

USING WEBSOCKET IN INTEGRATION SERVER - A QUICK START

Installation

- Install Integration Server using Software AG installer.
- Install Software AG Designer using Software AG installer.

Configuration on Integration Server

- Create a WebSocket port in Integration Server either Regular or Secure.
For more information, see *Integration Server Administrator's Guide*.

Configuration on Software AG Designer

- Create WebSocket Server Endpoint. (Optional) If Integration Server is acting as a WebSocket server.
- Create WebSocket Client Endpoint. (Optional) If Integration Server is acting as a WebSocket client.

For more information, see *Service Development Help Guide*.

After creating endpoints, the Software AG Designer creates callback services and saves it to the specified folder.
