

Working with Grids

So far, all pages that were explained referred to singular properties of the adapter class. There was just one control referring to one property (and sometimes more than one).

This part shows you how to deal with grids. Working with grids is as simple as working with singular properties because the grid management adapts seamlessly into the normal processing of the Application Designer environment.

The information provided in this part is organized under the following headings:

- Basics
- TEXTGRID2
- TEXTGRIDSSS2 - TEXTGRID2 with Server-Side Scrolling
- ROWTABLEAREA2 - The Flexible Control Grid
- COLINFOS Control - Show and Hide Single Columns
- FLEXLINE - Flexible Columns in Control Grids
- MGDGRID - Managing the Grid
- GRIDCOLHEADER - Flexible Column Headers
- FLEXGRID - Flexible Grid, Hiding the Grid Complexity for Developers
- Sorting Aspects with Grids
- Background Information on Grids
