
Ehcache Installation Guide

Version 2.10.7

April 2019

This document applies to Ehcache Version 2.10.7 and to all subsequent releases.

Specifications contained herein are subject to change and these changes will be reported in subsequent release notes or new editions.

About This Documentation

Online Information and Support

Software AG Documentation Website

You can find documentation on the Software AG Documentation website at "<http://documentation.softwareag.com>". The site requires credentials for Software AG's Product Support site Empower. If you do not have Empower credentials, you must use the TECHcommunity website.

Software AG Empower Product Support Website

If you do not yet have an account for Empower, send an email to "empower@softwareag.com" with your name, company, and company email address and request an account.

Once you have an account, you can open Support Incidents online via the eService section of Empower at "<https://empower.softwareag.com/>".

You can find product information on the Software AG Empower Product Support website at "<https://empower.softwareag.com/>".

To submit feature/enhancement requests, get information about product availability, and download products, go to "[Products](#)".

To get information about fixes and to read early warnings, technical papers, and knowledge base articles, go to the "[Knowledge Center](#)".

If you have any questions, you can find a local or toll-free number for your country in our Global Support Contact Directory at "https://empower.softwareag.com/public_directory.asp" and give us a call.

Software AG TECHcommunity

You can find documentation and other technical information on the Software AG TECHcommunity website at "<http://techcommunity.softwareag.com>". You can:

- Access product documentation, if you have TECHcommunity credentials. If you do not, you will need to register and specify "Documentation" as an area of interest.
- Access articles, code samples, demos, and tutorials.
- Use the online discussion forums, moderated by Software AG professionals, to ask questions, discuss best practices, and learn how other customers are using Software AG technology.
- Link to external websites that discuss open standards and web technology.

Data Protection

Software AG products provide functionality with respect to processing of personal data according to the EU General Data Protection Regulation (GDPR). Where applicable, appropriate steps are documented in the respective administration documentation.

1 Installing Ehcache

- Installing Ehcache for General-Purpose Caching 8
- Installing Ehcache for Specific Technologies 8
- Building Ehcache from Source 9

Installing Ehcache for General-Purpose Caching

1. Download Ehcache from "<http://ehcache.org/downloads>".
Beginning with Ehcache 1.7.1, Ehcache depends on SLF4J ("<http://www.slf4j.org>") for logging. SLF4J is a logging framework with a choice of concrete logging implementations. For configuration details, see "Logging" in the *Ehcache Operations Guide*.
2. Use Java 1.5 or 1.6.
3. Place the Ehcache jar into your classpath.
4. Configure ehcache.xml and place it in your classpath. For additional information about the ehcache.xml file, see "XML Configuration" in the *Ehcache Configuration Guide*.
5. Optionally, configure an appropriate logging level, as described in "Logging" in the *Ehcache Operations Guide*.
6. To get started, see the *Ehcache Developer Guide*.

Installing Ehcache for Specific Technologies

Hibernate

1. Perform the same steps as for general-purpose caching (see "[Installing Ehcache for General-Purpose Caching](#)" on page 8).
2. Create caches in ehcache.xml.

For more information, see "Using Ehcache with Hibernate" in the *Integrations* book.

Caching with Java EE Servlet

1. Perform the same steps as for general-purpose caching (see "[Installing Ehcache for General-Purpose Caching](#)" on page 8).
2. Configure a cache for your web page in ehcache.xml.
 - To cache an entire web page, either use SimplePageCachingFilter or create your own subclass of CachingFilter.
 - To cache a jsp:Include or anything callable from a RequestDispatcher, either use SimplePageFragmentCachingFilter or create a subclass of PageFragmentCachingFilter.
3. Configure the web.xml. Declare the filters created above and create filter mapping associating the filter with a URL.

For more information, see the *Ehcache Web Cache User Guide*.

RESTful and SOAP Caching with the Cache Server

1. Download the ehcache-standalone-server from "<https://sourceforge.net/projects/ehcache/files/ehcache-server>"
2. `cd` to the bin directory.
3. Type `startup.sh` to start the server with the log in the foreground. By default it will listen on port 8080, will have both RESTful and SOAP web services enabled, and will use a sample Ehcache configuration from the WAR module
4. See "RESTful Code Samples" in the *Ehcache Cache Server User Guide*. You can use Java or any other programming language with the Cache Server.

JCache Style Caching

Ehcache contains an early draft implementation of JCache contained in the `net.sf.ehcache.jcache` package. For usage details, see the *Integrations* book.

Spring, Cocoon, Acegi and Other Frameworks

Usually, with these, you are using Ehcache without even realizing it. The first steps in getting more control over what is happening are:

1. Discover the cache names used by the framework.
2. Create your own `ehcache.xml` with settings for the caches and place it in the application classpath.

Building Ehcache from Source

This page is intended for users who want to create their own Ehcache or distributed Ehcache build, rather than use the packed kit.

These instructions work for each of the Ehcache "[modules](#)", except for `ehcache-jmsreplication`, which requires installation of a message queue. For details, see "Replicated Caching Using JMS" in the *Ehcache Replication Guide*.

Building an Ehcache Distribution From Source

To build Ehcache from source, perform the following steps.

1. Check the source out from the Subversion repository "<http://svn.terracotta.org/svn/ehcache/>".
2. Ensure that you have a valid JDK and Maven installation.
3. From within the `ehcache/core` directory, type `mvn -Dmaven.test.skip=true install`.

Running Tests for Ehcache

To run the test suite for Ehcache, perform the following steps.

1. Check the source out from the subversion repository.
2. Ensure you have a valid JDK and Maven 2 installation.
3. From within the ehcache/core directory, type `mvn test`.
4. If some performance tests fail, add a `-D net.sf.ehcache.speedAdjustmentFactor=x` system property to your command line, where *x* is how many times your machine is slower than the reference machine. Try setting it to 5 for a start.

Java Requirements

- Current Ehcache releases require Java 1.5 and 1.6 at runtime.
- Ehcache 1.5 requires Java 1.4. Java 1.4 is not supported with Terracotta distributed Ehcache.
- The ehcache-monitor module, which provides management and monitoring, will work with Ehcache 1.2.3 but only for Java 1.5 or higher.

Mandatory Dependencies

- Ehcache core 1.6 through to 1.7.0 has no dependencies.
- Ehcache core 1.7.1 depends on SLF4J ("<http://www.slf4j.org>"), an increasingly commonly used logging framework which provides a choice of concrete logging implementation. For configuration details, see "Logging" in the *Ehcache Operations Guide*.

Other modules have dependencies as specified in their maven POMs.

Maven Snippet

To include Ehcache in your project, use:

```
<dependency>
  <groupId>net.sf.ehcache</groupId>
  <artifactId>ehcache</artifactId>
  <version>2.3.1</version>
  <type>pom</type>
</dependency>
```

Note: Be sure to substitute the version number above with the version number of Ehcache that you want to use.

If using Terracotta Distributed Ehcache, also add:

```
<dependency>
  <groupId>org.terracotta</groupId>
  <artifactId>terracotta-toolkit-1.4-runtime</artifactId>
  <version>4.0.0</version>
</dependency>
<repositories>
```

```
<repository>
  <id>terracotta-repository</id>
  <url>http://www.terracotta.org/download/reflector/releases</url>
  <releases>
    <enabled>true</enabled>
  </releases>
</repository>
</repositories>
```

Be sure to check the dependency versions for compatibility. Versions released in a single kit are guaranteed compatible.
