

webMethods Adapter 10.2 for Apache Cassandra

Release Notes

Software AG is pleased to introduce webMethods Adapter 10.2 for Apache Cassandra. This adapter helps your organization to seamlessly integrate with Apache Cassandra, a distributed NoSQL database management system using DataStax Java Client APIs. The webMethods Adapter for Apache Cassandra provides a graphical interface to develop services for CRUD and query operations without the need for coding.

Release Highlights

Template-based integrations

webMethods Adapter for Apache Cassandra provides service templates on webMethods Designer for interactions with Apache Cassandra server. This provides graphical development of adapter services and you can easily create services for insert, update, retrieve and delete.

The webMethods Adapter for Apache Cassandra supports the following templates:

Template	Description
CQL Statement	Executes free format CQL on Apache Cassandra.
Insert	An Insert service inserts a new record into the Cassandra table.
Update	A Update service updates the existing record.
Delete	A Delete service deletes the record from the Cassandra table.
Query	A Query service retrieves the record from the Cassandra table.
Query with Prepared Statement	A Query with Prepared Statement service retrieves the record from the Cassandra table using a prepared statement.

Metadata introspection

webMethods Adapter for Apache Cassandra fetches key space's, tables and columns automatically from the server. From webMethods Designer, you can create adapter services without referring to the Apache Cassandra server for any details on the assets.

Security

webMethods Adapter for Cassandra provides SSL support for secured connections.

For additional information, see the webMethods Adapter for Apache Cassandra Installation and User's Guide and webMethods Adapter 10.2 for Apache Cassandra Readme. You can access these documents, as well as all product documentation, from the webMethods area on the [Software AG Documentation website](#).
