

# Supported Upgrade Paths for Software AG Products On Premises

Blue indicates upgrade path to another release. Purple indicates data center move to same release.

Old Release	New Release												
	9.5	9.6	9.7	9.8	9.9	9.10	9.12	10.1	10.3	10.5	10.7	10.11	10.15
8.2													
9.0													
9.5													
9.6													
9.7													
9.8													
9.9													
9.10													
9.12													
10.1													
10.3													
10.5													
10.7													
10.11													
10.15													

If a direct upgrade path is not shown above, Software AG does not test or support that path. For example, Software AG does not test or support a direct upgrade path from 9.0 to 10.1 or later. You might still be able to perform such upgrades, but you would do so at your own risk.

If no direct upgrade path is supported, upgrade to the highest interim release possible and then upgrade to the target release. For example, to upgrade from 9.0 to 10.5, upgrade to 9.12 and then to 10.5. For instructions, use the upgrade guide(s) for the interim release(s) and then use the upgrade guide for the target release. Perform every step in every guide; for example, if an interim release's instructions require product initialization, you must initialize the product at that time. Do not skip steps or wait to perform steps during upgrade to the target release.

Paths not shown above: 6.5 requires interim upgrade to 8.2. 7.1 and 8.0 require interim upgrade to 9.5.

There is no direct path from Presto 3.8 (webMethods release 9.7), Presto 3.8 (webMethods release 9.8), or MashZone NextGen 9.9 to MashZone Next Gen 9.12 or higher. Instead you must upgrade to MashZone NextGen 9.10 and then upgrade to the target release.
