

Designing the Left Pane of the Screen

Exercise

Design the left pane of the screen in `instant.jsp/asp`. Look at the body of the screen: you will see that it is a table divided into two rows, the second of which is divided into two cells.

1. Edit the first row to expand across the entire screen (increase the `colSpan` to 3 since we will want the second row to contain 3 cells).
2. Add to the first cell of the second row an attribute that will color its background in gray.
3. Add a second cell to the row. Define its width to be 150px, and have it display the image `GreyCorner.jpg`, which you can find in the `images` folder of the `InstantDemo` Web application.
