1 Release Notes

This document contains an overview of the features of Tamino XML Server 9.7 that have been introduced or modified since the previous release (Tamino XML Server 9.5). If you have an existing Tamino installation, please refer also to the *Migration Guide* for information about migration from your current system to Tamino 9.7. The *readme.txt* file may also contain information that you should be aware of before you use Tamino 9.7.

2 Native 64-bit Support on Windows Systems

The new feature of Tamino 9.7 is Windows native 64-bit support. While previous Tamino Versions on Unix already supported a 64-bit address space, the Tamino server now can benefit from using large memory on Windows systems, too. Large memory is used when a buffer pool larger than 4 GB is specified or dynamically when large XML documents are processed.

3 Miscellaneous Topics

Coexistence of several Tamino versions

Tamino XML Server 9.7 can coexist with all previous versions of Tamino XML Server on one computer. With the Tamino Manager, it is possible to administer Tamino XML Server 9.7 and previous versions of Tamino XML Server simultaneously. There are some restrictions as described in the *Tamino XML Server Installation Guide* (available on **http://documentation.softwareag.com**).

However, if you have an existing Software AG product that uses Tamino as the database engine, coexistence of Tamino XML Server 9.7 and the Tamino database engine of the other product on the same machine is not guaranteed.

Migration

It is not necessary to migrate schemas or data from version 4.4, 8.0, 8.2 or 9.5 to version 9.7; it is merely necessary to set the version of existing databases. Please see the *Migration Guide* for details.

Important: If you wish to migrate to version 9.7 from a version earlier than 4.4, you must migrate to version 4.4 first.

For information about migration to version 4.4 from versions earlier than 4.4, refer to the documentation for Tamino version 4.4 in Software AG's web-based Product Support System, Empower, at **https://empower.softwareag.com/**.

License file issues

It is necessary to provide a Tamino 9.7 license file to install this version of Tamino XML Server properly. The server components do not run with license files from earlier versions of Tamino. The development components, though, can be installed without an additional license file.

Support for Z-Linux

Tamino for Z-Linux is not available via the Software AG Download Center. In case such a kit is required, please contact your Software AG representative.

Tamino Developer Community

As a source of valuable information and help, developers can refer to the Tamino Developer Community web site (**http://communities.softwareag.com/ecosystem/communities/public/developer/webmethods/default.html?product=tamino**). There you can find discussion forums and further services.
