A4)	BS2000

Type of hardware-software interface. Possible values:

Value	Explanation
NXS	24-bit address mode
XS25	25-bit address mode
XS31	31-bit address mode

Field Name	Type/Length	Operating System
PRODUCT-NAME	(A16)	z/OS, z/VSE

The name of the product as defined in the operating system. Currently, possible values are z/OS, z/VSE.

Field Name	Type/Length	Operating System
PRODUCT-VERSION	(A8)	z/OS, z/VSE

The version of the product as defined in the operating system. In z/OS environments, this will be in the format vv.rr.mm, whilst in the z/VSE environment this will be v.r.m.

Field Name	Type/Length	Operating System
SECOND-CPU-SERIAL-NUMBER	(A6)	BS2000

The serial number of the second CPU.

Field Name	Type/Length	Operating System
SECURITY	(A4)	z/OS, z/VSE, BS2000

Security system defined in Entire System Server startup parameters.

Field Name	Type/Length	Operating System
SESSION-NUMBER	(N3)	BS2000

Number of actual BS2000 session.

Field Name	Type/Length	Operating System
SMF-RECORD	(N3)	z/OS

SMF record number written by the Entire System Server.

Field Name	Type/Length	Operating System
SPOOL-RELEASE	(A8)	z/OS, z/VSE

Spooling system release number.

Field Name	Type/Length	Operating System
SPOOL-TYPE	(A8)	z/OS, z/VSE

Spooling system type.

Field Name	Type/Length	Operating System
STARTUP-PARM	(A80)	z/OS, z/VSE, BS2000

Entire System Server startup parameters. To obtain all startup parameters, use a processing loop in Natural.

Field Name	Type/Length	Operating System
SYSTEM-BASE-ADDRESS	(A8)	BS2000

Gives the start address of the virtual system address space.

Field Name	Type/Length	Operating System
SYSTEM-ID	(A16)	z/VSE

POWER-ID.

Field Name	Type/Length	Operating System
SYSTEM-NAME	(A8)	z/OS

SMF system name.

Field Name	Type/Length	Operating System
SYSTEM-RELEASE	(A8)	z/OS, z/VSE, BS2000

Operating system release number.

Field Name	Type/Length	Operating System
SYSTEM-TYPE	(A8)	z/OS, z/VSE, BS2000

Operating system type. For compatibility reasons, MVS/ESA is returned on a z/OS system, and DOS is returned on a z/VSE system. Use the field `PRODUCT-NAME` to determine the name of the product as defined in the operating system. Possible options:

Option	Explanation
DOS	Old notation for z/VSE .
BS2000	
MVS/ESA	Old notation for z/OS

Example 1:

The following example displays system information on the Entire System Server with Node Number 148:

PROCESS SYSTEM-INFO WITH NODE = 148 DISPLAY SYSTEM-TYPE SYSTEM-RELEASE PRODUCT-NAME (EM=X(8)) PRODUCT-VERSION SPOOL-TYPE				
Sample output from above program:				
SYSTEM-TYPE	SYSTEM-RELEASE	PRODUCT-NAME	PRODUCT-VERSION	SPOOL-TYPE

MVS/ESA	SP7.0.2	z/OS	01.02.00	JES2

Example 2:

The following example displays spool information and the startup parameter with the keyword `SP00L` of the Entire System Server with Node Number 85:

```
PROCESS SYSTEM-INFO WITH NODE = 85
      AND STARTUP-PARM = '*SP00L=*'
      DISPLAY SP00L-TYPE SP00L-RELEASE STARTUP-PARM (EM=X(18))
```

Sample output from above program:

```
SP00L-TYPE  SP00L-RELEASE  STARTUP-PARM
-----
JES3        OS2.10.0       SP00L=JES3
```

799	Entire System Server internal error.	X
988	Invalid task type detected.	X

Field Descriptions

Field Name	Type/Length	Operating System
ACCOUNT-NUMBER	(A8)	

Account number of job for Task Types 1 - 3.

Field Name	Type/Length	Operating System
COPIES	(N3)	

Number of copies for print jobs.

Field Name	Type/Length	Operating System
CPU-MAX	(N7.2)	

CPU time limit for the job, for Task Types 1 - 3.

Field Name	Type/Length	Operating System
CPU-USED	(N7.2)	

CPU time already used by the task for Task Types 2 and 3.

Field Name	Type/Length	Operating System
DEVICE	(A8)	

Printer device name.

Field Name	Type/Length	Operating System
HOLD	(A3)	

For Task Type 2 (see TYPE-NUMBER): YES, if job is in hold, or NO.

Field Name	Type/Length	Operating System
JOB-ID	(A8)	

Alphanumeric TSN of job.

Field Name	Type/Length	Operating System
JOB-NAME	(A8)	

Name of job.

Field Name	Type/Length	Operating System
JOB-NUMBER	(N7)	

TSN of job.

Field Name	Type/Length	Operating System
LAST-COMMAND	(A12)	

Last command executed by the task. For Task Types 2 and 3.

Field Name	Type/Length	Operating System
LOADED-PROGRAM	(A64)	

For Tasks Types 2 and 3: name of loaded program.

Field Name	Type/Length	Operating System
LOGON-DATX	(D)	

For Task Types 2 and 3: date of LOGON in Natural format.

Field Name	Type/Length	Operating System
LOGON-TIMX	(T)	

For Task Types 2 and 3: time of LOGON in Natural format.

Field Name	Type/Length	Operating System
NUMBER-OF-PRINTED-LINES	(N6)	

For print jobs.

Field Name	Type/Length	Operating System
NUMBER-OF-PRINTED-PAGES	(N6)	

For print jobs.

Field Name	Type/Length	Operating System
ORIGINATOR-JOB-ID	(A8)	

For print-jobs: alphanumeric TSN of task which started the job.

Field Name	Type/Length	Operating System
ORIGINATOR-TSN	(N5)	

For print-jobs: TSN of task which started the job.

Field Name	Type/Length	Operating System
PRINT-ELEMENT	(A64)	

Name of printed element.

Field Name	Type/Length	Operating System
PRINT-ELEMENT-TYPE	(A8)	

Type of printed element.

Field Name	Type/Length	Operating System
PRINT-ELEMENT-VERSION	(A24)	

Version of printed element.

Field Name	Type/Length	Operating System
PRINT-ERROR-MESSAGE	(A10)	

Error message issued during PRINT. Only relevant for Task Type 7.

Field Name	Type/Length	Operating System
PRINT-FILE-NAME	(A54)	

Name of printed file.

Field Name	Type/Length	Operating System
PRINT-FORM	(A8)	

For print jobs: name of form used.

Field Name	Type/Length	Operating System
PRIORITY	(N3)	

Task scheduling priority.

Field Name	Type/Length	Operating System
SIZE	(A6)	

Size of job.

Task Types 2 and 3: program size.

Task Types 4 - 7: size of SPOOLOUT file.

Field Name	Type/Length	Operating System
STATUS	(A9)	

Task status (DIALOG, TP, etc.).

Field Name	Type/Length	Operating System
TASK-QUEUE-NUMBER	(N3)	

Number of task scheduler queue for Task Types 2 and 3.

Field Name	Type/Length	Operating System
TYPE-NUMBER	(N1)	

Numeric job type identifier used in BS2000 (for example, 2 = batch, 3 = dialog). Possible values: 1 - 7.

Field Name	Type/Length	Operating System
UNPEND-CODE	(N4)	

Pend / Unpend code for Task Types 2 and 3.

Field Name	Type/Length	Operating System
USER	(A8)	

BS2000 user ID of task owner.

Field Descriptions

Field Name	Type/Length	Operating System
ACTIVITY	(A9)	z/OS, z/VSE

Activity of device. Possible values:

Value	Explanation
ALLOCATED	Device allocated.
BUSY	Device busy.

Field Name	Type/Length	Operating System
CLASS	(A4)	z/OS, z/VSE

The device class. Possible values:

Value	Explanation
COMM	Communications.
CTCA	Channel-to-channel adapter.
DASD	Direct access.
DISP	Display station.
TAPE	Tape.
UREC	Unit record.

Field Name	Type/Length	Operating System
CONTIG-CYLINDERS	(N7)	z/OS

Number of cylinders in largest free extent.

Field Name	Type/Length	Operating System
CONTIG-CYLINDERS-TRACK-MANAGED	(N7)	z/OS

Number of cylinders in largest free extent in track managed space on volume.

Field Name	Type/Length	Operating System
CONTIG-TRACKS	(N4)	z/OS

Number of tracks in largest free extent (in addition to CONTIG-CYLINDERS).

Field Name	Type/Length	Operating System
EAV	(A3)	z/OS

Specifies whether a device is an Extended Address Volume. Possible values:

- NO
- YES

Field Name	Type/Length	Operating System
DCB-COUNT	(N3)	z/OS, z/VSE

Number of DCBs currently open on the unit.

Field Name	Type/Length	Operating System
DENSITY	(A9)	z/OS, z/VSE

Tape density. Possible values:

Value	Explanation
800	Bits per inch (bpi)
800/1600	
1600	
1600/6250	
6250	

Field Name	Type/Length	Operating System
DEVICE-STATUS	(A7)	z/OS, z/VSE

Possible values:

Value	Explanation
CHANGE	Status changing.
OFFLINE	Device is offline.
ONLINE	Device is online.

Field Name	Type/Length	Operating System
DEVICE-TYPE	(B4)	z/OS, z/VSE

UCBTYP device type internal code.

Field Name	Type/Length	Operating System
FREE-CYLINDERS	(N7)	z/OS

Number of free cylinders on disk pack.

Field Name	Type/Length	Operating System
FREE-CYLINDERS-TRACK-MANAGED	(N7)	z/OS

Number of free cylinders in track managed space on volume.

Field Name	Type/Length	Operating System
FREE-EXTENTS	(N4)	z/OS

Number of free extents on disk pack.

Field Name	Type/Length	Operating System
FREE-EXTENTS-TRACK-MANAGED	(N4)	z/OS

Number of free extents in track managed space on volume.

Field Name	Type/Length	Operating System
FREE-TRACKS	(N4)	z/OS

Number of free tracks (in addition to FREE-CYLINDERS).

Field Name	Type/Length	Operating System
MOUNT-STATUS	(A10)	z/OS

Possible values:

- MOUNT PEND
- NOT READY
- REMOVABLE
- RESERVED
- RESIDENT

Field Name	Type/Length	Operating System
SERIES	(A6)	z/OS, z/VSE

Device series, for example, 3330-1.

Field Name	Type/Length	Operating System
SMS	(A3)	z/OS

Whether device is SMS-managed. Possible values:

- NO
- YES

Field Name	Type/Length	Operating System
TOTAL-CYLINDERS	(N7)	z/OS

Total number of cylinders on disk pack.

Field Name	Type/Length	Operating System
TOTAL-CYLINDERS-TRACK-MANAGED	(N7)	z/OS

Total number of cylinders in track managed space on volume.

Field Name	Type/Length	Operating System
TRACKS-PER-CYLINDER	(N3)	z/OS

Number of tracks per cylinder.

Field Name	Type/Length	Operating System
UCB-ADDRESS	(B4)	z/OS, z/VSE

Memory address of unit control block for unit.

Field Name	Type/Length	Operating System
UNIT	(A4)	z/OS, z/VSE

Unit address in EBCDIC.

Field Name	Type/Length	Operating System
UNIT-HEX	(B2)	z/OS, z/VSE

Binary device number, used for comparisons (X'12A' > X'120', but '12A' < '120').

Field Name	Type/Length	Operating System
VOLSER	(A6)	z/OS, z/VSE

Volume serial number currently mounted on the unit.

Field Name	Type/Length	Operating System
VOLUME - STATUS	(A8)	z/OS, z/VSE

Possible values:

z/OS:	PRIVATE PUBLIC STORAGE
z/VSE:	SYSRES (system-resident)

Field Name	Type/Length	Operating System
VTOC - TYPE	(A1)	z/OS

Type of VTOC. Possible values:

Value	Explanation
I	Indexed.
N	Normal.

58

UNIX-DIRECTORY

■ Relevant Error Codes	468
■ Field Descriptions	469

File	97
Op-Sys	z/OS
Statement	FIND
Task	This view makes it possible to display directory information related to a z/OS UNIX file system.

Fields (z/OS only)

Dictionary Field Name	F/L	Mu	DE	Remarks
NODE	N5.0		D	D Node ID (DBID).
ERROR-CODE	N3.0			
ERROR-TEXT	A58			
NODE-NAME	A16		D	
SYSTEM-MESSAGE-CODE	A10			
PATH	A54		D	Fully qualified path name.
FILE	A54		D	File name.
TYPE	A1		D	File type D = directory 3 standard file, see also below .
ACCESS-USER	A3		D	Access rights of the user.
ACCESS-GROUP	A3		D	Access rights of the group.
ACCESS-OTHER	A3		D	Access rights for someone neither being the user nor a member of the group.
OWNER	A8		D	File owner.
OWNER-GROUP	A8		D	Group of the file owner.
FILE-SIZE	N8.0		D	Size in bytes.

Relevant Error Codes

Code	Text	z/OS
530	Access denied by Security Facility.	X
568	File not found.	X
893	Getmain failed.	X
899	I/O error on file.	X
993	Cannot open file.	X

Field Descriptions

Field Name	Type/Length	Operating System
NODE	(N5.0)	z/OS

D Node ID (DBID).

Field Name	Type/Length	Operating System
ERROR-CODE	(N3.0)	z/OS

Message code.

Field Name	Type/Length	Operating System
ERROR-TEXT	(A58)	z/OS

Text describing error.

Field Name	Type/Length	Operating System
NODE-NAME	(A16)	z/OS

LPAR where node is running.

Field Name	Type/Length	Operating System
SYSTEM-MESSAGE-CODE	(A10)	z/OS

Code of system message.

Field Name	Type/Length	Operating System
PATH	(A54)	z/OS

Path of directory to be read.

Field Name	Type/Length	Operating System
FILE	(A253)	z/OS

Name of file or directory.

Field Name	Type/Length	Operating System
TYPE	(A1)	z/OS

Directory or file.

Values	Explanation
D	Directory.
3	Standard file.

Field Name	Type/Length	Operating System
ACCESS-USER	(A3)	z/OS

Access rights of user.

Values	Explanation
R	Read
W	Write
X	Execute

Field Name	Type/Length	Operating System
ACCESS-GROUP	(A3)	z/OS

Access rights of group.

Values	Explanation
R	Read
W	Write
X	Execute

Field Name	Type/Length	Operating System
ACCESS-OTHER	(A3)	z/OS

Access rights of others.

Values	Explanation
R	Read
W	Write
X	Execute

Field Name	Type/Length	Operating System
OWNER	(N8)	z/OS

Owner of file/directory.

Field Name	Type/Length	Operating System
OWNER-GROUP	(N8)	z/OS

Group of owner.

Field Name	Type/Length	Operating System
FILE-SIZE	(N8.0)	z/OS

Size of file in bytes.

799	Entire System Server internal error.	X

Field Descriptions

Field Name	Type/Length	Operating System
ACCOUNT-NUMBER	(A8)	

Account number for user ID. If more than one account number exists, it is necessary to have a processing loop in Natural to get them all.

Field Name	Type/Length	Operating System
AUDIT	(A3)	

Possible options:

Option	Explanation
NO	User is not authorized.
YES	User can specify for the files of his user ID that access to them must be supervised by the system.

Field Name	Type/Length	Operating System
CLASS	(N3)	

SPOOLOUT class (0-255) for the user's account number.

Field Name	Type/Length	Operating System
COMMANDS - FILE - NAME	(A54)	

Name of group syntax file or profile for SDF.

Field Name	Type/Length	Operating System
CSTMP - MACRO	(A3)	

Specifies whether the CSTMP macro (define memory pool as read only) can be used. Possible options:

Option	Explanation
NO	CSTMP macro not allowed.
YES	CSTMP macro can be used (define memory pool as read only).

Field Name	Type/Length	Operating System
DEFAULT - PUBSET	(A4)	

Default pubset assigned for user. This is used for allocation of files when no pubset is specified.

Field Name	Type/Length	Operating System
ENFORCE	(A3)	

Possible options:

Option	Explanation
NO	User is not authorized.
YES	User can force usage of PAM pages although the limit specified in MAX - PUBLIC - SPACE has already been reached for the user ID.

Field Name	Type/Length	Operating System
EXPRESS	(A3)	

Specifies whether the user can start batch jobs under the specified account number immediately, even though the limit for running jobs of the job classes assigned to the user has been reached.

Possible options:

Option	Explanation
NO	The user is not authorized.
YES	The user is authorized.

Field Name	Type/Length	Operating System
FUNCTION	(A8)	

Possible options:

Option	Explanation
READ	Default. Read information for user ID.
READNXT	Read information for user following entry for user ID in TSOSJOIN (only allowed for TSOS).

Field Name	Type/Length	Operating System
INHIBIT-DEACTIVATION	(A3)	

Possible options:

Option	Explanation
NO	Tasks can be deactivated by user.
YES	Prohibit deactivation of tasks of this account number.

Field Name	Type/Length	Operating System
MAIL - ADDRESS	(A64)	

Mail address for output listings.

Field Name	Type/Length	Operating System
MAX - ACC - REC	(A5)	

Maximum number of accounting records which can be written by a job or program. Possible values:

Value	Explanation
<i>n</i>	Maximum number, 0 - 32767.
NL	There is no limit.

Field Name	Type/Length	Operating System
MAX - CPU - TIME	(N5)	

Maximum CPU time in seconds available for this account number (1 - 65535) The default is 65535.

Field Name	Type/Length	Operating System
MAX - INPUT - CARDS	(A8)	

Maximum number of SYSOPT cards allowed for tasks of this user, or NO LIMIT, if the number is not restricted.

Field Name	Type/Length	Operating System
MAX - OUTPUT - LINES	(A8)	

Maximum number of SYSLST lines allowed for tasks of this user, or NO LIMIT, if the number is not restricted.,

Field Name	Type/Length	Operating System
MAX - PUBLIC - SPACE	(N8)	

Maximum number of PAM pages of public space which can be occupied by this user.

Field Name	Type/Length	Operating System
NO-TIME-LIMIT	(A3)	

Specifies whether the user is allowed to specify `TIME=NTL` for batch jobs under this account number.
Possible options:

Option	Explanation
NO	The user is not authorized.
YES	The user is authorized.

Field Name	Type/Length	Operating System
PASSWORD	(A8)	

Possible options:

Option	Explanation
NO	No password.
YES	User ID is password-protected.

Field Name	Type/Length	Operating System
PASSWORD-MODS	(A3)	

Specifies whether the user can change or delete his password. Possible values:

Value	Explanation
NO	User cannot change or delete his/her password.
YES	User can delete his password.

Field Name	Type/Length	Operating System
PRIORITY	(N3)	

Default job priority for this account number.

Field Name	Type/Length	Operating System
PUBLIC-SPACE	(N8)	

Number of PAM pages used on public space for this user ID.

Field Name	Type/Length	Operating System
RESIDENT - PAGES	(N5)	

Number of resident pages of real memory available for use (maximum is 32767).

Field Name	Type/Length	Operating System
SEVER	(A3)	

Possible values:

Value	Explanation
NO	Not severed.
YES	User ID severed.

Field Name	Type/Length	Operating System
TEST - PRIVILEGE	(A3)	

Defines whether user can change the privilege level for use of the software product AID. Possible options:

Option	Explanation
NO	The user can change the authorization at will.
YES	The user can change the authorization only with the operator's permission.

Field Name	Type/Length	Operating System
TP - IGNORE	(A4)	

States whether the operator can ignore tape label checks for the user. Possible options:

Option	Explanation
NO	Default. Error messages cannot be ignored.
ALL	All error messages are ignored.
BLP	For tapes processed in INPUT or REVERSE mode, no label checking is performed.
READ	Messages for input files can be ignored.
YES	Can only be ignored by the tape owner or TSOS.

Field Name	Type/Length	Operating System
TTYPL	(A3)	

Allowed category where tasks for this user and account number are grouped. Possible options:

Option	Explanation
STD	BATCH and DIALOG type tasks are allowed.
SYS	All task types are allowed.
TP	BATCH, DIALOG and TP are allowed.

Field Name	Type/Length	Operating System
USER-ADDRESS-SPACE	(N5)	

Size of address space for tasks of this user in MB.

Field Name	Type/Length	Operating System
USER-ID	(A8)	

Identification of user, whose information is to be read. The default is your own user ID. To read information on other users, your user ID must be TSOS.

Field Name	Type/Length	Operating System
USERID-PUBSET	(A4)	

ID of pubset from which user attributes are to be read.

Field Name	Type/Length	Operating System
USER-PRIVILEGE	(A4)	

Specifies whether the user is TSOS-authorized or not. Possible options:

Option	Explanation
USER	Normal user.
TSOS	The user is authorized.

Field Descriptions

Field Name	Type/Length	Operating System
ALLOCATION-TYPE	(A4)	z/OS

Allocation type specified. Possible values:

Value	Explanation
ABS	Absolute
BLK	Block
CYL	Cylinder
TRK	Track

Field Name	Type/Length	Operating System
BLKSIZE	(N5)	z/OS

Block size.

Field Name	Type/Length	Operating System
CREATION-DATE	(A8)	z/OS, z/VSE

Dataset creation date in format *DD/MM/YY*. If no creation date is specified, the field is filled with asterisks ****.

Field Name	Type/Length	Operating System
CREATION-DATX	(D)	z/OS, z/VSE

Creation date of file in Natural format.

Field Name	Type/Length	Operating System
CYLINDERS-ALLOCATED	(N7)	z/OS, z/VSE

Number of integral cylinders allocated.

Field Name	Type/Length	Operating System
DSNAME	(A54)	z/OS, z/VSE, BS2000

Fully qualified dataset name when returned as output field. When used as input fields, this field can be used to select further datasets and supports the asterisk notation (*) as wildcard selection.

Field Name	Type/Length	Operating System
DSNTYPE	(A8)	z/OS

Data Set Type Specification.

Field Name	Type/Length	Operating System
DSORG	(A4)	z/OS, z/VSE

Dataset organization, for example PS for sequential dataset, PO for partitioned dataset, POE for PDSE.

Field Name	Type/Length	Operating System
EXPIRATION-DATE	(A8)	z/OS, z/VSE

Dataset expiration date in format *DD/MM/YY*. If no creation date is specified, the field is filled with asterisks ******.

Field Name	Type/Length	Operating System
EXPIRATION-DATX	(D)	z/OS, z/VSE

Expiration date of file in Natural format.

Field Name	Type/Length	Operating System
EXTENTS	(A192)	z/OS, z/VSE

Extent information. The field contains 16 entries, each 12 bytes long. Each entry contains the following:

- Low cylinder and head (track) address of extent (binary *CCHH*)
- High cylinder and head (track) address of extent (binary *CCHH*)
- Number of cylinders in extent
- Number of additional tracks in extent

Field Name	Type/Length	Operating System
EXTENTS-ARRAY	(A192) M16	z/OS, z/VSE

Extent information array of 16 x 16 entries, each 12 bytes long. Each entry contains the following:

- Low cylinder and head (track) address of extent (binary *CCHH*)
- High cylinder and head (track) address of extent (binary *CCHH*)
- Number of cylinders in extent
- Number of additional tracks in extent

Field Name	Type/Length	Operating System
EXTENT-TYPE	(A4)	z/OS, z/VSE

Possible values:

Value	Explanation
FREE	This entry describes a free extent.
USED	This entry describes a regular data set (default value).
VTOC	Indicates the VTOC extent (z/OS only).

Field Name	Type/Length	Operating System
FILE-SIZE	(N10)	z/OS, z/VSE, BS2000

Number of tracks currently allocated. (CYLINDERS-ALLOCATED in tracks + TRACKS-ALLOCATED).

In BS2000, the number of PAM pages allocated.

Field Name	Type/Length	Operating System
LAST-REFERENCE	(A8)	z/OS

Last reference date in format *DD/MM/YY*. If the last reference date is null, this field is filled with asterisks ******.

Field Name	Type/Length	Operating System
LAST-REFERENCE-DATX	(D)	z/OS

Last reference date in Natural format.

Field Name	Type/Length	Operating System
LAST-TTR	(B3)	z/OS

Last track.

Field Name	Type/Length	Operating System
LAST-TTTR	(B4)	z/OS

Last used track and block on track (TTTR).

Field Name	Type/Length	Operating System
LRECL	(N5)	z/OS

Logical record length.

Field Name	Type/Length	Operating System
NUMBER-OF-EXTENTS	(A192)	z/OS, z/VSE

Number of extents used. Valid values are 1 - 255.

Field Name	Type/Length	Operating System
PERCENT-USED	(N3)	z/OS

Amount of space used in the dataset as a percentage of total space.

Field Name	Type/Length	Operating System
PRIMARY-QTY	(N10)	z/OS

Primary allocation.

Field Name	Type/Length	Operating System
RECFM	(A5)	z/OS

Record format, for example, FB.

Field Name	Type/Length	Operating System
SECONDARY-QTY	(N10)	z/OS

Secondary allocation.

Field Name	Type/Length	Operating System
SECURITY	(A5)	z/OS

Security status. Possible values:

Value	Explanation
NONE	Not password-protected.
READ	Password-protected for read and write operations.
VSAM	VSAM file.
WRITE	Password-protected for write operations.

Field Name	Type/Length	Operating System
SERIES	(A8)	z/OS, z/VSE

Device series for the unit, for example, 3380.

Field Name	Type/Length	Operating System
SMS	(A3)	z/OS

Specifies whether the file is on an SMS-managed unit or device, YES or NO.

Field Name	Type/Length	Operating System
TRACKS-ALLOCATED	(N3)	z/OS

Number of remaining tracks allocated in addition to CYLINDERS-ALLOCATED.

Field Name	Type/Length	Operating System
UNIT	(A4)	z/OS, z/VSE

Device number of the unit on which the dataset resides.

Field Name	Type/Length	Operating System
UPDATED-SINCE-BACKUP	(A3)	z/OS

Specifies whether the file has been updated since the last backup, YES or NO.

Field Name	Type/Length	Operating System
VOLSER	(A6)	z/OS, z/VSE, BS2000

Volume serial number.

Field Descriptions

Field Name	Type/Length	Operating System
CATALOG-UPDATE	(A3)	z/OS

Update catalog after a file is scratched or renamed. Possible options:

Option	Explanation
NO	Catalog is not updated.
YES	Catalog is updated.

Field Name	Type/Length	Operating System
DSNAME	(A54)	z/OS, z/VSE, BS2000

Fully qualified dataset name. In BS2000, fully qualified file name.

Field Name	Type/Length	Operating System
ERASE-OPTION	(A7)	BS2000

Possible options:

Option	Explanation
CATALOG	Erase only catalog entry (only for tape files and private disks. Default for tape files).
DATA	Erase only data: keep allocated space and catalog entry (not valid for tape files).
DESTROY	Overwrite with x'00' (not valid for tape files).
SPACE	Same as DATA, but release allocated space (not valid for tape files and private disks).

Field Name	Type/Length	Operating System
ERASE-RANGE	(A1)	BS2000

Range of generation files to be deleted. Possible options:

Option	Explanation
A	All files after the generation number in DSNAME.
B	All files before the generation number in DSNAME.

Field Name	Type/Length	Operating System
FUNCTION	(A8)	z/OS, z/VSE, BS2000

Possible functions are:

Function	Explanation
PURGE	Delete dataset or file regardless of expiration date.
RELEASE	In z/OS, release unused space. In BS2000, this function can be performed by FUNCTION=COMPRESS in the view FILE-MAINTENANCE. This function is not supported in z/VSE.
RENAME	Rename dataset or file.
SCRATCH	Delete dataset or file. In z/VSE, SCRATCH is equivalent to PURGE.

Field Name	Type/Length	Operating System
LEAVE	(N5)	z/OS

Number of free tracks after the unused tracks are freed with FUNCTION=RELEASE.

Field Name	Type/Length	Operating System
NEWNAME	(N54)	z/OS, z/VSE, BS2000

Relevant when FUNCTION=RENAME. New name to be assigned to the dataset or file.

In BS2000, must be supplied without CAT-ID / User ID.

Field Name	Type/Length	Operating System
PASSWORD	(A8)	BS2000

Password for write access to file to be renamed or deleted.

Field Name	Type/Length	Operating System
VOLSER	(A6)	z/OS, z/VSE

Volume serial number.

Field Name	Type/Length	Operating System
WAIT	(A3)	z/OS

Relevant when VOLSER=MIGRAT. Possible values are:

Value	Explanation
YES	Wait for the dataset to be recalled from a migration volume before deleting it.
NO	Delete the migrated dataset without recalling (default).

62

Field Descriptions

Field Name	Type/Length	Operating System
BLKSIZE	(B2)	z/OS, z/VSE

Block size for dataset.

z/OS:	Required only for tape datasets that have no standard label.
-------	--

Field Name	Type/Length	Operating System
BLOCK-TTR	(B3)	z/OS

Track value at which to start writing.

Field Name	Type/Length	Operating System
BLOCK-TOKEN	(B4)	z/OS

Token value at which to start writing.

For a large format sequential data set, the token is in the format *TTTR* where *TTT* is the relative track address and *R* the number of the block on that track.

Field Name	Type/Length	Operating System
DISP	(A3)	z/OS, z/VSE, BS2000

Disposition of dataset or file. Possible values:

z/OS:

Value	Explanation
MOD	Add records to the end of the sequential dataset.
OLD	Overwrite existing dataset.

BS2000:

Value	Explanation
MOD	Add records to the end of the sequential file.
NEW	Create new file.
STR	Only for ISAM files: replace or add records identified by value in KEY.

z/VSE ((VSAM (SAM ESDS) only):

Value	Explanation
MOD	Add records at the end of the dataset or file.
NEW	Overwrite existing file contents.
OLD	Same as MOD.

Field Name	Type/Length	Operating System
DSNAME	(A54)	z/OS, z/VSE, BS2000

Fully qualified dataset name. For BS2000, fully qualified file name. Specify `&TEMP.name` here to select a temporary dataset or file as specified in the Entire System Server startup parameter module. These temporary datasets or files are freed when you log off (not supported in BS2000).

Field Name	Type/Length	Operating System
DUPLICATE-KEY	(A3)	BS2000

For ISAM only:

Value	Explanation
NO	Default. No duplicate keys allowed.
YES	Duplicate keys allowed.

Field Name	Type/Length	Operating System
ELEMENT	(A64)	BS2000

Name of the LMS element to be written.

Field Name	Type/Length	Operating System
ELEMENT-PASSWORD	(A8)	BS2000

Password for protected LMS element (LMS V2 or above).

Field Name	Type/Length	Operating System
ELEMENT-RECORD-TYPE	(N3)	BS2000

Record type (LMS only).

Field Name	Type/Length	Operating System
ELEMENT-TYPE	(A8)	BS2000

Type of LMS element to be written.

Types C and L are currently not supported.

Field Name	Type/Length	Operating System
ELEMENT-USER-DATE	(A14)	BS2000

Is written as element information into LMS library. Format: *YYYY-MM-DDaaaa*, where *aaaa* can be any 4-character string.

Field Name	Type/Length	Operating System
ELEMENT-USER-TIME	(A8)	BS2000

Is written as element information into LMS library. Format: *HH:MM:SS*.

Field Name	Type/Length	Operating System
ELEMENT-VERSION	(A24)	BS2000

Version of LMS element to be written.

Field Name	Type/Length	Operating System
EXPIRATION-DATE	(A5)	BS2000

The file's new expiration date in format *YYDDD*.

Field Name	Type/Length	Operating System
EXPIRATION-DATX	(D)	BS2000

Expiration date in Natural format.

Field Name	Type/Length	Operating System
FUNCTION	(A8)	z/OS, z/VSE, BS2000

Function to be performed. Possible options:

Option	Explanation
<i>blank</i>	Default. Write a record.
CLOSE	All records have been written. Specify this function for the last WRITE-FILE request.
OPEN	(z/OS) Open a new file. This OPEN can be omitted for simple WRITE-FILE loops, but is recommended for complex, nested WRITE-FILE programs (for example, writing in parallel to several files).

Field Name	Type/Length	Operating System
GENERATION	(N9)	z/OS

Generation number of member (only valid for PDSE version 2 with MAXGENS > 0).

Field Name	Type/Length	Operating System
IDENTIFIER	(A8)	z/OS, z/VSE, BS2000

Required if multiple WRITE-FILE calls are executing in parallel. All requests for the same file must have the same identifier.

Field Name	Type/Length	Operating System
INLINE-DATA	(A3)	z/VSE

For cataloged procedures: (see LIBR, DATA=YES). Possible values:

Value	Explanation
NO	Default. Input contains no SYSIPT data.
OFF	SYSIPT flag for existing member switched off before member is saved.
YES	Input contains SYSIPT data.

Field Name	Type/Length	Operating System
KEY	(A253)	z/OS, BS2000

ISAM/VSAM key.

Field Name	Type/Length	Operating System
LIBRARY	(A8)	z/VSE

Name of library.

Field Name	Type/Length	Operating System
LMS-RESET-FLAG	(A3)	BS20000/OSD

If YES is specified in this field with FUNCTION=CLOSE, all previous writes for this LMS element are reset.

Field Name	Type/Length	Operating System
LRECL	(B2)	z/OS, z/VSE

Logical record length. Default length is 80.

z/OS: Required only for tape datasets that have no standard label.

z/VSE: Required if RECFM=F.

Field Name	Type/Length	Operating System
MEMBER	(A10)	z/OS, z/VSE

Member name.

Field Name	Type/Length	Operating System
MEMBER-TYPE	(A8)	z/VSE

Member type.

Field Name	Type/Length	Operating System
MSHP	(A3)	z/VSE

Indicate MSHP bypass required when saving members. Possible values:

Value	Explanation
NO	No MSHP bypass required.
YES	MSHP bypass to be performed.

Field Name	Type/Length	Operating System
PAD	(N2)	BS2000

Only for ISAM: padding factor (default is 15).

Field Name	Type/Length	Operating System
PASSWORD	(A8)	z/OS, BS2000

Password for protected dataset or file.

Field Name	Type/Length	Operating System
PRODUCT	(A1)	z/OS, BS2000

Access method used. Possible options:

Option	Explanation
L	CA-Librarian
M	LMS (BS2000)
P	CA-Panvalet

Field Name	Type/Length	Operating System
PRODUCT-OPTIONS	(A80)	z/OS

Options for CA-Librarian access method (when PRODUCT=L).

Field Name	Type/Length	Operating System
RECFM	(A2)	z/OS, z/VSE

Record format of the dataset.

z/OS: Required only for tape datasets that have no standard label.

z/VSE: Default is F.

Field Name	Type/Length	Operating System
RECORD	(A253)	z/OS, z/VSE, BS2000

Record to be written.

Field Name	Type/Length	Operating System
RECORD-LENGTH	(N5)	z/OS, z/VSE, BS2000

Length of record (used only if record format is variable). Can be omitted in BS2000.

Field Name	Type/Length	Operating System
RECORD-NUMBER	(N9)	BS2000

Number of record to be written.

Field Name	Type/Length	Operating System
REPLACE	(A3)	z/OS, z/VSE

Possible options:

Option	Explanation
NO	Add module. If it already exists, issue error code.
REP	Replace module. If it does not already exist, issue error code.
YES	Default. Add module, replace module of the same name, if it exists.

Field Name	Type/Length	Operating System
SEGMENT-LENGTH	(N3)	z/OS, z/VSE, BS2000

Length of segment.

Field Name	Type/Length	Operating System
SEGMENT-NUMBER	(N5)	z/OS, z/VSE, BS2000

Number of segment. If SEGMENT-NUMBER=1, a new logical record is started. If SEGMENT-NUMBER > 1, the segment is a continuation.

Field Name	Type/Length	Operating System
STATS	(A3)	z/OS

Generate or update ISPF statistical data, see also [Write ISPF Statistics](#). If STATS=YES,

- ISPF statistical data is generated if
 - the member is new, that is WRITE-FILE is creating the member,
 - or
 - the member already existed, but no ISPF statistical data has yet been generated for example when the member was created by a previous version of WRITE-FILE.
- ISPF statistic data already generated for an old member is updated.

If STATS=DEL, ISPF statistical data of an existing PDS member is deleted. STATS=DEL is valid only for PDS members and these will be always be accessed as if UPDATE-IN-PLACE is set to YES.

The default is STATS=NO. In this case WRITE-FILE behaves like in a previous version where the function did not provide writing of ISPF statistics. No ISPF statistics is generated or updated.

Field Name	Type/Length	Operating System
SUB-LIBRARY	(A8)	z/VSE

Name of sublibrary.

Field Name	Type/Length	Operating System
TAPE-UNLOAD	(A3)	z/OS, BS2000

Unload TAPE during CLOSE:

YES: Unload tape.

NO: Tape is rewound and positioned to beginning of tape (default).

Field Name	Type/Length	Operating System
UPDATE-INPLACE	(A3)	z/OS, z/VSE, BS2000

Valid only for PDS members. It is ignored for PDSE members; these will be always be accessed as if UPDATE-IN-PLACE was set to NO. Possible options:

Option	Explanation
YES	Perform UPDATE-INPLACE function.

Field Name	Type/Length	Operating System
USER-DATA	(A120)	z/OS

User data for PDS member, for example, save date, size. Relevant when FUNCTION=CLOSE.

Field Name	Type/Length	Operating System
USER-DATA-HEX	(B120)	z/OS

User data for the member in hexadecimal format.

Field Name	Type/Length	Operating System
USER-DATA-LENGTH	(N3)	z/OS

Length of data for PDS member. Relevant when FUNCTION=CLOSE.

Field Name	Type/Length	Operating System
VOLSER	(A6)	z/OS, z/VSE

Volume serial number (required if dataset is not cataloged).

Field Name	Type/Length	Operating System
VSAM-CATALOG	(A8)	z/VSE

Name of the VSAM catalog where the library is kept.

WRITE-FILE Programming Notes

WRITE-FILE is an UPDATE view, i.e., data is transmitted from the Natural program (client side) to ESY (server side).

The Entire System Server view WRITE-FILE returns codes and messages that describe whether the requested operation has been executed successfully or not. The DEFINE DATA section of the Natural program should only contain the fields shown below:

```
1 WRITE-FILE VIEW OF WRITE-FILE
2 ERROR-CODE
2 ERROR-TEXT
2 SYSTEM-MESSAGE-CODE
2 SYSTEM-CODE
```

These fields in DEFINE DATA are the fields returned from the WRITE-FILE view in Entire System Server to the calling Natural program. It is not necessary to define any other fields in the DDM; accessing any fields other than those above may lead to unpredictable results.

WRITE-FILE and RELEASE Unused Space

```
PROCESS FILE-ALLOCATE using DSNAME = xxx, RLSE=YES
...
PROCESS WRITE-FILE using DSNAME = xxx, record = yyy
PROCESS WRITE-FILE using DSNMAE = xxx, function=close
```

After the last PROCESS statement, unused space will be released; only one FILE-ALLOCATION and WRITE-FILE relationship with RLSE is possible at any one time.

Write ISPF Statistics

Writing PDS members in TSO / ISPF or NSPF produces statistics entries. Most common is an order of entries on who edited the member at which time:

MEMBER	VV.MM	CREATED	MODIFIED	TIME	SIZE	INIT	TID	ID
-----+-----+-----+-----+-----+-----+-----+-----+								
AFP1	01.05	19950131	19970403	16:19	23	17		<i>user1</i>
ASMAOPT	01.10	20190613	20190613	13:15	1	1		<i>user2</i>

whereas the columns are explained as follows:

VV	main version
MM	subversion
CREATED	date of creation
MODIFIED	date of modification
TIME	time of modification
SIZE	current record count
INIT	initial record count, when member was created
ID	ID of the user responsible for the latest change

These statistic entries can also be written using WRITE-FILE view outside NSPF or ISPF in an application.

ISPF statistics is described in <https://www.ibm.com/support/knowledgecenter> under *z/OS version> ISPFz/OS> ISPF Messages and Codes> Diagnostic Tools and Information> Diagnostic information*, for example in https://www.ibm.com/support/knowledgecenter/SSLTBW_2.1.0/com.ibm.zos.v2r1.f54mc00/isp-mc28.htm.

Field Descriptions

Field Name	Type/Length	Operating System
BINARY	(A3)	BS2000

Print in hexadecimal format or not:

Value	Explanation
NO	Character
YES	Hexadecimal

Field Name	Type/Length	Operating System
BURST	(A3)	z/VSE

Burst option. Possible values:

Value	Explanation
NO	Default
YES	

Field Name	Type/Length	Operating System
CHARS	(A64)	z/OS, BS2000

Four groups of four bytes each, taken from the JCL

```
'(CHARS=(AAAA,BBBB,CCCC,DDDD))'
```

In BS2000, it is taken from the CHARS parameter of the PRINT command. Possible values:

- AAAA
- AAAABBBB
- AAAABBBBCCCC
- AAAABBBBCCCCDDDD

Sixteen groups of four bytes can be specified for RSO printers (maximum 64 bytes).

Field Name	Type/Length	Operating System
CHARS-MODIFICATION	(A3)	BS2000

Possible values:

Value	Explanation
YES	Default. All characteristics of character sets are supported.
NO	Only character type, language and near-letter-quality are supported.

Field Name	Type/Length	Operating System
CLASS	(A1)	z/OS, z/VSE

SYSOUT class. If omitted, the default class of the Entire System Server node is used.

Field Name	Type/Length	Operating System
COMPACT	(A4)	z/VSE

Name of compaction table.

Field Name	Type/Length	Operating System
CONTROL	(A1)	z/OS, z/VSE, BS2000

Carriage control mode:

Value	Explanation
<i>n</i>	(BS2000) number of new lines after each line.
A	Position 1 is ASA code.
E	SPACE=E (BS2000).
I	SPACE=I (in BS2000 for IBM carriage control characters).
M	Position 1 is machine code.

Field Name	Type/Length	Operating System
CONTROL-OPTION	(A16)	BS2000

Possible values:

- NO
- LINEMODE
- LOGICAL
- PHYS

- PHYSICAL
- TRANSPARENT

For an explanation, see the description of the `CONTROL` parameter of the BS2000 command `PRINT`.

Field Name	Type/Length	Operating System
COPIES	(B1)	z/OS, z/VSE, BS2000

Number of `SYSOUT` copies.

Field Name	Type/Length	Operating System
COPY-MODIFY-MODULE	(A4)	z/VSE

Copy modification module name.

Field Name	Type/Length	Operating System
COPY-MODIFY-TABLE	(A4)	z/VSE

Character arrangement table for copy modification.

Field Name	Type/Length	Operating System
DATA-SET-ID	(A54)	z/OS

Internal dataset name of the `SYSOUT` file (returned after the `CLOSE` function).

Field Name	Type/Length	Operating System
DDNAME	(A8)	z/OS

The `DDNAME` of the spool file.

Field Name	Type/Length	Operating System
DESTINATION	(A127)	z/OS, z/VSE, BS2000

- `z/OS`: Remote destination of this dataset.

May also be specified in the form '`IP:ipaddr`' which may be used by a functional subsystem that can perform Internet Protocol (IP) transmission (for example, IP PrintWay).

- `z/VSE` : Remote destination of this dataset.
- `BS2000`: Device type of printer (`ND`, `HP`), if the `DEVICE` field is specified.

Field Name	Type/Length	Operating System
DEVICE	(A8)	BS2000

RSO printer.

Field Name	Type/Length	Operating System
DIA	(A2)	BS2000

Form DIA name.

Field Name	Type/Length	Operating System
DISPOSITION	(A1)	z/VSE

Disposition to be assigned to spool output.

Field Name	Type/Length	Operating System
DSNAME	(A54)	BS2000

Name of the file to be printed out. Note that FUNCTION=CLOSE is required to start the printout.

Field Name	Type/Length	Operating System
ELEMENT	(A64)	BS2000

Name of the LMS element to be written (BS2000 version V10 or above).

Field Name	Type/Length	Operating System
ELEMENT-PASSWORD	(A8)	BS2000

Password for protected LMS element (BS2000 version V10 or above and LMS V2 or above).

Field Name	Type/Length	Operating System
ELEMENT-TYPE	(A8)	BS2000

Type of LMS element to be written (BS2000 version V10 or above).

Field Name	Type/Length	Operating System
ELEMENT-VERSION	(A24)	BS2000

Version of LMS element to be written (BS2000 version V10 or above).

Field Name	Type/Length	Operating System
END - NUMBER	(N5)	BS2000

Number of the last column in the line to be printed. Value range: 1 <= value <= 32767

Field Name	Type/Length	Operating System
FCB	(A4)	z/OS, z/VSE

FCB name.

Field Name	Type/Length	Operating System
FLASH	(A4)	z/OS, z/VSE

Flash for 3800.

Field Name	Type/Length	Operating System
FLASH - COUNT	(N3)	z/VSE

Flash count.

Field Name	Type/Length	Operating System
FORM	(A8)	z/OS, z/VSE, BS2000

SYSOUT form.

Field Name	Type/Length	Operating System
FROM - LINE - NUMBER	(N10)	BS2000

Starting line number of output list.

Field Name	Type/Length	Operating System
FROM - PAGE - NUMBER	(N10)	BS2000

Starting page number of output list.

Field Name	Type/Length	Operating System
FSSDATA	(A127)	z/OS

Specifies data to pass to a functional subsystem (FSS) that controls printing (for example, IP PrintWay). See the documentation for the particular subsystem for additional information.

Field Name	Type/Length	Operating System
FUNCTION	(A8)	z/OS, z/VSE, BS2000

Function to be performed. Possible options:

Option	Explanation
<i>blank</i>	Write a record.
CLOSE	All records have been written. Specify this on the last request.
SEGMENT	z/VSE only. Create a new POWER segment after writing next line.

Field Name	Type/Length	Operating System
HEADER	(A5)	BS2000

Print a headline on each page. Possible values are:

Value	Explanation
D	DATE in format YY-MM-DD.
D, T, P	All values are in headline.
NO	No headline.
P	PAGE <i>nnnn</i> .
T	First record is headline.

Field Name	Type/Length	Operating System
HEADER-NUMBER	(N10)	BS2000

Number of cover pages for the output list. Range of values: $0 \leq \text{value} \leq 2^{31} - 1$

Field Name	Type/Length	Operating System
HOLD	(A8)	z/OS

Possible values:

Value	Explanation
NO	The SYSOUT dataset is not to be held.
YES	The SYSOUT dataset is to be held.

Field Name	Type/Length	Operating System
IDENTIFIER	(A8)	z/OS, BS2000

Required if multiple update views are executing in parallel, all requests for the same process must have the same identifier.

Field Name	Type/Length	Operating System
IMAGE	(A28)	BS2000

Specifies a user file which includes LOOP records, character sets, etc.

Field Name	Type/Length	Operating System
JOB-ID	(A8)	z/OS, BS2000

Returned for FUNCTION=CLOSE.

z/OS & z/VSE :	Job number in alphanumeric format.
BS2000:	TSN of job in alphanumeric format. This field must be used for V10 or above with alphanumeric TSNs.

Field Name	Type/Length	Operating System
JOB-NAME	(A8)	z/VSE , BS2000

Name of the job under which the output is to be printed.

Field Name	Type/Length	Operating System
JOB-NUMBER	(N7)	z/OS, BS2000

Returned for FUNCTION=CLOSE.

z/OS, z/VSE : Job number.

BS2000: TSN of job.

Field Name	Type/Length	Operating System
LINES	(N3)	BS2000

Number of lines per page.

Field Name	Type/Length	Operating System
LOCK	(A3)	BS2000

Protect output against modifications during wait as Task Type 4. Possible options:

Option	Explanation
NO	Output not protected.
YES	Output protected.

Field Name	Type/Length	Operating System
LOOP	(A3)	BS2000

Name of LOOP record.

Field Name	Type/Length	Operating System
PASSWORD	(A8)	z/VSE , BS2000

z/VSE : Password of job.

BS2000: Password, if the file is protected.

Field Name	Type/Length	Operating System
PORTNO	(N5)	z/OS

Specifies the TCP/IP port number at which a functional subsystem (for example, IP Printway) connects to the printer. See the documentation for the particular subsystem for additional information.

Field Name	Type/Length	Operating System
PROGRAM	(A8)	z/OS, z/VSE

Name of writer program to process this dataset.

Field Name	Type/Length	Operating System
PRTOPTNS	(A16)	z/OS

Specifies additional print options a functional subsystem can use when printing a DEST='IP:ipaddr' routed dataset. See the documentation of the particular subsystem for additional information.

Field Name	Type/Length	Operating System
PRTQUEUE	(A127)	z/OS

Specifies the name of the target print queue on a remote host system. The PRTQUEUE field applies only to datasets processed by a functional subsystem that can perform Internet Protocol (IP) transmission (for example, IP Printway). See the documentation of the particular subsystem for additional information.

Field Name	Type/Length	Operating System
RECORD	(A253)	z/OS, z/VSE, BS2000

Record to be written.

Field Name	Type/Length	Operating System
RECORD-LENGTH	(N3)	z/OS, z/VSE, BS2000

Length of record.

Field Name	Type/Length	Operating System
REMOTE-USERID	(A8)	z/OS

User ID for printing at remote destinations.

Field Name	Type/Length	Operating System
RSO-FILE-NAME	(A28)	BS2000

Name of translation table for RSO printer. For detailed information, see the description of the TRANSLATION-TABLE parameter (name2) of the BS2000 command PRINT.

Field Name	Type/Length	Operating System
SEGMENTATION-SIZE	(B4)	z/VSE

Size (in lines) of each segment to be written.

Field Name	Type/Length	Operating System
SEP-PAGES-COPIES	(A3)	z/VSE

Copy separators required. Possible values:

Value	Explanation
NO	Default
YES	

Field Name	Type/Length	Operating System
SEP - PAGES - COUNT	(B1)	z/VSE

Number of separator pages.

Field Name	Type/Length	Operating System
START - NUMBER	(N5)	BS2000

Number of first column in line for print. Range of values: $0 \leq \text{value} \leq 32767$

Field Name	Type/Length	Operating System
TARGET - NODE	(A8)	z/VSE

Name of target node.

Field Name	Type/Length	Operating System
TEXT	(A32)	BS2000

Saved in spool control block (SCB). The first 8 characters are used as text at the header page.

Field Name	Type/Length	Operating System
TO - LINE - NUMBER	(N10)	BS2000

Ending line number of output list.

Field Name	Type/Length	Operating System
TO - PAGE - NUMBER	(N10)	BS2000

Ending page number of output list.

Field Name	Type/Length	Operating System
TRAIL - NUMBER	(N10)	BS2000

Number of trailing pages for the output list. Range of values: $0 \leq \text{value} \leq 2^{**31} - 1$

Field Name	Type/Length	Operating System
TRANSLATION-TABLE	(A8)	BS2000

Name of translation table for RSO printer. For detailed information, see the description of the TRANSLATION-TABLE parameter (name1) of the BS2000 command PRINT.

Field Name	Type/Length	Operating System
TRAY	(N1)	BS2000

Specifies the tray number. Possible values: 1 - 9.

Field Name	Type/Length	Operating System
TRC	(A3)	z/OS

Value	Explanation
YES	Byte 2 in record used for CHARS (3800) (DCB=OPTCB=J specified).

Field Name	Type/Length	Operating System
UCS	(A8)	z/VSE

UCB name.

Field Name	Type/Length	Operating System
UCS-OPTIONS	(A2)	z/VSE

UCB options. Possible values:

Value	Explanation
B	Block data check option.
F	Fold option.

Field Name	Type/Length	Operating System
USER-INFO	(A16)	z/VSE

User information.

WRITE-SPOOL Programming Notes

WRITE-SPOOL is an UPDATE view, that is, data is transmitted from the Natural program (client side) to ESY (server side).

The Entire System Server view WRITE-SPOOL returns codes and messages that describe whether the requested operation has been executed successfully or not.

Therefore, the DEFINE DATA section of the Natural program should only contain the fields shown in this example:

```
1 WRITE-SPOOL VIEW OF WRITE-SPOOL
2 ERROR-CODE
2 ERROR-TEXT
2 SYSTEM-MESSAGE-CODE
2 SYSTEM-CODE
```

These fields in DEFINE DATA statement are the fields returned from the WRITE-SPOOL view in Entire System Server to the calling Natural program.

Defining other fields in DDM is not critical, but the access to these fields may lead to unpredictable results.

64

WRITE-UNIX-FILE

■ Fields (z/OS only)	534
■ Relevant Error Codes	534
■ Field Descriptions	535

File	215
Op-Sys	z/OS
Statement	PROCESS
Task	This view makes it possible to write data to files in the z/OS UNIX file system.

Fields (z/OS only)

Dictionary Field Name	F/L	Mu	DE	Remarks
NODE	N5.0		D	D Node ID (DBID).
ERROR-CODE	N3.0			
ERROR-TEXT	A58			
NODE-NAME	A16		D	
SYSTEM-MESSAGE-CODE	A10			
FUNCTION	A8		D	Function to be performed. Can be left unspecified. See below for possible values.
PATH	A128		D	Fully qualified path name of file to be written.
RECORD	A253		D	Contents of record.
IDENTIFIER	A8		D	Required for multiple parallel WRITE-UNIX-FILE calls.
RECORD-LENGTH	N3.0		D	Length of record to be written.

Relevant Error Codes

Code	Text	z/OS
530	Access denied by Security Facility.	X
553	I-O error in directory.	X
568	File or directory not found.	X
899	I/O ERROR DURING WRITE	X

Field Descriptions

Field Name	Type/Length	Operating System
NODE	(N5.0)	z/OS

D Node ID (DBID).

Field Name	Type/Length	Operating System
ERROR-CODE	(N3.0)	z/OS

Message code.

Field Name	Type/Length	Operating System
ERROR-TEXT	(A58)	z/OS

Text describing error.

Field Name	Type/Length	Operating System
NODE-NAME	(A16)	z/OS

Name of Node.

z/OS:

Field Name	Type/Length	Operating System
SYSTEM-MESSAGE-CODE	(A10)	z/OS

Field Name	Type/Length	Operating System
FUNCTION	(A8)	z/OS

Function to be performed. If not left unspecified the following functions are available:

Option	Explanation
CLOSE	Closes all records that have been written.

Field Name	Type/Length	Operating System
PATH	(A128)	z/OS

Fully qualified path name of file to be written.

Field Name	Type/Length	Operating System
RECORD	(A253)	z/OS

Contents of record.

Field Name	Type/Length	Operating System
IDENTIFIER	(A8)	z/OS

Required if multiple WRITE-FILE calls are executing in parallel. All requests for the same file must have the same identifier.

Field Name	Type/Length	Operating System
RECORD-LENGTH	(N3.0)	z/OS

Length of record to be written. Default is 132.
