

About this Documentation

This documentation provides information on how to develop your own customized controls. The information is divided into the following topics:

	Overview	Gives information about why you need customized controls.
	Control Concept	Gives details about the control concept and how to generate controls.
	Composing New Controls Out of Existing Controls	Shows you how to provide macro controls for existing controls.
	Creating New Controls	Shows you how to build completely new controls that are not part of the control set.
	Special Issues	Gives you additional important information about control creation.
	Control Library	Gives information about a generally available control library in the web.
