ABSFOLDER

The ABSFOLDER control has neither optical or execution relevance. It is used to structure the absolutely positioned controls inside a hierarchy. Without the ABSFOLDER control, the controls would be displayed in one long line, one after the other.

Properties

Basic			
name	A name for the ABSFOLDER can be defined here, without any effect on rendering and behaviour.	Optional	
comment	Comment without any effect on rendering and behaviour. The comment is shown in the layout editor's tree view.	Optional
