Notes:

¹ Red Hat Enterprise Linux Server includes the Base Server and Advanced Platform.

² ApplinX and EntireX support additional operating systems. See the product's Release Notes.

³ Zementis also supports Ubuntu 16.04 and Debian 9, as well as other platforms. See the product's documentation.

⁴ Terracotta products support Docker (kernel engine 3.10+) and Kubernetes. See the product's documentation.

⁵ Support for CentOS Linux 8, as a rebuild of RHEL 8, will end at the end of 2021. Due to unavailability of manufacturer support, Software AG discontinues support for CentOS 8 for all product versions effective immediately.

Please refer to "General Info & Disclaimers" on the last page!

Supported Operating System Platforms for Software AG Designer

Software AG supports all listed operating systems on premise, and the following operating systems in any cloud environment: Windows Server 2012, 2016, and 2019, and Red Hat Linux Enterprise Server 7 and 8.

Operating System		Windows Server 2012 Datacenter and Standard Edition		Windows Server 2016 Datacenter and Standard Edition		Windows Server 2019 Datacenter and Standard Edition		Windows 8.x Pro and Enterprise		Windows 10 Pro and Enterprise		Suse Linux Enterprise Server		Red Hat Enterprise Linux		CentOS		macOS

Notes:

¹ Can include layered webMethods Process Engine and webMethods SAP, JDBC, IBM WebSphere MQ, MSMQ, Kafka, and AS/400 adapters

² Integration Server support does not extend to the base image and any fixes or patches issued by the base Docker image provider

³ Supported Alpine version is 3.9.4

⁴ Support for CentOS Linux 8, as a rebuild of RHEL 8, will end at the end of 2021. Due to unavailability of manufacturer support, Software AG discontinues support for CentOS 8 for all product versions effective

⁵ Can include layered webMethods Task Engine

Please refer to "General Info & Disclaimers" on the last page!

Containers and Orchestration

Hyperscalers such as Amazon, Microsoft, and Google have customized Kubernetes as part of their serverless offerings (for example, Amazon EKS, Azure AKS, and Google GKE). Software AG products that are certified for Kubernetes can run on all flavors certified by the Cloud Native Computing Foundation (<https://www.cncf.io/certification/software-conformance>). However, many of those, such as AKS and EKS, offer custom services like databases, specific network storage, secrets managers, and identity providers. To determine whether a Software AG product can run with specific service components, please check the product specific documentation.

This table covers the primary orchestration scenarios. It does not cover all orchestration scenarios.

Product Name	Type	Orchestrators					
	Version	Kubernetes	Open Shift	High availability	Horizontal scaling	Container upgrade strategy for major releases	Container upgrade strategy for fixes

Supported RDBMSs

Release 10.5 Software AG products that support DB2, MySQL Enterprise Edition, Oracle, PostgreSQL, or SQL Server use DataDirect Connect JDBC database driver 6.0.0 to communicate with those RDBMSs. Software AG provides any updates for the driver on Software AG Update Manager and Software AG Command Central. Software AG products that support MySQL Community Edition use the MySQL Community Edition database driver to communicate with the RDBMS. For more information, see [Installing Software AG Products](#).

Notes:

¹ Apama and MashZone NextGen products support additional RDBMSs. See the product's documentation.

² Apama only supports **MySQL 5.7 Community Edition**

³ MashZone NextGen supports JDBC drivers 11.2.0.2.0 and higher.

⁴ Integration Server and Microservice Runtime support also Amazon Relational Database Service (Amazon RDS).

⁵ Trading Networks supports MySQL 5.7.

⁶ AgileApps Cloud supports Community Edition and Enterprise Edition for MySQL 5.6 and 5.7 for on-premise and Amazon RDS for cloud.

⁷ Supports PostgreSQL 9.1 and MongoDB 3.2.9.

Please refer to "General Info & Disclaimers" on the last page!

Software AG Universal Messaging ²	10.7					✓	✓			
webMethods Broker ⁴	10.7					✓	✓			✓
Zementis Server	10.7	✓	✓	✓	✓	✓				

Notes:

¹ Application server support applies to Apama dashboards.

² Refers to the supported application server for the JMS Resource Adapter. The Universal Messaging Resource Adapter is explicitly tested and supported on the platforms specified in the table above. Software AG will take support issues on other platforms, but will try to reproduce issues on one of the supported platforms. If the issue is not reproducible, report this to your application server vendor.

³ Support also extends to JBoss/Wildfly versions 8, 9 and 10.

⁴ webMethods Broker supports application servers based on Java EE standards by way of the Java EE Connector Architecture (JCA) 1.5 and JMS Application Server Facilities (ASF). webMethods Broker includes a resource adapter that works with JCA 1.5, uses the JMS client library, and integrates well with application servers. You can use webMethods Broker with application servers using either the JCA resource adapter or ASF. webMethods Broker is tested to work with Oracle WebLogic, JBoss enterprise editions, and IBM WebSphere application servers. Software AG Support will handle any issues pertaining to resource adapter operation with JCA 1.5 or ASF. For issues specific to the application server configuration or the JCA container of the application server, report those issues to the respective application server vendors.

Please refer to "General Info & Disclaimers" on the last page!

General Information and Disclaimers:

This document will be updated whenever additional support becomes available.

Language packs are available for some products on all supported operating systems except macOS.

webMethods products support their database components on all platforms on which the RDBMS vendor supports the RDBMS. Unless otherwise mentioned all webMethods products come with the client component of the DataDirect Connect JDBC 6.0.0 driver.

The JDKs listed on the "Delivered JDKs" page are part of the 10.5 release delivery.

Unless otherwise mentioned all products only support the application server that is included with the suite. For additional application server support please contact your Software AG representative.

Unless otherwise specified in our documentation, we encourage installing the latest service packs, patch-bundles and fixes for the supported operating systems and products if those are recommended by the respective vendor. Please report defects resulting from 3rd party supplied fixes, patches or service packs to the vendor directly.

Except where otherwise specified by a special arrangement, we support our software operation only on the supported Linux distributions mentioned above. Customers may run Software AG products on Linux distributions like Oracle Linux and other Linux distributions that are stated to be compatible with the Linux distributions supported by Software AG products. If they encounter an issue that might be related to Software AG products, Technical Services may ask the customer to reproduce the issue on the Red Hat or SUSE distributions that are supported before analyzing the issue further.

Software AG tests its software against specific versions of operating systems and supported products (RDBMSs, JDKs, browsers, application servers, directory servers) and not specifically against all possible combinations of patches, fixes and hardware that might comprise that platform. Therefore, Software AG may not use the exact same versions of fixes, patches or service packs for operating systems and supported software products, when troubleshooting a customer issue.
