<b>Explanation</b>	The X509ValidatorModule is enabled in the IntegrationServer/config/is_jaas.cnf file. As a result, Integration Server checked the client certificate against the Certificate Revocation List (CRL) and the client certificate was found to be revoked.
<b>Action</b>	Advise the client to resubmit the request using a valid certificate.
<b>ISS.0012.0022E</b>	<b>Access Denied. Authentication resolved to user "{0}". User is not defined in any of the available user stores.</b>
<b>Explanation</b>	Integration Server JAAS authentication modules return the username in the Subject. Integration Server then tries to retrieve the definition of this user either locally in its user store, or in Central Users (if configured), or LDAP (if configured). If Integration Server is not able to find the user anywhere, it rejects the client request with this error.
<b>Action</b>	If this user should be allowed accessing Integration Server resources, make sure this user is defined in any of the user stores accessible to Integration Server.
<b>ISS.0012.0023E</b>	<b>SAML assertion verification failed. The current time {0} violates the "Not Before" setting {1} specified in the SAML assertion.</b>
<b>Explanation</b>	Integration Server received a SAML assertion that arrived before the "Not Before" setting.
<b>Action</b>	Check the clock time of the issuer. If it is significantly different from the clock time on the Integration Server machine, adjust the Clock Skew value on the Security -> SAML screen.

---

<b>ISS.0012.0024</b>	<b>SAML assertion verification failed. The current time {0} violates the "Not On Or After" setting {1} specified in the SAML assertion.</b>
<b>Explanation</b>	Integration Server received a SAML assertion that arrived later than the "Not On Or After" setting.
<b>Action</b>	Check the clock time of the issuer. If it is significantly different from the clock time on the Integration Server machine, adjust the Clock Skew value on the Security -> SAML screen.
<b>ISS.0012.0025E</b>	<b>Rejecting SAML assertion from issuer "{0}" because issuer is not configured on the Security &gt; SAML screen.</b>
<b>Explanation</b>	Integration Server received a SAML assertion from an issuer that has not been configured on the Security -> SAML screen.
<b>Action</b>	Configure the issuer on the Security -> SAML screen.
<b>ISS.0012.0027W</b>	<b>{0}% or more of maximum number of concurrent stateful sessions are in use. {1} sessions are available.</b>
<b>Explanation</b>	Integration Server is approaching the threshold for concurrent stateful sessions.
<b>Action</b>	No immediate action is required. Once the limit is reached, all new requests to create stateful sessions will be rejected. You can increase the limit using the Resources screen in the Integration Server Administrator; however, doing so could increase the server's resource requirement.
<b>ISS.0012.0030E</b>	<b>Rejecting SAML assertion because the subject identified in the SAML assertion is not the one who signed the request.</b>
<b>Explanation</b>	For security reasons, Integration Server cannot accept requests that are not signed by the subject identified in the SAML assertion.
<b>Action</b>	Sign the message using the subject identified in the SAML assertion.
<b>ISS.0013.0001</b>	<b>Binding XML. Service {0} was unable to bind incoming XML data</b>
<b>ISS.0013.0004E</b>	<b>Registering multipart content handler {0} for service {1}.</b>
<b>Explanation</b>	The syntax for the watt.server.content.type.mappings parameter is invalid.
<b>Action</b>	Use the correct syntax for this parameter. See Administering webMethods Integration Server for more information about using watt.server.content.type.mappings.

<b>ISS.0014.0001E</b>	<b>Encountered fatal errors while starting License Manager. Shutting down server.</b>
<b>Explanation</b>	Integration Server encountered a serious internal error while validating the license.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0014.0004</b>	<b>No listening ports were available. Shutting down server.</b>
<b>ISS.0014.0009</b>	<b>Server is unable to determine its own name.</b>
<b>ISS.0014.0012</b>	<b>watt.server.fileEncoding unsupported by JVM. Server may be unable to continue.</b>
<b>ISS.0014.0013</b>	<b>watt.server.netEncoding unsupported by JVM. Text may not process properly.</b>
<b>ISS.0014.0014</b>	<b>watt.server.logEncoding unsupported by JVM. Logging in default encoding.</b>
<b>ISS.0014.0017</b>	<b>Warning: {0} when initializing ACL Manager file {1}</b>
<b>ISS.0014.0021E</b>	<b>Failed to invoke notification callback {0}: {1}</b>
<b>Explanation</b>	Integration Server encountered an error while updating ACLs. Specifically, an error occurred when Integration Server invoked a service that is registered as a notification callback.
<b>Action</b>	Make sure that the service being invoked exists and can be executed.
<b>ISS.0014.0022E</b>	<b>Retrying service {0}. Retry count is {1}</b>
<b>Explanation</b>	Integration Server is retrying a service that was previously unsuccessful.
<b>Action</b>	No action is required.
<b>ISS.0014.0023E</b>	<b>Available Thread Pool Threshold No Longer Exceeded: {0}% available</b>
<b>Explanation</b>	Integration Server is no longer exceeding the specified threshold for thread pool usage.
<b>Action</b>	No action is required.

---

<b>ISS.0014.0024E</b>	<b>Server Initialization Aborted. See log messages.</b>
<b>Explanation</b>	During start up, Integration Server encountered a serious internal error that caused it to shut down immediately.
<b>Action</b>	Make sure that the machine on which Integration Server runs has sufficient disk space. In addition, make sure the operating system user that is trying to start Integration Server has a sufficient space allowance and has read/write permission to the directory on which Integration Server resides.
<b>ISS.0014.0025</b>	<b>Master password for outbound password encryption has expired. Password was last changed on {0}. The current expiration interval is {1} days</b>
<b>ISS.0014.0026</b>	<b>Master password for outbound password encryption expires in {0} days</b>
<b>ISS.0014.0027</b>	<b>Unable to remove outbound password handle {0}</b>
<b>ISS.0014.0028</b>	<b>Cannot initialize OutboundPasswordManager with null Password Manager</b>
<b>ISS.0014.0029S</b>	<b>Master password failed a sanity check</b>
<b>Explanation</b>	During Integration Server initialization, the sanity check of the master password for outbound passwords failed. Integration Server uses the master password to encrypt outbound passwords, which the Integration Server uses to connect to applications or systems such as remote Integration Servers, proxy servers, or databases. The outbound passwords are stored in files on Integration Server and encrypted for security purposes. During initialization, Integration Server performs a sanity check of the master password by attempting to use it to decrypt a special, internal string that it previously encrypted using the master password. If the decrypted internal string matches the clear text version of the string, Integration Server knows the correct master password was provided. This error is issued when the decrypted and clear text versions of the string do not match.
<b>Action</b>	The sanity check of the master password can fail for a number of reasons: <ul style="list-style-type: none"><li>- The outbound password file is corrupted.</li><li>- The master password file is corrupted.</li><li>- You mistyped the master password when you were prompted for it.</li></ul> If you suspect you have mistyped the password, shut down the server and restart it, this time entering the correct password. If this does not correct the problem, refer to the webMethods Integration Server documentation.

<b>ISS.0014.0030S</b>	<b>Master password updated</b>
<b>Explanation</b>	The master password, which Integration Server uses to encrypt outbound passwords, has been successfully updated.
<b>Action</b>	No action is required.
<b>ISS.0014.0035S</b>	<b>OutboundPasswordManager configuration directory cannot be null</b>
<b>Explanation</b>	Integration Server cannot locate the configuration directory it uses for managing outbound passwords.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0014.0039S</b>	<b>OutboundPasswordManager, {0} caught this: type {1}, msg {2}</b>
<b>Explanation</b>	The code that Integration Server uses to manage outbound passwords encountered a problem while trying to perform the indicated operation.
<b>Action</b>	If the exception message text does not suggest a solution, contact Software AG Global Support.
<b>ISS.0014.0047</b>	<b>com.wm.app.b2b.server.DataStore must be initialized before it can be used.</b>
<b>ISS.0014.0048</b>	<b>The ISInternal functional alias is not configured properly on the JDBC Pools page. Assign a valid database pool and restart the Integration Server.</b>
<b>ISS.0014.0051</b>	<b>Cannot acquire the lock.</b>
<b>ISS.0014.0054</b>	<b>Error occurred while initializing server: {0}</b>
<b>ISS.0014.0055</b>	<b>Cannot acquire an exclusive lock. Another session is holding a shared lock on the requested item.</b>
<b>ISS.0014.0056</b>	<b>Cannot acquire an exclusive lock on the requested context. Another session has locked it.</b>

ISS.0014.0057	Integration Server is quiesced and is not accepting new requests at this time.
ISS.0014.0058	Integration Server has reached the license limit for concurrent sessions.
ISS.0014.9101	User does not exist: {0}
ISS.0014.9102	No package name specified
ISS.0014.9104	A listener must be provided
ISS.0014.9105	A listener factory must be provided
ISS.0014.9106	A listener factory with {0} is already registered in the {1} package
ISS.0014.9107	Attempted to register a factory with an invalid identifying key
ISS.0014.9108	Attempted to register a listener with an invalid identifying key
ISS.0014.9109	A listener is already registered with the key {0}. The existing listener must be unregistered first
ISS.0014.9110	Failed to update listener configuration information
ISS.0014.9111	Unregistration failed, could not update the configuration
ISS.0014.9112	Service {0} unable to bind incoming XML data
ISS.0014.9113	No Valid Active Packages

**ISS.0014.9114      Package directory for {0} does not exist**

**ISS.0014.9115      Package {0} does not exist**

**ISS.0014.9116      Unable to locate or start compiler**

**ISS.0014.9117      Unable to save file {0} for {1}**

**ISS.0014.9118U      ServerReferenceManager can't get session to access object cache**

**Explanation**      Integration Server encountered an internal error with the object cache.

**Action**              Contact Software AG Global Support.

**ISS.0014.9119U      Unable to allocate a new thread in the time specified**

**Explanation**      Integration Server has reached the configured limit for the number of new threads it can create. After waiting unsuccessfully for resources to become available, Integration Server issued this ISRuntime exception. This exception usually indicates a transient condition in which resources are temporarily unavailable. If this error occurs during execution of a trigger, and retry is enabled, Integration Server will automatically retry the service. If, after a configured amount of time, the resources are still unavailable, Integration Server throws this exception.

**Action**              If the problem persists, use the Resource Settings page of the Server Administrator to specify thread pool settings that are more appropriate for your environment.

**ISS.0014.9120      Can not set thread pool max to zero or less than min, max={0}, min={1}**

**ISS.0014.9121      Repository config file repository4.cnf not found.**

**ISS.0014.9123E      {0} package not reloaded; missing the following assets: {1}**

**Explanation**      An internal error occurred while using the local service development feature in Software AG Designer. An attempt to reload an updated IS asset (flow service, Java service, document type, etc. ) failed because the specified IS asset does not exist in the IS namespace. At run time, the {0} in the error message is replaced with the package name and the {1} is replaced with the IS assets that do not exist in the namespace.

**Action**              Contact Software AG Global Support.

---

<b>ISS.0014.9124E</b>	<b>{0} package not reloaded. {1} already registered in {2}</b>
<b>Explanation</b>	While using the local service development feature in Software AG Designer, an attempt to reload an updated IS asset (flow service, Java service, document type, etc. ) failed because Integration Server determined that another package contains an asset with the same name. At run time, the {0} in the error message is replaced with the package name, the {1} is replaced with the IS asset name for which a reload was attempted, and the {2} is replaced with the name of the package that contains the already loaded, identically named asset.
<b>Action</b>	Ensure that each IS asset uses a name that is unique across the Integration Server namespace. To rename one of the assets, you might need to disable the package that contains the asset whose name you do not want to change. Change the name of the IS asset in the package that you want to change. Then, re-enable both packages.
<b>ISS.0014.9125E</b>	<b>Primary port change failed. The primary port must be a port associated with the WmRoot package.</b>
<b>Explanation</b>	An attempt to change the primary port failed because the chosen port is associated with a package other than WmRoot.
<b>Action</b>	Select a port associated with the WmRoot package as the primary port. Alternatively, change the chosen port to associate it with the WmRoot package and then designate the port as the primary port.
<b>ISS.0014.9126E</b>	<b>Primary port change failed. The primary port must be an enabled port.</b>
<b>Explanation</b>	An attempt to change the primary port failed because the chosen port is not enabled.
<b>Action</b>	Select an enabled port as the primary port. Alternatively, enable the chosen port and then designate the port as the primary port.
<b>ISS.0014.9127E</b>	<b>Primary port change failed. The primary port must be an HTTP or HTTPS port.</b>
<b>Explanation</b>	An attempt to change the primary port failed because the chosen port is not an HTTP or HTTPS port.
<b>Action</b>	Select an HTTP or HTTPS port to use as the primary port.
<b>ISS.0014.9128E</b>	<b>Primary port change failed. The primary port must be a standard port.</b>
<b>Explanation</b>	An attempt to change the primary port failed because the chosen port was not a standard port. Currently, the only non-standard port type is the diagnostic port.
<b>Action</b>	Select a standard HTTP or HTTPS port to use as the primary port. Do not select a diagnostic port to be the primary port.

<b>ISS.0015.0002E</b>	<b>Error {0} initializing Invoke Manager class {1} from {2}</b>
<b>Explanation</b>	Integration Server failed to initialize InvokeManager from the configuration file located at <IntegrationServer_dir>/config/invokeManager.cnf file at startup.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0015.0003E</b>	<b>Error {0} initializing Invoke Manager with {2}</b>
<b>Explanation</b>	Integration Server failed to initialize InvokeManager from the configuration file located at <IntegrationServer_dir>/config/invokeManager.cnf file at startup.
<b>Action</b>	Using a text editor, open the <IntegrationServer_dir>/config/invokeManager.cnf file and make sure that the content is not corrupt. If the error still occurs, consider removing the invokeManager.cnf file and restarting Integration Server.
<b>ISS.0015.0004E</b>	<b>Service {0} failed ACL access checking for user {1}</b>
<b>Explanation</b>	The client application failed to invoke the service because the current user did not have the Execute ACL privileges to execute the service.
<b>Action</b>	Using the Integration Server Administrator, examine the ACL settings of the service as well as the ACL group to which the current user belongs. Make sure that the user has the proper ACL settings.
<b>ISS.0016.0006EE</b>	<b>Cannot cache {0} service. The cache manager {1} is not initialized.</b>
<b>Explanation</b>	The cache manager SoftwareAG.IS.Services is not initialized.
<b>Action</b>	Check the configuration of the SoftwareAG.IS.Services cache manager.
<b>ISS.0017.0001E</b>	<b>An error was encountered parsing {0}: {1}. See the Integration Server error log for the full stack trace.</b>
<b>Explanation</b>	Either the format of XML in the configuration file is invalid, or a specific setting is not allowed.
<b>Action</b>	Read through the details provided in the error message and edit the configuration file to correct the problem.
<b>ISS.0017.0002I</b>	<b>Cache manager {0} created.</b>
<b>ISS.0017.0003E</b>	<b>{0} is required.</b>
<b>Explanation</b>	A value is required for the indicated parameter.
<b>Action</b>	Supply a value for the parameter.

---

<b>ISS.0017.0004E</b>	<b>There is no cache manager named {0}.</b>
<b>Explanation</b>	There is no cache manager with this name on Integration Server.
<b>Action</b>	Make sure the cache manager name is typed correctly and that it exists on the Integration Server.
<b>ISS.0017.0005E</b>	<b>There is no cache named {0} in the {1} cache manager.</b>
<b>Explanation</b>	Integration Server tried to connect to the indicated cache, but there is no cache with this name associated with the cache manager.
<b>Action</b>	Provide the name of a cache that is managed by the supplied cache manager.
<b>ISS.0017.0006I</b>	<b>Cache {0} created.</b>
<b>ISS.0017.0007E</b>	<b>Cache manager names starting with "SoftwareAG" are reserved.</b>
<b>Explanation</b>	The cache manager could not be created because the name is invalid.
<b>Action</b>	Choose a different name for the cache manager.
<b>ISS.0017.0008I</b>	<b>Successfully deleted cache manager {0}.</b>
<b>ISS.0017.0009I</b>	<b>All elements have been removed from cache {1} of cache manager {0}.</b>
<b>ISS.0017.0010I</b>	<b>Disabled cache {1} of cache manager {0}.</b>
<b>ISS.0017.0011I</b>	<b>Enabled cache {1} of cache manager {0}.</b>
<b>ISS.0017.0012E</b>	<b>Cache manager {0} is not started.</b>
<b>Explanation</b>	The service failed to execute because the specified cache manager is not available.
<b>Action</b>	Open Integration Server Administrator and go to the Settings > Caching page to verify that the cache manager is started and the cache the service wants to use is enabled.
<b>ISS.0017.0013E</b>	<b>Cache {1} for cache manager {0} not enabled.</b>
<b>Explanation</b>	The operation could not be completed because the indicated cache could not be found in the indicated cache manager.
<b>Action</b>	Make sure the cache name is typed correctly and that it is contained in the indicated cache manager.

- ISS.0017.0014E**      **Cache manager {0} already exists.**  
**Explanation**      The cache manager could not be created because a cache manager with the indicated name already exists on the Integration Server. The name you specify must be unique on the Integration Server.  
**Action**              Enter a new name for the cache manager that is unique to the Integration Server.
- ISS.0017.0015E**      **The {0} cache manager attempted to connect to a Terracotta Server Array, but the Integration Server license does not allow it. This cache manager will not be usable.**  
**Explanation**      To use this feature, Integration Server must have a license that allows distributed caching.  
**Action**              Obtain the appropriate license from Software AG Global Support and add it to the Integration Server.
- ISS.0017.0016E**      **If rejoin is enabled, a Terracotta Server Array URL must be supplied.**  
**Explanation**      You selected the Rejoin check box, but did not configure the cache manager to connect to a Terracotta Server Array.  
**Action**              Specify a Terracotta Server Array URL or clear the Rejoin check box.
- ISS.0017.0017E**      **Cannot use the administrative services to change a system cache manager: {0}.**  
**Explanation**      The cache could not be created because a cache with that name already exists in the cache manager. The name you specify must be unique within the cache manager.  
**Action**              See Administering webMethods Integration Server for more information about system cache managers.
- ISS.0017.0018E**      **The {0} cache already exists.**  
**Explanation**      The cache could not be created because a cache with that name already exists in the cache manager. The name you specify must be unique within the cache manager.  
**Action**              Enter a name for the cache that is unique within the cache manager.
- ISS.0017.0019E**      **Cannot delete a system cache manager: {0}.**  
**Explanation**      The cache manager you attempted to delete is a system cache manager and cannot be deleted.  
**Action**              See Administering webMethods Integration Server for more information about system cache managers.

<b>ISS.0017.0020E</b>	<b>Cache manager name cannot contain any of these characters: ? [ ] / = + &lt; &gt; : ; " , *   ^ @</b>
<b>Explanation</b>	The cache manager could not be created because the name you specified contains invalid characters.
<b>Action</b>	Specify a new name using valid characters.
<b>ISS.0017.0021E</b>	<b>Cache manager name cannot start with a ' ' or end with a space.</b>
<b>Explanation</b>	The cache manager could not be created because the name you specified contains invalid characters.
<b>Action</b>	Specify a new name using valid characters.
<b>ISS.0017.0022E</b>	<b>Cache manager name cannot be an operating system device name.</b>
<b>Explanation</b>	The cache manager could not be created because the name you specified is a reserved word as specified by your operating system.
<b>Action</b>	Specify a new name for the cache manager. Refer to your operating system's documentation for a list of reserved words.
<b>ISS.0017.0023E</b>	<b>An error was encountered updating {0}: {1}. See the Integration Server error log for the full stack trace.</b>
<b>Explanation</b>	While attempting to enable or disable clustering for the Integration Server, an error occurred while updating the Terracotta Cache Manager configuration files.
<b>Action</b>	Review the error details provided in the message and in the Integration Server error log. After correcting the issue that caused the error, use Integration Server Administrator to enable or disable clustering for the Integration Server.
<b>ISS.0017.0024E</b>	<b>When a cache is distributed, Overflow to Disk, Overflow to Off-heap and Persist to Disk cannot be selected.</b>
<b>Explanation</b>	The Overflow to Disk, Overflow to Off-heap and Persist to Disk options are not allowed with distributed caches.
<b>Action</b>	If you are creating a distributed cache, remove the values from the Overflow to Disk, Overflow to Off-heap and Persist to Disk fields.
<b>ISS.0017.0026E</b>	<b>Cache manager name is null in {0}. The cache manager will not be used</b>
<b>Explanation</b>	A cache manager configuration file was supplied with a null cache manager name.
<b>Action</b>	Edit the configuration file and provide a name for the cache manager.

- ISS.0017.0027E**      **A cache manager named "{0}" has already been loaded from {1}. The name cannot also be used in {2}. The cache manager in {2} will be ignored.**
- Explanation**      More than one configuration file in the Integration Server\_directory\config\Caching directory contains the specified cache manager. Integration Server cannot load two instances of the same cache manager. The cache manager that is already loaded is being used. The cache manager in the second configuration file will be ignored.
- Action**            Either remove one of the configuration files or change the cache manager name in one of the configuration files.
- 
- ISS.0017.0029I**      **Cache manager {0} successfully started.**
- 
- ISS.0017.0030E**      **Cache manager {0} successfully reloaded.**
- Explanation**      A value is required for the indicated parameter.
- Action**            Supply a value for the parameter.
- 
- ISS.0017.0031I**      **Cache manager {0} is already running.**
- 
- ISS.0017.0032I**      **Cache manager {0} is not running.**
- 
- ISS.0017.0033E**      **Cannot enable a system cache.**
- Explanation**      The cache you attempted to enable is a system cache. System caches are used by internal processes and cannot be modified.
- Action**            See Administering webMethods Integration Server for more information about system caches.
- 
- ISS.0017.0034E**      **Cannot disable a system cache.**
- Explanation**      The cache you attempted to disable is a system cache. System caches are used by internal processes and cannot be modified.
- Action**            See Administering webMethods Integration Server for more information about system caches.
- 
- ISS.0017.0035E**      **Cannot clear the contents of a system cache.**
- Explanation**      The cache you attempted to clear is a system cache. System caches are used by internal processes and cannot be modified.
- Action**            See Administering webMethods Integration Server for more information about system caches.

---

<b>ISS.0017.0036E</b>	<b>Cannot start a system cache manager.</b>
<b>Explanation</b>	The cache manager you attempted to start is a system cache manager. System cache managers are used by internal processes and cannot be modified.
<b>Action</b>	See Administering webMethods Integration Server for more information about system cache managers.
<b>ISS.0017.0037E</b>	<b>Cannot shutdown a system cache manager.</b>
<b>Explanation</b>	The cache manager you attempted to shutdown is a system cache manager. System cache managers are used by internal processes and cannot be modified.
<b>Action</b>	See Administering webMethods Integration Server for more information about system cache managers.
<b>ISS.0017.0038E</b>	<b>Cannot reload a system cache manager.</b>
<b>Explanation</b>	The cache manager you attempted to reload is a system cache manager. System cache managers are used by internal processes and cannot be modified.
<b>Action</b>	See Administering webMethods Integration Server for more information about system caches.
<b>ISS.0017.0039E</b>	<b>Attempted to create cache manager {0} that connects to a Terracotta Server Array, but the Integration Server license does not allow it. Cannot save cache manager configuration.</b>
<b>Explanation</b>	To use this feature, Integration Server must have a license that allows distributed caching.
<b>Action</b>	Obtain the appropriate license from Software AG Global Support and add it to Integration Server.
<b>ISS.0017.0040I</b>	<b>Successfully evicted expired elements from the cache {0} contained in cache manager {1}.</b>
<b>ISS.0017.0041I</b>	<b>Cleared all caches starting with name {0} contained within the cache manager {1}.</b>
<b>ISS.0017.0042I</b>	<b>Cleared all caches contained within the cache manager {0}.</b>

<b>ISS.0017.0043E</b>	<b>Error occurred while clearing caches starting with name {0} contained within the cache manager {1}. Details:{2}</b>
<b>Explanation</b>	The service cannot remove the element from the cache for the reason indicated in the message.
<b>Action</b>	Take the appropriate action based on the details shown in the message.
<b>ISS.0017.0044E</b>	<b>Error occurred while clearing caches contained within the cache manager {0}. Details:{1}</b>
<b>Explanation</b>	The service did not clear the caches in the specified cache manager because of the specified error.
<b>Action</b>	Take the appropriate action based on the details shown in the message.
<b>ISS.0017.0045I</b>	<b>Added cache {0}.</b>
<b>ISS.0017.0046I</b>	<b>Updated cache {0}.</b>
<b>ISS.0017.0047I</b>	<b>Deleted cache {0}.</b>
<b>ISS.0017.0048E</b>	<b>{0} is not a distributed cache. Integration Server cannot synchronize with the Terracotta Server Array.</b>
<b>Explanation</b>	You can only synchronize distributed caches with a Terracotta Server Arrays.
<b>Action</b>	Set the Distributed option on all the caches you want to synchronize with the Terracotta Server Array.
<b>ISS.0017.0049E</b>	<b>The {0} cache manager is not running. Start the cache manager to synchronize the cache with the Terracotta Server Array.</b>
<b>Explanation</b>	You cannot synchronize caches against the Terracotta Server Array when the cache manager is not running.
<b>Action</b>	Start the cache manager and then synchronize the cache with the Terracotta Server Array.
<b>ISS.0017.0050I</b>	<b>The configuration for the {0} cache has been synchronized with the Terracotta Server Array.</b>

<b>ISS.0017.0051I</b>	<b>Integration Server cannot evict expired elements for caches contained in a system cache manager.</b>
<b>ISS.0017.0052I</b>	<b>Integration Server cannot reload the {0} cache manager because it is not running.</b>
<b>ISS.0017.0053E</b>	<b>The {0} cache in {1} has a different local configuration than the configuration on the Terracotta Server Array. Integration Server is using the configuration from the Terracotta Server Array.</b>
<b>Explanation</b>	The configuration of the local cache should match that of the associated Terracotta Server Array. If the local cache configuration does not match the configuration of the Terracotta Server Array, Integration Server ignores the local cache configuration and uses the configuration of the Terracotta Server Array.
<b>Action</b>	Configure the local cache to match the configuration of the Terracotta Server Array.
<b>ISS.0017.0054I</b>	<b>Use Integration Server Administrator to synchronize mismatched cache configurations with the Terracotta Server Array.</b>
<b>ISS.0017.0055E</b>	<b>Integration Server has registered a cache manager, but the configuration file is not in the config/Caching directory. Integration Server cannot manage this configuration.</b>
<b>Explanation</b>	Integration Server saved the configuration for a cache manager, but the configuration file is not in the IntegrationServer/config/Caching directory. If the configuration is valid, you can still use the cache manager, but you cannot use Integration Server Administrator to stop or start the cache manager or edit its configuration.
<b>Action</b>	Copy the configuration file to the IntegrationServer/config/Caching directory and restart Integration Server.
<b>ISS.0017.0056E</b>	<b>The {0} cache manager is shut down but there is no configuration file associated with it. Integration Server cannot restart this cache manager.</b>
<b>Explanation</b>	The cache manager configuration file is not in the IntegrationServer/config/Caching directory.
<b>Action</b>	Restore the missing configuration file to the IntegrationServer/config/Caching directory.
<b>ISS.0017.0057E</b>	<b>The {0} cache manager is shut down but its corresponding configuration file ({1}) no longer exists. Integration Server cannot restart this cache manager.</b>
<b>Explanation</b>	The cache manager configuration file is not in the IntegrationServer/config/Caching directory.
<b>Action</b>	Restore the missing configuration file to the IntegrationServer/config/Caching directory.

- ISS.0017.0058E**      **Integration Server cannot remove the Terracotta Server Array URLs for this cache manager because one or more of its caches are distributed. Clear the Distributed option on all the caches.**
- Explanation**      Integration Server cannot remove Terracotta Server Array URLs if any of the caches contained in the cache manager are distributed.
- Action**             Shut down the cache manager and then change the Terracotta Server Array URLs.
- 
- ISS.0017.0059E**      **Integration Server cannot modify the Terracotta Server Array URLs for a cache manager while it is running. Shut down the cache manager, then change the Terracotta Server Array URLs.**
- Explanation**      Integration Server cannot modify the Terracotta Server Array URLs for a cache manager while it is running.
- Action**             Shut down the cache manager and then change the Terracotta Server Array URLs.
- 
- ISS.0017.0060I**      **Updated cache manager {0}.**
- 
- ISS.0017.0061I**      **Added cache manager {0}.**
- 
- ISS.0017.0062E**      **Integration Server encountered an error while parsing {0}: {1}.**
- Explanation**      The cache manager configuration file contains invalid syntax.
- Action**             Manually edit the cache manager configuration file so that it is syntactically correct.
- 
- ISS.0017.0063I**      **The current Terracotta license is not valid for the BigMemory settings configured for the {0} cache manager. To use the cache manager, either remove the BigMemory settings from the configuration file or obtain a valid Terracotta license for BigMemory.**
- 
- ISS.0017.0064E**      **Deployment of cache manager {0} failed because of invalid license. Check the Integration Server log for details.**
- Explanation**      Integration Server could not deploy the cache manager because the license for Integration Server or Terracotta is invalid.
- Action**             Acquire the correct license file for Terracotta, Integration Server, or both and then redeploy the cache manager.

---

ISS.0017.0065I	Reading cache manager configuration from file {0}.
ISS.0017.0066I	{0} is a system cache manager.
ISS.0017.0067I	Read cache manager {0} from file {1}.
ISS.0017.0068I	Integration Server is running in safe mode. Cache manager {0} not initialized.
ISS.0017.0069I	Initializing cache manager {0}.
ISS.0017.0070I	Cache manager {0} initialized.
ISS.0017.0072I	Shutting down cache manager {0}.
ISS.0017.0073I	Cache manager {0} is shut down.
ISS.0017.0074I	Shutting down cache managers.
ISS.0017.0075I	Finished shutting down cache managers.
ISS.0017.0076E	<b>The value specified in the "Maximum Elements in Memory" field must be an integer no larger than 2147483647.</b>
<b>Explanation</b>	An invalid value was specified in the Maximum Elements in Memory field.
<b>Action</b>	Change the value to an integer no larger than 2147483647.
ISS.0017.0077E	<b>Field cannot be changed while the cache manager is running: {0}</b>
<b>Explanation</b>	The specified field cannot be modified while the cache manager is running.
<b>Action</b>	Shut down the cache manager, and then update the field. To shut down the cache manager, open Integration Server Administrator and go to the Settings > Caching page, then click the "Shutdown" link for the cache's cache manager.

**ISS.0019.7005E**      **Unable to retrieve client\_secret for {0} from the secure password store. See the error log for a full stack trace.**

**Explanation**      Integration Server cannot retrieve the client secret for the specified OpenID Provider.

**Action**              Re-enter the client\_secret value in the OpenID Provider's configuration file and click the Reload OpenID Providers link on the Security > OpenID page. If none of the passwords work, the password store might be corrupt. Contact Software AG Global Support.

**ISS.0019.7007E**      **ID Token's issuer claim {0} is invalid. It does not match the application's OpenID Provider issuer ID.**

**Explanation**      Integration Server expected the iss field in the token to match the issuer value in the OpenID Provider's configuration file; however, the iss and issuer values do not match.

**Action**              Check that the issuer value in the OpenID Provider's configuration file is correct. If it is not, edit the OpenID Provider configuration file to include the correct issuer value. Then, click the Reload OpenID Providers link on the Security > OpenID page.

**ISS.0019.7008E**      **ID Token's audience claim {0} does not match the application's OpenID Provider client ID.**

**Explanation**      Integration Server expected the aud field in the token to match the client\_id value in the OpenID Provider's configuration file.

**Action**              Check that the client\_id value in the OpenID Provider's configuration file is correct. If it is not, edit the OpenID Provider configuration file to include the correct client\_id value. Then, click the Reload OpenID Providers link on the Security > OpenID page.

**ISS.0019.7009E**      **ID Token's audience claim has multiple values "{0}" but the required authorized party claim is not present.**

**Explanation**      The audience for an ID Token must contain the OAuth 2.0 client\_id of the Relying Party as an audience value but the required client\_id is missing.

**Action**              No action required.

**ISS.0019.7010E**      **ID Token's authorized party claim {0} does not match the OpenID Provider client ID {1}.**

**Explanation**      The authorized party claim in the ID Token either does not contain or does not match the OAuth 2.0 client\_id for the Authorized Party. The ID token must contain the authorized party claim when the ID Token has a single audience value and the audience is not the Authorized Party.

**Action**              No action required.

<b>ISS.0019.7011E</b>	<b>ID Token has expired. Expiration claim value is {0}, current time is {1}.</b>
<b>Explanation</b>	The ID Token issued by the OpenID Provider has expired and cannot be used for authentication.
<b>Action</b>	Set the prompt value in the OpenID Provider's configuration file to "login", which instructs the OpenID Provider to require the end user to log in using their credentials. Then, click the Reload OpenID Provider link on the Security > OpenID page. Have the user reissue the original request.
<b>ISS.0019.7012E</b>	<b>ID Token has expired. Issued at time value is {0}, current time is {1}, provider's max_age limit is {2}.</b>
<b>Explanation</b>	The age of the ID Token issued by the OpenID Provider exceeds the max_age value in the OpenID Provider's configuration file. The token cannot be used for authentication.
<b>Action</b>	Increase the max_age value in the OpenID Provider's configuration file and click the Reload OpenID Provider link on the Security > OpenID page. Have the user reissue the original request.
<b>ISS.0019.7013E</b>	<b>ID Token's asserted claim value(s) "{0}" do not match any of the provider's asserted claim values "{1}".</b>
<b>Explanation</b>	The claim values in the token do not match any of the claim values for the OpenID Provider.
<b>Action</b>	No action required.
<b>ISS.0019.7015E</b>	<b>ID Token requires re-authentication, Maximum Authentication Age {0} has expired. Authentication time was {1}, current time is {2}</b>
<b>Explanation</b>	The user must be re-authenticated because the time elapsed since the token authentication time exceed the Maximum Authentication Age.
<b>Action</b>	Re-authenticate the token. Set the prompt value in the OpenID Provider's configuration file to "login" and click the Reload OpenID Provider link on the Security > OpenID page. Have the user reissue the request.
<b>ISS.0019.7016E</b>	<b>{0} is null.</b>
<b>Explanation</b>	The OpenID Provider's token endpoint or userinfo endpoint did not return a token.
<b>Action</b>	Check the error log for an exception related to the request. Set watt.server.oauth.custom.responseHeader to true and the server logging facility "0040 HTTP Response" to TRACE. Recreate the problem and check the server log for a response header of X-OAuth-Error. If no error is reported, contact the OpenID Provider.

- ISS.0024.0001**      **Could not initialize User Manager.**
- ISS.0024.0002**      **Error occurred while initializing User Manager: Class {0} was not found in CLASSPATH.**
- ISS.0024.0003**      **Error occurred while initializing User Manager: {0}**
- ISS.0024.0004**      **Could not access User Manager**
- ISS.0024.0005E**      **Could not read users.cnf (the file may be corrupt)**  
**Explanation**      Integration Server could not read user and group configuration information from the users.cnf file. The file might be corrupt.  
**Action**            Examine this file in the Integration Server /config directory. Ensure that the server has read access to it. If the file is corrupted, you might need to set up the users and/or groups again through the Integration Server Administrator.
- ISS.0024.0006E**      **Could not write users.cnf (the file may be corrupt)**  
**Explanation**      Integration Server could not write user and group configuration information to the users.cnf file. The file might be corrupt.  
**Action**            Examine this file in the Integration Server /config directory. Ensure that the server has write access to it. If the file is corrupted, you might need to set up the users and/or groups again through the Integration Server Administrator.
- ISS.0024.0007**      **The JDBC Pool {0} associated with Central Users JDBC function is not defined so the Central User Manager is not enabled**
- ISS.0024.0010**      **Central User Manager initialization failed with error : {0}**
- ISS.0024.0011**      **Not able to load the {0} Role/Group.**
- ISS.0024.0013**      **Integration Server cannot add group to ACL because the required parameter "{0}" is not supplied.**

<b>ISS.0024.0014</b>	<b>Integration Server cannot add group "{0}" to ACL "{1}" because ACL "{1}" is not defined.</b>
<b>ISS.0024.0015</b>	<b>Integration Server cannot add group "{0}" to ACL "{1}" because group "{0}" is not found.</b>
<b>ISS.0024.0018</b>	<b>Integration Server failed to add group "{0}" to ACL "{1}" because of exception: {2}.</b>
<b>ISS.0025.0009E</b>	<b>Integration Server could not initialize the cache manager. Stopping Integration Server initialization. Use the server log and error log to diagnose and correct the problem.</b>
<b>Explanation</b>	This error occurs when Integration Server is configured to be in a cluster and cannot connect to the Terracotta Server Array (TSA). This could happen because the TSA URL in your cluster configuration is incorrect, the TSA is offline, or because there is a network problem.
<b>Action</b>	(1) Verify that the Terracotta Server Array is available and accepting connections. (2) If it is, start the server in safe mode by including the "-safeboot" argument in the command line. On the Settings > Clustering page of Integration Server Administrator, check that the Terracotta Server Array URL value is correct. (3) Make sure the network configuration of the host is correct and there are no problems with your network.
<b>ISS.0025.0034U</b>	<b>Dispatcher could not be shutdown: {0}</b>
<b>Explanation</b>	Integration Server encountered a serious internal error while shutting down.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0025.0035</b>	<b>Dispatcher could not be started: {0}</b>
<b>ISS.0025.0040I</b>	<b>FIPS mode initialized</b>
<b>Explanation</b>	Integration Server is operating under Federal Information Processing Standards.
<b>Action</b>	No action is required.
<b>ISS.0025.0041I</b>	<b>FIPS mode not initialized</b>
<b>Explanation</b>	Integration Server is not operating under Federal Information Processing Standards.
<b>Action</b>	No action is required.

- ISS.0025.0042S**      **FIPS mode could not be initialized. Shutting down server: {0}**  
**Explanation**      An error was encountered during initialization of FIPS mode operation.  
**Action**              Contact Software AG Global Support. Be prepared to provide configuration information related to security provider and FIPS mode.
- ISS.0025.0043S**      **Integration Server started in Safe Mode**  
**Explanation**      Integration Server is operating in safe mode either because it was started using the safeboot switch or because there were problems with the master password. When running in safe mode, Integration Server is not connected to any external resources, except the server's own external repository, and you cannot update any passwords. If it is a master password problem, there will be other messages logged that indicate that there was a master password problem.  
**Action**              If you intended to start the Integration Server in safe mode, then no action is required. If the Integration Server automatically started in safe mode due to a master password problem, see the webMethods Integration Server Administrator documentation.
- ISS.0025.0046**      **Monitoring API could not be initialized. JmsUrl = {0}. Value must be supplied for JmsUrl.**
- ISS.0025.0047**      **Monitoring API could not be initialized because of following exception. Check JMS Provider. {0}**
- ISS.0025.0048**      **Monitoring API could not be initialized. Check JMS Provider.**
- ISS.0025.0050**      **The JCE Unlimited Strength Jurisdiction Policy File was not found. Please install it.**
- ISS.0025.0053**      **Error encountered while disabling Monitoring API.**
- ISS.0025.0054**      **Fabric Agent initialization failed.**
- ISS.0025.0056**      **FIPS could not be initialized because the JCE Unlimited Strength Jurisdiction Policy File was not found. Shutting down Integration Server.**

---

<b>ISS.0025.0058</b>	<b>Error reading system level information: {0}</b>
<b>ISS.0025.0059W</b>	<b>Error initializing cluster node name: {0}</b>
<b>Explanation</b>	The specified cluster node name is an empty node name.
<b>Action</b>	Specify a non-empty cluster node name.
<b>ISS.0025.0060W</b>	<b>Falling back on the fully qualified domain name as the cluster node name, cluster node name is :{0}</b>
<b>Explanation</b>	Integration Server is using the default cluster node name for the machine because the cluster node name is empty or not provided.
<b>Action</b>	No action is required.
<b>ISS.0025.0061E</b>	<b>The logical name for the cluster node is not correct: {0}</b>
<b>Explanation</b>	The name for the cluster node is not valid. The logical host name you specify must be unique within the cluster and cannot contain a semicolon (;).
<b>Action</b>	Specify a unique logical name to identify the Integration Server instance in the cluster.
<b>ISS.0025.0062CC</b>	<b>Web services stack could not be initialized. Shutting down server: {0}</b>
<b>Explanation</b>	Integration Server encountered an error while initializing the Web services stack. Typical reasons are:  1) Loading of axis2.xml file located in Integration Server_directory/config/wss or Integration Server_directory/config/wssClient/conf folders failed because the file has been modified.  2) Integration Server failed to initialize the policy manager for the Web service.
<b>Action</b>	If you have modified the axis2.xml file located in Integration Server_directory/config/wss or Integration Server_directory/config/wssClient/conf folders, make sure that the changes made are correct. For all other reasons, refer to the details listed in the error message and respond accordingly.
<b>ISS.0025.0063E</b>	<b>EDA Manager initialization failed: {0}</b>
<b>Explanation</b>	The EDA Manager did not initialize during Integration Server start up.
<b>Action</b>	Review the exception returned with the error message to determine why the EDA Manager did not initialize.

<b>ISS.0025.0064E</b>	<b>EDA Manager initialized.</b>
<b>Explanation</b>	The EDA Manager initialized successfully.
<b>Action</b>	No action required.
<b>ISS.0025.0065W</b>	<b>Encountered an error while disabling listeners. Proceeding with server shutdown.</b>
<b>Explanation</b>	An error occurred while shutting down Integration Server. If the logging level for logging facility 0025, Initialization, is set to Debug or higher, the server log will include a stack trace with more details about the error.
<b>Action</b>	No action is required. Integration Server will shut down as requested.
<b>ISS.0025.0066W</b>	<b>Encountered an error while suspending triggers. Proceeding with server shutdown.</b>
<b>Explanation</b>	An error occurred while shutting down Integration Server. If the logging level for logging facility "0025 Initialization" is set to Debug or higher, the server log will include a stack trace with more details about the error.
<b>Action</b>	No action is required. Integration Server will shut down as requested.
<b>ISS.0025.0070C</b>	<b>Integration Server detected files in config/work directory which suggests unapplied configuration changes.</b>
<b>Explanation</b>	When saving changes to configuration files, Integration Server first saves the configuration changes in a temporary file in the IntegrationServer_directory/instances/instanceName/config/work directory. After saving the changes in a temporary file, Integration Server moves the temporary file to the actual configuration file. This ensures that if unexpected behavior occurs before the configuration changes are initially saved to the temporary file, only the temporary file is impacted. The actual configuration file is not corrupted. If Integration Server detects files in in the IntegrationServer_directory/instances/instanceName/config/work, it suggests that changes to a configuration file were not saved to the temporary file and that, therefore, the changes were not made to the actual configuration file.
<b>Action</b>	Use the contents of the IntegrationServer_directory/instances/instanceName/config/work directory to determine which configuration files were in the process of being changed. Decide whether or not you want to redo the changes to the configuration files. Delete the files under the directory and redo the configuration change if you so choose.
<b>ISS.0026.0002E</b>	<b>Failure while loading service {0}: {1}</b>
<b>Explanation</b>	Integration Server failed to install, enable, or reload the package because it could not load a service in the package into its namespace.
<b>Action</b>	Examine the error message to determine the problem service. Usually this error occurs when a Java service was not compiled before loading the package.

---

ISS.0026.0005	<b>Flow service could not be registered with the server: folder.servicename may already exist.</b>
ISS.0026.0006	<b>Warning missing type name while loading service {0}</b>
ISS.0026.0007	<b>Warning missing type name in operation {0} while loading service {1}</b>
ISS.0026.0008E	<b>Error: Exception serializing Flow Service {0}</b>
<b>Explanation</b>	Integration Server encountered an internal error with a flow service.
<b>Action</b>	Contact Software AG Global Support.
ISS.0026.0009E	<b>Error: unknown flow operation type for node:{0} in file:{1}</b>
<b>Explanation</b>	Integration Server encountered an internal error with a flow service.
<b>Action</b>	Contact Software AG Global Support.
ISS.0026.0010	<b>Warning: {0} Operation with no body in service {1}</b>
ISS.0026.0011	<b>Warning: {0} Operation missing service name in {1}</b>
ISS.0026.0012W	<b>Warning: Flow Branch Operation must have switch name or use conditional labels in {0}</b>
ISS.0026.0013	<b>Warning: Flow Branch Operation cannot have switch name and use conditional labels in {0}</b>
ISS.0026.0014	<b>Warning: {0} Operation missing target path in {1}</b>
ISS.0026.0015	<b>Warning: {0} Operation missing source path name in {1}</b>
ISS.0026.0016	<b>Warning: Flow Map Delete Operation missing field name in {0}</b>

<b>ISS.0026.0017</b>	<b>The HTTP URL alias could not be registered by the service {0}. "{1}" is already registered as an alias for the path: {2}</b>
<b>ISS.0026.9101E</b>	<b>Missing flow.xml</b>
<b>Explanation</b>	The flow.xml file does not exist. When a flow service is created, Integration Server creates a flow.xml file and a node.ndf file in the IntegrationServer\packages\packageName\ns\folderName directory that corresponds to the package and folder in which the flow service was created.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0026.9102E</b>	<b>Read only {0}</b>
<b>Explanation</b>	The flow.xml file cannot be updated because it is read-only.
<b>Action</b>	Navigate to the directory of the flow.xml file and make it a writable file.
<b>ISS.0026.9103E</b>	<b>Unable to write to flow.xml</b>
<b>Explanation</b>	An exception occurred while writing to the flow.xml file.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0026.9104E</b>	<b>Missing class {0}</b>
<b>Explanation</b>	The specified Java class cannot be found. This error is returned by the JVM.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0026.9105E</b>	<b>Method {0} is not defined with the proper signature</b>
<b>Explanation</b>	The signature of the Java service does not have a return type of void.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0026.9106E</b>	<b>No method {0} in class {1}</b>
<b>Explanation</b>	The service is to be supported by a specific method in a class. However, the loaded class does not contain the specified method.
<b>Action</b>	Make sure the class contains the method that you want to use to support the service.

---

<b>ISS.0026.9107E</b>	<b>Method {0} is unexpectedly null</b>
<b>Explanation</b>	Method defined to support the invoked service is null.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0026.9108E</b>	<b>Unable to create service; Service name missing</b>
<b>Explanation</b>	The service cannot be created because the service name is missing. Integration Server can only create and register services that have a name.
<b>Action</b>	Make sure to specify a name for the service.
<b>ISS.0026.9109E</b>	<b>Already registered in {0}</b>
<b>Explanation</b>	An identically named element already exists in another package. The fully qualified element name must be unique across Integration Server. Fully qualified element names use the format: folder.subfolder.subfolder:elementName
<b>Action</b>	Provide a different name for the element.
<b>ISS.0026.9110E</b>	<b>{0} : Name already used by another service type in {1} package</b>
<b>Explanation</b>	Integration Server cannot save or register the service because a service with that name already exists in the package.
<b>Action</b>	Specify a different name for the service.
<b>ISS.0026.9111E</b>	<b>Unable to register service; Package {0} is not enabled</b>
<b>Explanation</b>	An attempt was made to register a service in a disabled package. A service can be registered in an enabled package only.
<b>Action</b>	Enable the package and then attempt to register the service.
<b>ISS.0026.9201E</b>	<b>Unknown service: {0}</b>
<b>ISS.0027.0001W</b>	<b>nCipher Hardware accelerator not available</b>
<b>Explanation</b>	An error occurred while accessing the nCipher hardware.
<b>Action</b>	Turn the "0027 Server Configuration" logging facility up to TRACE on the Settings > Logging > Server Logger page of the Integration Server Administrator and try again. See the details of the error in the server log.

- ISS.0028.0002 Packages directory missing or corrupted
- ISS.0028.0003 Unable to copy the original package manifest file: {0}
- ISS.0028.0006 Unable to load {0} package (possibly due to circular dependencies)
- ISS.0028.0007 This package requires {0} package (Version {1}) to load
- ISS.0028.0008 Warning! Loading package from backup manifest file
- ISS.0028.0009 Unable to read manifest file for {0} package
- ISS.0028.0010 Unknown service type ({0}) in {1} package
- ISS.0028.0011 Unable to write package manifest file: {0}
- ISS.0028.0013 Startup service exited with the following error: {0}
- ISS.0028.0014 Startup service {1} was not found in {0} package
- ISS.0028.0016 Shutdown service exited with the following error: {0}
- ISS.0028.0017 Shutdown service {1} was not found in {0} package
- ISS.0028.0018 Server could not update the node definition file. Changes to the package were not saved.
- ISS.0028.0020 Unable to read node definition file

---

ISS.0028.0021	Server could not update the node subdirectory. Changes to the package were not saved.
ISS.0028.0022	Unable to locate class: {0}
ISS.0028.0023	Could not delete service
ISS.0028.0024	Invalid Package License key for Package: {0}
ISS.0028.0025	Unable to save Package Key for Package: {0}
ISS.0028.0026E	<b>Invalid or corrupt namespace plug-in configuration found in {0} package</b>
<b>Explanation</b>	Integration Server could not read plug-in configuration information from the nsplugins.cnf file associated with the indicated package.
<b>Action</b>	Contact Software AG Global Support.
ISS.0028.0027	Namespace plug-in type name {0} in package {1} conflicts with existing type
ISS.0028.0028	Cannot create namespace factory class {0} in package {1}: {2}
ISS.0028.0029	Namespace factory class invalid type {0} in package {1}
ISS.0028.0030	Error: Will not load deprecated service type ({0}) in service {1} in package {2}
ISS.0028.0035	Package {0} has failed to load.
ISS.0028.0036	Document type {0} has failed to load. Duplicate Broker document type name {1} is also referenced by {2}

- ISS.0028.0038**      **Error loading {0} : Name already used by another item in package {1}**
- ISS.0028.0039E**      **Failure while loading document type {0}: {1}**  
**Explanation**      Integration Server failed to load the document type into the namespace because another document type with the same name was already being loaded into the Integration Server namespace.  
**Action**              Examine the error message to determine the problem document types. Check both document types to make sure they have different names. If they have the same name and both need to be loaded into the namespace, rename one and try again.
- ISS.0028.0040E**      **Failure while loading schema {0}: {1}**  
**Explanation**      Integration Server failed to load the schema into the namespace because another schema with the same name was already being loaded into the Integration Server namespace.  
**Action**              Examine the error message to determine the problem schemas. Check both schemas to make sure they have different names. If both need to be loaded into the namespace, rename one and try again.
- ISS.0028.0041E**      **Failure while loading element {0}: {1}**  
**Explanation**      Integration Server failed to load the element into the namespace because another element with the same name was already being loaded into the Integration Server namespace.  
**Action**              Examine the error message to determine the problem elements. Check both elements to make sure they have different names. If both need to be loaded into the namespace, rename one and try again.
- ISS.0028.0043**      **Error unregistering node {0}: {1}**
- ISS.0028.0044W**      **Invalid classpath entry: {0}**  
**Explanation**      An I/O error occurred when Integration Server tried to access the file system to resolve the canonical name of the directory in which the file exists.  
**Action**              Check the file system for errors, such as problems with permissions and cyclical links.
- ISS.0028.0045E**      **Failed to install package {0}. Another package exists with the name {1}**  
**Explanation**      Integration Server was unable to install a package because a package with the same name already exists on the Integration Server.  
**Action**              Rename one of the packages, either the existing package or the one you are trying to install. Note that case does not matter; Integration Server considers "ABC" the same name as "abc".

---

<b>ISS.0028.0046E</b>	<b>Unable to load package replication passwords from {0}</b>
<b>Explanation</b>	Integration Server encountered an error while loading the indicated class.
<b>Action</b>	Check the audit log for messages about the underlying cause of the exception.
<b>ISS.0028.0047E</b>	<b>Unable to save package replication passwords to {0}</b>
<b>Explanation</b>	Integration Server encountered an error while loading the indicated resource.
<b>Action</b>	Check the Audit log for messages about the underlying cause of the exception.
<b>ISS.0028.0048</b>	<b>Failed to read class {0} from input stream</b>
<b>ISS.0028.0049</b>	<b>Unable to locate resource {0}</b>
<b>ISS.0028.0051E</b>	<b>Task Scheduler startup service exited with the following error: {0}</b>
<b>Explanation</b>	Integration Server encountered an error while executing the scheduler startup service task.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0028.0052E</b>	<b>Task Scheduler startup service {1} was not found in {0} package</b>
<b>Explanation</b>	The package startup process could not locate the service named in the message.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0028.0055</b>	<b>Caching of package classes is disabled due to the following error for file [{0}]: {1}</b>
<b>ISS.0028.0056</b>	<b>The post-initialization startup service {0} threw an exception: {1}. See the error log for the full stack trace.</b>
<b>ISS.0028.0057</b>	<b>Failure while registering HTTP URL alias "{0}" for the package {1}. Already registered as an alias for the path: {2}</b>
<b>ISS.0028.0058</b>	<b>Failure while registering HTTP URL alias "{0}" for the package {1}. Already registered by package {2} as an alias for the path: {3}</b>

- ISS.0028.0059**      **Failure while registering HTTP URL alias "{0}". Already registered as an alias for the path: {1}**
- ISS.0028.0060**      **Failure while registering HTTP URL alias "{0}". Already registered by package {1} as an alias for the path: {2}**
- ISS.0028.0061E**      **Unable to load system package {0} due to dependency on non-system packages.**  
**Explanation**      Integration Server cannot load the specified system package because it depends on a non-system package. System packages are pre-defined packages that are part of the Integration Server product (for example, WmPublic). A system package can have dependencies on other system package(s) only.  
**Action**              Using Designer, edit the package dependencies for the specified system package to remove the dependency on the non-system package.
- ISS.0028.9999W** **Error message – Unable to load the REST resource with URL template {0}, HTTP method(s) {1}, and service {2} because the URL template contains either illegal or unsupported characters.**  
**Explanation**      The information you have specified for configuring the REST resource contains either illegal or unsupported characters.  
**Action**              Update the REST resource configuration to not include illegal or unsupported characters.
- ISS.0033.0001**      **Inactive server {0} was removed from cluster {1}**
- ISS.0033.0100**      **If any multicast setting is supplied (Discovery Address, Discovery Port, Time To Live), they must all be supplied.**
- ISS.0033.0103E**      **Could not open the session cache. {0}**  
**Explanation**      Integration Server encountered an internal error.  
**Action**              Contact Software AG Global Support.
- ISS.0033.0104E**      **Could not add server to the cluster. {0}**  
**Explanation**      Integration Server failed to add a server to the cluster.  
**Action**              Make sure that the server repository is running and that the connection to other servers is valid.

---

ISS.0033.0108	<b>Could not remove server from cluster. {0}</b>
ISS.0033.0114E	<b>Failed to add server statistics to the cluster cache. {0}.</b>
<b>Explanation</b>	Integration Server encountered an internal error.
<b>Action</b>	Contact Software AG Global Support.
ISS.0033.0124E	<b>Local Address</b>
<b>Explanation</b>	Integration Server failed to remove expired sessions from the Repository. This is an internal error.
<b>Action</b>	Contact Software AG Global Support.
ISS.0033.0128	<b>Unable to save settings to the server's configuration file.</b>
ISS.0033.0143	<b>Please restart the server to make the new settings take effect.</b>
ISS.0033.0144	<b>Changes not saved: {0} is required.</b>
ISS.0033.0146	<b>Evaluating host {0} to receive Session Document.</b>
ISS.0033.0147	<b>Register Session Document handler with host {0}.</b>
ISS.0033.0148	<b>Received unknown special document. Body = &lt;&lt;{0}&gt;&gt;.</b>
ISS.0033.0149	<b>Changes not saved. Invalid value. {0} must be an integer.</b>
ISS.0033.0150	<b>Changes not saved. Invalid Well Known Address. If either host or port is supplied, both must be supplied. host={0}, port={1}.</b>
ISS.0033.0151U	<b>Communication with Terracotta Server Array has been lost.</b>
<b>Explanation</b>	During server startup, Integration Server detected a problem with its configuration that will prevent it from being part of a cluster.
<b>Action</b>	Check the Clustering and Repository settings for your Integration Server. Refer to the webMethods Integration Server documentation for more information about clustering. If you cannot determine the cause of the problem, contact Software AG Global Support.

<b>ISS.0033.0153E</b>	<b>Could not obtain a handle to ConnectionManager.</b>
<b>Explanation</b>	Integration Server encountered an internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0033.0154E</b>	<b>Could not save session {0} to the session cache. {1}.</b>
<b>Explanation</b>	Integration Server failed to persist the indicated session to the Repository. This is an internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0033.0155E</b>	<b>Could not create local session {0} from the cached session values. {1}.</b>
<b>Explanation</b>	An Integration Server in a cluster tried to update a session object, but was unable to find it. This in an internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0033.0156E</b>	<b>Cluster Invoke did not complete successfully. Cluster Synchronization feature is not configured.</b>
<b>Explanation</b>	After a trigger configuration update, Integration Server attempted to apply the change to other Integration Servers in the cluster, but was unable to. The most likely reason is that the Cluster Synchronization feature has not been properly configured.
<b>Action</b>	Review the cluster synchronization for rigger management text in the webMethods Integration Server documentation for instructions on configuring your cluster to propagate trigger changes to other Integration Servers in the cluster.
<b>ISS.0033.0159</b>	<b>The TSA URL must be specified on the Settings &gt; Clustering page in order to join a cluster. Clustering has been disabled. This server is running in stand-alone mode.</b>
<b>ISS.0033.0161</b>	<b>CLUSTERING DISABLED: Could not create or join distributed clustering cache "{0}". This server is NOT a member of a cluster.</b>
<b>ISS.0033.0162</b>	<b>The Cluster Name can contain only the following characters: alphanumeric, dashes, underscores, and colons.</b>
<b>ISS.0033.0163</b>	<b>Cache configuration is invalid. Settings were not saved: {0}</b>

<b>ISS.0033.0164</b>	<b>The ISInternal functional alias on the JDBC Pools page must be configured to use an external database in order to enable clustering.</b>
<b>ISS.0033.0167</b>	<b>The ISInternal functional alias on the JDBC Pools page must be configured to use an external database in order to join a cluster. Clustering has been disabled. This server is running in stand-alone mode.</b>
<b>ISS.0033.0169</b>	<b>Logical cluster node name, {0}, is not valid.</b>
<b>Explanation</b>	A cluster node name is either empty or null. Integration Server detects invalid cluster node names at server initialization or when someone attempts to pin a scheduled task to cluster node with an invalid name.
<b>Action</b>	Provide a non-empty cluster node name for the cluster node.
<b>ISS.0033.0181I</b>	<b>Cluster name cannot contain any of these characters: ? [ ] / = + &lt; &gt; ; " , *   ^ @</b>
<b>ISS.0033.0182I</b>	<b>Cluster name cannot start with a '.' or end with a space.</b>
<b>ISS.0033.0183I</b>	<b>Cluster name cannot be an operating system device name.</b>
<b>ISS.0033.0184I</b>	<b>Cluster name cannot be null or empty.</b>
<b>ISS.0033.0186W</b>	<b>Statistics polling time set to 60 seconds because clustering is configured.</b>
<b>Explanation</b>	Integration Server uses a value of 60 for the statistics polling time because the <code>watt.server.stats.pollTime</code> server configuration parameter is set to a value less than or equal to 0 (zero) or greater than 60. When clustering is configured, <code>watt.server.stats.pollTime</code> must be greater than 0 and less than or equal to 60.
<b>Action</b>	Set <code>watt.server.stats.pollTime</code> to value greater than 0 (zero) but less than or equal to 60.
<b>ISS.0035.0002</b>	<b>Initial log rotation interval could not be set: {0} ms in not valid</b>
<b>ISS.0035.0004</b>	<b>Returned {0} lines while requested for {1} number of lines for error logs.</b>

<b>ISS.0036.0002E</b>	<b>Errors occurred invoking URL {0}</b>
<b>Explanation</b>	A client application using the Java API did one of the following:  1) Tried to invoke the indicated folder or service name, but specified the wrong folder/service name.  2) Specified invalid certificates when setting up the SSL connection to the Integration Server.
<b>Action</b>	Examine the error stack trace to determine which exception was thrown. If it is a MalformedURLException, check the folder/service name provided in the API call and make sure that you specified the fully qualified service name. If it is a CertificateException, an IOException, or an InvalidKeyException, check the certificates provided and make sure that they are valid.
<b>ISS.0036.0004</b>	<b>Error occurred while pinging server: {0}</b>
<b>ISS.0036.0005</b>	<b>Error occurred while disconnecting from server: {0}</b>
<b>ISS.0036.0009E</b>	<b>Ping Failed to server: {0}</b>
<b>Explanation</b>	A client application performed a periodic ping of a remote Integration Server. The ping resulted in an exception.
<b>Action</b>	Verify that the remote Integration Server is up and running. In addition, verify that there is network connectivity between the two servers.
<b>ISS.0051.0002E</b>	<b>Error: {0}</b>
<b>Explanation</b>	Integration Server failed to add a port, remove a port, or edit an existing port because it could not save ports properties to <IntegrationServer_dir>/config/port.cnf.
<b>Action</b>	Examine the port.cnf file to make sure that it is not corrupt and not Read-Only. If the file is corrupt, you may need to remove the file and restart Integration Server. After you do this, you can re-add ports to the Integration Server.
<b>ISS.0051.0003</b>	<b>Port {0} already registered</b>
<b>ISS.0051.0005</b>	<b>Unable to unregister port {0}</b>

---

ISS.0051.0008	<b>Listener {0} was denied access to service {1}</b>
ISS.0053.0002	<b>Access denied for user {0} on port {1} from {2}.</b>
ISS.0053.0003	<b>Dispatch caught exception in run loop: {0}</b>
ISS.0053.0005	<b>Dispatch caught exception while trying to send response: {0}</b>
ISS.0053.0006S	<b>(tid={0}) Enterprise Gateway Server encountered the error "{1}" while handling a request from client "{2}" at request URL "{3}".</b>
<b>Explanation</b>	Enterprise Gateway Server experienced an internal error while handling the request.
<b>Action</b>	If the issue persists, contact the system administrator.
ISS.0053.0008I	<b>(tid={0}) Attempting to forward the request to the Internal Server again because the original attempt failed with exception "{1}". The retry count is {2} and the request URL is "{3}".</b>
<b>Explanation</b>	Enterprise Gateway Server failed to transmit the client request to the Internal Server due to the indicated network exception. The server will automatically try to send the request again. If the retry attempts fail, the server will log a message and fail the client request.
<b>Action</b>	The action you take depends on the exception issued. Look at the exception message for specific information.
ISS.0053.0009W	<b>(tid={0}) Enterprise Gateway Server encountered an I/O error while writing the Internal Server's response back to the client at "{1}". The request URL is "{2}".</b>
<b>Explanation</b>	An input/output error occurred between Enterprise Gateway Server and the Internal Server.
<b>Action</b>	If the issue persists, contact the system administrator.
ISS.0053.0010E	<b>(tid={0}) Enterprise Gateway Server encountered error "{1}" while handling the request. The server is unable to retry the request at this time. The retry count is {2}.</b>
<b>Explanation</b>	Enterprise Gateway Server experienced an internal error while handling the request.
<b>Action</b>	If the issue persists, contact the system administrator.

**ISS.0053.0011W** (tid={0}) Enterprise Gateway Server is stopping attempts to retry the request because the content length "{1}" of the retry request does not match the content length "{2}" of the original request. The retry count is {3}.

**Explanation** Enterprise Gateway Server could not complete the request for the reason indicated.

**Action** If the issue persists, contact the system administrator.

**ISS.0053.0012S** Access is denied for user "{0}" on port {1} from client "{2}" through Enterprise Gateway "{3}".

**Explanation** Incorrect credentials were specified while connecting to the Internal Server through the Enterprise Gateway.

**Action** Supply valid credentials.

**ISS.0053.0013** (tid={0}) API Gateway encountered an I/O error while responding to a request from the client at "{1}". The request URL is "{2}".

**Explanation** API Gateway cannot respond to the specified client request because of an I/O error.

**Action** Retry the request. If the issue persists, contact your system administrator.

**ISS.0053.0014** (tid={0}) API Gateway encountered the error "{1}" while handling a request from the client. The server is unable to retry the request at this time. The retry count is {2}.

**Explanation** The server is unable to retry the request after the retry count exceeded the predefined threshold.

**Action** Contact your system administrator.

**ISS.0053.0016** (tid={0}) API Gateway encountered an error while handling a request from client "{1}" at the request URL "{2}".

**Explanation** API Gateway encountered an error while handling the specified client request.

**Action** Retry the request. If the issue persists, contact your system administrator.

**ISS.0053.0017** Access denied for user "{0}" on port {1} from client "{2}" through API Gateway "{3}".

**Explanation** The current user cannot access API Gateway on the specified port because of not having the proper ACLs.

**Action** Check the ACLs for the current user. Ensure that the user has the correct ACLs to access API Gateway on the specified port.

---

<b>ISS.0054.0002E</b>	<b>CSRF attack detected. CSRF token is not present in the request URL: {0}</b>
<b>Explanation</b>	CSRF secure token is missing in the request URL, possibly due to a CSRF attack.
<b>Action</b>	If the request is valid, provide a valid CSRF secure token for the request.
<b>ISS.0055.0001E</b>	<b>Critical Java Service error</b>
<b>Explanation</b>	Integration Server encountered a serious internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0055.0002</b>	<b>Service setup {0} uses old-style signature</b>
<b>ISS.0055.0003</b>	<b>Initialization of Java Service {0} failed due to error: {1}</b>
<b>ISS.0056.0001</b>	<b>No SMTP server set. Cannot deliver mail</b>
<b>ISS.0056.0002</b>	<b>No recipient specified. Cannot deliver mail</b>
<b>ISS.0056.0003</b>	<b>Unable to send mail. *{0}</b> *
<b>ISS.0056.0004</b>	<b>Invalid SMTP port specified {0}. SMTP logging turned off</b>
<b>ISS.0059.0001U</b>	<b>Interrupted {0}</b>
<b>Explanation</b>	Integration Server encountered an internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0070.0003W</b>	<b>Error encountered creating {0} listener on port {1}: {2}</b>
<b>Explanation</b>	An error was encountered while creating a listener.
<b>Action</b>	See the exception message for details about the error. Use the exception message to correct the error.
<b>ISS.0070.0004E</b>	<b>Failed to load configuration information</b>
<b>Explanation</b>	An error occurred while creating a listener from the settings in a package's listeners.cnf file.
<b>Action</b>	Go to the Settings > Logging > Server Log page in the Integration Server Administrator and increase the logging level for the "0070 Listeners" logging facility to TRACE. Reload the package that has the affected port or restart Integration Server. If the problem recurs, capture the exception written to the server log and send it to Software

AG Global Support. If you cannot connect to Integration Server because all ports are affected, contact Software AG Global Support and provide them with the listener.cnf file from the WmRoot package.

- ISS.0070.0006E**      **Failed to save configuration information**  
**Explanation**      An error occurred while saving listener settings.  
**Action**              Increase the logging level for the "0070 Listeners" logging facility to TRACE and try to save the listener settings again. If the problem recurs, capture the exception written to the server log and send it to Software AG Global Support.
- ISS.0070.0008W**      **Failed to bootstrap listener {0}**  
**Explanation**      The listener could not be started from the settings in the listeners.cnf file in a package's config directory. This file may have been manually edited or corrupted.  
**Action**              If you have a backup of the listeners.cnf file, restore it and reload the package or restart Integration Server.
- ISS.0070.0013W**      **Failed to start listener {0}. The following error was encountered: {1}**  
**Explanation**      Could not start the listener.  
**Action**              See error details in the message.
- ISS.0070.0025I**      **Access to {0} from host {1} was denied.**  
**Explanation**      The host with the specified IP address is unable to invoke services through the specified port. Possible reason for this could be the following:- The host with the specified IP address is in the deny list of the port. - In case of an Enterprise Gateway, the host is in the Enterprise Gateway deny list.  
**Action**              The following lists the actions you can take:- If the host with the specified IP address is in the deny list of the port, delete the host from the Deny List table in the Security > Ports > IP Access > <port> page in the Integration Server Administrator.- If the host with the specified IP address is in the Enterprise Gateway deny list, delete the IP address of the host from the Denied IP Address List table in the Security > Enterprise Gateway Rules > Denial of Service Options page in the Integration Server Administrator.
- ISS.0070.0027E**      **An I/O or Socket exception has occurred on {0}**  
**Explanation**      An error occurred while listening on a port.  
**Action**              See the exception message for details about the error.

---

<b>ISS.0070.0030W</b>	<b>Duplicate alias {2} encountered creating {0} listener on port {1}</b>
<b>Explanation</b>	When loading a package, Integration Server encountered a port alias that is the same as an existing port alias on Integration Server. The alias for a port must be unique across the Integration Server. Integration Server loads and enables the package but will not create the port with the duplicate alias.
<b>Action</b>	If you do not want the port created, you do not need to do anything. However, if you want the port to be created when the package is loaded, delete the existing port with that alias, create a new port that has the same properties as the just deleted port, and then reload the package containing the duplicate alias. Integration Server creates the port when the package is reloaded.
<b>ISS.0070.9001E</b>	<b>Invalid global service {0}</b>
<b>Explanation</b>	Invalid global service name provided for message processing. An e-mail listener was started. When the Integration Server tried to determine which service to use for message processing for this listener, the Integration Server detected a problem with the name of the service specified as the Global Service. The Global Service overrides the setting for the Default Service or the service specified in the e-mail message from the e-mail client. The problem could be that the service name is specified in the wrong case (service names are case sensitive) or that the specified service does not exist in the Integration Server's namespace.
<b>Action</b>	Examine the Global Service name provided. Make sure the name is in the correct case and that the service exists in the Integration Server's namespace.
<b>ISS.0070.9002E</b>	<b>Invalid default service {0}</b>
<b>Explanation</b>	An e-mail listener was started. When the Integration Server tried to determine which service to use for message processing for this listener, the Integration Server detected a problem with the name of the service specified as the Default Service. The Integration Server executes the Default Service if no service is specified in the e-mail message and no service is specified for the Global Service in the Email Client Configuration screen on the Integration Server Administrator. The problem could be that the service name is specified in the wrong case (service names are case-sensitive) or that the specified service does not exist in the Integration Server's namespace.
<b>Action</b>	Examine the Default Service name provided. Make sure the name is in the correct case and that the service exists in the Integration Server's namespace.
<b>ISS.0070.9003</b>	<b>Enable failed: Could not log into account {0}@{1}</b>

ISS.0070.9005	<b>Must provide Server Host</b>
ISS.0070.9006	<b>Must provide Server Type</b>
ISS.0070.9007	<b>Must provide User Name</b>
ISS.0070.9009	<b>Error starting to listen: {0}</b>
ISS.0070.9010	<b>A number must be provided for the port</b>
ISS.0070.9011E	<b>An invalid port number was provided</b>
<b>Explanation</b>	An administrator entered an invalid port number on a port configuration screen in the Integration Server Administrator.
<b>Action</b>	Specify a positive integer from 1 through 65534 for the port number.
ISS.0070.9012	<b>A port number must be provided</b>
ISS.0070.9013	<b>Private key not specified</b>
ISS.0070.9014	<b>Private key file does not exist</b>

ISS.0070.9024	Invalid value for thread priority, {0}
ISS.0070.9025	Invalid min/max threads min={0} is greater than max={1}
ISS.0070.9026	Invalid thread priority {0}, minimum priority={1} and maximum priority={2}
ISS.0070.9027	Invalid port backlog queue value={0}
ISS.0070.9028	Invalid keep alive timeout value={0}
ISS.0070.9029	Invalid Enterprise Gateway internal port number {0}
ISS.0070.9030	Invalid port number {0}
ISS.0070.9031	Invalid maximum number of connections value {0}
ISS.0070.9039	Access denied to host: Hostname verification failed. The CN "{0}" in the subject DN of the certificate does not match the hostname "{1}".

- ISS.0070.9040**      **Aborting connection, Server Certificate purpose verification failed**
- ISS.0070.9041**      **Key alias is empty. Specify a key alias for the port or a global SSL key alias on the Security > Certificates > Edit page.**
- Explanation**      The port cannot be enabled because a key alias was not specified and there is not a default SSL key alias for the Integration Server.
- Action**            Before enabling the port, either define a key alias or specify a default SSL key alias for the Integration Server. The default SSL key alias is the keys alias specified during configuration of the SSL authentication credentials for the Integration Server. To use a defined key alias with the HTTPS port, specify that keystore alias in the create or update operation. To use the Integration Server's default SSL key alias with the HTTPS port, do not supply key alias information for the create or update operations.
- ISS.0070.9042**      **Keystore alias is empty. Specify a keystore alias for the port or a global SSL keystore alias on the Security > Certificates > Edit page.**
- Explanation**      The port cannot be enabled because a keystore alias was not specified and there is not a default SSL keystore alias for the Integration Server.
- Action**            Before enabling the port, either define a keystore alias or specify a default SSL keystore alias for the Integration Server. The default SSL keystore alias is the keystore alias specified during configuration of the SSL authentication credentials for the Integration Server. To use a defined keystore alias with a port, specify that keystore alias when creating or updating the port. To use the Integration Server's default SSL keystore alias with the port, do not supply keystore alias information when creating or updating the port.
- ISS.0070.9043**      **Invalid keypair specified. Public and private keypair moduli don't match**
- ISS.0070.9044E**      **Unsupported key type: {0}. The HTTPS/FTPS listener supports RSA keys only. Specify a key store that contains the appropriate RSA private key.**
- Explanation**      HTTPS or FTPS listener is configured with a keystore having DSA or EC key types. The HTTPS/ FTPS listener currently supports only RSA keys.
- Action**            Configure the HTTPS or FTPS listener to use a keystore that contains the RSA key.
- ISS.0070.9046E**      **Invalid character/s found in host name, {0}, in IP Access Deny list.**
- Explanation**      The specified host in the deny list contains one or more invalid characters.
- Action**            Correct the host name to remove the invalid characters. The host names or IP addresses can include upper and lower case alphabetic characters, digits (0-9), hyphens (-), and periods (.) and cannot include spaces. For IPv6, IP addresses can also include colons (:) and brackets ([])

---

<b>ISS.0070.9048E</b>	<b>Integration Server cannot find the file {0} specified for the server configuration parameter {1}.</b>
<b>Explanation</b>	The specified server configuration parameter uses a file to identify the allowed cipher suites; however, Integration Server cannot find the file.
<b>Action</b>	Make sure the server configuration parameter specifies the correct location of an existing file.
<b>ISS.0076.9021E</b>	<b>Error invoking the protocol buffer compiler. Error: {0}</b>
<b>Explanation</b>	An error has occurred while trying to compile a message descriptor for a publishable document type. At run time, the error text from the compiler replaces the {0} placeholder in the message. This error could occur under several circumstances including: when an IS document type is made publishable for the first time, when a publishable document type is edited and then saved, or when the publishable document type is synchronized with the Universal Messaging server.
<b>Action</b>	Use the error message to identify and correct the error. Then, repeat the action that led to the error. For example, if the error occurred when saving changes to a publishable document type, retry saving the publishable document type.
<b>ISS.0076.9022E</b>	<b>Protocol buffer coder cannot find descriptor in document type: {0}</b>
<b>Explanation</b>	An error occurred while encoding or decoding an instance of the specified publishable document type. Integration Server cannot find the message descriptor for the publishable document type. Integration Server creates a message descriptor for a publishable document type with an encoding type set to protocol buffers.
<b>Action</b>	Make sure the publishable document type is synchronized with the messaging provider.
<b>ISS.0081.9183E</b>	<b>All binders must contain the same operations</b>
<b>Explanation</b>	The binders in the Web service descriptor do not contain the same operations. In a service first provider Web service descriptor with multiple binders, the binders must contain the same operations.
<b>Action</b>	Modify the binders to contain the same operations.
<b>ISS.0081.9184W</b>	<b>The web service descriptor does not contain any operations</b>
<b>Explanation</b>	A provider Web service descriptor cannot be saved if it does not contain any operations.
<b>Action</b>	Add operations to the provider Web service descriptor.

<b>ISS.0081.9185E</b>	<b>Cannot resolve operation {0} in binding {1}; operation does not have a unique SOAPAction or a unique first element name.</b>
<b>Explanation</b>	The provider Web service descriptor could not be created because the operation in the specified binding does not have a unique SOAPAction value or the first part element in the operation's input message is not unique. If neither of these values are unique, Integration Server cannot match an incoming web service request with an operation.
<b>Action</b>	Modify the WSDL document so that operations within a binding have unique SOAPAction values or make sure operations with duplicate SOAPAction values have an input message in which the first part element is unique.
<b>ISS.0081.9186W</b>	<b>Web service name will change from: {0} to: {1}</b>
<b>Explanation</b>	<p>Changing the value of the Pre-8.2 compatibility mode property for a provider Web service descriptor results in a change to the value of the name attribute in the wsdl:service element in the associated WSDL document. Web service descriptors that run in pre-8.2 compatibility mode use the local name of the Web service descriptor as the service name. Web service descriptors that do not run in pre-8.2 compatibility mode use the fully qualified name of the Web service descriptor as the service name.</p> <p>For example, suppose that a Web service descriptor has the fully qualified name folder.myFolder:myWebService. If the Web service descriptor runs in pre-8.2 compatibility mode, in the WSDL document, the value of the name attribute in the wsdl:service element is "myWebService". If the Web service descriptor does not run in pre-8.2 compatibility mode, in the WSDL document, the value of the name attribute in the wsdl:service element is "folder.myFolder:myWebService".</p>
<b>Action</b>	Existing consumer Web service descriptors and Web service connectors created from an earlier version of the WSDL document are not affected by the service name change and will execute as expected. However, web service clients created on other platforms might be affected. If a web service client is affected by the name change, regenerate the client using the updated WSDL document.
<b>ISS.0081.9191W</b>	<b>The fault has a message part "{0}" defined by the type "{1}". Message parts in a fault must be defined by the element attribute instead of the type attribute.</b>
<b>Explanation</b>	The WSDL for the Web service descriptor contains a fault message part defined by the type attribute. To be deployed to the Web services stack in version 8.2 or later of Integration Server, the fault message part must be defined using the element attribute.
<b>Action</b>	To enable the WSDL for the Web service descriptor to be deployed to the Web services stack, modify the fault message part in the source WSDL used to create the Web service descriptor.

---

<b>ISS.0081.9192W</b>	<b>WS Security Handler has no effect when the Pre-8.2 compatibility mode property is false. To enforce WS Security attach WS Policies.</b>
<b>Explanation</b>	When a Web service descriptor is not running in pre-8.2 compatibility mode (i.e., the Pre-8.2 compatibility mode property is set to false), Integration Server does not execute the WS Security Handler. As a result, the WS Security Handler has no effect and WS Security will not be enforced.
<b>Action</b>	If you want to enforce WS Security, create the appropriate WS Policies and attach the WS Policies to the Web service descriptor.
<b>ISS.0081.9193W</b>	<b>WS Policies has no effect when the Pre-8.2 compatibility mode property is true.</b>
<b>Explanation</b>	When a Web service descriptor is running in pre-8.2 compatibility mode (i.e., the Pre-8.2 compatibility mode property is set to true), Integration Server does not enforce WS Policies attached to the Web service descriptor.
<b>Action</b>	If you want to enforce WS Policies (including those with WS-Security assertions), set the Pre-8.2 compatibility mode property to false. As an alternative, if you want to keep the Pre-8.2 compatibility mode property is set to true and still enforce WS Security policies, you can use the Integration Server WS Security facility. In this case, remove all WS Policies that you have attached to the Web service descriptor and attach the WS Security Handler. For more information about the WS Security Handler, see the Designer online help.
<b>ISS.0081.9205E</b>	<b>JMS Binders are not supported when Pre-8.2 compatibility mode is true.</b>
<b>Explanation</b>	One of the following situations occurred: the Pre-8.2 compatibility mode property was changed from false to true for a Web service descriptor that contains a binder with a Transport property set to JMS, a binder that specifies the JMS transport was added to a Web service descriptor that runs in compatibility mode (the Pre-8.2 compatibility mode property is set to true), or the Transport property for an existing binder was changed to JMS for a Web service descriptor that runs in compatibility mode. A Web service descriptor for which the Pre-8.2 compatibility mode property is set to true does not support binders with a JMS transport.
<b>Action</b>	If you want to keep the JMS binder, change the Pre 8.2 compatibility mode property from true to false. If you want to keep the Web Service descriptor in Pre 8.2 compatibility mode, delete any binders using the JMS transport or change the binder Transport property to a supported transport (HTTP or HTTPS). Then, save the modified Web service descriptor.
<b>ISS.0084.0001E</b>	<b>Invalid credentials</b>
<b>Explanation</b>	Integration Server validates any credentials (username/password or certificates) that are supplied by the client, and if those credentials fail to match any user known to Integration Server, Integration Server will return this exception back to the client.
<b>Action</b>	Supply the correct credentials.

<b>ISS.0084.9009W</b>	<b>Warning: CSRF secure token is not present in the request. If you still want to complete this request, click Continue.</b>
<b>Explanation</b>	CSRF token is missing in the request URL, possibly due to a CSRF attack.
<b>Action</b>	If the request is valid, click Continue to complete the request.
<b>ISS.0084.9010E</b>	<b>CSRF secure token is not present in the request.</b>
<b>Explanation</b>	CSRF token is missing in the request URL, possibly due to a CSRF attack.
<b>Action</b>	If the request is valid, provide a valid CSRF token for the request.
<b>ISS.0084.9101E</b>	<b>Access Denied</b>
<b>ISS.0085.9208E</b>	<b>Service first provider Web service descriptors cannot be refreshed.</b>
<b>Explanation</b>	An attempt was made to refresh a service first provider Web service descriptor. Only WSDL first provider Web service descriptors and consumer Web service descriptors can be refreshed.
<b>Action</b>	None.
<b>ISS.0085.9209E</b>	<b>Cannot refresh Web service descriptor. The Web service descriptor cannot be found in the Integration Server namespace.</b>
<b>Explanation</b>	A Web service descriptor cannot be refreshed because it does not exist in the Integration Server namespace.
<b>Action</b>	None.
<b>ISS.0085.9211E</b>	<b>Cannot roll back Web service descriptor to previously saved version.</b>
<b>Explanation</b>	An attempt to refresh a Web service descriptor failed. However, Integration Server could not roll back to the most recently saved version of the Web service descriptor and its associated assets. This can happen if Integration Server becomes unresponsive when rolling back the Web service descriptor.
<b>Action</b>	Delete the Web service descriptor and recreate it using the updated WSDL document. Note that any changes made to the Web service descriptor, such as new headers or faults, will be lost. Alternatively, if the Web service descriptor was checked into a version control system, check out the last checked in version of the Web service descriptor and then refresh the Web service descriptor

---

<b>ISS.0085.9212E</b>	<b>Cannot Save the refreshed Web service descriptor. Integration Server will rollback to the most recently saved versions of the Web service descriptor and its associated assets.</b>
<b>Explanation</b>	The WSDL file used to refresh the Web service descriptor contains or references an invalid schema.
<b>Action</b>	Use the information in the server log to determine why the schema is invalid. Correct the WSDL file or the associated XML Schema definition. Then, refresh the Web service descriptor.
<b>ISS.0085.9213E</b>	<b>Cannot refresh Web service descriptor. One or more operations cannot be merged. Integration Server will roll back to the most recently saved versions of the Web service descriptor and its associated assets.</b>
<b>Explanation</b>	As part of refreshing a Web service descriptor, Integration Server merges in changes made to existing services used as operations. One of the following can prevent Integration Server from merging the changes in successfully: - The contents or properties of an existing service could not be merged into the refreshed version of the service. - The ACL information could not be set for the refreshed service. - An existing service could not be locked. Integration Server will roll back to the most recently saved versions of the Web service descriptor and its associated assets.
<b>Action</b>	Contact Software AG Global Support. Obtain a copy of the server log before contacting support.
<b>ISS.0085.9214W</b>	<b>The {0} docTypes folder contained one or more user-defined document types used for headers. These document types were deleted when the Web service descriptor was refreshed.</b>
<b>Explanation</b>	The specified docTypes folder contains a document type used for a header in the Web service descriptor. This document type will be deleted upon refresh. When refreshing a Web service descriptor, Integration Server deletes the WSDName_docTypes folder and all elements contained in that folder and its subfolders. Integration Server will not recreate any assets manually added to the folder or its subfolders.
<b>Action</b>	Do not add any assets to any of the folders created automatically by Integration Server for a Web service descriptor including the WSDName_doctypes folder. If you added any assets to the folders, move the assets to another folder before refreshing the Web service descriptor.
<b>ISS.0085.9215W</b>	<b>The {0} docTypes folder contained one or more user-defined document types used for faults. These document types were deleted when the Web service descriptor was refreshed.</b>
<b>Explanation</b>	The specified docTypes folder contained a document type used for a fault in the Web service descriptor. This document type will be deleted upon refresh. When refreshing a Web service descriptor, Integration Server deletes the WSDName_docTypes folder and all elements contained in that folder and its subfolders. Integration Server will not recreate any assets manually added to the folder or its subfolders.

**Action** Do not add any assets to any of the folders created automatically by Integration Server for a Web service descriptor including the WSDName\_doctypes folder. If you added any assets to the folders, move the assets to another folder before refreshing the Web service descriptor.

**ISS.0085.9262** **No registered handler found for Header QName:{0}**

**Explanation** The WSDL you are using to create the Web service connector has a header defined, but a matching header handler is not registered in Integration Server.

**Action** Add a header handler with a QNAME matching the Document Universal Name to Integration Server, then create the Web service connector. If you do not have the appropriate header handler, you can continue the process and Developer will create the Web service connector without the header information.

**ISS.0085.9283** **Unknown ExtensibleElement "{0}" found in SOAPBinding "{1}"**

**Explanation** The WSDL used to create the Web service descriptor contains a binding element with a child other than SOAP 1.1 or SOAP 1.2. Integration Server does not support extensions to SOAP, such as sdk:binding (Microsoft SOAP-Toolkit extensions). Integration Server will process the valid portions of the SOAP 1.1 or SOAP 1.2 binding, but will skip processing of the unsupported extension.

**Action** Verify that the WSDL contains a valid SOAP 1.1 or SOAP 1.2 binding, and is usable without the extension.

**ISS.0085.9315E** **Binding {0} contains duplicate operation names {1}**

**Explanation** Web service descriptor cannot be generated. A binding in the WSDL document contains more than one operation with the same name.

**Action** Modify the WSDL document so that operation names are unique within a binding.

**ISS.0085.9317E** **Error occurred during export of the package {0}. Details : {1}**

**Explanation** Integration Server could not export the package because an error occurred during export.

**Action** Read through the details provided in the error message and take corrective steps.

**ISS.0085.9318E** **Invalid parameters passed. Make sure each required parameter is passed as an input to the service.**

**Explanation** Integration Server cannot export the assets because the required input parameters are not specified.

**Action** Specify all the required parameters.

---

<b>ISS.0085.9319E</b>	<b>Archive name passed "{0}" is invalid</b>
<b>Explanation</b>	The name of the archive contains illegal characters.
<b>Action</b>	Remove all illegal characters from the archive name.
<b>ISS.0085.9320E</b>	<b>Invalid service found; service {0} does not define any ports</b>
<b>Explanation</b>	The WSDL document contains a wsdl:service element that does not define any ports. A Web service descriptor cannot be created.
<b>Action</b>	Modify the WSDL document to include ports in the wsdl:service element.
<b>ISS.0085.9321E</b>	<b>Invalid port found; port {0} does not specify a binding</b>
<b>Explanation</b>	The WSDL document contains a wsdl:port element that does not specify a binding. A Web service descriptor cannot be created.
<b>Action</b>	Modify the WSDL document to include a binding for the port.
<b>ISS.0085.9322E</b>	<b>Invalid SOAP binding found; binding {0} does not contain all operations for corresponding portType {1}</b>
<b>Explanation</b>	The specified binding does not contain all of the operations declared in the specified portType.
<b>Action</b>	Modify the WSDL document so that the binding contains all of the operations declared in the specified portType.
<b>ISS.0085.9323W</b>	<b>Port alias for JMS Binder "{0}" set to "{1}". Ensure that this is the correct port alias.</b>
<b>Explanation</b>	When creating a WSDL first provider Web service descriptor, Integration Server uses the first JMS provider web service endpoint alias listed on the Settings > Web Service Endpoints page in Integration Server Administrator as the port alias.
<b>Action</b>	If you want to use a different JMS provider web service endpoint alias as the port alias, select the JMS binder and assign a different port alias.
<b>ISS.0085.9324E</b>	<b>Unable to create JMS Binder for binding {0}. There is not a defined JMS provider web service endpoint alias.</b>
<b>Explanation</b>	When creating a WSDL first provider Web service descriptor, Integration Server uses the first JMS provider web service endpoint alias listed on the Settings > Web Service Endpoints page in Integration Server Administrator as the port alias. If there is no defined JMS provider web service endpoint alias, Integration Server does not create the Web service descriptor.
<b>Action</b>	Create a JMS provider web service endpoint alias. Then create the WSDL first provider Web service descriptor.

- ISS.0085.9325E**      **Invalid parameter passed. {0} is a required parameter.**
- Explanation**      Integration Server cannot export the assets because the required input parameters are not specified.
- Action**              Specify all of the required parameters.
- 
- ISS.0085.9326E**      **Error occurred while exporting runtime configurations: {0}. For more information, see the Integration Server logs.**
- Explanation**      Deployer encountered an error while exporting runtime configurations: {0}.
- Action**              Check Integration Server log for more information.
- 
- ISS.0085.9327E,W**    **Unknown transport found in binding {0}. {1} is not a valid transport value.**
- Explanation**      The WSDL document used as the source for the Web service descriptor contains a binding with an invalid transport attribute. Integration Server will not create a WSDL first provider Web service descriptor when a binding transport is invalid. Integration Server will create a consumer Web service descriptor when a binding transport is invalid if the WSDL document contains other valid bindings.
- Action**              No action is required.
- 
- ISS.0085.9328E,W**    **No transport found in binding {0}. Valid transport value is required.**
- Explanation**      The WSDL document used as the source for the Web service descriptor contains a binding that does not specify a transport. Integration Server will not create a WSDL first provider Web service descriptor when a binding transport is missing. Integration Server will create a consumer Web service descriptor when a binding transport is missing if the WSDL document contains other valid bindings.
- Action**              If possible, determine the actual transport type and then edit the WSDL document to specify that transport for the specified binding.
- 
- ISS.0085.9329E,W**    **Unable to create JMS Binder for binding {0}. JMS Binders can be created using Designer only.**
- Explanation**      The source WSDL document for the Web service descriptor contains a SOAP JMS binding. Developer cannot be used to create a WSDL first provider Web service descriptor from a WSDL document with a SOAP JMS binding. Developer can be used create a consumer Web service descriptor from a WSDL document with a SOAP JMS binding if the WSDL document contains other valid SOAP HTTP bindings, but the resulting consumer Web service descriptor will not have a JMS binder.
- Action**              Use Designer to create the Web service descriptor.

---

<b>ISS.0085.9331E</b>	<b>Error occurred while deploying the asset: {0}. For more information, see the Integration Server logs.</b>
<b>Explanation</b>	Integration Server encountered an error while deploying the asset. Typical reasons for this error are: 1) Stream is already read. 2) An I/O error occurred. 3) Value for aclData input parameter is not provided. 4) Any other error that occurred during deployment.
<b>Action</b>	Read through the details provided in the error message and take corrective steps.
<b>ISS.0085.9333W</b>	<b>JVM "{0}" of the target Integration Server for installing package "{2}" is older than the recommended JVM "{1}".</b>
<b>Explanation</b>	The target Integration Server is running a JVM version that is older than the version recommended by the source package.
<b>Action</b>	Ensure that the target Integration Server is running the same or a later version of the JVM specified during release creation.
<b>ISS.0085.9334E</b>	<b>The version of target package cannot be null for a patch release.</b>
<b>Explanation</b>	The source package being installed is a patch release, but when the patch release was created, no version was specified for the target package.
<b>Action</b>	Specify a version for the target package when creating the patch release.
<b>ISS.0085.9335W</b>	<b>The target Integration Server version "{2}" and the Integration Server version "{1}" recommended by source package "{0}" are incompatible.</b>
<b>Explanation</b>	The target Integration Server version does not match the Integration Server version recommended by the source package.
<b>Action</b>	Ensure that the version of the target and source Integration Servers are the same.
<b>ISS.0085.9336W</b>	<b>Package "{2}" will not be deployed because the source package is a patch release and target package version: "{0}" does not match the required target package version: "{1}".</b>
<b>Explanation</b>	During installation of a patch release, Integration Server detected that the version of the target package is not the version required by the patch release.
<b>Action</b>	Install the correct version of the target package before applying the patch.
<b>ISS.0085.9337W</b>	<b>Package "{0}" will not be deployed because the source package is a patch release and the target package does not exist.</b>
<b>Explanation</b>	Integration Server could not install the package because the source package being installed is a patch release and the required package does not exist on the target server.
<b>Action</b>	The following lists the actions you can take: 1) Install the package in the target server before applying the patch. -OR- 2) Redefine the source package to a full release before deploying the package on the target server.

<b>ISS.0085.9338W</b>	<b>Package "{2}" will not be deployed because the version of source package: "{0}" is older than the version of target package: "{1}".</b>
<b>Explanation</b>	The package installed in the target server is of a later version than the source package being installed.
<b>Action</b>	Ensure that the version of the package on the target server is earlier than or the same as the package being installed.
<b>ISS.0085.9341E</b>	<b>Recursive invoke of wm.server.util:remoteInvoke service on a local server is not allowed.</b>
<b>Explanation</b>	You cannot invoke the wm.server.util:remoteInvoke service using the wm.server.util:remoteInvoke service recursively on a local server. Recursive invoke of wm.server.util:remoteInvoke service on a local server results in reduced thread availability and after sometime, Integration Server stops responding.
<b>Action</b>	Make sure that you are not invoking the wm.server.util:remoteInvoke service recursively on a local server.
<b>ISS.0085.9377E</b>	<b>Internal Error - Asset {0} does not exist</b>
<b>Explanation</b>	While using the local service development feature in Software AG Designer, an attempt to move, copy, or rename an IS asset, such as a flow service, java service, document type, or trigger, resulted in an internal error occurred. At run time, the {0} in the message is replaced with the name of the IS asset being moved, copied, or renamed.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0085.9380E</b>	<b>Invalid folder name {0}. Error : {1}</b>
<b>Explanation</b>	The specified folder name is invalid.
<b>Action</b>	Specify a valid folder name.
<b>ISS.0085.9381E</b>	<b>Folder {0} is not empty</b>
<b>Explanation</b>	The specified folder must be empty.
<b>Action</b>	Delete the contents of the specified folder or specify an empty folder.
<b>ISS.0085.9382E</b>	<b>Message addressing endpoint alias "{0}" of type "{1}" does not exist.</b>
<b>Explanation</b>	The specified message addressing endpoint alias does not exist.
<b>Action</b>	Ensure that the message addressing endpoint alias name that you specified is correct and that this endpoint alias exists.

---

<b>ISS.0085.9383E</b>	<b>Cannot delete message addressing endpoint alias "{0}" because it is referred to by the following provider endpoint aliases {1}</b>
<b>Explanation</b>	A Web service endpoint alias for a provider Web service descriptor is using the message addressing endpoint alias that you attempted to delete as a part of the Response Map. Integration Server can only delete a message addressing endpoint alias if it is not in use.
<b>Action</b>	Before deleting a message addressing endpoint alias, ensure that the endpoint alias is not associated with the Response Map of any provider Web service endpoint alias.
<b>ISS.0085.9385E</b>	<b>Reliable messaging sequence {0} not found.</b>
<b>Explanation</b>	No reliable messaging sequence for the specified internal Sequence Id was not found.
<b>Action</b>	Ensure that a valid Internal Sequence Id is specified.
<b>ISS.0085.9389E</b>	<b>Host Name must be only ASCII characters.</b>
<b>Explanation</b>	Host Name contains non-ASCII characters. Host Name must consist of only ASCII characters.
<b>Action</b>	Specify a valid host name consisting of only ASCII characters.
<b>ISS.0085.9390E</b>	<b>User Name must be only ASCII characters.</b>
<b>Explanation</b>	User Name contains non-ASCII characters. Host Name must consist of only ASCII characters.
<b>Action</b>	Specify a valid User Name consisting of only ASCII characters.
<b>ISS.0085.9391E</b>	<b>Port Number must be positive integer between 0 and 65535 (inclusive).</b>
<b>Explanation</b>	Port must be a positive integer.
<b>Action</b>	Specify a valid integer between 0 and 65535 (inclusive) for Port.
<b>ISS.0085.9392E</b>	<b>Password must be only ASCII characters.</b>
<b>Explanation</b>	Password contains non-ASCII characters. Password must consist of only ASCII characters.
<b>Action</b>	Specify a valid password consisting of only ASCII characters.

<b>ISS.0085.9393E</b>	<b>Proxy server alias {0} does not exist.</b>
<b>Explanation</b>	Proxy server alias does not exist.
<b>Action</b>	Specify a valid configured proxy server alias.
<b>ISS.0085.9394E</b>	<b>Protocol must be either HTTP or HTTPS or FTP or SOCKS.</b>
<b>Explanation</b>	The specified protocol is not valid. Protocol must be HTTP, HTTPS, FTP or SOCKS.
<b>Action</b>	Specify one of the following as the protocol: HTTP, HTTPS, FTP, or SOCKS.
<b>ISS.0085.9395E</b>	<b>Invalid FTP proxy type.</b>
<b>Explanation</b>	Invalid FTP proxy type. The FTP proxy type must be an integer within the range of 0 and 7 (inclusive).
<b>Action</b>	Specify an interger within the range of 0 to 7 (inclusive).
<b>ISS.0085.9396E</b>	<b>Proxy server alias contains illegal characters.</b>
<b>Explanation</b>	The Proxy server alias name is invalid because it contains invalid characters such as #&@^!%*:.\$/ \ \~;~+=)( ).{\><.
<b>Action</b>	Specify a proxy server alias name that does not contain the following characters: #&@^!%*:.\$/ \ \~;~+=)( ).
<b>ISS.0086.9063E</b>	<b>Missing required value: string</b>
<b>Explanation</b>	The string parameter is required but is either missing from the pipeline or is null.
<b>Action</b>	Make sure the string parameter is being supplied to the service and that the value of string is not null.
<b>ISS.0086.9263E</b>	<b>Specified path [{0}] is not on the [{1}] allowed list in the fileAccessControl configuration file</b>
<b>Explanation</b>	The specified path is not in the list of allowed directories and/or files for the specified parameter in the fileAccessControl.cnf file. For the pub.file services, Integration Server provides additional validation checks by ensuring that the paths supplied to the pub.file services are listed in the relevant parameter (allowedReadPath, allowedWritePath, or allowedDeletePath) in the fileAccessControl.cnf file. At run time, the {0} is replaced by the supplied path and the {1} is replaced with the parameter that is being checked in the fileAccessControl.cnf file.
<b>Action</b>	If the supplied path is listed for the specified parameter in the fileAccessControl.cnf, make sure that the supplied path does not contain any errors such as misspellings, misplaced punctuation, and so forth. Keep in mind that path names are case-sensitive on a UNIX-based system. Additionally, note that if the path includes a semicolon, the two backslashes that must precede the semicolon for a parameter in the fileAccessControl.cnf file do not need to be included in the path supplied to the input parameter of a pub.file service. If the specified path should be in the allowed list for

the specified parameter but is not, edit the parameter in the fileAccessControl.cnf file to include the path.

<b>ISS.0086.9287E</b>	<b>Applications cannot set the "{0}" field in the HTTP response header.</b>
<b>Explanation</b>	The input to the pub.flow:setResponseHeader service specifies a header field that cannot be set by an application.
<b>Action</b>	Change the input to the pub.flow:setResponseHeader service so that it does not specify a header field that cannot be set by an application.
<b>ISS.0086.9288E</b>	<b>Either "{0}" or "{1}" must be supplied</b>
<b>Explanation</b>	A value is required for one of the two indicated parameters.
<b>Action</b>	Supply the missing value.
<b>ISS.0086.9290E</b>	<b>Invalid JMS property name "{0}"; property name must contain only Java identifier part characters.</b>
<b>Explanation</b>	The property name specified as input to pub.flow:setResponseHeaders does not meet the syntax requirement for JMS properties as described in the Java Message Service standard.
<b>Action</b>	Modify the property name to meet the syntax requirements for JMS properties. Refer to the Java Message Service standard for information about syntax requirements for message properties.
<b>ISS.0086.9291E</b>	<b>Invalid JMS property name "{0}"; reserved word.</b>
<b>Explanation</b>	The property name specified as input to pub.flow:setResponseHeaders contains a reserved word as described in the Java Message Service standard.
<b>Action</b>	Modify the property name by removing the reserved word. Refer to the Java Message Service standard for information about reserved words for message properties.
<b>ISS.0086.9292E</b>	<b>Applications cannot set the "{0}" field in the JMS response header.</b>
<b>Explanation</b>	The input to the pub.flow:setResponseHeader service specifies a message header field that cannot be set by an application.
<b>Action</b>	Change the input to the pub.flow:setResponseHeader service so that it does not specify a header field that cannot be set by an application.

**ISS.0086.9293E**      **At least one of the parameters, "generateHeaderDocumentTypes", "generateBodyDocumentTypes" or "generateFaultDocumentTypes", must be set to true.**

**Explanation**      The "generateHeaderDocumentTypes", "generateBodyDocumentTypes", and "generateFaultDocumentTypes" parameters are all set to false while executing the pub.soap.handler:generateDocumentTypesFromWSDL service.

**Action**             Set the value of any one of these parameters to true.

**ISS.0086.9294E**      **If convertAllPackages is set to true, packageNames cannot be specified.**

**Explanation**      When convertAllPackages is set to true, the pub.ws.utils:setCompatibilityModeFalse service sets the Pre-8.2 compatibility mode property to false for each Web service descriptor in an enabled package. It is invalid to specify individual packages in packageNames as well.

**Action**             Either remove the specified value for packageNames or set convertAllPackages to false.

**ISS.0086.9295E**      **If convertAllPackages is set to false, packageNames must be specified.**

**Explanation**      When convertAllPackages is set to false, the packageNames parameter must specify the names of the packages that contain the Web service descriptors for which to change the Pre-8.2 compatibility mode value.

**Action**             Either specify packages in packageNames or set convertAllPackages to true.

**ISS.0086.9296E**      **Package {0} not enabled.**

**Explanation**      The specified package is not enabled. The pub.ws.utils:setCompatibilityModeFalse service can change Web service descriptors in enabled packages only.

**Action**             Enable the package.

**ISS.0086.9297E**      **Package {0} not found.**

**Explanation**      The packageNames parameter specifies a package that does not exist.

**Action**             Ensure that the package name is spelled correctly. Additionally, verify that package exists on the Integration Server.

**ISS.0086.9298E**      **Unable to lock Web service descriptor for editing.**

**Explanation**      The Pre-8.2 compatibility mode property cannot be changed because an error occurred while attempting to lock the Web service descriptor for editing.

**Action**             Determine what error prevents locking of the Web service descriptor by examining the lock properties of the Web service descriptor or by attempting to lock (or check out) the Web service descriptor. Either action should provide a detailed error message that you can use to resolve the error. Then either run the pub.utils.ws:setCompatibilityModeFalse service again or lock (check out) the Web

service descriptor and change the value of the Pre-8.2 compatibility mode property manually.

<b>ISS.0086.9299E</b>	<b>Web service descriptor is locked by another user.</b>
<b>Explanation</b>	The Pre-8.2 compatibility mode property cannot be changed because another user has the Web service descriptor checked out or locked for editing.
<b>Action</b>	Review the lock properties of the Web service descriptor to determine which user has it checked out or locked for editing. After the user unlocks (or checks in) the Web service descriptor, either run the <code>pub.utils.ws:setCompatibilityModeFalse</code> service again or lock (check out) the Web service descriptor and change the value of the Pre-8.2 compatibility mode property manually.
<b>ISS.0086.9309E</b>	<b>Could not release a lock of type {0} for key {1} in cache {2} contained within the cache manager {3}. Error:{4}</b>
<b>Explanation</b>	The specified lock type for the specified key, cache, and cache manager does not match the actual lock type held. This error also occurs if a release lock is called from a thread that did not lock the key.
<b>Action</b>	Specify the correct lock type or invoke the service from the same thread that acquired the lock.
<b>ISS.0086.9312E</b>	<b>Error while executing command {0}: {1}</b>
<b>Explanation</b>	Integration Server encountered an error while executing the command. Typical reasons are: 1) The session is invalid. 2) The command parameter is invalid. 3) The SFTP server is not reachable.
<b>Action</b>	Read through the details provided in the error message and take corrective steps.
<b>ISS.0086.9313E</b>	<b>Invalid session {0}</b>
<b>Explanation</b>	The session key that you specified is invalid.
<b>Action</b>	Ensure that session key is correct and that the session corresponding to this session key exists.
<b>ISS.0086.9314E</b>	<b>Session {0} expired.</b>
<b>Explanation</b>	The session key that you specified has expired.
<b>Action</b>	Adjust the session timeout value for this SFTP user alias according to your requirements. Once a session expires, you must create a new session.

<b>ISS.0086.9315E</b>	<b>Session {0} is in use. Integration Server does not support parallel command execution on a session.</b>
<b>Explanation</b>	You attempted to execute commands in parallel.
<b>Action</b>	Integration Server does not support parallel command execution on a session. Ensure that you execute the commands sequentially.
<b>ISS.0086.9316E</b>	<b>One or more required values are missing: {0}.</b>
<b>Explanation</b>	You have not provided all the mandatory input parameters that Integration Server requires to execute the SFTP put command.
<b>Action</b>	Ensure that you provide all the input parameters to execute the SFTP put command. For example, to execute the put command, you have the option to provide a combination of contentStream and remote file name. Integration Server throws this error if you do not provide both the input parameters in this combination.
<b>ISS.0086.9317E</b>	<b>Invalid mode: {0}.</b>
<b>Explanation</b>	The mode that you specified to execute an SFTP command is invalid.
<b>Action</b>	Ensure that you specify a valid value for mode. Valid values are "OVERWRITE", "RESUME", and "APPEND".
<b>ISS.0086.9334E</b>	<b>The packageNames and documentTypeNames input parameters are mutually exclusive.</b>
<b>Explanation</b>	Values cannot be specified for both the packageNames and documentTypeNames input parameters.
<b>Action</b>	Specify either packageNames or documentTypeNames or neither. If you specify neither, Integration Server searches through all the pub.utils.messaging:migrateDocTypesTriggersToUM attempts to migrate all publishable document types contained in packages that do not start with the letters "wm" in any case combination.
<b>ISS.0086.9335E</b>	<b>Error creating package archive:{0}.</b>
<b>Explanation</b>	Integration Server could not create an archive for a package. At run time, the {0} is replaced by the error message that caused package archiving to fail.
<b>Action</b>	Use the error message to correct the cause of the error, then , execute the pub.utils.messaging:migrateDocTypesTriggersToUM service. Note that when using the service to migrate the contents of multiple packages, it might be hard to determine for which package Integration Server could not create an archive. If the server log facility 0153 Dispatcher (Universal Messaging) is set to the Debug level, when the pub.utils.messaging:migrateDocTypesTriggersToUM service executes, the server log will indicate which package Integration Server attempted to archive when the error occurred.

---

<b>ISS.0086.9336E</b>	<b>Unable to lock for editing. Lock status:{0}.</b>
<b>Explanation</b>	The publishable document type could not be locked and therefore cannot be updated.
<b>Action</b>	Use the lock status to determine why the publishable document type is locked. Once the publishable document type is unlocked, execute the <code>pub.utils.messaging:migrateDocTypesTriggersToUM</code> service.
<b>ISS.0086.9337E</b>	<b>Locked by another user:{0}.</b>
<b>Explanation</b>	The publishable document type could not be locked because it is already locked by the specified user. For the publishable document type to be updated, it must be unlocked or locked by the user executing the <code>pub.utils.messaging:migrateDocTypesTriggresToUM</code> service.
<b>Action</b>	Ask the user who has the publishable document type locked to unlock it. Once the publishable document type is unlocked, execute the <code>pub.utils.messaging:migrateDocTypesTriggersToUM</code> service.
<b>ISS.0086.9339E</b>	<b>Could not find newConnectionAlias {0}.</b>
<b>Explanation</b>	Integration Server cannot find the Universal Messaging connection alias specified for the <code>newConnectionAlias</code> parameter. It is possible the alias does not exist or there is an error in the supplied alias name.
<b>Action</b>	Specify an Universal Messaging connection alias that exists on Integration Server as the value for <code>newConnectionAlias</code> . Make sure you spell the alias name properly. Universal Messaging connection alias names are case sensitive. Then, re-execute the <code>pub.utils.messaging.migrateDocTypesTriggersToUM</code> service.
<b>ISS.0086.9340E</b>	<b>Cannot find document type:{0}.</b>
<b>Explanation</b>	Integration Server cannot locate the document type.
<b>Action</b>	Make sure the document type exists on Integration Server. Then, re-execute the <code>pub.utils.messaging.migrateDocTypesTriggersToUM</code> service.
<b>ISS.0086.9341E</b>	<b>The specified element is not a document type.</b>
<b>Explanation</b>	An element specified for the <code>documentTypeNames</code> parameter is not a document type. Valid values for the <code>documentTypeNames</code> parameter are names of publishable document types that exist on Integration Server.
<b>Action</b>	Make sure the <code>documentTypeNames</code> parameter specifies only publishable document types that exist on Integration Server. Then, re-execute the <code>pub.utils.messaging.migrateDocTypesTriggersToUM</code> service.

- ISS.0086.9342E**      **The specified element is not a publishable document type.**
- Explanation**      An element specified for the documentTypeNames parameter is not a publishable document type. Valid values for the documentTypeNames parameter are names of publishable document types that exist on Integration Server.
- Action**              Make sure the documentTypeNames parameter specifies only publishable document types that exist on Integration Server. Then, re-execute the pub.utils.messaging.migrateDocTypesTriggersToUM service.
- 
- ISS.0086.9343E**      **Package not found**
- Explanation**      The contents of the package could not be migrated because Integration Server cannot find the package. The packageNames input parameter specifies a package that does not exist on Integration Server.
- Action**              Make sure the packageNames parameter specifies only packages that exist on Integration Server. Then re-execute the pub.utils.messaging.migrateDocTypesTriggersToUM service.
- 
- ISS.0086.9344E**      **Package disabled**
- Explanation**      The contents of the package could not be migrated because the package is disabled. Only the contents of enabled packages can be migrated.
- Action**              Enable the package and re-execute the pub.utils.messaging.migrateDocTypesTriggersToUM service.
- 
- ISS.0086.9345W**      **Document type does not belong to a package or belongs to a system package.**
- Explanation**      The pub.utils.messaging.migrateDocTypesTriggersToUM service skipped migration for a publishable document type because the publishable document type did not belong to a package or belongs to a system package. A system package begins with the letters “wm” in an case combination. The service modifies publishable document types or webMethods messaging triggers in a system package only when the system package is specified in the packageNames input parameter or the publishable document type was specified in the documentTypeNames input parameter.
- Action**              To migrate the skipped publishable document type, re-execute the pub.utils.messaging.migrateDocTypesTriggersToUM service and specify the publishable document type name in the documentTypeNames input parameter. Alternatively, to migrate multiple publishable document types in a system package, re-execute the pub.utils.messaging.migrateDocTypesTriggersToUM service and specify the system package in the packageNames input parameter.

---

<b>ISS.0086.9346I</b>	<b>Document type not changed.</b>
<b>Explanation</b>	Integration Server skipped migration for the document type because the <code>pub.utils.messaging.migrateDocTypesTriggersToUM</code> service did not make any changes to the publishable document type.
<b>Action</b>	No action required.
<b>ISS.0086.9347I</b>	<b>Package does not contain publishable document types.</b>
<b>Explanation</b>	Migration failed for the package because it does not contain any publishable document types that can be migrated.
<b>Action</b>	No action required.
<b>ISS.0086.9348E</b>	<b>The "serviceName" input parameter is required.</b>
<b>Explanation</b>	There is no service name specified for the <code>serviceName</code> input parameter.
<b>Action</b>	Specify a service name for the <code>serviceName</code> input parameter.
<b>ISS.0086.9350E</b>	<b>The "resultSetKey" input parameter is optional.</b>
<b>Explanation</b>	The pipeline key name specified for the <code>resultSetKey</code> input parameter does not exist in the pipeline.
<b>Action</b>	Specify the correct pipeline key name for the <code>servicePipeline</code> input parameter.
<b>ISS.0086.9351E</b>	<b>The pipeline key name "{0}" does not exist in the wrapped service pipeline.</b>
<b>Explanation</b>	The specified pipeline key name does not exist in the wrapped service.
<b>Action</b>	Verify the resultset key value returned by the wrapped service.
<b>ISS.0086.9352E</b>	<b>The \$internal service input parameter is required.</b>
<b>Explanation</b>	The calling service must create the <code>\$internal</code> service input parameter before calling iterator.
<b>Action</b>	Create the required <code>\$internal</code> input parameter for the iterator service and rerun.
<b>ISS.0086.9353E</b>	<b>The timeToLive input parameter must be greater than 0.</b>
<b>Explanation</b>	The <code>timeToLive</code> input parameter must have a value of greater than 0.
<b>Action</b>	Specify a value that is greater than 0 for the <code>timeToLive</code> input parameter.

<b>ISS.0086.9354E</b>	<b>The batchSize input parameter must be greater than 0.</b>
<b>Explanation</b>	The batchSize input parameter requires a value greater than 0.
<b>Action</b>	Set the batchSize input parameter to a value greater than 0 and rerun the service.
<b>ISS.0086.9355E</b>	<b>The service request has expired.</b>
<b>Explanation</b>	The value specified in the timeToLive input parameter has expired and the result set has been removed from the cache.
<b>Action</b>	Increase the value for timeToLive and rerun the service.
<b>ISS.0086.9356W</b>	<b>Document type is not assigned to a UM connection alias.</b>
<b>Explanation</b>	Integration Server skipped the document type during migration because a value was not specified for newConnectionAlias or a newConnectionAlias specified a Broker connection alias and the document type is either associated with a Broker connection alias or is publishable locally.
<b>Action</b>	Specify a value for newConnectionAlias and re-execute the pub.utils.messaging:migrateDocTypesTriggersToUM service. Alternatively, use Designer to assign the document type a Universal Messaging connection alias and then re-execute the pub.utils.messaging:migrateDocTypesTriggersToUM service.
<b>ISS.0086.9361E</b>	<b>newConnectionAlias:{0} must be an existing UM connection alias.</b>
<b>Explanation</b>	The newConnectionAlias input parameter specifies an alias that does not exist or specifies a Broker connection alias. The pub.utils.messaging:migrateDocTypesTriggersToUM service can be used to migrate publishable document types to a UM connection alias only
<b>Action</b>	Specify the name of a Universal Messaging connection alias that exists on Integration Server and then re-execute the pub.utils.messaging:migrateDocTypesTriggersToUM service.
<b>ISS.0086.9362I</b>	<b>Trigger does not contain any filters.</b>
<b>Explanation</b>	Integration Server skipped the trigger during migration because the trigger does not contain any filters.
<b>Action</b>	No action required.
<b>ISS.0086.9363W</b>	<b>Trigger already specifies a value for Provider Filter (UM).</b>
<b>Explanation</b>	Migration of the filters in the trigger failed because one or more of the trigger conditions already contains a value for Provider Filter (UM). A trigger filter cannot be migrated if a value already exists in Provider Filter (UM).
<b>Action</b>	Manually create the needed Provider Filter. For information about creating trigger filters for use with Universal Messaging, see the documentation.

<b>ISS.0086.9365E</b>	<b>Error retrieving Broker Transport Factory.</b>
<b>Explanation</b>	Integration Server cannot connect to the Broker. Specifically, the Broker Transport Factory cannot be located. Either the connection to the Broker is unavailable or the connection to the Broker is not configured correctly. A Broker connection is required for the <code>pub.utils.messaging:migrateDocTypesTriggersToUM</code> service to execute successfully.
<b>Action</b>	Make sure the Broker connection alias is properly configured, the Broker is installed and properly configured, and that the Broker is available.
<b>ISS.0086.9366E</b>	<b>Error retrieving Broker Transport.</b>
<b>Explanation</b>	Integration Server cannot connect to the Broker. Either the connection to the Broker is unavailable or the connection to the Broker is not configured correctly. A Broker connection is required for the <code>pub.utils.messaging:migrateDocTypesTriggersToUM</code> service to execute successfully.
<b>Action</b>	Make sure the Broker connection alias is properly configured, the Broker is installed and properly configured, and that the Broker is available
<b>ISS.0086.9367E</b>	<b>Error retrieving Broker Admin Client.</b>
<b>Explanation</b>	Integration Server cannot connect to the Broker. Either the connection to the Broker is unavailable or the connection to the Broker is not configured correctly. A Broker connection is required for the <code>pub.utils.messaging:migrateDocTypesTriggersToUM</code> service to execute successfully.
<b>Action</b>	Make sure the Broker connection alias is properly configured, the Broker is installed and properly configured, and that the Broker is available.
<b>ISS.0086.9368I</b>	<b>Converted Filter:{0} to Provider Filter (UM):{1}.</b>
<b>Explanation</b>	Integration Server converted the expression in Filter to the expression in Provider Filter (UM).
<b>Action</b>	No action required.
<b>ISS.0086.9369W</b>	<b>Partial filter conversion - Dropped:{0}.</b>
<b>Explanation</b>	The complete filter in the Filter field could not be migrated to the Provider Filter (UM) field. Integration Server migrated some expressions in the filter successfully, but could not migrate one or more expressions in the original filter. The <code>pub.utils.messaging:migrateDocTypesTriggersToUM</code> service returns this message for each expression that could not be migrated. At run time, the portion of the expression that could not be migrated replaces the {0} in the message. The contents of the Filter field will not change. That is, Integration Server does not remove the filter expressions that it migrated to Provider Filter (UM) field from the Filter field.
<b>Action</b>	No action is required. However, you might want to edit the contents of the Filter field by removing the expressions that were migrated to Provider Filter (UM). This will eliminate duplicate filter processing.

**ISS.0086.9371E      The node specified as input for the node parameter does not exist or is not a DOM node**

**Explanation**      The node specified as input to the node parameter for the pub.xmldata:domNodeToXMLData service does not exist or is not a DOM node.

**Action**            Make sure the node specified as input for the node parameter for the pub.xmldata:domNodeToXMLData service exists and is a DOM node.

**ISS.0086.9372E      The document type specified for the conformsTo input parameter does not exist or is not an XML document type.**

**Explanation**      The document type specified for the conformsTo input parameter for the pub.xmldata:domNodeToXMLData service either does not exist or is not an XML document type.

**Action**            Make sure that the document types specified as input to the conformsTo parameter exists and is an XML document type..

**ISS.0086.9373E      The document specified as input for the xmlDataDocument parameter does not exist or is not of type XMLData.**

**Explanation**      Either the specified document as input for the xmlDataDocument parameter does not exist or it is not of type XMLData. The pub.xmldata.xmlDataToXMLString service requires that the input document be of type XMLData.

**Action**            Make sure the document specified as input for xmlDataDocument exists and is of type XMLData. Use the Document data type property for the specified document to determine if it is of type XML Data.

**ISS.0086.9380E      The servicePrincipal input parameter is required if a jaasContext is specified.**

**Explanation**      If the pub.client:http service specifies a value for the auth/kerberos/jaasContext input parameter, the auth/keberos/servicePrincipal input parameter must be specified as well.

**Action**            Specify a value for the auth/Kerberos/servicePrincipal input parameter.

**ISS.0086.9381E      A value is not supplied for the Kerberos clientPassword input parameter. The Keberos clientPassword must be specified if the Kerberos clientPrincipal is supplied.**

**Explanation**      The pub.client:http service specifies a value for the auth/kerberos/clientPrincipal input parameter but does not specify a value for the auth/kerberos/clientPassword input parameter. If clientPrincipal is specified, then clientPassword must be specified.

**Action**            Specfiy a value for the auth/kerberos/clientPassword field.

---

<b>ISS.0086.9382E</b>	<b>Input to {0} must be an inputstream.</b>
<b>Explanation</b>	The input must be an input stream.
<b>Action</b>	Specify an inputstream.
<b>ISS.0086.9383E</b>	<b>Input must be a byte array or an inputstream.</b>
<b>Explanation</b>	The input must be a byte array or an input stream.
<b>Action</b>	Specify a byte array or input stream.
<b>ISS.0086.9384E</b>	<b>Input to {0} must be a (byte[]).</b>
<b>Explanation</b>	If the user does not provide a byte[] type
<b>Action</b>	User should provide a byte[].
<b>ISS.0086.9385E</b>	<b>Error while processing the signature stream:</b>
<b>Explanation</b>	User encounters problem while reading the stream
<b>Action</b>	To inform the user that there is a problem in processing the stream.
<b>ISS.0088.9108E</b>	<b>SOAP Handler {0} already registered</b>
<b>Explanation</b>	While executing pub.soap.processor:registerProcessor, Integration Server could not register the custom SOAP message processor because the registry already has a SOAP message processor registered for the supplied directive.
<b>Action</b>	When registering a custom SOAP message processor using pub.soap.processor:registerProcessor, specify a directive for which there is not already a custom SOAP message processor. Alternatively, use pub.soap.processor:unregisterProcessor to unregister the custom SOAP message processor that is currently registered to the specified directive and then register the new SOAP message processor with that directive.
<b>ISS.0088.9109</b>	<b>SOAP is only supported using HTTP POST protocol</b>
<b>Explanation</b>	The SOAP message handler was not able to accept the request because the SOAP message was submitted to Integration Server using the HTTP GET method. The SOAP message handler only accepts requests via the POST method (per W3C specification).
<b>Action</b>	Modify the client to use HTTP POST to submit SOAP messages to Integration Server.

<b>ISS.0088.9110E</b>	<b>Invalid BOOLEAN value {0} for variable {1}; must be 0 or 1</b>
<b>Explanation</b>	The addHeaderEntry service failed because the mustUnderstand attribute was not set correctly.
<b>Action</b>	Check the logic in the process that failed to make sure that it sets the value of the specified variable to either 0 or 1. No other values are permitted when setting the mustUnderstand attribute.
<b>ISS.0088.9111E</b>	<b>Cannot load or execute the SOAP processor {0}</b>
<b>Explanation</b>	The SOAP message handler cannot process the SOAP message because the requested SOAP processor is non-operational.
<b>Action</b>	On the server, check the status of the service that is registered to directiveName. Make sure this service is loaded and operating successfully. (Frequently this error occurs because the processor was modified and then did not recompile successfully.)
<b>ISS.0088.9112E</b>	<b>An Exception was thrown in the server:{0}</b>
<b>Explanation</b>	Integration Server, the SOAP processor, or one of the services processing the message has thrown an exception.
<b>Action</b>	See the detail element in the SOAP fault to determine the exception that was thrown and which process it was thrown by.
<b>ISS.0088.9113E</b>	<b>The SOAP Envelope does not have a Body block</b>
<b>Explanation</b>	The SOAP client was given a soapRequestData that did not contain a body element.
<b>Action</b>	Examine the logic in the client to see whether it uses the stringToSoapData or streamToSoapData service to generate their SOAP objects. If so, determine whether the String or stream from which the SOAP object was generated represented a valid SOAP message. Also check whether the SOAP processor or client used any of the data removal utilities (such as removeHeaderEntry or removeBodyEntry) and might have inadvertently removed the entire Body element.
<b>ISS.0088.9116]E</b>	<b>The server cannot execute the requested SOAP utility; required parameter {0} is missing or invalid</b>
<b>Explanation</b>	The requested SOAP utility service failed to execute because a required parameter was not supplied.
<b>Action</b>	Check the logic in the SOAP processor or client to make sure that it passes the correct parameters to each SOAP utility service that it invokes.

---

<b>ISS.0088.9117E</b>	<b>One or more header entries were not understood by the SOAP processor</b>
<b>Explanation</b>	The SOAP processor has rejected the SOAP message because it cannot obey a mandatory header entry (a header entry whose mustUnderstand attribute is enabled).
<b>ISS.0088.9118E</b>	<b>Parameter {0} must be a valid soapData</b>
<b>Explanation</b>	The requested SOAP utility service failed to execute because the value supplied to the specified parameter s not a SOAP object.
<b>Action</b>	Examine the logic in the SOAP processor or client and make sure that it passes a SOAP object to the specified parameter.
<b>ISS.0088.9119E</b>	<b>SOAP Processor did NOT return a valid SOAP Response</b>
<b>Explanation</b>	The message handler did not receive a valid SOAP message from the SOAP processor.
<b>Action</b>	Examine the logic in the SOAP processor to make sure that it composes the SOAP response message correctly. For example, check to see whether it the processor uses the stringToSoapData or streamToSoapData services to generate soapResponseData. If so, determine whether the original String or stream represents a valid SOAP message. If the SOAP processor logic seems correct, contact Software AG Global Support. This would indicate a serious internal error.
<b>ISS.0088.9120E</b>	<b>Parameter {0} is not one of the valid data types: {1}</b>
<b>Explanation</b>	The requested SOAP utility failed to execute because the specified parameter did not have the correct data type. The exception message identifies the data type that is expected.
<b>Action</b>	Examine the logic in the SOAP processor or client and make sure that it passes an object of the specified data type to the specified parameter.
<b>ISS.0088.9122E</b>	<b>Service {0} does not exist</b>
<b>Explanation</b>	The SOAP facility could not complete the requested operation because it could not find the specified service. This error is issued by various SOAP processes (e.g., registering a SOAP processor, invoking a SOAP processor, invoking a target service).
<b>Action</b>	Examine the process that failed and make sure that it specifies the name of the requested service correctly. For example, if you receive this error when registering a SOAP processor, check that you have specified the svcName parameter correctly. Remember that service names are case-sensitive.

- ISS.0088.9123E      Requested SOAP processor {0} is not registered on this server**
- Explanation**      The Integration Server could not process the SOAP message because it does not have the SOAP processor requested by the client.
- Action**              On the client side, verify that the correct process directive is specified in the URL (remember that the directive is case-sensitive). If the client has specified the process directive correctly, then use `pub.soap.processor:list` to verify that the requested processor is registered on the Integration Server.
- 
- ISS.0088.9124E      SOAP Message does not conform to the SOAP message model**
- Explanation**      The SOAP message passed to the `validateSoapData` utility failed validation (for example, it is missing the Body element or the Header element follows the body).
- Action**              Examine the logic that produced the message and see whether it uses the `stringToSoapData` or `streamToSoapData` service to manually generate a SOAP object instead of using the message composition services (e.g., `createSoapData`, `addHeaderEntry`, `addBodyEntry`). If so, determine whether the String or stream from which the SOAP object is generated represents a valid SOAP message. Also check whether the SOAP processor or client used any of the data removal utilities (such as `removeHeaderEntry` or `removeBodyEntry`) and might have inadvertently removed required portions of the SOAP object (for example, the entire Body element).
- 
- ISS.0088.9125E      SOAP request does not conform to the SOAP message model**
- Explanation**      The SOAP message handler could not process the SOAP request because it violates the SOAP message schema (for example, it is missing the Body element or the Header element follows the body).
- Action**              On the client side, correct the logic that builds the message to ensure that it produces a valid SOAP message.
- 
- ISS.0088.9126E      SOAP response does not conform to the SOAP message model**
- Explanation**      The SOAP message handler could not return the SOAP response generated by a SOAP processor on the Integration Server because the message violates the SOAP message schema.
- Action**              Examine the logic in the SOAP processor and see whether it uses the `stringToSoapData` or `streamToSoapData` service to generate a SOAP object. If so, determine whether the String or stream from which the SOAP object is generated represents a valid SOAP message. Examine the logic that produced the message and see whether it uses the `stringToSoapData` or `streamToSoapData` service to manually generate a SOAP object instead of using the message composition services (e.g., `createSoapData`, `addHeaderEntry`, `addBodyEntry`). If so, determine whether the String or stream from which the SOAP object is generated represents a valid SOAP message. Also check whether the SOAP processor or client used any of the data removal utilities (such as `removeHeaderEntry` or `removeBodyEntry`) and might have inadvertently removed required portions of the SOAP object (for example, the entire Body element).

---

<b>ISS.0088.9127E</b>	<b>The server could not load the SOAP XML Validator</b>
<b>Explanation</b>	The SOAP message handler encountered a serious internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0088.9128E</b>	<b>Request is from namespace {0}, server requires namespace {1}</b>
<b>Explanation</b>	The SOAP message handler could not process the message because the message is not from a version of SOAP that the Integration Server supports. Integration Server supports the version indicated in the exception message.
<b>Action</b>	From the client side, resubmit the message using a version of SOAP that Integration Server supports.
<b>ISS.0088.9132E</b>	<b>Failed to register SOAP Handler {0}, illegal characters in directive name.</b>
<b>Explanation</b>	Integration Server was not able to successfully register the SOAP processor, because directiveName contains characters that are not allowed in a directive name.
<b>Action</b>	Register the SOAP processor under a name that is composed only of letters, digits, or the characters <code>-.!~*'()</code> .
<b>ISS.0088.9133E</b>	<b>Error while encoding RPC output</b>
<b>Explanation</b>	While encoding RPC output, an exception occurred which resulted in an Integration Server error.
<b>Action</b>	Use the underlying exception to help determine what caused the error.
<b>ISS.0088.9134E</b>	<b>Exception occurred while processing the body of the message</b>
<b>Explanation</b>	Integration Server, the SOAP processor, or one of the services processing the SOAP message has thrown an exception.
<b>Action</b>	See the detail element in the SOAP fault to determine the exception that was thrown and by which process it was thrown.
<b>ISS.0088.9135E</b>	<b>A WMDocument Exception was thrown in the server, usually because an XML block was not well-formed</b>
<b>Explanation</b>	The SOAP message handler, the soapHTTP service, or the soapRPC service has received a SOAP message that contains invalid XML.
<b>Action</b>	Check the process that submitted the SOAP message to the Integration Server and make sure that it is producing valid XML. This error usually occurs because of a basic error in the XML document, such as missing tags or overlapping elements.

<b>ISS.0088.9137E</b>	<b>Invalid input parameter; {0} must be a Document (IData)</b>
<b>Explanation</b>	The requested SOAP service failed to execute because the object passed into the specified parameter is not an IData object.
<b>Action</b>	Check the logic in the SOAP processor or client to make sure that it passes an IData into the specified parameter.
<b>ISS.0088.9138E</b>	<b>Input parameters do not conform to targetInputSignature: {0}</b>
<b>Explanation</b>	The pub.client:soapRPC service could not submit the remote procedure call because the input parameters did not pass the data-validation process.
<b>Action</b>	This error is thrown when a client supplies an invalid set of input parameters for a SOAP remote procedure call. Specifically, it indicates that the parameters submitted to pub.client:soapRPC in reqParms do not match the structure and constraints of the document type specified in targetInputSignature. Generally, you will want to code your client to detect this kind of error and take some type of corrective action when it occurs.
<b>ISS.0088.9139E</b>	<b>Output parameters do not conform to targetOutputSignature: {0}</b>
<b>Explanation</b>	The SOAP RPC client could not submit the remote procedure call because the output parameters returned by the remote server did not pass the data-validation process.
<b>Action</b>	This error is thrown when a client receives an invalid set of output parameters (results) from a SOAP remote procedure call. Specifically, it indicates that the parameters returned to pub.client:soapRPC in respParms do not match the structure and constraints of the document type specified in targetOutputSignature. Generally, you will want to code your client to detect this kind of error and take some type of corrective action when it occurs.
<b>ISS.0088.9140E</b>	<b>Invalid target signature {0}, must be a Document Type</b>
<b>Explanation</b>	The SOAP RPC client could not process the remote procedure call because it was not able to validate the input or output parameters associated with the request. The signature it was given for validation is not a document type.
<b>Action</b>	Examine the logic in the SOAP RPC client and make sure that the object it specifies in targetInputSignature and/or targetOutputSignature is a document type. That is, these parameters, if used, specify the fully qualified name of a document type that exists on Integration Server.
<b>ISS.0088.9141E</b>	<b>Invalid target signature {0}, Document Type does not exist</b>
<b>Explanation</b>	The SOAP RPC client could not process the remote procedure call because it was not able to validate the input or output parameters associated with the request. The specified document type does not exist on the Integration Server.
<b>Action</b>	Examine the logic in the SOAP RPC client and make sure that targetOutputSignature and/or targetOutputSignature are correctly specified. (Remember that the names of

document types are case sensitive.). Also verify that the specified document type exists on the server and the package in which it resides is loaded and enabled.

<b>ISS.0088.9144</b>	<b>this SOAPEnvelope object already contains a valid SOAPHeader object</b>
<b>Explanation</b>	An attempt was made to add a SOAPHeader object to the SOAPEnvelope of a SOAPMessage that already contains a SOAPHeader object.
<b>Action</b>	The SOAPEnvelope object may contain a maximum of one SOAP Header.
<b>ISS.0088.9145E</b>	<b>this SOAPEnvelope object does not contain a valid SOAPHeader object</b>
<b>Explanation</b>	An attempt was made to access the SOAPHeader object, but the SOAPEnvelope of the SOAPMessage does not contain a SOAPHeader object.
<b>Action</b>	Add a SOAPHeader object to the SOAPEnvelope before accessing it.
<b>ISS.0088.9147E</b>	<b>this SOAPEnvelope object does not contain a valid SOAPBody object</b>
<b>Explanation</b>	An attempt was made to access the SOAPBody object, but the SOAPEnvelope of the SOAPMessage does not contain a SOAPBody object.
<b>Action</b>	Add a SOAPBody object to the SOAPEnvelope before accessing it.
<b>ISS.0088.9148E</b>	<b>Exception occurred while retrieving SOAPHeader object</b>
<b>Explanation</b>	The specified exception occurred while attempting to access the SOAPHeader object.
<b>Action</b>	Correct the error and retry.
<b>ISS.0088.9149E</b>	<b>Exception occurred while retrieving SOAPBody object</b>
<b>Explanation</b>	The specified exception occurred while attempting to access the SOAPBody object.
<b>Action</b>	Correct the error and retry.
<b>ISS.0088.9150E</b>	<b>Exception occurred while retrieving SOAPHeaderElement objects</b>
<b>Explanation</b>	The specified exception occurred while attempting to access the SOAPHeaderElement object.
<b>Action</b>	Correct the error and retry.

<b>ISS.0088.9151E</b>	<b>Exception occurred while retrieving SOAPBodyElement objects</b>
<b>Explanation</b>	The specified exception occurred while attempting to access the SOAPBodyElement object.
<b>Action</b>	Correct the error and retry.
<b>ISS.0088.9152E</b>	<b>The property {0} is unknown</b>
<b>Explanation</b>	An attempt was made to either get or set a property of the specified SOAPMessage, but the property name is unknown. The only valid SOAPMessage property names are javax.xml.soap.WRITE_XML_DECLARATION and javax.xml.soap.CHARACTER_SET_ENCODING.
<b>Action</b>	Specify the name of a valid property.
<b>ISS.0088.9153E</b>	<b>this SOAPMessage object already contains a valid Detail object</b>
<b>Explanation</b>	An attempt was made to add a Detail object to the SOAPBody of this SOAPMessage, but the SOAPBody already contains a Detail object. The SOAPBody can contain one and only one Detail object.
<b>Action</b>	Remove the existing Detail object before adding the new one.
<b>ISS.0088.9154</b>	<b>this SOAPMessage object already contains a valid Fault object</b>
<b>Explanation</b>	An attempt was made to add a Fault object to the SOAPBody of this SOAPMessage, but the SOAPBody already contains a Fault object. The SOAPBody can contain one and only one Fault object.
<b>Action</b>	Remove the existing Fault object before adding the new one.
<b>ISS.0088.9155E</b>	<b>this SOAPMessage does not contain a valid Envelope object</b>
<b>Explanation</b>	The specified SOAPMessage does not contain a valid SOAPEnvelope object.
<b>Action</b>	Create a new SOAPMessage that contains a valid SOAPEnvelope object.
<b>ISS.0088.9163E</b>	<b>Could not retrieve WSDL for service {0}, WSD not found.</b>
<b>Explanation</b>	Integration Server could not retrieve the WSDL for the specified Web service descriptor because the specified Web service descriptor does not exist on Integration Server.
<b>Action</b>	Ensure that the specified Web service descriptor exists on Integration Server.

<b>ISS.0088.9164E</b>	<b>Access to WSDescriptor {0} denied.</b>
<b>Explanation</b>	The user is not authorized to access the specified Web service descriptor.
<b>Action</b>	Specify a username that is authorized to access the specified Web service descriptor.
<b>ISS.0088.9166E</b>	<b>Binder not found for soapAction = {0}</b>
<b>Explanation</b>	The Web service descriptor has more than one binder, with the same operation name. Developer cannot calculate a default soapAction attribute to identify the correct operation.
<b>Action</b>	Include a unique soapAction attribute in the SOAPAction HTTP Header for every request.
<b>ISS.0088.9251E</b>	<b>JAX-RPC Handler failed to process the message</b>
<b>Explanation</b>	The JAX-RPC handler was invoked to process the message. Either the handleRequest() or handleResponse() method returns false, indicating a failure.
<b>Action</b>	Check the webMethods Integration Server log for error messages generated by the JAX-RPC handler.
<b>ISS.0088.9252E</b>	<b>An Exception has been caught: {0}</b>
<b>Explanation</b>	An exception was caught while attempting to process a SOAP message.
<b>Action</b>	Correct the problem indicated by the exception message.
<b>ISS.0088.9253E</b>	<b>Could not add "Text" element to "Reason" element, locale is null</b>
<b>Explanation</b>	An attempt to add a Text element to the existing Reason element failed because the locale was not specified.
<b>Action</b>	Specify the locale when adding the Text element.
<b>ISS.0088.9255I</b>	<b>This element's QName cannot be changed</b>
<b>Explanation</b>	An attempt to change the QName of a SOAPEnvelope, SOAPBody, or SOAPHeader failed, because the QName cannot be changed.
<b>Action</b>	No action is required.
<b>ISS.0088.9356E</b>	<b>One or more required Headers "{0}" are not present in the SOAP request.</b>
<b>Explanation</b>	The SOAP request received by the provider does not contain one or more required headers. Note that Integration Server considers all headers defined in a Web service descriptor to be required.
<b>Action</b>	Determine why the SOAP request does not contain the required headers, which might involve contacting the client to determine why the client did not include the required headers in the request.

<b>ISS.0088.9420E</b>	<b>Required parameter {0} is missing</b>
<b>Explanation</b>	A required input parameter was not provided.
<b>Action</b>	Provide the required input parameter.
<b>ISS.0088.9421E</b>	<b>The service {0} does not exist</b>
<b>Explanation</b>	The specified service does not exist.
<b>Action</b>	Specify an existing service.
<b>ISS.0088.9422E</b>	<b>Either parameter {0} or {1} must be provided</b>
<b>Explanation</b>	The service requires either one of the specified parameters, but neither was provided.
<b>Action</b>	Provide one of the required parameters.
<b>ISS.0088.9423E</b>	<b>Service handler {0} is already registered</b>
<b>Explanation</b>	A service handler with that name is already registered.
<b>Action</b>	Specify a different name when registering the service handler.
<b>ISS.0088.9425E</b>	<b>Error destroying service handler {0}. Error:{1}</b>
<b>Explanation</b>	An error occurred while destroying the JAX-RPC handler.
<b>Action</b>	The destroy() method of the JAX-RPC Handler has thrown an error. Correct the error in destroy() method.
<b>ISS.0088.9427E</b>	<b>Service handler {0} could not be unregistered. A service handler by that name is not registered</b>
<b>Explanation</b>	A service handler with the provided name is not registered.
<b>Action</b>	Specify the name of a registered service handler.
<b>ISS.0088.9428E</b>	<b>Service handler {0} could not be found. A service handler by that name is not registered</b>
<b>Explanation</b>	The specified service handler could not be found because it is not registered.
<b>Action</b>	Provide the name of a registered service handler.

<b>ISS.0088.9429E</b>	<b>Could not find service handler for header {0}:{1}</b>
<b>Explanation</b>	The header QName does not correspond to a registered service handler.
<b>Action</b>	Verify that the QName of the header corresponds to a registered service handler or register a service handler for the provided QName.
<b>ISS.0088.9430E</b>	<b>Handler processing failed on the provider</b>
<b>Explanation</b>	A handler service failed on the provider.
<b>Action</b>	Examine the handler services for errors and correct any errors that are found.
<b>ISS.0088.9431E</b>	<b>Handler processing failed on the consumer: {0}</b>
<b>Explanation</b>	A handler service failed on the consumer.
<b>Action</b>	Examine the handler services for errors and correct any errors that are found.
<b>ISS.0088.9443E</b>	<b>One or more required Headers "{0}" are not present in the SOAP response.</b>
<b>Explanation</b>	The SOAP response received by the Web service connector does not contain one or more required headers. That is, the SOAP response does not contain a header with a QName that matches the QName of a header defined in the consumer Web service descriptor. Note that Integration Server consider all headers defined in a Web service descriptor to be required.
<b>Action</b>	Determine why the SOAP response does not contain the required headers, which might involve contacting the provider to determine why the provider did not include the required headers in the response.
<b>ISS.0088.9448E</b>	<b>Handler services do not support XML document type usage</b>
<b>Explanation</b>	The name of the document type supplied to the pub.soap.handler* service is an XML document type. Integration Server does not support the use of XML document types with web services. As a result, the pub.soap.handler* services will not accept the name of XML document type as input for the documentType or documentTypes names input parameters.
<b>Action</b>	Modify the documentType or documentTypes input parameter to specify an IS document type name instead of an XML document type name.
<b>ISS.0092.9045E</b>	<b>A WS-I compliant Web Service Descriptor cannot contain a header or fault with a different namespace. Source: {0}</b>
<b>Explanation</b>	The supplied WSDL document is not WS-I compliant because it contains a header or a fault with a different namespace.
<b>Action</b>	Edit the WSDL document to be WS-I compliant.

<b>ISS.0092.9101E</b>	<b>Cannot specify both 'element' and 'type'.</b>
<b>Explanation</b>	The supplied WSDL document is invalid because element and type are both used to define a message part.
<b>Action</b>	Edit the WSDL document so that either element or type is used to define the message part.
<b>ISS.0092.9102E</b>	<b>{0}: not a valid web service description document</b>
<b>Explanation</b>	The file identified as the source for creating the Web service descriptor is not a .wsdl or .wsd file. A consumer Web service descriptor or a WSDL first provider Web service descriptor can be generated from a .wsdl or .wsd file only.
<b>Action</b>	Provide a .wsdl or .wsd file to use as the source for the Web service descriptor.
<b>ISS.0092.9103E</b>	<b>{0}: invalid file, unable to parse root element</b>
<b>Explanation</b>	The WSDL document does not contain a proper root element. Integration Server is unable to determine which element is the root element and cannot parse the root element.
<b>Action</b>	Ensure that the WSDL document contains a proper root element.
<b>ISS.0092.9105E</b>	<b>Cannot find the specified Document Type or input/output parameter.</b>
<b>Explanation</b>	While creating an XML Schema definition, Integration Server cannot find the specified document type or the Input/Output parameters are not mentioned.
<b>Action</b>	When creating an XML Schema definition from an document type, service (input/output parameters), or specification, ensure that the chosen source exists and is not null.
<b>ISS.0092.9106E</b>	<b>Field {0} is multi-dimensional which cannot be converted to xsd without using SOAP_ARRAY</b>
<b>Explanation</b>	The specified field is a table (multi-dimensional) and cannot be represented in XML Schema.
<b>Action</b>	A multi-dimensional field such as a table can be represented as a nested fields in an array.
<b>ISS.0092.9107E</b>	<b>Port {0} is missing required extended element.</b>
<b>Explanation</b>	The WSDL document is invalid because the specified port is missing a required element. Integration Server cannot create a Web service descriptor.
<b>Action</b>	Edit the WSDL document to include a valid port.

---

<b>ISS.0092.9108E</b>	<b>SimpleType {0} does not have base type.</b>
<b>Explanation</b>	In the WSDL or WSD document the specified simple type definition does not have a base type.
<b>Action</b>	Edit the simple type definition in the WSDL document to include a base data type.
<b>ISS.0092.9109E</b>	<b>The system cannot find {0}</b>
<b>Explanation</b>	The Web service descriptor cannot be created because the specified WSDL file cannot be found on the file system.
<b>Action</b>	Make sure that the specified WSDL file exists on the file system or that the provided URL for the WSDL file is correct.
<b>ISS.0092.9111E</b>	<b>Element must be a document type, service, or specification</b>
<b>Explanation</b>	The specified source from which Integration Server is to create an XML Schema definition is not a document type, service, or specification.
<b>Action</b>	Make sure the specified source is a document type, service, or specification.
<b>ISS.0092.9112E</b>	<b>The service does not have a valid signature</b>
<b>Explanation</b>	The service signature from which Integration Server is to create the XML Schema definition is not valid.
<b>Action</b>	Make sure the specified service has a valid signature that describes the expected names and data types for the inputs and outputs to the service.
<b>ISS.0092.9113E</b>	<b>Unknown ExtensibleElement "{0}"</b>
<b>Explanation</b>	The portType element in the WSDL document is missing required extensions (document OR operation).
<b>Action</b>	Edit the WSDL document to include the required extension in the that the portType element.
<b>ISS.0092.9114E</b>	<b>Invalid WSDL; 'arrayType' attribute value {0} is malformed. Invalid QName {1}</b>
<b>Explanation</b>	The supplied WSDL document is invalid because the specified arrayType attribute value contains the specified invalid QName.
<b>Action</b>	Edit the WSDL document to supply a valid QName for the arrayType attribute value.

<b>ISS.0092.9115E</b>	<b>Invalid WSDL; 'arrayType' attribute value {0} is malformed. It should contain characters '[' and ']'</b>
<b>Explanation</b>	The supplied WSDL document is invalid because the specified arrayType attribute value does not contain the opening and/or closing bracket characters '[' and ']'.
<b>Action</b>	Edit the WSDL by correcting the arrayType attribute value so that it includes the opening and closing bracket characters '[' and ']'.
<b>ISS.0092.9116E</b>	<b>Invalid WSDL; 'arrayType' attribute value {0} is malformed. Invalid rank size {1}</b>
<b>Explanation</b>	The supplied WSDL document is invalid because the specified arrayType attribute value contains an invalid rank size. The rank size should follow the pattern: "(\[\[,*\]\])*\[\(((\d+)*\d+)?\]\]" OR "(\[\[,*\]\])*" OR "(\[\[\(((\d+)*\d+)?\]\])*" )
<b>Action</b>	Edit the WSDL document to specify a valid rank size for the attribute. A valid rank size follows this pattern: "(\[\[,*\]\])*\[\(((\d+)*\d+)?\]\]" OR "(\[\[,*\]\])*" OR "(\[\[\(((\d+)*\d+)?\]\])*" )
<b>ISS.0094.0001E</b>	<b>Repository Exception: {0}</b>
<b>Explanation</b>	During initialization, Integration Server could not initialize the Repository Manager. The most likely reason is that the repository4.cnf file is corrupted.
<b>Action</b>	Check the directory that contains the repository files. By default, they are located at <IntegrationServer_dir>\WmRepository4\ directory. Try renaming the repository4.cnf file manually (to something like "damagedrepository4.cnf") or deleting it, then try re-initializing Integration Server. If that does not work, contact Software AG Global Support.
<b>ISS.0094.0003E</b>	<b>RepositoryManager detected damaged data files : {0}</b>
<b>Explanation</b>	During initialization, Integration Server detected that some of the data files that make up the repository were corrupted. In a recovery attempt, Integration Server tried to open the files, but was unable to.
<b>Action</b>	Check the directory that contains the data files. By default, the data files are located at <IntegrationServer_dir>\WmRepository4\ directory. You can also look in the repository4.cnf file for the location of the data files. Try manually renaming the files (to something like "damagedFSDData00000000") or deleting them, then try re-initializing Integration Server. If that does not work, contact Software AG Global Support.
<b>ISS.0094.0004E</b>	<b>RepositoryManager Exception renaming damaged data files : {0}</b>
<b>Explanation</b>	During initialization, Integration Server detected that some of the data files that make up the repository were corrupted. In an attempt to correct the problem, Integration Server tried to rename the damaged files before creating new ones but encountered an exception when trying to rename the damaged files.
<b>Action</b>	Check the directory that contains the data files. By default, the data files are located at <IntegrationServer_dir>\WmRepository4\ directory. You can also look in the repository4.cnf file for the location of the data files. Try manually renaming the files

(to something like "damagedFSDData00000000") or deleting them, then try re-initializing Integration Server. If that does not work, contact Software AG Global Support.

<b>ISS.0094.0006E</b>	<b>RepositoryManager Exception creating new data files : {0}</b>
<b>Explanation</b>	During initialization, Integration Server detected that some of the data files that make up the repository were corrupted. In an attempt to correct the problem, Integration Server renamed the damaged files and tried to create new ones but encountered an exception when trying to create new files. Possible reasons for the problem are that the file system does not have enough space for the data files or that Integration Server does not have write access to the directory that contains the files.
<b>Action</b>	Check the directory that contains the data files. By default, the data files are located at <IntegrationServer_dir>\WmRepository4\ directory. You can also look in the repository4.cnf file for the location of the data files. Make sure the file system has space for the files and that Integration Server has write access to the directory.
<b>ISS.0095.0006E</b>	<b>AuditLogManager: Exception auditing start of service {0}: {1}</b>
<b>Explanation</b>	An error was encountered while audit logging the start of a service invocation.
<b>Action</b>	Set the logging level of the "0095 Audit Log Manager" logging facility to TRACE on the Settings > Logging > Server Logger page of the Integration Server Administrator. If the error recurs, see the error details in the server log.
<b>ISS.0095.0007E</b>	<b>AuditLogManager: Exception auditing end of service {0}: {1}</b>
<b>Explanation</b>	An error was encountered while audit logging the start of a service invocation.
<b>Action</b>	Set the logging level of the "0095 Audit Log Manager" logging facility to TRACE on the Settings > Logging > Server Logger page of the Integration Server Administrator. If the error recurs, see the error details in the server log.
<b>ISS.0095.0008E</b>	<b>AuditLogManager: Exception auditing error for service {0}: {1}</b>
<b>Explanation</b>	An error was encountered while audit logging a service invocation.
<b>Action</b>	Set the logging level of the "0095 Audit Log Manager" logging facility to TRACE on the Settings > Logging > Server Logger page of the Integration Server Administrator. If the error recurs, see the error details in the server log.
<b>ISS.0095.0009E</b>	<b>AuditLogManager: Audit runtime interface object cannot be initialized: {0}</b>
<b>Explanation</b>	The Integration Server Audit Log Manager encountered an internal error.
<b>Action</b>	Contact Software AG Global Support.

- ISS.0095.0010E      AuditLogManager Runtime Exception: {0} publishing log entry {1}. {2}**  
**Explanation**      An error was encountered while audit logging a service error.  
**Action**              See the detailed error message and stack trace that follow. If audit logging to a database, you may have to work with your DBA to diagnose a database problem.
- ISS.0095.0014E      Audit Logging initialized with errors.**  
**Explanation**      An error was encountered while starting the audit logging facility.  
**Action**              Set the logging level of the "0095 Audit Log Manager" logging facility to TRACE on the Settings > Logging > Server Logger page of the Integration Server Administrator. If the error recurs, contact Software AG Global Support and provide them with the server log.
- ISS.0095.0015W      Database at URI {0} is not available.**  
**Explanation**      An audit logger is configured to write log messages to a database, but the database is not available.  
**Action**              Go to the Settings > JDBC Pools page of the Integration Server Administrator and verify that the ISCoreAudit functional alias is correct. For process auditing, check the ProcessAudit functional alias. Use the Test button to check that Integration Server can reach the configured database.
- ISS.0095.0016W      Changing destination of queue {0} from database {1} to file system {2}.**  
**Explanation**      An asynchronous audit logger is configured to write log messages to a database, but the database is not available. The audit logger is being reconfigured to write audit messages to the file system.  
**Action**              Go to the Settings > JDBC Pools page of the Integration Server Administrator and verify that the ISCoreAudit functional alias is correct. For process auditing, check the ProcessAudit functional alias. Use the Test button to check that Integration Server can reach the configured database.
- ISS.0095.0017W      Changing destination of logger {0} from database {1} to file system {2}.**  
**Explanation**      A synchronous audit logger is configured to write log messages to a database, but the database is not available. The audit logger is being reconfigured to write audit messages to the file system.  
**Action**              Go to the Settings > JDBC Pools page of the Integration Server Administrator and verify that the ISCoreAudit functional alias is correct. For process auditing, check the ProcessAudit functional alias. Use the Test button to check that Integration Server can reach the configured database.

---

<b>ISS.0095.0018W</b>	<b>Cannot change destination of logger {0} to file system.</b>
<b>Explanation</b>	An audit logger is configured to write log messages to a database, but the database is not available. It is not possible to write messages for this audit logger to the file system because the messages contain binary data. This audit logger is being disabled.
<b>Action</b>	Go to the Settings > JDBC Pools page of the Integration Server Administrator and verify that the ISCoreAudit functional alias is correct. For process auditing, check the ProcessAudit functional alias. Use the Test button to check that Integration Server can reach the configured database.
<b>ISS.0095.0019W</b>	<b>Disabling the logger {0}.</b>
<b>Explanation</b>	The audit logger is being disabled. This is probably happening because the logger's database is not available.
<b>Action</b>	Go to the Settings > JDBC Pools page of the Integration Server Administrator and verify that the ISCoreAudit functional alias is correct. For process auditing, check the ProcessAudit functional alias. Use the Test button to check that Integration Server can reach the configured database.
<b>ISS.0095.0020W</b>	<b>Audit Logging Initialization: The {0} JDBC Pool Alias was not configured with enough connections. The Maximum Connections have been increased to {1}.</b>
<b>Explanation</b>	The auditing system needed more database connections than were provided in the JDBC Pools configuration. The configuration was changed as needed.
<b>Action</b>	No action is required.
<b>ISS.0095.0021E</b>	<b>ERROR: Audit Logging Initialization: The {0} JDBC Pool Alias was not configured with enough connections. Unable to automatically increase the Maximum Connections setting.</b>
<b>Explanation</b>	The auditing system needed more database connections than were provided in the JDBC Pools configuration. An attempt was made to automatically increase the number of connections, but it failed.
<b>Action</b>	Go to the Settings > JDBC Pools page of the Integration Server Administrator and increase the Max Connections setting for the ISCoreAudit functional alias. Restart Integration Server.
<b>ISS.0095.0022W</b>	<b>Audit Logging Initialization: Unable to verify the Max Connections setting for the Audit Logging database.</b>
<b>Explanation</b>	Integration Server encountered an error while checking the Max Connection setting for the ISCoreAudit functional alias.
<b>Action</b>	If the auditing system is slow or unresponsive, go to the Settings > JDBC Pools page of the Integration Server Administrator and increase the Max Connections setting for the ISCoreAudit functional alias.

**ISS.0095.0024W**      **The value for watt.server.audit.logDir has been changed and does not identify an existing directory that Integration Server can write to. File-based audit logs will continue to be written to the {0} directory.**

**Explanation**      The audit log directory was not changed because the watt.server.audit.logDir parameter refers to a directory that either does not exist or Integration Server does not have permission to write to. As a result, Integration Server will write file-based audit logs to the last valid directory specified.

**Action**      Go to the Settings > Extended page in the Integration Server Administrator and change the value for the watt.server.audit.logDir parameter. Specify a directory that exists on the server and that Integration Server can write to. You can specify the full path name, or a relative path in relation to the Integration Server.

**ISS.0095.0025W**      **The {0} file was not found and is being created.**

**Explanation**      Upon start up, Integration Server could not find the specified file, for which {0} is a placeholder, in the following directory:  
IntegrationServer/instances/instanceName/config/auditing where instanceName is the Integration Server instance that was started. Integration Server will create the file. The file specifies which database errors are considered transient.

**Action**      If the specified file has been modified, restore the file from a backup, if possible. If the file has not been modified, no action is necessary.

**ISS.0095.0026W**      **The {0} file was not found and is being created. The audit logging system is using default settings.**

**Explanation**      Upon start up, Integration Server could not find the specified file, for which {0} is a placeholder, in the following directory:  
IntegrationServer/instances/instanceName/config/auditing where instanceName is the Integration Server instance that was started. The specified file contains the configured auditing logging settings. Integration Server will create the file, which will contain the default auditing logging settings.

**Action**      If the specified file has been modified, restore the file from a backup or use Integration Server Administrator to restore the configured audit logging settings . If the file has not been modified (that is, you have not modified the audit logging configuration), no action is necessary.

**ISS.0095.0030I**      **Audit Logging: The {0} has entered fail-fast mode for messaging connection alias {1}.**

**Explanation**      The specified audit logger has entered queue fail-fast mode lost the connection to the Universal Messaging server established through indicated messaging connection alias. The audit logger will write log entries to the internal audit logging queue instead of the Universal Messaging

**Action**      Make sure that Universal Messaging server is up and running and that there are no network related problems between Integration Server and Universal Messaging server.

<b>ISS.0095.0031I</b>	<b>Audit Logging: The {0} has exited fail-fast mode for the messaging connection alias {1}.</b>
<b>Explanation</b>	The specified audit logger has exited queue fail-fast mode because connectivity to the Universal Messaging server has been restored. The audit logger writes new log entries to the Universal Messaging queue.
<b>Action</b>	None.
<b>ISS.0095.0032I</b>	<b>Audit Logging: Session for messaging connection alias {0} disconnected.</b>
<b>Explanation</b>	The session on a Universal Messaging server created using the specified messaging connection alias has disconnected. Any audit loggers that use the specified messaging connection alias to write log entries to a Universal Messaging queue will enter queue fail-fast mode and begin writing log entries to the internal audit logging queue.
<b>Action</b>	Make sure that Universal Messaging server is up and running and that there are no network related problems between Integration Server and Universal Messaging server.
<b>ISS.0095.0033I</b>	<b>Audit Logging: Reestablished connection with session for messaging connection alias {0}.</b>
<b>Explanation</b>	The session on a Universal Messaging server created using the specified messaging connection alias has been re-established. Any audit loggers that use the specified messaging connection alias will exit queue fail-fast mode and resume writing new log entries to the Universal Messaging queue
<b>Action</b>	None.
<b>ISS.0095.0037E</b>	<b>Pool with messaging connection alias name {0} does not exist.</b>
<b>Explanation</b>	For an audit logger configured to use Universal Messaging as the queue provider, Integration Server requested a session from a pool for a Universal Messaging connection alias that does not exist. The Universal Messaging connection alias specified in the Connection Alias field for the logger does not exist.
<b>Action</b>	Make sure the logger specifies an existing Universal Messaging connection alias for the Connection Alias field.
<b>ISS.0095.0038W</b>	<b>watt.server.audit.um.sessionPool.min.value is invalid {0}. Value must be an integer greater than zero. Integration Server will use default value of 2.</b>
<b>Explanation</b>	The watt.server.audit.um.sessionPool.min value is invalid because it is not an integer greater than zero. Integration Server will use the default value of 2 until a valid value is specified.
<b>Action</b>	Set watt.server.audit.um.sessionPool.min to an integer greater than 0 (zero) but less than or equal to the value of watt.server.audit.um.sessionPool.max.

**ISS.0095.0039W**      **watt.server.audit.um.sessionPool.max.value is invalid {0}. Value must be an integer greater than zero. Integration Server will use default value of 10.**

**Explanation**      The watt.server.audit.um.sessionPool.max value is invalid because it is not an integer greater than zero. Integration Server will use the default value of 10 until a valid value is specified.

**Action**      Set watt.server.audit.um.sessionPool.max to an integer greater than 0 (zero) but greater than or equal to watt.server.audit.um.sessionPool.min.

**ISS.0095.0040W**      **Invalid watt.server.audit.um.sessionPool.min value {0} and watt.server.audit.um.sessionPool.max value {1}. watt.server.audit.um.sessionPool.min must be less than or equal to watt.server.audit.um.sessionPool.max. Integration Server will use the default values of 2 and 10, respectively.**

**Explanation**      The watt.server.audit.um.sessionPool.min value and watt.server.audit.um.sessionPool.max value are invalid because the watt.server.audit.um.sessionPool.min value is greater than the watt.server.audit.um.sessionPool.max value. Integration Server will use the default values of 2 and 10, respectively, until valid values are specified

**Action**      Set watt.server.audit.um.sessionPool.mim and watt.server.audit.um.sessionPool so that both are integers greater than 0 (zero) and watt.server.audit.um.sessionPool.min value is less than or equal to the watt.server.audit.um.sessionPool.max value.

**ISS.0095.9998E**      **AuditLogManager Exception: {0}**

**Explanation**      An error was encountered using the audit logging database.

**Action**      Try logging again. It may be a transient error. If the error persists, examine the detailed message and stack trace that follow. You may need to work with your DBA to diagnose a problem with the audit logging database.

**ISS.0096.0001E**      **JDBCConnectionManager: initialization failed for {0} functional alias, check configuration.**

**Explanation**      Unable to initialize the functional alias. Integation Server will not be able to connect to the database for this functional alias.

**Action**      Go to the Settings > JDBC Pools page of the Integration Server Administrator and verify that the functional alias settings are correct. Use the Test button to check that Integration Server can reach the configured database.

<b>ISS.0096.0002W</b>	<b>JDBCConnectionManager: creating Embedded Pool Alias for {0}.</b>
<b>Explanation</b>	The connection pool for the embedded database is being created.
<b>Action</b>	No action is required.
<b>ISS.0096.0004E</b>	<b>JDBCConnectionManager: embedded database objects not created: {0}</b>
<b>Explanation</b>	Unable to create tables, keys, or other database objects while initializing the embedded database.
<b>Action</b>	Verify that Integration Server has write access to the file system. If the problem persists, contact Software AG Global Support.
<b>ISS.0096.0005E</b>	<b>JDBCConnectionManager: initialization failed with exception {0}</b>
<b>Explanation</b>	Initialization of the JDBC Connection Manager failed.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0096.0010E</b>	<b>The DataStoreDBListener has detected a bad connection for the {0} JDBC functional alias. The JDBC connection pool is being reinitialized</b>
<b>Explanation</b>	A database connection being used by the pub.storage services is no longer functional. This often indicates a network interruption has broken all existing database connections. Integration Server is reinitializing the pool of connections for the JDBC functional alias. If network connectivity has been restored, the pub.storage services may continue to be used without interruption. If network connectivity has not been restored, the pub.storage services will continue to fail until it is restored.
<b>Action</b>	If the network interruption is transient and connectivity to the database is restored quickly, no immediate action is required. If the network interruption persists, or if transient network interruptions continue to occur, this indicates a problem in the network or in the networking implementation of the host that Integration Server is running on. Seek assistance from a networking expert in your company to investigate and resolve this problem.
<b>ISS.0097.0004E</b>	<b>Failed to lock Repository entry {0}</b>
<b>Explanation</b>	Integration Server encountered an internal error when trying to lock the repository.
<b>Action</b>	If the error continues, contact Software AG Global Support.
<b>ISS.0097.0006I</b>	<b>Messaging synchronizer shutdown</b>
<b>Explanation</b>	The Broker Synchronizer has shut down.
<b>Action</b>	No action is required. This message is displayed when Integration Server is shutting down.

<b>ISS.0097.0012E</b>	<b>Messaging Synchronizer cannot open repository for sync-state storage</b>
<b>Explanation</b>	An error was encountered while trying to open WmRepository4.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0097.0013E</b>	<b>Messaging Synchronizer cannot update sync state; cannot remove sync data from repository: {0}</b>
<b>Explanation</b>	An error occurred while removing sync state data from WmRepository4.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0097.0014E</b>	<b>Messaging Synchronizer cannot update sync state; document type not specified</b>
<b>Explanation</b>	The document type to be synchronized was not specified; the nsName input variable is null.
<b>Action</b>	Specify a document type name for nsName.
<b>ISS.0097.0015D</b>	<b>Messaging Synchronizer cannot update sync state; document type {0} has no sync state</b>
<b>Explanation</b>	The requested document type has no sync state.
<b>Action</b>	No action is required.
<b>ISS.0097.0016E</b>	<b>Messaging Synchronizer cannot perform sync; Integration Server cannot connect to provider</b>
<b>Explanation</b>	Synchronization cannot occur because Integration Server cannot connect to the message provider.
<b>Action</b>	Make sure the message provider is running and that the message connection alias is enabled in Integration Server Administrator.
<b>ISS.0098.0003U</b>	<b>Exception occurred while decoding Broker Document {0} : {1}</b>
<b>Explanation</b>	Integration Server failed to decode the document received from the Broker. The document may be corrupt.
<b>Action</b>	Check the publisher of the document. Consider redelivering the document from the Broker.

---

<b>ISS.0098.0010U</b>	<b>Exception initializing Dispatcher configuration from file: {0}</b>
<b>Explanation</b>	Integration Server encountered the indicated exception while trying to initialize the Dispatcher. This is a serious internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0098.0023E</b>	<b>Document Router for Consumer Queue:{0} encountered error: {1}</b>
<b>Explanation</b>	Integration Server encountered an error while routing a document to a Broker.
<b>Action</b>	The action to take depends on the exception that occurred. Review the returned exception for more guidance.
<b>ISS.0098.0024U</b>	<b>No Trigger available for incoming Document {0}. Rejecting Document</b>
<b>Explanation</b>	Integration Server failed to deliver the incoming document to the trigger because there is not a trigger that subscribes to the document. The intended trigger may be disabled or deleted.
<b>Action</b>	Examine the existing triggers. If a trigger that subscribes to the document is disabled, enable it and ask the publisher to re-publish or deliver the document.
<b>ISS.0098.0025E</b>	<b>Document {0} from store {1} exceeded Redelivery Count.</b>
<b>ISS.0098.0029U</b>	<b>Exception while doing Request Reply: {0}</b>
<b>Explanation</b>	Integration Server encountered an internal error while executing a request reply.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0098.0030E</b>	<b>{0} received duplicate document(s). Error {1}</b>
<b>Explanation</b>	Integration Server determined that it received duplicate documents from a publisher.
<b>Action</b>	If you determine that the Integration Server did receive duplicate messages, check the publishing source to learn the source of the problem.  In some cases, Integration Server did not really receive duplicates. For example, two documents might use the same tracking ID but have different content. If Integration Server did not receive a duplicate document, try resubmitting the document using webMethods Monitor.

<b>ISS.0098.0031E</b>	<b>Consumer:{0} unable to persist Document(s) to Document Store. Error: {1}</b>
<b>Explanation</b>	Integration Server failed to write a document to the transient store. A likely cause is that the Integration Server JVM has run out of memory.
<b>Action</b>	Try increasing the heap size of the JVM. The heap size indicates how much memory is allotted for server processes.
<b>ISS.0098.0033E</b>	<b>Error while shutting down Dispatcher: {0}</b>
<b>Explanation</b>	Integration Server encountered an internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0098.0036U</b>	<b>{0} encountered Transport Exception: {1}</b>
<b>Explanation</b>	Integration Server failed to publish the document because of one of the following:  1) The Broker is temporarily unavailable.  2) The client does not have the canPublish permission for its associate Broker document.  3) The document being published does not conform to the Broker document on the Broker. This may be because the document was not synchronized with the one on the Broker.  4) An internal error occurred.
<b>Action</b>	Do one of the following:  1) Check the Broker status. If the Broker or network connection is temporarily down, wait until they are up to re-publish the document.  2) Using the Broker administration tool, check the publication permissions of the client group to which the trigger client belongs. Make sure that the client is allowed to publish the document.  3)Synchronize the document and make sure that the document being published matches its associate Broker document type.  4) If the previous actions fail to correct the problem, contact Software AG Global Support.
<b>ISS.0098.0038E</b>	<b>{0} handling invalid Document. Exception: {1}</b>
<b>Explanation</b>	Integration Server encountered an error while processing a document. Specifically, the document does not have a corresponding publishable document type on the Integration Server or the publishable document type does not have a matching schema.
<b>Action</b>	Make sure that the appropriate document types and schemas for the document exist on the Integration Server.

---

<b>ISS.0098.0041E</b>	<b>Unable to connect to Broker. Starting to poll</b>
<b>ISS.0098.0044U</b>	<b>Exception while interacting with the Document Store name:{0} Problem:{1}</b>
<b>Explanation</b>	Integration Server encountered an internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0098.0045U</b>	<b>Unrecoverable Exception while initializing the Dispatcher: {0}</b>
<b>Explanation</b>	Integration Server encountered the indicated exception while trying to initialize the Dispatcher. This is an internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0098.0047E</b>	<b>Connection to Broker unavailable. Unable to create transport for Trigger:{0}.</b>
<b>ISS.0098.0048U</b>	<b>Unable to remove subscription for Publishable Document {0} from transport:{1}. If connected, please remove subscription from {2} manually.</b>
<b>Explanation</b>	Integration Server failed to remove the document type subscription before unregistering the trigger. The Broker may be unavailable.
<b>Action</b>	In the Broker Administrator, check the status of the Broker and the network connection. If one or both are down, then you will need to manually remove the stale subscriptions for the trigger when they are back up.
<b>ISS.0098.0049U</b>	<b>Exception:{0} while executing trigger. {1} Document for TriggerStore:{2}.</b>
<b>Explanation</b>	Integration Server failed to execute the trigger. This indicates an internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0098.0055U</b>	<b>Exception during attempt to register Trigger: {0}</b>
<b>Explanation</b>	Integration Server failed to register the trigger. This indicates an internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0098.0056U</b>	<b>Unable to acknowledge Document {0} to transport for Trigger {1}. Exception:{2}</b>
<b>Explanation</b>	Integration Server encountered an internal error while acknowledging the document to the transport for the trigger.
<b>Action</b>	Contact Software AG Global Support.

<b>ISS.0098.0057U</b>	<b>Unable to delete Document Store for Trigger:{0}. Exception:{1}</b>
<b>Explanation</b>	Integration Server encountered an internal error while deleting the document store associated with the trigger.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0098.0058E</b>	<b>Stopping delivery of {1} to trigger {0} to prevent infinite loop.</b>
<b>ISS.0098.0059U</b>	<b>Exception while shutting down the Document Stores:{0}.</b>
<b>Explanation</b>	Integration Server encountered a serious internal error while shutting down.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0098.0060U</b>	<b>Exception while saving Dispatcher configuration :{0}.</b>
<b>Explanation</b>	Integration Server encountered an exception while trying to save Dispatcher configuration information to the dispatch.cnf file in the <IntegrationServer_dir>/config directory.
<b>Action</b>	If the dispatch.cnf file is set to read-only, change it to read/write. If the file is not set to read-only, this error indicates a serious internal error and you should contact Software AG Global Support.
<b>ISS.0098.0062E</b>	<b>{0} encountered Exception: {1}</b>
<b>ISS.0098.0073U</b>	<b>ControlledPublishOnSuccess max exceeded while processing {0}</b>
<b>Explanation</b>	Integration Server failed to publish a document because the maximum concurrent publish-on-success value was exceeded.
<b>Action</b>	Do one of the following:  1) On the Integration Server, increase the "concurrent publish on success" setting by editing the "watt.server.control.maxPublishOnSuccess" property.  2) Decrease the number of concurrent publish operations in the service.
<b>ISS.0098.0074E</b>	<b>Outbound msg store max exceeded, services blocking. Start broker to drain store.</b>

---

<b>ISS.0098.0075E</b>	<b>Insufficient memory while decoding event:{0} for {1}.</b>
<b>Explanation</b>	Integration Server does not have sufficient memory to decode the documents being retrieved from the Broker. Integration Server will attempt to decode the documents one more time.
<b>Action</b>	Check the size of the documents sent by the Broker and consider increasing the heap size of the Integration Server's JVM.
<b>ISS.0098.0076U</b>	<b>Unable to decode events for {0}. Please check JVM Heap size and/or size of Documents on the Broker.</b>
<b>Explanation</b>	Integration Server does not have sufficient memory to decode the documents from the Broker.
<b>Action</b>	Check the document size sent by the Broker and consider increasing the heap size of the JVM used by Integration Server.
<b>ISS.0098.0077E</b>	<b>Dispatcher out of memory. Retrying operation.</b>
<b>Explanation</b>	Integration Server does not have sufficient memory to continue its document publishing operations. Integration Server will attempt to process this message again.
<b>Action</b>	Consider increasing the heap size of the JVM used by Integration Server.
<b>ISS.0098.0078E</b>	<b>Dispatcher out of memory. Operation failed. Check error log.</b>
<b>Explanation</b>	Integration Server does not have sufficient memory to continue its document publishing operations. Integration Server has exceeded its retry count, and an exception will be thrown.
<b>Action</b>	Consider increasing the heap size of the JVM used by Integration Server.
<b>ISS.0098.0079E</b>	<b>Dispatcher out of memory. Retry succeeded.</b>
<b>Explanation</b>	Integration Server successfully retried a publishing operation after an OutOfMemory error prevented the operation from working the first time.
<b>Action</b>	If the Integration Server continues to issue this message, check the JVM Heap size and/or size of Documents on the Broker. The Trigger configuration (possibly the acknowledgment queue size) may need to be adjusted.
<b>ISS.0098.0080U</b>	<b>Insufficient memory while persisting messages for Trigger: {0}.</b>
<b>Explanation</b>	Integration Server does not have sufficient memory to persist the documents to the document store for the trigger.
<b>Action</b>	Check the size of the documents being persisted and consider increasing the heap size of the JVM used by Integration Server.

<b>ISS.0098.0081U</b>	<b>Insufficient memory while persisting message: {1} for Trigger: {0}.</b>
<b>Explanation</b>	Integration Server does not have sufficient memory to persist a single document to the document store for the trigger.
<b>Action</b>	Check the size of the document being persisted and consider increasing the heap size of the JVM used by Integration Server.
<b>ISS.0098.0082U</b>	<b>Unable to persist Document: {0} to Document Store: {1}. Exception: {2}</b>
<b>Explanation</b>	Integration Server failed to persist the document to the document store. This indicates a serious internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0098.0083U</b>	<b>Unable to acknowledge Document: {0} for Trigger Store: {1}. Insufficient memory.</b>
<b>Explanation</b>	Integration Server does not have sufficient memory to acknowledge the document to the document store.
<b>Action</b>	Check the size of the document being persisted and consider increasing the heap size of the JVM used by Integration Server.
<b>ISS.0098.0084U</b>	<b>Exception:{0} during Trigger dispatching.</b>
<b>Explanation</b>	Integration Server encountered an internal error while which processing a document destined for an individual trigger.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0098.0085U</b>	<b>Unable to remove all subscriptions for transport:{0} while unregistering trigger. If connected, please remove subscription from {1} manually.</b>
<b>Explanation</b>	Integration Server failed to remove all stale subscriptions before unregistering the trigger. The Broker may be unavailable.
<b>Action</b>	In the Broker Administrator, check the status of the Broker and the network connection. If one or both are down, then you will need to manually remove the stale subscriptions for the trigger when they are back up.
<b>ISS.0098.0086U</b>	<b>Unable to remove all subscriptions for transport:{0} before registering trigger. If connected, please remove stale subscriptions from {1} manually.</b>
<b>Explanation</b>	Integration Server failed to remove all stale subscriptions before registering the trigger. The Broker may be unavailable.
<b>Action</b>	In the Broker Administrator, check the status of the Broker and the network connection. If one or both are down, then you will need to manually remove the stale subscriptions for the trigger when the Broker and network are back up.

<b>ISS.0098.0087E</b>	<b>Duplicate document of type:{0} with Id:{1} received for trigger:{2}.</b>
<b>ISS.0098.0089U</b>	<b>Transaction size (no of documents * size of documents) is too large for Document Store: {0}. Please reduce capacity of Trigger and /or increase initial size of Document Stores.</b>
<b>Explanation</b>	The Integration Server failed to persist documents because the document store did not contain enough space. Documents received from the Broker are persisted in the triggers' persistent stores.
<b>Action</b>	In the Integration Server Administrator, click Settings>Resources>Document Stores. On this page, consider increasing the initial size of the document store. Also, consider reducing the number of triggers that subscribe to the document.
<b>ISS.0098.0090U</b>	<b>Size of Document: {0} for Document Store: {1} is too large. Server is unable to persist. Audit logging the document.</b>
<b>Explanation</b>	Integration Server failed to persist a document because the document store did not contain enough space.
<b>Action</b>	In the Integration Server Administrator, click Settings>Resources>Document Stores. On this page, consider increasing the initial size of the document store.
<b>ISS.0098.0096I</b>	<b>Integration Server is now connected to a Broker that tracks document redelivery counts. Restart the Integration Server to make use of redelivery counts in duplicate detection.</b>
<b>Explanation</b>	Integration Server connects to a version of the Broker that supports redelivery count. Previously it was connected to a Broker that did not support this feature.
<b>Action</b>	Restart Integration Server so that it can take advantage of the redelivery count feature supported by the Broker.
<b>ISS.0098.0100</b>	<b>Copying of documents to trigger store started.</b>
<b>ISS.0098.0103S</b>	<b>{0} not initialized. Adjust document store settings and restart server.</b>
<b>Explanation</b>	Integration Server was unable to create the Document Store on disk. The Document Store is essential for Integration Server functioning, therefore startup terminates.
<b>Action</b>	Check to see if there is enough disk space on the drive where the Document Store is being created (usually under <IS_SERVER_ROOT>\DocumentStore directory). If there is sufficient disk space, then check to see if the dispatch.cnf file under <IS_SERVER_ROOT>\config directory is corrupted. If the problem persists despite a re-start, contact Software AG Global Support.

**ISS.0098.0104I**      **Integration Server is now connected to a Broker that does not track document redelivery counts. Restart the Integration Server so that duplicate detection does not expect document redelivery counts.**

**Explanation**      Integration Server connects to a version of the Broker that does not support the redelivery count. Previously it was connected to a Broker that does support this feature.

**Action**              Restart the Integration Server so that its duplicate detection mechanism does not expect redelivery counts to be present in documents delivered by the Broker.

**ISS.0098.0105E**      **Unable to fully build comparable trigger: {0}**

**Explanation**      During Cluster Synchronization, Integration Server was unable to compare trigger nodes across all the nodes in the cluster. The most likely cause is that one or more triggers are not completely configured. Cluster Synchronization makes sure that changes made to a trigger's configuration on one Integration Server are propagated to other servers in the cluster. If an Integration Server is configured for Cluster Synchronization, this process runs when an administrator makes a trigger configuration change through the Integration Server Administrator or when a user-written service calls one of the pub.trigger:\* services.

**Action**              Using the development tool, check the trigger configuration. After correcting the problem, retry the task you were performing when the error occurred.

**ISS.0098.0106**      **Trigger comparison failed: trigger = {0}; parameter = {1}; local value = {2}; remote value = {3}.**

**ISS.0098.0107E**      **Error occurred during cluster invoke: Alias = {0}; Service = {1}; Exception = {2}.**

**Explanation**      During Cluster Synchronization, Integration Server threw an exception while invoking a service on a remote node in the cluster. Cluster Synchronization makes sure that changes made to a trigger's configuration on one Integration Server are propagated to other servers in the cluster. If an Integration Server is configured for Cluster Synchronization, this process runs when an administrator makes a trigger configuration change through the Server Administrator or when a user-written service calls one of the pub.trigger:\* services.

**Action**              The action you take depends on the exception issued. Look at the exceptionMessage for specific information.

**ISS.0098.0108**      **Serial trigger {0} has been automatically suspended due to an exception: {1}.**

---

ISS.0098.0109	Unable to establish secure connection to Broker. Password needed for SSL connection to Broker:{0}.
ISS.0098.0112	Trigger Resource Monitor now monitoring resource availability for trigger "{0}".
ISS.0098.0113	Trigger Resource Monitor invoked "{0}". Status of resource is "available".
ISS.0098.0114	Trigger Resource Monitor invoked "{0}". Status of resource is "not available".
ISS.0098.0115	Trigger Resource Monitor has resumed trigger "{0}".
ISS.0098.0116	Trigger Resource Monitor encountered an exception while attempting to resume trigger "{0}": {1}
ISS.0098.0117	The ISInternal functional alias is not configured properly on the JDBC Pools page. It is required in order to create and manage AND and XOR trigger joins. Assign a valid database pool and restart the Integration Server.
ISS.0098.0118	The ISInternal functional alias on the JDBC Pools page must be configured to use an external database in order to create and manage AND and XOR trigger joins.
ISS.0098.0119	Trigger Retry Failure occurred for trigger "{0}" : "{1}" . This trigger is being suspended and the message is being rolled back to the Broker because the Audit Logging subsystem also failed: "{2}"
ISS.0098.0120	The default Broker was detected while initializing the dispatch.cnf file. Broker Settings will automatically be enabled.
ISS.0098.0121	The default Broker was not detected while initializing the dispatch.cnf file. Broker Settings will automatically be disabled.

- ISS.0098.0122**      **The subscription for publishable document {0} will not be removed or recreated because the client prefix {1} used by the Broker connection for trigger {2} may be shared by multiple clients. If required, please remove subscription from Broker manually.**
- ISS.0098.0123**      **The subscription for publishable document {0} will not be removed or recreated because the client prefix {1} used by the Broker connection for trigger {2} may be shared by multiple clients. If required, please remove subscription from Broker manually.**
- ISS.0098.0124E**      **A username and password are required for Username/Password authentication.**  
**Explanation**      Authentication credentials were not specified.  
**Action**              Provide a username and password.
- ISS.0098.9002U**      **Required property missing for creating {0} transport: {1}**  
**Explanation**      Integration Server could not read properties from the  
 <IntegrationServer\_dir>\config\dispatch.cnf file. The file may be corrupt.  
**Action**              Examine the dispatch.cnf file to make sure that it is not corrupt and that the  
 "clientGroupName" and "brokerHost" fields exist. If the file is corrupt, rename it and  
 restart Integration Server. After you do this, you can re-configure the Broker Settings  
 using the Integration Server Administrator.
- ISS.0098.9005**      **Invalid connections properties for creating {0}**
- ISS.0098.9006U**      **No matching Document Type exists for {0}**  
**Explanation**      A pub.publish\* service returned an error because the document specified in the  
 "documentTypeName" parameter does not exist on the Integration Server.  
**Action**              Examine the input for the "documentTypeName" parameter. Make sure that the  
 parameter specifies the fully qualified name of the document type for which you want  
 to publish or deliver an instance. Keep in mind that document type names are  
 case-sensitive. Additionally, ensure that the specified document type exists on  
 Integration Server.
- ISS.0098.9007E**      **Data does not conform to the Publishable Document Type {0} errors: {1}**  
**Explanation**      A pub.publish\* service issued an error because the IData input for the "document"  
 parameter does not conform to the document type specified in the  
 "documentTypeName" parameter.  
**Action**              Examine the validation error message and the IData object passed to the "document"  
 parameter. Make sure that it conforms to the document type specified in the  
 "documentTypeName" parameter.

---

<b>ISS.0098.9008U</b>	<b>No registered Transport for the given id: {0}</b>
<b>Explanation</b>	Integration Server failed to create a subscription to the publishable document type specified in a trigger. The transport information does not exist, which indicates an internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0098.9009</b>	<b>Certificate file require for using SSL encryption</b>
<b>ISS.0098.9010E</b>	<b>No waiting thread for Document Id: {0}. Requestor might have timed out.</b>
<b>Explanation</b>	Integration Server encountered an internal error while publishing the document and waiting for a reply.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0098.9011U</b>	<b>{0} is not a Publishable Document Type.</b>
<b>Explanation</b>	A pub.publish* service returned an error because the document type specified in the "documentTypeName" parameter was not publishable.
<b>Action</b>	Ensure that the Publishable property is set to "true" for the document type."
<b>ISS.0098.9013U</b>	<b>Dispatcher is not initialized</b>
<b>Explanation</b>	Integration Server was not able to publish, deliver, or reply to a document because the dispatcher that is responsible for performing these operations was not initialized.
<b>Action</b>	Log on to the Integration Server Administrator and make sure that you have correctly configured Integration Server for document publishing.
<b>ISS.0098.9014U</b>	<b>BrokerException: {0}</b>
<b>Explanation</b>	Integration Server was unable to publish or retrieve documents from the Broker because the operation failed on the Broker.
<b>Action</b>	Examine the error message provided by the Broker. Refer to the webMethods Broker API documentation for the Java Client for a detailed description of the error.
<b>ISS.0098.9015</b>	<b>Rejected document because Dispatcher was unable to deliver document after {0} attempts</b>

**ISS.0098.9016U**      **Broker Transport unable to subscribe to Publishable Document Type:{0} BrokerEvent Type:{1}**

**Explanation**      Integration Server failed to create a subscription to the publishable document type specified in a trigger. The client is not allowed to subscribe to the Broker document type associated with the publishable document type.

**Action**              In the Broker Administrator, check the subscription permissions of the client group to which the trigger belongs. Make sure that the client is allowed to subscribe to the Broker document type associated with the publishable document type.

**ISS.0098.9017**      **Rejecting document as there is no enabled Trigger registered:**

**ISS.0098.9018E**      **Unrecoverable Error while initializing the webMethods Messaging Subsystem (Dispatcher): {0}. No webMethods Messaging features will be available until this issue is resolved and the server is restarted.**

**Explanation**      Integration Server encountered an internal error.

**Action**              Contact Software AG Global Support.

**ISS.0098.9019U**      **Request timed out while waiting for reply**

**Explanation**      Integration Server encountered an internal error while publishing or delivering the document and waiting for a reply.

**Action**              Contact Software AG Global Support.

**ISS.0098.9021U**      **Received incorrect document as Reply. Expecting {0} and received {1}**

**Explanation**      Integration Server failed to receive the expected reply document while publishing or delivering the document and waiting for a reply.

**Action**              Check the subscriber of the publisher document. Make sure that the subscriber delivers a correct reply document.

**ISS.0098.9022E**      **Invalid DispatcherMessage {0}**

**Explanation**      Integration Server failed to deliver the document to the subscribing triggers. The document is null, which indicates an internal error.

**Action**              Contact Software AG Global Support.

<b>ISS.0098.9023U</b>	<b>Transport Factory: {0} not found.</b>
<b>Explanation</b>	Integration Server encountered an internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0098.9024U</b>	<b>{0} Unknown Transport Type specified. Unable to create transport.</b>
<b>Explanation</b>	Integration Server encountered an internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0098.9025U</b>	<b>{0} not configured. {1} operation can only be done after a {0} is configured.</b>
<b>Explanation</b>	The pub.publish:deliver or pub.publish:deliverAndWait service failed to execute because Integration Server is not configured to connect to the Broker.
<b>Action</b>	Use Integration Server Administrator to configure the server to connect to a Broker.
<b>ISS.0098.9027U</b>	<b>Unknown broker version.</b>
<b>Explanation</b>	Integration Server failed to connect to the Broker because the version of the Broker is not supported.
<b>Action</b>	Do not attempt to set up such an environment. See the "Installing webMethods Products" for supported configurations.
<b>ISS.0098.9028</b>	<b>Incompatible Broker version. The minimum Broker version required is 6.0.</b>
<b>ISS.0098.9033E</b>	<b>Duplicate condition name "{1}" in Trigger "{0}"</b>
<b>Explanation</b>	Integration Server could not save the condition settings of a trigger because the trigger has duplicate condition names.
<b>Action</b>	Edit the trigger so that each condition has a unique name.
<b>ISS.0098.9034E</b>	<b>Condition name "{0}" - Cannot have duplicate document types in AND join.</b>
<b>Explanation</b>	Integration Server could not save a trigger because a condition has duplicate document types in an "AND" join.
<b>Action</b>	Edit the trigger condition to make sure that unique document types are specified in the "AND" join.

<b>ISS.0098.9035E</b>	<b>Cannot specify different filters for document type "{0}" within a single trigger</b>
<b>Explanation</b>	Integration Server could not save the condition settings of a trigger because more than one filter is specified for a document type in the trigger.
<b>Action</b>	If multiple conditions in the trigger specify the same document type, make sure that the filter applied to the document type is the same for each condition.
<b>ISS.0098.9036U</b>	<b>Unable to ack</b>
<b>Explanation</b>	Integration Server failed to acknowledge the document to the trigger document store. This indicates an internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0098.9050U</b>	<b>Unable to publish volatile Document: {0}. Broker not connected.</b>
<b>Explanation</b>	Integration Server published a volatile document while the Broker was down. A service exception occurred for the publishing service and the volatile document was lost.
<b>Action</b>	Make sure the Broker is available and re-publish the document.
<b>ISS.0098.9051U</b>	<b>No activation specified for Join Document:{0}.</b>
<b>Explanation</b>	The published document cannot be processed in a join because it is missing an activation ID.
<b>Action</b>	The publisher of the document needs to set an activation ID for the document.
<b>ISS.0098.9056U</b>	<b>cmd for msgs all not the same or null</b>
<b>Explanation</b>	A flow service mixed the pub.publish:deliver and pub.publish:publish steps when the "delayUntilServiceSuccess" parameter is set to "true".
<b>Action</b>	Use separate flow services to deliver and publish a message when the "delayUntilServiceSuccess" parameter is set to "true".
<b>ISS.0098.9057U</b>	<b>destination for msgs all not the same or null</b>
<b>Explanation</b>	A flow service contains multiple pub.publish:deliver steps where the "delayUntilServiceSuccess" parameter is set to "true", but the destination IDs are not identical.
<b>Action</b>	Use separate flow services to deliver a message to different destination IDs when the "delayUntilServiceSuccess" parameter is set to "true".

<b>ISS.0098.9058E</b>	<b>publish-on-success is suspended</b>
<b>Explanation</b>	The publish-on-success facility has been programmatically suspended. Therefore, the publish-on-success operation will not work.
<b>Action</b>	Restart the Integration Server.
<b>ISS.0098.9059E</b>	<b>max concurrent publish-on-success is exceeded</b>
<b>Explanation</b>	The watt.server.control.maxPublishOnSuccess parameter was exceeded by a publishing flow. The maxPublishOnSuccess parameter controls the maximum number of documents that Integration Server publishes on success at one time.
<b>Action</b>	Decrease the number of documents published by a flow service that uses publish-on-success, or increase the value of the maxPublishOnSuccess parameter.
<b>ISS.0098.9061</b>	<b>Document store runtime capacity</b>
<b>ISS.0098.9062U</b>	<b>Document store is missing for {2}</b>
<b>Explanation</b>	Integration Server encountered an internal error in the document store.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0098.9063</b>	<b>Step size for {2} must be positive and no greater than 100: {3}</b>
<b>ISS.0098.9064</b>	<b>Unable to mark as complete to the Document History</b>
<b>ISS.0098.9065E</b>	<b>Error reply {0} received. adapterType:{1}, errorCategory:{2},errorText:{3},eventId:{4}</b>
<b>Explanation</b>	A client, typically an Integration Server but possibly a Broker client or Adapter, sent a request document to an Integration Server, but received an error reply (a document of type pub.publish.notification:error ) in response. This happens when the service executing the request document on the target server encounters an error. Instead of sending the expected reply document type, it sends an error document indicating it could not process the request document correctly.
<b>Action</b>	Check the Error log of the target Integration Server, that is, the Integration Server to which the request document was sent. If the error occurred when a document was being published to a single subscriber, you will know which target server issued the error reply. However, if the error occurred during a publish to multiple Integration Servers, you will have to determine which target server issued the error.

<b>ISS.0098.9066E</b>	<b>Missing required parameter: "{0}".</b>
<b>Explanation</b>	A client tried to invoke a service, but did not specify a required parameter.
<b>Action</b>	Supply the missing required parameter.
<b>ISS.0098.9067E</b>	<b>Trigger not found for triggerName: "{0}".</b>
<b>Explanation</b>	Integration Server tried to suspend or fetch metadata for the indicated trigger, but there is no trigger with this name enabled on Integration Server.
<b>Action</b>	Make sure the trigger name is typed correctly and that the trigger is enabled.
<b>ISS.0098.9068E</b>	<b>Unable to get status for Trigger "{0}": No IControlObject found.</b>
<b>Explanation</b>	Integration Server encountered an error while trying to perform an action against a trigger, but the trigger was not completely configured, and as a result, not fully initialized.
<b>Action</b>	Verify that the trigger is properly configured and is considered to be valid. After correcting the problem, retry the task you were performing when the error occurred.
<b>ISS.0098.9069E</b>	<b>Unable to get status for Trigger "{0}": {1}</b>
<b>Explanation</b>	Integration Server encountered an error while trying to perform an action against a trigger.  - For trigger retrieval, the status indicates whether the trigger is active or suspended.  - For trigger processing, the status indicates whether the trigger is active or suspended and shows the current threads being used, the current volatile queue size, and the current persisted queue size.
<b>Action</b>	The action you take depends on the exception issued. Look at the exception message and the server log for additional details.
<b>ISS.0098.9072E</b>	<b>Trigger "{0}" is locked. Change not permitted.</b>
<b>Explanation</b>	A user tried to modify the indicated trigger using the Trigger Management screens in Integration Server Administrator or the built-in services, but the trigger is locked.
<b>Action</b>	Unlock the trigger and try again.
<b>ISS.0098.9073E</b>	<b>Unable to suspend document {0} for Trigger "{1}": No IControlObject found.</b>
<b>Explanation</b>	A request to suspend document processing failed. The most likely cause is that the trigger was not completely configured, and as a result, not fully initialized.
<b>Action</b>	Make sure the trigger is configured properly and is considered to be valid. After correcting the problem, retry the task you were performing when the error occurred.

---

<b>ISS.0098.9074E</b>	<b>Unable to suspend document {0} for Trigger "{1}": {2}</b>
<b>Explanation</b>	A request to suspend document processing failed due to the indicated exception.
<b>Action</b>	The action you take depends on the exception issued. Look at the exception message value in the message for specific information.
<b>ISS.0098.9075E</b>	<b>Unable to resume document {0} for Trigger "{1}": No IControlObject found.</b>
<b>Explanation</b>	A request to resume document processing failed. The most likely cause is that the trigger was not completely configured, and as a result, not fully initialized.
<b>Action</b>	Make sure the trigger is properly configured and is considered to be valid. After correcting the problem, retry the task you were performing when the error occurred.
<b>ISS.0098.9076E</b>	<b>Unable to resume document {0} for Trigger "{1}": {2}</b>
<b>Explanation</b>	A request to resume document processing failed due to an exception.
<b>Action</b>	The action you take depends on the exception issued. Look at the exception message value in the message for specific information.
<b>ISS.0098.9077E</b>	<b>Unable to persist the change made to Trigger "{0}": {1}</b>
<b>Explanation</b>	The configuration change for a trigger was not saved to file. As a result, the change will revert back to its original value after Integration Server restarts or someone reloads the package.
<b>Action</b>	The action you take depends on the exception issued. Look at the exception message value in the message for specific information.
<b>ISS.0098.9078E</b>	<b>maxExecutionThreads cannot exceed queueCapacity</b>
<b>Explanation</b>	The value specified for the number of maximum execution threads exceeds the queue capacity. This is not permitted because the number of documents the Integration Server can process concurrently (maxExecutionThreads) cannot exceed the maximum number of documents that can be in the trigger's queue (queueCapacity).
<b>Action</b>	Change the maximum execution threads value to be less than or equal to the queue capacity. Alternatively, change the queue capacity value so that it is greater than or equal to the maximum execution threads.
<b>ISS.0098.9079E</b>	<b>queueRefillLevel cannot exceed queueCapacity</b>
<b>Explanation</b>	The value specified for the queue refill level exceeds the queue capacity. The queue refill level is the number of unprocessed documents that must remain in the trigger queue before Integration Server retrieves more documents for the queue from the Broker. This level cannot exceed the maximum number of documents that can be in the trigger's queue (queueCapacity).

**Action** Change the queue refill level value so that it is less than or equal to the queue capacity. Alternatively, change the queue capacity value so that it is greater than or equal to the queue refill level.

**ISS.0098.9080E** **{0} must be a positive number.**  
**Explanation** The value specified for the indicated parameter was zero or a negative number. This value must be positive number.  
**Action** Supply a positive number for the indicated parameter.

**ISS.0098.9081** **Unable to publish Document: {0}. Broker not connected.**

**ISS.0098.9082** **Unable to create trigger "{0}": {1}**

**ISS.0098.9083** **Unable to create trigger "{0}". Invalid Trigger Name.**

**ISS.0098.9084** **Unable to create trigger "{0}". Invalid NSName.**

**ISS.0098.9085** **Unable to create trigger "{0}". Package "{1}" does not exist.**

**ISS.0098.9086** **Unable to create trigger "{0}": Insufficient Write ACL privileges.**

**ISS.0098.9087** **Unable to create trigger "{0}". A trigger with this name already exists.**

**ISS.0098.9088** **{0} must me greater than 0 or -1.**

**ISS.0098.9089** **{0} must me greater than or equal to 0.**

**ISS.0098.9090** **Unable to publish to the broker the Document: {0}. Sync the document with the broker.**

---

<b>ISS.0098.9092W</b>	<b>Filter cannot be migrated to UM Provider Filter, it uses an unsupported construct:{0}.</b>
<b>Explanation</b>	The contents of the Filter field could not be migrated to the Provider Filter (UM) field because the filter contains the specified unsupported constructs. At run time, the unsupported constructs replace {0}, {1}, and {2}.
<b>Action</b>	No action is required. The contents of the Filter field will not change. The trigger will apply the filter to any messages that it receives. Note that while Broker might have applied portions of the filter to received messages before routing the message to the trigger, once the trigger and its document types have been updated to work with Universal Messaging, the contents of the Filter field become a local filter only. If you want the filter to become a provider filter applied by Universal Messaging, you must specify a filter in the Provider Filter (UM) field.
<b>ISS.0098.9093W</b>	<b>Filter cannot be completely migrated to Provider Filter (UM). Contains duplicate field name:{0}.</b>
<b>Explanation</b>	The contents of Filter could not be migrated to Provider Filter (UM) because the filter contains the specified duplicate field name. Universal Messaging cannot filter on duplicate field names because duplicate field names cannot be encoded as protocol buffers.
<b>Action</b>	No action is required. The contents of the Filter field will not change. The trigger will apply the filter to any messages that it receives. Note that while Broker might have applied portions of the filter to received messages before routing the message to the trigger, once the trigger and its document types have been updated to work with Universal Messaging, the contents of the Filter field become a local filter only. If you want the filter to become a provider filter applied by Universal Messaging, you must specify a filter in the Provider Filter (UM) field.
<b>ISS.0098.9094W</b>	<b>Filter cannot be completely migrated to Provider Filter (UM). Contains field with an invalid name:{0}.</b>
<b>Explanation</b>	The contents of Filter could not be migrated to Provider Filter (UM) because the filter contains a name considered to be invalid by Universal Messaging or a field name that cannot be encoded as protocol buffers.
<b>Action</b>	No action is required. The contents of the Filter field will not change. The trigger will apply the filter to any messages that it receives. Note that while Broker might have applied portions of the filter to received messages before routing the message to the trigger, once the trigger and its document types have been updated to work with Universal Messaging, the contents of the Filter field become a local filter only. If you want the filter to become a provider filter applied by Universal Messaging, you must specify a filter in the Provider Filter (UM) field.

**ISS.0098.9095W**      **Filter cannot be completely migrated to Provider Filter (UM). Contains an Object or Object List field:{0}.**

**Explanation**      The contents of Filter could not be migrated to Provider Filter (UM) because the filter contains a field of type Objects and Object Lists which is defined to be an unknown Java wrapper type. Object and Object Lists defined to be an unknown Java wrapper type cannot be encoded with protocol buffers.

**Action**      No action is required. The contents of the Filter field will not change. The trigger will apply the filter to any messages that it receives. Note that while Broker might have applied portions of the filter to received messages before routing the message to the trigger, once the trigger and it's document types have been updated to work with Universal Messaging, the contents of the Filter field become a local filter only. If you want the filter to become a provider filter applied by Universal Messaging, you must specify a filter in the Provider Filter (UM) field.

**ISS.0098.9096W**      **Filter cannot be completely migrated to Provider Filter (UM). Contains an invalid AND condition:{0} - {1}.**

**Explanation**      The contents of Filter could not be migrated to Provider Filter (UM) because the filter contains an AND condition that specifies a null value. Because a null value cannot be included in a protocol buffer message, a filter that checks for a null value is invalid.

**Action**      No action is required. The contents of the Filter field will not change. The trigger will apply the filter to any messages that it receives. Note that while Broker might have applied portions of the filter to received messages before routing the message to the trigger, once the trigger and it's document types have been updated to work with Universal Messaging, the contents of the Filter field become a local filter only. If you want the filter to become a provider filter applied by Universal Messaging, you must specify a filter in the Provider Filter (UM) field.

**ISS.0098.9097W**      **Filter cannot be completely migrated to Provider Filter (UM). Contains an invalid FUNCTION.**

**Explanation**      The contents of Filter could not be migrated to Provider Filter (UM) because the filter contains an invalid FUNCTION.

**Action**      No action is required. The contents of the Filter field will not change. The trigger will apply the filter to any messages that it receives. Note that while Broker might have applied portions of the filter to received messages before routing the message to the trigger, once the trigger and it's document types have been updated to work with Universal Messaging, the contents of the Filter field become a local filter only. If you want the filter to become a provider filter applied by Universal Messaging, you must specify a filter in the Provider Filter (UM) field.

---

<b>ISS.0098.9098W</b>	<b>Filter cannot be completely migrated to Provider Filter (UM). Contains an invalid comparator value:{0} - {1}.</b>
<b>Explanation</b>	The contents of Filter could not be migrated to Provider Filter (UM) because the filter contains a comparison considered invalid by Universal Messaging or protocol buffers. At run time, the {0} in the message is replaced the contents of the left side of the expression and {1} is replaced by the contents of the right side of the expression.
<b>Action</b>	No action is required. The contents of the Filter field will not change. The trigger will apply the filter to any messages that it receives. Note that while Broker might have applied portions of the filter to received messages before routing the message to the trigger, once the trigger and it's document types have been updated to work with Universal Messaging, the contents of the Filter field become a local filter only. If you want the filter to become a provider filter applied by Universal Messaging, you must specify a filter in the Provider Filter (UM) field.
<b>ISS.0098.9099W</b>	<b>Filter cannot be completely migrated to Provider Filter (UM). Contains a NULL comparator value:{0} - {1}.</b>
<b>Explanation</b>	The contents of Filter could not be migrated to Provider Filter (UM) because the filter compares a field to a NULL value. Because a null value cannot be included in a protocol buffer message, a filter that checks for a null value is invalid.
<b>Action</b>	No action is required. The contents of the Filter field will not change. The trigger will apply the filter to any messages that it receives. Note that while Broker might have applied portions of the filter to received messages before routing the message to the trigger, once the trigger and it's document types have been updated to work with Universal Messaging, the contents of the Filter field become a local filter only. If you want the filter to become a provider filter applied by Universal Messaging, you must specify a filter in the Provider Filter (UM) field.
<b>ISS.0098.9100W</b>	<b>Filter cannot be completely migrated to Provider Filter (UM). Contains a REGEX value:{0} {1}.</b>
<b>Explanation</b>	The contents of Filter could not be migrated to Provider Filter (UM) because the filter contains a regular expression. Universal Messaging filtering syntax does not support the use of regular expressions.
<b>Action</b>	No action is required. The contents of the Filter field will not change. The trigger will apply the filter to any messages that it receives. Note that while Broker might have applied portions of the filter to received messages before routing the message to the trigger, once the trigger and it's document types have been updated to work with Universal Messaging, the contents of the Filter field become a local filter only. If you want the filter to become a provider filter applied by Universal Messaging, you must specify a filter in the Provider Filter (UM) field.

**ISS.0098.9101W**      **Filter cannot be completely migrated to Provider Filter (UM). Contains an invalid Boolean value:{0}.**

**Explanation**      The contents of Filter could not be migrated to Provider Filter (UM) because the filter contains an invalid value for a field or type Boolean.

**Action**      No action is required. The contents of the Filter field will not change. The trigger will apply the filter to any messages that it receives. Note that while Broker might have applied portions of the filter to received messages before routing the message to the trigger, once the trigger and it's document types have been updated to work with Universal Messaging, the contents of the Filter field become a local filter only. If you want the filter to become a provider filter applied by Universal Messaging, you must specify a filter in the Provider Filter (UM) field.

**ISS.0098.9102W**      **Filter cannot be completely migrated to Provider Filter (UM). Contains an invalid OR condition:{0} - {1}.**

**Explanation**      The contents of Filter could not be migrated to Provider Filter (UM) because the filter contains an OR condition that specifies a null value. Because a null value cannot be included in a protocol buffer message, a filter that checks for a null value is invalid. At run time, the {0} in the message is replaced the contents of the left side of the expression and {1} is replaced by the contents of the right side of the expression.

**Action**      No action is required. The contents of the Filter field will not change. The trigger will apply the filter to any messages that it receives. Note that while Broker might have applied portions of the filter to received messages before routing the message to the trigger, once the trigger and it's document types have been updated to work with Universal Messaging, the contents of the Filter field become a local filter only. If you want the filter to become a provider filter applied by Universal Messaging, you must specify a filter in the Provider Filter (UM) field.

**ISS.0098.9103W**      **Filter cannot be completely migrated to Provider Filter (UM). Contains an invalid NOT condition:{0}.**

**Explanation**      The contents of Filter could not be migrated to Provider Filter (UM) because the filter contains an invalid value in a NOT condition.

**Action**      No action is required. The contents of the Filter field will not change. The trigger will apply the filter to any messages that it receives. Note that while Broker might have applied portions of the filter to received messages before routing the message to the trigger, once the trigger and it's document types have been updated to work with Universal Messaging, the contents of the Filter field become a local filter only. If you want the filter to become a provider filter applied by Universal Messaging, you must specify a filter in the Provider Filter (UM) field.

---

<b>ISS.0098.9104E</b>	<b>{0} operation is not supported when connection alias type is Local.</b>
<b>Explanation</b>	The documentTypeName input parameter specifies a publishable document type that uses the IS_LOCAL_CONNECTION alias. Instances of publishable document types that use the IS_LOCAL_CONNECTION messaging connection alias cannot be delivered.
<b>Action</b>	Change the documentTypeName input parameter value to be a publishable document type associated with a Universal Messaging connection alias or a Broker connection alias and then re-execute the service. If you want to publish a document locally, use the pub.publish:publish service or the pub.publish:publishAndWait service.
<b>ISS.0098.9105E</b>	<b>Cannot specify different provider filters for document type "{0}" within a single UM trigger</b>
<b>Explanation</b>	If a webMethods messaging trigger that receives messages from Universal Messaging specifies the same publishable document type in more than one condition, the conditions must specify the same provider filter. That is, the contents of the Provide Filter (UM) column must be the same for each condition that subscribes to the same publishable document type.
<b>Action</b>	Revise the contents of the Provider Filter (UM) column to be the same for each condition that subscribes to the same publishable document type.
<b>ISS.0099.0001U</b>	<b>Broker Transport:{0} unable to subscribe to Broker Document {1}. Exception {2}</b>
<b>Explanation</b>	The Integration Server failed to create the subscription for the trigger on the Broker. The Broker may be unavailable.
<b>Action</b>	In the Broker Administrator, check the status of the Broker and the network connection. If all are correct, then this is an internal error. Contact Software AG Global Support.
<b>ISS.0099.0002U</b>	<b>Broker Transport:{0} unable to unsubscribe to Broker Document {1}. Exception {2}</b>
<b>Explanation</b>	The Integration Server failed to cancel the subscription for the trigger from the Broker after removing the trigger from the Integration Server. The Broker might be unavailable.
<b>Action</b>	In the Broker Administrator, check the status of the Broker and the network connection. If all are correct, then this is an internal error. Contact Software AG Global Support.
<b>ISS.0099.0003U</b>	<b>Unable to create Broker Transport {0}. Exception {1}</b>
<b>Explanation</b>	The Integration Server failed to create the Broker transport for the Broker client because the client could not reconnect to the Broker. The Broker might be temporarily unavailable.
<b>Action</b>	In the Broker Administrator, check the status of the Broker and the network connection. If all are correct, then this is an internal error. Contact Software AG Global Support.

<b>ISS.0099.0005E</b>	<b>Creating subscription on Broker without invalid filter: {0}</b>
<b>Explanation</b>	A trigger contains an invalid filter. The subscription was created on the Broker without the invalid filter.
<b>Action</b>	Change the filter in the trigger to a valid trigger.
<b>ISS.0099.0006U</b>	<b>Unable to disconnect Broker Transport. Exception: {0}</b>
<b>Explanation</b>	Integration Server failed to disconnect from the Broker during shutdown. This indicates an internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0099.0007U</b>	<b>BrokerTransport:{0} got Exception: {1}</b>
<b>Explanation</b>	The Integration Server encountered an internal error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0099.0008U</b>	<b>Insufficient memory while retrieving events for BrokerTransport:{0}</b>
<b>Explanation</b>	The Integration Server does not have sufficient memory to retrieve even one document from the Broker.
<b>Action</b>	From the Broker, check the size of the document. Consider increasing the heap size of the JVM used by Integration Server.
<b>ISS.0099.0009U</b>	<b>Unable to retrieve events from the Broker for BrokerTransport:{0}. Insufficient JVM memory. Please check Heap size/ size of Documents on the Broker.</b>
<b>Explanation</b>	The Integration Server does not have sufficient memory to retrieve documents from the Broker.
<b>Action</b>	From the Broker, check the size of the documents. Consider increasing the heap size of the JVM used by Integration Server.
<b>ISS.0099.0010U</b>	<b>Broker Transport:{0} failed to unsubscribe to all Broker Documents. Exception {1}</b>
<b>Explanation</b>	The Integration Server failed to cancel the subscriptions from the Broker while removing the trigger from the Integration Server. The Broker might be unavailable.
<b>Action</b>	In the Broker Administrator, check the status of the Broker and the network connection. If all are correct, then this is an internal error. Contact Software AG Global Support.

<b>ISS.0099.0011E</b>	<b>Broker Transport Factory unable to retrieve password for handle {0}</b>
<b>Explanation</b>	An internal error occurred.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0099.0012E</b>	<b>{0} failed to retrieve password for handle {1}. Exception {2}</b>
<b>Explanation</b>	An internal error occurred.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0099.0013E</b>	<b>{0} failed to save password for handle {1}. Exception {2}</b>
<b>Explanation</b>	An internal error occurred.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0099.0014E</b>	<b>{0} failed to refresh broker settings. Exception type {1}, msg {2}</b>
<b>Explanation</b>	An error occurred while saving broker settings to disk.
<b>Action</b>	Read through the details provided in the exception and take corrective steps. If you are not able to resolve the problem, contact Software AG Global Support.
<b>ISS.0099.0015E</b>	<b>BrokerTransport : Broker Timing out repetitively. New subscriptions won't get created and if subscriptions are already existing,this might lead to the client queue growing on the broker</b>
<b>Explanation</b>	An attempt to create a new subscription has timed out multiple times.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0100.0036E</b>	<b>{0} getReader() has already been called for this request</b>
<b>Explanation</b>	A servlet or JSP called the ServletRequest.getInputStream() method after it had already called the ServletRequest.getReader() method. The servlet or JSP can call one method or the other, not both.
<b>Action</b>	Check the servlet or JSP and ensure that only one of these methods is called.
<b>ISS.0100.9900U</b>	<b>The {0} action is not enclosed by a {1} action.</b>
<b>Explanation</b>	Integration Server was not able to execute a Web application because there are syntax errors in the JSP file.
<b>Action</b>	Examine the error message to determine which tag name caused the exception to be thrown. Then check the JSP file that contains the tags and look for syntax errors. See the "Web Applications Developer's Guide" for the correct usage. After you fix the problem, re-deploy the Web application on Integration Server.

<b>ISS.0100.9901U</b>	<b>The {0} action is not enclosed by a {1} action at {2}.</b>
<b>Explanation</b>	Integration Server was not able to execute a web application because there was a syntax error in the <webm:ifvar> and <webm:else> tags in the JSP file.
<b>Action</b>	Examine the JSP file that contains the <webm:ifvar> and <webm:else> tags. See the "webMethods Applications Developer's Guide" for the correct usage of these tags. After you fix the problem, re-deploy the Web application on Integration Server.
<b>ISS.0105.0003E</b>	<b>Cannot get canonicalKey: {0}</b>
<b>Explanation</b>	The pub.synchronization.xref:getCanonicalKey service failed to execute because an exception was thrown when Integration Server tried to retrieve the corresponding canonical key for the specified native ID from the repository.
<b>Action</b>	Examine the exception message and stack trace for details. Verify that you have provided correct input for the "appID", "nativeID", and "objectID" parameters. If you cannot find the cause for the problem, contact Software AG Global Support.
<b>ISS.0105.0005E</b>	<b>Cannot insert into database this record, appId="{0}", nativeId="{1}", canonicalKey="{2}", objId="{3}", error: {4}</b>
<b>Explanation</b>	The pub.synchronization.xref:createXReference service or pub.synchronization.xref:insertXReference service failed to execute because an exception was thrown when Integration Server tried to insert or create the cross-reference record in the repository.
<b>Action</b>	Examine the error stack trace to determine which exception was thrown. If it was a SQLException, check the webMethods Integration Server documentation to make sure that you have set up your JDBC Pool configurations correctly. If you cannot determine the cause of the problem, contact Software AG Global Support.
<b>ISS.0105.0006E</b>	<b>Cannot close latch: {0}</b>
<b>Explanation</b>	The "pub.synchronization.latch:closeLatch" service failed to execute because an exception was thrown when Integration Server tried to close the latch for a given application ID, canonical Key, and object ID.
<b>Action</b>	Examine the error stack trace to determine which exception was thrown. If it was a SQLException, check the webMethods Integration Server documentation to make sure you have set up your JDBC Pool configurations correctly. If you cannot determine the cause of the problem, contact Software AG Global Support.
<b>ISS.0105.0007E</b>	<b>Cannot open latch: {0}</b>
<b>Explanation</b>	The "pub.synchronization.latch:closeLatch" service failed to execute because an exception was thrown when the Integration Server tried to open the latch for a given application ID, canonical Key, and object ID.
<b>Action</b>	Examine the error stack trace to determine which exception was thrown. If it was a SQLException, check "Installing webMethods Products" to make sure you have set

up your JDBC Pool correctly. If you cannot determine the cause of the problem, contact Software AG Global Support.

<b>ISS.0105.0008E</b>	<b>Cannot get nativeId: {0}</b>
<b>Explanation</b>	The "pub.synchronization.xref:getNativeId" service failed to execute because an exception was thrown when the Integration Server tried to retrieve the native ID for a given canonical key, application ID, and object ID.
<b>Action</b>	Examine the error stack trace to determine which exception was thrown. If it was a SQLException, check "Installing webMethods Products" to make sure you have set up your JDBC Pool configurations correctly. If you cannot determine the cause of the problem, contact Software AG Global Support.
<b>ISS.0105.0009E</b>	<b>Cannot obtain a JDBC connection: {0}</b>
<b>Explanation</b>	The Integration Server was not able to obtain a connection to the JDBC database where cross-reference keys and echo suppression status are stored. A likely cause is that the pool alias for this database was specified incorrectly on the Settings>JDBC Pools page of the Server Administrator.
<b>Action</b>	From the Settings>JDBC Pools page of the Server Administrator, examine the pool alias properties for the Xref and make sure it specifies the correct Database URL, User Id, Password, and Database driver. Then, restart the Integration Server.
<b>ISS.0105.0010E</b>	<b>No JDBC connection available</b>
<b>Explanation</b>	The Integration Server was not able to obtain a connection to the JDBC database where the cross-reference keys and echo suppression status are stored. A likely cause is that no JDBC pool connections are available.
<b>Action</b>	From the Settings > JDBC Pools page of the Integration Server Administrator, examine the pool alias properties for the Xref and consider increasing the number of connections. Then, restart Integration Server.
<b>ISS.0105.0011E</b>	<b>Release JDBC connection error: {0}</b>
<b>Explanation</b>	Integration Server tried to perform a database operation, but the "pub.synchronization*" service failed to release its connection to the database. This indicates an internal error.
<b>Action</b>	Contact Software AG Global Support.

<b>ISS.0105.0012E</b>	<b>Get preparedStatement error: {0}</b>
<b>Explanation</b>	While trying to perform a database operation, a "pub.synchronization*" service encountered an SQLException.
<b>Action</b>	Examine the error stack trace to determine which SQL exception was thrown. Make sure you followed the instructions in the "webMethods Integration Server documentation and set up the Database correctly. If you cannot determine the cause of the error, contact the database vendor.
<b>ISS.0105.0013E</b>	<b>Check isLatchClosed error: {0}</b>
<b>Explanation</b>	The pub.synchronization.latch:isLatchClosed service threw an exception when it tried to check the latch status for a given canonical key, application ID, and object ID.
<b>Action</b>	Examine the error stack trace to determine which exception was thrown. If it was a SQLException, check "Installing webMethods Products" to make sure you have set up your JDBC Pool correctly. If you cannot determine the cause of the problem, contact Software AG Global Support.
<b>ISS.0105.0014E</b>	<b>Drop all records with objId="{0}", error: {1}</b>
<b>Explanation</b>	The "pub.synchronization.xref:deleteByObjectId" service threw an exception when it tried to remove all cross-reference records associated with a particular process or synchronization.
<b>Action</b>	Examine the error stack trace to determine which exception was thrown. If it was a SQLException, check the webMethods Integration Server documentation to make sure that you have set up your JDBC Pool configurations correctly. If you cannot determine the cause of the problem, contact Software AG Global Support.
<b>ISS.0105.0024E</b>	<b>Delete xref record: appId="{0}", canonicalKey="{1}", objId="{2}", error: {3}</b>
<b>Explanation</b>	The pub.synchronization.xref:deleteXReference service threw an exception when it tried to remove all cross-reference records associated with a particular process or synchronization.
<b>Action</b>	Examine the error stack trace to determine which exception was thrown. If it was a SQLException, check the webMethods Integration Server documentation to make sure that you have set up your JDBC Pool configurations correctly. If you cannot determine the cause of the problem, contact Software AG Global Support.
<b>ISS.012.0026E</b>	<b>The certificate in the SAML assertion signature does not match the certificate on file for the issuer; Rejecting SAML assertion.</b>
<b>Explanation</b>	The certificate in the SAML assertion signature does not match the certificate on file for the issuer.
<b>Action</b>	Check the issuer configuration on Security -> SAML screen and make sure that the identified truststore contains the correct certificate for the issuer.

<b>ISS.0125.0015W</b>	<b>The trigger input control parameters, <code>watt.server.control.triggerInputControl.delaysIncrementInterval</code> and <code>watt.server.control.triggerInputControl.delays</code>, were set to their default values because an exception occurred when parsing the supplied values.</b>
<b>Explanation</b>	Integration Server could not set the trigger input control configuration parameter <code>watt.server.control.triggerInputControl.delaysIncrementInterval</code> and/or <code>watt.server.control.triggerInputControl.delays</code> to the new value because an exception occurred when parsing a new value for one of the parameters. Integration Server reset both configuration parameters to the default values.
<b>Action</b>	Use a valid value for the <code>watt.server.control.triggerInputControl.delaysIncrementInterval</code> or <code>watt.server.control.triggerInputControl.delays</code> parameter.
<b>ISS.0128.0001E</b>	<b>Unable to get JDBC connection. Exception:{0}</b>
<b>Explanation</b>	Integration Server was unable to connect to the database defined by the DocumentHistory functional alias. This alias defines the database that the Integration Server uses to detect duplicate documents.
<b>Action</b>	From the Settings>JDBC Pools> page of the Integration Server Administrator, make sure that a Functional Alias called DocumentHistory exists and is associated with a valid Pool Alias. Click the Test button. If the alias exists, but there are errors when you hit the Test button, then there is a problem with the connection. Review the Journal log for messages about the operation being performed. If the problem persists, contact your Database Administrator.
<b>ISS.0128.0002E</b>	<b>Exception while {1}: {0}</b>
<b>Explanation</b>	An exception occurred when Integration Server tried to perform a task using the In Doubt Resolver component.
<b>Action</b>	From the Settings>JDBC Pools> page of the Integration Server Administrator, make sure that a Functional Alias called DocumentHistory exists and is associated with a valid Pool Alias. Click the Test button. If the alias exists, but there are errors when you hit the Test button, then there is a problem with the connection. If the problem persists, contact your Database Administrator.
<b>ISS.0128.0003E</b>	<b>SQLException:{0} while {1}</b>
<b>Explanation</b>	An exception occurred when Integration Server tried to perform a SQL operation using the JDBC connection pool for the functional alias DocumentHistory.
<b>Action</b>	From the Settings>JDBC Pools> page of the Integration Server Administrator, make sure that a Functional Alias called DocumentHistory exists and is associated with a valid Pool Alias. Click the Test button. If the alias exists, but there are errors when you hit the Test button, then there is a problem with the connection. Review the Journal log for messages about the operation being performed. If the problem persists, contact your Database Administrator.

<b>ISS.0128.0004E</b>	<b>Exception while loading the Decision Tree: {0}</b>
<b>Explanation</b>	An exception occurred when Integration Server tried to create the decision tree for resolving duplicate documents. The decision is based on multiple criteria, but Integration Server was not able to load these criteria into memory.
<b>Action</b>	Contact webMethods Customer Care. Be prepared to provide logs and the version number and patch level for Integration Server and your operating system.
<b>ISS.0128.0005E</b>	<b>Exception:{0} while resolving Document of type: {1} and Id: {2} for trigger: {3}. Document is being deemed as In Doubt.</b>
<b>Explanation</b>	An exception occurred when Integration Server tried to resolve a document it received. The exception might be due to a problem with the database connection for the alias DocumentHistory or with the Resolver Service associated with the trigger.
<b>Action</b>	Examine the Server log for error messages that indicate the cause of the problem. If the error was a database/SQL exception, check to see if the functional alias DocumentHistory is working properly. If a problem occurred with the Resolver Service, verify that the service is properly coded.
<b>ISS.0128.0006E</b>	<b>Trigger: {0} encountered exception while executing resolver service: {1}. Exception: {2}</b>
<b>Explanation</b>	Integration Server received a document, but the document resolver service associated with the trigger encountered an exception.
<b>Action</b>	Check the Error log to see if the Document Resolver Service associated with the trigger has logged any error messages. If no messages have been logged, change the auditing properties for the service to enable the Log on Error property. In addition, because this is a user-written service, check it to make sure it has been coded properly.
<b>ISS.0128.0007E</b>	<b>In Doubt document of type:{0} with Id:{1} received for trigger:{2}. Document is being Audit Logged.</b>
<b>Explanation</b>	Integration Server received a document, but the document resolver service associated with the trigger could not resolve the document and therefore considers it to be "In Doubt".
<b>Action</b>	Check the document's id to see if it is a duplicate. If there is a document resolver service associated with the trigger, determine why the service was not able to resolve the document. Integration Server records occurrences of In Doubt Documents in the Audit log. You can view In Doubt documents through WmMonitor.

<b>ISS.0128.0008E</b>	<b>Unable to Audit Log document of type:{0} with id:{1} as it can't be decoded. Exception:{2}.</b>
<b>Explanation</b>	An error occurred when Integration Server tried to resolve a document. As part of the resolution process, a document first goes to the In Doubt Resolver component. If that component successfully resolves the document, Integration Server decodes the document and sends it to the trigger. However, if the In Doubt Resolver cannot resolve the document, the Integration Server decodes the document and sends it to the In Doubt Resolver service associated with the trigger. This error is issued if there is an error when decoding the document before sending it to the In Doubt Resolver service associated with the trigger.
<b>Action</b>	Make sure the document type on Integration Server matches the associated Broker document type on the Broker. Re-sync the document types by pushing the IS document type to the Broker ("Push to Broker"). If all the document type fields and data types match and the problem still persists, contact webMethods Customer Care.
<b>ISS.0128.0009E</b>	<b>Unable to get JDBC Connection to the database.</b>
<b>Explanation</b>	As part of storing history for the document being processed, the Integration Server's In Doubt Resolver component add/deletes rows to a database. While performing one of these actions, the connection to the database was lost.
<b>Action</b>	From the Settings>JDBC Pools> page of the Integration Server Administrator, make sure that a functional alias called DocumentHistory exists and is associated with a valid Pool Alias. Click the Test button. If the alias exists, but there are errors when you hit the Test button, then there is a problem with the connection. If the problem persists, contact your Database Administrator. Review the Journal log for messages about the operation being performed. If the problem persists, contact your Database Administrator.
<b>ISS.0128.0010</b>	<b>Detected expired UUID:{0} for trigger:{1}. Deleting all expired UUIDs.</b>
<b>ISS.0128.0011</b>	<b>Unable to resolve processing state for UUID:{0} for trigger:{1}. Exception:{2}</b>
<b>ISS.0128.0012</b>	<b>Unable to mark UUID:{0} for trigger:{1} as complete in the database. A non-expired UUID already exists.</b>
<b>ISS.0128.0014E</b>	<b>Unable to insert UUID:{0}. Exception:{1}</b>
<b>Explanation</b>	As part of storing history for the document or message being processed, Integration Server's In Doubt Resolver component stores the UUID (universally unique ID) of the document (message) in a database. An exception occurred during this process.
<b>Action</b>	From the Settings>JDBC Pools> page of the Integration Server Administrator, make sure that a Functional Alias called DocumentHistory exists and is associated with a valid Pool Alias. Click the Test button. If the alias exists, but there are errors when

you hit the Test button, then there is a problem with the connection. If the problem persists, contact your Database Administrator.

**ISS.0128.0015E Document history initialization failed. Please verify database connection is available.Exception {0}.**

**Explanation** No valid JDBC connection Pool is available for the In Doubt Resolver Alias "DocumentHistory". Detection of duplicate documents depends on the availability of a database where document history is defined.

**Action** From the Settings>JDBC Pools> page of the Integration Server Administrator, make sure that a Functional Alias called DocumentHistory exists and is associated with a valid Pool Alias. Click the Test button. If the alias exists, but there are errors when you hit the Test button, then there is a problem with the connection. If the problem persists, contact your Database Administrator.

**ISS.0128.9002E Unable to get Connection**

**Explanation** No valid JDBC connection Pool is available for the In Doubt Resolver Alias "DocumentHistory".

**Action** From the Settings>JDBC Pools> page of the Integration Server Administrator, make sure that a Functional Alias called DocumentHistory exists and is associated with a valid Pool Alias. Click the Test button. If the alias exists, but there are errors when you hit the test button, then there is a problem with the connection. Review the Journal log for messages about the operation being performed. If the problem persists, contact your Database Administrator.

**ISS.0128.9006E Invalid argument supplied for:{0}**

**Explanation** Integration Server stores document history information in a database so that it can detect when duplicate documents are received. This error occurs when a process tries to insert an entry that specifies an invalid argument into the database.

**Action** Check to see if the name of the trigger and the UUID of the document satisfy the constraints specified on the columns of the Table WM\_IDR\_MSG\_HST in your database. This error can occur if the Trigger Name or UUID exceeds the column length of the database column.

**ISS.0128.9013E Exception while executing in doubt resolver service:{0}**

**Explanation** Integration Server received a document, but an exception occurred during execution of the document resolver service associated with the trigger.

**Action** Check the Integration Server error log to see if the document resolver service has logged any error messages. If no errors were logged, configure the document resolver service's auditing properties to Log on Error. In addition, verify that the document resolver service has been coded properly.

---

<b>ISS.0128.9015E</b>	<b>The DocumentHistory functional alias is not configured properly on the JDBC Pools page. Assign a valid database pool and restart the Integration Server.</b>
<b>Explanation</b>	Integration Server stores document history information in a Document History database so that it can detect when duplicate documents are received. Integration Server throws this exception whenever it does not find a JDBC Pool for the Document History functional alias.
<b>Action</b>	Configure a JDBC Pool for Document History functional alias.
<b>ISS.0131.0001E</b>	<b>No threads available. All diagnostic listener threads are in use.</b>
<b>Explanation</b>	Integration Server has detected that all threads allocated to the diagnostic thread pool are in use.
<b>Action</b>	Wait for one or more of these threads to finish. If this problem persists, contact webMethods Customer Care.

<b>ISS.0134.0104</b>	<b>JMS connection alias "{0}" is dynamically setting polling interval to {1} milliseconds.</b>
<b>ISS.0134.0105</b>	<b>JMS connection alias "{0}" is unable to retrieve polling interval, so the default value of {1} minutes will be used instead: {2}</b>
<b>ISS.0134.0106</b>	<b>Starting JMS connection alias with Guaranteed Multisend policy. Broker list = {0}; Multisend Broker count = {1}.</b>
<b>ISS.0134.0114D</b>	<b>Refreshed session for consumer: {0}</b>
<b>Explanation</b>	Integration Server refreshed the session for the specified message consumer.
<b>Action</b>	None.
<b>ISS.0134.0115D</b>	<b>Initialized default Session pool for alias "{0}"; max size "{1}"</b>
<b>Explanation</b>	Integration Server created a default Session Pool for the specified JMS connection alias.
<b>Action</b>	No action required.
<b>ISS.0134.0116D</b>	<b>Initialized MessageProducer pool for alias "{0}"; destination "{1}"; max size "{2}"</b>
<b>Explanation</b>	For the specified JMS connection alias, Integration Server created a MessageProducer Pool for the specified destination.
<b>Action</b>	No action required.

<b>ISS.0134.0117E</b>	<b>Unable to initialize MessageProducer pool for alias "{0}"; destination "{1}": {2}</b>
<b>Explanation</b>	An error occurred while initializing the MessageProducer Pool for the specified JMS connection alias and destination. The error most likely occurred because the destination does not exist or cannot be accessed.
<b>Action</b>	Verify that the specified destination exists and that you have sufficient privileges to access the destination. If the JMS connection alias uses a JNDI provider for administered objects, verify that the JNDI provider is available.
<b>ISS.0134.0999</b>	<b>JMS subsystem unexpected error: {0}</b>
<b>ISS.0134.9045E</b>	<b>Unable to create trigger "{0}". Invalid or non-ascii characters in NSName.</b>
<b>Explanation</b>	The WS endpoint trigger could not be created because the Web service endpoint alias name includes characters that are not valid for an element name.
<b>Action</b>	Change the name of the alias so that it does not include any characters that Integration Server considers to be reserved or invalid for element names. Refer to the Designer or webMethods Developer documentation for a list of reserved or invalid characters.
<b>ISS.0134.9082E</b>	<b>The client side queue cannot be used with a send and wait request if the reply destination is a temporary queue.</b>
<b>Explanation</b>	The useCSQ parameter is set to true and the replyToDestinationName is blank or specifies a temporary queue.
<b>Action</b>	If you want Integration Server to route messages to the client side queue when the JMS provider is not available leave useCSQ set to true and specify a queue that is not temporary. That is, specify values for the destinationNameReplyTo and destinationTypeReplyTo input parameters.
<b>ISS.0134.9083E</b>	<b>The pub.jms:sendBatch service is not supported with this provider.</b>
<b>Explanation</b>	The connectionAliasName parameter specifies a JMS connection alias that uses a JMS provider that is not supported with the pub.jms:sendBatch service.
<b>Action</b>	Change the value of the connectionAliasName parameter to specify a JMS connection alias that uses a supported JMS provider.
<b>ISS.0134.9084E</b>	<b>The pub.jms:sendBatch service is not supported with connection factories that use the multisend guaranteed or multisend best effort Broker cluster policies.</b>
<b>Explanation</b>	The connectionAliasName parameter specifies a JMS connection alias that uses a connection factory to which the multisend guaranteed or multisend best effort Broker cluster policy is applied. The pub.jms:sendBatch service cannot be used with connection factories that have these policies.
<b>Action</b>	Change the value of the connectionAliasName parameter to specify a JMS connection alias that does not use a connection factory to which the multisend guaranteed or multisend best effort Broker cluster policy is applied.

<b>ISS.0134.9350E</b>	<b>UM admin operation failed [{0}]: {1}</b>
<b>Explanation</b>	The specified admin operation could not be completed on Universal Messaging due to the listed error. Integration Server will perform admin operations on Universal Messaging when Designer is being used to manage destinations and durable subscribers on Universal Messaging.
<b>Action</b>	Use the provided error message to determine why the admin operation could not be completed.
<b>ISS.0135.0001E</b>	<b>No properties found for JNDI alias {0}</b>
<b>Explanation</b>	Integration Server could not find the JNDI properties file for the specified JNDI provider alias.
<b>Action</b>	Ensure that the properties file associated with the JNDI provider alias exists and is not empty. The JNDI properties file is stored in the following directory: IntegrationServer_directory\instances\instanceName\config\jndi
<b>ISS.0135.0002E</b>	<b>JNDI configuration file already exists: {0}</b>
<b>Explanation</b>	Integration Server cannot create the JNDI provider alias because a JNDI properties file already exists for an alias with that name.
<b>Action</b>	Ensure that the JNDI provider alias is not a duplicate of one that already exists. Specify a different name for the JNDI provider alias.
<b>ISS.0135.0003E</b>	<b>JNDI configuration file does not exist: {0}</b>
<b>Explanation</b>	When deleting the JNDI provider alias, Integration Server encountered an error when attempting to delete the associated properties file as the associated JNDI properties file does not exist.
<b>Action</b>	Ensure that the properties file associated with the JNDI provider alias exists in the following directory: IntegrationServer_directory\instances\instanceName\config\jndi
<b>ISS.0135.0004E</b>	<b>Unable to delete JNDI configuration file: {0}</b>
<b>Explanation</b>	When deleting the JNDI provider alias, Integration Server could not delete the associated JNDI properties file.
<b>Action</b>	Ensure that another user is not currently accessing the properties file for the JNDI provider alias that you are attempting to delete. The JNDI properties files are located in the following directory IntegrationServer_directory\instances\instanceName\config\jndi

---

<b>ISS.0135.0005E</b>	<b>Unable to load JNDI Properties. File not found: {0}</b>
<b>Explanation</b>	Integration Server cannot load the properties file associated with the JNDI provider alias.
<b>Action</b>	Ensure that a valid properties file exists for the JNDI provider alias in the following directory: IntegrationServer_directory\instances\instanceName\config\jndi
<b>ISS.0135.0006E</b>	<b>Unable to load JNDI Properties. Invalid properties file: {0}</b>
<b>Explanation</b>	Integration Server could not load the properties file for the JNDI provider alias because the file is invalid.
<b>Action</b>	Ensure that the properties file associated with the JNDI provider alias exists and is not empty. The JNDI properties file is stored in the following directory: IntegrationServer_directory\instances\instanceName\config\jndi
<b>ISS.0137.0002W</b>	<b>Scheduler: Unable to get pool for ISInternal</b>
<b>Explanation</b>	Integration Server was unable to get the ISInternal JDBC connection pool.
<b>Action</b>	Configure the ISInternal functional alias (specified on the Settings > JDBC Pools screen in Integration Server Administrator) and assign a valid JDBC connection pool to it.
<b>ISS.0137.0006E</b>	<b>Scheduler: Error initializing scheduler: {0}</b>
<b>Explanation</b>	Integration Server encountered an error while initializing the database in which information about scheduled jobs is stored.
<b>Action</b>	Read through the contents of the error logs and take corrective steps. If you are unable to resolve the issue, contact Software AG Global Support.
<b>ISS.0137.0007E</b>	<b>Scheduler: Unable to get a connection to the database.</b>
<b>Explanation</b>	Integration Server was unable to get a connection from the JDBC connection pool.
<b>Action</b>	Use Integration Server Administrator to increase the maximum number of connections available in the JDBC connection pool that is assigned to the ISInternal functional alias.
<b>ISS.0137.0010E</b>	<b>Scheduler: Resources unavailable: {0}</b>
<b>Explanation</b>	Scheduler thread throttle, which is the percentage of server threads the scheduler function is permitted to use, is reached. Integration Server cannot execute a scheduled task because there are no threads available.
<b>Action</b>	Use Server Administrator to increase the maximum number of connections available in the JDBC pool that is assigned to the ISInternal functional alias.

<b>ISS.0137.0011E</b>	<b>Scheduler: Exception: {0}</b>
<b>Explanation</b>	Integration Server encountered an error while retrieving a scheduled task from the database and executing it.
<b>Action</b>	Read through the contents of the error logs and take corrective steps. If you are unable to resolve the issue, contact Software AG Global Support.
<b>ISS.0137.0012E</b>	<b>Scheduler: Error inserting task into database: {0}</b>
<b>Explanation</b>	Integration Server encountered an error while adding a new scheduled task to the database.
<b>Action</b>	Read through the contents of the error logs and take corrective steps. If you are unable to resolve the issue, contact Software AG Global Support.
<b>ISS.0137.0013E</b>	<b>Scheduler: Error updating task in database: {0}</b>
<b>Explanation</b>	Integration Server encountered an error while updating the information of a scheduled task in the database.
<b>Action</b>	Read through the contents of the error logs and take corrective steps. If you are unable to resolve the issue, contact Software AG Global Support.
<b>ISS.0137.0014E</b>	<b>Scheduler: Error updating status in database: {0}</b>
<b>Explanation</b>	Integration Server encountered an error while updating the status of a scheduled task in the database.
<b>Action</b>	Read through the contents of the error logs and take corrective steps. If you are unable to resolve the issue, contact Software AG Global Support.
<b>ISS.0137.0016E</b>	<b>Scheduler: Exception getting task IDs from database: {0}</b>
<b>Explanation</b>	Integration Server encountered an error while retrieving the IDs of scheduled tasks associated with a user.
<b>Action</b>	Read through the contents of the error logs and take corrective steps. If you are unable to resolve the issue, contact Software AG Global Support.
<b>ISS.0137.0017E</b>	<b>Scheduler: Exception getting tasks from database: {0}</b>
<b>Explanation</b>	Integration Server encountered an unexpected SQLException while retrieving the scheduled tasks from the database.
<b>Action</b>	Ensure that the database is available and configured to execute scheduled tasks.

---

<b>ISS.0137.0018E</b>	<b>Scheduler: Exception while invoking "{0}": {1}</b>
<b>Explanation</b>	Integration Server encountered a runtime exception while invoking a scheduled task.
<b>Action</b>	Read through the contents of the error logs and take corrective steps. If you are unable to resolve the issue, contact Software AG Global Support.
<b>ISS.0137.0021E</b>	<b>Invalid database vendor type: {0}</b>
<b>Explanation</b>	The database driver for the ISInternal functional alias is not valid.
<b>Action</b>	Go to the Settings > JDBC Pools page in Integration Server Administrator and set ISInternal's pool alias to use one of the listed database drivers.
<b>ISS.0137.0022E</b>	<b>No ISInternal JDBC Pool</b>
<b>Explanation</b>	The ISInternal functional alias is not configured.
<b>Action</b>	Configure the ISInternal functional alias (specified on the Settings > JDBC Pools screen in Integration Server Administrator) and assign a valid JDBC connection pool to it.
<b>ISS.0137.0023E</b>	<b>Could not get connection for pool {0}</b>
<b>Explanation</b>	Integration Server attempted to acquire a JDBC connection, but no connections are available in the pool assigned to the ISInternal functional alias.
<b>Action</b>	Use Server Administrator to increase the maximum number of connections available in the JDBC pool that is assigned to the ISInternal functional alias.
<b>ISS.0137.0024E</b>	<b>Namespace Dependency Manager is disabled</b>
<b>Explanation</b>	Unable to determine if the service executed by a scheduled task refers to other services that are unavailable.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0137.0025E</b>	<b>Found unresolved dependent services: {0}</b>
<b>Explanation</b>	Integration Server was unable to create or run the scheduled task because the service scheduled to run contains a reference to a service that cannot be located.
<b>Action</b>	Update the scheduled task to specify a correct reference to the dependent service. Note: Integration Server performs reference validation for services only when the <code>watt.server.scheduler.ignoreReferenceValidation</code> configuration parameter is set to true. The default is false.

<b>ISS.0137.0026E</b>	<b>User {0} is disabled</b>
<b>Explanation</b>	The user a scheduled task is set to run as is disabled. The task will not run.
<b>Action</b>	Enable the user or modify the task to run as a different user.
<b>ISS.0137.0027E</b>	<b>User {0} is removed</b>
<b>Explanation</b>	The user associated with a scheduled task has been removed.
<b>Action</b>	Add the user or change the scheduled task to execute with an enabled user.
<b>ISS.0137.0028W</b>	<b>Could not complete last run at node {0}</b>
<b>ISS.0137.0029E</b>	<b>Rolling back due to scheduler thread throttle reached: {0}</b>
<b>Explanation</b>	A scheduled task attempted to use more threads than the maximum number allowed by the Scheduler thread throttle limit. Any scheduled tasks that attempt to execute under these circumstances will fail.
<b>Action</b>	Use Integration Server Administrator to increase the Scheduler thread throttle under Settings > Resources > Edit Resource Settings > Server Thread Pool.
<b>ISS.0137.0030E</b>	<b>...&lt;truncated&gt;</b>
<b>Explanation</b>	Integration Server encountered an error during the execution of a scheduled task.
<b>Action</b>	Read through the contents of the error logs and take corrective steps. If you are unable to resolve the issue, contact Software AG Global Support.
<b>ISS.0137.0031E</b>	<b>Invalid Target {0}</b>
<b>Explanation</b>	A scheduled task is set to run on a host that is not currently a member of the Integration Server cluster.
<b>Action</b>	Modify the scheduled task to run on a member of the cluster.
<b>ISS.0137.0032E</b>	<b>Invalid task ID {0}</b>
<b>Explanation</b>	Internal error.
<b>Action</b>	Contact Software AG Global Support.

---

<b>ISS.0137.0033E</b>	<b>Errors encountered while initializing Scheduler. Scheduled tasks will not run. Check the logs for more information.</b>
<b>Explanation</b>	Integration Server encountered an error either while initializing the scheduler or while connecting to the database in which information about scheduled jobs is stored. As a result, scheduled tasks will not run.
<b>Action</b>	Read through the contents of the error logs and take corrective steps. After correcting the issue that caused the error, restart the Integration Server.
<b>ISS.0137.0034E</b>	<b>Unknown Service: {0}. Scheduled task will not run.</b>
<b>Explanation</b>	The service configured to execute for a scheduler does not exist in the Integration Server.
<b>Action</b>	Ensure that the service is available in the Integration Server.
<b>ISS.0138.0350E</b>	<b>Test of CentraSite connection failed.</b>
<b>Explanation</b>	Integration Server encountered an exception while connecting to CentraSite.
<b>Action</b>	Ensure the parameters that Integration Server uses to connect to CentraSite are correct. Specifically, check the URL pointing to CentraSite (including the port), the user name, and password.
<b>ISS.0139.0056W</b>	<b>Error: Default keystore alias "DEFAULT_IS_KEYSTORE" cannot be created. Details: {0}</b>
<b>Explanation</b>	Error while creating DEFAULT_IS_KEYSTORE alias at the first startup of Integration Server.
<b>Action</b>	<p>&lt;p&gt;The following lists the actions you can take:&lt;/p&gt;&lt;p&gt;1. Ensure that the keystore file 'keystore.jks' is present in the Integration Server_directory\common\conf directory.&lt;/p&gt;&lt;p&gt;2. Ensure that the keystore has not expired.&lt;/p&gt;&lt;p&gt;3. Contact Software AG Global Support.&lt;/p&gt;</p>
<b>ISS.0139.0057W</b>	<b>Error: Default truststore alias "DEFAULT_IS_TRUSTSTORE" cannot be created. Details: {0}</b>
<b>Explanation</b>	Error while creating DEFAULT_IS_TRUSTSTORE alias at the first start up of Integration Server.
<b>Action</b>	<p>&lt;p&gt;The following lists the actions you can take:&lt;/p&gt;&lt;p&gt;1. Ensure that the truststore file platform_truststore.jks is present in the Integration Server_directory\common\conf\ directory.&lt;/p&gt;&lt;p&gt;2. Ensure that the truststore has not expired.&lt;/p&gt;&lt;p&gt;3. Contact Software AG Global Support.&lt;/p&gt;</p>

<b>ISS.0139.9002E</b>	<b>Error: invalid keystore or truststore configuration file "{0}".</b>
<b>Explanation</b>	Configuration file related to keystore is corrupted.
<b>Action</b>	Create a keystore alias.
<b>ISS.0139.9003I</b>	<b>Keystore alias "{0}" saved successfully.</b>
<b>ISS.0139.9004W</b>	<b>Keystore alias "{0}" saved successfully. Warning: before using the keystore, you must create a password for at least one of its key aliases. Please edit the keystore alias configuration and add one or more valid key alias passwords.</b>
<b>Explanation</b>	The key aliases are not configured. Before using the keystore, you must create a password for at least one of its key aliases.
<b>Action</b>	Edit the keystore alias configuration and add at least one valid key alias passwords.
<b>ISS.0139.9005E</b>	<b>Keystore alias "{0}" saved successfully. An error occurred while loading the keystore in memory, please edit the keystore alias configuration. Details: {1}</b>
<b>Explanation</b>	An error occurred while loading the keystore in memory.
<b>Action</b>	Edit the keystore alias configuration. Make sure that the keystore location is correct and keystore exists on the file system. Then, make sure that the configuration file related to the keystore is valid.
<b>ISS.0139.9006W</b>	<b>Keystore alias "{0}" saved successfully. Warning: the following key aliases "{1}" cannot be used because they do not have passwords. Please edit the keystore alias configuration and add password(s) for the appropriate key alias(es).</b>
<b>Explanation</b>	Some key aliases are not configured.
<b>Action</b>	Edit the keystore alias configuration and add passwords for the corresponding key aliases.
<b>ISS.0139.9007W</b>	<b>Keystore alias "{0}" saved successfully. Warning: the following key aliases "{1}" have been removed from the keystore alias configuration.</b>
<b>Explanation</b>	Few key aliases were removed from the keystore alias configuration.
<b>Action</b>	Refresh the keystore alias.
<b>ISS.0139.9012E</b>	<b>Error: cannot save the keystore alias "{0}".</b>
<b>Explanation</b>	Either the keystore location is invalid, or the key aliases passwords do not consist of ASCII characters.
<b>Action</b>	Make sure that the keystore location is valid and the key aliases passwords consist of valid ASCII characters.

---

<b>ISS.0139.9013E</b>	<b>Error: keystore "{0}" not found.</b>
<b>Explanation</b>	The configuration file related to keystore alias is unavailable.
<b>Action</b>	Make sure that the configuration file related to the keystore alias exists in the directory ../config/security/keystore.
<b>ISS.0139.9014E</b>	<b>Error: keystore "{0}" not found. Details: {1}.</b>
<b>Explanation</b>	Invalid keystore location.
<b>Action</b>	Make sure that the location of the keystore is correct; the key aliases passwords are valid; and the configuration file exists, and it is not corrupted.
<b>ISS.0139.9016W</b>	<b>Keystore "{0}" was reloaded successfully. Warning: you must provide the password for at least one key alias in the keystore before using it. Please edit the keystore alias configuration and add at least one valid key alias password.</b>
<b>Explanation</b>	Either the keystore does not contain any key aliases, or a key alias password is not provided. You must provide the password for at least one key alias in the keystore before using it.
<b>Action</b>	Check whether the keystore has any key aliases. If not, then add key alias in the keystore. If there are key aliases in the keystore, then edit the keystore alias configuration and add at least one valid key alias password.
<b>ISS.0139.9017W</b>	<b>Keystore "{0}" reloaded successfully. Warning: the following key aliases "{1}" cannot be used because they do not have a password. Please edit the keystore alias configuration and add one or more valid key alias passwords.</b>
<b>Explanation</b>	Key alias must be configured in advance.
<b>Action</b>	Edit the keystore alias configuration and add one or more valid key alias passwords.
<b>ISS.0139.9018W</b>	<b>Keystore "{0}" reloaded successfully. Warning: the following key aliases "{1}" have been removed from the alias configuration.</b>
<b>Explanation</b>	Key alias must be configured in advance.
<b>Action</b>	Edit the keystore alias configuration and add one or more valid key alias passwords.
<b>ISS.0139.9019E</b>	<b>Error: cannot reload keystore "{0}". Details: {1}.</b>
<b>Explanation</b>	Keystore alias does not map to a valid keystore.
<b>Action</b>	Make sure that the keystore location is correct and keystore exists on the file system. Make sure that the configuration file related to the keystore is valid.

<b>ISS.0139.9020E</b>	<b>Error: cannot reload keystore "{0}".</b>
<b>Explanation</b>	Configuration file does not exist.
<b>Action</b>	Make sure that the configuration file, which corresponds to the truststore alias, exists in the directory ../config/security/keystore.
<b>ISS.0139.9022E</b>	<b>Error: unable to delete the keystore alias "{0}".</b>
<b>Explanation</b>	Keystore does not exist.
<b>Action</b>	Make sure that the keystore location is correct and the keystore exists on the file system.
<b>ISS.0139.9023E</b>	<b>Error: invalid keystore alias name "{0}".</b>
<b>Explanation</b>	Keystore alias is null or empty.
<b>Action</b>	Make sure that the keystore alias is not null or empty.
<b>ISS.0139.9024E</b>	<b>Error: cannot load the keystore pointed to by keystore alias "{0}", because of invalid password(s) for key alias(es) "{1}".</b>
<b>Explanation</b>	Invalid key alias password.
<b>Action</b>	Make sure that the key aliases passwords are correct.
<b>ISS.0139.9025E</b>	<b>Error: invalid key alias "{0}".</b>
<b>Explanation</b>	The key alias is invalid.
<b>Action</b>	Make sure that the key alias exists in the keystore.
<b>ISS.0139.9026E</b>	<b>Error: unable to look up the password for the key alias "{1}" in the keystore '{0}'.</b>
<b>Explanation</b>	Invalid key alias password.
<b>Action</b>	Make sure that the key alias password is correct.
<b>ISS.0139.9028E</b>	<b>Truststore alias "{0}" saved successfully. An error occurred while loading the truststore in memory, please edit the truststore alias configuration. Details: {1}.</b>
<b>Explanation</b>	Configuration file is corrupted.
<b>Action</b>	Make sure that the configuration file, which corresponds to the truststore alias is valid.

---

<b>ISS.0139.9029E</b>	<b>Error: cannot save the truststore alias "{0}".</b>
<b>Explanation</b>	Truststore location is invalid.
<b>Action</b>	Make sure that the truststore location is valid.
<b>ISS.0139.9030E</b>	<b>Error: truststore "{0}" not found.</b>
<b>Explanation</b>	The configuration file related to truststore alias is unavailable.
<b>Action</b>	Make sure that the configuration file related to the truststore alias exists in the directory <code>../config/security/keystore</code> .
<b>ISS.0139.9031E</b>	<b>Error: truststore "{0}" not found. Error: {1}.</b>
<b>Explanation</b>	Either the truststore location, or the configuration file is invalid.
<b>Action</b>	Make sure that the location of the truststore is correct; the truststore alias password is correct; and the configuration file exists, and it is not corrupted.
<b>ISS.0139.9033E</b>	<b>Error: cannot reload truststore "{0}". Details: {1}.</b>
<b>Explanation</b>	Either the keystore location is invalid, or the key aliases are modified.
<b>Action</b>	Make sure that the keystore location is valid and the key alias is not modified.
<b>ISS.0139.9034E</b>	<b>Error: cannot reload truststore "{0}".</b>
<b>Explanation</b>	Configuration file does not exist.
<b>Action</b>	Make sure that the configuration file, which corresponds to the truststore alias, exists in the directory <code>../config/security/keystore</code> .
<b>ISS.0139.9036E</b>	<b>Error: unable to delete the truststore alias "{0}".</b>
<b>Explanation</b>	Configuration file does not exist.
<b>Action</b>	Make sure that the configuration file for the truststore alias exists in the directory <code>../config/security/keystore</code> .
<b>ISS.0139.9037E</b>	<b>Error: invalid truststore alias name "{0}".</b>
<b>Explanation</b>	Invalid truststore name.
<b>Action</b>	Make sure that the truststore name is not null or empty.

<b>ISS.0139.9038E</b>	<b>Error: cannot retrieve data for the truststore "{0}".</b>
<b>Explanation</b>	Keystore is not loaded or initialized properly.
<b>Action</b>	Make sure that keystore is valid and the alias refers to the valid keystore location.
<b>ISS.0139.9039E</b>	<b>Error: cannot retrieve trusted certificates from the truststore pointed to by truststore alias "{0}". Details: {1}.</b>
<b>Explanation</b>	Truststore is not initialized or loaded properly.
<b>Action</b>	Reload the truststore alias and then make sure that the configuration file exists for the truststore alias.
<b>ISS.0139.9041E</b>	<b>Error: cannot retrieve the key for alias "{0}" from the keystore pointed to by keystore alias "{1}". Details: {2}.</b>
<b>Explanation</b>	Key alias entry in the keystore is not valid.
<b>Action</b>	Make sure that the key alias entry in the keystore is valid. For example, the certificate chain is available or the algorithm of the private key matches to the algorithm of the PublicKey in the end entity Certificate (at index 0).
<b>ISS.0139.9043E</b>	<b>Error: cannot retrieve the certificate for alias "{0}" from the truststore pointed to by truststore alias "{1}". Unsupported certificate type "{2}".</b>
<b>Explanation</b>	Invalid certificate type.
<b>Action</b>	Make sure that the certificate configured by the key alias is X509 Certificate.
<b>ISS.0139.9044E</b>	<b>Error: the alias has been modified from "{0}" to "{1}".</b>
<b>Explanation</b>	Keystore alias does not map to a valid keystore.
<b>Action</b>	Make sure that the keystore alias refers to a valid keystore.
<b>ISS.0139.9045E</b>	<b>Error: either the alias name "{0}" or the configuration file name "{1}" is incorrect.</b>
<b>Explanation</b>	Configuration file does not exist.
<b>Action</b>	Make sure that the configuration file exists for the alias in the directory ../config/security/keystore.
<b>ISS.0139.9047E</b>	<b>Password for following key aliases must be ASCII characters: {0}</b>
<b>Explanation</b>	The key alias password consists of non-ASCII characters.
<b>Action</b>	Make sure that the key alias password consists of valid ASCII characters.

<b>ISS.0139.9051E</b>	<b>Error: cannot load the keystore/truststore configuration file "{0}". Details:{1}.</b>
<b>Explanation</b>	Keystore alias does not map to a valid keystore.
<b>Action</b>	Make sure that the keystore alias refers to a valid keystore. In addition, verify that the configuration file related to the keystore alias is valid. Make sure that the security provider is installed and registered with Integration Server if you use a security provider.
<b>ISS.0139.9052E</b>	<b>Error: invalid keystore/truststore configuration file "{0}".</b>
<b>Explanation</b>	Configuration file does not exist.
<b>Action</b>	Make sure that the configuration file, which corresponds to the truststore alias, exists in the directory ../config/security/keystore.
<b>ISS.0139.9053E</b>	<b>Error: ISKeyStoreManager initialization failed. Cannot create the keystore configuration directory "{1}".</b>
<b>Explanation</b>	Keystore directory does not exist.
<b>Action</b>	Keystore location is invalid. Make sure that the keystore directory exists.
<b>ISS.0139.9054E</b>	<b>Error: alias has been modified from "{0}" to "{1}".</b>
<b>Explanation</b>	Keystore alias does not map to a valid keystore .
<b>Action</b>	Make sure that the keystore alias refers to a valid keystore.
<b>ISS.0139.9055E</b>	<b>Error: either the alias name "{0}" or the configuration file name "{1}" is incorrect.</b>
<b>Explanation</b>	Configuration file is corrupted.
<b>Action</b>	Make sure that the configuration file, which corresponds to the truststore alias, exists in the directory ../config/security/keystore.
<b>ISS.0139.9058I</b>	<b>Default keystore alias for Integration Server.</b>
<b>ISS.0139.9059I</b>	<b>Default truststore alias for Integration Server.</b>
<b>ISS.0141.0001E</b>	<b>Unable to create JMS URI for WS Endpoint Alias "{0}": {1}</b>
<b>Explanation</b>	The Web service endpoint alias does not contain the information needed to construct a JMS URI.
<b>Action</b>	Use the information in the exception to update the alias. For example, you may need to make changes to the provider Web service endpoint alias or edit the SOAP-JMS trigger used with the alias.

- ISS.0141.0002E**      **Unable to create WS Endpoint Trigger: {0}**
- Explanation**      Integration Server could not create a WS endpoint trigger using the information in the provider Web service endpoint alias.
- Action**              In Integration Server Administrator, use the information provided in the exception to edit the provider Web service endpoint alias
- 
- ISS.0141.0101W**      **WS-Policy file {0} with policy ID {1} is invalid. Details: {2}**
- Explanation**      The WS-Policy file added to the policy repository is not valid. Integration Server has moved the policy file to the IntegrationServer/config/wss/policies/invalid folder.
- Action**              Correct the invalid WS-Policy file in the IntegrationServer/config/wss/policies/invalid folder to make it valid and move it back into the main policy repository directory.
- 
- ISS.0141.0103W**      **Web service descriptor {0} is not available because the WS-Policy file {1} with policy ID {2} attached to the WSD is deleted.**
- Explanation**      The Web service descriptor is not available because the WS-Policy file attached to the Web service descriptor is deleted or moved from the policy repository.
- Action**              The following lists the actions you can take:
- 1) Ensure that the WS-Policy that is attached to the Web service descriptor resides in the policy repository.
  - OR-
  - 2) Edit the Web service descriptor so that it no longer uses the deleted WS-Policy file.
- 
- ISS.0141.0107W**      **Web service descriptor {0} is not available because the policy ID in WS-Policy file {1} is changed from {2} to {3}.**
- Explanation**      The Web service descriptor is not available because the policy ID of the WS-Policy file attached to the Web service descriptor has changed.
- Action**              The following lists the actions you can take:
- 1) Change the policy id of the WS-Policy that is attached to the Web service descriptor to what it was previously.
  - 2) Edit the Web service descriptor by re-attaching the WS-Policy file with the updated policy ID.

---

<b>ISS.0141.0108E</b>	<b>Transport header "{0}" is invalid and will not be added to the message. Transport headers must be Strings.</b>
<b>Explanation</b>	In the name/value pair supplied as a transport header, the name and the value must be of type String. If a transport header has a name or value that is not of type String, the header will not be included in the message.
<b>Action</b>	Change the transport header so that the name and value are both of type String.
<b>ISS.0141.0109W</b>	<b>Could not deploy consumer Web service descriptor {0} for handling asynchronous responses. Connectors generated for this consumer Web service descriptor can only be used for handling responses synchronously. Cause: {1}.</b>
<b>Explanation</b>	The consumer Web service descriptor specified in the message could not be deployed to handle asynchronous responses. See the error message for more details about the cause of the failure.
<b>Action</b>	If the error message indicates that the error can be resolved by changing the WSDL, change or correct the WSDL used for creating the consumer Web service descriptor and recreate the consumer. If the error still occurs, contact Software AG Global Support.
<b>ISS.0141.9106E</b>	<b>Received a null response.</b>
<b>Explanation</b>	An internal error occurred while processing the Web service request.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0141.9107E</b>	<b>Received unsupported content-encoding: {0}</b>
<b>Explanation</b>	The Web service response used the specified content-encoding, which is not supported.
<b>Action</b>	Ensure that the Web service request specifies a supported content-encoding for the response.
<b>ISS.0141.9108E</b>	<b>An HTTP transport error occurred. Error Code: {0}, Error Message: {1}</b>
<b>Explanation</b>	An error occurred while sending a Web service response. The error code and message portions of the error contain details about the error.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0141.9109E</b>	<b>Access Denied</b>
<b>Explanation</b>	A Web service request has arrived over an HTTP or HTTPS port, but the port access check has failed for the Web service descriptor. This means that the provider Web service descriptor name is either missing from the Allow list or is present in the Deny List, depending on how access to the port is defined.
<b>Action</b>	If access to this Web service is to be allowed over this port, ensure that the provider Web service descriptor name is either removed from the port's deny list or added to the port's allow list.

<b>ISS.0141.9208E</b>	<b>Could not deploy the Web service descriptor {0}. Cause: {1}</b>
<b>Explanation</b>	Integration Server could not deploy the Web service descriptor. Typical reasons are:  1) The WS-Policy that is attached to the provider Web service descriptor does not exist.  2) The module required to handle the attached WS-Policy does not exist.  3) The "rampartConfigProperties" parameter, which is in the axis2.xml file, is locked. If it is not one of these reasons, refer to the error message, which lists the cause.
<b>Action</b>	The following lists the actions you can take for one of the typical causes:  1) Ensure the WS-Policy that is attached to the Web service descriptor resides in the policy repository: (webMethods_directory)/IntegrationServer/config/wss  2) Ensure the module required to handle the attached WS-Policy resides in the (webMethods_directory)/IntegrationServer/config/wss/modules subdirectory.  3) Ensure the "rampartConfigProperties" parameter in the axis2.xml file is not locked. The axis2.xml file resides (webMethods_directory)/IntegrationServer/config/wss/modules subdirectory. For all other reasons, refer to the cause listed in the error message and respond accordingly.
<b>ISS.0141.9211E</b>	<b>Received a plain text response: {0}</b>
<b>Explanation</b>	A Web service call expected a SOAP Response but instead received a plain text response. The actual responseText is returned within a SOAP fault.
<b>Action</b>	Determine why the Web service provider did not return a SOAP response. It is possible that an incorrect endpoint address was used or an error occurred on the Web service provider.
<b>ISS.0141.9213E</b>	<b>Unknown web services reliable messaging sequence {0} specified for endpoint URI {1}.</b>
<b>Explanation</b>	A reliable messaging sequence with the specified sequence key corresponding to the specified endpoint URI does not exist.
<b>Action</b>	Specify a valid sequence key for the specified endpoint URI.
<b>ISS.0141.9214E</b>	<b>A duplicate web services reliable messaging sequence {0} specified for endpoint URI {1}.</b>
<b>Explanation</b>	A reliable messaging sequence with the specified sequence key and endpoint URI already exists.
<b>Action</b>	Specify a valid sequence key for the specified endpoint URI.

---

<b>ISS.0141.9215E</b>	<b>A closed web services reliable messaging sequence {0} specified for endpoint URI {1}.</b>
<b>Explanation</b>	The reliable messaging sequence with the specified sequence key and endpoint URI is closed.
<b>Action</b>	Specify a valid sequence key for the specified endpoint URI.
<b>ISS.0141.9216E</b>	<b>A terminated web services reliable messaging sequence {0} specified for endpoint URI {1}.</b>
<b>Explanation</b>	The reliable messaging sequence with the specified key and endpoint URI is terminated.
<b>Action</b>	Specify a valid sequence key for the specified endpoint URI.
<b>ISS.0141.9217E</b>	<b>Web services reliable messaging is not enabled for consumer web Services Descriptor {0}.</b>
<b>Explanation</b>	Reliable messaging is not enabled for the specified consumer web service descriptor.
<b>Action</b>	Specify a valid consumer web service descriptor for which reliable messaging is enabled or enable reliable messaging for the specified consumer web service descriptor.
<b>ISS.0142.0003W</b>	<b>User {0} issued request to cancel the thread. Thread id - {1}</b>
<b>Explanation</b>	Integration Server received a request to cancel an executing thread.
<b>Action</b>	No action is required.
<b>ISS.0142.0004W</b>	<b>User {0} issued request to kill the thread. Thread id - {1}</b>
<b>Explanation</b>	Integration Server received a request to kill an executing thread.
<b>Action</b>	No action is required.
<b>ISS.0142.0018E</b>	<b>The <code>watt.server.threadKill.timeout.enabled</code> parameter is set to true; however, the property that enables the thread kill facility, <code>watt.server.threadKill.enabled</code>, is set to false.</b>
<b>Explanation</b>	The ability to cancel or kill service threads is controlled by the <code>watt.server.threadKill.enabled</code> property. If you want to be able to cancel or kill threads, this property must be set to true, which is the default setting.
<b>Action</b>	Set <code>watt.server.threadKill.enabled</code> to true so that a flow step will not run beyond its specified timeout period.

**ISS.0145.0000E      Unable to start Integration Server in quiesce mode. No quiesce port was specified.**

**Explanation**      Integration Server cannot be started from the command line with the -quiesce switch unless a quiesce port is specified.

**Action**            Start Integration Server using either the Start menu (on Windows) or the startup.sh script (on UNIX). Then, specify the quiesce port that Integration Server should use to enter and exit quiesce mode.

**ISS.0145.0009E      Unable to quiesce this Integration Server. Exception: {0}**

**Explanation**      An error occurred while switching this server to quiesce mode.

**Action**            Check the Integration Server server and error logs. Take appropriate corrective action for the reported asset type. Then, try switching to quiesce mode again.

**ISS.0145.0012W      Handler "{0}" cannot disable asset type "{1}". Exception: {2}**

**Explanation**      While entering quiesce mode, Integration Server encountered an error when attempting to disable the specified asset type.

**Action**            In the Integration Server Administrator, manually disable the assets of the reported asset type.

**ISS.0145.0015E      Unable to return Integration Server to active mode. Exception: {0}**

**Explanation**      An error occurred while switching this Integration Server to active mode.

**Action**            Check the Integration Server server and error logs. Then, take the appropriate corrective action.

**ISS.0145.0018W      Handler "{0}" was unable to restore state of "{1}" asset type. Exception: {2}**

**Explanation**      While exiting quiesce mode, Integration Server could not restore the state of the specified asset type.

**Action**            In the Integration Server Administrator, manually enable the assets of the reported asset type.

**ISS.0145.0020W      Unable to shut down the quiesce mode manager. Exception: {0}.**

**Explanation**      Integration Server could not save the quiesce properties in the quiesce configuration file. The quiesce.cnf file either does not exist or is corrupt.

**Action**            Delete the quiesce.cnf file from the Integration Server\_directory\config directory. Then, restart the server and specify the quiesce port again.

---

<b>ISS.0145.0022E</b>	<b>Unable to save the configuration after setting quiesce port to {0}. Exception: {1}</b>
<b>Explanation</b>	An error occurred when the quiesce port was changed and Integration Server attempted to save the changes.
<b>Action</b>	Set the quiesce port to a valid port. If the error recurs, contact Software AG Global Support.
<b>ISS.0145.0023E</b>	<b>Unable to validate quiesce port {0}. Port does not exist.</b>
<b>Explanation</b>	The quiesce port has been deleted.
<b>Action</b>	Specify the port alias of an existing valid port.
<b>ISS.0145.0024E</b>	<b>Unable to validate quiesce port {0}. Port is not enabled.</b>
<b>Explanation</b>	The quiesce port is disabled.
<b>Action</b>	Enable the quiesce port.
<b>ISS.0145.0025E</b>	<b>Unable to validate quiesce port {0}. Port is not associated with WmRoot or WmPublic package.</b>
<b>Explanation</b>	The quiesce port does not reside in either the WmRoot or the WmPublic package.
<b>Action</b>	Specify the port alias of a valid quiesce port that resides in either the WmRoot package or the WmPublic package.
<b>ISS.0145.0027E</b>	<b>Unable to validate quiesce port {0}. Port type is incorrect.</b>
<b>Explanation</b>	The specified quiesce port does not belong to the HTTP or HTTPS protocol.
<b>Action</b>	Specify the port alias of a valid quiesce port of type HTTP or HTTPS.
<b>ISS.0145.0028E</b>	<b>Unable to validate quiesce port {0}. Port is suspended.</b>
<b>Explanation</b>	The quiesce port is suspended.
<b>Action</b>	Resume the quiesce port.
<b>ISS.0145.0029E</b>	<b>Unable to validate quiesce port {0}. Port does not have the necessary access mode.</b>
<b>Explanation</b>	The quiesce port's access mode is set to Deny+.
<b>Action</b>	Change the quiesce port's access mode to Allow.

<b>ISS.0145.0202E</b>	<b>Integration Server that is configured to be a member of a cluster did not join the cluster when exiting quiesce mode.</b>
<b>Explanation</b>	When exiting quiesce mode, Integration Server did not join the cluster.
<b>Action</b>	Use the Integration Server server log and error log to determine why Integration Server did not join the cluster and take the necessary actions to correct the error. Then, do one of the following for Integration Server to join the cluster: either restart Integration Server or enter and exit quiesce mode.
<b>ISS.0145.0206E</b>	<b>Integration Server is not configured for clustering. Errors occurred during initialization of cache managers. Exception: {0}</b>
<b>Explanation</b>	When exiting quiesce mode, Integration Server failed to initialize cache managers.
<b>Action</b>	Check Integration Server Server and Error logs and take required actions to correct the clustering error. Once this is done, you can either restart Integration Server or Enter and Exit Quiesce Mode to enable the cluster.
<b>ISS.0145.0207E</b>	<b>Integration Server is not configured for clustering. Errors occurred during initialization of cache managers.</b>
<b>Explanation</b>	When exiting quiesce mode, Integration Server failed to initialize cache managers.
<b>Action</b>	Check Integration Server Server and Error logs and take required actions to correct the clustering error. Once this is done, you can either restart Integration Server or Enter and Exit Quiesce Mode.
<b>ISS.0145.0302W</b>	<b>Unable to suspend {0}. Reason: {1}</b>
<b>Explanation</b>	While entering quiesce mode, Integration Server could not suspend the specified trigger.
<b>Action</b>	Check the server log for details and manually suspend the trigger.
<b>ISS.0145.0306W</b>	<b>Unable to resume {0}. Reason: {1}</b>
<b>Explanation</b>	While entering quiesce mode, Integration Server could not resume the specified trigger, even though the package containing trigger is enabled.
<b>Action</b>	Check the server log for details and manually enable the trigger.
<b>ISS.0145.0315W</b>	<b>Quiesce timeout limit of {0} minutes has expired. {1} services are running. Proceeding with disabling the packages.</b>
<b>Explanation</b>	Integration Server is proceeding with disabling packages even though some long-running services are still running. One or more of these services might fail.
<b>Action</b>	In the Integration Server Administrator, check which services are still running and make sure those services have completed before attempting to quiesce this server again. Alternatively, increase the quiesce timeout limit.

---

<b>ISS.0145.0504E</b>	<b>Cannot disable packages. Exception: {0}</b>
<b>Explanation</b>	While entering quiesce mode, Integration Server could not disable packages.
<b>Action</b>	Check the Integration Server server log for details. Then, in the Integration Server Administrator, manually disable the packages.
<b>ISS.0145.0506E</b>	<b>Package "{0}" is not loaded.</b>
<b>Explanation</b>	While starting in quiesce mode, Integration Server could not load the WmRoot or WmPublic package.
<b>Action</b>	Start the server in active mode, and then enter quiesce mode.
<b>ISS.0145.0509E</b>	<b>Unable to restore state of packages. Exception: {0}</b>
<b>Explanation</b>	While exiting quiesce mode, Integration Server could not restore the state of packages.
<b>Action</b>	Check the Integration Server server log for details. Then, in the Integration Server Administrator, manually enable or disable the packages as necessary.
<b>ISS.0145.0511E</b>	<b>Cannot enable package "{0}".</b>
<b>Explanation</b>	While exiting quiesce mode, Integration Server could not enable the specified package.
<b>Action</b>	In the Integration Server Administrator, manually enable the specified package.
<b>ISS.0145.0603E</b>	<b>Cannot enable listener "{0}" in quiesce mode. Exception: {1}</b>
<b>Explanation</b>	Integration Server could not start the quiesce listener.
<b>Action</b>	Ensure that the listener is enabled in the listener.cnf configuration file.
<b>ISS.0145.0604E</b>	<b>Cannot disable listener "{0}" in quiesce mode. Exception: {1}</b>
<b>Explanation</b>	Integration Server could not stop the quiesce listener.
<b>Action</b>	Ensure that the listener is disabled in the listener.cnf configuration file.
<b>ISS.0145.0700E</b>	<b>Unable to process scheduled task. Exception: {0}</b>
<b>Explanation</b>	Integration Server encountered a runtime error of unknown cause while attempting to quiesce a scheduled task.
<b>Action</b>	Check the server log for details and take the appropriate corrective steps.

<b>ISS.0145.0701E</b>	<b>Unable to retrieve scheduled task "{0}" from database. Exception: {1}</b>
<b>Explanation</b>	Either the database server is down or Integration Server is no longer connected to the database.
<b>Action</b>	Make sure the connection between Integration Server and the database is active.
<b>ISS.0145.0702E</b>	<b>Unable to retrieve scheduled task from database. Exception: {0}</b>
<b>Explanation</b>	Either the database server is down or Integration Server is no longer connected to the database.
<b>Action</b>	Make sure the connection between Integration Server and the database is active.
<b>ISS.0145.0705E</b>	<b>Unable to resume scheduled task "{0}" in quiesce mode. Exception: {1}</b>
<b>Explanation</b>	The state of the scheduled task may be inconsistent between the database and Integration Server. This can occur when changes are made to the database outside of Integration Server.
<b>Action</b>	Check the state of the task in the database. In the Integration Server Administrator, change the state of the task to match the state reported in the database.
<b>ISS.0145.0711E</b>	<b>Unable to retrieve host name. Exception: {0}</b>
<b>Explanation</b>	The Integration Server you are attempting to quiesce is part of a cluster, and there is an issue with the cluster's configuration.
<b>Action</b>	Verify your clustering environment and cache configuration according to the guidelines in the webMethods Integration Server documentation.
<b>ISS.0145.0803W</b>	<b>Cannot disable JMS connection alias "{0}". Reason: {1}</b>
<b>Explanation</b>	While entering quiesce mode, Integration Server could not disable the specified JMS connection alias.
<b>Action</b>	In the Integration Server Administrator, manually disable the JMS connection alias.
<b>ISS.0145.0805W</b>	<b>Cannot enable JMS connection alias "{0}". Reason: {1}</b>
<b>Explanation</b>	While exiting quiesce mode, Integration Server could not enable the specified JMS connection alias.
<b>Action</b>	In the Integration Server Administrator, manually enable the JMS connection alias.

---

<b>ISS.0145.0902E</b>	<b>Unable to shut down the guaranteed delivery outbound Job Manager. Exception: {0}</b>
<b>Explanation</b>	While entering quiesce mode, Integration Server could not shut down the outbound Job Manager.
<b>Action</b>	In the Integration Server Administrator, manually disable the guaranteed delivery outbound Job Manager.
<b>ISS.0145.0905E</b>	<b>Unable to initialize the guaranteed delivery inbound Job Manager. Exception: {0}</b>
<b>Explanation</b>	While exiting quiesce mode, Integration Server could not initialize the guaranteed delivery inbound Job Manager.
<b>Action</b>	In the Integration Server Administrator, manually enable the guaranteed delivery inbound Job Manager.
<b>ISS.0145.0906E</b>	<b>Unable to initialize the guaranteed delivery outbound Job Manager. Exception: {0}</b>
<b>Explanation</b>	While exiting quiesce mode, Integration Server could not initialize the guaranteed delivery outbound Job Manager.
<b>Action</b>	In the Integration Server Administrator, manually enable the guaranteed delivery outbound Job Manager.
<b>ISS.0146.9001E</b>	<b>Key cannot be empty.</b>
<b>Explanation</b>	The Key field must not be empty while adding a global variable.
<b>Action</b>	Provide a valid Key for the global variable.
<b>ISS.0146.9002E</b>	<b>Value cannot be empty.</b>
<b>Explanation</b>	The Value field must not be empty while adding a global variable.
<b>Action</b>	Provide a valid value for global variable.
<b>ISS.0146.9003E</b>	<b>Global variable {0} already exists.</b>
<b>Explanation</b>	Global variable key must be unique.
<b>Action</b>	Provide a unique key for the global variable.
<b>ISS.0146.9004E</b>	<b>Global variable {0} does not exist.</b>
<b>Explanation</b>	You attempted to delete or edit a global variable that does not exist.
<b>Action</b>	Ensure that the global variable exists before attempting to edit or delete it.

<b>ISS.0146.9005</b>	<b>Global Variable key cannot contain any of these characters:{0}</b>
<b>Explanation</b>	The global variable key that you specified contains special characters other than period (.) or underscore(_).
<b>Action</b>	Ensure that the global variable key does not contain any special characters other than period or underscore(_).
<b>ISS.0146.9006E</b>	<b>Global variable key cannot exceed 255 characters.</b>
<b>Explanation</b>	The global variable key that you specified contains more than 255 characters.
<b>Action</b>	Ensure that length of the global variable key is less than or equal to 255.
<b>ISS.0146.9007E</b>	<b>Global variable value cannot exceed 255 characters.</b>
<b>Explanation</b>	The global variable value that you specified contains more than 255 characters.
<b>Action</b>	Ensure that length of the global variable value is less than or equal to 255.
<b>ISS.0146.9008E</b>	<b>The value of the 'isSecure' field of a global variable cannot be edited.</b>
<b>Explanation</b>	You attempted to edit the value of the 'isSecure' field of a global variable.
<b>Action</b>	Ensure that you do not edit the value of the 'isSecure' field of a global variable.
<b>ISS.0147.9001E</b>	<b>SFTP server alias {0} already exists.</b>
<b>Explanation</b>	The SFTP server alias name that you specified already exists in Integration Server.
<b>Action</b>	Specify an SFTP server alias name that does not exist in Integration Server.
<b>ISS.0147.9002E</b>	<b>SFTP server alias {0} does not exist.</b>
<b>Explanation</b>	The specified SFTP server alias does not exist in Integration Server.
<b>Action</b>	Ensure that the SFTP server alias name you specified is correct and that this SFTP server alias exists in Integration Server.
<b>ISS.0147.9003E</b>	<b>Cannot retrieve the host key from location {0}. Details: Corrupt or unknown public key file format.</b>
<b>Explanation</b>	The specified host key file contains the public key of the SFTP server in an unsupported format.
<b>Action</b>	Ensure that the host key file contains the public key in the supported (openssh) format.

---

<b>ISS.0147.9004E</b>	<b>Cannot find the private key file {0}.</b>
<b>Explanation</b>	Integration Server is unable to find the private key file at specified location.
<b>Action</b>	Ensure that the private key file exists at the specified location.
<b>ISS.0147.9005E</b>	<b>Private key file {0} already exists in Integration Server.</b>
<b>Explanation</b>	The specified private key file already exists in Integration Server.
<b>Action</b>	Specify a different private key file.
<b>ISS.0147.9006E</b>	<b>User alias {0} does not exist.</b>
<b>Explanation</b>	The specified SFTP user alias does not exist in Integration Server.
<b>Action</b>	Ensure that the SFTP user alias name you specified is correct and that this SFTP user alias exists in Integration Server.
<b>ISS.0147.9007E</b>	<b>User alias {0} already exists.</b>
<b>Explanation</b>	The SFTP user alias name that you specified already exists in Integration Server.
<b>Action</b>	Specify an SFTP user alias name that does not exist in Integration Server.
<b>ISS.0147.9008E</b>	<b>Cannot read host key from location {0}.</b>
<b>Explanation</b>	Integration Server is unable to read the host key file from the location you specified.
<b>Action</b>	Specify a valid host key file location to which Integration Server has the required permission for reading.
<b>ISS.0147.9009E</b>	<b>Cannot write the public key to file {0}.</b>
<b>Explanation</b>	Integration Server is unable to write the host key file to the specified location.
<b>Action</b>	Ensure that Integration Server has the required permission and enough disk space to write the host key to the specified location.
<b>ISS.0147.9010E</b>	<b>Cannot get host key from server {0}. Details: {1}</b>
<b>Explanation</b>	Integration Server is unable to retrieve the host key from the specified (arg0) SFTP server.
<b>Action</b>	Ensure that the SFTP server is configured and running on the specified host-port.

<b>ISS.0147.9011E</b>	<b>Test of user alias {0} Fail. Details: {1}</b>
<b>Explanation</b>	Testing of SFTP user alias (arg0) failed due to error (arg1).
<b>Action</b>	Ensure that the SFTP user alias information is correct and that the SFTP server is running on the specified host and port.
<b>ISS.0147.9012E</b>	<b>Cannot delete SFTP server alias {0} because the following SFTP user alias(es) are using it : {1}.</b>
<b>Explanation</b>	Integration Server cannot delete the SFTP server alias (arg0) because the SFTP user alias(es) [arg1] are using it.
<b>Action</b>	Ensure that the SFTP server alias that you want to delete is not included in any SFTP user alias definition.
<b>ISS.0148.9010E</b>	<b>A valid short value must be specified for "{0}".</b>
<b>Explanation</b>	The value of short data type that you entered for field {0} while calling the service is invalid.
<b>Action</b>	Ensure that the value specified for the field {0} is a valid short value.
<b>ISS.0148.9011E</b>	<b>A valid boolean value must be specified for "{0}".</b>
<b>Explanation</b>	The value of boolean data type that you entered for field {0} while calling the service is invalid.
<b>Action</b>	Ensure that the value specified for the field {0} is a valid boolean value.
<b>ISS.0148.9012E</b>	<b>A valid double value must be specified for "{0}".</b>
<b>Explanation</b>	The value of double data type that you entered for field {0} while calling the service is invalid.
<b>Action</b>	Ensure that the value specified for the field {0} is a valid double value.
<b>ISS.0148.9013E</b>	<b>A valid float value must be specified for "{0}".</b>
<b>Explanation</b>	The value of float data type that you entered for field {0} while calling the service is invalid.
<b>Action</b>	Ensure that the value specified for the field {0} is a valid float value.

---

<b>ISS.0148.9014E</b>	<b>A valid character value must be specified for "{0}".</b>
<b>Explanation</b>	The value of character data type that you entered for field {0} while calling the service is invalid.
<b>Action</b>	Ensure that the value specified for the field {0} is a valid character value.
<b>ISS.0148.9015E</b>	<b>A valid byte value must be specified for "{0}".</b>
<b>Explanation</b>	The value of byte data type that you entered for field {0} while calling the service is invalid.
<b>Action</b>	Ensure that the value specified for the field {0} is a valid byte value.
<b>ISS.0148.9016E</b>	<b>A valid long value must be specified for "{0}".</b>
<b>Explanation</b>	The value of long data type that you entered for field {0} while calling the service is invalid.
<b>Action</b>	Ensure that the value specified for the field {0} is a valid long value.
<b>ISS.0148.9017E</b>	<b>{1} is not a valid value for {0}. Allowed values are {2}</b>
<b>Explanation</b>	The value {1} specified for field {0} while calling a service is not available in the pick list {2}.
<b>Action</b>	Ensure that the value specified for the field {0} is in the pick list {2}.
<b>ISS.0149.0001E</b>	<b>Message size exceeded the limit of {0} MB.</b>
<b>Explanation</b>	Enterprise Gateway Server could not process the request because the message associated with the request is larger than the size allowed in the Enterprise Gateway rule.
<b>Action</b>	Either reduce the message size of the request or increase the message size limit in the filter for the rule.
<b>ISS.0149.0002D</b>	<b>Enterprise Gateway rules processing has started on URL {0} and IP address {1} at time {2}.</b>
<b>Explanation</b>	Enterprise Gateway Server has started processing rules.
<b>Action</b>	No action is needed.

<b>ISS.0149.0003D</b>	<b>Processing Enterprise Gateway rule "{0}".</b>
<b>Explanation</b>	Enterprise Gateway Server has started processing the specified rule.
<b>Action</b>	No action is needed.
<b>ISS.0149.0004D</b>	<b>Processing Enterprise Gateway rule filter "{0}".</b>
<b>Explanation</b>	Enterprise Gateway Server has started processing the specified rule filter.
<b>Action</b>	No action is needed.
<b>ISS.0149.0005E</b>	<b>A rule violation occurred for Enterprise Gateway rule "{0}" for filter "{1}": {2}.</b>
<b>Explanation</b>	Enterprise Gateway Server could not process the request because the request met a filter condition defined in the Enterprise Gateway rule.
<b>Action</b>	Check the filter conditions for the specified rule and either change the conditions or modify the request so a rule violation does not occur.
<b>ISS.0149.0006E</b>	<b>A rule violation occurred for Enterprise Gateway rule "{0}".</b>
<b>Explanation</b>	Enterprise Gateway Server could not process the request because its type did not match the request type configured in the Enterprise Gateway rule.
<b>Action</b>	Modify the request so it matches one of the configured request types.
<b>ISS.0149.0007E</b>	<b>Denial of Service by IP address limit was reached for IP address {0}.</b>
<b>Explanation</b>	Enterprise Gateway Server could not process the request because an Enterprise Gateway Denial of Service limit was reached for this IP address.
<b>Action</b>	Delete the IP address from the Enterprise Gateway deny list.
<b>ISS.0149.0008W</b>	<b>IP address {0} is unblocked.</b>
<b>Explanation</b>	Enterprise Gateway Server is again accepting requests from this IP address because the Enterprise Gateway Denial of Service block interval has elapsed.
<b>Action</b>	No action is needed.
<b>ISS.0149.0009W</b>	<b>IP address {0} is blocked for a duration of {1} minutes.</b>
<b>Explanation</b>	Enterprise Gateway Server has blocked incoming requests from this IP address because the number of requests from this address has exceeded the specified Enterprise Gateway Denial of Service limits.
<b>Action</b>	Wait for the IP address to become unblocked when the block interval elapses. If an IP address is blocked too often, reevaluate the "maximum requests" and "maximum requests in progress" limits.

---

<b>ISS.0149.0011E</b>	<b>Requests from IP address {0} have exceeded the maximum in-progress limit of {1}.</b>
<b>Explanation</b>	Enterprise Gateway Server will deny or block incoming requests from this IP address because the number of requests from this address has exceeded the specified Enterprise Gateway Denial of Service limit for in-progress requests.
<b>Action</b>	Delete the IP address from the Enterprise Gateway deny list.
<b>ISS.0149.0012D</b>	<b>Denial of Service clean-up task has executed.</b>
<b>Explanation</b>	Periodically, Enterprise Gateway Server starts a task to clear old Denial of Service entries from the queue.
<b>Action</b>	No action is needed.
<b>ISS.0149.0013E</b>	<b>Global Denial of Service limits were reached: {0}.</b>
<b>Explanation</b>	Enterprise Gateway Server will block incoming requests received from all IP addresses because the number of requests has exceeded the specified Enterprise Gateway global Denial of Service limits.
<b>Action</b>	Wait for the block interval to elapse.
<b>ISS.0149.0014E</b>	<b>Requests from IP address {0} have exceeded the maximum request limit of {1} in {2} seconds.</b>
<b>Explanation</b>	Enterprise Gateway Server will deny or block incoming requests from this IP address because the number of requests from this address has exceeded the specified Enterprise Gateway Denial of Service limit for requests allowed in a specified time period.
<b>Action</b>	Delete the IP address from the Enterprise Gateway deny list.
<b>ISS.0149.0015S</b>	<b>Requests from all IP addresses will be blocked for a duration of {0} minutes.</b>
<b>Explanation</b>	Enterprise Gateway Server will block incoming requests received from all IP addresses for the indicated interval because the number of requests has exceeded the specified Enterprise Gateway global Denial of Service limits.
<b>Action</b>	Wait for the block interval to elapse.
<b>ISS.0149.0016E</b>	<b>OAuth token is not present in the request header.</b>
<b>Explanation</b>	Enterprise Gateway Server could not process the request because the OAuth token is not present in the request header.
<b>Action</b>	Either disable the OAuth filter or ensure that the request contains the OAuth token.

<b>ISS.0149.0017E</b>	<b>Maximum in-progress limit of {0} has been exceeded.</b>
<b>Explanation</b>	Enterprise Gateway Server will block incoming requests received from all IP addresses because the number of requests has exceeded the specified Enterprise Gateway global Denial of Service limit for in-progress requests.
<b>Action</b>	Wait for the block interval to elapse.
<b>ISS.0149.0018E</b>	<b>Maximum requests limit of {0} in {1} seconds has been exceeded.</b>
<b>Explanation</b>	Enterprise Gateway Server will block incoming requests received from all IP addresses because the number of requests has exceeded the specified Enterprise Gateway global Denial of Service limit for requests allowed in a specified time period.
<b>Action</b>	Wait for the block interval to elapse.
<b>ISS.0149.0019E</b>	<b>The header "{0}" is not present in the request header.</b>
<b>Explanation</b>	Enterprise Gateway Server could not process the request because the indicated header is not present in the request header.
<b>Action</b>	Either disable the mobile application protection filter or ensure that the request has the required mobile device type, application name, and application version request headers.
<b>ISS.0149.0020E</b>	<b>Mobile application version {0} is {1} {2} for application "{3}" and device type "{4}".</b>
<b>Explanation</b>	Enterprise Gateway Server could not process the request because the request matches the indicated mobile application protection filter condition. As a result, the request is in violation of the Enterprise Gateway rule.
<b>Action</b>	Reevaluate the mobile application protection filter conditions if desired.
<b>ISS.0149.0501CS</b>	<b>Exception occurred while sending a notification for Enterprise Gateway rule "{0}": {1}.</b>
<b>Explanation</b>	Enterprise Gateway Server could not send an alert notification indicating that a rule violation occurred for the reason indicated in the exception.
<b>Action</b>	Check the server error logs and take corrective steps.
<b>ISS.0149.0502CS</b>	<b>Exception occurred while invoking "{0}": {1}.</b>
<b>Explanation</b>	Enterprise Gateway Server could not invoke the flow service to notify users that a rule violation occurred for the reason indicated in the exception.
<b>Action</b>	Check the server error logs and take corrective steps.

---

<b>ISS.0149.0503W</b>	<b>Alert notification for Enterprise Gateway rule "{0}" was not sent. No alert options were found for the rule.</b>
<b>Explanation</b>	Enterprise Gateway Server could not send an alert notification indicating that a rule violation occurred because no alert options were specified for the rule to indicate how to handle the alert.
<b>Action</b>	Check the server error logs and take corrective steps.
<b>ISS.0149.0504W</b>	<b>Alert notification for Enterprise Gateway rule "{0}" was not sent. SMTP server configuration is not valid.</b>
<b>Explanation</b>	Enterprise Gateway Server could not send an alert notification for the Enterprise Gateway rule because the server is not configured to send emails.
<b>Action</b>	Check the settings on the Settings > Resources screen under Email Notification. If your server is not configured to send emails, use Integration Server Administrator to configure an SMTP port.
<b>ISS.0149.9001E</b>	<b>Enterprise Gateway rule "{0}" already exists.</b>
<b>Explanation</b>	Enterprise Gateway Server could not create the rule because an Enterprise Gateway rule with this name already exists.
<b>Action</b>	Specify a unique name for the Enterprise Gateway rule.
<b>ISS.0149.9002E</b>	<b>Enterprise Gateway rule "{0}" was not found</b>
<b>Explanation</b>	Enterprise Gateway Server could not find the specified Enterprise Gateway rule. Either the rule does not exist on this server or the specified rule name is incorrect.
<b>Action</b>	Ensure that the Enterprise Gateway rule exists on this Enterprise Gateway Server and that the name specified for the rule is correct.
<b>ISS.0149.9003E</b>	<b>Mobile application protection filter conditions were not specified.</b>
<b>Explanation</b>	Enterprise Gateway Server failed to create or update an Enterprise Gateway rule that has a mobile application protection filter enabled because no filter conditions were specified.
<b>Action</b>	Either specify one or more conditions or disable this filter.
<b>ISS.0149.9004E</b>	<b>Mobile application "{0}" was not found.</b>
<b>Explanation</b>	Enterprise Gateway Server did not recognize the application name provided in the mobile application protection filter because the application is not in the Mobile Applications list.
<b>Action</b>	Either specify a different mobile application or use the Mobile Application Protection Options screen in Integration Server Administrator to add the application.

- ISS.0149.9005E**      **Mobile device type "{0}" was not found.**  
**Explanation**      Enterprise Gateway Server did not recognize the device type provided in the mobile application protection filter because the device is not in the Device Types list.  
**Action**              Specify a different device type or use the Mobile Application Protection Options screen in Integration Server Administrator to add the device type.
- ISS.0149.9006E**      **Condition "{0}" is not supported.**  
**Explanation**      Enterprise Gateway Server failed to apply the condition to this Enterprise Gateway rule because the condition character specified in the mobile application protection filter is not valid.  
**Action**              Ensure that the condition is one of the following characters: =,<,>,<=,>=,<>
- ISS.0149.9007E**      **Mobile application version "{0}" is not valid.**  
**Explanation**      Enterprise Gateway Server failed to apply the condition to this Enterprise Gateway rule because the application version specified in the mobile application protection filter is not formatted correctly.  
**Action**              Ensure that the application version is in the following format:  
<major-version>.<minor-version>.<sub-minor-version>.<patch>
- ISS.0149.9008E**      **Mobile applications list was not updated. The following applications are specified in one or more rules: {0}.**  
**Explanation**      Enterprise Gateway Server failed to remove mobile applications from the application list because the applications are specified in a filter condition for one or more rules.  
**Action**              Before you attempt to remove a mobile application from the list, make sure the application is not specified in a filter condition in any rules.
- ISS.0149.9009E**      **Device types list was not updated. The following device types are specified in one or more rules: {0}.**  
**Explanation**      Enterprise Gateway Server failed to remove device types from the device types list because the device types are specified in a filter condition for one or more rules.  
**Action**              Before you attempt to remove a device type from the list, make sure the device type is not specified in a filter condition in any rules.
- ISS.0149.9010E**      **Service name "{0}" is not valid.**  
**Explanation**      A flow service was specified for Enterprise Gateway Server to invoke when an Enterprise Gateway rule violation occurs, but the service name is not valid.  
**Action**              Specify a valid, fully qualified service name.

---

<b>ISS.0150.9001</b>	<b>Missing required parameter: "{0}".</b>
<b>Explanation</b>	A required parameter was not supplied.
<b>Action</b>	Supply the specified required parameter.
<b>ISS.0150.9002</b>	<b>Unable to create port: "{0}".</b>
<b>Explanation</b>	Integration Server cannot create the port because an exception occurred.
<b>Action</b>	Use the specified exception to determine why the port could not be created.
<b>ISS.0150.9003</b>	<b>Unable to set the IP access mode for the port: {0}</b>
<b>Explanation</b>	An error occurred during an attempt to set the IP access mode for the port.
<b>Action</b>	Use the exception returned by the error message to determine the cause of the error.
<b>ISS.0150.9004</b>	<b>Unable to set the IP access list for the port: {0}</b>
<b>Explanation</b>	An error occurred while attempting to set the IP access list for the port.
<b>Action</b>	Use the exception returned by the error message to determine the cause of the error.
<b>ISS.0150.9005</b>	<b>Unable to set the URL access mode for the port: {0}</b>
<b>Explanation</b>	An error occurred during an attempt to set the URL access mode for the port.
<b>Action</b>	Use the exception returned by the error message to determine the cause of the error.
<b>ISS.0150.9006</b>	<b>Unable to set the URL access list for the port: {0}</b>
<b>Explanation</b>	An error occurred during an attempt to set the URL access list for the port.
<b>Action</b>	Use the exception returned by the error message to determine the cause of the error.
<b>ISS.0150.9008</b>	<b>The primary port cannot be changed.</b>
<b>Explanation</b>	An update operation attempted to make changes to the primary port of the Integration Server. The primary port cannot be updated.
<b>Action</b>	To make changes to the port that is assigned to be the primary port, specify another port as the primary port. Then make changes to the port that was previously the primary port.

**ISS.0150.9009**      **Invalid protocol. The webMethods Platform Manager subsystem does not support the protocol "{0}".**

**Explanation**      A create or update operation for port settings specified an protocol that is not supported by the webMethods Platform Manager subsystem in Integration Server.

**Action**            Specify a protocol supported by the webMethods Platform Manager subsystem in Integration Server.

**ISS.0150.9010**      **Cannot change port protocol [from {0} to {1}].**

**Explanation**      An update operation attempted to change the protocol for the port. Once a port is created, the protocol cannot be changed.

**Action**            To change the protocol used with a particular port, first delete the port. Then, recreate the port with the new protocol.

**ISS.0150.9011**      **Package "{0}" is not loaded or is not enabled.**

**Explanation**      A create or update port operation attempted to create or change a port in a package that either does not exist or is not enabled.

**Action**            Make sure the package exists and is enabled before performing the create or update port operation.

**ISS.0150.9012**      **Unable to disable port: {0}**

**Explanation**      An exception occurred during an attempt to disable the port

**Action**            Review the exception to determine why the port could not be disabled.

**ISS.0150.9013**      **No port found with unique ID {0}.**

**Explanation**      A read, update, or delete port operation supplied a port ID that does not exist.

**Action**            Verify the instance ID that the Software AG Platform Manager associates with the port. To do this, refresh the port list on the Software AG Platform Manager.

**ISS.0150.9014**      **The port was created. However, the access configuration was not set: {0}**

**Explanation**      A create port operation was partially successful. The port was created and some configuration settings were established. However, establishing some or all of the access configuration settings failed. The port will be disabled if it is not already.

**Action**            Review the exception to determine why the access configuration could not be set.

---

<b>ISS.0150.9015</b>	<b>The port was partially updated. However, the access configuration was not set: {0}</b>
<b>Explanation</b>	An update port operation was partially successful. Some settings were updated. However, updates to some or all of the access configuration settings failed. The port will be disabled if it is not already.
<b>Action</b>	Review the exception to determine why the access configuration settings could not be updated.
<b>ISS.0150.9020</b>	<b>The diagnostic port must be associated with the WmRoot package. Package {0} is invalid.</b>
<b>Explanation</b>	A create or update operation for the diagnostic port attempted to assign a package other than WmRoot to the diagnostic port. This is not allowed. The diagnostic port must be associated with the WmRoot package.
<b>Action</b>	Specify the WmRoot package when creating or updating the diagnostic port.
<b>ISS.0150.9021</b>	<b>Cannot create diagnostic port. A diagnostic port with port number {0} and ID {1} already exists. Each Integration Server can have one diagnostic port only.</b>
<b>Explanation</b>	An operation attempted to create a diagnostic port. However, the Integration Server already has a diagnostic port. Each Integration Server can have one diagnostic port only.
<b>Action</b>	To create a new diagnostic port, delete the existing diagnostic port first.
<b>ISS.0150.9022</b>	<b>Unable to update port. The diagnostic port cannot be changed to a standard port.</b>
<b>Explanation</b>	An operation attempted to change a diagnostic port to a standard port. A diagnostic port cannot be created in this way because the type of port may not be changed.
<b>Action</b>	To create a standard port on an assigned diagnostic port, first delete the existing diagnostic port and then create a standard port.
<b>ISS.0150.9023</b>	<b>Unable to update port. The standard port cannot be changed to a diagnostic port.</b>
<b>Explanation</b>	An operation attempted to change a standard port to a diagnostic port. A diagnostic port cannot be created in this way because the type of port may not be changed.
<b>Action</b>	To create a diagnostic port on an assigned port, first delete the existing port and then create a diagnostic port.
<b>ISS.0150.9024</b>	<b>Invalid keystore alias {0}</b>
<b>Explanation</b>	A create or update port operation specified a keystore alias that does not exist.
<b>Action</b>	Make sure to specify the name of an existing keystore alias. Verify that the name of the keystore alias is spelled correctly.

<b>ISS.0150.9025</b>	<b>Invalid key alias {0}</b>
<b>Explanation</b>	A create or update port operation specified a key alias that does not exist.
<b>Action</b>	Make sure to specify the name of an existing key alias. Verify that the name of the key alias is spelled correctly
<b>ISS.0150.9026</b>	<b>Invalid truststore alias {0}</b>
<b>Explanation</b>	A create or update port operation specified a truststore alias that does not exist.
<b>Action</b>	Make sure to specify the name of an existing truststore alias. Verify that the name of the truststorealias is spelled correctly.
<b>ISS.0150.9027</b>	<b>Cannot enable port. Keystore alias is empty. Specify a keystore alias for the port or a define a default SSL keystore alias for the Integration Server.</b>
<b>Explanation</b>	A create or update port operation did not specify a keystore alias and there is not a default SSL keystore alias for the Integration Server. An HTTPS port requires a keystore alias.
<b>Action</b>	Either define a keystore alias or specify a default SSL keystore alias for the Integration Server. The default SSL keystore alias is the keystore alias specified during configuration of the SSL authentication credentials for the Integration Server. To use a defined keystore alias with the HTTPS port, specify that keystore alias in the create or update operation. To use the Integration Server's default SSL keystore alias with the HTTPS port, do not supply keystore alias information for the create or update operations.
<b>ISS.0150.9028</b>	<b>Cannot enable port. Keystore alias is empty. Specify a key alias for the port or a define a default SSL key alias for the Integration Server.</b>
<b>Explanation</b>	A create or update port operation did not specify a key alias and there is not a default SSL key alias for the Integration Server. An HTTPS port requires a key alias.
<b>Action</b>	Either define a key alias or specify a default SSL key alias for the Integration Server. The default SSL key alias is the keys alias specified during configuration of the SSL authentication credentials for the Integration Server. To use a defined key alias with the HTTPS port, specify that keystore alias in the create or update operation. To use the Integration Server's default SSL key alias with the HTTPS port, do not supply key alias information for the create or update operations.
<b>ISS.0150.9030</b>	<b>Unable to assign primary port: "{0}".</b>
<b>Explanation</b>	An attempt to change the primary port failed because the selected port does not meet the primary port criteria mentioned in the wrapped exception.
<b>Action</b>	Select a port that meets the primary port requirements. Alternatively, change the chosen port to meet the primary port requirements mentioned in the wrapped exception.

---

<b>ISS.0150.9037E</b>	<b>Unable to assign quiesce port: "{0}".</b>
<b>Explanation</b>	An attempt to change the quiesce port failed because the selected port does not meet the quiesce port criteria mentioned in the wrapped exception.
<b>Action</b>	Select a port that meets the quiesce port requirements. Alternatively, change the chosen port to meet the quiesce port requirements mentioned in the wrapped exception.
<b>ISS.0150.9999</b>	<b>The webMethods Platform Manager subsystem experienced an unexpected error: {0}</b>
<b>Explanation</b>	An error occurred in the webMethods Platform Manager subsystem that runs in Integration Server.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0151.9001</b>	<b>Missing required parameter: "{0}".</b>
<b>Explanation</b>	A required parameter is missing.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.0153.0089C</b>	<b>Trigger {0} failed decoding: {1}</b>
<b>Explanation</b>	The specified trigger could not decode a received document.
<b>Action</b>	Review the provided exception to determine why decoding failed.
<b>ISS.0153.0401EE</b>	<b>{0} failed to save password for handle {1}. Exception: {2}</b>
<b>Explanation</b>	Integration Server was unable to save the password in the password store. This can occur if there is an issue with either the messaging.cnf file, which contains details about the connection alias, or the password store.
<b>Action</b>	Take appropriate action to resolve the problem described in the exception.
<b>ISS.0153.0402EE</b>	<b>{0} failed to retrieve password for handle {1}. Exception: {2}</b>
<b>Explanation</b>	Integration Server was unable to retrieve the password from the password store. This can occur if there is an issue with either the messaging.cnf file, which contains details about the connection alias, or the password store.
<b>Action</b>	Take appropriate action to resolve the problem described in the exception.

**ISS.0153.0404WW**    **Client authentication type for Universal Messaging connection alias {0} is not valid. Therefore, no authentication will be performed for this connection. Supported types: basic, none.**

**Explanation**        The client authentication type provided for the specified Universal Messaging connection alias is not valid. As a result, Universal Messaging will use the default authentication type (“none”) and no authentication will be performed.

**Action**              Supply a valid authentication type (“none” or “basic”).

**ISS.0155.0003E**    **Unable to perform hot deployment of packages. Hot deployment timeout limit has expired while waiting for in-flight tasks to complete.**

**Explanation**        Hot deployment of packages can happen only if the in-flight tasks are complete within the specified hot deployment timeout period.

**Action**              Increase the hot deployment timeout limit in the Settings > Hot Deployment page of the Integration Server Administrator. Alternatively, ensure that Integration Server is handling less load or requests.

**ISS.0155.0005E**    **Hot deployment of the system package {0} is not supported.**

**Explanation**        You attempted to hot deploy a system package. Hot deployment can be performed only for custom packages.

**Action**              Ensure that the packages that you are attempting to hot deploy are not system packages.

**ISS.0155.0008E**    **Invalid input. Provide a valid positive integer as the hot deployment timeout value.**

**Explanation**        The hot deployment timeout value must be a positive integer.

**Action**              Provide a valid positive integer as the hot deployment timeout value.

**ISS.0155.0010E**    **Cannot cancel the hot deployment operation. The installation of package has already started.**

**Explanation**        You attempted to cancel the hot deployment operation after the installation of the package started. You can cancel the hot deployment operation only before the package installation starts.

**Action**              If you attempted to cancel the hot deployment because of the delay in the completion of in-flight tasks, this message indicates that the in-flight processes are now complete and Integration Server has started the hot deployment operation. No action required.<p>If the hot deployment operation is canceled because the new version of the package has issues, perform hot deployment of the previous version of the package from the salvage directory or perform hot deployment of a newer version of the package after correcting the issues.</p>

---

<b>ISS.0157.0001E</b>	<b>Package "{0}" is not loaded</b>
<b>Explanation</b>	The specified package exists on Integration Server but is not enabled.
<b>Action</b>	Make sure the specified package is enabled. Then, re-execute the pub.assets:getChecksums service. Note that the service gets checksums only for assets that are loaded. If the specified package is partially loaded, the service gets checksums for the loaded assets only.
<b>ISS.0157.0002E</b>	<b>Package "{0}" does not exist</b>
<b>Explanation</b>	The specified package does not exist on Integration Server .
<b>Action</b>	Make sure the specified package exists and is loaded. Then, re-execute the pub.assets:getChecksums service.
<b>ISS.0157.0003E</b>	<b>A value must be specified for either 'packages' or 'assets'</b>
<b>Explanation</b>	A value was not specified for either the packages or assets input parameters. The pub.assets:getChecksums service requires a value for either packages or assets.
<b>Action</b>	Specify a value for the packages input parameter or the assets input parameter. Then, re-execute the pub.assets:getChecksums service.
<b>ISS.134.9215E</b>	<b>Connection Count must be a positive integer, and it must not exceed {0}.</b>
<b>Explanation</b>	The value of the Maximum execution threads property is less than the value of the Connection count property. The Maximum execution threads value must be greater than or equal to the Connection count value.
<b>Action</b>	Change the value of the Maximum execution threads property to be greater than or equal to the Connection count property. Alternatively, change the value of the Connection count property to be less than or equal to the Maximum execution threads property.
<b>ISS.134.9216E</b>	<b>The Multiple Connection feature is not supported when using non-durable Topics.</b>
<b>Explanation</b>	Only JMS triggers that subscribe to queues and/or topics (durable subscribers) can use multiple connections to receive messages from the JMS provider. A JMS trigger that subscribes to a topic that is a non-durable subscriber cannot use multiple connections to receive messages from the JMS provider. That is, only a JMS trigger that subscribes to queues and/or topics that are durable subscribers can have a connection count greater than 1.
<b>Action</b>	Set Connection count to 1. Alternatively, remove any topics that are non-durable subscribers from the list of destinations to which the JMS trigger subscribes.

<b>ISS.141.9102E</b>	<b>No transport info in MessageContext</b>
<b>Explanation</b>	An internal error occurred while processing the Web service request.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.141.9103E</b>	<b>No MessageFormatter in MessageContext</b>
<b>Explanation</b>	An internal error has occurred while processing the Web service request.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.141.9209E</b>	<b>Could not deploy the Web service descriptor {0} as policy with id {1} is not found.</b>
<b>Explanation</b>	Integration Server was unable to execute the Web service connector because the WS-Policy attached to the Web service connector is either missing or invalid. Valid policies should be in the policy repository, that is, saved in the following directory: (webMethods_directory)/IntegrationServer/config/wss
<b>Action</b>	<p>If you want to secure the Web service with the policy, locate the WS-Policy and add it to the policy repository. You can check the policy repository's invalid subdirectory to see whether the policy was moved because it is invalid. If the policy is in the invalid directory, correct it to make it valid, and move it back into the main policy repository directory.</p> <p>If the WS-Policy does not exist, detach the WS-Policy from the Web service descriptor. If you still need to secure the Web service, create a WS-Policy that provides the security you want, add it to the policy repository, and attach it to the Web service descriptor.</p>
<b>ISS.150.9036E</b>	<b>Port Alias cannot be edited.</b>
<b>Explanation</b>	Once a port is created, the port alias cannot be changed.
<b>Action</b>	None. However, if you want an existing port to use a different port alias, you must delete the port and then recreate it using the new port alias.
<b>ISS.153.9302E</b>	<b>Protocol buffer coder cannot find descriptor in document type: {0}</b>
<b>Explanation</b>	An error occurred while encoding or decoding an instance of the specified publishable document type. Integration Server cannot find the message descriptor for the publishable document type. Integration Server creates a message descriptor for a publishable document type with an encoding type set to protocol buffers.
<b>Action</b>	Make sure the publishable document type is synchronized with the messaging provider.

---

<b>ISS.156.10E</b>	<b>Failed to unsubscribe because subscription does not exist for unique key "{0}".</b>
<b>Explanation</b>	Subscription not found for the unique key \"{0}\".
<b>ISS.156.11E</b>	<b>Provided options "{0}" are not valid.</b>
<b>Action</b>	Provide valid options.
<b>ISS.156.13E</b>	<b>Unable to invoke service "{0}" because of the exception: "{1}" .</b>
<b>Explanation</b>	The exception message describes the cause.
<b>Action</b>	Check the exception message and take appropriate action.
<b>ISS.156.14E</b>	<b>An error occurred because the service name is not provided when the isAsync flag is set to true.</b>
<b>Explanation</b>	An error occurs when service name is not provided and the isAsync flag is set to true.
<b>Action</b>	Provide a service name when isAsync flag is set to true.
<b>ISS.156.15E</b>	<b>An error occurred because the user "{0}" is invalid or does not have the ACL permission to execute the service: "{1}".</b>
<b>Explanation</b>	You have entered an invalid username or the user does not have necessary permissions to invoke the callback service.
<b>Action</b>	Enter a valid user name and check if the user has the necessary permissions to invoke the callback service.
<b>ISS.156.16E</b>	<b>An error occurred because the service name is provided and the isAsync flag is set to false.</b>
<b>Explanation</b>	An error occurs when service name is provided and the isAsync flag is set to false.
<b>Action</b>	Do not provide a service name when isAsync is set to false.
<b>ISS.156.6E</b>	<b>Could not unsubscribe the subscription. The exception message is: "{0}".</b>
<b>Explanation</b>	The exception message describes the cause.
<b>Action</b>	Check the exception message and take appropriate action.

<b>ISS.156.7E</b>	<b>Event routing service is unavailable.</b>
<b>Explanation</b>	An error occurred when initializing event routing service.
<b>ISS.156.8E</b>	<b>Invalid Callback Service "{0}". Service should be invocable and should have reference to "{1}" document type as the only input.</b>
<b>Explanation</b>	Callback service cannot be invoked and does not have reference to \"{1}\" document type.
<b>Action</b>	Ensure that the callback service can be invoked and has reference to \"{1}\" document type as the only input.
<b>ISS.156.9E</b>	<b>Subscription failed because subscription already exists for unique key "{0}"</b>
<b>ISS.88.9435E</b>	<b>The specified document type {0} does not exist.</b>
<b>Explanation</b>	The document type that you supplied as input to the service does not exist.
<b>Action</b>	Check the name of the document type that you are attempting to use to ensure you have the correct name. Then, specify a document type name that exists and re-invoke the service.
<b>ISS.88.9436E</b>	<b>The structure of the document instance does not match the specified document type, {0}; validation failed.</b>
<b>Explanation</b>	The service validates a document instance using the IS document type you supplied. However, the document instance does not have the structure specified by the IS document type. Validation of the document instance failed.
<b>Action</b>	Check the IS document type you are attempting to use to ensure you specifying the correct one. Then, re-invoke the service specifying the correct IS document type for the document instance.
<b>ISS.88.9437E</b>	<b>Unexpected exception occurred: {0}</b>
<b>Explanation</b>	The Web services stack, which is Integration Server code that performs Web service functionality, encountered an unexpected error.
<b>Action</b>	Read through the contents of the messages, and take corrective steps. If you are unable to resolve the issue, contact Software AG Global Support.

<b>ISS.88.9438E</b>	<b>Unexpected exception occurred while creating a fault message.</b>
<b>Explanation</b>	Integration Server encountered an unexpected error. It was attempting to add a child fault element to a non-existing parent fault element.
<b>Action</b>	Contact Software AG Global Support.
<b>ISS.88.9439E</b>	<b>The query for the fault element failed because its corresponding parent element is absent from the SOAP message.</b>
<b>Explanation</b>	You attempted to query a SOAP message for SOAPFault elements. However, there is no parent element in the SOAP message for the queried item. For example, Integration Server will issue this error if you attempt to query for a fault code when there is no SOAPFault in the SOAP message.
<b>Action</b>	Ensure the SOAP message that you are attempting to process is valid. If the SOAP message is valid, contact Software AG Global Support.
<b>ISS.88.9440E</b>	<b>The structure of the SOAP fault detail Document is not valid, resulting in the invalid attribute name: {0}; validation failed.</b>
<b>Explanation</b>	A document representing the SOAP fault detail was passed to a service that handles SOAP faults, for example, the pub.soap.handler:addFaultBlock. The fault detail Document that was passed to the service has an invalid structure. An example of an invalid structure would be if the name in the Document instance that corresponds to an attribute is "@ns1:", but there is no local name for the attribute. In this example, there should have been additional text after the ":" that corresponds to a valid local name.
<b>Action</b>	Ensure that IS document instance for the SOAP fault detail is a proper representation of valid XML structure. Correct the SOAP fault detail Document and execute the service again.
<b>ISS.88.9441E</b>	<b>Validation requested, but no IS document type specified; validation failed.</b>
<b>Explanation</b>	You specified that you want an input Document to be validated. However, you have not provided the document type that the service should use for validation. As a result, the validation failed.
<b>Action</b>	Invoke the service again. This time pass the document type to use for validation in the appropriate input parameter.
<b>ISS.88.9442E</b>	<b>Service executed with invalid input parameter {0} : {1}</b>
<b>Explanation</b>	Execution of the service failed because the specified input parameter was passed an invalid value. The invalid value is displayed in the message.
<b>Action</b>	Invoke the service again, this time specifying a valid value for the input parameter.

**IS\_RUNTIME\_EXCEPTION** – runtime exception occurred. see error log for details.

**JBS.0122.0006**      Package "{0}" has deploy directory contents, but does not have a dependency on 'WmJBoss'

**JNDI\_CONTEXT\_NOT\_INITIALIZED** – Cannot perform JNDI operation: JNDI context is not initialized.

**JSONCODER\_INVALID\_DECODE\_FOR\_REAL** – Both `decodeRealAsString` and `decodeRealAsDouble` cannot be set to true.

**JSONCODER\_UNSUPPORTED\_TOKEN** – Invalid state. Unsupported token found in the JSON input stream.

**Explanation**      The input stream does not contain valid JSON content.

**Action**              Provide valid JSON content in the input stream.

**JSON\_INVALID\_INPUTS\_REAL\_AS\_STRING\_AND\_DOUBLE** – Both `decodeRealAsString` and `decodeRealAsDouble` cannot be set to true.

**JSON\_INVALID\_INPUT\_REAL\_AS\_STRING** – Field `decodeRealAsString` if set , can only be true or false.

**JournalLogger.FAC\_SCHED+"."+DATABASE\_VERSION\_CHECK\_FAILED** – Check of internal database failed: the current version {0} should be at least {1}

**LDAP\_URL\_INVALID\_CHAR** – Directory url contain invalid charactors. {0}

**LVLCHNG\_COMP\_CODE\_INVALID** – Supplied "componentCode" is not valid.

**LVLCHNG\_COMP\_CODE\_NULL** – Parameter "componentCode" is required and it cannot be null.

**LVLCHNG\_LISTENER\_NULL** – Parameter "listener" is required and it cannot be null.

**NESTED\_TRANS\_NOT\_SUPPORTED** – another tran active. nested tran disabled in settings

**NODE\_NS\_NAME\_EXISTS** – node\_nsName already exists

**NODE\_NS\_NAME\_IS\_INVALID** – node\_nsName "{0}" is invalid

**NODE\_NS\_NAME\_IS\_REQUIRED** – node\_nsName is required

**NODE\_PKG\_IS\_INVALID** – node\_pkg "{0}" is invalid

**NODE\_PKG\_IS\_REQUIRED** – node\_pkg is required

**NODE\_TYPE\_IS\_INVALID** – Node "{0}" is not of type 'webMethods/WebSocket'

**NOT\_NSWEBSOCKETENDPOINTCLIENT\_TYPE** – Provided NSWebSocketEndpointDescriptor is not of type Client

**NOT\_NSWEBSOCKETENDPOINTDESC\_TYPE** – Provided NSName {0} is not a type of NSWebSocketEndpointDescriptor. Please provide the NSWebSocketEndpointDescriptor NSName

**NO\_LOADERS\_FOUND** Loader is not configured for the cache {1} contained within the cache manager {0}.

**NO\_MORE\_EVENTS\_AVAILABLE** – No more xml events available

**NO\_OUTPUT\_SIGNATURE** – no output signature

**NO\_TRANS\_FOR\_THREAD** – current thread not with any transaction

**NO\_WRITERS\_FOUND** Writer is not configured for the cache {1} contained within the cache manager {0}.

**OAUTH\_ONE\_PREVENTS\_OTHERS** – {0} may not be specified if {1} is "{2}".

**Explanation** The service failed because the specified input variable contains an invalid value combination. The invalid combination is listed in the message text.

**Action** Enter a valid value combination for the input variable.

**ON\_BINARY\_IS\_INVALID** – onBinary "{0}" is invalid

**ON\_CLOSE\_IS\_INVALID** – onClose "{0}" is invalid

**ON\_CONNECT\_IS\_INVALID** – onConnect "{0}" is invalid

**ON\_ERROR\_IS\_INVALID** – onError "{0}" is invalid

**ON\_TEXT\_IS\_INVALID** onText "{0}" is invalid

**OPERATION\_NOT\_SUPPORTED\_WITH\_DES\_ALIAS** – {0} operation is not supported when connection alias type is DES.

**OTHER\_THAN\_SPACE\_CHARACTERS\_ENCOUNTERED** – Other than space characters encountered

**PACKAGE\_HOTDEPLOY\_ACTIVATION\_FAILED\_ON\_RECOVERYE** – Package recovered but not activated.

**Explanation** Hot deployment of the specified package failed. Integration Server recovered the package from the salvage directory, but was unable to activate the package.

**Action** Check the logs for hot deployment failure messages or contact Software AG Global Support.

**PACKAGE\_HOTDEPLOY\_AUTORECOVER\_ERROR** – Package cannot be recovered, check server logs for details.

**Explanation** Hot deployment of the specified package failed.

**Action** Check the logs for hot deployment failure messages or contact Software AG Global Support.

---

**PACKAGE\_HOTDEPLOY\_AUTORECOVER\_FAILEDE – Error during hot deployment of package {0}. Package cannot be recovered.**

<b>Explanation</b>	Hot deployment of the specified package failed. Integration Server attempted to recover the package from the salvage directory but was unable to do so.
<b>Action</b>	Check the logs for hot deployment failure messages or contact Software AG Global Support.

**PACKAGE\_HOTDEPLOY\_AUTORECOVER\_SUCCESSEI – Package recovered and activated.****PACKAGE\_HOTDEPLOY\_IN\_PROGRESSE – Cannot hot deploy package {0}. Hot deployment of package {1} is already in progress.**

<b>Explanation</b>	You attempted to hot deploy multiple packages in parallel. Integration Server does not support parallel hot deployment of packages.
<b>Action</b>	Integration Server does not support parallel hot deployment of packages. Ensure that you perform hot deployment of packages sequentially.

**PACKAGE\_HOTDEPLOY\_TIMEOUTE – Cannot hot deploy package {0} due to error: {1}**

<b>Explanation</b>	Hot deployment of the package failed due to the listed error.
<b>Action</b>	Review the error details provided in the message to determine the cause of the failure and take appropriate action, and then retry hot deploying the packages.

**PARSER\_MUST\_BE\_ON\_START\_ELEMENT\_TO\_READ\_NEXT\_TEXT – parser must be on START\_ELEMENT to read next text****PASSWORDBADOLDPASSWORDE – Invalid user name or password.**

<b>Explanation</b>	The specified user credentials are not valid.
<b>Action</b>	Provide a valid user name and password.

**PASSWORD\_EMPTY Password is empty. User(s) {0} not added.**

<b>Explanation</b>	The Password field requires a value.
<b>Action</b>	Enter a valid password.

**PASSWORD\_UPDT\_EMPTY – Password is empty. Password was not changed.**

**Explanation** The Password field requires a value.  
**Action** Enter a valid password.

**PDT\_OUT\_OF\_SYNC Document type "{0}" is out of sync with Provider**

**PIECMNE0000 Error initializing ISAttributeValues. ISMonitoringContext cannot be null.**  
**Explanation** The ISAttributeValues cannot be initialized because ISMonitoringContext is null.  
**Action** This is an internal error. Contact Software AG Global Support.

**PIECMNE0001 Error retrieving AttributeValue. The metaModelTypeID cannot be null or empty.**  
**Explanation** The AttributeValue cannot be retrieved because metaModelTypeID is null or empty.  
**Action** This is an internal error. Contact Software AG Global Support.

**PIECMNE0002 Error retrieving AttributeValue. The attributeID cannot be null or empty.**  
**Explanation** The AttributeValue cannot be retrieved because metaModelTypeID is null or empty.  
**Action** This is an internal error. Contact Software AG Global Support.

**PIECMNE0003 Error retrieving AttributeValue. The attributeID cannot be null or empty.**  
**Explanation** The AttributeValue cannot be retrieved because attributeID is null or empty.  
**Action** This is an internal error. Contact Software AG Global Support.

**PIECMNE0004 Error retrieving attribute values. The attributeQuery object cannot be null.**  
**Explanation** The attribute values cannot be retrieved because the attributeQuery object is null.  
**Action** This is an internal error. Contact Software AG Global Support.

**PIECMNE0005 Error retrieving attribute values. The modelType is invalid.**  
**Explanation** The attribute values cannot be retrieved because the modelType is invalid.  
**Action** This is an internal error. Contact Software AG Global Support.

---

<b>PIECMNE0006</b>	<b>Error while destroying ISMonitoringContext. The ISMonitoringContext cannot be null.</b>
<b>Explanation</b>	The ISMonitoringContext could not be destroyed because it is null.
<b>Action</b>	This is an internal error. Contact Software AG Global Support.
<b>PIECMNE0007</b>	<b>Error destroying ISMonitoringContext. Invalid ISMonitoringContext provided.</b>
<b>Explanation</b>	The ISMonitoringContext could not be destroyed because it is not a valid instance of ISMonitoringContext.
<b>Action</b>	This is an internal error. Contact Software AG Global Support.
<b>PIECMNE0008</b>	<b>Error getting meta model. The metaModelTypeId cannot be null.</b>
<b>Explanation</b>	The meta model could not be retrieved because the metaModelTypeId is null or empty.
<b>Action</b>	This is an internal error. Contact Software AG Global Support.
<b>PIECMNE0009</b>	<b>Error validating ISMonitoringContext. ISMonitoringContext cannot be null.</b>
<b>Explanation</b>	The ISMonitoringContext could not be validated because it is null.
<b>Action</b>	This is an internal error. Contact Software AG Global Support.
<b>PIECMNE0010</b>	<b>Error validating ISMonitoring Context. Invalid ISMonitoringContext provided.</b>
<b>Explanation</b>	The ISMonitoringContext could not be validated because it is not an instance of MonitoringContext.
<b>Action</b>	This is an internal error. Contact Software AG Global Support.
<b>PIECMNE0011</b>	<b>Error validating ISMonitoringContext. ISInputContext object is null.</b>
<b>Explanation</b>	The ISMonitoringContext cannot be validated because the supplied ISInputContext object is null.
<b>Action</b>	This is an internal error. Contact Software AG Global Support.
<b>PIECMNE0012</b>	<b>Error validating ISMonitoringContext. ISInputContext is invalid.</b>
<b>Explanation</b>	The ISMonitoringContext cannot be validated because the supplied ISInputContext object is invalid.
<b>Action</b>	This is an internal error. Contact Software AG Global Support.

<b>PIECMNE0013</b>	<b>Error validating ISMonitoringContext. Context host attribute cannot be null or empty.</b>
<b>Explanation</b>	The ISMonitoringContext cannot be validated because the context has a host attribute that is null or empty.
<b>Action</b>	This is an internal error. Contact Software AG Global Support.
<b>PIECMNE0014</b>	<b>Error validating ISMonitoringContext. Context port attribute is invalid.</b>
<b>Explanation</b>	The ISMonitoringContext cannot be validated because the context has an invalid port attribute.
<b>Action</b>	This is an internal error. Contact Software AG Global Support.
<b>PIECMNE0015</b>	<b>Error initializing ISModelInstance. ISMonitoringContext is null.</b>
<b>Explanation</b>	An ISModelInstance cannot be initialized because the ISMonitoringContext is null.
<b>Action</b>	This is an internal error. Contact Software AG Global Support.
<b>PIECMNE0016</b>	<b>Error getting model instances. The metaModelTypeName is null or empty.</b>
<b>Explanation</b>	The model instances cannot be retrieved because a metaModelTypeName is null or empty.
<b>Action</b>	This is an internal error. Contact Software AG Global Support.
<b>PIECMNE0017</b>	<b>Error getting model instances. Invalid metaModelTypeName.</b>
<b>Explanation</b>	The model instances cannot be retrieved because a valid metaModelTypeName was not supplied.
<b>Action</b>	This is an internal error. Contact Software AG Global Support.
<b>PIECMNE0018</b>	<b>Error while initializing ISServerModel. ISMonitoringContext is null.</b>
<b>Explanation</b>	The ISServerModel cannot be initialized because ISMonitoringContext is null.
<b>Action</b>	This is an internal error. Contact Software AG Global Support.
<b>PIECMNE0019</b>	<b>Error getting attributes for Integration Server. The modelInstanceListToQuery cannot be null.</b>
<b>Explanation</b>	Integration Server attributes cannot be retrieved because the modelInstanceListToQuery was null .
<b>Action</b>	This is an internal error. Contact Software AG Global Support.

---

<b>PIECMNE0020</b>	<b>Error getting Integration Server attributes. The attributeListToQuery cannot be null.</b>
<b>Explanation</b>	The Integration Server attributes cannot be retrieved because the attributeListToQuery was null.
<b>Action</b>	This is an internal error. Contact Software AG Global Support.
<b>PIECMNE0021</b>	<b>Error getting attributeID. The attributeID cannot be null.</b>
<b>Explanation</b>	The Integration Server attribute cannot be retrieved because the attributeID was null.
<b>Action</b>	This is an internal error. Contact Software AG Global Support.
<b>PIECMNE0022</b>	<b>Error while pinging Integration Server. Invalid ISMonitoringContext.</b>
<b>Explanation</b>	The ping of Integration Server failed because the provided ISMonitoringContext is invalid.
<b>Action</b>	This is an internal error. Contact Software AG Global Support.
<b>PIESIME0000</b>	<b>Unable to access Integration Server:{0}</b>
<b>Explanation</b>	An error occurred while attempting to access Integration Server. The details of the error will replace the {0} in the message text.
<b>Action</b>	Use the details of the error to resolve the error preventing a connection to Integration Server.
<b>PIESIME0001</b>	<b>Integration Server is unavailable:{0}</b>
<b>Explanation</b>	An error occurred while attempting to access Integration Server. The details of the error will replace the {0} in the message text.
<b>Action</b>	Use the provided error information to correct the issue and try again.
<b>PIESIME0002</b>	<b>An error occurred while invoking a service on Integration Server:{0}</b>
<b>Explanation</b>	An error occurred while invoking a service on Integration Server. The details of the error will replace the {0} in the message text.
<b>Action</b>	Use the supplied error information to correct the condition causing the error. Then, reissue the service request.

<b>PIESIME0004</b>	<b>Port object cannot be null.</b>
<b>Explanation</b>	ISContext cannot be created because the Port object is null.
<b>Action</b>	Provide a valid Port object that is not null.
<b>PIESIME0005</b>	<b>UserCredentials username/password cannot be null.</b>
<b>Explanation</b>	ISContext cannot be created because the username/password is null.
<b>Action</b>	Make sure that the username/password has a valid value and is not null.
<b>PIESIME0006</b>	<b>Missing required ClientAuthType for SSL.</b>
<b>Explanation</b>	ISContext cannot be created because the ClientAuthType required for SSL is null.
<b>Action</b>	Make sure the ClientAuthType has a valid value and is not null.
<b>PIESIME0007</b>	<b>Invalid protocol. The webMethods Platform Manager subsystem does not support the protocol "{0}".</b>
<b>Explanation</b>	A create or update operation for port settings specified a protocol that is not supported by the webMethods Platform Manager subsystem in Integration Server.
<b>Action</b>	Specify a protocol supported by the webMethods Platform Manager subsystem in Integration Server.
<b>PIESIME0008</b>	<b>Unable to connect Integration Server:{0}</b>
<b>Explanation</b>	An error occurred while attempting to connect Integration Server. The details of the error will replace the {0} in the message text.
<b>Action</b>	Use the error details to resolve the error that is preventing a connection to Integration Server.
<b>PIESIME0009E</b>	<b>Port Validation Error :{0}</b>
<b>Explanation</b>	The port configuration is not valid.
<b>Action</b>	Make sure the port configuration is valid.
<b>PIESIME0010</b>	<b>Port Validation Error, Invalid URLAccess Service :{0}</b>
<b>Explanation</b>	The port is not valid because the supplied URLAccess does not have a valid service name.
<b>Action</b>	Specify a valid service name for URLAccess.

---

<b>PIESIME0011</b>	<b>Port Validation Error, Invalid IPAccess Hostname :{0}</b>
<b>Explanation</b>	The port is not valid because the IPAccess Hostname is not valid.
<b>Action</b>	Specify a valid value for the IPAccess Hostname.
<b>PIESIME0012</b>	<b>Port Validation Error, Port Alias already exists : {0}</b>
<b>Explanation</b>	The port is not valid because the port alias is used by another port on Integration Server.
<b>Action</b>	Specify a port alias that is unique for the Integration Server.
<b>PIESIME0013</b>	<b>Port Validation Error, Primary port may not be disabled in an update.</b>
<b>Explanation</b>	A primary port cannot be disabled as part of an update.
<b>Action</b>	Do not attempt to disable the primary port as part of updating a port. If you want to disable the port acting as the primary port, you must first designate another port as the primary port. Then you can disable the port that was previously the primary port.
<b>PIESIME0014</b>	<b>Port Validation Error, Primary port package name must be WmRoot. Invalid Package Name : {0}</b>
<b>Explanation</b>	The primary port must be associated with the WmRoot package.
<b>Action</b>	Make sure the primary port is associated with the WmRoot package.
<b>PIESIME0015</b>	<b>Invalid server configuration parameter names: {0}</b>
<b>Explanation</b>	The server configuration parameter names must begin with "watt."
<b>Action</b>	Rename the server configuration parameter names so that they begin with "watt."
<b>PIESIME0016</b>	<b>A required configuration parameter is missing: {0}</b>
<b>Explanation</b>	A required configuration parameter is missing.
<b>Action</b>	Check the logs.
<b>PIESIME0017</b>	<b>Configuration details for COMMON-JDBC cannot be null.</b>
<b>Explanation</b>	While creating a JDBC pool alias, the configuration details for COMMON-JDBC cannot be null.
<b>Action</b>	Provide valid JDBC pool alias configuration details.

<b>PIESIME0018</b>	<b>JDBC pool alias cannot be null or empty.</b>
<b>Explanation</b>	While creating or updating a JDBC pool, the pool alias cannot be null or empty.
<b>Action</b>	Provide a valid value for the JDBC pool alias.
<b>PIESIME0019</b>	<b>Invalid configuration type.</b>
<b>Explanation</b>	The configuration type provided while creating the JDBC pool alias must be of type COMMON-JDBC.
<b>Action</b>	Provide a valid configuration of type COMMON-JDBC.
<b>PIESIME0020</b>	<b>Invalid configuration type.</b>
<b>Explanation</b>	The configuration type provided while updating the JDBC pool alias must be of type COMMON-JDBC.
<b>Action</b>	Provide a valid configuration of type COMMON-JDBC.
<b>PIESIME0021</b>	<b>JDBC pool cannot be null.</b>
<b>Explanation</b>	While creating a JDBC pool alias, the pool configuration details cannot be null.
<b>Action</b>	Provide valid configuration details while creating or updating a JDBC pool.
<b>PIESIME0022</b>	<b>{0} cannot be null or empty.</b>
<b>Explanation</b>	The specified value must not be null or empty
<b>Action</b>	Provide a valid value.
<b>PIESIME0023</b>	<b>Enter a positive number for {0}</b>
<b>Explanation</b>	The specified value must not be a negative number.
<b>Action</b>	Specify a positive number.
<b>PIESIME0024</b>	<b>JDBC configuration instance id is missing.</b>
<b>Explanation</b>	JDBC configuration instance id is required and must be specified.
<b>Action</b>	Provide a valid JDBC configuration instance id.
<b>PIESIME0025</b>	<b>MaxSize must be greater than 0.</b>
<b>Explanation</b>	The value provided for MaxSize must be greater than 0.
<b>Action</b>	Ensure that the value provided for MaxSize is greater than 0.

---

<b>PIESIME0026</b>	<b>Configuration details for COMMON-JDBC cannot be null.</b>
<b>Explanation</b>	While updating a JDBC pool alias, the configuration details for COMMON-JDBC cannot be null.
<b>Action</b>	Provide valid JDBC pool alias configuration details.
<b>PIESIME0027</b>	<b>JDBC pool cannot be null.</b>
<b>Explanation</b>	While updating a JDBC pool alias, the pool configuration details cannot be null.
<b>Action</b>	Provide valid configuration details while creating or updating a JDBC pool.
<b>PIESIME0028</b>	<b>MinSize must be less than or equal to MaxSize.</b>
<b>Explanation</b>	Minimum connections must be less than or equal to maximum connections.
<b>Action</b>	Ensure that the value provided for MinSize is less than or equal to MaxSize.
<b>PIESIME0029</b>	<b>Invalid SMTP port.</b>
<b>Explanation</b>	SMTP port should be greater than 0.
<b>Action</b>	Change the SMTP port to a valid value greater than 0.
<b>PIESIME0030</b>	<b>Unable to retrieve truststores.</b>
<b>Explanation</b>	Integration server is unable to retrieve the truststores.
<b>Action</b>	Ensure that there are truststores installed in Integration server.
<b>PIESIME0031</b>	<b>SMTP settings are already defined.</b>
<b>Explanation</b>	Unable to define new SMTP settings because the SMTP settings are already defined.
<b>Action</b>	To specify new SMTP settings, update the existing SMTP configuration.
<b>PIESIME0032</b>	<b>The truststore {0} does not exist.</b>
<b>Explanation</b>	The specified truststore alias cannot be found.
<b>Action</b>	Ensure that the specified truststore exists in Integration Server.
<b>PIESIME0033</b>	<b>Configuration details for COMMON-DBFUNCTION cannot be null.</b>
<b>Explanation</b>	While updating a functional alias, the configuration details for COMMON-DBFUNCTION cannot be null.
<b>Action</b>	Provide valid functional alias configuration details.

<b>PIESIME0034</b>	<b>Invalid configuration type.</b>
<b>Explanation</b>	The configuration type provided while updating the functional alias must be of type COMMON-DBFUNCTION.
<b>Action</b>	Provide a valid configuration of type COMMON-DBFUNCTION.
<b>PIESIME0035</b>	<b>Functional alias cannot be null</b>
<b>Explanation</b>	While updating a functional alias,the functional alias configuration details cannot be null.
<b>Action</b>	Provide valid configuration details while updating a functional alias.
<b>PIESIME0037</b>	<b>Configuration details for COMMON-JNDI cannot be null.</b>
<b>Explanation</b>	While configuring a JNDI provider alias, the configuration details for COMMON-JNDI cannot be null.
<b>Action</b>	Provide valid JNDI provider alias configuration details.
<b>PIESIME0038</b>	<b>Invalid configuration type.</b>
<b>Explanation</b>	The configuration type provided while configuring a JNDI provider alias must be of type COMMON-JNDI.
<b>Action</b>	Provide a valid configuration of type COMMON-JNDI.
<b>PIESIME0039</b>	<b>SMTP server not configured.</b>
<b>Explanation</b>	SMTP server is not configured in Integration Server.
<b>Action</b>	Configure SMTP server in Integration Server.
<b>PIESIME0040</b>	<b>Functional alias specified is not valid.</b>
<b>Explanation</b>	The functional alias specified in the input must be valid.
<b>Action</b>	Ensure that the functional alias specified in the input is valid.
<b>PIESIME0041</b>	<b>Functional alias description cannot be modified.</b>
<b>Explanation</b>	The functional alias description specified in the input cannot be modified.
<b>Action</b>	Ensure that the functional alias description specified in the input is not modified.

---

<b>PIESIME0042</b>	<b>The functional alias {0} cannot be associated with the embedded database pool.</b>
<b>Explanation</b>	The embedded database pool can only be used with IS Internal and Cross Reference database components.
<b>Action</b>	Associate the functional alias with any JDBC connection pool other than the embedded database pool.
<b>PIESIME0043</b>	<b>Invalid configuration details for COMMON-JMS. Invalid value for {0}.</b>
<b>Explanation</b>	The value specified for COMMON-JMS configuration {0} is not valid.
<b>Action</b>	Specify valid values for all the mandatory attributes in COMMON-JMS configuration.
<b>PIESIME0045</b>	<b>Configuration details for COMMON-JMS cannot be null.</b>
<b>Explanation</b>	The configuration details for COMMON-JMS cannot be null.
<b>Action</b>	Provide valid JMS configuration details.
<b>PIESIME0046</b>	<b>Invalid configuration provided while updating the COMMON-JMS configuration.</b>
<b>Explanation</b>	The JMS alias configuration provided while updating the COMMON-JMS configuration does not match the existing JMS alias configuration.
<b>Action</b>	Provide a valid JMS configuration that matches the JMS configuration to be updated.
<b>PIESIME0047</b>	<b>An error occurred while invoking a service in Integration Server : {0}</b>
<b>Explanation</b>	An error occurred while invoking a service in Integration Server. Error {0} occurred.
<b>Action</b>	Use the supplied error information to correct the condition causing the error. Then, reissue the service request.
<b>PIESIME0048</b>	<b>JMS alias {0} should be disabled before {1} operation.</b>
<b>Explanation</b>	The JMS alias {0} should be disabled before performing the {1} operation.
<b>Action</b>	Ensure that the JMS alias is disabled.
<b>PIESIME0049</b>	<b>Messaging connection alias {0} should be disabled before {1} operation.</b>
<b>Explanation</b>	The messaging connection alias {0} should be disabled before performing the {1} operation.
<b>Action</b>	Ensure that the messaging connection alias is disabled.

<b>PIESIME0050</b>	<b>Messaging connection alias description cannot be null or empty.</b>
<b>Explanation</b>	While creating a messaging connection alias, the description field cannot be null or empty.
<b>Action</b>	Provide a valid description for messaging connection alias.
<b>PIESIME0051</b>	<b>Messaging connection alias name cannot be updated.</b>
<b>Explanation</b>	You attempted to update the messaging connection alias. Messaging connection alias name is not editable.
<b>Action</b>	To change the name of a messaging connection alias, delete the existing messaging connection alias and create a new alias.
<b>PIESIME0052</b>	<b>Default messaging connection alias cannot be deleted.</b>
<b>Explanation</b>	The messaging connection alias that you attempted to delete is the default messaging connection alias, which cannot be deleted.
<b>Action</b>	To delete a default messaging connection alias, configure another messaging connection alias as the default.
<b>PIESIME0053</b>	<b>Cannot create a new messaging connection alias for Broker.</b>
<b>Explanation</b>	Only one messaging connection aliases for Broker can exist at a time in Integration Server.
<b>Action</b>	Delete the existing messaging connection aliases for Broker before creating a new messaging connection aliases for Broker.
<b>PIESIME0057</b>	<b>Logger name for COMMON-LOGGERS configuration type is invalid.</b>
<b>Explanation</b>	Valid values of logger name for COMMON-LOGGERS configuration type are {0}.
<b>Action</b>	Ensure that you specify a valid logger name when updating the COMMON-LOGGERS configuration type.
<b>PIESIME0058</b>	<b>Server logger cannot be disabled.</b>
<b>Explanation</b>	You attempted to disable the server logger. Server logger cannot be disabled.
<b>Action</b>	Ensure that the server logger is enabled.

---

<b>PIESIME0059</b>	<b>Destination for server log entries must be a file.</b>
<b>Explanation</b>	The destination for server log entries can only be a file.
<b>Action</b>	Ensure that you specify a file as the destination for server log entries.
<b>PIESIME0060</b>	<b>Mode for writing server log entries must be synchronous.</b>
<b>Explanation</b>	The server logger writes log entries synchronously to the specified destination file. Therefore, the mode for writing server log entries must be specified as synchronous.
<b>Action</b>	Ensure that the mode for writing server log entries is specified as synchronous.
<b>PIESIME0062</b>	<b>The destination for writing Integration Server log entries must be database or file.</b>
<b>Explanation</b>	Integration Server logger writes log entries to database or file only. You attempted to specify a destination other than database or file.
<b>Action</b>	Ensure that you specify database or file as the destination for writing Integration Server log entries.
<b>PIESIME0063</b>	<b>Configuration details for COMMON-VARS cannot be null.</b>
<b>Explanation</b>	While creating a global variable, the configuration details for COMMON-VARS cannot be null.
<b>Action</b>	Provide valid global variable configuration details.
<b>PIESIME0064</b>	<b>Invalid configuration type.</b>
<b>Explanation</b>	The configuration type provided while creating the global variable must be of type COMMON-VARS.
<b>Action</b>	Provide a valid configuration of type COMMON-VARS.
<b>PIESIME0065</b>	<b>Global variable validation error: Variable Setting cannot be empty.</b>
<b>Explanation</b>	The global variable configuration is not valid.
<b>Action</b>	Make sure that Variable Setting is not empty and that the global variable configuration is valid.
<b>PIESIME0066</b>	<b>Global variable validation error: Integration Server accepts only Strings as global variable values.</b>
<b>Explanation</b>	The global variable value specified is not of type String.
<b>Action</b>	Provide a valid value of type String for the global variable.

<b>PIESIME0067</b>	<b>Global variable validation error: Global variable value cannot be empty.</b>
<b>Explanation</b>	The global variable value must not be empty.
<b>Action</b>	Provide a valid value for the global variable.
<b>PIESIME0068</b>	<b>Global variable validation error: Global variable value cannot exceed 255 characters.</b>
<b>Explanation</b>	The global variable value that you specified contains more than 255 characters.
<b>Action</b>	Ensure that length of the global variable value is less than or equal to 255.
<b>PIESIME0069</b>	<b>Global variable validation error: Global variable key cannot be empty.</b>
<b>Explanation</b>	The global variable key must not be empty.
<b>Action</b>	Provide a valid key for the global variable.
<b>PIESIME0070</b>	<b>Global variable validation error: Global variable key cannot exceed 255 characters.</b>
<b>Explanation</b>	The global variable key that you specified contains more than 255 characters.
<b>Action</b>	Ensure that length of the global variable key is less than or equal to 255.
<b>PIESIME0071</b>	<b>Global variable validation error: Global variable key contains special characters other than "." and "_".</b>
<b>Explanation</b>	The global variable key that you specified contains special characters other than period (.) or underscore(_).
<b>Action</b>	Ensure that the global variable key does not contain any special characters other than period or underscore(_).
<b>PIESIME0072</b>	<b>Invalid value for ServiceLogLevel in Service Logger.</b>
<b>Explanation</b>	The value specified for ServiceLogLevel in Service Logger is not valid. Valid values for ServiceLogLevel are perSvc, brief, and verbose.
<b>Action</b>	Ensure that you specify a valid value for ServiceLogLevel in Service Logger.
<b>PIESIME0073</b>	<b>Invalid value for GenerateAuditingDataOnStartup in Security Logger.</b>
<b>Explanation</b>	The value specified for GenerateAuditingDataOnStartup in Security Logger is not valid. The GenerateAuditingDataOnStartup value must be a valid Boolean value (true/false).
<b>Action</b>	Ensure that you specify a valid value for GenerateAuditingDataOnStartup in Security Logger.

---

<b>PIESIME0074</b>	<b>Invalid value for GenerateAuditingDataOnEvent in Security Logger.</b>
<b>Explanation</b>	The value specified for GenerateAuditingDataOnEvent in Security Logger is not valid. Valid values for GenerateAuditingDataOnEvent are Success or Failure, Success, and Failure.
<b>Action</b>	Ensure that you specify a valid value for GenerateAuditingDataOnEvent in Security Logger.
<b>PIESIME0075</b>	<b>Invalid value for SecurityAreasToAudit in Security Logger.</b>
<b>Explanation</b>	The value specified for SecurityAreasToAudit in Security Logger is not valid. Valid values for SecurityAreasToAudit are {0}.
<b>Action</b>	Ensure that you specify a valid value for SecurityAreasToAudit in Security Logger.
<b>PIESIME0076</b>	<b>Unable to disable messaging connection alias.</b>
<b>Explanation</b>	An operation to disable messaging connection alias failed.
<b>Action</b>	Check the Integration Server logs for more information.
<b>PIESIME0077</b>	<b>Configuration details for COMMON-CLUSTER cannot be null.</b>
<b>Explanation</b>	When updating cluster settings, the configuration details for COMMON-CLUSTER cannot be null.
<b>Action</b>	Provide valid cluster configuration details.
<b>PIESIME0078</b>	<b>Invalid configuration type.</b>
<b>Explanation</b>	When updating the cluster settings, the provided configuration type must be COMMON-CLUSTER.
<b>Action</b>	Specify a configuration type of COMMON-CLUSTER when updating the cluster settings.
<b>PIESIME0079</b>	<b>{0} is required.</b>
<b>Explanation</b>	The required field value cannot be empty.
<b>Action</b>	Specify a value for the required field.
<b>PIESIME0082</b>	<b>Session timeout must be a positive integer.</b>
<b>Explanation</b>	The provided session timeout is not a positive integer.
<b>Action</b>	Specify a positive integer for session timeout.

<b>PIESIME0083E</b>	<b>Configuration details for {0} cannot be null.</b>
<b>Explanation</b>	While creating a {0} web service endpoint alias, the configuration details for {1} cannot be null.
<b>Action</b>	Provide valid web service endpoint alias configuration details.
<b>PIESIME0084</b>	<b>Invalid configuration type.</b>
<b>Explanation</b>	The configuration type provided while creating {0} web service endpoint alias must be of type {1}.
<b>Action</b>	Provide a valid configuration type.
<b>PIESIME0085</b>	<b>{0} Web service endpoint alias is not specified.</b>
<b>Explanation</b>	{0} Web service endpoint alias is not specified.
<b>Action</b>	Specify a valid web service endpoint alias configured in Integration Server.
<b>PIESIME0086</b>	<b>{0} Web service endpoint alias contains invalid characters.</b>
<b>Explanation</b>	{0} Web service endpoint alias contains invalid characters.
<b>Action</b>	Specify a valid web service endpoint alias.
<b>PIESIME0087</b>	<b>Host or port is not specified for {0} web service endpoint alias.</b>
<b>Explanation</b>	Host or port is not specified for {0} web service endpoint alias.
<b>Action</b>	Specify a valid host and port for the web service endpoint alias.
<b>PIESIME0088</b>	<b>Keystore alias or key alias is not valid.</b>
<b>Explanation</b>	Keystore alias or key alias must be a valid alias configured in Integration Server.
<b>Action</b>	Specify a valid configured keystore alias or key alias.
<b>PIESIME0089</b>	<b>Truststore alias is not valid.</b>
<b>Explanation</b>	Truststore alias must be a valid alias configured in Integration Server.
<b>Action</b>	Specify a valid configured truststore alias.
<b>PIESIME0090</b>	<b>{0} cannot be edited.</b>
<b>Explanation</b>	You attempted to edit {0}, which cannot be edited.
<b>Action</b>	Ensure that the specified field is not edited.

---

<b>PIESIME0092</b>	<b>Execute ACL is not valid.</b>
<b>Explanation</b>	The specified Execute ACL does not exist.
<b>Action</b>	Specify a valid ACL.
<b>PIESIME0093</b>	<b>Proxy server alias is not valid.</b>
<b>Explanation</b>	Proxy server alias must be a valid alias configured in Integration Server.
<b>Action</b>	Specify a valid proxy server alias.
<b>PIESIME0094E</b>	<b>The proxy-bypass alias cannot be deleted.</b>
<b>Explanation</b>	The default proxy alias, proxy-bypass, contains the proxy bypass addresses list and cannot be deleted.
<b>Action</b>	You cannot create or delete the proxy-bypass alias.
<b>PIESIME0095E</b>	<b>Invalid protocol specified. Protocol must be HTTP, HTTPS, FTP, or SOCKS.</b>
<b>Explanation</b>	Protocol must be HTTP, HTTPS, FTP, or SOCKS.
<b>Action</b>	Specify HTTP, HTTPS, FTP, or SOCKS as the protocol.
<b>PIESIME0096E</b>	<b>Invalid FTP proxy type. The FTP proxy type must be an integer within the range of 0 and 7 (inclusive).</b>
<b>Explanation</b>	FTP proxy type must be an integer within the range of 0 and 7 (inclusive).
<b>Action</b>	Specify an integer within the range of 0 and 7 (inclusive).
<b>PIESIME0097E</b>	<b>Only the NonProxyHosts field can be edited in the proxy-bypass alias.</b>
<b>Explanation</b>	You attempted to edit the fields other than the NonProxyHosts field in the proxy-bypass alias.
<b>Action</b>	Ensure that you edit only the NonProxyHosts field in the proxy-bypass alias.
<b>PIESIME0098E</b>	<b>License key location cannot be updated.</b>
<b>Explanation</b>	License key location cannot be updated.
<b>Action</b>	License key location cannot be updated.

<b>PIESIME0099E</b>	<b>The proxy server alias element for the existing configuration of type COMMON-PROXY cannot be updated.</b>
<b>Explanation</b>	You attempted to update the alias element for the existing configuration of type COMMON-PROXY.
<b>Action</b>	The proxy server alias element is not editable.
<b>PIESIME0102</b>	<b>File Access Permission configuration instance id cannot be null.</b>
<b>Explanation</b>	File Access Permission configuration instance id is required and must be specified.
<b>Action</b>	Provide a valid File Access Permission configuration instance id.
<b>PIESIME0103</b>	<b>Configuration details for IS-FILEPERMISSION cannot be null.</b>
<b>Explanation</b>	While updating a file permission instance, the configuration details for IS-FILEPERMISSION cannot be null.
<b>Action</b>	Provide valid file permission configuration details.
<b>PIESIME0104</b>	<b>Invalid configuration type.</b>
<b>Explanation</b>	The configuration type provided while updating the file permission configuration must be of type IS-FILEPERMISSION.
<b>Action</b>	Provide a valid configuration of type IS-FILEPERMISSION.
<b>PIESIME0105</b>	<b>Configuration details for IS-FILEPERMISSION cannot be null.</b>
<b>Explanation</b>	While updating the file access control configuration, the configuration details for IS-FILEPERMISSION cannot be null.
<b>Action</b>	Provide valid file access control configuration details.
<b>PIESIME0106</b>	<b>File permission type cannot be modified.</b>
<b>Explanation</b>	While updating file access control configuration, the file permission type cannot be modified.
<b>Action</b>	Provide valid configuration details while updating the file access control configuration.
<b>PIESIME0107</b>	<b>Logger Levels specified for Server Logger cannot be modified.</b>
<b>Explanation</b>	You attempted to add or delete the Logger Levels specified for Server Logger.
<b>Action</b>	You cannot add or delete the Logger Levels specified for Server Logger.

---

<b>PIESIME0108</b>	<b>Logger Level names and descriptions specified for Server Logger cannot be modified.</b>
<b>Explanation</b>	You attempted to modify the Logger Level names or descriptions specified for Server Logger.
<b>Action</b>	You can modify only the Logger Level value for Server Logger.
<b>PIESIME0109E</b>	<b>Specify an {0} proxy server alias.</b>
<b>Explanation</b>	Protocol of the proxy server alias that you specified and the transport type of the consumer web service endpoint alias must match.
<b>Action</b>	Specify an {0} proxy server alias.
<b>PIESIME0110</b>	<b>Value of {0} must be a positive integer between 0 and {1} (inclusive).</b>
<b>Explanation</b>	You specified an invalid value for {0}. Value of {1} must be a positive integer between 0 and {2} (inclusive).
<b>Action</b>	Ensure that you specify a positive integer between 0 and {1} (inclusive) as the value of {0}.
<b>PIESIME0111</b>	<b>Alias of an Integration Server logger cannot be modified.</b>
<b>Explanation</b>	You attempted to modify the alias of an Integration Server logger.
<b>Action</b>	You cannot modify the alias of an Integration Server logger.
<b>PIESIME0112</b>	<b>Invalid timestamp format.</b>
<b>Explanation</b>	The timestamp format must be supported by the Java class <code>java.text.SimpleDateFormat</code> .
<b>Action</b>	Specify any timestamp format that is supported by the Java class <code>java.text.SimpleDateFormat</code> .
<b>PIESIME0113</b>	<b>Alias of a {0} cannot be modified.</b>
<b>Explanation</b>	You attempted to modify the alias of a {0}.
<b>Action</b>	You cannot modify the alias of a {0}.
<b>PIESIME0114E</b>	<b>Remote server endpoint configuration details are not valid for {0}.</b>
<b>Explanation</b>	The value specified for remote server endpoint {0} is missing or is not valid.
<b>Action</b>	Specify valid values for all mandatory remote server endpoint attributes.

<b>PIESIME0115E</b>	<b>Remote server endpoint configuration details cannot be null.</b>
<b>Explanation</b>	Configuration details for a remote server endpoint cannot be null.
<b>Action</b>	Provide valid remote server endpoint details.
<b>PIESIME0116E</b>	<b>Remote server endpoint configuration could not be updated because the configuration details provided are not valid.</b>
<b>Explanation</b>	The remote server endpoint configuration could not be updated because the provided configuration details are not valid.
<b>Action</b>	Specify valid values for all mandatory remote server endpoint attributes.
<b>PIESIME0117E</b>	<b>An error occurred while invoking a service in Integration Server: {0}</b>
<b>Explanation</b>	Integration Server could not execute the service for the reason indicated.
<b>Action</b>	Check the reason detailed in the message, take appropriate corrective action, and reissue the service request.
<b>PIESIME0118E</b>	<b>Connection attempts to the remote server endpoint {0} failed.</b>
<b>Explanation</b>	A connection error occurred while trying to connect to the remote Integration Server from the target server on which the remote server endpoint was created. Either the remote server is not available or the provided host name, port, or authentication credentials are not valid.
<b>Action</b>	Check the status of the remote server and restart the server if necessary. Ensure the configuration of the remote server endpoint is valid.
<b>PIESIME0119E</b>	<b>Invalid SOCKS protocol version.</b>
<b>Explanation</b>	Supported SOCKS protocol versions are 4 and 5.
<b>Action</b>	Specify the SOCKS protocol version as either 4 or 5.
<b>PIESIME0120E</b>	<b>SOCKS protocol version 4 does not support authentication.</b>
<b>Explanation</b>	You specified authentication credentials (i.e. username and password) for SOCKS protocol version 4.
<b>Action</b>	Do not specify authentication credentials (i.e. username and password) for SOCKS protocol version 4.

---

<b>PIESIME0121</b>	<b>Messaging connection alias client prefix cannot be null or empty.</b>
<b>Explanation</b>	While creating a messaging connection alias, the client prefix field cannot be null or empty.
<b>Action</b>	Provide a valid client prefix for messaging connection alias.
<b>PIESIME0122</b>	<b>JAAS Context cannot be null or empty.</b>
<b>Explanation</b>	You did not specify a valid JAAS login context for Kerberos authentication. The JAAS Context field must not be null or empty.
<b>Action</b>	Provide a valid JAAS login context for Kerberos authentication.
<b>PIESIME0123</b>	<b>Service Principal Name Format cannot be null or empty.</b>
<b>Explanation</b>	You did not specify a valid Service Principal Name Format. Service Principal Name Format must not be null or empty.
<b>Action</b>	Provide a valid Service Principal Name Format.
<b>PIESIME0124</b>	<b>Proxy server alias contains invalid characters.</b>
<b>Explanation</b>	The Proxy server alias name can contain only alphanumeric characters.
<b>Action</b>	Specify a proxy server alias name that contains only alphanumeric characters.
<b>PIESIME0125</b>	<b>No LDAP server configuration is available in the target Integration Server or more than one LDAP servers are configured in the target Integration Server.</b>
<b>Explanation</b>	Only one LDAP server must be configured in the target Integration Server.
<b>Action</b>	Add or remove LDAP server configurations to ensure that there is only one LDAP server configured in the target Integration Server.
<b>PIESIME0126</b>	<b>An LDAP server is already configured in the target Integration Server.</b>
<b>Explanation</b>	Only one LDAP server must be configured in the target Integration Server. There is already one or more than one LDAP servers configured in the target Integration Server.
<b>Action</b>	Ensure that there is only one LDAP server configured in the target Integration Server. Retain one LDAP server configuration and delete the rest.

**PIESIME0127      The Maximum Connection Pool Size must be greater than the Minimum Connection Pool Size.**

**Explanation**      The value specified for Maximum Connection Pool Size is lesser than the Minimum Connection Pool Size.

**Action**              Ensure that you provide a Maximum Connection Pool Size greater than the Minimum Connection Pool Size.

**PIESIME0128      LDAP server configuration must contain either a default group or a group member attribute.**

**Explanation**      While configuring the LDAP server, either a default group or a group member attribute must be specified.

**Action**              Ensure that you specify a default group or a group member attribute while configuring the LDAP server.

**PIESIME0129      Invalid LDAP URL! Specify a LDAP URL that starts with ldap:// or ldaps:// and try again.**

**Explanation**      Invalid LDAP URL specified in the Server configuration type for LDAP.

**Action**              Specify a valid URL in the Server configuration type for LDAP.

**PIESIME0130      The Group Id attribute in the Server configuration type for LDAP cannot be null.**

**Explanation**      The Group Id attribute is not provided in the Server configuration type for LDAP.

**Action**              Specify a Group Id attribute in the Server configuration type for LDAP.

**PIESIMW0036      Unable to establish a connection using the specified JNDI provider alias.**

**Explanation**      Integration Server is unable to establish a connection using the specified JNDI provider alias. For possible causes, check the server logs.

**Action**              Ensure that the JNDI provider is running and that the JNDI provider-specific libraries are used in Integration server.

**PIESIMW0044      JMS alias {0} created successfully, but an error occurred while enabling the JMS alias.**

**Explanation**      An error occurred while enabling JMS alias {0}. Check logs of integration server.  
Exception : {1}

**Action**              Check the Integration Server log to handle the exception manually.

**PIESIMW0055**      **IS Resource settings updated successfully. If Broker is not configured, Broker-related settings will be ignored.**

**Explanation**      IS Resource settings updated successfully. If Broker is not configured on Integration Server, all the Broker-related settings that you specified will be ignored.

**Action**              Ensure that Broker is configured if you want the Broker-related settings to be updated.

**PIESIMW0056**      **Unable to read listeners.cnf file from package {0}.**

**Explanation**      Unable to read the listeners.cnf configuration file while attempting to locate the port number for the specified port alias.

**Action**              No action is required. If the issue persists, contact Software AG Global Support.

**PIPELINE\_SAVE\_ACCESSDENIED – Save pipeline to file {0}, Access denied**

**POOL\_NOT\_EXISTI** Pool alias {0} does not exist.

**PREFIX+String.valueOf(NEG\_TIMEOUT\_ERROR) – Pool {0} cannot be initialized. The pool timeouts must not be negative.**

**PROPERTIES\_CAN\_NOT\_BE\_NULL – properties can not be null**

**PROTOBUF\_CODER\_UNSUPPORTED\_DATATYPE – Protocol buffer coder cannot handle data type {0} for field {1} in document type: {2}. Error: {3}**

**PROXY\_INVALID SOCKS\_AUTH – SOCKS protocol version 4 does not support authentication.**

**PROXY\_INVALID SOCKS\_VERSION – Invalid SOCKS protocol version.**

**REMOTE\_NO\_REGISTRY\_TYPE – No Registry type specified**

**RESOURCE\_CAN\_NOT\_BE\_NULL – resource can not be null**

**RESPONSE\_ONE\_OF\_THREE\_REQD – "{0}" or "{1}" or "{2}" must be supplied**

**REVERSE\_GATEWAY\_NO\_LICENSE – Could not find a valid license for Enterprise Gateway.**

**Explanation** The Enterprise Gateway Server instance does not have a valid license for webMethods Enterprise Gateway.

**Action** Check the terms of the license file.

**ROLLBACK\_FAILED\_BAD\_STATE – Rollback failed due to status**

**RUN\_AS\_USER\_IS\_REQUIRED – runAsUser is required**

SCC.0121.0004 enlist failed: {0} xid = {1} rxid = {2}

SCC.0121.0007 delist failed: {0} xid = {1} rxid = {2}

SCC.0121.0010E commit failed: {0} xid = {1} resource = {2}

**Explanation** Integration Server transaction manager was unable to commit a two-phase commit (2PC) transaction to the backend XA resource.

**Action** Check to see if the backend resource is connected to Integration Server. Then, if necessary, re-initiate the transaction.

SCC.0121.0013 prepare failed: {0} xid = {1} rxid = {2} vote = {3}

SCC.0121.0017E rollback failed: {0} xid = {1} resource = {2}

**Explanation** The Integration Server transaction manager was unable to roll back a two-phase commit (2PC) transaction, most likely due to a resource issue.

**Action** Check to see if the backend resource is connected to Integration Server. Then, if necessary, re-initiate the transaction.

SCC.0121.0020 end failed: {0} xid = {1} rxid = {2}

SCC.0121.0026	<b>delisted transaction commit failed: {0} xid = {1}</b>
SCC.0121.0029	<b>one phase commit failed: {0} xid = {1} resource = {2}</b>
SCC.0121.0031	<b>sync beforeCompletion ran: {0} error: {1}</b>
SCC.0121.0033	<b>sync afterCompletion ran: {0} error: {1}</b>
SCC.0121.0034	<b>commit failed: more than 1 local trans enlisted. xid = {1} rxid = {2}</b>
SCC.0121.0035	<b>resource delisted with TMFAIL flag, transaction marked for rollback. xid = {0} rxid = {1}</b>
SCC.0121.0036	<b>transaction timeout. xid = {0}</b>
SCC.0121.0052E	<b>Unable to persist transaction status for xid = {0}: Exception: {1}</b>
<b>Explanation</b>	The transaction recovery manager in Integration Server was unable to write the status of a two-phase commit (2PC) transaction to the disk-based XA recovery store.
<b>Action</b>	Investigate the following possible causes for the problem: <ul style="list-style-type: none"> <li>1) The operating system userid under which the Integration Server is running does not have write privileges to the XAStore directory.</li> <li>2) There is not sufficient disk space for the directory.</li> <li>3) The XA recovery store is corrupt. If this is the case, archive the files stored in the XA recovery store directory, mail them to Software AG Global Support, move the files in the XA recovery store to a backup directory, and restart Integration Server.</li> </ul>
SCC.0121.0055E	<b>Unable to get unrecovered transactions from persistent store. Exception:{0}</b>
<b>Explanation</b>	The transaction recovery manager in Integration Server was unable to obtain a list of incomplete transactions from the XA recovery store. Integration Server uses this store to hold two-phase commit (2PC) transaction states for possible future recovery.
<b>Action</b>	Investigate the following possible causes for the problem: <ul style="list-style-type: none"> <li>1) The operating system userid under which Integration Server is running does not have write privileges to the XAStore directory.</li> <li>2) There is not sufficient disk space for the directory.</li> </ul>

3) The XA recovery store is corrupt. If this is the case, archive the files stored in the XA recovery store directory, mail them to Software AG Global Support, move the files in the XA recovery store to a backup directory, and restart the Integration Server.

**SCC.0121.0056      RecoveryManager found {0} unrecovered Transactions. Starting recovery.**

**SCC.0121.0057      Recovery process started for Transaction Xid:{0}, Status: {1}.**

**SCC.0121.0062E      Unable to rollback Xid:{0} during recovery for resource:{1}, transaction might be heuristically rolled back/committed by resource. Manual intervention might be required. Exception:{2}: Error Code:{3}.**

**Explanation**      The transaction recovery manager in Integration Server detected a transaction whose status in Integration Server is different from the status stored in the back-end resource (for example, a database). This situation occurs when the transaction recovery manager tries to rollback a transaction that the back-end XA resource has already rolled back or committed.

**Action**            Check to see if the back-end resource administrator (for example a database administrator ) manually issued a rollback/commit for the incomplete transaction. If so, ensure that the other back-end XA resources do the same.

**SCC.0121.0067E      Unable to commit Xid:{0} during recovery for resource:{1}, transaction might be heuristically rolled back/committed by resource. Manual intervention might be required. Exception:{2}.**

**Explanation**      The transaction recovery manager of the Integration Server detected a transaction whose status in the Integration Server is different from the status stored in the back-end resource (for example, a database). This situation occurs when the transaction recovery manager tries to commit a transaction that the back-end XA resource has already rolled back or committed.

**Action**            Check to see if the back-end resource administrator (for example a database administrator) manually issued a rollback/commit for the incomplete transaction. If so, ensure that the other back-end XA resources do the same.

**SCC.0121.0070      XARecoveryStore: Error during checkDataDevice. Db:{0} Error:{1}**

**SCC.0121.0071      XARecoveryStore: Resized Data file recovered. Db:{0}**

- SCC.0121.0092      XARecoveryStore: Damaged data file re-created. Db:{0}
- SCC.0121.0094S      **Unrecoverable Exception while initializing the XA Recovery Store: {0}**  
**Explanation**      Integration Server was unable to create a persistent XA recovery store on disk. Integration Server uses this store to hold two-phase commit (2PC) transaction states for possible future recovery.  
**Action**              Investigate the following possible causes for the problem:  
  
                            1) The operating system userid under which the Integration Server is running does not have write privileges to the XA recovery store directory.  
  
                            2) There is not sufficient disk space for the directory.  
  
                            3) The XA recovery store is corrupt. If this is the case, archive the files stored in the XAStore directory, mail them to Software AG Global Support, move the files in the XA recovery store to a backup directory, and restart the Integration Server.
- SCC.0121.0095      XA Recovery Store could not be created.
- SCC.0121.0104      Unable to gain access to resource:{0} Error:{1}. Please verify that the Connection exists and is correctly configured.
- SCC.0121.0106      No transaction record found for Xid:{0} in resource:{1}. Transaction might have been committed or erased on resource:{1}. Unable to resolve as transaction might be in mixed state, requires manual intervention.

---

SCC.0121.0107	<b>Invalid global transaction state for Xid:{0}. Unable to auto-resolve transaction, aborting recovery.</b>
SCC.0121.0108	<b>Transaction Xid:{0} exceeded abandon timeout setting, aborting recovery.</b>
SCC.0121.0112E	<b>Error while shutting down XA Recovery Store:{0}.</b>
<b>Explanation</b>	The Integration Server XA recovery store did not shut down cleanly. Integration Server uses this store to hold two-phase commit (2PC) transaction states for possible future recovery.
<b>Action</b>	Restart Integration Server and examine the Server log for any error messages regarding the XARecovery Store. If the problem is a file permission or out of storage issue, correct the problem and restart the Integration Server. If the problem is not a file permission or out of storage issue, archive the contents of the XAStore directory and contact Software AG Global Support.
SCC.0121.0113E	<b>Recover call on XAResource:{0} failed. Exception:{1}, Error Code:{2}</b>
<b>Explanation</b>	The transaction recovery manager on Integration Server encountered an error when it tried to obtain a list of all incomplete XIDs known to the back-end resource. The error occurred because the back-end resource threw an exception.
<b>Action</b>	Check to see if the back-end resource is available and connected to Integration Server. The name of the resource will be the name of the connection defined in the adapter for the resource.
SCC.0121.0116	<b>Active transaction detected while completing service {0}. Rolling back pending operations.</b>
SCC.0121.0118	<b>Active resource detected while cleaning Top Transaction for service {0}. Rolling back pending operations.</b>
SCC.0121.0120	<b>Active transaction found with the thread after cleanup while completing service {0}. Check the cleanup process.</b>
SCC.0121.0990	<b>XA Transaction Logging: {0}</b>

**SCC.0126.0100**      **An error occurred while attempting to clean up transaction resources on connection {0}**

**SCC.0126.0101**      **An error occurred while attempting to release connection {0}**

**SCC.0126.0102**      **An error occurred while attempting to close connection pool {0}**

**SCC.0126.0103E**      **Assertion error during creation of connection pool {0}**

**Explanation**      An error occurred while allocating the managed connection because either the connection pool does not exist or the connection pool is empty for the managed connection factory.

**Action**      Ensure that the connection pool settings contain valid values. If the values are valid and if Integration Server is still unable create the connection pool, contact Software AG Global Support.

**SCC.0126.0104**      **Assertion error during reset of connection pool {0}**

**SCC.0126.0105E**      **Assertion error during connection request from pool {0}**

**Explanation**      An error occurred while allocating a connection to a request from the connection pool. This can happen if there are no available connections in the pool, if the managed connection factory does not exist, or if the conditions provided by the basic connection pool properties (such as pool size, minimum number of connections or maximum number of connections) are not met.

**Action**      Ensure the connection pool settings are valid. If the connection pool settings are valid and Integration Server is still unable to allocate a connection from the connection pool, contact Software AG Global Support.

**SCC.0126.0106**      **An error occurred while attempting to retrieve a connection from {0}**

**SCC.0126.0107**      **A connection was not available for request in pool {0}**

**SCC.0126.0110**      **Failed to retrieve handle for connection {0}**

SCC.0126.0111	<b>A duplicate connection returned from managed connection factory {0}</b>
SCC.0126.0112	<b>A data level assertion occurred while managing connections for pool {0}</b>
SCC.0126.0113	<b>Pool {0} cannot be initialized. The pool sizes (min, max, increment) must not be negative.</b>
SCC.0126.0115E	<b>Pool {0} cannot be initialized. The minimum pool size must be &lt;= the maximum pool size.</b>
<b>Explanation</b>	An error occurred while initializing the connection pool because the minimum number of connections is greater than the maximum number of connections allowed or the maximum number of connections is set to zero.
<b>Action</b>	Check the adapter connection pool settings to ensure the values for the minimum number of connections and maximum number of connections are valid. If the adapter connection pool settings are valid and the pool is still unable to initialize, contact Software AG Global Support.
SCC.0126.0116E	<b>Pool {0} cannot be initialized. A valid ManagedConnectionFactory was not provided.</b>
<b>Explanation</b>	An error occurred while checking basic properties for a connection pool because the managed connection factory for this pool is null.
<b>Action</b>	Check the connection pool settings to ensure that a valid connection factory is provided. If the settings are valid and the problem still exists, contact Software AG Global Support.
SCC.0126.0117E	<b>An error occurred while attempting to destroy connection {0}</b>
<b>Explanation</b>	An error occurred while closing the database connection from the connection pool.
<b>Action</b>	This is an internal error. Contact Software AG Global Support.
SCC.0126.0118E	<b>Pool state error in {0}. Cannot process request.</b>
<b>Explanation</b>	The next available connection cannot be obtained from the connection pool because the connection pool is disabled.
<b>Action</b>	Check the connection pool settings to ensure that the connection pool is enabled. If the connection pool is enabled and if Integration Server is still unable to obtain the next available connection from the connection pool, contact Software AG Global Support.

**SCC.0126.0119E**     **An error occurred while attempting to create connections for {0}**  
**Explanation**     An error occurred while creating a new connection for the connection pool.  
**Action**            Ensure that the resource database is running and the connection pool settings are valid. If the resource database is running and the connection pool settings are valid, contact Software AG Global Support.

**SCC.0126.0120E**     **{0} Threads are already waiting to get connection. The pool {1} doesn't have a connection available for the request.**  
**Explanation**     This error occurs when a thread holds a connection and stops responding or is in an infinite loop. In either case, the connection pool management capabilities to grant, release, or close connections do not work. Meanwhile, if the pool is flooded with many connection requests, all of the requesting threads are held in a waiting state. Under a heavy load, Integration Server might stop responding. If there are a large number of threads already waiting for a connection, ResourceAllocationException will be thrown to the new threads.  
**Action**            Check the adapter connection pool settings to ensure the values for the minimum number of connections and maximum number of connections are valid. If the adapter connection pool settings are valid and the pool is still unable to initialize, contact Software AG Global Support.

**SESSION\_EXPIRED**   **Session has expired.**

**SS.0088.9424E**     **Error initializing service handler {0}. Error: {1}**  
**Explanation**     An error occurred while initializing the JAX-RPC header handler.  
**Action**            The init() method of JAX-RPC handler threw an error. Correct the error in init() method.

**STATUS\_ACTIVE**    **Transaction is active**

**STATUS\_COMMITTED** **Transaction is committed**

**STATUS\_COMMITTING** **Transaction is committing**

**STATUS\_MARKED\_ROLLBACK** – Transaction is marked for rollback

**STATUS\_NO\_TRANSACTION** – No Transaction

**STATUS\_PREPARED** Transaction is prepared

**STATUS\_PREPARING** Transaction is preparing

**STATUS\_ROLLEDBACK** Transaction is rolled back

**STATUS\_ROLLING\_BACK** – Transaction is rolling back

**STATUS\_TWO\_LOCAL\_TX** – commit failed. more than one local transaction enlisted.

**STATUS\_UNKNOWN** Transaction status is unknown

**STRINGSET\_NOSUCHELEMENT** – StringSetEnumerator

**TEST\_INVALID\_ALIASE** – Associated pool alias for the functional alias {0} does not exist.

**Explanation** Integration Server cannot establish a connection to the pool. A connection pool alias is not associated with the specified functional alias.

**Action** Make sure a connection pool is associated with the functional alias.

**THREAD\_ALREADY\_WITH\_THIS\_TX** – thread already associated with this transaction

**THREAD\_WITH\_ANOTHER\_TX** – thread already associated with another transaction

**TRAN\_NOT\_ACTIVE** transaction is not active

**TRAN\_NOT\_FOR\_THREAD** – transaction is not with current thread

**TRAN\_NOT\_WMIRAN** transaction not a Tran instance

**TRUST\_STORE\_EMPTY** Truststore alias is empty. Specify a Truststore alias for the port or a global truststore alias on the Security > Certificates > Edit page.

**UM\_MIGRATE\_CONNECTION\_ALIAS\_NOT\_FOUND...0** – conectionAlias was not found:{0}.

**UM\_MIGRATE\_CONNECTION\_ALIAS\_NOT\_UM...0** – conectionAlias:{0} MUST be a Universal Messaging Connection Alias.

**UM\_MIGRATE\_NOT\_MIGRATABLE\_FILTER** – Filter cannot be completely migrated to Provider Filter (UM). Contains an unsupported construct:{0} {1} {2}.

**UNABLE\_TO\_INIT\_XASTORE** – Unrecoverable Error while initializing XA Store: {0}

**UNEXPECTED\_END\_OF\_DOCUMENT\_WHEN\_READING\_ELEMENT\_TEXT\_CONTENT** – unexpected end of document when reading element text content

**UNEXPECTED\_EVENT\_TYPE** – Unexpected event type {0}

**UNSUPPORTED\_ACTION\_DELETE\_DEST\_NULL** – Cannot delete durable subscriber {0} for alias {1}. The durable subscriber cannot be accessed. You may need to delete the durable subscriber from the JMS provider manually.

**URI\_IS\_INVALID** URI "{0}" is invalid

**URI\_IS\_NOT\_UNIQUE** URI "{0}" is already being used

**URI\_IS\_REQUIRED** URI is required

**URLALIAS\_ALREADY\_REGISTERED** – The HTTP URL alias could not be registered by the service {0}. "{1}" is already registered as an alias for the path: {2}

**URLALIAS\_ALREADY\_REGISTERED2** – HTTP URL alias "{0}" could not be registered. It is already registered as an alias for the path: {1}

**URLALIAS\_ALREADY\_REGISTERED3** – HTTP URL alias "{0}" could not be registered. It is already registered by package {1} as an alias for the path: {2}

**URL\_IS\_INVALID** URL "{0}" is invalid

**URL\_IS\_NOT\_UNIQUE** URL "{0}" is already being used

**URL\_IS\_REQUIRED** URL is required

**VCS.0132.0051** VCS package shutting down

WEBSOCKET\_NO\_CALLBACK – Values for callback is required

WEBSOCKET\_NO\_VALUE Callback {0} is required

WEBSOCKET\_REQ\_FIELD – " {0} " is a required field.

WEBSOCKET\_REQ\_STR\_OR\_BYTE – message field should be either string or byte object

WEBSOCKET\_RUNASUSR runAsUser is a required field.

WEBSOCKET\_SESSION\_NOTFOUND – Couldn't find the session with sessionID: {0}

WS\_ALIAS\_EXISTING\_MESSAGE\_ADDRESSING – Could not add the Web service endpoint alias because the message addressing endpoint alias {0} for transport type {1} already exists. Provide a different alias name.

**Explanation** The message addressing endpoint alias name you specified already exists for a transport type (HTTP, HTTPS, JMS).

**Action** Specify a message addressing endpoint alias name that does not already exist.

WS\_INVALID\_ASC\_CLIENT\_KEYTAB\_FILE – Client Keytab Filename must be ASCII characters

WS\_INVALID\_ASC\_CLIENT\_PASSWORD – Password for Client Principal must be ASCII characters

WS\_INVALID\_ASC\_CLIENT\_PRINCIPAL – Client Principal name must be ASCII characters

**WS\_INVALID\_ASC\_CLIENT\_PWD\_INPUT\_MODE** – Client Password Input Mode must be ASCII characters

**WS\_INVALID\_ASC\_JAAS\_CONTEXT** – JAAS Context name must be ASCII characters

**WS\_INVALID\_ASC\_SERVICE\_PRINCIPAL** – Service Principal Name must be ASCII characters

**WS\_INVALID\_ASC\_SERVICE\_PRINCIPAL\_FORM** – Service Principal Name Form must be ASCII characters

**WS\_NO\_MSG\_KRB\_JAAS\_CONTEXT** – JAAS Context for WS Security not specified

**WS\_NO\_MSG\_KRB\_SERVICE\_PRINCIPAL** – Service Principal for WS Security not specified

**WS\_NO\_MSG\_KRB\_SERVICE\_PRINCIPAL\_FORM** – Service Principal Name Form for WS Security not specified

**XID\_NOT\_FOUND** Failed attempt to store global status={0} for xid={1}. XID not found.

**XML\_SOURCE\_SHOULD\_BE\_OF\_CORRECT\_TYPE** – xmlSource should be of type 'java.io.InputStream', 'java.io.Reader', 'org.w3c.dom.Node', 'javax.xml.stream.XMLStreamReader' or 'java.lang.String'

**XML\_TARGET\_SHOULD\_BE\_OF\_CORRECT\_TYPE** – xmlTarget should be of type 'java.io.OutputStream', 'java.io.Writer' or 'javax.xml.stream.XMLEventWriter'

**XSL.0002.0014E**      `new Object[][]{{Integer.valueOf(1),Integer.valueOf(2),"JAXP: Error - {0}"},{Integer.valueOf(2),Integer.valueOf(3),"JAXP: Warning - {0}"},{Integer.valueOf(3),Integer.valueOf(5),"JAXP: Properties file is {0}.",{Integer.valueOf(4),Integer.valueOf(5),"JAXP: DocumentBuilderFactory = {0}"},{Integer.valueOf(5),Integer.valueOf(5),"JAXP: SAXParserFactory = {0}"},{Integer.valueOf(6),Integer.valueOf(5),"JAXP: TransformerFactory = {0}"},{Integer.valueOf(7),Integer.valueOf(5),"JAXP: Stylesheet template {0} cached."},{Integer.valueOf(8),Integer.valueOf(5),"JAXP: Stylesheet templates cache cleared."},{Integer.valueOf(9),Integer.valueOf(3),"JAXP: Required argument 'stylesheet' not specified; no value removed from stylesheet cache."},{Integer.valueOf(10),Integer.valueOf(5),"JAXP: Stylesheet template {0} removed from cache."},{Integer.valueOf(11),Integer.valueOf(3),"JAXP: Stylesheet template {0} was not found in cache."},{Integer.valueOf(12),Integer.valueOf(5),"JAXP: Stylesheet {0} was successfully`

**compiled."},{Integer.valueOf(13),Integer.valueOf(5),"JAXP: Compiling TransformerFactory = {0}},{Integer.valueOf(14),Integer.valueOf(2),"JAXP: Error - External entity attack detected. Entity name is {0}"}},}**

**Explanation**

An external entity was detected in the XML that the pub.xslt.Transformations:transformSerialXML service received or in the XSLT stylesheet the service used to transform the XML.

**Action**

Check the XML file or the XSLT stylesheet for external entities. If the external entity is a trusted entity, add the entity to the server parameter watt.core.xml.allowedExternalEntities.

# 18 Mediator Messages

---

<b>0010.0345Debug</b>	<b>AliasesController.updateAliases - Deployment request for runtime alias is null</b>
<b>Explanation</b>	Mediator received an alias deployment request with null values.
<b>Action</b>	Check the deployment request and specify valid information in the request.
<b>0010.0715E</b>	<b>Mediator Upgrade, did not complete successfully.</b>
<b>Explanation</b>	This log message may occur when the Mediator package loads during the Integration Server restart after an overinstall. This message indicates the upgrade was not successful. There should be a previous error message in the server log that indicates the problem.
<b>Action</b>	See actions for message ID '0010.0702'
<b>0010.0753</b>	<b>Successfully migrated Mediator cache configuration file</b>
<b>0010.0786Error</b>	<b>Error initializing runtime aliases. {0}</b>
<b>Explanation</b>	Mediator could not initialize the XML data for the runtime alias.
<b>0010.0811Debug Error</b>	<b>AliasesController.removeAliases - Cannot delete alias. Null values found in the request field(s).</b>
<b>Explanation</b>	Mediator received an alias undeployment request with null values in one or more fields.
<b>Action</b>	Verify the request and resend the request with valid values in the fields.

<b>0010.0814Error</b>	<b>Error retrieving the secure alias: {0}. {1}</b>
<b>Explanation</b>	Error while retrieving the secure string for the alias from the Integration Server password manager.
<b>Action</b>	Check the Integration Server password manager for details on the secure alias string.
<b>0010.0815Error</b>	<b>Error saving the secure alias: {0}. {1}</b>
<b>Explanation</b>	Error while saving the secure string for the alias to the Integration Server password manager.
<b>Action</b>	Check the Integration Server password manager for the secure alias string.
<b>0010.0816Error</b>	<b>Secure alias does not contain a secure string. Secure alias: {0}</b>
<b>Explanation</b>	The secure alias does not have a secure string associated with it.
<b>Action</b>	Enter a valid secure string for the secure alias and try again.
<b>0010.0817Error</b>	<b>Secure alias has invalid secure string encoding. Secure alias: {0}</b>
<b>Explanation</b>	The secure string assigned to the secure alias is not valid.
<b>Action</b>	Check if the secure string is properly encoded.
<b>0010.0852</b>	<b>Mediator could not deploy the service, {0}. {1}</b>
<b>Explanation</b>	An error occurred while parsing the default content type values for the service. Hence, the service could not be deployed.
<b>Action</b>	Check the Integration server logs for more details.
<b>0010.0853</b>	<b>Service failed because of an incorrect value for the default content type. Service: {0}; default content type: {1}</b>
<b>Explanation</b>	The default content type you provided for the service is either not valid or not supported by Mediator.
<b>Action</b>	Check the default content type provided to the service. A list of the content types support by Mediator is available in the product documentation.
<b>0010.0855</b>	<b>Mediator cannot deploy the service because the SOAP action in the REST request received is not suitable.</b>
<b>Explanation</b>	Mediator could not find a suitable SOAP action for the REST request received from the consumer.
<b>Action</b>	Redeploy the service with the correct SOAP action.

---

<b>0010.0868</b>	<b>Mediator is performing start-up tasks, please wait ...</b>
<b>Explanation</b>	User trying to attempt deployment while loading service(s) from cache/disk at start-up.
<b>Action</b>	Please wait to trigger deployment task until complete the Mediator start-up tasks
<b>0030.0092</b>	<b>PublisherPropsObserver - Unknown sender data type ({0})</b>
<b>Explanation</b>	The properties observer received an invalid sender type.
<b>Action</b>	This indicates a coding error. Non-Mediator code should never call this method.
<b>0030.0094</b>	<b>PublisherPropsObserver - Unknown parameters data type ({0})</b>
<b>Explanation</b>	The properties observer received an invalid update object type.
<b>Action</b>	This indicates a coding error. Non-Mediator code should never call this method.
<b>0030.0099</b>	<b>PublisherPropsObserver - Unknown wrapper factory data type ({0})</b>
<b>Explanation</b>	This message has incorrect text. It should indicate an invalid data type for UDDP publisher bean.
<b>Action</b>	Update the pg configuration file to use a proper UDDI publisher data type.
<b>0030.0100</b>	<b>PublisherPropsObserver - Unable to find wrapper factory</b>
<b>Explanation</b>	There is no UDDI publisher configured, but its properties are being changed.
<b>Action</b>	Update the configuration file. Either configure a UDDI publisher or unregister the UDDI properties observer.
<b>0030.0104</b>	<b>Exception encountered initializing logging resource: {0}</b>
<b>Explanation</b>	A problem was encountered while setting up a logger for Mediator to use. There should be an exception message with more details.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0030.0109</b>	<b>PublisherPropsObserver - Can't convert string ({0}) to integer for publishing interval, ignoring input</b>
<b>Explanation</b>	The value received for performance data reporting interval was not a valid numeric string.
<b>Action</b>	Make sure a numeric value is input.

<b>0030.0113</b>	<b>PublisherPropsObserver - Unknown pg service deployer data type {{0}}</b>
<b>Explanation</b>	The data type of the PG Service Deployer bean is invalid.
<b>Action</b>	Update the pg configuration file to use a proper PG Service Deployer data type.
<b>0030.0301</b>	<b>ConsumerApplicationManager.convert - cannot handle null request</b>
<b>Explanation</b>	Unable to create Consumer deployment object for update.
<b>Action</b>	Probably bad SOAP request to Deployer, fix request.
<b>0030.0302</b>	<b>ConsumerApplicationManager.convert - cannot convert consumer with null {0}</b>
<b>Explanation</b>	Invalid Consumer deployment object was found.
<b>Action</b>	Probably bad SOAP request to Deployer, fix request.
<b>0030.0303</b>	<b>VirtualServiceDeployer.{0} - cannot handle null {1}</b>
<b>Explanation</b>	A null reference was found during a deployment activity. The object and activity are identified in the message.
<b>Action</b>	Probably bad SOAP request for deployment, fix request.
<b>0030.0304</b>	<b>VirtualServiceDeployer.deploy - service {{0}} already deployed, undeploying</b>
<b>Action</b>	Info level message, no action required.
<b>0030.0305</b>	<b>VirtualServiceDeployer.undeploy - cannot undeploy service {{0}}, not deployed</b>
<b>Explanation</b>	Attempt to undeploy virtual service failed.
<b>Action</b>	Verify that Mediator and CentraSite agree that the service is no longer deployed. If not, try undeploying this service again, or restarting Mediator/IS.
<b>0030.0306</b>	<b>VirtualServiceDeployer.{0} - caught this: type({1}) message({2})</b>
<b>Explanation</b>	Unable to deploy virtual service. See exception message for more details.
<b>Action</b>	Address the problem indicated by exception and try to deploy again.
<b>0030.0309</b>	<b>ClusteredServiceDeployer{0} - cannot handle null {1}</b>
<b>Explanation</b>	Unable to create VS deployment object for update.
<b>Action</b>	Probably bad SOAP request to Deployer, fix request.

---

<b>0030.0315</b>	<b>ClusteredConsumerManager.updateConsumer - cannot handle null consumer</b>
<b>Explanation</b>	Unable to create Consumer object for update.
<b>Action</b>	Probably bad SOAP request to Deployer, fix request.
<b>0030.0318</b>	<b>ClusteredServiceDeployer - cannot deploy null info to cache</b>
<b>Explanation</b>	A problem occurred while attempting to convert a PGService for deployment to shared cache. There should be another message describing the conversion or deployment issue.
<b>Action</b>	Fix the conversion or deployment problem.
<b>0030.0319</b>	<b>ClusteredServiceDeployer - cannot undeploy null service name from cache</b>
<b>Explanation</b>	Virtual service undeployment requires a non-empty service name. This is problem with undeployment request payload.
<b>Action</b>	Fix the undeployment request payload.
<b>0030.0328</b>	<b>ConsumerApplicationManager.{0} - cannot handle null update request</b>
<b>Explanation</b>	Invalid Consumer deployment request for update.
<b>Action</b>	Probably bad SOAP request to Deployer, fix request.
<b>0030.0330</b>	<b>ConsumerApplicationManager - not updating consumer ({0}), modification date, ({1}), is no more recent</b>
<b>Action</b>	Info level message, no action required.
<b>0030.0333</b>	<b>ConsumerApplicationManager.{0} - caught this: type({1}) message({2})</b>
<b>Explanation</b>	Unable to create and persist Consumer object for update.
<b>Action</b>	Either bad SOAP request to Deployer, fix Request. Or file system problem, check file system permissions. See logged message text for specific error details.
<b>0030.0336</b>	<b>Consumer Application Update Failed; requested update has invalid {0} field</b>
<b>Explanation</b>	Invalid consumer name or key in remove request.
<b>Action</b>	Probably bad SOAP request to Deployer, fix request.

- 0030.0337**            **Consumer Application Remove Failed; consumer ({0}) does not exist**  
**Explanation**        Attempt to remove consumer failed.  
**Action**                Reply to CentraSite Deployment attempt should indicate error. Try redeploying this consumer or resynchronizing all consumers.
- 0030.0343**            **RegisteredConsumerNamesManager.{0} - cannot handle null update request**  
**Explanation**        Invalid RegisteredConsumerNames deployment request for update.  
**Action**                Probably bad SOAP request to Deployer, fix request.
- 0030.0344**            **Registered Consumer Names Update Failed; requested update has invalid {0} field**  
**Explanation**        Invalid service name or consumer names in registered consumer names update request.  
**Action**                Probably bad SOAP request to Deployer, fix request.
- 0030.0346**            **RegisteredConsumerNamesManager - not updating consumer names registered to ({0}), modification date, ({1}), is no more recent**  
**Action**                Info level message, no action required.
- 0030.0347**            **RegisteredConsumerNamesManager.{0} - cannot handle null update request**  
**Explanation**        Invalid RegisteredConsumerNames deployment request for remove.  
**Action**                Probably bad SOAP request to Deployer, fix request.
- 0030.0348**            **Registered Consumer Names Remove Failed; requested update has invalid {0} field**  
**Explanation**        Invalid service consumer name in remove request.  
**Action**                Probably bad SOAP request to Deployer, fix request.
- 0030.0350**            **Registered Consumer Names Remove Failed; service ({0}) has no registered consumers**  
**Explanation**        Invalid request to remove RegisteredConsumerNames, must include at least one consumer name.  
**Action**                Probably bad SOAP request to Deployer, fix request.

---

0030.0352	<b>RegisteredConsumerNamesManager.{0} - caught this: type({1}) message({2})</b>
<b>Explanation</b>	Unable to create and persist RegisteredConsumerNames object for update.
<b>Action</b>	Either bad SOAP request to Deployer, fix Request. Or file system problem, check file system permissions. See logged message text for specific error details.
0030.0356	<b>VirtualServiceDeployer - unable to get endpoints for {0}, caught this: type({1}), msg({2})</b>
<b>Explanation</b>	Unable to obtain endpoint for deployed service.
<b>Action</b>	Probably bad SOAP request to Deployer or bad VSD, fix one or both.
0030.0357	<b>ClusteredRegisteredConsumerNamesDeployer.updateConsumerNames - cannot handle null reg names object</b>
<b>Explanation</b>	Unable to create RegisteredConsumerNames object for update.
<b>Action</b>	Probably bad SOAP request to Deployer, fix request.
0030.0358	<b>Consumer Application Remove Failed; requested update has invalid name and key fields, both are empty</b>
<b>Explanation</b>	Consumer remove request must have either name or key to identify consumer; both were null or empty.
<b>Action</b>	Probably bad SOAP request to Deployer, fix request.
0030.0359	<b>ConsumerApplicationManager - Consumer update request has invalid IP range; from ({0}) to ({1})</b>
<b>Explanation</b>	Consumer update request had invalid IP address range.
<b>Action</b>	Probably bad SOAP request to Deployer, fix request.
0030.0361	<b>VirtualServiceDeployer - redeploying undeployed service ({0}), deployment failed for newer version</b>
<b>Action</b>	Info level message, no action required.
0030.0362	<b>VirtualServiceDeployer - a problem was encountered during deployment, ({0}) will be undeployed and replaced if necessary</b>
<b>Action</b>	Info level message, no action required.

<b>0030.0363</b>	<b>VirtualServiceDeployer.{0} - service({1}) caught this: type({2}) message({3})</b>
<b>Explanation</b>	Message context encountered an exception while attempting to redeploy or undeploy a virtual service. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0030.0364</b>	<b>Deployment request for service: {0}. Registered consumer name element was processed, but the existing modification date is the same as the request. {1}</b>
<b>Action</b>	Info level message, no action required.
<b>0030.0366</b>	<b>UddiPropertiesObserver - Password lookup failed; type ({0}), message ({1})</b>
<b>Explanation</b>	A problem was encountered by attempting to retrieve stored password. There should be an exception with more specific trouble description.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0030.0367</b>	<b>UddiPropertiesObserver - Unable to activate performance data policies; type ({0}), message ({1})</b>
<b>Explanation</b>	The performance data deployer was unable to run. This message should include more details regarding the reason.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0030.0370</b>	<b>Unable to connect to UDDI: ({0}); property updates saved, but data collection is OFF.</b>
<b>Explanation</b>	A problem was encountered during publisher test.
<b>Action</b>	This is probably a bad configuration parameter, fix it.
<b>0030.0371</b>	<b>UddiPropertiesObserver - Unable to convert port string ({0}) to integer, using default port {1}</b>
<b>Explanation</b>	The value input for 'UDDI port' number is non-numeric.
<b>Action</b>	Input an numeric port value.
<b>0030.0396Debug</b>	<b>Exception in AliasesController.{0}. Alias type: {1}, message: {2}</b>
<b>Explanation</b>	Mediator is unable to create and persist an alias during an update.
<b>Action</b>	Verify the access permissions in the file system. See the Mediator error logs for details.

<b>0030.0398Error</b>	<b>Runtime alias update failed. The update request contains an invalid field: {0}</b>
<b>Explanation</b>	The SOAP request sent to the Deployer contains an invalid field.
<b>Action</b>	Resend the request with a valid value for the field.
<b>0030.0399Debug</b>	<b>SimpleAliasDeploymentManager.convert - Cannot deploy simple alias: {0}. Null value in field(s)</b>
<b>Explanation</b>	Mediator found an invalid simple alias during deployment.
<b>Action</b>	Resend the request with a valid value for the field(s).
<b>0030.0410Error</b>	<b>Error undeploying alias. Alias is associated with services. Alias: {0}, services: {1}</b>
<b>Explanation</b>	You are trying to undeploy an alias which is already deployed to a service. If you continue with undeploy, the associated services will not be usable.
<b>Action</b>	Remove the association between the alias and the service that you want to delete, or undeploy the associated services before you undeploy the alias.
<b>0030.0412Debug error</b>	<b>EndpointAliasDeploymentManager.convert - Cannot deploy endpoint alias: {0}. Null value in field(s)</b>
<b>Explanation</b>	Mediator found an invalid endpoint alias during deployment.
<b>Action</b>	Resend the request with a valid value for the field(s)
<b>0030.0419</b>	<b>AliasesDeploymentManager.convert - Cannot deploy alias: {0} of type {1}. Null value in field: {2}</b>
<b>Explanation</b>	Mediator found an invalid alias of type {1} during deployment. Alias Name: {0} Reason - Null value in field: {2}
<b>Action</b>	Resend the request with valid value for the field : {2}
<b>0030.0420</b>	<b>Deployment of webMethods IS Alias {0} failed because no webMethods IS service exists with the given service name {1} in Mediator.</b>
<b>Explanation</b>	Cannot deploy webMethods IS Alias with alias name : {0} and service name : {1}. No webMethods IS Service exists with given service name {1} in Mediator.
<b>Action</b>	Resend the deploy request with valid webMethods IS service name.

<b>0050.0001</b>	<b>Unable to find Policy Element in the VSD:{0}</b>
<b>Explanation</b>	An exception was encountered while attempting to extract a policy element from VSD. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0002</b>	<b>Unable to create Rampart properties:{0}</b>
<b>Explanation</b>	An exception was encountered while attempting to assemble Rampart keystore properties. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0003</b>	<b>Unable to replace static Rampart configuration with configured properties:{0}</b>
<b>Explanation</b>	An exception was encountered while attempting to re-configure Rampart keystore properties. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0004</b>	<b>Unable to create Rampart Configuration Element:{0}</b>
<b>Explanation</b>	An exception was encountered while attempting to convert Rampart configuration string to XML. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0005</b>	<b>Unable to create XPath to select first Policy Alternative:{0}</b>
<b>Explanation</b>	An exception was encountered while attempting to create an Xpath object. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0006</b>	<b>Error while removing existing RampartConfig elements:{0}</b>
<b>Explanation</b>	An exception was encountered while attempting to remove configuration elements. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.

---

<b>0050.0007</b>	<b>Required configuration information to enable WS-Security processing is missing. Unable to process service: {0}. Please ensure Keystore/Truststore information is configured</b>
<b>Explanation</b>	Service could not be initialized due to a problem with keystore/trustore configuration.
<b>Action</b>	Fix the security configuration.
<b>0050.0011</b>	<b>Exception while determining hostname or IP address of the server:{0}</b>
<b>Explanation</b>	An exception was encountered while attempting to resolve a host name or IP address. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0013</b>	<b>Mediator needs the repository location of the SOAP Stack</b>
<b>Explanation</b>	Configuration does not include a valid location for Axis2 repositoryconfiguration.
<b>Action</b>	Fix the axis2 configuration.
<b>0050.0016</b>	<b>ServerManager ready for processing</b>
<b>Action</b>	Info level message, no action required.
<b>0050.0017</b>	<b>Mediator encountered exception while starting ServerManager:{0}</b>
<b>Explanation</b>	An exception was encountered during configuration of Axis2 listeners. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0018</b>	<b>Invalid Port specified. Using default configuration: {0}</b>
<b>Explanation</b>	The 'port' property has a non-numeric string value, the value configured in Axis is used.
<b>Action</b>	Make sure the property value to numeric.
<b>0050.0019</b>	<b>Port {0} is already in use. Trying alternate</b>
<b>Explanation</b>	The port indicated in the message is not available to use with a new socket.
<b>Action</b>	Specify another port value in the system 'port' property or Axis configuration.

<b>0050.0020</b>	<b>Exception while creating "id" selection XPath: {0}</b>
<b>Explanation</b>	Message context encountered an exception while attempting to create an XPath object. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0021</b>	<b>Found Element within Resources element with id: {0}</b>
<b>Action</b>	Info level message, no action required.
<b>0050.0022</b>	<b>Exception while selecting element with id:{0} in Resources Element: {1}</b>
<b>Explanation</b>	Message context encountered an exception while attempting to extract the indicated element from XML. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0023</b>	<b>Mediator received a response for the request with message Id :{0} But a callback is not registered (anymore) to process this response</b>
<b>Explanation</b>	No callback was registered at the time this response was processed.
<b>Action</b>	This is probably a VS configuration problem.
<b>0050.0024</b>	<b>Mediator received a response message without a message Id</b>
<b>Explanation</b>	There was a problem relating the native service response to a virtual service request.
<b>Action</b>	Look for previously logged message indicating that message Id was not used.
<b>0050.0025</b>	<b>Mediator encountered an exception: {0}. No error handlers found - [Message Dropped]</b>
<b>Explanation</b>	This could be a configuration problem. An exception was encountered while attempting to handle a fault. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the configuration, or other problem identified by the exception message.
<b>0050.0029</b>	<b>VSD with incorrect Namespace:{0}. Unable to create PGService.</b>
<b>Explanation</b>	The namespace found in the VSD is unknown.
<b>Action</b>	This is a virtual service configuration problem.

---

<b>0050.0031</b>	<b>The {0} element is required for a Mediator Service</b>
<b>Explanation</b>	Some element used during service deployment was found to be null. The specific element should be identified in the message text.
<b>Action</b>	This is a virtual service configuration problem.
<b>0050.0032</b>	<b>The {0} sequence element is required for a Mediator Service</b>
<b>Explanation</b>	The VSD is missing the sequence element identified in the message.
<b>Action</b>	This is a virtual service configuration problem.
<b>0050.0033</b>	<b>The inSequence for VSD:{0} is invalid.</b>
<b>Explanation</b>	The sequence identified in the message failed validation. Look for recent error message with more validation failure details.
<b>Action</b>	This is a virtual service configuration problem.
<b>0050.0034</b>	<b>The outSequence for VSD:{0} is invalid.</b>
<b>Explanation</b>	The sequence identified in the message failed validation. Look for recent error message with more validation failure details.
<b>Action</b>	This is a virtual service configuration problem.
<b>0050.0035</b>	<b>Exception while parsing Virtual Service String Definition:{0}</b>
<b>Explanation</b>	An exception was encountered while attempting to parse the virtual service description. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0036</b>	<b>Unable to create Virtual Service Definition</b>
<b>Explanation</b>	Unable to create XML object from the VSD string.
<b>Action</b>	This is a virtual service configuration or deployment problem.
<b>0050.0037</b>	<b>PGServiceFactory encountered and exception while creating the PGService: {0}</b>
<b>Explanation</b>	An exception was encountered while attempting to validate input or output sequence or during WSDL URI processing. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.

<b>0050.0038</b>	<b>Invalid parameter specified for PGService: {0}</b>
<b>Explanation</b>	The attribute named in the message has no value in the VSD.
<b>Action</b>	This is a virtual service configuration problem.
<b>0050.0039</b>	<b>Exception {0} for PGService: {1}</b>
<b>Explanation</b>	An exception was encountered while attempting during service creation. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0040</b>	<b>No PGService found with name: {0}</b>
<b>Explanation</b>	Attempting to undeploy or get endpoints for a service that does not exist.
<b>Action</b>	Make sure the virtual service exists before operating on it.
<b>0050.0041</b>	<b>WSStack exception processing service: {0} Cause: {1}</b>
<b>Explanation</b>	An AxisFault was encountered while attempting to either undeploy or get endpoints for the virtual service named in the message. The associated fault message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the fault message.
<b>0050.0042</b>	<b>Unable to locate the WSStack configuration. Can't deploy Virtual Service:{0}</b>
<b>Explanation</b>	The Synapse configuration cannot supply an Axis configuration.
<b>Action</b>	This is an Axis2/Synapse/WS-Stack configuration problem.
<b>0050.0043</b>	<b>A Virtual Service with name:{0} already exists. Unable to deploy.</b>
<b>Explanation</b>	Cannot deploy an Axis service when one already exists with the same name.
<b>Action</b>	Undeploy the existing service before attempting to redeploy or use the same name.
<b>0050.0044</b>	<b>Unable to locate WSStack configuration. Please check if WSStack is enabled/correctly configured.</b>
<b>Explanation</b>	Unable to retrieve the configuration context supplier bean.
<b>Action</b>	This is a Spring bean configuration issue, the pg-config.xml file is missing or corrupted.

---

<b>0050.0045</b>	<b>Invalid parameter passed for Virtual Service creation:{0}</b>
<b>Explanation</b>	An attempt to persist the VSD for a service found a null element. The VSD is not allowed to be null.
<b>Action</b>	This may be the result of invalid deployment payload; fix the VSD.
<b>0050.0046</b>	<b>Unable to persist VSD:{0} to disk. Encountered error:{1}</b>
<b>Explanation</b>	An exception was encountered while attempting to serialize the VSD for the service identified in the message. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0047</b>	<b>Unable to {0} VSD:{1}. Error:{2}</b>
<b>Explanation</b>	This message is used in several different error conditions, as indicated by the object of 'unable to...'.
<b>Action</b>	Fix the 'unable to...' problem for the service identified by 'VSD:'.
<b>0050.0048</b>	<b>Error getting endpoints for service:{0}, Cause: {1}</b>
<b>Explanation</b>	An exception was encountered while attempting to get endpoints. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0049</b>	<b>Exception while creating PGService: {0}, Cause: {1}</b>
<b>Explanation</b>	An AxisFault was encountered while checking if deploying service already exists or while attempting to register service with Axis2. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0050</b>	<b>Error while engaging module: {0}</b>
<b>Explanation</b>	An AxisFault was encountered while attempting to engage the Axis2 module indicated in the message. The associated fault message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the fault message.

<b>0050.0052</b>	<b>Axis was unable to load module {0}</b>
<b>Explanation</b>	An exception was encountered while attempting to load and engage module identified in message. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0053</b>	<b>Loading the WSDL : {0}</b>
<b>Action</b>	Info level message, no action required.
<b>0050.0055</b>	<b>PGService {0} encountered error while converting wsdl element to a StreamSource:{0}</b>
<b>Explanation</b>	An exception was encountered while attempting to read WSDL from manifest. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0057</b>	<b>Unknown WSDL format for PGService:{0}, neither WSDL 1.1 nor WSDL 2.0</b>
<b>Explanation</b>	The current WSDL element has unknown or no namespace associated.
<b>Action</b>	This is a virtual service configuration problem.
<b>0050.0060</b>	<b>Populating SOAP service using WSDL</b>
<b>Action</b>	Info level message, no action required.
<b>0050.0061</b>	<b>Unable to find a WSDL for the PGService:{0}. Assuming a POX or Legacy service</b>
<b>Action</b>	Info level message, no action required.
<b>0050.0062</b>	<b>PGService: {0} is available on transports {1}</b>
<b>Action</b>	Info level message, no action required.
<b>0050.0063</b>	<b>Adding PGService:{0} to the SOAP Stack</b>
<b>Action</b>	Info level message, no action required.
<b>0050.0064</b>	<b>Removing PGService:{0} due to error: axisFault.getMessage()</b>
<b>Action</b>	Info level message, no action required.

---

<b>0050.0065</b>	<b>Exception while setting policy on PGService:{0}</b>
<b>Explanation</b>	An exception was encountered while attempting to engage WS-Policy module. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0066</b>	<b>Setting Policy with id:{0} on Mediator Service:{1}</b>
<b>Action</b>	Info level message, no action required.
<b>0050.0068</b>	<b>Successfully created service in SOAP Stack for PGService:{0} containing {1} endpoint(s).</b>
<b>Action</b>	Info level message, no action required.
<b>0050.0069</b>	<b>Error{1} on setting parameter :{0} on Mediator Service</b>
<b>Explanation</b>	An exception was encountered while attempting to set a parameter into an Axis service. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0070</b>	<b>creating new Mediator Service: {0}</b>
<b>Action</b>	Info level message, no action required.
<b>0050.0071</b>	<b>Unable to find service directory for service {0}</b>
<b>Explanation</b>	Unable to persist WSDL assets because the virtual service directory does not exist.
<b>Action</b>	Redeploying the virtual service should create the service directory.
<b>0050.0074</b>	<b>Error: {0} while reading from file {1}</b>
<b>Explanation</b>	An exception was encountered while attempting to read the proxy file identified in the message. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0076</b>	<b>Scheduled task[{0}] with startup delay of {1} ms and interval of {2} ms</b>
<b>Action</b>	Info level message, no action required.

- 0050.0077**      **Error initializing JMS transport listener. Cause: {0}**  
**Explanation**      An exception was encountered while attempting to register JMS listener. The associated exception message should include more details regarding the problem.  
**Action**              Fix the problem identified by the exception message.
- 0050.0078**      **Unable to stop TransportListener called:{0}. Exception:{1}**  
**Explanation**      An AxisFault was encountered while attempting to stop the JMS transport listener during bean initialization. The associated fault message should include more details regarding the problem.  
**Action**              Fix the problem identified by the fault message.
- 0050.0083**      **Error {0} occurred while updating the load balancer properties**  
**Explanation**      An AxisFault was encountered while attempting to add load balancer URL to an Axis transport description. The associated fault message should include more details regarding the problem.  
**Action**              Fix the problem identified by the fault message.
- 0050.0084**      **Loadbalanced Endpoint: [{0}] failed!**  
**Explanation**      A mediation operation to a load balanced endpoint has failed. The endpoint indicated in the message is not available. This usually indicates a communication problem with the targeted server.  
**Action**              Fix the targeted server.
- 0050.0086**      **Unable to get the IS keystore manager - please check your configuration!**  
**Explanation**      Unable to retrieve the keystore manager bean.  
**Action**              This is a Spring bean configuration issue, the pg-config.xml file is missing or corrupted.
- 0050.0087**      **Keystore initialization failed! Please check the server log for more details**  
**Explanation**      Unable to load the keystore file.  
**Action**              This is a Mediator security configuration problem.
- 0050.0088**      **Truststore initialization failed! Please check the server log for more details**  
**Explanation**      Unable to load the truststore file.  
**Action**              This is a Mediator security configuration problem.

---

<b>0050.0089</b>	<b>Unable to get the Rampart Configuration Handler - please check your configuration!</b>
<b>Explanation</b>	Unable to retrieve the Rampart creation handler bean.
<b>Action</b>	This is a Spring bean configuration issue, the pg-config.xml file is missing or corrupted.
<b>0050.0099</b>	<b>VSD proxy loader, Unable to delete file: {0}</b>
<b>Explanation</b>	The file or directory indicated in the message could not be deleted.
<b>Action</b>	Determine why the file or directory could not be deleted and make it deletable.
<b>0050.0100</b>	<b>VSD proxy loader, Unable to delete directory: {0}</b>
<b>Explanation</b>	The directory indicated in the message could not be deleted.
<b>Action</b>	Determine why the directory could not be deleted and make it deletable.
<b>0050.0101</b>	<b>VSD proxy loader, Unable to create directory: {0}</b>
<b>Explanation</b>	The file or directory indicated in the message could not be created.
<b>Action</b>	Delete the directory so that Mediator can create it again.
<b>0050.0105</b>	<b>Unable to determine fault cause. Please check the log file for more information!</b>
<b>Explanation</b>	This error indicates that Mediator could not determine the cause for the error when trying to extract the soap fault message from the response. Additional errors if any would be present in the IS log file (server.log)
<b>0050.0208</b>	<b>Error resolving WSDL URI. Cause {0}</b>
<b>Explanation</b>	An exception was encountered while attempting to resolve URI elements into XML source. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0209</b>	<b>Error initializing virtual service factory. Cause: {0}</b>
<b>Explanation</b>	An exception was encountered while attempting to initialize XPath elements. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.

<b>0050.0210</b>	<b>Error setting location of virtual service proxies directory. Path: {0} Cause: {1}</b>
<b>Explanation</b>	An exception was encountered while attempting to use the directory identified in the message. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0211</b>	<b>Unable to determine service endpoint URI for this service: {0} No transport listener defined for the virtual service's transport protocol.</b>
<b>Explanation</b>	The configuration context's listener manager cannot find an endpoint for the current service. This may indicate that the hosting IS does not have an appropriate listener registered.
<b>Action</b>	This is a configuration problem, either in IS ports or VSD
<b>0050.0212</b>	<b>Unknown exception deploying virtual service: {0} Cause: {1}</b>
<b>Explanation</b>	An exception was encountered while attempting to get an endpoint reference from the context listener manager. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0214</b>	<b>Error {0} manifest from external resources associated with virtual service: {1}. Cause: {2}</b>
<b>Explanation</b>	An exception was encountered while attempting to read WSDL from manifest. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0215</b>	<b>Error initializing virtual service transformation bean with this xslt: {0} Cause: {1}</b>
<b>Explanation</b>	An exception was encountered while attempting to read the transformation file. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0216</b>	<b>Error transforming raw virtual service string. Cause: {0} virtual service xml: {1}</b>
<b>Explanation</b>	An exception was encountered while attempting to read the Mediator's transformation file. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.

---

0050.0221	<b>Mediator has an internal configuration error. It's deploy-time xslt transformation file path does not exist. Path: {0}</b>
<b>Explanation</b>	An exception was encountered while attempting to read the file identified in the message. The associated exception message should include more details regarding the problem.
<b>Action</b>	This is a configuration problem; make sure the file identified in the message exists and contains the transformation.
0050.0250	<b>Could not find user-specified value for HTTP method! Defaulting to inbound request HTTP method {0}</b>
<b>Explanation</b>	The 'routing method' context variable has an invalid value.
<b>Action</b>	If the value indicated in the message is acceptable, no action is required. Otherwise virtual service configuration must be changed.
0050.0252	<b>Could not set HTTP method for outgoing request for endpoint: {0}</b>
<b>Explanation</b>	The outgoing request's message context is null.
<b>Action</b>	This is a virtual service/policy configuration problem.
0050.0300	<b>Context variable name "{0}" is already declared. Multiple declarations in the same context is not allowed.</b>
<b>Explanation</b>	Context variable names must be unique for a service.
<b>Action</b>	This is a service configuration problem.
0050.0303	<b>Attempt to reference context variable without providing a message context. Custom context variables may only be declared with a 'session' scope at this time. Other scopes are not supported.</b>
<b>Explanation</b>	Attempting to get context variable or context variable map, but the message context (or session) is null.
<b>Action</b>	Earlier error messages should provide clues to help determine why a valid message context is null.
0050.0306	<b>Context variable name is required for variable declaration.</b>
<b>Explanation</b>	Variable name validation failed, QName is null or is missing a local part.
<b>Action</b>	This is a context variable configuration problem.

<b>0050.0307</b>	<b>Namespace URI and prefix is required for custom variable declaration. varName: {0}</b>
<b>Explanation</b>	Variable name validation failed, Namespace URI and prefix must both be neither null nor empty.
<b>Action</b>	This is a context variable configuration problem.
<b>0050.0308</b>	<b>Context variable name must be a valid identifier ( alpha-numeric, \$, or _ permitted ) Found: {0}</b>
<b>Explanation</b>	Variable name validation failed, name has invalid characters.
<b>Action</b>	This is a context variable configuration problem.
<b>0050.0309</b>	<b>Core Context variables cannot have a namespace or prefix as part of its declaration. varName: {0}</b>
<b>Explanation</b>	Variable name validation failed, prefix for core variables must be empty.
<b>Action</b>	This is a context variable configuration problem.
<b>0050.0310</b>	<b>Either a Message context or axis service name is required when creating a custom context variable. varName: {0}</b>
<b>Explanation</b>	Both service name and Axis2 message context are null, this is not acceptable. This is probably the result of attempting to deploy a service with no service name.
<b>Action</b>	Verify that service configuration is correct.
<b>0050.0311</b>	<b>Attempt to create a custom variable using a message context with no AxisService. varName: {0}</b>
<b>Explanation</b>	The axis2 message context is corrupted, it should identify a service.
<b>Action</b>	Earlier error messages should provide clues to help determine why a valid message context could not be created.
<b>0050.0312</b>	<b>Unexpected error creating custom Mediator context variable. varName: {0} reason: {1}</b>
<b>Explanation</b>	An exception was encountered while attempting to create a custom context variable. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.

---

<b>0050.0313</b>	<b>Unexpected error removing custom Mediator context variable for service: {0} reason: {1}</b>
<b>Explanation</b>	An exception was encountered while attempting to remove or inject a custom context variable. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0314</b>	<b>Unexpected error initializing core Mediator context variables. reason: {0}</b>
<b>Explanation</b>	An exception was encountered while attempting to create a context variable. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0316</b>	<b>Unexpected error getting Mediator context variable value. varName: {0} reason: {1}</b>
<b>Explanation</b>	An exception was encountered while attempting to get the value of the context variable named in the message. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0317</b>	<b>Unexpected error setting Mediator context variable value. varName: {0}, value:{1}, reason: {2}</b>
<b>Explanation</b>	An exception was encountered while attempting to set the context variable value named in the message. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0318</b>	<b>Expected a virtual service name for this method operation, but none was provided.</b>
<b>Explanation</b>	Attempting to get context variable map for a null service name.
<b>Action</b>	Earlier error messages should provide clues to help determine why a valid service name is null.
<b>0050.0321</b>	<b>Mediator context variable adapter unable to locate this type: {0}</b>
<b>Explanation</b>	The context variable type indicated in the message is unknown.
<b>Action</b>	This is a context variable configuration problem.

**0050.0322**      **Unexpected error getting core Mediator context variable value from adapter. type: {0}**

**Explanation**      An exception was encountered while attempting to get the context variable value named in the message. The associated exception message should include more details regarding the problem.

**Action**      Fix the problem identified by the exception message.

**0050.0323**      **Only string and int schema types are supported at this time. Type: {0}, declared with "{1}" context variable is not supported.**

**Explanation**      The context variable schema type is not among the accepted types.

**Action**      This is a service configuration problem.

**0050.0324**      **Context variable name declarations cannot contain \$ sign symbols in the name since that is used as a reference operator. varName: {0}**

**Explanation**      Variable name validation failed, name must include substitution character, (dollar sign).

**Action**      This is a context variable configuration problem.

**0050.0325**      **Unable to return list of context variables declared for this service: {0} Reason: {1}**

**Explanation**      An AxisFault was encountered while attempting to retrieve a list of context variable names. The associated fault message should include more details regarding the problem.

**Action**      Fix the problem identified by the fault message.

**0050.0326**      **Unable to return list of context variables declared for this message context: {0} Reason: {1}**

**Explanation**      An AxisFault was encountered while attempting to get a list of context variables or list of variable keys. The associated fault message should include more details regarding the problem.

**Action**      Fix the problem identified by the fault message.

**0050.0327**      **Context variable name deployed with virtual service {0} references an unknown namespace prefix. name attribute: {1}**

**Explanation**      Context variable identified in message has invalid namespace.

**Action**      This is a context variable configuration problem.

---

<b>0050.0328</b>	<b>Exception while copying context variables from request to response message context. Reason: {0}</b>
<b>Explanation</b>	An AxisFault was encountered while attempting to copy context variable names between contexts. The associated fault message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the fault message.
<b>0050.0329</b>	<b>Could not create backup directory for failed services! Dir tried = {0}</b>
<b>Explanation</b>	An attempt to create the 'failed services' directory has failed.
<b>Action</b>	Determine why the directory could not be created. Either fix the creation problem or specify a different directory.
<b>0050.0331</b>	<b>Error occurred when getting backup directory for path {0}</b>
<b>Explanation</b>	An exception was encountered while attempting to determine directory for backing up failed services. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0333</b>	<b>Error occurred while resolving URI; message = {0}</b>
<b>Explanation</b>	An exception was encountered during URI resolution. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0337</b>	<b>Previously selected {0} port {1} is no longer enabled or available!</b>
<b>Explanation</b>	The message indicates port number and type. The requested port is not available.
<b>Action</b>	Select a new port number for the indicated port type.
<b>0050.0343</b>	<b>Context variable API expected an IData object for ctx variable, {0}, but received this: {1}</b>
<b>Explanation</b>	The data element from which a context variable is to be extracted has an unknown data type.
<b>Action</b>	This is probably a flow configuration problem; where the pipeline was populated with an invalid value.

<b>0050.0344</b>	<b>Attempt to insert {0} core ctx variable with invalid value type: {1}. Expected a collection of this type: {2}</b>
<b>Explanation</b>	.The allowable data type for a core context variable is restricted, depending on variable type.
<b>Action</b>	.This is a context variable configuration problem.
<b>0050.0345</b>	<b>Unable to access array element [{0}] in SOAP_HEADERS core ctx variable. Cause: {1}</b>
<b>Explanation</b>	The index value indicated in the message must be numeric.
<b>Action</b>	This is a context variable configuration problem.
<b>0050.0346</b>	<b>Invalid array or key reference for core ctx variable. This substitution string has mismatched braces: {0}</b>
<b>Explanation</b>	The context variable substitution string is invalid, mismatched brace characters were found.
<b>Action</b>	This is a context variable configuration problem.
<b>0050.0347</b>	<b>Attempt to create an IData value for a ctx variable from an unsupported class type. CtxVar: {0} Bad type: {1}</b>
<b>Explanation</b>	The context variable to be converted to IData has an unknown data type.
<b>Action</b>	This is a context variable configuration problem.
<b>0050.0348</b>	<b>Unable to append header block to the end of the soap header. Cause: {0}, soapHeader element: {1}</b>
<b>Explanation</b>	An exception was encountered while attempting to add append new SOAP header block. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0349</b>	<b>Unable to prepend header block to the beginning of the soap header. Cause: {0}, soapHeader element: {1}</b>
<b>Explanation</b>	An exception was encountered while attempting to add prepend new SOAP header block. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.

---

<b>0050.0350</b>	<b>Unable to remove header block from the soap header. Cause: {0}, soapHeader: {1}</b>
<b>Explanation</b>	An exception was encountered while attempting to remove a SOAP header block. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0351</b>	<b>Unable to set header block at position {0} of the soap header. Cause: {1}, soapHeader element: {2}</b>
<b>Explanation</b>	An exception was encountered while attempting to replace a SOAP header block with a new one. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0355</b>	<b>Could not create STS configuration directory! Dir tried = {0}</b>
<b>Explanation</b>	The file or directory indicated in the message could not be created.
<b>Action</b>	Delete the directory so that Mediator can create it next time it is required.
<b>0050.0357</b>	<b>Error occurred when getting STS configurations directory for path {0}</b>
<b>Explanation</b>	An exception was encountered while attempting to create the directory indicated in the message. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0362</b>	<b>Error occurred when creating STS client</b>
<b>Explanation</b>	An exception was encountered while attempting to create an STS client object. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0364</b>	<b>Error occurred when initializing default STS configuration store</b>
<b>Explanation</b>	An exception was encountered while attempting to create JAXB marshaller/unmarshaller pair. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.

<b>0050.0365</b>	<b>Could not find STS configuration file with path {0}</b>
<b>Explanation</b>	An attempt to delete the file indicated in the message failed because the file does not exist.
<b>Action</b>	Check this directory [IS_INSTALL_DIR\packages\WmMediator\config\resources\security\sts] to make sure there is an xml file with the STS config name being deleted. For e.g. if the STS config being deleted is MySTS, then there should be an XML file called MySTS.xml in the mentioned directory
<b>0050.0366</b>	<b>Could not delete STS configuration file with path {0}</b>
<b>Explanation</b>	An attempt to delete the file indicated in the message returned 'false'. The file was not deleted.
<b>Action</b>	Make sure the STS config file present under [IS_INSTALL_DIR\packages\WmMediator\config\resources\security\sts] is present and not locked by any other application (e.g. opened in an editor like Windows Notepad). Check the log file to see if there is any java IOException related to disk errors.
<b>0050.0367</b>	<b>Error occurred when saving STS configuration to disk</b>
<b>Explanation</b>	An exception was encountered while attempting to marshal configuration object into file. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0368</b>	<b>Error occurred when reading STS configuration from file {0}</b>
<b>Explanation</b>	An exception was encountered while attempting to unmarshal configuration file indicated in the message into JAXB object. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0371</b>	<b>Error getting IS keystore manager instance!</b>
<b>Explanation</b>	An exception was encountered while attempting to get a reference to the keystore manager. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.

---

<b>0050.0373</b>	<b>Error occurred when adding rampart configuration to STS policy</b>
<b>Explanation</b>	An exception was encountered while attempting to configure the STS policy. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0379</b>	<b>Error occurred when adding assertion to STS policy</b>
<b>Explanation</b>	An exception was encountered while attempting to add an assertion to a WS-Policy artifact. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0382</b>	<b>Error occurred when adding OnBehalfOf element to WS-Trust request element</b>
<b>Explanation</b>	An exception was encountered while attempting to add the WS-Trust element to a request. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0383</b>	<b>Error occurred when sending WS-Trust request to STS to obtain SAML assertion</b>
<b>Explanation</b>	An exception was encountered while attempting to add SAML assertion to pipeline. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0384</b>	<b>Could not find required property {0} for SAML sender-vouches action!</b>
<b>Explanation</b>	The pub.mediator.security.ws.AddSamlSenderVouchesToken ESB service is missing the required 'ConfigName' input value
<b>Action</b>	Make sure that the 'ConfigName' service input has a valid STS config name (must match one of the configured STS names)
<b>0050.0386</b>	<b>Could not find any STS client configuration with name {0}. Check to see if such an STS configuration exists!</b>
<b>Explanation</b>	This error occurs if the configured ESB service that calls the pub.mediator.security.ws.AddSamlSenderVouchesToken specifies the STS config name incorrectly.
<b>Action</b>	Check if the specified STS config name matches one of the configured STSs in Mediator. The "ConfigName" service input value should be the same name (case-sensitive) as the STS name specified in Mediator Admin configuration page

<b>0050.0388</b>	<b>Could not get SAML assertion from STS!</b>
<b>Explanation</b>	A null assertion element was found in the STS client.
<b>Action</b>	Mediator sent a request to the configured STS to obtain a SAML assertion, but no valid assertion was obtained by the client. Please check the log file for any errors related to sending the WS-Trust request to the STS to obtain the token.
<b>0050.0389</b>	<b>Adding OnBehalfOf element in WS-Trust request for IS user {0}</b>
<b>Action</b>	Info level message, no action required.
<b>0050.0390</b>	<b>Could not find base STS policy file: {0} !</b>
<b>Explanation</b>	An exception was encountered while attempting to load a WS-Policy artifact from the file indicated in the message. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0391</b>	<b>Error occurred when getting STS configurations! Check to see if the ISTSClientConfigManager bean is configured!</b>
<b>Explanation</b>	The STS configuration manager bean could not be found.
<b>Action</b>	This is a Spring bean configuration issue, the pg-config.xml file is missing or corrupted.
<b>0050.0392</b>	<b>Could not find any STS configuration with the name {0}</b>
<b>Explanation</b>	The STS client configuration identified in the message to be loaded or deleted could not be found.
<b>Action</b>	Verify that the STS configuration being loaded or deleted has an equivalent configuration file present under [IS_INSTALL_DIR\packages\WmMediator\config\resources\security\sts] directory. E.g. if the configuration being deleted is called MySTS, then there should be a file with name MySTS.xml in the mentioned directory
<b>0050.0394</b>	<b>Error occurred when getting key aliases for keystore {0}: Error: {1}</b>
<b>Explanation</b>	An exception was encountered while attempting to add a list of certificate aliases to the pipeline. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.

---

<b>0050.0395</b>	<b>Error occurred when getting keystore handles {0}</b>
<b>Explanation</b>	An exception was encountered while attempting to add a list of keystore handles to the pipeline. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0396</b>	<b>Error when signing SAML assertion and SOAP request body</b>
<b>Explanation</b>	An exception was encountered while attempting to sign a SAML assertion and request body. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0397</b>	<b>Error occurred when adding ws-addressing headers to outbound soap request; Error: {0}</b>
<b>Explanation</b>	An exception was encountered while attempting to add WS-Addressing headers. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0400</b>	<b>Using default timestamp value of 300s, because input TTL {0} is invalid (-ve or too big)</b>
<b>Explanation</b>	The input value was not valid, a default was used.
<b>Action</b>	If the default is acceptable, no action is required. Otherwise update the configuration.
<b>0050.0507</b>	<b>ScaDeploymentPayload.extractParts found no virtual service requests</b>
<b>Action</b>	Info level message, no action required.
<b>0050.0508</b>	<b>Unexpected exception, attempting to {0}, caught: type({1}), msg({2})</b>
<b>Explanation</b>	An exception was encountered while attempting to process a deployment request. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0509</b>	<b>ScaDeploymentPayload.extractParts - Unable to find consumer file {0}, for component {1}</b>
<b>Explanation</b>	The SCA deployment package was expected to contain a file to define the consumer identified in the message. The file was not found.
<b>Action</b>	This is a deployment payload construction problem.

<b>0050.0510</b>	<b>Unexpected exception, attempting to process {0} request, caught: type({1}), msg({2})</b>
<b>Explanation</b>	An exception was encountered while attempting to process a deployment request. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0515</b>	<b>ScaCompositeConfiguration found component with implementation type ({0})</b>
<b>Action</b>	Info level message, no action required.
<b>0050.0516</b>	<b>{0} - unable to convert string ({1}) to XMLGregorianCalendar: exception message ({2})</b>
<b>Explanation</b>	The date element from the deployment payload has an unexpected format.
<b>Action</b>	This is problem with the contents of the deployment payload.
<b>0050.0517</b>	<b>DeploymentPayload.{0} - input pipeline does not contain expected key ({1})</b>
<b>Explanation</b>	The deployment payload must include an element with the key indicated in the message.
<b>Action</b>	This is problem with the contents of the deployment payload.
<b>0050.0519</b>	<b>ScaDeploymentPayload - unable to delete temporary zip file: ({0})</b>
<b>Explanation</b>	The file indicated in the message could not be deleted.
<b>Action</b>	Determine why the file could not be deleted and make it deletable.
<b>0050.0520</b>	<b>DeploymentPayload - invalid request type: {0}</b>
<b>Explanation</b>	The deployment payload type is unknown.
<b>Action</b>	This is a deployment payload construction problem.
<b>0050.0528</b>	<b>DeploymentPayload - found null/empty virtual service descriptor for service {0}</b>
<b>Explanation</b>	The deployment payload must contain a VSD. The VSD for the service identified in the message was not found.
<b>Action</b>	This is a deployment payload construction problem.
<b>0050.0603</b>	<b>Error occurred when adding UsernameToken to SOAP Envelope: {0}</b>
<b>Explanation</b>	An exception was encountered while attempting to add username token to the pipeline. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.

---

<b>0050.0605</b>	<b>Error occurred when adding X.509 token to SOAP Envelope: {0}</b>
<b>Explanation</b>	An exception was encountered while attempting to add X509 token to the pipeline. The associated exception message should include more details regarding the problem.
<b>Action</b>	Fix the problem identified by the exception message.
<b>0050.0630Debug</b>	<b>DeploymentPayload - No update requests for the runtime aliases being deployed</b>
<b>Explanation</b>	Mediator did not receive any update requests for the runtime aliases being deployed.
<b>Action</b>	Check the update request for runtime aliases.
<b>0050.0632Error</b>	<b>Mediator does not support the runtime alias. Alias type: {0}</b>
<b>Explanation</b>	Mediator was not able to find a runtime alias of the specified type.
<b>Action</b>	Check the alias type assigned to the runtime alias.
<b>0050.0670Error</b>	<b>Resources for the endpoint URI not found. Endpoint URI: {0}</b>
<b>Explanation</b>	Mediator does not have REST resources configured with the specified URI.
<b>Action</b>	Check the configuration of the virtual REST service to ensure that the required resources are configured.
<b>0050.0677</b>	<b>Error while processing the REST to SOAP transformation in Mediator. The JSON string in the request is empty.</b>
<b>Explanation</b>	Mediator expects a non-empty JSON string in the request message.
<b>Action</b>	Check if the JSON request string is valid, and try again. Contact your system administrator for details if the issue persists.
<b>0050.0678</b>	<b>Mediator could not complete the transformation of a REST request received from the consumer to a SOAP request because of an error. JSON string:{0}. {1}</b>
<b>Explanation</b>	Mediator encountered an error while converting the JSON request to a SOAP request as part of the conversion of the REST request to a SOAP request.
<b>Action</b>	Check if the JSON request string is valid and try again. Contact your system administrator for details if the issue persists.
<b>0050.0679</b>	<b>Mediator could not complete the transformation of a REST request received from the consumer to a SOAP request because of an error. {0}</b>
<b>Explanation</b>	Mediator encountered an error while converting the multi-part REST request to SOAP request as part of the conversion of the REST request to SOAP request.
<b>Action</b>	Check if the attachments in the multi-part request are valid.

<b>0050.0680</b>	<b>Mediator could not complete the transformation of a REST request received from the consumer to a SOAP request because of an error. JSON string: {0}. {1}</b>
<b>Explanation</b>	Mediator encountered an error while converting the JSON string sent as an attachment to a SOAP request as part of the conversion of the REST request to a SOAP request.
<b>Action</b>	Check if the JSON string in the attachment to the SOAP request is valid.
<b>0050.0681</b>	<b>Mediator could not complete the transformation of a REST request received from the consumer to a SOAP request because of an error. {0}</b>
<b>Explanation</b>	Mediator encountered an error while parsing the schema in WSDL file, which leads to namespaces not being placed properly in the SOAP request when the REST to SOAP transformations are processed.
<b>Action</b>	Check the schema of the WSDL file provided in the native SOAP service.
<b>0070.0081</b>	<b>{{0}} Removing the Content-Encoding header in response as the Accept-encoding is null</b>
<b>0070.0094</b>	<b>{{0}} --&gt; Incoming Request Header does not contain a valid OAuth token.</b>
<b>Explanation</b>	User has configured OAuth authentication scheme but OAuth token is not present in the request.
<b>Action</b>	Ensure that the request has an authorization header with OAuth token in it.
<b>0070.0172</b>	<b>Found duplicate target namespace {{0}}, enabling namespace-growth for schema validation</b>
<b>Explanation</b>	This flag will be auto enabled when duplicate target namespaces found in the schema definition otherwise it will be false by default.
<b>Action</b>	User can enable/disable this flag by setting true/false to pg.schema.validation.namespacegrowth property.
<b>010.0787Error</b>	<b>Could not load information on runtime aliases to Mediator. File not found {0}</b>
<b>Explanation</b>	Mediator could not find the file containing information on the runtime aliases.
<b>Action</b>	Check if the file is present in the specified location.
<b>010.0788Error</b>	<b>Error loading aliases from file store :{0}, {1}</b>
<b>Explanation</b>	Mediator encountered an error while loading the aliases from the file store.
<b>Action</b>	Check if the file store exists in Mediator and is valid.

<b>010.0790</b>	<b>Error saving runtime aliases to the file store: {0}. {1}</b>
<b>Explanation</b>	Mediator encountered an error while saving the aliases from the file store.
<b>Action</b>	Check if the file store exists in Mediator and is a valid file store.
<b>010.0792Error</b>	<b>Runtime alias not added to the file store: {0}</b>
<b>Explanation</b>	Mediator is not able to add the runtime alias to the file store.
<b>Action</b>	Check the Integration Server log for more details
<b>0201.0049</b>	<b>No Certificate was sent over HTTPS transport</b>
<b>0203.0323Error</b>	<b>Error parsing alias service names file. {0}</b>
<b>Explanation</b>	Mediator cannot parse the alias service names file.
<b>Action</b>	Check the Integration Server log for details. Redeploy the aliases and the associated services after you have fixed the issues in the alias service names file.
<b>0203.0324Error</b>	<b>Error loading the service names associated with the alias to memory. {0}</b>
<b>Explanation</b>	Mediator cannot parse the alias service names file.
<b>Action</b>	Check the Integration Server log for details.
<b>0203.0325Error</b>	<b>Error saving the service names associated with the alias to the file store. {0}</b>
<b>Explanation</b>	User may not have permission to write to the file, or the file may not be in the disk.
<b>Action</b>	Check the Integration Server log for details.
<b>0203.0326Debug error – RuntimeAliasesCache - Null references to aliases found. Could not load the runtime alias cache.</b>	
<b>Explanation</b>	Mediator found null references to aliases.
<b>Action</b>	Check the cluster configuration in Integration Server and also ensure that there are no null elements in the cache.
<b>MED.0010.0062E</b>	<b>Unable to get password for callback identifier: {0}</b>
<b>Explanation</b>	Error while retrieving cleartext password from encrypted passman file store.
<b>Action</b>	Review Mediator STS configuration; otherwise, this is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.

- MED.0010.0083W Non-fatal Mediator package initialization error. {0}, {1}**  
**Explanation** Mediator encountered an error during an upgrade processing step after the package initialization completed.  
**Action** Verify the overinstall upgrade steps were followed as defined in the documentation; otherwise, this is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
- MED.0010.0212E Endpoint connection timeout duration expected as a number but was not a number ({0})**  
**Explanation** A virtual service was deployed with an invalid connection timeout specified for its native provider endpoint.  
**Action** Review the advanced endpoint configuration in CentraSite and redeploy the service if necessary.
- MED.0010.0214E Both keystore and key alias must be specified or none at all for SSL configuration; KeyStore alias = [{0}]; Key alias = [{0}]**  
**Explanation** A virtual service with a native provider SSL endpoint was deployed with an invalid advanced endpoint configuration. The endpoint must have a valid alias for both the keystore file and the keystore entry aliases as defined in the Integration Server or it can have no aliases defined at all.  
**Action** Update the advanced endpoint configuration and redeploy the virtual service to Mediator.
- MED.0010.0217E Error occurred when getting the password for handle {0} from passman!**  
**Explanation** An attempt to retrieve a cleartext password from a passman encrypted file store failed.  
**Action** This is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
- MED.0010.0218E Error occurred when storing the password for handle {0} in passman!**  
**Explanation** An attempt to save a password in a passman encrypted file store failed during Mediator STS configuration.  
**Action** This is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.

---

<b>MED.0010.0220E</b>	<b>Error converting given WS-Policy component to string</b>
<b>Explanation</b>	Mediator was unable to parse policy elements used in producing request security tokens (RST) to a configured security token service (STS).
<b>Action</b>	This is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
<b>MED.0010.0702E</b>	<b>Mediator Upgrade, Mediator migration interrupted due to error. Details: {0}</b>
<b>Explanation</b>	This log message may occur when the Mediator package loads during the Integration Server restart after an overinstall. It indicates the upgrade was not successful and further actions are required.
<b>Action</b>	Depending on the error message, one of the three options are available. 1) Resolve the issue causing the upgrade to fail, and restart the Integration Server again to see if the upgrade completes successfully. 2) Delete the mediatorUpgrade.xml file from installation path: \${IS_HOME}/packages/WmMediator/ directory. This is the file that causes Mediator to perform its upgrade step. If this action is taken, the Mediator configuration will have to be re-entered manually through the IS admin UI. 3) Contact support. Everytime the Integration Server is restarted, Mediator will attempt to perform an upgrade as long as its mediatorUpgrade.xml file is present in the package directory.
<b>MED.0010.0705E</b>	<b>Mediator Upgrade, mediatorUpgrade.xml file is corrupted. Expected 'properties' root element but none found.</b>
<b>Explanation</b>	This message indicates the mediatorUpgrade.xml file included after the installer completes a Mediator overinstall is corrupted. This file is normally installed into the \${IS_HOME}/packages/WmMediator/ directory path when the overinstall completes. Its presence causes Mediator to run its upgrade tasks during the next Integration Server restart. Once the upgrade task has completed, this file is removed ensuring the upgrade is run only once.
<b>Action</b>	Contact customer support or remove the mediatorUpgrade.xml file. The mediator package should load without error during the next Integration Server restart if this file is removed, but Mediator configuration must be set up manually through the IS admin UI.
<b>MED.0010.0706E</b>	<b>Mediator Upgrade, unable to read required file. {0}</b>
<b>Explanation</b>	This log message may occur when the Mediator package loads during the Integration Server restart after an overinstall. This message implies that the OS user running the Integration Server does not have adequate permissions to read the file referenced in the error message.
<b>Action</b>	Review user and file permissions and make necessary adjustments to ensure the file can be read.

<b>MED.0010.0707E</b>	<b>Mediator Upgrade, configuration file is missing a required entry element key attribute. {0}, File path: {1}</b>
<b>Explanation</b>	This log message may occur when the Mediator package loads during the Integration Server restart after an overinstall. The mediatorUpgrade.xml file used to control a Mediator overinstall upgrade is corrupted. It is missing a reference to an attribute containing a path to an archive of the previous Mediator version prior to the overinstall.
<b>Action</b>	Contact support.
<b>MED.0010.0708E</b>	<b>Mediator Upgrade, configuration file entry element key attribute: {0}, expected this value: {1}, but found: {2}, File path: {3}</b>
<b>Explanation</b>	This log message may occur when the Mediator package loads during the Integration Server restart after an overinstall. The mediatorUpgrade.xml file used to control a Mediator overinstall upgrade is corrupted.
<b>Action</b>	Contact support.
<b>MED.0010.0709E</b>	<b>Mediator Upgrade, unable to find the required file. Expected location: {0}</b>
<b>Explanation</b>	This log message may occur when the Mediator package loads during the Integration Server restart after an overinstall. The backup file archive containing the Mediator package prior to the overinstall upgrade cannot be found.
<b>Action</b>	Contact support.
<b>MED.0010.0711E</b>	<b>Mediator Upgrade, unable to delete configuration file. Mediator upgrade task will continue to execute after each Integration Server startup until this file is removed. Path: {0}</b>
<b>Explanation</b>	This log message may occur when the Mediator package loads during the Integration Server restart after an overinstall. Verify that the OS user account running the Integration Server has the necessary permissions to delete the file.
<b>Action</b>	If the log messages suggest the upgrade ran successfully, this file can be deleted; otherwise, contact support.
<b>MED.0010.0712E</b>	<b>Mediator Upgrade, configuration file is not valid xml. Unable to parse it. {0}, Details: {1}</b>
<b>Explanation</b>	This log message may occur when the Mediator package loads during the Integration Server restart after an overinstall. The mediatorUpgrade.xml file is corrupted.
<b>Action</b>	Contact support.

---

<b>MED.0010.0717W</b>	<b>Mediator Upgrade, Could not find Default STS configuration file: {0} in archived zip file</b>
<b>Explanation</b>	The default STS configuration file was not found when performing an overinstall upgrade.
<b>Action</b>	No action is necessary if migrating from Mediator 8.0; otherwise, this is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
<b>MED.0010.0718E</b>	<b>Mediator Upgrade, configuration file has unexpected element key attribute, {0}, with value. {1}, and configuration file path: {2}</b>
<b>Explanation</b>	This log message may occur when the Mediator package loads during the Integration Server restart after an overinstall. The mediatorUpgrade.xml file is corrupted.
<b>Action</b>	Contact support.
<b>MED.0010.0719E</b>	<b>Mediator Upgrade, Could not find Default STS configuration file: {0} following upgrade; Skipping migrating configuration data!</b>
<b>Explanation</b>	Mediator was unable to locate the default STS configuration file during an overinstall upgrade.
<b>Action</b>	This is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
<b>MED.0010.0720W</b>	<b>Mediator Upgrade, Could not load Default STS client configuration; Skipping migrating configuration data</b>
<b>Explanation</b>	The default STS configuration file was not found when performing an overinstall upgrade.
<b>Action</b>	No action is necessary if migrating from Mediator 8.0; otherwise, this is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
<b>MED.0050.0408E</b>	<b>Authentication failed for user {0}</b>
<b>Explanation</b>	Invalid basic authentication credentials were included in the Authorization header sent to a virtual service that has a "Require HTTP Basic Authentication" runtime security policy.
<b>Action</b>	The web service consumer should include proper credentials and resend the service request.

- MED.0050.0608E**    **Error occurred when adding Timestamp to SOAP Envelope: {0}**  
**Explanation**    Mediator was unable to insert a WS security timestamp element to the request's security header sent to the native provider.  
**Action**    Review the configured ESB "AddTimestamp" service call for virtual service and redeploy if incorrect. Otherwise, this is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
- MED.0070.0010E**    **Incoming request does not contain the 'Authorization' header. This service requires the HTTP Basic Authentication token to be present.**  
**Explanation**    Authorization header was not sent to a virtual service that has a "Require HTTP Basic Authentication" runtime security policy.  
**Action**    The web service consumer must include valid credentials and resend the service request.
- MED.0070.0032E**    **Unable to create Schema for this service "{0}" Schema validation may not succeed!**  
**Explanation**    Mediator was unable to initialize the schema parser for a virtual service with a "Validate Schema" runtime policy. This error occurs when a consumer sends Mediator a service request.  
**Action**    Review the schemas defined in the virtual service, make corrections, and redeploy the virtual service if necessary; otherwise, this is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
- MED.0070.0071W**    **The ESB service name specified for InvokeESB mediator cannot be empty!**  
**Explanation**    A virtual service was deployed containing an ESB service invocation step containing an invalid or missing service name.  
**Action**    Review all service invocations from the "Processing steps" configuration for the virtual service and redeploy if necessary.
- MED.0070.0072E**    **The 'service' attribute is required for the InvokeESB mediator definition**  
**Explanation**    The deployed virtual service configuration is corrupted.  
**Action**    This is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.

---

<b>MED.0200.0045E</b>	<b>Error saving EhCache configuration file: {0}</b>
<b>Explanation</b>	Mediator was unable to save its configuration file used for the Terracotta cache component.
<b>Action</b>	This is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
<b>MED.0200.0046E</b>	<b>Could not find specified EhCache configuration file: {0}</b>
<b>Explanation</b>	The Terracotta cache configuration file for Mediator's caches could not be found during package startup.
<b>Action</b>	This is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
<b>MED.0203.0062E</b>	<b>ControllingNodeLocker.run, thread id({0}), expected Ehcache, found ({1})</b>
<b>Explanation</b>	Unexpected content was returned in the Terracotta cluster status cache.
<b>Action</b>	This is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
<b>MED.0203.0065E</b>	<b>ControllingNodeLocker.run, thread id({0}), caught ({1}/{2}) attempting to get a lock, thread dies</b>
<b>Explanation</b>	Mediator encountered an error trying to obtain a lock on the controlling node in a Terracotta cluster.
<b>Action</b>	This is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
<b>MED.0203.0070I</b>	<b>ClusterStatusCache - cache manager for {0} returned null CacheCluster reference, not clustered?</b>
<b>Explanation</b>	Mediator was unable to obtain a reference to the configured Terracotta cluster.
<b>Action</b>	This is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.

<b>MED.0203.0071I</b>	<b>{0} - getCluster(ClusterScheme.TERRACOTTA) threw exception {1}, using schema NONE</b>
<b>Explanation</b>	An attempt to get Terracotta cluster configuration details failed.
<b>Action</b>	If Mediator is configured for a Terracotta cluster, this is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
<b>MED.0203.0072E</b>	<b>ClusterStatusCache - thread id({0}) attempts to release {1} lock, but does not hold it</b>
<b>Explanation</b>	An attempt to release the lock on the node controller in a Terracotta cluster failed.
<b>Action</b>	This is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
<b>MED.0203.0073E</b>	<b>Error initializing JAXB Context: {0}</b>
<b>Explanation</b>	Initialization for the cached global or registered consumers deployed to Mediator has failed.
<b>Action</b>	This is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
<b>MED.0203.0075E</b>	<b>ControllingNodeLocker.run, thread id({0}), caught {1} attempting to ask about lock status, thread dies</b>
<b>Explanation</b>	The thread defining the controlling node in a Mediator cluster encountered an error.
<b>Action</b>	This is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
<b>MED.0203.0076E</b>	<b>Unable to get cache named {0} from cache manager {1}</b>
<b>Explanation</b>	Mediator encountered an error accessing one of the Terracotta caches.
<b>Action</b>	This is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.

<b>MED.0203.0081E</b>	<b>{0}, thread id({1}), caught {2}/{3} attempting to release lock, thread dies</b>
<b>Explanation</b>	Mediator encountered an error releasing the lock on the controlling node in the Terracotta cluster.
<b>Action</b>	This is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
<b>MED.0203.0082E</b>	<b>EhcacheClusterStatusCache, thread id({0}), caught {1}/{2} attempting to update controlling lock in cache</b>
<b>Explanation</b>	Mediator encountered an error updating the controlling node in a Terracotta cluster.
<b>Action</b>	This is an internal error. Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
<b>MED.0203.0100W</b>	<b>Thread interrupted when trying to obtain {0} lock for cache {1}</b>
<b>Explanation</b>	While Mediator was attempting to obtain a lock on a cache entry key, its thread was interrupted.
<b>Action</b>	No action may be necessary if Mediator is functioning normally.
<b>MED.0203.0101E</b>	<b>Unable to {0} lock the {1} cache for key {2} after waiting {3} mSecs</b>
<b>Explanation</b>	Mediator failed to lock a cache key in the expected period of time.
<b>Action</b>	No action may be necessary if Mediator is functioning normally
<b>MED.0203.0103E</b>	<b>{0} task in thread {1} threw this: {2}</b>
<b>Explanation</b>	An error occurred in the controlling node of a Terracotta cluster during Mediator shutdown.
<b>Action</b>	Contact webMethods Customer Care. Please produce a diagnostic zip file by running the mediator.util:mediatorDiagnosticZip service from the WmMediator package's list of services in IS Admin's package management menu if available.
<b>MED.0205.0062E</b>	<b>UddiPerformanceMetricsSender - unable to publish metrics over UDDI for service: {0}, message: {1}</b>
<b>Explanation</b>	This log message is produced when Mediator is unable to publish performance metrics results to Mediator. When reviewing the content, please be aware that some exception details may have originated from the CentraSite product hosting the UDDI server. Errors can range from improper Mediator configuration, OS resource issues, network connectivity, or issues with the CentraSite installation.

**Action** Depending on the errors logged in the Mediator UI, one of the following actions may prove more relevant. Verify CentraSite configuration information regarding UDDI is correct for the Mediator UI. Verify the hostname or IP address is reachable from the computer running the Mediator instance. Verify the CentraSite instance and its repository is up and accessible.

**MED.0205.0063E** **Unable to initialize UddiClientAdapter due to a missing password for username: {0}.**

**Explanation** This log message is produced when Mediator is unable to publish performance metrics results to Mediator. A password was not found in the encrypted store for the user configured in the CentraSite panel of the Mediator UI.

**Action** Verify the password is entered and the configuration was successfully saved for the CentraSite configuration screen in the Mediator UI.

**MED.0205.0064E** **Error connecting to CentraSite UDDI registry running on {0}://{1}:{2}. Error: {3}**

**Explanation** This log message may be produced under the following situations: During Mediator package startup. CentraSite configuration entered in Mediator UI is saved, but a connection to the UDDI server fails for these settings. Mediator attempts to publish performance metrics but fails during its regularly scheduled interval.

**Action** Verify the CentraSite configuration values in the Mediator UI are correct and CentraSite is up and running.

**MED.0205.0067E** **Error disconnecting to CentraSite UDDI registry running on {0}://{1}:{2}. Error: {3}**

**Explanation** This log message may be produced during the following situations: During Mediator package shutdown. While Mediator is initializing communications with the CentraSite UDDI server after encountering an error during runtime or saving configuration values in the Mediator UI.

**Action** Please see the Action for 0205.0064

**MED.0205.0602E** **Missing "{0}" Jdbc destination pool from spring configuration**

**Explanation** One of the Mediator configuration files is corrupted and a necessary configuration element is missing.

**Action** Contact support.

**MED.0205.0603E** **Jdbc destination sender expected a JdbcEvent object but received: "{0}"**

**Explanation** The JDBC destination sender event component received an unexpected event type.

**Action** Contact Support.

---

<b>MED.0205.0604E</b>	<b>Jdbc destination sender encountered a Sql Exception while generating "{0}" events. Error Code: {1} Cause: {2}</b>
<b>Explanation</b>	The Mediator Jdbc destination sender component encountered a SQL exception while sending a runtime event.
<b>Action</b>	Verify the database is operational and restart the functional alias pool. Verify the MediatorEvents database component tables installed using the Common Database Component are still defined, and the Jdbc pool credentials defined in Integration Server are correct. If all else fails, please contact Support.
<b>MED.0205.0605D</b>	<b>Jdbc destination sender took {0} msec to get a connection out of data source.</b>
<b>Explanation</b>	If the '0205 MEN - Events' Mediator logging component is set to 'DEBUG', then Mediator will issue a log message if the time it takes to get a Jdbc connection exceeds a pre-defined threshold as defined in Mediator's pg-jdbc.xml file. The current default is 50 milliseconds.
<b>Action</b>	No action is necessary.
<b>MED.0205.0606D</b>	<b>Jdbc destination sender took {0} msec to get a prepared statement out of connection with this SQL: {1}.</b>
<b>Explanation</b>	If the '0205 MEN - Events' Mediator logging component is set to 'DEBUG', then Mediator will issue a log message if the time it takes to get a Jdbc prepared statement exceeds a pre-defined threshold as defined in Mediator's pg-jdbc.xml file. The current default is 50 milliseconds.
<b>Action</b>	No action is necessary.
<b>MED.0205.0609D</b>	<b>Jdbc destination sender took {0} msec to close the prepared statement and connection.</b>
<b>Explanation</b>	If the '0205 MEN - Events' Mediator logging component is set to 'DEBUG', then Mediator will issue a log message if the time it takes to close a Jdbc connection exceeds a pre-defined threshold as defined in Mediator's pg-jdbc.xml file. The current default is 50 milliseconds.
<b>Action</b>	No action is necessary.
<b>MED.0205.0610E</b>	<b>Jdbc event requires at least one sql clause to be valid.</b>
<b>Explanation</b>	The Mediator Jdbc component is in an invalid state.
<b>Action</b>	Contact Support.

<b>MED.0205.0611D</b>	<b>Jdbc destination sender took {0} msec to insert a batch of {1} "{2}" events. AutoCommit enabled on driver? {3}, Transaction Isolation level? {4}</b>
<b>Explanation</b>	If the '0205 MEN - Events' Mediator logging component is set to 'DEBUG', then Mediator will issue a log message if the time it takes to execute a batch of runtime event inserts into the database exceeds a pre-defined threshold as defined in Mediator's pg-jdbc.xml file. The current default is 500 milliseconds.
<b>Action</b>	No action is necessary unless the time is extremely large. In that case, consider reducing the 'pg.jdbc.batchSize' property in Mediator's pg-config.properties file. This will cause the Jdbc destination sender to send updates to the database server in smaller batches.
<b>MED.0205.0612E</b>	<b>Jdbc destination sender cannot use a read-only connection object to insert events.</b>
<b>Explanation</b>	The functional alias used by Mediator's Jdbc destination sender is configured for a read-only transaction model in the Integration Server admin.
<b>Action</b>	Change the configured transaction model so it supports updates to the database.
<b>MED.0205.0614E</b>	<b>Jdbc event sql range should be between 0 and {0}, {1} is out of range.</b>
<b>Explanation</b>	Mediator Jdbc component is in an invalid state.
<b>Action</b>	Contact Support.
<b>MED.0205.0615E</b>	<b>Jdbc performance metrics processor expected only one return key, but "{0}" were found.</b>
<b>Explanation</b>	The Mediator Jdbc component is in an invalid state.
<b>Action</b>	Contact Support.
<b>MED.0205.0616E</b>	<b>Jdbc performance metrics processor expected two SQL statements, but "{0}" were found.</b>
<b>Explanation</b>	The Mediator Jdbc component is in an invalid state.
<b>Action</b>	Contact Support.
<b>MED.0205.0617E</b>	<b>Jdbc performance metrics processor is missing returned primary key upon SQL insert</b>
<b>Explanation</b>	Database did not return the 'event_pk' primary key column for the event inserted into the mediator_metrics_event table.
<b>Action</b>	Verify database is functioning properly; otherwise, contact Support.

---

<b>MED.0205.0618E</b>	<b>Jdbc event is in a bad state. Data type count "{0}" does not equal column value count "{1}"</b>
<b>Explanation</b>	The Jdbc event destination component is in an invalid state.
<b>Action</b>	Contact Support.
<b>MED.0205.0619W</b>	<b>Jdbc driver doesn't support returned named SQL columns from Insert statement. Trying "Statement.RETURN_GENERATED_KEYS" mode.</b>
<b>Explanation</b>	The Jdbc event destination component will attempt to use named columns for returning the database-generated primary key after inserting a row. If the database driver does not support this feature, this log message is raised, and the component will use another method to return the inserted primary key.
<b>Action</b>	No action required unless other SQLException errors are raised.
<b>MED.0206.0035W</b>	<b>MAC cache update {0} operation took {1} milliseconds to complete for {2} SIEs. This could cause lock attempts for tallying metrics statistics in MAC cache to fail.</b>
<b>Explanation</b>	An update to the policy engine metrics data took longer than expected. When the duration of this task is longer than the configured lock request timeout, tasks can be lost when they fail to obtain exclusive locks.
<b>Action</b>	Review Integration Server performance and increase the advanced property for lock timeout <code>pg.PgMenSharedCacheManager.lockTimeOut</code> and restart IS. Otherwise, if this happens very frequently, contact webMethods Customer Care. Please produce a diagnostic zip file by running the <code>mediator.util:mediatorDiagnosticZip</code> service from the <code>WmMediator</code> package's list of services in IS Admin's package management menu if available.

# 19

## My webMethods Server Messages

---

### **ClassPathComponentsMapper.folder.cannot.read – Cannot read from folder.**

**Explanation**            Cannot read from file. The file was deleted with no read rights.

**Action**                    Check to see if the file exists and if you have read rights.

### **ClassPathComponentsMapper.folder.not.exists – The folder does not exist:**

**Explanation**            The provided folder does not exist.

**Action**                    You must specify an existing folder.

### **ClassPathComponentsMapper.folder.not.valid – The specified path is not a valid folder.**

**Explanation**            The specified path is not valid folder; it might be a file and not a folder.

**Action**                    Specify a valid folder path.

### **Error.POP.0.0.001    Error sending mail**

**Explanation**            When a forum message is retracted, an e-mail notification is sent to the configured forum administrator. This error occurs if there are any problems sending this e-mail to the administrator.

**Action**                    Check the My webMethods Server logs for additional information about the specific e-mail failure. It may be caused by the e-mail server not being available, or because of an invalid forum administrator e-mail address. See Check the My webMethods Server logs for more details. See ..\MWS\server\\logs

<b>POP.001.0002E</b>	<b>A "{0}" occurred with the Message "{1}"</b>
<b>Explanation</b>	An unexpected error occurred during deployment.
<b>Action</b>	Examine the install.log, and optionally try again. In the log file, look for any information specific to the deployed component.
<b>POP.002.0004E</b>	<b>Context is in an invalid state.</b>
<b>Explanation</b>	The server attempted to use an invalid context object. This error is the result of attempting to use a context object before it has been initialized or after it has been uninitialized.
<b>Action</b>	Always use the provider <code>com.webmethods.portal.bizPolicy.IContextProvider</code> (available through the <code>com.webmethods.portal.system.PortalSystem</code> ) to acquire a context object.
<b>POP.002.0005E</b>	<b>Unable to locate command: {0}</b>
<b>Explanation</b>	The requested command is not deployed on the server.
<b>Action</b>	Log in to My webMethods Server and use the Install Administration portlet to deploy the command to the server.
<b>POP.002.0006E</b>	<b>Unable to locate biz policy for resource: {0}</b>
<b>Explanation</b>	The server cannot resolve the business policy for the specified resource because no policy has been registered for the resource type.
<b>Action</b>	Create and register a business policy for the resource type. Consult the My webMethods Server documentation to learn more about business policies.
<b>POP.002.0007E</b>	<b>Unknown error encountered while trying to resolve business policy for uri {0}</b>
<b>Explanation</b>	The server cannot resolve a business policy for specified resource because of an internal error.
<b>Action</b>	Check the <code>_problems_.log</code> in the <code>..\MWS\server\default\logs</code> directory for more specific error information.
<b>POP.002.0008E</b>	<b>Uri is not a valid thingID: {0}</b>
<b>Explanation</b>	The server cannot invoke the <code>RemoveAccess</code> command on a resource that is not a metadata resource.
<b>Action</b>	Correct the command-invoking source code to specify a metadata resource using either the <code>'resourceURI'</code> parameter or the context's current resource.

---

<b>POP.002.0009</b>	<b>Invalid arguments to create Alias command</b>
<b>Explanation</b>	You cannot invoke this command without the required arguments: key and target.
<b>Action</b>	If you invoked this command programatically, review the Javadocs and make the required changes to the invoking code.
<b>POP.002.0010</b>	<b>The arguments are not valid</b>
<b>Explanation</b>	When invoking the alias commands you must supply valid arguments.
<b>Action</b>	If you invoked this command programatically, review the Javadocs and make the required changes to the invoking code.
<b>POP.002.0011</b>	<b>You cannot flush another user's cache</b>
<b>Explanation</b>	Only an Administrator can flush another user's cache.
<b>Action</b>	You must log in to My webMethods Server with Administrator credentials to be able to flush another user's cache.
<b>POP.002.0012E</b>	<b>Class group name is not specified</b>
<b>Explanation</b>	You must specify the groupName parameter when invoking the ReloadClasses command.
<b>Action</b>	Correct the command-invoking code to specify the 'groupName' parameter. The parameter value should be the name of the group's class-loader bundle.
<b>POP.002.0014E</b>	<b>Unable to authenticate user: {0}</b>
<b>Explanation</b>	The server cannot authenticate the user either because the user does not exist or because the user's password is incorrect.
<b>Action</b>	Try again with correct username and password. If necessary, log in to My webMethods or My webMethods Server and use the User Management feature to add the user to the server
<b>POP.002.0016E</b>	<b>Error listing directory groups</b>
<b>Explanation</b>	The server cannot list the groups of a particular directory service, most likely because of a problem connecting to the directory service.
<b>Action</b>	If the directory service is a newly configured directory service, log in to the My webMethods Server and double-check the configuration using the Folders > System > Portlets > Administration > Directory Services Administration portlet. If the directory service is an existing directory service for which groups could be listed previously, validate that the LDAP or ADSI server to which the directory service is connected is up and running properly. Also check that the machine which hosts My webMethods Server is able to connect to the LDAP or ADSI server using the hostname and port specified in the directory service's configuration.

- POP.002.0017E**      **Error retrieving template list**  
**Explanation**      The server cannot list directory service templates, because an error occurred loading the templates.  
**Action**              Check the ..\MWS\server\default\logs\\_problems\_.log file for more specific error information.
- POP.002.0018E**      **Error listing users**  
**Explanation**      The server cannot list the users of a particular directory service, most likely because of a problem connecting to the directory service.  
**Action**              If the directory service is a freshly configured directory service, go back to the Portal Admin Dashboard, and double-check the configuration using the Directory Service Administration portlet (in the Portal Configuration category). If the directory service is an existing directory service for which groups could be listed previously, validate that the LDAP or ADSI server to which the directory service is connected is up and running properly. Also check that the machine which hosts the Portal server is able to connect to the LDAP or ADSI server using the hostname and port specified in the directory service's configuration.
- POP.002.0019E**      **Error updating directory**  
**Explanation**      The server cannot update the directory service configuration because an error occurred in validating or storing the configuration settings.  
**Action**              Check the ..\MWS\server\default\logs\\_problems\_.log file for more specific error information.
- POP.002.0020**        **Invalid command ID: {0}**  
**Explanation**      The requested command is not found.  
**Action**              Verify that the command has been properly installed. This can be done by logging in to My webMethods Server as sysadmin and viewing the commands in the folder Folders > System > Manager > Commands directory.
- POP.002.0021E**      **Cannot resolve install mechanics for: {0}**  
**Explanation**      An error occurred during the installation of a server component.  
**Action**              Look in the ..\MWS\server\default\logs\\_problems\_.log file for the stack trace of the error. The stack trace may not provide enough detail to say why the error was thrown, but it will show where the error originated.

---

<b>POP.002.0022</b>	<b>Location is not a folder: {0}</b>
<b>Explanation</b>	When the Install Services commands are instructed to deploy all of the components of a folder, the resource must be a folder and cannot be a file.
<b>Action</b>	Ensure that either the Autodeploy folder is properly configured or that the object passed to the InstallComponents command is a folder.
<b>POP.002.0023</b>	<b>Cannot find folder: {0}</b>
<b>Explanation</b>	When the Install Services commands are instructed to deploy all of the components of a folder, the folder must be available.
<b>Action</b>	Ensure that either the Autodeploy folder is properly configured or that the object passed to the InstallComponents command is an available folder.
<b>POP.002.0025E</b>	<b>Command name is not specified</b>
<b>Explanation</b>	The Ant build file does not contain the command name needed to invoke the ExecuteCommand ant task.
<b>Action</b>	Correct the Ant build file to provide the command name with the 'name' attribute of the ExecuteCommand task.
<b>POP.002.0026E</b>	<b>Cannot resolve command [name, type] [{0}, {1}]</b>
<b>Explanation</b>	The server cannot execute the command by means of an Ant task because the specified command has not been deployed to the server.
<b>Action</b>	Deploy the command specified by the error message.
<b>POP.002.0027E</b>	<b>Attribute target is required</b>
<b>Explanation</b>	The target for invoking the ExecuteTargetLoop Ant task has not been specified.
<b>Action</b>	This error can occur if a developer modifies an Ant build file used to deploy components to the server. Correct the Ant build file to add a 'target' attribute to the ExecuteTargetLoop task invocation.
<b>POP.002.0028E</b>	<b>Cannot create IInitializableComponentData from: {0}</b>
<b>Explanation</b>	The component configuration data is not one of the following types: xml (serialized XML document), xmlLocation (URL specifying an XML document), properties (serialized properties map), propertiesLocation (URL specifying a properties file location).
<b>Action</b>	Correct the component configuration in the phaseProvider.xml configuration file to specify component configuration data as either xml, xmlLocation, properties, or propertiesLocation.

<b>POP.002.0029E</b>	<b>Attribute source is required</b>
<b>Explanation</b>	The server cannot execute an Ant task because the task requires a source attribute to be specified.
<b>Action</b>	Correct the Ant build file to add a 'src' attribute to RunJavaScript and RunSQLScript tasks. The 'src' attribute must specify the file path to the script to be run.
<b>POP.002.0030E</b>	<b>Cannot create IInitializableComponentData from {0} for provider {1}</b>
<b>Explanation</b>	The server cannot unregister the specified component. The component's configuration data has become corrupted.
<b>Action</b>	Reinstall the component with the Folders > Administrative Folders > Administration Dashboard > Configuration > Install Administration portlet, and then re-try uninstalling the component.
<b>POP.002.0031</b>	<b>Cannot find IComponent using IComponentData {0} in provider {1}</b>
<b>Explanation</b>	An attempt was made to unregister a component that is not currently registered.
<b>Action</b>	No further action is required.
<b>POP.002.0032E</b>	<b>Cannot get IComponentData for component {0} from provider {1}</b>
<b>Explanation</b>	An error occurred during the unregistration of a server component.
<b>Action</b>	Look in the ..\MWS\server\default\logs\_problems_.log file for the stack trace of the error. The stack trace may not provide enough detail to say why the error was thrown, but it will show where the error originated. It is likely that you need to restart the server.
<b>POP.002.0033E</b>	<b>Component Provider not found: {0}</b>
<b>Explanation</b>	The server cannot unregister the component because component data has become corrupted.
<b>Action</b>	Re-install the component with the Folders > Administrative Folders > Administration Dashboard > Configuration > Install Administration portlet, then re-try uninstalling.
<b>POP.002.0034E</b>	<b>Attribute descriptorSrc is required</b>
<b>Explanation</b>	The Ant task does not have skin descriptor content.
<b>Action</b>	Correct the Ant build file to provide skin descriptor content using the 'descriptorSrc' attribute to CreateSkinInstance, GetSkinInfo, and RemoveSkinInstance Ant tasks.

---

<b>POP.002.0035E</b>	<b>Skin name is empty</b>
<b>Explanation</b>	The server cannot determine the skin name because the skin descriptor does not contain the skin name or because the skin descriptor is improperly structured.
<b>Action</b>	Correct the skin descriptor to include the skin name in the 'name' attribute value of the 'wm_xt_skin' element.
<b>POP.002.0036E</b>	<b>Portlet info is not specified</b>
<b>Explanation</b>	Portlet descriptor content is not included in the GetPortletInfo Ant task.
<b>Action</b>	Correct the Ant build file to provide portlet descriptor content using the 'descriptorSrc' attribute.
<b>POP.002.0037E</b>	<b>Portlet name is empty</b>
<b>Explanation</b>	The server cannot determine the portlet name because the portlet descriptor does not contain the portlet name or because the portlet descriptor is improperly structured.
<b>Action</b>	Correct the portlet descriptor to include the portlet name as the content of the 'name' element.
<b>POP.002.0038E</b>	<b>Portlet is not available: {0}</b>
<b>Explanation</b>	The specified portlet is not deployed on the server.
<b>Action</b>	Use the Folders > Administrative Folders > Administration Dashboard > Configuration > Install Administration portlet to deploy the portlet specified by the error message.
<b>POP.002.0040E</b>	<b>Cannot find system folder for the portlet: {0}</b>
<b>Explanation</b>	An error occurred during installation of a portlet.
<b>Action</b>	Look in the ..\MWS\server\default\logs\_problems_.log file for the stack trace of the error. It may be necessary to reinstall the component.
<b>POP.002.0041</b>	<b>Page have to be a folder type</b>
<b>Explanation</b>	When cloning pages, the source of the cloning operation must be of the appropriate type
<b>Action</b>	Ensure that an appropriate source is used for the cloning operation.

<b>POP.002.0042E</b>	<b>Destination container is not a valid thing: {0}</b>
<b>Explanation</b>	The server cannot clone a remote resource; the resource must be cloned to a metadata destination container.
<b>Action</b>	Correct the command-invoking source code to specify a metadata destination container using the 'destContainerURI' parameter.
<b>POP.002.0043E</b>	<b>Source item container is not a valid thing: {0}</b>
<b>Explanation</b>	The server cannot clone the remote resource; only metadata resources can be cloned.
<b>Action</b>	Correct the command-invoking source code to specify a metadata resource using either the 'resourceURI' parameter or the server context's current resource.
<b>POP.002.0044E</b>	<b>Invalid XType: {0}</b>
<b>Explanation</b>	The server cannot resolve the DBO type of the remote item to be cloned. The most likely reason is that the DBO type has been uninstalled from the system.
<b>Action</b>	Normally, a DBO type cannot be uninstalled from the system until all instances of the type have been deleted. This message may also indicate that a damaged instance of the remote item is still present but cannot be cloned or recovered. No further action can be taken.
<b>POP.002.0046E</b>	<b>Item is not a valid thing: {0}</b>
<b>Explanation</b>	The server cannot invoke the metadata command because the command must be invoked against a metadata resource.
<b>Action</b>	Correct the command-invoking source code to specify a metadata resource using either the 'resourceURI' parameter or the server context's current resource.
<b>POP.002.0047</b>	<b>Can not create an item with an empty name</b>
<b>Explanation</b>	When creating a new resource, a 'name' property is required.
<b>Action</b>	When creating the resource, ensure that a name is supplied.
<b>POP.002.0048E</b>	<b>Delete operation failed</b>
<b>Explanation</b>	The container cannot be deleted because at least one of the items in the container cannot be deleted. Refer to the the list of contained items that cannot be deleted, displayed in the user interface along with this message.
<b>Action</b>	Manually delete the specified undeletable contained items individually. This may result in more detailed information as to why the items cannot be deleted.

---

<b>POP.002.0049E</b>	<b>Error obtaining owned folder</b>
<b>Explanation</b>	The server cannot obtain the owned folder because of an internal server error.
<b>Action</b>	Check the ..\MWS\server\default\logs\_problems_.log file for more specific error information.
<b>POP.002.0050E</b>	<b>Cannot get current resource uri</b>
<b>Explanation</b>	Cannot invoke the portlet command because a target portlet for the command is not specified.
<b>Action</b>	Correct the command-invoking code to specify the portlet with the 'resourceURI' parameter or with the server context's current resource.
<b>POP.002.0051E</b>	<b>ResourceURI is not specified</b>
<b>Explanation</b>	The server cannot invoke the portlet command because a target portlet for the command is not specified.
<b>Action</b>	Correct the command-invoking source code to specify the portlet with the 'resourceURI' parameter or with the server context's current resource.
<b>POP.002.0052E</b>	<b>PortletBean is not ICommandBean</b>
<b>Explanation</b>	The command cannot be invoked against the portlet because the portlet's portlet-bean does not implement the com.webmethods.portal.bizPolicy.command.ICommandBean interface.
<b>Action</b>	Modify portlet's portlet-bean source code to make the portlet-bean implement ICommandBean. Rebuild and redeploy the portlet.
<b>POP.002.0053E</b>	<b>UserID is not of type IThingID or String</b>
<b>Explanation</b>	The command was invoked using RMI with an inappropriate userID data type. This error is usually a result of a bug in the command-invoking code.
<b>Action</b>	Correct the command-invoking code to ensure it invokes the command with a userID specified either as a java.lang.String or a com.portal.webmethods.meta2.thing.IThingID object.
<b>POP.002.0054E</b>	<b>Search library not found: {0}.</b>
<b>Explanation</b>	An attempt was made to delete a search library that does not exist.
<b>Action</b>	Log in to My webMethods Server and use the Search Administration portlet to check the name of the search library against the available libraries.

<b>POP.002.0056E</b>	<b>Saved Searches folder not found.</b>
<b>Explanation</b>	The server cannot save a search because the user's saved-searches folder does not exist.
<b>Action</b>	User folders such as the user's saved-searches folder are created automatically for users when they login to My webMethods Server. Try logging out as the user, and then logging in again.
<b>POP.002.0057E</b>	<b>No name parameter found</b>
<b>Explanation</b>	The server cannot invoke the save-search command name; the command does not specify a name parameter.
<b>Action</b>	Correct the command-invoking source code to specify a 'name' parameter.
<b>POP.002.0058E</b>	<b>Not a valid skin: {0}</b>
<b>Explanation</b>	The server cannot invoke the ReloadSkin command; the specified skin identifier does not identify a valid skin.
<b>Action</b>	Correct the command-invoking source code to specify a valid skin resource using the 'skin' parameter.
<b>POP.002.0059E</b>	<b>Default xmlimport requires an IThingID for the parent: {0}</b>
<b>Explanation</b>	The server cannot import a metadata resource using xmlImport unless the parent of the resource is also a metadata resource.
<b>Action</b>	Correct the xmlImport file to move or remove elements contained by the element specified by the error message.
<b>POP.002.0060</b>	<b>Default xmlimport requires the parent to be a container: {0}</b>
<b>Explanation</b>	When executing an XML import script, every new child must be created within a valid container.
<b>Action</b>	Check the script to ensure that each created item has a valid parent.
<b>POP.002.0061E</b>	<b>Unable to locate acl for aclName: {0}</b>
<b>Explanation</b>	The server cannot modify the access control list (ACL) for a resource specified in xmlImport because the access control list was referenced by an alias that does not exist.
<b>Action</b>	Correct the xmlImport file to replace the 'aclName' attribute value specified by the error message with a valid value.

---

<b>POP.002.0062E</b>	<b>Unable to find value for acl</b>
<b>Explanation</b>	The server cannot create an access control entry using xmlImport because the ACL element requires a value attribute.
<b>Action</b>	Correct the xmlImport file to add a 'value' attribute to the 'acl' elements. The 'value' attribute values must contain one of the following My webMethods Server access right names (comma separated): READ, CREATE_ITEM, CREATE_CONTAINER, MODIFY, DELETE, PORTLET_MODIFY_PROPERTIES_INSTANCE, PORTLET_MODIFY_PROPERTIES_USER, ALL.
<b>POP.002.0063E</b>	<b>Unable to find ace value for: {0}</b>
<b>Explanation</b>	The server cannot create access an control entry using xmlImport because the xmlImport entry references an unknown right value.
<b>Action</b>	Correct the xmlImport file to add a 'value' attribute to the 'acl' elements. The 'value' attribute values must contain one of the following My webMethods Server access right names (comma separated): READ, CREATE_ITEM, CREATE_CONTAINER, MODIFY, DELETE, PORTLET_MODIFY_PROPERTIES_INSTANCE, PORTLET_MODIFY_PROPERTIES_USER, ALL.
<b>POP.002.0064</b>	<b>Unable to find alias name to set the acl</b>
<b>Explanation</b>	The required argument 'value' was not set on this xmlimport element.
<b>Action</b>	Ensure that the ACL element has a 'value' attribute
<b>POP.002.0065E</b>	<b>Alias attribute missing on context node</b>
<b>Explanation</b>	The server cannot establish the resource context during xmlImport because the context element requires an alias attribute.
<b>Action</b>	Correct the xmlImport file to add an 'alias' attribute to 'context' elements. The alias attribute value must contain the name of a valid alias; elements enclosed by the context apply to the resource identified by this alias.
<b>POP.002.0069S</b>	<b>Root users folder not found</b>
<b>Explanation</b>	The server cannot create the user's home folder because the server users folder does not exist.
<b>Action</b>	Create a new server folder, and set its alias to 'folder.users'.

- POP.002.0076E      The basic update properties requires a thingID: {0}**  
**Explanation**      The server cannot invoke the ImportFiles command because it does not specify a target folder for the import.  
**Action**              Correct the command-invoking source code to specify a folder using either the 'resourceURI' parameter or the server context's current resource.
- POP.002.0077E      Adding to version control requires a thingID: {0}**  
**Explanation**      The server cannot invoke the version-control command without specifying a versionable resource.  
**Action**              Correct the command-invoking source code to specify a versionable resource using either the 'resourceURI' parameter or the server context's current resource.
- POP.002.0078E      The resource does not support IVersionableMechanics: {0}**  
**Explanation**      The server cannot invoke the version-control command on the resource because the resource is not versionable.  
**Action**              Do not invoke the AddToVersion command against resources that are not versionable. Only server folders and server content items are versionable.
- POP.002.0079E      Command requires a thingID: {0}**  
**Explanation**      The server cannot invoke the version-control command without specifying a versionable resource.  
**Action**              Correct the command-invoking source code to specify a versionable resource using either the 'resourceURI' parameter or the server context's current resource.
- POP.002.0080E      Invalid version Uri: {0}**  
**Explanation**      The server cannot display the server version information of an item because the identifier used to specify the version is not a valid version identifier.  
**Action**              Correct the source code that invokes the ViewVersion command to provide a valid version identifier.
- POP.002.0081E      Invalid thing ID: {0}**  
**Explanation**      The server cannot display the server version information of an item because the identifier used to specify the item does not identify a valid resource  
**Action**              Correct the command-invoking source code to provide a valid versioned-item identifier for the 'targetURI' parameter.

---

<b>POP.002.0082</b>	<b>User {0} don't have rights to view {1}</b>
<b>Explanation</b>	The current user failed the permissions check to see a particular version of an item.
<b>Action</b>	Check the permissions on that item.
<b>POP.002.0083E</b>	<b>Could not acquire context, principal data not found on session</b>
<b>Explanation</b>	The server cannot create a server context for the specified javax.servlet.http.HttpSession because the HttpSession has not been initialized with the necessary server session data.
<b>Action</b>	Restart My webMethods Server.
<b>POP.002.0085E</b>	<b>Can't create subscription for non Thing: {0}</b>
<b>Explanation</b>	The server cannot create a subscription from xmlImport data because subscriptions are supported only for metadata resources.
<b>Action</b>	Correct the xmlImport file to remove 'subscription' elements from non-metadata resource contexts. The best way to determine specifically which subscription elements in the xmlImport file are causing this error is the trial-and-error approach: remove each subscription element in the xmlImport file one by one and then try re-importing from the xmlImport file.
<b>POP.002.0086E</b>	<b>Unable to import xml. No uid.</b>
<b>Explanation</b>	An attempt to create an access control entry or subscription using xmlimport did not specify the user ID of the My webMethods Server user or group.
<b>Action</b>	Correct the xmlImport file to add a 'uid' attribute to 'subscription' and 'ace' elements. The 'uid' attribute value must contain the user ID (LDAP user ID) of a valid My webMethods Server user or the cn (LDAP group ID) of a valid My webMethods Server group.
<b>POP.002.0087W</b>	<b>Unable to import xml. Could not acquire uri for uid: {0}</b>
<b>Explanation</b>	The user referenced in the xmlImport file does not exist on My webMethods Server.
<b>Action</b>	Log in to My webMethods or My webMethods Server with appropriate permissions and add the user, or change the xmlImport file.
<b>POP.002.0089E</b>	<b>Unable to import subscription. No value specified for 'deliveryMode'.</b>
<b>Explanation</b>	The server cannot create a subscription from xmlImport data because the subscription element requires a deliveryMode attribute. This error is caused by importing from an improperly constructed xmlImport file.
<b>Action</b>	Correct the xmlImport file by adding a 'deliveryMode' attribute to 'subscription' elements. The valid value for 'deliveryMode' attribute is "email", indicating notifications for this subscription are to be delivered to the user's e-mail address.

- POP.002.0090E**      **Unable to import subscription. No value specified for 'criteria'.**
- Explanation**      The server cannot create the subscription from xmlImport data because the subscription element requires a criteria attribute that contains the name of at least one criterion valid for the type of resource subscribed to.
- Action**            Correct the 'subscription' elements in the xmlImport file so that they all contain valid 'criteria' attribute values. Valid values are not empty; they must contain a comma-separated list of criterion names. The criterion names for basic folders are: 'added', 'removed', 'modified', 'deleted', and 'moved'. The criterion names for basic links, forms, portlets, and content items are 'modified', 'deleted', and 'moved'. Custom DBO types may have additional criteria.
- 
- POP.002.0091E**      **No matching criteria found for type: {0} and for criteria: {1}.**
- Explanation**      The server cannot create a subscription from xmlImport data because the subscription element requires a criteria attribute that contains the name of at least one criterion valid for the type of resource subscribed to.
- Action**            Correct the xmlImport file so that 'subscription' elements contained by any element of the type specified by the error message's resource-typeName have valid 'criteria' attribute values. Valid values are not empty; they must contain a comma-separated list of criterion names. The criterion names for basic folders are: 'added', 'removed', 'modified', 'deleted', and 'moved'. The criterion names for basic links, forms, portlets, and content items are 'modified', 'deleted', and 'moved'. Custom DBO types may have additional criteria.
- 
- POP.002.0092E**      **Can't set ace for non Thing: {0}**
- Explanation**      The server cannot modify the access control entry (ACE) for a resource specified in xmlImport because the resource does not support My webMethods Server access control entries.
- Action**            Correct the xmlImport file to remove the 'ace' element for the resource specified by the error message.
- 
- POP.002.0093E**      **Unable to locate alias for: {0}**
- Explanation**      The server cannot establish the resource context during xmlImport because the alias specified for the context does not exist.
- Action**            Log in to My webMethods Server and use the Alias Management portlet to create the alias specified by the error ,message or fix the xmlImport file to use an alias that does exist. To fix the xmlImport file, locate the alias attribute with the value specified by the error message and replace that value with the name of an existing alias.

---

<b>POP.002.0095</b>	<b>Unable to create alias: {0} because it already exists.</b>
<b>Explanation</b>	The command failed because an alias of the same name has already been registered.
<b>Action</b>	Either apply a different name to the new alias or modify the existing alias that uses the same name.
<b>POP.002.0096E</b>	<b>Mechanics is not an IBasicMechanics</b>
<b>Explanation</b>	The server cannot use xmlImport to update the properties of a resource that is not a metadata resource.
<b>Action</b>	Correct the xmlImport file to not update the properties of non-metadata resources. The best way to determine the element in the xmlImport file that is causing this error is the trial-and-error approach: remove each element in the xmlImport file one-by-one and then try re-importing from the xmlImport file.
<b>POP.002.0097E</b>	<b>Unable to complete import because type: {0} doesn't exist.</b>
<b>Explanation</b>	The server cannot import a resource specified in xmlImport because the resource is an instance of a DBO that is not currently deployed in My webMethods Server.
<b>Action</b>	Deploy the DBO specified by the error message and then rerun the xmlImport.
<b>POP.002.0098</b>	<b>Role xmlimport requires attributes of 'roleProvider' and 'name'</b>
<b>Explanation</b>	When creating a new role using an xmlImport script, the attributes must be available.
<b>Action</b>	Modify the xmlimport script to include the required 'roleProvider' and 'name' properties.
<b>POP.002.0099</b>	<b>Role xmlimport unable to locate roleProvider: {0}</b>
<b>Explanation</b>	The type of role is not registered on the current system.
<b>Action</b>	Check the 'roleProvider' attribute to make sure it is correct.
<b>POP.002.0103</b>	<b>Failed to set Alias {0} for resource {1}.</b>
<b>Explanation</b>	The system failed to correctly set an alias during the xmlimport.
<b>Action</b>	Check the server logs at ..\MWS\server\default\logs for any additional exceptions that occurred during the import.

<b>POP.002.0105</b>	<b>Failed to load xml document from {0}</b>
<b>Explanation</b>	The XML file specified for the xmlimport script is either not found or not well-formed.
<b>Action</b>	Verify that the XML file exists in the specified location and that the contents of the file are valid XML.
<b>POP.002.0107</b>	<b>Failed to invoke remote command: {0}. Original error message: {1}</b>
<b>Explanation</b>	A problem occurred when executing a command on a remote server.
<b>Action</b>	Check the logs on the remote server for additional information.
<b>POP.002.0108</b>	<b>User UID can not be found in MWS directories: {0}</b>
<b>Explanation</b>	No user is found with the specific user ID.
<b>Action</b>	Specify a valid user ID.
<b>POP.002.0110</b>	<b>You have insufficient privileges to impersonate other users.</b>
<b>Explanation</b>	You have insufficient privileges to impersonate other users.
<b>Action</b>	The log file indicates how to grant user impersonate privileges. Contact a system administrator if you need such privileges.
<b>POP.002.0111</b>	<b>Illegal Argument: Command result may not be serialized.</b>
<b>Explanation</b>	The command result cannot be serialized.
<b>Action</b>	Make sure the command result can be serialized.
<b>POP.002.0113</b>	<b>The parent of the task is already completed</b>
<b>Explanation</b>	You cannot create a new child task if its parent task has been completed.
<b>Action</b>	Contact the parent task owner to determine how to handle the additional work.
<b>POP.002.0114</b>	<b>User {0} does not have the functional privilege to delegate task {1}</b>
<b>Explanation</b>	The user has not been granted the functional privilege to delegate the task.
<b>Action</b>	Please contact the system administrator if you need such privileges.
<b>POP.002.0118</b>	<b>Thing with name "{0}" for locale "{1}" already exists in "{2}". Unable to rename "{3}"</b>

---

<b>POP.003.0003S</b>	<b>No access model specified in property "{0}".</b>
<b>Explanation</b>	The framework.access.model system property does not specify an access model.
<b>Action</b>	Update the portal.properties file to specify framework.access.model property value. The choices are permissive or restrictive.
<b>POP.003.0004S</b>	<b>Unable to register principal types: "{0}".</b>
<b>Explanation</b>	The system directory is corrupted.
<b>Action</b>	Restore the underlying system user directory content from a backup or manually restore the user directory. In the case of LDAPd, you can reinstall the LDAPd server using the webMethods Installer.
<b>POP.003.0005S</b>	<b>Unable to register search service: "{0}".</b>
<b>Explanation</b>	An error occurred in registering a new search service.
<b>Action</b>	You might need to reinstall My webMethods Server.
<b>POP.003.0006S</b>	<b>Error initializing content service: "{0}".</b>
<b>Explanation</b>	The content service cannot be initialized.
<b>Action</b>	Check the Content Service Administration portlet to verify that the content service is properly configured.
<b>POP.003.0007E</b>	<b>Cannot list roles, directory service "{0}" not found.</b>
<b>Explanation</b>	The directory service cannot be found.
<b>Action</b>	Check the Directory Service Administration portlet to verify that the directory service is properly configured and functional.
<b>POP.003.0008E</b>	<b>Could not locate system directory: "{0}".</b>
<b>Explanation</b>	The server cannot find the system user directory.
<b>Action</b>	Verify that the system directory is present in Directory Services Administration portlet, and that it is configured and functional.
<b>POP.003.0009E</b>	<b>Error setting system directory: "{0}".</b>
<b>Explanation</b>	The command failed to change the system directory service.
<b>Action</b>	Do not attempt to change the system directory.

<b>POP.003.0012W</b>	<b>"{0}" does not have permission to modify the Administrators group.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu to open the Permissions portlet to give the user access rights.
<b>POP.003.0013W</b>	<b>"{0}" does not have permission to modify the directory configuration.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu to open the Permissions portlet to give the user access rights.
<b>POP.003.0014E</b>	<b>Cannot update directory config, domain not found: "{0}".</b>
<b>Explanation</b>	An attempt was mademto update the config information for a directory service using an invalid domain name.
<b>Action</b>	Use a valid domain name.
<b>POP.003.0015S</b>	<b>Cannot update directory config, Administrator user not found: "{0}".</b>
<b>Explanation</b>	The system directory or the database is corrupted.
<b>Action</b>	Restore the underlying system user directory content from a backup or do so manually. If LDAPd, you can reinstall the LDAPd server using the webMethods Installer.
<b>POP.003.0016E</b>	<b>Cannot update directory config, Everyone group not found: "{0}".</b>
<b>Explanation</b>	The system directory does not have an everyone group or the directory is corrupted.
<b>Action</b>	Restore the underlying system user directory content from a backup or do so manually. In the case of LDAPd, you can reinstall the LDAPd server using the webMethods Installer.
<b>POP.003.0017S</b>	<b>Cannot update directory config, Guest user not found: "{0}".</b>
<b>Explanation</b>	The system directory is corrupted.
<b>Action</b>	Restore the underlying system user directory content from a backup or do so manually. In the case of LDAPd, you can reinstall the LDAPd server using the webMethods Installer.

---

<b>POP.003.0018E</b>	<b>Cannot remove the system directory.</b>
<b>Explanation</b>	The system directory services cannot be removed.
<b>Action</b>	Do not try to remove the system directory.
<b>POP.003.0021E</b>	<b>System directory does not have Administrator user.</b>
<b>Explanation</b>	The LDAP user store is missing the administrator user.
<b>Action</b>	Add a user to the system LDAP user store whose UID matches the Portal Administrator UID. This should only be necessary if the LDAP user store has become corrupted or the PortalAdmin user has been removed.
<b>POP.003.0022S</b>	<b>System directory does not have Everyone group. Everyone group access will not be available.</b>
<b>Explanation</b>	The system directory is corrupted.
<b>Action</b>	Restore or create the everyone group in the system directory. Use the directory's administration UI or tools for that purpose.
<b>POP.003.0023E</b>	<b>System directory does not have Guest user. Guest access will not be available.</b>
<b>Explanation</b>	The system directory does not have a guest user or it is corrupted.
<b>Action</b>	Restore the underlying system user directory content from a backup or do so manually. In the case of LDAPd, you can reinstall the LDAPd server using the webMethods Installer.
<b>POP.003.0024W</b>	<b>The type "{0}" is either 'disabled' or not deployed to this MWS cluster node. Please contact the My webMethods Server Administrator.</b>
<b>Explanation</b>	An attempt was made to view a portlet for which the status has been set to disabled.
<b>Action</b>	Use the Manage Components portlet in the Administration Dashboard to change the status of the portlet type.
<b>POP.003.0025W</b>	<b>{0} cannot view the content of {1}.</b>
<b>Explanation</b>	The user is denied access to view a portlet item
<b>Action</b>	Use the Permissions page to set the authentication scheme for the item to one of the installed authentication schemes.

<b>POP.003.0026W</b>	<b>{0} cannot list the shortcuts to {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0027W</b>	<b>{0} cannot list the notes for {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0028W</b>	<b>{0} cannot view the access list for {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0029W</b>	<b>{0} cannot view the authentication scheme for {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0030W</b>	<b>{0} cannot create an item of type {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open up the Permissions portlet to give the user access rights.
<b>POP.003.0031W</b>	<b>{0} cannot update the content of {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0032W</b>	<b>{0} cannot add the note for {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.

---

<b>POP.003.0033W</b>	<b>{0} cannot remove the note for {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0034W</b>	<b>{0} cannot update the properties of {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0035W</b>	<b>{0} cannot delete {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0037W</b>	<b>{0} cannot destroy {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0038</b>	<b>{0} cannot store content {1}.</b>
<b>Explanation</b>	An attempt was made to store a document on a type that does not support document storage
<b>Action</b>	Ensure that content is stored on document types
<b>POP.003.0039W</b>	<b>{0} cannot contain a duplicate reference to {1}.</b>
<b>Explanation</b>	You cannot create items with the same name under the same folder.
<b>Action</b>	When naming items in a folder, make sure each item uses a name that is unique within the folder.
<b>POP.003.0040W</b>	<b>Cannot uninstall "{0}" because it has "{1}" published instances. Please delete them first and try again.</b>
<b>Explanation</b>	The DBO cannot be uninstalled because it has published instances.
<b>Action</b>	Manually delete all published instances of this DBO and try to uninstall it again. You can use Publish History portlet to help you find all published instances.

<b>POP.003.0044W</b>	<b>{0} is checked out.</b>
<b>Explanation</b>	The item cannot be checked out because it is already checked out.
<b>Action</b>	Wait until the item is checked in and try again.
<b>POP.003.0045W</b>	<b>{0} is not versioned.</b>
<b>Explanation</b>	The item is not versioned.
<b>Action</b>	Add the item to version control using the item's local menu.
<b>POP.003.0046</b>	<b>{0} cannot view version number of {1}.</b>
<b>Explanation</b>	An attempt was made to view a version of a document that failed a permissions check
<b>Action</b>	Verify that the current user has sufficient permissions
<b>POP.003.0047W</b>	<b>{0} cannot list the versions of {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0048W</b>	<b>{0} cannot add to versioning {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0049</b>	<b>{0} cannot remove from versioning {1}.</b>
<b>Explanation</b>	An attempt was made to remove a version from version control that failed a permissions check
<b>Action</b>	Verify that the current user has sufficient permissions
<b>POP.003.0050W</b>	<b>{0} is checked out by {1}.</b>
<b>Explanation</b>	The item is already checked out.
<b>Action</b>	Wait until the item is checked in and before trying to check out.

---

<b>POP.003.0051W</b>	<b>{0} cannot set the current version of {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0052W</b>	<b>{0} cannot publish a version of {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0053W</b>	<b>{0} cannot check out {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0054W</b>	<b>{0} is not checked out.</b>
<b>Explanation</b>	You cannot check the item in because it is not checked out.
<b>Action</b>	Do not attempt to check in an item that was not checked out.
<b>POP.003.0055W</b>	<b>{0} cannot check in {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0056W</b>	<b>{0} cannot undo the check out of {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0057E</b>	<b>Source branch is not found: "{0}".</b>
<b>Explanation</b>	The server cannot find a source version branch for this object.
<b>Action</b>	Do not try to add this object to version control.

<b>POP.003.0058</b>	<b>Destination branch is not found: "{0}".</b>
<b>Explanation</b>	Version control system was unable to create a new branch required to complete the add to versioning command.
<b>Action</b>	Check the logs for additional information such as out of disk space.
<b>POP.003.0059W</b>	<b>{0} cannot be added to versioning because parent is null.</b>
<b>Explanation</b>	The item is invalid because it does not have a parent.
<b>Action</b>	Use the local item menu to delete the item.
<b>POP.003.0060W</b>	<b>Not initialized: call init(PageData) first.</b>
<b>Explanation</b>	An internal error has occurred.
<b>Action</b>	Try the operation again.
<b>POP.003.0061W</b>	<b>Column must be contained by a row.</b>
<b>Explanation</b>	The page data xml is not valid. The column element must reside inside a row element.
<b>Action</b>	If you are using My webMethods Server when you got this message, the My webMethods Server page data has been corrupted. Try editing and then saving the page. If you cannot load the page into the page editor you need to delete the page and then recreate it.
<b>POP.003.0062E</b>	<b>Property must be contained by a portlet.</b>
<b>Explanation</b>	The page data xml is not valid. The property element must be inside portlet element.
<b>Action</b>	If you are using My webMethods Server when you got this message, the My webMethods Server page data has been corrupted. Try to edit and then save the page. If you cannot load the page into the page editor you need to delete the page and then recreate it.
<b>POP.003.0063E</b>	<b>Portlet must contain 'uri' attribute.</b>
<b>Explanation</b>	The page data xml file is not valid. The portlet definition does not have an URI attribute.
<b>Action</b>	If you are using My webMethods Server when you got this message, the My webMethods Server page data has been corrupted. Try to edit and then save the page. If you cannot load the page into the page editor you need to delete the page and then recreate it.

---

<b>POP.003.0064W</b>	<b>Property must contain 'name' attribute.</b>
<b>Explanation</b>	The page data xml is not valid. The property element must have a name attribute.
<b>Action</b>	If you are using My webMethods Server when you got this message, the My webMethods Server page data has been corrupted. Try to edit and then save the page. If you cannot load the page into the page editor you need to delete the page and then recreate it.
<b>POP.003.0065E</b>	<b>Wiring must be contained by a portlet.</b>
<b>Explanation</b>	The page data xml is not valid. The property element must reside inside the portlet element.
<b>Action</b>	If you are using My webMethods Server when you got this message, the My webMethods Server page data has been corrupted. Try to edit and then save the page. If you cannot load the page into the page editor you need to delete the page and then recreate it.
<b>POP.003.0066W</b>	<b>Wiring must contain 'name' attribute.</b>
<b>Explanation</b>	The page data xml is not valid. The wiring element must have a name attribute.
<b>Action</b>	If you are using My webMethods Server when you got this message, the My webMethods Server page data has been corrupted. Try to edit and then save the page. If you cannot load the page into the page editor you need to delete the page and then recreate it.
<b>POP.003.0067E</b>	<b>Wiring must contain 'portlet' attribute.</b>
<b>Explanation</b>	The page data xml file is not valid. The wiring definition does not have a portlet attribute.
<b>Action</b>	If you are using My webMethods Server when you got this message, the My webMethods Server page data has been corrupted. Try to edit and then save the page. If you cannot load the page into the page editor you need to delete the page and then recreate it.
<b>POP.003.0069E</b>	<b>The content service "{0}" is not available. Please contact the My webMethods Server Administrator.</b>
<b>Explanation</b>	The server failed to update the contents of a file that was saved to My webMethods Server.
<b>Action</b>	Verify that the location for the My webMethods Server content repository exists.

<b>POP.003.0070</b>	<b>"{0}" is not editable as it does not exist in a sandbox.</b>
<b>Explanation</b>	An invalid attempt to check in a versioned item was made.
<b>Action</b>	Check out a new version and the the item check in.
<b>POP.003.0071E</b>	<b>Cannot lookup install service: "{0}".</b>
<b>Explanation</b>	The server cannot find the install service for this component.
<b>Action</b>	The component is not supported.
<b>POP.003.0072E</b>	<b>ComponentUri is not a thingID: "{0}".</b>
<b>Explanation</b>	The server cannot determine the location of the installed component based on the passed URI.
<b>Action</b>	Correct the calling code to specify a thingID as the componentUri parameter of the uninstallComponent command.
<b>POP.003.0073E</b>	<b>{0} cannot install component.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0074W</b>	<b>{0} cannot read search service.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0075</b>	<b>{0} cannot set access entries on {1}.</b>
<b>Explanation</b>	An attempt was made to set permissions which failed a permissions check
<b>Action</b>	Ensure the current user has sufficient permissions to edit the permissions on the current object
<b>POP.003.0076W</b>	<b>{0} cannot remove access entries from {1}.</b>
<b>Explanation</b>	The specified user cannot remove entries from the access control list of the specified item.
<b>Action</b>	Grant the user the rights to perform the operation, or have the operation performed by a different user with permission to change the access control list of the target item.

---

<b>POP.003.0077W</b>	<b>{0} cannot set the authentication scheme of {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0078W</b>	<b>{0} cannot set the owner of {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0079E</b>	<b>Internal error. Access right lengths do not match.</b>
<b>Explanation</b>	Internal error. A database API inconsistency exists.
<b>Action</b>	Use the Manage Components portlet to edit permissions for this My webMethods Server object.
<b>POP.003.0080W</b>	<b>No auth scheme for auth Level: "{0}".</b>
<b>Explanation</b>	The authentication scheme might not be installed yet, or the specified authentication level is not valid.
<b>Action</b>	Install the missing authentication scheme <code>wm_&lt;schema&gt;Auth.cdp</code> component or correct the <code>authLevel</code> attribute value of your custom <code>xmlImport.xml</code> file.
<b>POP.003.0081E</b>	<b>No implementation for auth scheme: "{0}".</b>
<b>Explanation</b>	The authentication scheme for the target My webMethods Server item is invalid.
<b>Action</b>	Use the Permissions page to set the authentication scheme for the item to one of the installed authentication schemes.
<b>POP.003.0082W</b>	<b>{0} cannot list the contents of {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0083W</b>	<b>{0} cannot add an item to {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.

<b>POP.003.0084W</b>	<b>{0} cannot add a shortcut to {1}.</b>
<b>Explanation</b>	Most likely user does not have appropriate access rights.E145
<b>Action</b>	Give the user access rights.
<b>POP.003.0085W</b>	<b>{0} cannot remove an item from {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open Permissions portlet to give the user access rights.
<b>POP.003.0086W</b>	<b>{0} cannot remove a shortcut from {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0087</b>	<b>You cannot copy this container into a descendant of itself.</b>
<b>Explanation</b>	A paste operation was attempted inside the source container.
<b>Action</b>	Paste the clipboard contents into an external container.
<b>POP.003.0088W</b>	<b>You cannot move this container into a descendant of itself.</b>
<b>Explanation</b>	The folder cannot move into one of its subfolders.
<b>Action</b>	If you need to move the folder, do not attempt to move it into a subfolder of itself.
<b>POP.003.0090W</b>	<b>{0} cannot contain a duplicate name.</b>
<b>Explanation</b>	The folder or page cannot have items with duplicate names.
<b>Action</b>	When naming items in a folder, make sure each item has a name that is unique within the folder.
<b>POP.003.0091E</b>	<b>Unable to create xtype with null name: "{0}".</b>
<b>Explanation</b>	The xtype id passed into the createChild command is not valid.
<b>Action</b>	Pass a valid xtype id parameter value. The valid values are listed in the tbIXTypes tables.

---

<b>POP.003.0092W</b>	<b>{0} is a reserved folder and cannot be modified.</b>
<b>Explanation</b>	The folder is a system folder and cannot be modified.
<b>Action</b>	Do not try to modify a system folder.
<b>POP.003.0093W</b>	<b>You cannot move a reserved item.</b>
<b>Explanation</b>	The item is reserved and cannot be moved.
<b>Action</b>	Do not attempt to move reserved items.
<b>POP.003.0094W</b>	<b>{0} is a reserved folder and can not be versioned.</b>
<b>Explanation</b>	The folder cannot be added to the version control because it is a special folder type.
<b>Action</b>	Do not try to add this folder to version control.
<b>POP.003.0095W</b>	<b>{0} cannot change the columns of {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0096</b>	<b>{0} cannot move portlet {1}.</b>
<b>Explanation</b>	An attempt to move a portlet failed a permissions check
<b>Action</b>	Verify that the current user has sufficient permissions
<b>POP.003.0097W</b>	<b>{0} cannot minimize portlet {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0099W</b>	<b>{0} cannot view this item.</b>
<b>Explanation</b>	The user attempted to view an item but does not have permission to see it.
<b>Action</b>	The My webMethods Server administrator should use the Manage Components portlet to edit permissions for this My webMethods Server object.

<b>POP.003.0102W</b>	<b>Unable to locate: "{0}".</b>
<b>Explanation</b>	The server cannot find the user in the directory.
<b>Action</b>	The user might have been removed from the directory. Determine if this user belongs in the directory.
<b>POP.003.0103W</b>	<b>Unable to locate: "{0}" invalid type.</b>
<b>Explanation</b>	The directory might be corrupted or improperly configured.
<b>Action</b>	Check the Directory Service Administration portlet to verify that the directory service is properly configured and functional.
<b>POP.003.0104W</b>	<b>{0} cannot modify user.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0105W</b>	<b>Cannot modify attribute on principal, {0} not found.</b>
<b>Explanation</b>	The server cannot find the user in the directory.
<b>Action</b>	The user might have been removed from the directory. Determine if this user belongs in the directory.
<b>POP.003.0106W</b>	<b>Cannot set email address on principal, email address attribute not configured properly.</b>
<b>Explanation</b>	The email attribute is not configured for this user directory.
<b>Action</b>	Update the directory configuration in Directory Service Administration portlet to specify an email attribute name and try again.
<b>POP.003.0107W</b>	<b>{0} cannot create an alias.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0108W</b>	<b>Alias not found: "{0}".</b>
<b>Explanation</b>	An attempt was made to remove an alias that does not exist.
<b>Action</b>	Verify that the remove alias call uses an existing alias name.

---

<b>POP.003.0109W</b>	<b>{0} cannot delete the "{2}" alias.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0110E</b>	<b>Internal ScheduleMechanics error.</b>
<b>Explanation</b>	The paging cookie is invalid.
<b>Action</b>	Close the browser, then open it again, and retry the action.
<b>POP.003.0111W</b>	<b>{0} cannot view the subscription of {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0112W</b>	<b>{0} cannot list the subscriptions to {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0113W</b>	<b>{0} cannot edit the subscription to {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0115W</b>	<b>Cannot create cookie for URI: "{0}".</b>
<b>Explanation</b>	The system directory or the database is corrupted.
<b>Action</b>	Restore the underlying system user directory content from a backup or do so manually. In the case of LDAPd, you can reinstall the LDAPd server using the webMethods Installer.
<b>POP.003.0116W</b>	<b>User page size must be &gt;= 0 (zero indicates default).</b>
<b>Explanation</b>	The page size cannot be negative.
<b>Action</b>	Correct the calling code to pass the pageSize parameter as a positive number.

<b>POP.003.0117W</b>	<b>Cannot set password on user, user not found: "{0}".</b>
<b>Explanation</b>	The system directory or the database is corrupted.
<b>Action</b>	Restore the underlying system user directory content from a backup or do so manually. In the case of LDAPd, you can reinstall the LDAPd server using the webMethods Installer.
<b>POP.003.0118E</b>	<b>Cannot get roles for user, user not found: "{0}".</b>
<b>Explanation</b>	The server cannot find the user in the directory.
<b>Action</b>	The user might have been removed from the directory. Determine if this user belongs in the directory.
<b>POP.003.0119E</b>	<b>Unable to locate mechanics: "{0}".</b>
<b>Explanation</b>	Mechanics were not found for the given name or URI.
<b>Action</b>	If the error is related to a standard portlet, try to redeploy the portlet using the Install Administration portlet. If you have created a custom portlet, you need to correct the calling code in CAF and redeploy the portlet.
<b>POP.003.0120W</b>	<b>{0} cannot cut {1}.</b>
<b>Explanation</b>	The user does not have appropriate access rights.
<b>Action</b>	Use the item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0121W</b>	<b>{0} cannot cut {1}.</b>
<b>Explanation</b>	The user does not have the appropriate access rights.
<b>Action</b>	Use the item's Permissions local menu item to open the Permissions portlet to give the user access rights.
<b>POP.003.0122W</b>	<b>A datasource named "{0}" already exists.</b>
<b>Explanation</b>	An attempt was made to register a SQL datasource with a datasource name that has already been used for another datasource.
<b>Action</b>	Use a different name for the new datasource.

---

<b>POP.003.0123W</b>	<b>You cannot copy a reserved item.</b>
<b>Explanation</b>	The item is reserved.
<b>Action</b>	Do not attempt to copy a reserved item.
<b>POP.003.0124</b>	<b>{0} cannot access datasource.</b>
<b>Explanation</b>	An attempt to issue a SQL statement was made with an invalid argument for the datasource
<b>Action</b>	Ensure that the datasource is registered
<b>POP.003.0126W</b>	<b>compression not allowed.</b>
<b>Explanation</b>	The presentation cache content cannot be compressed.
<b>Action</b>	Correct the calling code to not call PresentationCacheContent.setCompressed(true).
<b>POP.003.0129W</b>	<b>Cannot initialize principal, invalid type: "{0}".</b>
<b>Explanation</b>	The directory might be corrupted or improperly configured
<b>Action</b>	Check the Directory Service Administration portlet to verify that the directory service is properly configured and functional.
<b>POP.003.0130E</b>	<b>Error in thread resyncing group properties [domain]: "{0}".</b>
<b>Explanation</b>	The server failed to refresh the metadata for a Group from the LDAP server.
<b>Action</b>	Validate the connectivity to the LDAP server using an LDAP browser tool, the directory native Administration UI, or other tools.
<b>POP.003.0132</b>	<b>"{0}" depends on "{1}".</b>
<b>Explanation</b>	During the wiring resolution phase an error occurred
<b>Action</b>	Check the wiring configuration for the portlets on the current page.
<b>POP.003.0134W</b>	<b>{0}'s account has been disabled.</b>
<b>Explanation</b>	The user account has been disabled.
<b>Action</b>	Enable the user account in the underlying user directory. Use the directory Administration UI or other tools for that purpose.

**POP.003.0135W**      **Unable to find the content location for: "{0}". Content service is not available or out of sync with the database. Please try again. If the problem persists, contact the My webMethods Server Administrator.**

**Explanation**      The content store is corrupted.

**Action**      Delete the item and try again.

**POP.003.0136W**      **Cannot install component "{0}" because it requires "{1}" to be installed first.**

**Explanation**      The component being installed depends on another component that is not yet installed and not listed in the items to install list.

**Action**      Install the required components before attempting to install the component that raised the error.

**POP.003.0137W**      **Unable to create with unknown type: "{0}".**

**Explanation**      Cannot create an item because the xtype is invalid.

**Action**      Pass a valid xtype parameter to createChild command. All valid xtypes are found in the XTypes system folder in the My webMethods Server UI.

**POP.003.0139W**      **Component "{0}" installation failed. System state is recovered by uninstalling the component. Original error: {1}**

**Explanation**      The installation of the component failed.

**Action**      Uninstall the component to recover the system state. Look at the install.log file for details of why the installation failed.

**POP.003.0140E**      **Component "{0}" installation failed. System state is recovered by reinstalling the previous version of the component. Original error: {1}"**

**Explanation**      The installation of the component failed.

**Action**      Uninstall the component to recover the system state. Look at the install.log file for details of why the installation failed.

**POP.003.0141**      **The username/password you entered is invalid.**

**Explanation**      The login attempt failed.

**Action**      Verify that the username and password are correct.

---

<b>POP.003.0142</b>	<b>Invalid principal type: "{0}".</b>
<b>Explanation</b>	An attempt to modify a group's membership failed.
<b>Action</b>	Verify that the group exists prior to attempting to modify the group.
<b>POP.003.0143</b>	<b>{0} cannot set policy on {1}.</b>
<b>Explanation</b>	An attempt was made to add an item to a Security Realm failed a permissions check.
<b>Action</b>	Verify that the current user has sufficient permissions.
<b>POP.003.0144</b>	<b>{0} cannot remove policy from {1}.</b>
<b>Explanation</b>	An attempt to remove an item from a Security Realm failed a permissions check.
<b>Action</b>	Verify that the current user has sufficient permissions.
<b>POP.003.0146</b>	<b>{0} cannot modify the members of group: {1}</b>
<b>Explanation</b>	An attempt to modify the members of group failed a permissions check.
<b>Action</b>	Verify that the current user has sufficient permissions.
<b>POP.003.0147</b>	<b>{0} cannot modify the membership of principal: {1}</b>
<b>Explanation</b>	An attempt to modify the groups and roles a principal belongs to failed a permissions check.
<b>Action</b>	Verify that the current user has sufficient permissions.
<b>POP.003.0148</b>	<b>Command Error, Parent is not a container. Class= {0}</b>
<b>Explanation</b>	An attempt was made to create a new item inside a parent that is not a valid container.
<b>Action</b>	Ensure that the attempt is made to create a child inside a valid container.
<b>POP.003.0150</b>	<b>{0} cannot create users or groups in the "{1}" directory service."</b>
<b>Explanation</b>	An attempt was made to create a user or group failed a permissions check.
<b>Action</b>	Verify that the current user has sufficient permissions.
<b>POP.003.0151</b>	<b>{0} cannot modify the members of role: {1}</b>
<b>Explanation</b>	An attempt to modify the members of a role failed a permissions check.
<b>Action</b>	Verify that the current user has sufficient permissions.

<b>POP.003.0153</b>	<b>{0} cannot add a {2} to {1}.</b>
<b>Explanation</b>	An attempt to create a new child failed a permissions check.
<b>Action</b>	Verify that the current user has sufficient permissions.
<b>POP.003.0154</b>	<b>{0} cannot remove a {2} from {1}.</b>
<b>Explanation</b>	An attempt to remove a child from a folder failed a permissions check.
<b>Action</b>	Verify that the current user has sufficient permissions.
<b>POP.003.0155</b>	<b>My webMethods Server webspace {0} should have an valid alias</b>
<b>Explanation</b>	Webspaces must have a valid name in order to be created.
<b>Action</b>	Ensure that a valid alias name is supplied.
<b>POP.003.0156</b>	<b>Unclosed skin property: "{1}". Please close with "].</b>
<b>Explanation</b>	During the dynamic skin property resolution, a malformed skin property was referenced.
<b>Action</b>	Ensure that the javaScript file with the dynamic skin property is properly formed.
<b>POP.003.0160E</b>	<b>Failed to resolve wiring for property "{0}"</b>
<b>Explanation</b>	Wiring cannot be resolved for the <propertyName> property of a portlet instance.
<b>Action</b>	Open the Wiring settings for this portlet, make sure the source portlet and its property are still available. Adjust the wiring settings if necessary.
<b>POP.003.0162</b>	<b>A group cannot be a member of itself.</b>
<b>Explanation</b>	A malformed attempt to modify a group was made.
<b>Action</b>	Do not set a group as a member of itself.
<b>POP.003.0163</b>	<b>Invalid username or Password.</b>
<b>Explanation</b>	The username or password is invalid.
<b>Action</b>	Specify a valid username and password.
<b>POP.003.0164</b>	<b>{0} cannot copy {1}.</b>
<b>Explanation</b>	The user does not have the privilege to copy.
<b>Action</b>	Please contact the system administrator if you need this privilege.

---

<b>POP.003.0165</b>	<b>{0} cannot clone {1}.</b>
<b>Explanation</b>	The user does not have the privilege to clone.
<b>Action</b>	Please contact the system administrator if you need this privilege.
<b>POP.003.0166</b>	<b>{0} is a system component. And will not be uninstalled.</b>
<b>Explanation</b>	System components cannot be uninstalled.
<b>Action</b>	Do not attempt to uninstall a system component.
<b>POP.003.0167</b>	<b>Too many failed login attempts for: "{0}". You may try to login again in {1} minutes.</b>
<b>Explanation</b>	The user is not allowed to login because of too many failed login attempts. The user must wait a specified amount of time before trying again.
<b>Action</b>	Make sure you are using a valid username and password. Contact the system administrator if your existing credentials are not working.
<b>POP.003.0168</b>	<b>Password has expired for: "{0}". Please contact an administrator to reset your password.</b>
<b>Explanation</b>	The user's password has expired.
<b>Action</b>	Contact an administrator to reset your password.
<b>POP.003.0169</b>	<b>{0} is reserved and cannot be used for an alias.</b>
<b>Explanation</b>	The specified name is reserved by the system and cannot be used for an alias name.
<b>Action</b>	Specify a different name as an alias.
<b>POP.003.0171</b>	<b>The uploaded file type is not allowed. The allowed file extensions are: {0}</b>
<b>Explanation</b>	The uploaded file type is not supported by the system.
<b>Action</b>	Be sure to upload only supported file types.
<b>POP.004.0001E</b>	<b>The Resource Bundle for "{0}" was not found.</b>
<b>Explanation</b>	The server cannot load the specified resource bundle class. The bundle is a portlet class that has not been deployed or was deployed in a different portlet.
<b>Action</b>	Use the Portlet Developer to add the resource bundle class to the invoking portlet. Redeploy the portlet.

<b>POP.004.0002E</b>	<b>The Message Key "{0}" was not found in the Resource Bundle "{1}".</b>
<b>Explanation</b>	The resource bundle message key is missing.
<b>Action</b>	Correct the resource bundle to include a resource for the key specified by the error message.
<b>POP.004.0003</b>	<b>There was no Object found for Message Key "{0}".</b>
<b>Explanation</b>	No object was found for the specified message key.
<b>Action</b>	Specify a valid message key.
<b>POP.004.0004E</b>	<b>An error occurred while formatting the Message Key "{0}".</b>
<b>Explanation</b>	The resource bundle message key is missing or the message could not be formatted because its content is invalid.
<b>Action</b>	Correct the resource bundle to include the key specified by the error message, or correct the resource content identified by the key.
<b>POP.004.0005S</b>	<b>Error creating search pools "{0}".</b>
<b>Explanation</b>	The server cannot initialize some search service data structures because an internal portal error occurred.
<b>Action</b>	Use the specific error message details to diagnose the problem.
<b>POP.004.0006S</b>	<b>Invalid cache ID: "{0}".</b>
<b>Explanation</b>	The server cannot initialize an invalid cache.
<b>Action</b>	Correct the thing cache configuration in the cache.xml My webMethods Server configuration file. A valid entry is: <code>&lt;cache name="Thing Cache" class="com.webmethods.portal.service.cache.impl.TransientCache" maxSize="10000" isClustered="true" ID= "1" enabled="true"/&gt;</code>
<b>POP.004.0008E</b>	<b>Unable to initialize content service component: "{0}".</b>
<b>Explanation</b>	Cannot initialize the content service.
<b>Action</b>	If you cannot reconfigure the offending content service. Call Software AG Global Support for a reset directive.

<b>POP.004.0010E</b>	<b>No provider for directory [name, type] : [{0}, {1}]</b>
<b>Explanation</b>	The server cannot initialize the specified directory service because the directory service is an unknown type.
<b>Action</b>	Correct the directoryConfig.xml My webMethods Server configuration file to remove the Service element with the name attribute value specified by the error message.
<b>POP.004.0011E</b>	<b>Invalid XML for directory, no DirectoryConfig element found: "{0}".</b>
<b>Explanation</b>	The server cannot initialize the directory service because its configuration data is corrupt.
<b>Action</b>	Correct the directoryConfig.xml My webMethods Server configuration file to remove the Service element with the name attribute value specified by the error message.
<b>POP.004.0012S</b>	<b>Unable to construct component data for directory: "{0}".</b>
<b>Explanation</b>	The server cannot initialize the directory service.
<b>Action</b>	Use the Directory Services Administration portlet to create a new directory service and then delete the old one.
<b>POP.004.0013S</b>	<b>Alias Cache not found.</b>
<b>Explanation</b>	The server cannot initialize the alias service because the alias cache is not configured.
<b>Action</b>	Add the following entry to the cache.xml My webMethods Server configuration file: <pre>&lt;cache name="AliasCache" class="com.webmethods.portal.service.cache.impl.AliasCache" maxSize="5000" isClustered="true" ID="2" enabled="true"/&gt;</pre>
<b>POP.004.0014E</b>	<b>Can't create alias cache.</b>
<b>Explanation</b>	The server cannot initialize the metadata service because the required cache was not located.
<b>Action</b>	Correct the thing cache configuration in the cache.xml My webMethods Server configuration file. A valid entry is: <pre>&lt;cache name="Thing Cache" class="com.webmethods.portal.service.cache.impl.TransientCache" maxSize="10000" isClustered="true" ID= "1" enabled="true"/&gt;</pre>
<b>POP.004.0015E</b>	<b>Unable to create MetaContext: "{0}".</b>
<b>Explanation</b>	The server cannot create a connection to metadata datasource because the configuration information for the datasource was not retrieved.
<b>Action</b>	Correct the metaContext.xml My webMethods Server configuration file to remove the Context element with the connection attribute value specified by the error message.

<b>POP.004.0016S</b>	<b>Can't get schedule list: "{0}".</b>
<b>Explanation</b>	The server was unable to list all of the My webMethods Server schedules.
<b>Action</b>	Verify that the database has been properly configured and that the My webMethods Server schema was properly installed by paying close attention to the installation process.
<b>POP.004.0017S</b>	<b>Thing Cache not found.</b>
<b>Explanation</b>	The server cannot initialize the metadata service because the required cache was not located.
<b>Action</b>	Correct the thing cache configuration in the cache.xml My webMethods Server configuration file. A valid entry is: <code>&lt;cache name="Thing Cache" class="com.webmethods.portal.service.cache.impl.TransientCache" maxSize="10000" isClustered="true" ID= "1" enabled="true"/&gt;</code>
<b>POP.004.0018S</b>	<b>Can't create thing cache.</b>
<b>Explanation</b>	The server cannot initialize the metadata service because the thing cache configuration is invalid.
<b>Action</b>	Correct the thing cache configuration in the cache.xml My webMethods Server configuration file. A valid entry is: <code>&lt;cache name="Thing Cache" class="com.webmethods.portal.service.cache.impl.TransientCache" maxSize="10000" isClustered="true" ID= "1" enabled="true"/&gt;</code>
<b>POP.004.0019S</b>	<b>No queue specified.</b>
<b>Explanation</b>	The server cannot initialize the e-mail notification deliverer because the notification queue name was not specified in the deliverer's configuration.
<b>Action</b>	Specify the queue name in the queue attribute of the delivery initializers in the phaseProvider.xml My webMethods Server configuration file.
<b>POP.004.0020S</b>	<b>Unexpected exception: "{0}".</b>
<b>Explanation</b>	The server cannot initialize the e-mail notification deliverer because an unexpected error occurred.
<b>Action</b>	Check the <code>_problems_.log</code> in the My webMethods Server current logging directory for more specific error information.

---

<b>POP.004.0021S</b>	<b>Invalid ConnectionManager config file.</b>
<b>Explanation</b>	The server cannot initialize the datasource connection manager because it cannot acquire its configuration file.
<b>Action</b>	Validate that the portal.properties My webMethods Server configuration file contains the following entry: 'sled.connectionmanager.config=config;/db.xml'.
<b>POP.004.0022E</b>	<b>Could not acquire meta context : version service name: "{0}".</b>
<b>Explanation</b>	The server cannot acquire the metadata datasource by name because the specified name is unrecognized.
<b>Action</b>	Restart the server where My webMethods Server is installed.
<b>POP.004.0023E</b>	<b>Could not find root folder of version services.</b>
<b>Explanation</b>	The root folder of the version service does not exist.
<b>Action</b>	Reinstall the version service using the My webMethods Server Configurator.
<b>POP.004.0024S</b>	<b>Could not create service thing : version service name: "{0}".</b>
<b>Explanation</b>	The server cannot initialize the version service.
<b>Action</b>	Verify that all of the versioning components have been deployed. This includes the version service and version portlet which can be located in the system portal folders.
<b>POP.004.0027E</b>	<b>Ftp login failed for user [{0}] : {1}.</b>
<b>Explanation</b>	The server cannot login to the remote FTP server.
<b>Action</b>	Verify that the credentials are valid for the FTP connection service, and that the network connectivity is valid.
<b>POP.004.0028E</b>	<b>Ftp Connection Error: Access Denied</b>
<b>Explanation</b>	The server cannot connect to the remote FTP server.
<b>Action</b>	Validate that the credentials and configuration are valid for the FTP connection service, using the Content Service Admin portlet. Verify that the network connectivity is valid.
<b>POP.004.0029E</b>	<b>Ftp Connection Error: "{0}".</b>
<b>Explanation</b>	The server cannot connect to the remote FTP server.
<b>Action</b>	Validate that the credentials and configuration are valid for the FTP connection service, using the Content Service Admin portlet. Verify that the network connectivity is valid.

<b>POP.004.0032E</b>	<b>Invalid ID's in createThing.</b>
<b>Explanation</b>	The server was unable to publish a new My webMethods Server object.
<b>Action</b>	Correct the invoking method to pass in a valid owner and parent ID parameters.
<b>POP.004.0033E</b>	<b>Database is busy or unavailable.</b>
<b>Explanation</b>	The server cannot execute the SQL command because the database is not responding to My webMethods Server in a timely fashion. The database could be experiencing too much load preventing it from responding to My webMethods Server and the server might not be able to access the database's server or port. In addition, the database might not be running.
<b>Action</b>	Verify that the database is running, and is not experiencing heavy load. Verify that the database has an adequate number of connection threads available. Verify that the machine on which the My webMethods Server is running can access the datasource's configured host name and port.
<b>POP.004.0034E</b>	<b>Datasource Mismatch, passed ({0}) to API on ({1}).</b>
<b>Explanation</b>	The metadata datasource cannot operate on a resource from a different datasource.
<b>Action</b>	Correct the invoking source code to use a metadata service to operate on a resource that belongs to the service's datasource. Consult the API documentation for more information.
<b>POP.004.0035E</b>	<b>Invalid URI</b>
<b>Explanation</b>	The server cannot resolve the datasource for a metadata My webMethods Server identifier.
<b>Action</b>	The identifier that caused this error does not identify a resource, do not use it to identify a resource.
<b>POP.004.0036E</b>	<b>Invalid schedule info: interval "{0}", timeAt "{1}": Unable to parse 'timeAt' and/or 'interval'</b>
<b>Explanation</b>	An attempt to create or modify a schedule has failed because of invalid schedule parameters.
<b>Action</b>	Correct the invoking code to pass valid schedule parameters. Valid interval and timeAt parameter values are the time values formatted according to the ISO 8601 date/time format.

<b>POP.004.0037E</b>	<b>Invalid schedule info: interval "{0}", timeAt "{1}": 'timeAt' overlaps with 'interval'</b>
<b>Explanation</b>	The server cannot execute the scheduled event because the time to wait (timeAt), after the interval setting but before executing the event, is approximately as long as the interval itself.
<b>Action</b>	Edit the schedule using the Event Administration portlet, in the Portal Configuration category in the My webMethods Server Admin Dashboard, so the interval is longer than the On/At time-to-wait, such that weeks instead of days, hours instead of minutes.
<b>POP.004.0038E</b>	<b>Unknown thing type: {0}</b>
<b>Explanation</b>	The server was unable to identify the base type of the metadata service object.
<b>Action</b>	Verify that the portlet was built using the My webMethods Server.
<b>POP.004.0039E</b>	<b>Unable to unregister XType: {0}</b>
<b>Explanation</b>	The xtype was not registered or there are published instances of that xtype.
<b>Action</b>	Ensure that all instances of that xtype have been deleted prior to unregistering. These types are found by using the Publish History reporting portlet.
<b>POP.004.0040E</b>	<b>Can't convert to xtype of different base type</b>
<b>Explanation</b>	Xtype conversion is unsupported.
<b>Action</b>	Correct the invoking method and do not attempt to modify the xtype parameter.
<b>POP.004.0041E</b>	<b>Invalid Principal.</b>
<b>Explanation</b>	The server cannot modify the access control entry.
<b>Action</b>	Correct the invoking method to specify a principal parameter.
<b>POP.004.0042E</b>	<b>Invalid Ace. Cannot set both granted and denied on the same right.</b>
<b>Explanation</b>	The server cannot set a single access control entry to grant and deny the same access right.
<b>Action</b>	Correct the invoking source code. Consult the API documentation for more information.
<b>POP.004.0043E</b>	<b>Invalid Ace. Unknown right.</b>
<b>Explanation</b>	The server cannot set access control entry with the right bit outside of the defined right bit range, as defined by the access service API.
<b>Action</b>	Correct the invoking source code. Consult the API documentation for more information.

<b>POP.004.0045E</b>	<b>Invalid Ace. Cannot delegate a right not granted.</b>
<b>Explanation</b>	The server cannot modify the access control entry.
<b>Action</b>	Correct the invoking method to include the proper right set parameter.
<b>POP.004.0046</b>	<b>Setting user name is not supported.</b>
<b>Explanation</b>	Internal group and user objects cannot have their name set
<b>Action</b>	Check and correct directory API usage
<b>POP.004.0047E</b>	<b>Cookie is not set in this view.</b>
<b>Explanation</b>	The server cannot display the inbox notifications because a paging cookie was not set.
<b>Action</b>	Log out, log in, and try again.
<b>POP.004.0048E</b>	<b>Unable to load Subscription object. Subscription no longer exists.</b>
<b>Explanation</b>	The server cannot locate the subscription information that triggered the notification.
<b>Action</b>	Delete the notification by locating the offending notification in the My webMethods Server inbox and deleting it.
<b>POP.004.0049E</b>	<b>Unable to load Event.</b>
<b>Explanation</b>	The server cannot load event data because an error occurred in querying the database.
<b>Action</b>	Check the <code>_problems_.log</code> in My webMethods Server current logging directory for more specific error information.
<b>POP.004.0050E</b>	<b>Unable to remove Notification.</b>
<b>Explanation</b>	The server was unable to locate the notification in order to delete it.
<b>Action</b>	Correct the invoking method to specify a valid notification parameter.
<b>POP.004.0051E</b>	<b>Unable to remove Event.</b>
<b>Explanation</b>	The server cannot remove the event item from the database due to a SQL error while executing the stored procedure that performs the removal.
<b>Action</b>	Check the <code>_problems_.log</code> in My webMethods Server current logging directory for more specific error information.

---

<b>POP.004.0052E</b>	<b>Start index beyond end of list.</b>
<b>Explanation</b>	The server cannot list a page of metadata resources because the specified start index of the page is greater than the total number of resources in the list.
<b>Action</b>	Correct the source code that executes the query. Specify a start index that is less than the total number of resources in the list by modifying the start property of the <code>com.webmethods.portal.service.view.IPagingCookie</code> .
<b>POP.004.0053E</b>	<b>Paged before first item.</b>
<b>Explanation</b>	The server cannot list a page of metadata resources because the specified start or end index of the page is less than one.
<b>Action</b>	Correct the source code that executes the query. Specify a start index that is less than the total number of resources in the list by modifying the start or end properties of the <code>com.webmethods.portal.service.view.IPagingCookie</code> .
<b>POP.004.0054E</b>	<b>Invalid end index.</b>
<b>Explanation</b>	The server cannot execute a paged container query because the page-start index is greater than the page-end index.
<b>Action</b>	Correct the source code that executes the query. Specify a start index that is less than the end index by modifying the start and end properties of the <code>com.webmethods.portal.service.view.IPagingCookie</code> .
<b>POP.004.0055E</b>	<b>Invalid sort order for getTreeView.</b>
<b>Explanation</b>	The server cannot sort the tree view's results with the supplied sort parameter.
<b>Action</b>	Correct the invoking code to pass valid sort parameters.
<b>POP.004.0056E</b>	<b>Error saving subscription. No subscription or source information.</b>
<b>Explanation</b>	The server cannot add the subscription because the subscription information is corrupted.
<b>Action</b>	Correct the invoking method to specify a valid subscription parameter.
<b>POP.004.0057E</b>	<b>Error adding subscription. No subscription or source information.</b>
<b>Explanation</b>	The server cannot add the subscription because the subscription information is corrupted.
<b>Action</b>	Correct the invoking method and ensure that the proper parameters are passed.

<b>POP.004.0059</b>	<b>Can't create an archived thing, use deactivate or delete.</b>
<b>Explanation</b>	The archived thing type cannot be created directly. It is created automatically when object is deleted
<b>Action</b>	Check and correct MWS API used when creating new object instance
<b>POP.004.0060</b>	<b>Unable to save Role.</b>
<b>Explanation</b>	A database error occurred when saving role information
<b>Action</b>	Check logs for additional exception details
<b>POP.004.0061E</b>	<b>Unable to load Role.</b>
<b>Explanation</b>	The server cannot load the metadata information for a registered role.
<b>Action</b>	Using the Role Administration portlet, regenerate and configure the role.
<b>POP.004.0062E</b>	<b>Missing results from the database.</b>
<b>Explanation</b>	The server has received invalid results from a stored procedure.
<b>Action</b>	Verify that the database has been properly configured and that the schema was properly installed by paying close attention to the installation process.
<b>POP.004.0063E</b>	<b>Access model not set.</b>
<b>Explanation</b>	The access service cannot evaluate access rights for a user until its access model has been specified.
<b>Action</b>	Correct the portal.properties file in the My webMethods Server config directory so that it has the following line: framework.access.model=restrictive.
<b>POP.004.0064E</b>	<b>Access model is not valid.</b>
<b>Explanation</b>	The server cannot set the access model because the specified model is unknown. The valid model values are 1 (permissive) and 2 (restrictive).
<b>Action</b>	Correct the portal.properties file in the My webMethods Server config directory so that it has the following line: framework.access.model=restrictive.
<b>POP.004.0065E</b>	<b>Serialized object version is different then current version: [version, currentVersion] [{0},{1}]</b>
<b>Explanation</b>	The server cannot read the alias stored in the database because its serialized object version is out of date.
<b>Action</b>	Revert to the previous version of wm-caf-server.jar, and restart the My webMethods Server.

<b>POP.004.0066E</b>	<b>Unknown type: {0}</b>
<b>Explanation</b>	The server cannot initialize the directory search control because the specified query type is unknown.
<b>Action</b>	Correct the code invoking directory search to specify a type of 1 (users) or 2 (groups).
<b>POP.004.0067E</b>	<b>Attempted to set subkey on primary-key only key.</b>
<b>Explanation</b>	The server cannot create the cache key.
<b>Action</b>	Correct the invoking method to include appropriate cache key parameter.
<b>POP.004.0068E</b>	<b>Can't find or create valid cache.</b>
<b>Explanation</b>	The cache update stored procedure cannot resolve the cache identifier.
<b>Action</b>	Correct the invoking source code to provide a cache-key with a valid cacheID. Consult the API documentation for more information.
<b>POP.004.0069E</b>	<b>Cache error: data is not a serializable object</b>
<b>Explanation</b>	The server attempted to cache an object that is not serializable.
<b>Action</b>	Correct the source code that invokes the <code>com.webmethods.portal.service.cache.impl.DBCache.getBytesFromObject()</code> method to pass serializable object.
<b>POP.004.0070E</b>	<b>Invalid connection parameters.</b>
<b>Explanation</b>	The server cannot connect to the remote FTP server.
<b>Action</b>	Verify that the credentials and configuration are valid for the FTP connection service, using the Content Service Admin portlet. Verify that the network connectivity is valid.
<b>POP.004.0071E</b>	<b>Error persisting directory config.</b>
<b>Explanation</b>	The server cannot store the directory configuration modifications.
<b>Action</b>	Use the Directory Services Administration portlet to create a new directory service and then delete the old one.
<b>POP.004.0072E</b>	<b>Cannot lookup non user or group thing based objects : {0}</b>
<b>Explanation</b>	The server cannot look up directory service resources using metadata identifiers unless the resource is a user, group, or role.
<b>Action</b>	The identifier specified by the error message does not identify a directory resource, do not try to use it to identify a directory resource.

<b>POP.004.0073E</b>	<b>Invalid URI, no directory service specified for URI - "{0}"</b>
<b>Explanation</b>	The server cannot locate an invalid directory user.
<b>Action</b>	Use the Directory Service Administration portlet to verify that the directory service is properly configured.
<b>POP.004.0074E</b>	<b>Specified domain in URI not found [domain, uri] -- [{0}, {1}]. This can be due to directory service being disabled or removed</b>
<b>Explanation</b>	The server cannot look up the directory service based on a Portal identifier because the identified directory service does not exist.
<b>Action</b>	This error may have happened because the specified directory service configuration was deleted. Try re-adding the directory service using the Directory Services Administration portlet (in the Portal Configuration category of the Portal Admin Dashboard).
<b>POP.004.0075</b>	<b>Cannot add directory service, service already exists: {0}</b>
<b>Explanation</b>	Directory service name must be unique.
<b>Action</b>	Check and correct directory service name being created.
<b>POP.004.0076E</b>	<b>Error adding new directory service: {0}</b>
<b>Explanation</b>	The server cannot add or update a directory service because of an error in validating or storing the directory service configuration.
<b>Action</b>	Check the <code>_problems_.log</code> in the My webMethods Server current logging directory for more specific error information.
<b>POP.004.0077E</b>	<b>Cannot build URI, unknown type 0</b>
<b>Explanation</b>	The server cannot construct a My webMethods Server identifier for the directory service object because the specified type is not one of user, group, or role.
<b>Action</b>	Correct the source code that invokes the <code>com.webmethods.portal.server.directory.impl.DirectoryTools.constructDirectoryURI()</code> method to specify only either user, group, or role.
<b>POP.004.0078E</b>	<b>Invalid escape character in {0} at position {1}</b>
<b>Explanation</b>	The server was unable to normalize the LDAP DN.
<b>Action</b>	Investigate the original DN and try to remove offending characters if possible.

---

<b>POP.004.0079E</b>	<b>Cannot retrieve most significant attribute; invalid DN: "{0}"</b>
<b>Explanation</b>	The server cannot parse a directory service object DN (the object's LDAP ID), because the DN is invalid.
<b>Action</b>	Supply a valid DN to the <code>com.webmethods.portal.service.directory.impl.jndi.JNDITools</code> class's <code>getMostSignificantAttr()</code> and <code>getMostSignificantAttrSet()</code> methods.
<b>POP.004.0080E</b>	<b>Unable to connect to: {0}</b>
<b>Explanation</b>	The server cannot connect to the remote LDAP directory store.
<b>Action</b>	Verify that the Directory configuration is valid by using the Directory Service Administration portlet.
<b>POP.004.0081E</b>	<b>No user class specified in directory factory config</b>
<b>Explanation</b>	The server cannot store the directory configuration modifications.
<b>Action</b>	Use the Directory Services Administration portlet to create a new directory service and then delete the old one.
<b>POP.004.0082E</b>	<b>No group class specified in directory factory config</b>
<b>Explanation</b>	The server cannot initialize the directory service.
<b>Action</b>	Verify that the Directory service is properly configured by using the Directory Service Administration portlet.
<b>POP.004.0083E</b>	<b>Unable to wrap object. Unkown type: {0}</b>
<b>Explanation</b>	The server was unable to read an LDAP entry.
<b>Action</b>	Use the Directory Services Administration portlet to verify that the Directory configuration is valid.
<b>POP.004.0084</b>	<b>Unable to wrap LDAP object: {0}</b>
<b>Explanation</b>	There was an error fetching LDAP object properties
<b>Action</b>	Check MWS logs for additional exception details
<b>POP.004.0085E</b>	<b>Error setting attribute [name, value, action, message] - [{0}, {1}, {2}, {3}]</b>
<b>Explanation</b>	The server cannot modify the LDAP attribute.
<b>Action</b>	Verify that the connection to the LDAP directory store has adequate privileges to modify LDAP entries. Use your LDAP vendor's administration tool.

- POP.004.0086E**      **No response controls for directory: {0}**  
**Explanation**      The server cannot update the directory search control.  
**Action**              Start a new search.
- POP.004.0087E**      **Cannot page backward**  
**Explanation**      The server cannot page directory search control backwards because the control is at the first page of results.  
**Action**              Correct the source code invoking the directory search to check if the search has previous results before trying to page back to previous results. You can determine if a search has previous results by inspecting the value of the hasPrevious property of the com.webmethods.portal.service.view.IPagingCookie that you used to perform the search.
- POP.004.0088E**      **Cannot page forward**  
**Explanation**      The server cannot page the directory search control forward because the search has no more results.  
**Action**              Correct the source code invoking the directory search to check if the search has more results before trying to page forward. You can determine if a search has more results by inspecting the value of the hasNext property of the com.webmethods.portal.service.view.IPagingCookie that you used to perform the search.
- POP.004.0089E**      **Unable to retrieve user list**  
**Explanation**      The server cannot list the users of a directory service, there might be a problem connecting to the directory service.  
**Action**              If the directory service was recently configured directory service, go back to the My webMethods Server Admin Dashboard, and double-check the configuration using the Directory Service Administration portlet. Verify that the LDAP or ADSI server that connects to the directory service is up and running properly. Verify that the server the hosts My webMethods Server is able to connect to the LDAP or ADSI server using the hostname and port specified in the directory service's configuration.
- POP.004.0090E**      **Unable to lookup user {0}**  
**Explanation**      The server cannot locate the specified user.  
**Action**              Use the User and Group Management portlet to verify that the group exists in the LDAP directory store.

---

<b>POP.004.0091E</b>	<b>Invalid username or password</b>
<b>Explanation</b>	You have supplied invalid credentials.
<b>Action</b>	Try authenticating again with proper user name and password.
<b>POP.004.0092E</b>	<b>Could not lookup DN {0}</b>
<b>Explanation</b>	The server cannot look up a user or group by directory DN, the user or group's LDAP ID, because an error occurred while querying the directory store.
<b>Action</b>	Check the <code>_problems_.log</code> in My webMethods Server current logging directory for more specific error information.
<b>POP.004.0093E</b>	<b>Error looking up group {0}</b>
<b>Explanation</b>	The server cannot locate the specified group.
<b>Action</b>	Verify that the Directory service is configured by using the Directory Service Administration portlet.
<b>POP.004.0094E</b>	<b>Unable to perform search : {0}</b>
<b>Explanation</b>	An unknown error occurred while performing an LDAP directory search.
<b>Action</b>	Correct the invoking method to specify a valid query parameter.
<b>POP.004.0095E</b>	<b>Error getting memberships</b>
<b>Explanation</b>	The server cannot get membership information from the LDAP directory store.
<b>Action</b>	Verify that the Directory configuration is valid by using the Directory Service Administration portlet.
<b>POP.004.0096E</b>	<b>Unable to modify password of user {0} because the supplied old password is incorrect.</b>
<b>Explanation</b>	An attempt was made to change a user's password without supplying the user's existing password.
<b>Action</b>	Supply the correct existing password.
<b>POP.004.0097E</b>	<b>INSTALL is not supported operation for: {0}</b>
<b>Explanation</b>	Installation of the deployable object has failed.
<b>Action</b>	The deployable object does not have any installation code associated with its file extension. Do not attempt to deploy an unsupported type to the My webMethods Server.

<b>POP.004.0098E</b>	<b>UNINSTALL is not supported operation for: {0}</b>
<b>Explanation</b>	The server cannot uninstall the specified type of component.
<b>Action</b>	The specified component was not uninstalled; try again.
<b>POP.004.0100E</b>	<b>Component file not found: {0}</b>
<b>Explanation</b>	The server cannot install the component the component was not found at the specified location.
<b>Action</b>	Specify the correct location. If you are installing a component using the Install Administration portlet, select a valid location using the portlet's Browse button.
<b>POP.004.0101E</b>	<b>Cannot set properties for installer: {0}</b>
<b>Explanation</b>	The server cannot set install services because an internal error occurred.
<b>Action</b>	Check the <code>_problems_.log</code> in My webMethods Server current logging directory for more specific error information.
<b>POP.004.0102E</b>	<b>Script file not found: {0}</b>
<b>Explanation</b>	The server cannot execute a portlet deployment script.
<b>Action</b>	Using My webMethods Server, rebuild and redeploy the portlet.
<b>POP.004.0103E</b>	<b>Install script finished with {0} error(s). Please look at the install.log for details</b>
<b>Explanation</b>	An error occurred while installing or uninstalling a deployable component.
<b>Action</b>	Examine the logs, and try again. Look for the information specific to the deployed component in the <code>install.log</code> file.
<b>POP.004.0104E</b>	<b>Error installing/uninstalling component</b>
<b>Explanation</b>	An error occurred while installing or uninstalling a deployable component.
<b>Action</b>	Examine the logs, and optionally try again. Look for the information specific to the deployed component in the <code>install.log</code> file.
<b>POP.004.0105E</b>	<b>Failed to initialize LoggingCollector: {0}</b>
<b>Explanation</b>	The server cannot initialize logging over the JMS provider.
<b>Action</b>	Verify that the JMS server is running and configured.

---

<b>POP.004.0106E</b>	<b>PortletInfo is not available for uri [{0}]. Probably the portlet is not properly installed. Try to uninstall and then install it again.</b>
<b>Explanation</b>	Portlet is not currently available.
<b>Action</b>	Try to uninstall and then re-install the portlet again.
<b>POP.004.0107E</b>	<b>Invalid portlet descriptor. Portlet/DBO name is not defined</b>
<b>Explanation</b>	The server cannot load portlet information from the portlet descriptor because the portlet descriptor does not contain the portlet's name, or the portlet descriptor is incorrectly structured.
<b>Action</b>	Using the My webMethods Server to correct the portlet descriptor and redeploy it to the My webMethods Server.
<b>POP.004.0109E</b>	<b>Portlet URI is not published instance of the portlet or type. Unable to persist properties</b>
<b>Explanation</b>	The server cannot persist the properties of a portlet type without a valid portlet or portlet type identifier.
<b>Action</b>	Supply a valid portlet or portlet type identifier to the <code>com.webmethods.portal.service.portlet.impl.PortletType.setProperties()</code> method.
<b>POP.004.0110E</b>	<b>Portlet bean class is invalid: {0}</b>
<b>Explanation</b>	The server cannot initialize the portlet because the portlet does not implement the required interface.
<b>Action</b>	Using My webMethods Server to correct the portlet's deployment descriptor or regenerate the portlet, and then redeploy it.
<b>POP.004.0111E</b>	<b>Portlet bean is not poolable: {0}</b>
<b>Explanation</b>	The server cannot instantiate the portlet bean because the bean does not implement the <code>com.webmethods.portal.system.pool.IPooledObject</code> interface.
<b>Action</b>	Use My webMethods Server to correct the portlet bean source code to implement <code>IPooledObject</code> .
<b>POP.004.0112E</b>	<b>Portlet title bar class is invalid: {0}</b>
<b>Explanation</b>	The server cannot initialize portlet type information because the portlet titlebar class specified by the portlet's descriptor was not found.
<b>Action</b>	Using the Portlet Developer, remove the titlebar class specification from the portlet descriptor and then redeploy the portlet.

<b>POP.004.0113E</b>	<b>Invalid URI, no search service specified: {0}</b>
<b>Explanation</b>	The server cannot locate search provider because of an invalid URI.
<b>Action</b>	Correct the invoking code to use a valid URI.
<b>POP.004.0114E</b>	<b>Invalid datasource name: {0}</b>
<b>Explanation</b>	The server cannot execute a SQL statement against an invalid datasource.
<b>Action</b>	Correct the invoking method to pass the correct parameters. One of the critical parameters is the handle of the datasource, which can be obtained from the DataManager's API.
<b>POP.004.0115S</b>	<b>Can't find data service folder: {0}</b>
<b>Explanation</b>	The server cannot locate the system folder.
<b>Action</b>	It is possible that a system administrator has deleted a critical system folder. If so, you might need to reinstall My webMethods Server.
<b>POP.004.0116E</b>	<b>Cannot obtain database connection from pool: {0}</b>
<b>Explanation</b>	The server cannot obtain a database connection because all connections allocated for My webMethods Server are already in use or My webMethods Server cannot connect to the database.
<b>Action</b>	Verify that the database is running and is not experiencing a heavy load. Verify that the database has an adequate number of connection threads available. Verify that the machine on which the My webMethods Server is running can access the datasource's configured host name and port.
<b>POP.004.0117E</b>	<b>Database connection is closed.</b>
<b>Explanation</b>	The server cannot execute the SQL query because the database connection is closed.
<b>Action</b>	Execute the statement again. If problems persist, shut down and restart My webMethods Server.
<b>POP.004.0118E</b>	<b>Error updating Clob field</b>
<b>Explanation</b>	An error occurred while updating an unbounded size database field at the database level.
<b>Action</b>	Try the operation again.

---

<b>POP.004.0119E</b>	<b>Error updating Blob field</b>
<b>Explanation</b>	An error occurred in updating an unbounded size database field at the database level.
<b>Action</b>	Try the operation again.
<b>POP.004.0120E</b>	<b>Could not find content service for: {0}</b>
<b>Explanation</b>	The server cannot store versioned content for a resource because the content service for the resource was not found.
<b>Action</b>	Delete the resource.
<b>POP.004.0121E</b>	<b>Versioned content uri is null or empty: {0}</b>
<b>Explanation</b>	The server cannot access the versioning information.
<b>Action</b>	The version information is corrupted. Try to obtain a different version and recreate the changes.
<b>POP.004.0122E</b>	<b>Content doesn't exist: {0}</b>
<b>Explanation</b>	The server cannot read a resource's versioned content because the resource has no content.
<b>Action</b>	Delete the resource using the UI.
<b>POP.004.0123E</b>	<b>User ID is invalid: {0}</b>
<b>Explanation</b>	The server cannot locate the user's information about the versioned object.
<b>Action</b>	The version information is corrupted. Use the Publish portlet to publish a new instance of the item, and add the item to versioning. Consult the My webMethods Server documentation.
<b>POP.004.0124E</b>	<b>Could not find user: {0}</b>
<b>Explanation</b>	Cannot locate the user's information about the versioned object.
<b>Action</b>	The version information is corrupt. Publish a new instance of the item, and add the item to versioning.
<b>POP.004.0125E</b>	<b>Could not find thing: {0}</b>
<b>Explanation</b>	Cannot resolve metadata resource identifier from string.
<b>Action</b>	The resource specified by the identifier does not exist; do not use the identifier.

<b>POP.004.0126E</b>	<b>Cookie is not set on the List View</b>
<b>Explanation</b>	The server cannot sort or slice the list without a paging cookie.
<b>Action</b>	Correct the invoking source code to associate the paging cookie with the list by setting the cookie property of the list.
<b>POP.004.0127E</b>	<b>Unable to initialize directory service {0}: {1}</b>
<b>Explanation</b>	The server cannot initialize the directory service due to an error.
<b>Action</b>	Verify the connection information to the directory service using the Directory Service Administration portlet. Verify that the login credentials are accurate. Verify that there is network connectivity to the directory service from My webMethods Server.
<b>POP.004.0128E</b>	<b>Invalid directory Uri: "{0}"</b>
<b>Explanation</b>	The URI is malformed.
<b>Action</b>	Correct the invoking method to specify a valid URI parameter.
<b>POP.004.0129</b>	<b>Uri "{0}" should resolve to principal object, but was found: {1}</b>
<b>Explanation</b>	Attempting to look up a directory principal by a URL that does not resolve to a valid directory object.
<b>Action</b>	Check and correct directory API usage. Verify that the URI value used to look up directory object is valid.
<b>POP.004.0130E</b>	<b>Unidentified Clob implementation class: {0}</b>
<b>Explanation</b>	The server cannot retrieve an unbounded-length field from the database because the database driver is incompatible with My webMethods Server.
<b>Action</b>	Modify the datasource driver settings in the db.xml My webMethods Server configuration file to use approved driver.
<b>POP.004.0131S</b>	<b>Unidentified Blob implementation class: {0}</b>
<b>Explanation</b>	The server cannot retrieve result set data because of an incompatible database implementation.
<b>Action</b>	Verify that the correct version of Oracle is installed and that you are using the My webMethods Server supplied database drivers. You can consult your Oracle installation documentation to verify the version of Oracle and ensure that you have not added any custom Oracle drivers in the class path.

---

<b>POP.004.0132E</b>	<b>Xtype not found: {0}</b>
<b>Explanation</b>	The server cannot locate the portlet xtype in the metadata store.
<b>Action</b>	Most likely the portlet has been undeployed. Use the Install Administration portlet to redeploy the portlet.
<b>POP.004.0133</b>	<b>XType already registered: {0}</b>
<b>Explanation</b>	Every XType (Portlet Name, Dynamic Business Object) must have a unique name. An attempt was made to install a new portlet or application that contains a portlet or Dynamic Business Object which is already registered in MWS.
<b>Action</b>	Check to see if an application or portlet was renamed. It is also possible that a component un-install was not fully successful, in this case use <code>/component/development/tools/wm_remove_portlet</code> to clean up and delete component registration in MWS.
<b>POP.004.0134E</b>	<b>Error loading class group: {0}</b>
<b>Explanation</b>	The server cannot load all the classes for the specified class loader group.
<b>Action</b>	Check the <code>_problems_.log</code> in My webMethods Server current logging directory for more specific error information.
<b>POP.004.0135E</b>	<b>Error setting config on directory, rolling back to previous config.</b>
<b>Explanation</b>	The server cannot store the directory configuration modifications.
<b>Action</b>	Use the Directory Services Administration portlet to create a new directory service and then delete the old one.
<b>POP.004.0136E</b>	<b>Unable to retrieve group list.</b>
<b>Explanation</b>	The server cannot get group information from the LDAP directory store.
<b>Action</b>	Verify that the directory configuration is valid by using the Directory Service Administration portlet.
<b>POP.004.0141E</b>	<b>No configuration information found for content service, not initializing: {0}.</b>
<b>Explanation</b>	The server cannot initialize the content service.
<b>Action</b>	If you cannot reconfigure the offending content service by using the Content Service Admin portlet call Software AG Global Support for a reset directive.

<b>POP.004.0144I</b>	<b>FTPconnection connect to {0}.</b>
<b>Explanation</b>	A connection was initiated with the remote FTP server.
<b>Action</b>	This is an informative statement. No action is necessary.
<b>POP.004.0152E</b>	<b>No Query Parameters specified.</b>
<b>Explanation</b>	The server cannot execute the search because there is no search query.
<b>Action</b>	Navigate to the Search portlet and try again.
<b>POP.004.0153E</b>	<b>Search Server is unavailable or not properly configured</b>
<b>Explanation</b>	The server cannot access the search service.
<b>Action</b>	Verify that the search service is properly configured by using the Search Admin portlet.
<b>POP.004.0155E</b>	<b>Error adding file to search index: {0}</b>
<b>Explanation</b>	The server was unable to properly index a My webMethods Server component object.
<b>Action</b>	Determine if the document is in an unknown format or is malformed. Examine the Lucene Search Admin portlet for details on formats.
<b>POP.004.0156E</b>	<b>content stream is null</b>
<b>Explanation</b>	The server cannot locate the content file in the content repository.
<b>Action</b>	Verify that the existence of the content repository and network connectivity. The content repository has some configuration information in the storageConfig.xml. If a custom content service has been mounted, then verify that connectivity between the My webMethods Server process and the network file system is intact. Verify that you can browse to the content using My webMethods Server. Purge all items pending deletion with the Manage Deleted Items Admin Portlet.
<b>POP.004.0157E</b>	<b>Error getting resync list for library: {0}</b>
<b>Explanation</b>	The server cannot resynchronize the search library index because an error occurred in querying the database for the list of resources to index.
<b>Action</b>	Restart the My webMethods Server.

---

<b>POP.004.0158E</b>	<b>Malformed Language Pack: {0}</b>
<b>Explanation</b>	The server cannot use the language pack because its name is malformed. The name should be one of [language], [language]_[country], or [language]_[country]_[variant], where [language] is a language code such as en or ja, [country] is a country code such as US or JP, and [variant] is a variant code.
<b>Action</b>	Correct the language pack name and re-install language pack.
<b>POP.004.0187</b>	<b>Could not lookup URI {0}</b>
<b>Explanation</b>	If the URI points to an invalid directory object (user or group) an error occurs.
<b>Action</b>	Check and correct directory API usage. Check what URI value was used. This error might also occur if the user was deleted immediately before logging in. The error will go away when MWS caches are updated, usually within seconds.
<b>POP.004.0196</b>	<b>Role Modification is not supported for: {0}.</b>
<b>Explanation</b>	Only static roles support modification of role membership. This error is thrown when attempting to modify membership using the directory APIs for non-static roles
<b>Action</b>	Check and correct directory API usage. Check to see if the role being modified is static role
<b>POP.004.0197</b>	<b>Failed to set property "{0}". Reason: {1}</b>
<b>Explanation</b>	Error has occurred when setting the thing object properties. This might happen when attempting to set the property of a specific java type, but passing in an incompatible value.
<b>Action</b>	Check MWS logs for additional error information. Check the values the code attempted to update and determine if the actual property types are valid.
<b>POP.004.0198E</b>	<b>Cannot create a user with a duplicate id: {0}</b>
<b>Explanation</b>	An attempt was made to create a new user with a duplicate ID of an existing user.
<b>Action</b>	Use a unique identifier when creating a new user, group or role.
<b>POP.004.0199E</b>	<b>Cannot create a group with a duplicate id: {0}</b>
<b>Explanation</b>	An attempt was made to create a new user with a duplicate ID of an existing user.
<b>Action</b>	Use a unique identifier when creating a new user, group or role.

<b>POP.004.0200</b>	<b>Cannot create database connection to default MWS datasource.</b>
<b>Explanation</b>	Unable to create database connection to MWS database schema.
<b>Action</b>	Check MWS database connection configuration in MWS/server/default/config/mws.db.xml config file.
<b>POP.004.0201</b>	<b>Cannot initialize MWS, invalid database schema is specified</b>
<b>Explanation</b>	MWS validates if database schema contains correct tables and then throws this error if it is not configured.
<b>Action</b>	Check if MWS database schema was correctly created by dbConfigurator tool. You might need to drop and re-create MWS schema.
<b>POP.004.0202</b>	<b>Cannot create database connection to default MWS datasource. Please verify database connection parameters in the MWS/server/{0}/config/mws.db.xml configuration file</b>
<b>Explanation</b>	An issue has occurred with the database connection configuration file such as invalid XML or an incorrect JDBC driver name.
<b>Action</b>	Verify the database connection parameters in the MWS/server/default/config/mws.db.xml configuration file.
<b>POP.004.0203</b>	<b>User {0} can not set access on {1}</b>
<b>Explanation</b>	User does not have access rights to set or update permissions.
<b>Action</b>	See if the user or groups and roles, the user is a member of has access rights to set permissions on a given object.
<b>POP.004.0204</b>	<b>Failed to search business data with the "taskTypeID" query term specified.</b>
<b>Explanation</b>	The taskTypeID is not specified in task search term.
<b>Action</b>	Provide a valid taskTypeID as a task search term.
<b>POP.004.0205</b>	<b>Unable to locate whitelist storage object</b>
<b>Explanation</b>	The required whitelist storage object cannot be located.
<b>Action</b>	Contact the system administrator to make sure that whitelist storage has been configured.

---

<b>POP.004.0206</b>	<b>Failed to connect to database at {0}. Verify hostname/port and connection credentials.</b>
<b>Explanation</b>	Failed to connect to database.
<b>Action</b>	Make sure the database is running and has a network connection, and that the proper credentials are in use. Otherwise, contact the system administrator to make sure database has been configured correctly.
<b>POP.004.0207</b>	<b>Unable to update whitelist storage object</b>
<b>Explanation</b>	Your user account has not been granted the privilege for updating a whitelist storage object.
<b>Action</b>	Contact the system administrator if you need this privilege.
<b>POP.004.0209</b>	<b>Role name is empty.</b>
<b>POP.005.0002E</b>	<b>Can Not Re-initialize CDS library</b>
<b>Explanation</b>	An attempt was made to initialize the system twice.
<b>Action</b>	After My webMethods Server is initialized, do not attempt to do so again.
<b>POP.005.0003E</b>	<b>Error parsing segment urls: "{0}"</b>
<b>Explanation</b>	One of the My webMethods Servers in the cluster has an incorrect URL.
<b>Action</b>	Determine the correct URL for the My webMethods Server, then log in to My webMethods Server as sysadmin and use the Cluster Administration portlet to correct the error.
<b>POP.005.0004E</b>	<b>Unable to register component: "{0}" due to "{1}"</b>
<b>Explanation</b>	My webMethods Server could not register the specified component.
<b>Action</b>	Look in the _problems_.log file for the stack trace of the error. It might be necessary to reinstall the component.
<b>POP.005.0005</b>	<b>Unable to reload component: "{0}" due to "{1}"</b>
<b>Explanation</b>	During dynamic reloading of a component (for example, a portlet), an error occurred.
<b>Action</b>	Check the logs to investigate what component failed to be reloaded. If the component is a portlet, then try uninstalling the portlet and reinstalling it, or try to revert to a previous version of the portlet.

<b>POP.005.0006E</b>	<b>This server node is not defined in the MWS cluster configuration: "{0}"</b>
<b>Explanation</b>	The specified My webMethods Server is not included in the cluster configuration.
<b>Action</b>	Log in to My webMethods Server as sysadmin and use the Cluster Administration portlet to add the specified My webMethods Server to the cluster.
<b>POP.005.0007</b>	<b>Front End URL is not specified in the MWS cluster configuration</b>
<b>Explanation</b>	The cluster doesn't have a valid configuration.
<b>Action</b>	Log in to My webMethods Server as sysadmin and use the Cluster Administration portlet to check the cluster configuration.
<b>POP.005.0008E</b>	<b>internal cache error</b>
<b>Explanation</b>	An internal error occurred while removing an item from a cache.
<b>Action</b>	Inspect the <code>_problems_.log</code> for details of the failure. This error could indicate that there is invalid data in a cache. Restart My webMethods Server to address the problem.
<b>POP.005.0009E</b>	<b>Unable to loadComponent: "{0}"</b>
<b>Explanation</b>	A failure occurred while loading a My webMethods Server component.
<b>Action</b>	Look in the <code>_problems_.log</code> file for the stack trace of the error. It may be necessary to reinstall the component.
<b>POP.005.0010E</b>	<b>Unknown object: "{0}"</b>
<b>Explanation</b>	The ComponentData object for a component is of an unknown type.
<b>Action</b>	The componentData must be one of the handled object types. This error means that a My webMethods Server component could not initialize because it is invalid. Check the component for a valid configuration.
<b>POP.005.0013</b>	<b>Command not found: "{0}"</b>
<b>Explanation</b>	A request to obtain a registered command failed. The command does not exist.
<b>Action</b>	Check the custom portlet invoking the command and ensure that it is specifying a deployed command.
<b>POP.005.0014</b>	<b>Unbalanced "{1}" in value expression: "{0}"</b>
<b>Explanation</b>	A legacy portlet has created an illegal dynamic expression.
<b>Action</b>	Review the custom portlet for proper syntax of any dynamic expressions.

---

<b>POP.005.0021</b>	<b>Attempting to use non empty My webMethods Server database for fresh deployment. Please make sure to create new empty My webMethods Server database</b>
<b>Explanation</b>	A first time startup check determined that the configured database is not a new database. A new database is required for a new installation.
<b>Action</b>	You must create new (empty) My webMethods Server database and configure My webMethods Server to connect to it. Please refer to the Software AG documentation for installing webMethods products.
<b>POP.005.0022</b>	<b>Wrong version of My webMethods Server database: {0} but expected: {1}</b>
<b>Explanation</b>	A first time startup check determined that the configured database does not match the schema required by My webMethods Server.
<b>Action</b>	Verify that the specified database is properly configured. The database is likely configured with an old or incomplete schema. Please refer to the Software AG documentation for installing webMethods products.
<b>POP.005.0026</b>	<b>Must have at least one server node defined</b>
<b>Explanation</b>	The cluster does not have a valid configuration. No server nodes are defined.
<b>Action</b>	Log in to My webMethods Server as sysadmin and use the Cluster Administration portlet to check the cluster configuration.
<b>POP.005.0028</b>	<b>"{0}" server node must have at least one web stack listener enabled</b>
<b>Explanation</b>	Each node in the cluster is required to have at least one port enabled for accepting web requests.
<b>Action</b>	Log in to My webMethods Server as sysadmin and use the Cluster Administration portlet to check the cluster configuration.
<b>POP.005.0029</b>	<b>server node name must not be empty</b>
<b>Explanation</b>	The cluster does not have a valid configuration. A server node name is not defined.
<b>Action</b>	Log in to My webMethods Server as sysadmin and use the Cluster Administration portlet to check the cluster configuration.
<b>POP.005.0030</b>	<b>Credentials required.</b>
<b>Explanation</b>	Credentials of a valid My webMethods Server user are required.
<b>Action</b>	Provide the user name and password of a valid My webMethods Server user account.

<b>POP.005.0031</b>	<b>Credentials should be String[].</b>
<b>Explanation</b>	Credentials must be supplied in a string array format.
<b>Action</b>	Configure the JMX client to provide credentials in a string array format.
<b>POP.005.0032</b>	<b>Credentials should have 2 elements.</b>
<b>Explanation</b>	Two credential elements (user name and password) were expected, but a non-matching number of elements were provided.
<b>Action</b>	Provide only the user name and password.
<b>POP.005.0033</b>	<b>JMX Authentication failed!</b>
<b>Explanation</b>	The user cannot be authenticated within My webMethods Server.
<b>Action</b>	Provide a valid My webMethods Server user.
<b>POP.005.0034</b>	<b>JMX Authorization failed!</b>
<b>Explanation</b>	The provided user does not have sufficient privileges for connecting via JMX.
<b>Action</b>	Provide a user with the "Connect to JMX" privilege.
<b>POP.005.0035</b>	<b>Insufficient privileges for establishing JMX communication!</b>
<b>Explanation</b>	The provided user does not have sufficient privileges for connecting via JMX.
<b>Action</b>	Provide a user with the "Connect to JMX" privilege.
<b>POP.005.0036</b>	<b>JMX Server Port number cannot be parsed. Port parameter value "{0}".</b>
<b>Explanation</b>	The provided JMX port number is not an available port number.
<b>Action</b>	Change the JMX port configuration property to an available port number.
<b>POP.005.0037</b>	<b>JDK 1.6 or higher is required to run JMX over SSL.</b>
<b>Explanation</b>	My webMethods Server is currently started with JDK 1.5.
<b>Action</b>	Update the My webMethods Server JDK to JDK 1.6.
<b>POP.005.0039</b>	<b>Cannot start CDS library because MWS did not initialize yet</b>
<b>Explanation</b>	The CDS library cannot start because My webMethods Server has not initialized yet.
<b>Action</b>	Wait for My webMethods Server to initialize before starting the CDS library.

---

<b>POP.005.0040</b>	<b>Cannot start common directory service because IS was started before MWS. Complete the MWS upgrade, which includes starting MWS, before performing the IS upgrade, which includes starting IS. See the upgrade guide for correct order.</b>
<b>Explanation</b>	The CDS library cannot start because the My webMethods Server upgrade has not completed yet.
<b>Action</b>	Complete the My webMethods Server upgrade before starting the CDS library.
<b>POP.005.0041</b>	<b>Unable to start server at port number {0} on host {1} (for: {2}) , reason : {3}. Perhaps another MWS process is already running?</b>
<b>Explanation</b>	The server cannot be started at the specified port on the specified host due to the specified reason.
<b>Action</b>	Make sure that no other My webMethods Server instance is running on the same host using the same port.
<b>POP.005.0042</b>	<b>Unable to start. The server name {0} could not be found in the cluster definition</b>
<b>Explanation</b>	The server cannot start because the specified server name cannot be found in the cluster definition.
<b>Action</b>	Make sure that the server name matches the name specified in the cluster definition.
<b>POP.005.0043</b>	<b>The JMS communication layer for common directory services (CDS) failed to initialize, which causes CDS assets to be out of sync. To enable JMS communication, specify a valid JNDI Provider URL on the Cluster Administration page in My webMethods and restart Integration Server.</b>
<b>POP.006.0003E</b>	<b>portlet bean URI not specified</b>
<b>Explanation</b>	The portlet:bean JSP tag does not contain a uri attribute to identify a valid portlet instance.
<b>Action</b>	Ensure that all instances of the 'portlet:bean' JSP tag include a 'uri' attribute. The attribute value must identify a valid portlet instance. Also, ensure that the portlet type referenced by the 'uri' attribute has been deployed and that all instances referenced by the attribute exist.
<b>POP.006.0004E</b>	<b>cannot create portlet bean for the URI "{0}"</b>
<b>Explanation</b>	The portlet:bean JSP tag does not contain a uri attribute that identifies a valid portlet instance.
<b>Action</b>	Ensure that all instances of the 'portlet:bean' JSP tag include a 'uri' attribute. The attribute value must identify a valid portlet instance. Also, ensure that the portlet type referenced by the 'uri' attribute has been deployed, and that all instances referenced by the attribute exist.

<b>POP.006.0005</b>	<b>parent "{0}" not found</b>
<b>Explanation</b>	The JSP page is invalid, because a JSP tag that is only valid when it is inside of a parent JSP tag is not inside the expected parent.
<b>Action</b>	Locate the error in the JSP page and correct the problem.
<b>POP.006.0006E</b>	<b>cannot find portlet bean named "{0}" in the current page context</b>
<b>Explanation</b>	The portlet:portletController JSP tag does not contain a portlet attribute. The value of this attribute is the key to the pageContext entry in which a com.webmethods.portal.service.portlet.IPortletBean object is stored.
<b>Action</b>	Ensure that all instances of the 'portlet:portletController' JSP tag include a 'portlet' attribute that references a valid IPortletBean.
<b>POP.006.0007E</b>	<b>cannot obtain portlet info</b>
<b>Explanation</b>	The portlet:info JSP tag does not contain an info attribute. The value of this attribute is the key to the pageContext entry in which a com.webmethods.portal.service.portlet.info.IPortletInfo object is stored.
<b>Action</b>	Ensure that all instances of the 'portlet:info' JSP tag include an 'info' attribute that references a valid IPortletInfo object.
<b>POP.006.0008E</b>	<b>cannot find portlet info named "{0}" in the current page context</b>
<b>Explanation</b>	The portlet:propertyGroups, portlet:propertyGroup, or portlet:propertyLine JSP tag does not contain an info attribute. The value of this attribute is the key to the pageContext entry in which a com.webmethods.portal.service.portlet.info.IPortletInfo object is stored.
<b>Action</b>	Ensure that all instances of the 'portlet:propertyGroups', 'portlet:propertyGroup', and 'portlet:propertyLine' JSP tags include an 'info' attribute that references a valid IPortletInfo object.
<b>POP.006.0015</b>	<b>cannot obtain portlet property info</b>
<b>Explanation</b>	The portlet configuration information could not be found. This problem could result from an invalid JSP page or a portlet installation that has been corrupted.
<b>Action</b>	Review the JSP page and ensure the portlet:propertyLine JSP tag is contained within a portlet:bean tag. If the JSP is correct and the problem persists, try re-installing the broken portlet.

---

<b>POP.006.0016E</b>	<b>cannot find portlet property info named "{0}" in the current page context</b>
<b>Explanation</b>	The portlet:propertyLine JSP tag does not contain a propertyInfo attribute. The value of this attribute is the key to the pageContext entry in which a com.webmethods.portal.service.portlet.info.IPortletPropertyInfo object is stored.
<b>Action</b>	Ensure that all instances of the 'portlet:propertyLine' JSP tag include a 'propertyInfo' attribute that references a valid IPortletPropertyInfo.
<b>POP.006.0017</b>	<b>portlet property name not specified</b>
<b>Explanation</b>	The JSP page contains a portlet:propertyLine tag that is missing the required "name" property.
<b>Action</b>	Review the JSP page and correct any missing "name" properties.
<b>POP.006.0018E</b>	<b>cannot obtain portlet property bag</b>
<b>Explanation</b>	The portlet:propertyLine JSP tag does not contain a propertyInfo attribute. The value of this attribute is the key to the pageContext entry in which a com.webmethods.rtl.util.obj.IPropertyBag object is stored.
<b>Action</b>	Ensure that all instances of the 'portlet:bean' JSP tag include a 'propertyInfo' attribute that references a valid IPropertyBag.
<b>POP.006.0019E</b>	<b>cannot find portlet property bag named "{0}" in the current page context</b>
<b>Explanation</b>	The portlet:propertyLine JSP tag does not contain a propertyInfo attribute. The value of this attribute is the key to the pageContext entry in which a com.webmethods.rtl.util.obj.IPropertyBag object is stored.
<b>Action</b>	Ensure that all instances of the 'portlet:bean' JSP tag include a 'propertyInfo' attribute that references a valid IPropertyBag.
<b>POP.006.0020E</b>	<b>object named "{0}" in the current page context is not a portlet property bag</b>
<b>Explanation</b>	The portlet:propertyLine JSP tag does not contain a propertyInfo attribute. The value of this attribute is the key to the pageContext entry in which a com.webmethods.rtl.util.obj.IPropertyBag object is stored.
<b>Action</b>	Ensure that all instances of the 'portlet:bean' JSP tag include a 'propertyInfo' attribute that references a valid IPropertyBag.
<b>POP.006.0021</b>	<b>"{0}" requires body content</b>
<b>Explanation</b>	A JSP page contains an sql:query tag with missing SQL query text in the tag body.
<b>Action</b>	The JSP page must be edited to either remove the tag or add the SQL query text as the tag body.

<b>POP.006.0022</b>	<b>skin property not found</b>
<b>Explanation</b>	In a JSP page, the ui:img tag is trying to render an image from the skin, but the image was not defined in the skin.
<b>Action</b>	Edit the skin to add the missing image, or change the JSP page to reference an image that does exist.
<b>POP.006.0024E</b>	<b>'IterateTag' container is null</b>
<b>Explanation</b>	The util:iterate JSP tag does not contain a container attribute. The value of this attribute is the key to the pageContext entry in which a java.util.Collection, java.util.Iterator, or java.lang.Object[] object is stored.
<b>Action</b>	Ensure that all instances of the 'util:iterate' JSP tag include a 'container' attribute that references a valid container object.
<b>POP.006.0025</b>	<b>"{0}" class not supported as an 'IterateTag' container</b>
<b>Explanation</b>	A JSP page uses the util:iterate tag, but the value of the 'container' property is not one of the supported data types.
<b>Action</b>	The JSP page must be edited to correct the problem.
<b>POP.006.0026</b>	<b>"{0}" requires "{1}" attribute</b>
<b>Explanation</b>	A JSP page uses the util:iterate tag, but the "indexVar" tag attribute was not supplied.
<b>Action</b>	The JSP page must be edited to add the missing tag attribute.
<b>POP.006.0027</b>	<b>cannot find 'PerfStartTag' token named "{0}"</b>
<b>Explanation</b>	A JSP page uses the util:perfEnd tag, but the perf token supplied in the "name" tag attribute does not exist.
<b>Action</b>	This problem most likely results from a malformed JSP page. The JSP developer should review the JSP page for any mismatched util:perfStart/util:perfEnd pairs.
<b>POP.006.0028E</b>	<b>cannot find XML DOM node named "{0}" in the current page context</b>
<b>Explanation</b>	Use of the xml:valueOf JSP tag causes this exception.
<b>Action</b>	Remove all instances of the 'xml:valueOf' JSP tag.

---

<b>POP.006.0029E</b>	<b>cannot create XML DOM document from given XML stream</b>
<b>Explanation</b>	The XML stream specified for the xml:xml JSP tag does not contain well-formed XML.
<b>Action</b>	Check the _problems_.log in the Portal's current logging directory for more specific error information.
<b>POP.006.0030E</b>	<b>cannot load XML DOM document for the specified location "{0}"</b>
<b>Explanation</b>	The xml:xml JSP tag could not load a file from the location specified by the 'location' attribute.
<b>Action</b>	Edit instances of the 'xml:xml' JSP tag to include a 'location' attribute that correctly specifies the url to an XML document.
<b>POP.006.0031</b>	<b>Required Property Editor parameter "{0}" not specified.</b>
<b>Explanation</b>	A JSP page is rendering a property editor, but a required parameter has not been supplied.
<b>Action</b>	The JSP developer should edit the JSP page to supply the missing required parameter.
<b>POP.006.0032</b>	<b>Property Editor "{0}" not deployed.</b>
<b>Explanation</b>	A JSP page is trying to render a property editor that is not deployed to My webMethods Server.
<b>Action</b>	Deploy the missing property editor to My webMethods Server, or change the JSP page to use a property editor that is deployed to My webMethods Server.
<b>POP.006.0033</b>	<b>invalid portlet bean URI: {0}</b>
<b>Explanation</b>	A JSP page is using either the portlet:bean or the portlet:controller tag in which the supplied portlet URI does not match an existing portlet instance.
<b>Action</b>	Deploy the missing portlet instance. Or, edit the JSP page to change the URI to match an existing portlet instance.
<b>POP.007.0002</b>	<b>Error getting directory mechanics: "{0}"</b>
<b>Explanation</b>	The My webMethods Server instance was not properly installed.
<b>Action</b>	Re-create the My webMethods Server database schema and the My webMethods Server server instance.

<b>POP.007.0003</b>	<b>Error rendering layout "{0}" due to "{1}"</b>
<b>Explanation</b>	There was an error either compiling or executing the application *.JSP page.
<b>Action</b>	You may need to run My webMethods Server with a full JDK which includes the Java compiler. Or, if you have modified any system JSP or NBSF pages, there may have been a syntax error.
<b>POP.007.0006</b>	<b>Requested content was not found: "{0}"</b>
<b>Explanation</b>	An error occurred when attempting to browse to a page or file; the page or file does not exist in My webMethods Server.
<b>Action</b>	Verify that the URL being browsed to is correctly formed and specifies a valid URL.
<b>POP.007.0007E</b>	<b>Command not Found: "{0}"</b>
<b>Explanation</b>	An attempt was made to execute a server command that is not deployed.
<b>Action</b>	Log in to My webMethods Server and use the Install Administration portlet to deploy the missing portlet.
<b>POP.007.0008</b>	<b>The requested resource is not a webservice: "{0}"</b>
<b>Explanation</b>	An attempt was made to obtain a WSDL for a resource that is not a web service.
<b>Action</b>	Modify the request to specify a resource that is a web service.
<b>POP.007.0009</b>	<b>You are not authorized to view the resource.</b>
<b>Explanation</b>	The current user does not have permission to view the specified object or page.
<b>Action</b>	Check the permissions for the object or page to ensure that the user has read rights
<b>POP.007.0010E</b>	<b>This renderer is unable to render: "{0}"</b>
<b>Explanation</b>	An attempt was made to use the FolderRenderer to render an item that is not a folder.
<b>Action</b>	You cannot use the FolderRenderer for non-folders; specify a valid folder.
<b>POP.007.0011E</b>	<b>Unknown response: "{0}"</b>
<b>Explanation</b>	The dispatch handler returned an unknown return code.
<b>Action</b>	Correct the dispatch handler to return a valid return code.

---

<b>POP.007.0012</b>	<b>Cannot redirect to an invalid data type: "{0}"</b>
<b>Explanation</b>	An incorrect API was called when redirecting to new URL. This error is most likely to occur with a custom portlet.
<b>Action</b>	Verify that the portlet specifies the correct API for redirection.
<b>POP.007.0013</b>	<b>Unable to find adequate authentication information to instantiate an http session</b>
<b>Explanation</b>	My webMethods Server is unable to authenticate an HTTP session.
<b>Action</b>	This error can occur because of incorrect implementation of custom authentication (such as, agent based authentication). Review the custom authentication scheme and verify that it is correctly implemented.
<b>POP.007.0023</b>	<b>getWriter() has already been called on this response.</b>
<b>Explanation</b>	This error indicates an incorrect usage of the <code>HttpResponse.getWriter()</code> API and most likely occurred in a custom CAF application.
<b>Action</b>	Review the CAF application and check the implementation of the <code>HttpResponse</code> APIs.
<b>POP.007.0024</b>	<b>getOutputStream() has already been called on this response.</b>
<b>Explanation</b>	This error indicates an incorrect usage of the <code>HttpResponse.getOutputStream()</code> API and most likely occurred in a custom CAF application.
<b>Action</b>	Review the CAF application and check the implementation of the <code>HttpResponse</code> APIs.
<b>POP.007.0026</b>	<b>Response body content already written.</b>
<b>Explanation</b>	This error occurs when attempting to set the <code>HttpResponse</code> header when the response has been already partially or fully committed. This most likely occurred in a custom CAF application.
<b>Action</b>	Review the CAF application and check the implementation of the <code>HttpResponse</code> APIs.
<b>POP.007.0027</b>	<b>Internal Error! Portlet Controller Bean is null.</b>
<b>Explanation</b>	The system cannot serve as the internal controller bean for the portlet.
<b>Action</b>	This error occurs only for non-CAF portlets. Log out and log back in to resolve this problem.

<b>POP.007.0028</b>	<b>User not found: "{0}"</b>
<b>Explanation</b>	This error occurs when a user ID passed into My webMethods Server by a custom authentication handler cannot be matched.
<b>Action</b>	Verify that the specified user exists in the My webMethods Server directories, and check the custom authentication handler logic.
<b>POP.007.0029</b>	<b>No authentication information was found.</b>
<b>Explanation</b>	No user name was supplied to My webMethods Server when authenticating a user. This error can occur with a custom authentication handler.
<b>Action</b>	Check the implementation of the custom authentication handler. Verify the proper operation of any custom login forms.
<b>POP.007.0033</b>	<b>No portlet found to render "{0}" view.</b>
<b>Explanation</b>	This error can occur if there is a registered portlet renderer, but the portlet defined in the renderer is not found.
<b>Action</b>	Renderers are used internally by My webMethods Server to define certain system pages. If this error occurs, check to see if any of the My webMethods Server system components have been un-installed.
<b>POP.007.0035</b>	<b>The value {0} can not be changed</b>
<b>Explanation</b>	An attempt has been made to change the value of an invalid portlet preference.
<b>Action</b>	Verify that the correct portlet preference name is used.
<b>POP.007.0036</b>	<b>The store() method can not be called from a render method</b>
<b>Explanation</b>	An attempt was made to change and persist portlet preferences from the render() method.
<b>Action</b>	Portlet preferences can be changed only with the portlet action method. Correct the code which updates portlet preferences to use the proper method.
<b>POP.007.0037</b>	<b>The state of the portlet can not be changed</b>
<b>Explanation</b>	Portlet preferences can be updated only during the action() request.
<b>Action</b>	Correct the usage of the portlet preferences APIs to change preferences during the action() request.

<b>POP.007.0038</b>	<b>The key given is null.</b>
<b>Explanation</b>	An attempt was made to use the portlet preferences API with a NULL preference name.
<b>Action</b>	Correct the portlet preferences API implementation to specify a valid preference name.
<b>POP.007.0044</b>	<b>The map given is null</b>
<b>Explanation</b>	This error indicates an incorrect usage of the portlet URL APIs; the parameter map setting is NULL.
<b>Action</b>	Correct the portlet URL APIs implementation to specify a valid parameter map.
<b>POP.007.0045</b>	<b>The map given contains a null key</b>
<b>Explanation</b>	This error indicates an incorrect usage of the portlet URL APIs; the parameters map setting contains a NULL key.
<b>Action</b>	Correct the portlet URL APIs implementation to specify a valid parameter map key.
<b>POP.007.0046</b>	<b>The map contains a non String key</b>
<b>Explanation</b>	This error indicates an incorrect usage of the portlet URL APIs; the parameters map setting contains non-String values.
<b>Action</b>	Correct the portlet URL APIs implementation to pass in only String type parameters.
<b>POP.007.0047</b>	<b>Namespace prefix defined more than once for {0}</b>
<b>Explanation</b>	An incorrect URL was passed into My webMethods Server; more than one namespace prefix is provided.
<b>Action</b>	Check that the URL passed into My webMethods Server contains only one single value for the namespace prefix.
<b>POP.007.0048</b>	<b>Namespace prefix is not defined for {0} and the prefix id is not a valid thingID</b>
<b>Explanation</b>	An incorrect URL was passed into My webMethods Server; no namespace prefix is provided.
<b>Action</b>	Modify the URL passed into My webMethods Server to define the missing namespace prefix.

- POP.007.0049**      **The portlet mode {0} is not supported for the {1} markup language.**  
**Explanation**      The requested mode is not implemented in the portlet or is not supported.  
**Action**            Check the portlet URL API usage if attempting to set the mode with APIs. If this is a custom portlet, check to see if the portlet implements this mode.
- POP.007.0051**      **Output generated because of an exception**  
**Explanation**      An exception occurred while rendering portlet content.  
**Action**            Refer to the server logs at ..\MWS\server\default\logs for additional exception details.
- POP.007.0052**      **sendRedirect was already called**  
**Explanation**      An attempt was made to change the portlet window state, mode, or parameters after a redirect request was sent.  
**Action**            Examine and correct the usage of the redirect request in the portlet code.
- POP.007.0053**      **The portlet mode is null**  
**Explanation**      An attempt was made to set a NULL portlet mode.  
**Action**            Examine and correct the usage of the Portlet URL API.
- POP.007.0054**      **The window state {0} is not supported by the portlet container**  
**Explanation**      An attempt was made to set an invalid window state.  
**Action**            Examine and correct the window state being set by the Portlet URL APIs.
- POP.007.0055**      **The window state is null**  
**Explanation**      An attempt was made to set a NULL window state.  
**Action**            Examine and correct the window state being set by the Portlet URL APIs.
- POP.007.0056**      **The portlet mode {0} is not supported by the portlet container**  
**Explanation**      An attempt was made to set an invalid portlet mode.  
**Action**            Examine and correct the portlet mode being set by the Portlet URL APIs.

---

<b>POP.007.0057</b>	<b>The map contains a non String[] value</b>
<b>Explanation</b>	An attempt was made to set a parameter with a value that is not of the type String[].
<b>Action</b>	Examine and correct parameters being by the Portlet URL API; these values must be String or String[] types only.
<b>POP.007.0058</b>	<b>The key given is null</b>
<b>Explanation</b>	An attempt was made to pass in a NULL key value.
<b>Action</b>	Examine and correct the key value that is being passed in by the Portlet URL API.
<b>POP.007.0059</b>	<b>The value given is null</b>
<b>Explanation</b>	An attempt was made to pass in a NULL value.
<b>Action</b>	Examine and correct the value being passed in by the Portlet URL API.
<b>POP.007.0060</b>	<b>The sendRedirect method can not be invoked after any of the following methods of the ActionResponse interface has been called: setPortletMode, setWindowState, setRenderParameter, setRenderParameters</b>
<b>Explanation</b>	The sendRedirect method can not be invoked after any of the following methods of the ActionResponse interface has been called: setPortletMode, setWindowState, setRenderParameter, setRenderParameters
<b>Action</b>	Correct the code to ensure that the sendRedirect() method does not occur after these calls during the same action request.
<b>POP.007.0061</b>	<b>A relative or incorrect path URL is given</b>
<b>Explanation</b>	An attempt was made to redirect to an invalid URL.
<b>Action</b>	Check the URL that is the target of the redirect. It must start with "http://", "https://", or "/".
<b>POP.007.0062</b>	<b>You cannot have null as a parameter</b>
<b>Explanation</b>	An attempt was made to pass in a NULL parameter name.
<b>Action</b>	Examine and correct the parameter name used in the PortletContext and PortletRequest APIs.

<b>POP.007.0063</b>	<b>Content type cannot be application/x-www-form-urlencoded</b>
<b>Explanation</b>	Incorrect API usage. The ServletRequest.getReader() and getInputStream() methods are not available for requests where a form is submitted.
<b>Action</b>	Examine and correct the ServletRequest.getReader() and getInputStream() API usage.
<b>POP.007.0064</b>	<b>This method cannot be called, when getReader() method has been called</b>
<b>Explanation</b>	The ServletResponse method cannot be used when the getReader() method has been called.
<b>Action</b>	Examine and correct the ServletResponse API usage.
<b>POP.007.0065</b>	<b>The attribute name cannot be null</b>
<b>Explanation</b>	An attempt was made to get or set an attribute using a NULL name.
<b>Action</b>	Examine and correct the attribute name being passed to the API.
<b>POP.007.0066</b>	<b>Path must start with /</b>
<b>Explanation</b>	An attempt was made to get a resource using an invalid path. The path of the resource must start with "/".
<b>Action</b>	Examine and correct the path name set by the PortletContext API.
<b>POP.007.0069</b>	<b>The content type {0} is not supported.</b>
<b>Explanation</b>	An attempt was made to set an invalid content type.
<b>Action</b>	Check and correct the content type being set by the PortletResponse API.
<b>POP.007.0070</b>	<b>The content type has not been set before calling the getPortletOutputStream() method.</b>
<b>Explanation</b>	The response content type must be set before obtaining the output stream.
<b>Action</b>	Examine and correct the API calls.
<b>POP.007.0071</b>	<b>the output stream has already been called</b>
<b>Explanation</b>	A Writer cannot be obtained for the response after obtaining the output stream.
<b>Action</b>	Examine and correct the API usage.

---

<b>POP.007.0072</b>	<b>the PrintWriter object has already been called</b>
<b>Explanation</b>	A Writer cannot be obtained for the response because the output stream has already been obtained.
<b>Action</b>	Examine and correct the API usage.
<b>POP.007.0073</b>	<b>Can not serialize Portlet Preferences</b>
<b>Explanation</b>	There was error when serializing portlet preferences. Portlet preferences cannot contain non-serializable objects.
<b>Action</b>	Check the server log for more details. Examine and correct any portlet preferences being set to ensure only serializable objects are used.
<b>POP.007.0074</b>	<b>Portlet Application "{0}" is not properly installed or unavailable.</b>
<b>Explanation</b>	The system cannot load the specified portlet application. It is either not installed or is disabled in the cluster partition.
<b>Action</b>	Re-install the portlet application. Check the server logs for errors during installation. Verify that the application is enabled in the cluster partition.
<b>POP.007.0075</b>	<b>Portlet "{0}" is not found</b>
<b>Explanation</b>	The specified portlet is not installed or is disabled in the cluster partition.
<b>Action</b>	Verify that the portlet application is installed; install if necessary. Check the server logs for any installation errors. Verify that the portlet is enabled in the cluster partition.
<b>POP.007.0076</b>	<b>PortletContainer Servlet "{0}" is not found. Check default web application configuration file (defaultPortletAppWeb.xml)</b>
<b>Explanation</b>	System servlet is not found.
<b>Action</b>	Determine if any changes were made to system configuration files in ../MWS/server/default/deploy/portal.war. Re-install My webMethods Server.
<b>POP.007.0077</b>	<b>You are not authorized to view the resource. {0}</b>
<b>Explanation</b>	The current user does not have permission to read the specified object or resource.
<b>Action</b>	Examine and correct the user account permissions.

- POP.007.0078**      **This action requires an anti-cross-site-request-forgery token.**  
**Explanation**      The executed command or action did not specify an anti-cross-site-request-forgery token.  
**Action**              Check if the given command or action does require an AXRF token. If it does require a token, the token must be explicitly generated and passed in as a URL parameter. For example, when calling a CAF action from a portlet URL, the action must either be configured to not require a token (which lessens security), or a token must be generated when calling this action from a direct URL.
- POP.007.0101**      **Illegal Property Editor name: "{0}".**  
**Explanation**      A legacy portlet property uses an invalid property-editor name.  
**Action**              Examine and correct the property-editor name in the wm-portlet.xml file (this applies only to legacy non-CAF portlets).
- POP.007.0102**      **Illegal Property Editor parameter value for "{0}": "{1}".**  
**Explanation**      An incorrect parameter value was passed to the property editor.  
**Action**              Check the property editor configuration in the wm-portlet.xml file (this applies only to legacy non-CAF portlets).
- POP.007.0103**      **Property Editor requires DHTML.**  
**Explanation**      The property editor "dhtml" property configuration is invalid. The property editor requires DHTML to be enabled.  
**Action**              Examine the property editor configuration in the wm-portlet.xml file. Set dhtml=true (this applies only to legacy non-CAF portlets).
- POP.007.0105**      **Property editor "{0}" parameter "{1}" of type "choice" defined without choices.**  
**Explanation**      An invalid 'choice' parameter value was supplied to the property editor.  
**Action**              Examine the property editor configuration in the wm-portlet.xml file (this applies only to legacy non-CAF portlets).
- POP.007.0106**      **Illegal property editor "{0}" attribute: "{1}" value: "{2}".**  
**Explanation**      An invalid property editor attribute was encountered.  
**Action**              Examine the property editor configuration in the wm-portlet.xml file (this applies only to legacy non-CAF portlets).

---

<b>POP.007.0107</b>	<b>Illegal property editor "{0}" parameter "{1}" attribute "{2}" value: "{3}".</b>
<b>Explanation</b>	An invalid property editor attribute was encountered.
<b>Action</b>	Examine the property editor configuration in the wm-portlet.xml file (this applies only to legacy non-CAF portlets).
<b>POP.007.0108</b>	<b>Illegal property editor "{0}" parameter "{1}" choice "{2}" attribute "{3}" value: "{4}".</b>
<b>Explanation</b>	An invalid property editor attribute was encountered.
<b>Action</b>	Examine the property editor configuration in the wm-portlet.xml file (this applies only to legacy non-CAF portlets).
<b>POP.007.0109</b>	<b>Property Editor not deployed: "{0}".</b>
<b>Explanation</b>	An incorrect property editor was specified for use
<b>Action</b>	Examine the property editor configuration in the wm-portlet.xml file (this applies only to legacy non-CAF portlets).
<b>POP.007.0110</b>	<b>Illegal Redirect URL: "{0}".</b>
<b>Explanation</b>	An invalid redirect URL was provided.
<b>Action</b>	Check and correct the redirect URL used in the API calls.
<b>POP.009.0001</b>	<b>WebService invocation is disabled for the requested command</b>
<b>Explanation</b>	An attempt was made to invoke a My webMethods Server command as a web service, but the command does not allow invocation as a web service.
<b>Action</b>	1. Enable the command if it is disabled. 2. For some commands it is not possible to execute them with a web service. If this is one of those commands, no other action can be taken.
<b>POP.009.0002</b>	<b>No WebService type mapping found for java class: {0}</b>
<b>Explanation</b>	For a My webMethods Server command being invoked as a web service, one or more of the command bean (input) fields to the command does not have a SOAP serializer (or deserializer) defined. Therefore, the My webMethods Server framework cannot convert the data to a SOAP message.
<b>Action</b>	The command developer must either mark the command as not enabled for web service invocation, or write the custom serializer/deserializer code for the data type and register it in the type mapping registry by overriding the "initializeSOAPMappingRegistry" method of the command Java class.

<b>POP.009.0003</b>	<b>The CommandBean must implement ISoapComplexTypeBean to be used as a WebService</b>
<b>Explanation</b>	For a My webMethods Server command being invoked as a web service, the command bean Java class does not implement the interface that is required to be used as a web service.
<b>Action</b>	The command developer must either mark the command as not enabled for web service invocation, or change the command bean Java class to have it implement the interface.
<b>POP.009.0004</b>	<b>Error initializing ServiceDesc for WebService: {0}</b>
<b>Explanation</b>	An unexpected exception was detected while preparing a My webMethods Server command to be invoked as a web service.
<b>Action</b>	Inspect the stack trace in the My webMethods Server server log files to determine the cause of the exception.
<b>POP.009.0005</b>	<b>No WebService marshalling factories are defined for type {0}, and the type can not be treated as a javabean because it does not contain a public no-arg constructor</b>
<b>Explanation</b>	For a My webMethods Server command being invoked as web service, one of the inputs or outputs is a complex Java class that does not have a no-arg constructor. Therefore, it cannot be automatically marshalled into a SOAP message.
<b>Action</b>	The command developer must either mark the command as not enabled for web service invocation, or add a no-arg constructor to the Java class.
<b>POP.009.0006</b>	<b>SAML or Hybrid authentication can not be used. Please deploy SAML Security Service component or use Basic authentication instead</b>
<b>Explanation</b>	The SAML security service is not available.
<b>Action</b>	Deploy the SAML security service component or use basic authentication instead.
<b>POP.009.0007</b>	<b>Could not find a user context.</b>
<b>Explanation</b>	Cannot find UID for the user.
<b>Action</b>	Specify a correct UID.
<b>POP.009.0008</b>	<b>The SAML service you are trying to access is not available right now.</b>
<b>Explanation</b>	The SAML service is currently unavailable.
<b>Action</b>	Inspect the stack trace in the My webMethods Server log files to determine the cause of the exception.

---

<b>POP.009.0009</b>	<b>Failed to initialize WS-Stack clients within {0} milliseconds. They will be disabled.</b>
<b>Explanation</b>	The Web Services Stack client failed to initialize in the specified period.
<b>Action</b>	Check the OSGi configuration at com.softwareag.platform.config.propsloader or restart My webMethods Server to re-initialize Web Services Stack.
<b>POP.009.0102</b>	<b>{0}: {1} is not a IThingIDList</b>
<b>Explanation</b>	The SOAP serializer that is intended to marshall a IThingIDList object into a SOAP message was passed the wrong type of object.
<b>Action</b>	This is most likely a defect in the way the type mapping registry was initialized. Examine the related code to determine the problem and correct as required.
<b>POP.011.0001</b>	<b>The method "{0}" has not been implemented.</b>
<b>Explanation</b>	An attempt was made to improperly invoke a Dynamic API.
<b>Action</b>	Examine the logs for an indication of what component and user action caused this error.
<b>POP.011.0002</b>	<b>must specify both 'prefix' and 'uri' parameters for 'taglib' directive</b>
<b>Explanation</b>	A syntax error occurred while parsing a JSP page.
<b>Action</b>	Correct the syntax error on the JSP page.
<b>POP.011.0003</b>	<b>expected "{0}" end tag but found "{1}" end tag</b>
<b>Explanation</b>	A syntax error occurred while parsing a JSP page.
<b>Action</b>	Correct the syntax error on the JSP page.
<b>POP.011.0005</b>	<b>"{0}" tag declared invalid by TagExtraInfo</b>
<b>Explanation</b>	A syntax error occurred while parsing a JSP page.
<b>Action</b>	Correct the syntax error on the JSP page.
<b>POP.011.0006</b>	<b>"{0}" tag requires "{1}" attribute</b>
<b>Explanation</b>	A syntax error occurred while parsing a JSP page.
<b>Action</b>	Correct the syntax error on the JSP page.

<b>POP.011.0007</b>	<b>specified attribute "{0}" for "{1}" tag not declared in tld</b>
<b>Explanation</b>	A syntax error occurred while parsing a JSP page.
<b>Action</b>	Correct the syntax error on the JSP page.
<b>POP.011.0008</b>	<b>specified attribute "{0}" value for "{1}" tag cannot be request-time expression</b>
<b>Explanation</b>	A syntax error occurred while parsing a JSP page.
<b>Action</b>	Correct the syntax error on the JSP page.
<b>POP.011.0009</b>	<b>request cannot be null</b>
<b>Explanation</b>	An error occurred while uploading a file.
<b>Action</b>	Check the logs for additional information.
<b>POP.011.0010</b>	<b>saveDirectory cannot be null</b>
<b>Explanation</b>	An error occurred while uploading a file.
<b>Action</b>	Use the Content Service page to ensure that a directory is configured to store the uploaded files.
<b>POP.011.0011</b>	<b>maxPostSize must be positive</b>
<b>Explanation</b>	An error occurred while uploading a file.
<b>Action</b>	Use the Content Service page to ensure that a maximum size for uploaded files is configured.
<b>POP.011.0012E</b>	<b>"{0}" is not a directory.</b>
<b>Explanation</b>	The temporary location for for saving a file upload is not valid.
<b>Action</b>	Delete all files in the Portal/server/default/temp folder.
<b>POP.011.0013W</b>	<b>"{0}" is not writable directory.</b>
<b>Explanation</b>	The temporary location for saving a file upload is not writable.
<b>Action</b>	Make sure My webMethods Server was started by a user who has rights to the portal temp folder.

---

<b>POP.011.0014E</b>	<b>Posted content type "{0}" isn't multipart/form-data.</b>
<b>Explanation</b>	My webMethods Server expects to upload a multipart portlet, but the specified content type does not match.
<b>Action</b>	Check the source file for corruption. If the file is valid and correct, try uploading it again.
<b>POP.011.0015E</b>	<b>Posted content length of "{0}" MB exceeds limit of "{1}" MB.</b>
<b>Explanation</b>	An uploaded file is larger than the size allowed by the system administrator.
<b>Action</b>	Upload a smaller file or have the system administrator use the Content Service Administration portlet to increase the maximum allowed file size.
<b>POP.011.0016E</b>	<b>Separation boundary was not specified.</b>
<b>Explanation</b>	The specified file was corrupted before or during the upload process.
<b>Action</b>	Check the source file for corruption. If the file is valid and correct, try uploading it again.
<b>POP.011.0017E</b>	<b>Corrupt form data. No leading boundary was found.</b>
<b>Explanation</b>	The specified file was corrupted before or during the upload process.
<b>Action</b>	Check the source file for corruption. If the file is valid and correct, try uploading it again.
<b>POP.011.0018E</b>	<b>Malformed line after disposition "{0}"</b>
<b>Explanation</b>	The specified file was corrupted before or during the upload process.
<b>Action</b>	Check the source file for corruption. If the file is valid and correct, try uploading it again.
<b>POP.011.0019E</b>	<b>The published file was empty or invalid.</b>
<b>Explanation</b>	The specified file was corrupted before or during the upload process.
<b>Action</b>	Check the source file for corruption. If the file is valid and correct, try uploading it again.
<b>POP.011.0020E</b>	<b>Content disposition "{0}" is corrupt.</b>
<b>Explanation</b>	The specified file was corrupted before or during the upload process.
<b>Action</b>	Check the source file for corruption. If the file is valid and correct, try uploading it again.

<b>POP.011.0021</b>	<b>Invalid content disposition "{0}".</b>
<b>Explanation</b>	An error occurred while processing the uploaded file.
<b>Action</b>	Investigate the contents of the HTTP POST to see if the data was corrupted.
<b>POP.011.0022E</b>	<b>Content type corrupt "{0}".</b>
<b>Explanation</b>	The specified file was corrupted before or during the upload process.
<b>Action</b>	Check the source file for corruption. If the file is valid and correct, try uploading it again.
<b>POP.011.0023E</b>	<b>Malformed line after disposition "{0}".</b>
<b>Explanation</b>	The specified file was corrupted before or during the upload process.
<b>Action</b>	Check the source file for corruption. If the file is valid and correct, try uploading it again.
<b>POP.011.0024</b>	<b>No file name available.</b>
<b>Explanation</b>	An error occurred while uploading a file.
<b>Action</b>	Examine the contents of the HTTP POST to see if the data was corrupted.
<b>POP.011.0025E</b>	<b>Failed to create a DocumentBuilderFactory.</b>
<b>Explanation</b>	The XML parser appears to be missing.
<b>Action</b>	Check for the xercesImpl.jar file in the portal class path. If the file is missing, reinstall My webMethods Server.
<b>POP.011.0026E</b>	<b>Failed to create a TransformerFactory.</b>
<b>Explanation</b>	The Xalan XSTL processor could not be loaded.
<b>Action</b>	Check for the xalan.jar file in the portal classpath. If the file is missing, reinstall My webMethods Server.
<b>POP.011.0027</b>	<b>JMS already initialized with "{0}".</b>
<b>Explanation</b>	An error occurred during startup.
<b>Action</b>	Ensure that startup routines are invoked only once.

---

<b>POP.011.0028E</b>	<b>JMSProvider: failed to get configuration file.</b>
<b>Explanation</b>	The JMS provider appears to be disconnected.
<b>Action</b>	Verify that the Broker is running and that My webMethods Server can connect to the computer on which the Broker is running.
<b>POP.011.0029E</b>	<b>JMSProvider: failed to get configuration file "{0}", due to "{1}".</b>
<b>Explanation</b>	The JMS provider appears to be disconnected.
<b>Action</b>	Verify that the Broker is running and that My webMethods Server can connect to the computer on which the Broker is running.
<b>POP.011.0030E</b>	<b>JNDI name not found: "{0}".</b>
<b>Explanation</b>	The JMS provider appears to be disconnected.
<b>Action</b>	Verify that the Broker is running and that My webMethods Server can connect to the computer on which the Broker is running.
<b>POP.011.0031</b>	<b>Can't initialize perf service: "{0}".</b>
<b>Explanation</b>	The specified Performance Service failed to initialize.
<b>Action</b>	Check the perfUtils.properties configuration file for spelling errors.
<b>POP.011.0032</b>	<b>Perf Service Not Initialized.</b>
<b>Explanation</b>	An attempt was made to use the Performance Service before it was initialized.
<b>Action</b>	The Performance Service might be disabled. Check the contents of the perfUtils.properties configuration file.
<b>POP.011.0033</b>	<b>Cannot open stream. Location: "{0}".</b>
<b>Explanation</b>	An attempt to access a file failed.
<b>Action</b>	Ensure that the file exists at the specified location.
<b>POP.011.0034E</b>	<b>Size read mismatch "{0}" vs "{1}"</b>
<b>Explanation</b>	An InputStream corruption error occurred.
<b>Action</b>	Examine the _problems_.log file for the stack trace of the error. The stack trace may not provide enough detail to explain why the error was thrown, but it will show where the error originated.

<b>POP.011.0035</b>	<b>Cannot create temporary folder: "{0}"</b>
<b>Explanation</b>	Folder creation failed.
<b>Action</b>	Most likely, the current process lacks Write access to the configured temporary folder.
<b>POP.011.0036E</b>	<b>Unable to delete file: "{0}"</b>
<b>Explanation</b>	An error occurred while removing a temporary file.
<b>Action</b>	Find the specified file and remove it manually.
<b>POP.011.0037E</b>	<b>Unable to delete directory: "{0}"</b>
<b>Explanation</b>	An error occurred while cleaning up temporary files.
<b>Action</b>	Find the specified directory and manually remove the temporary files.
<b>POP.011.0039E</b>	<b>ObjectUtil: illegal arguments.</b>
<b>Explanation</b>	An error occurred while setting a property on an object, because the target object is null or the property name is null or empty.
<b>Action</b>	Examine the <code>_problems_.log</code> file for the stack trace of the error. The stack trace may not provide enough detail to explain why the error was thrown, but it will show where the error originated.
<b>POP.011.0044E</b>	<b>Error obtaining JMS topic for name: "{0}"</b>
<b>Explanation</b>	The requested JMS topic is not available.
<b>Action</b>	Verify that Broker is running and that My webMethods Server can connect to the computer on which Broker is running.
<b>POP.011.0045E</b>	<b>no JMS provider, requesting topic name: "{0}"</b>
<b>Explanation</b>	The JMS provider appears to be disconnected.
<b>Action</b>	Verify that Broker is running and that My webMethods Server can connect to the computer on which Broker is running.
<b>POP.011.0046E</b>	<b>JMSTopic.createTopicSession(), no JMS provider.</b>
<b>Explanation</b>	The JMS provider appears to be disconnected.
<b>Action</b>	Verify that Broker is running and that My webMethods Server can connect to the computer on which Broker is running.

---

<b>POP.011.0047E</b>	<b>Unable to connect to registry.</b>
<b>Explanation</b>	The My webMethods Server configuration registry is unavailable.
<b>Action</b>	In a cluster deployment, make sure the Master server is started before starting the other cluster nodes.
<b>POP.011.0048</b>	<b>no protocol defined for: "{0}"</b>
<b>Explanation</b>	The system tried to load a file from an unknown protocol.
<b>Action</b>	Check the protocol string spelling.
<b>POP.011.0053E</b>	<b>Error obtaining JMS queue for name: "{0}"</b>
<b>Explanation</b>	The requested JMS queue is unavailable.
<b>Action</b>	Verify that Broker is running and that My webMethods Server can connect to the computer on which Broker is running.
<b>POP.011.0054E</b>	<b>no JMS provider, requesting queue name: "{0}"</b>
<b>Explanation</b>	The JMS provider appears to be disconnected.
<b>Action</b>	Verify that Broker is running and that My webMethods Server can connect to the computer on which Broker is running.
<b>POP.011.0055E</b>	<b>JMSTopic.createQueueSession(), no JMS provider.</b>
<b>Explanation</b>	The JMS provider appears to be disconnected.
<b>Action</b>	Verify that Broker is running and that My webMethods Server can connect to the computer on which Broker is running.
<b>POP.011.0056E</b>	<b>Invalid line: "{0}"</b>
<b>Explanation</b>	An error occurred in parsing a .properties file.
<b>Action</b>	Look in the _problems_.log file for the stack trace of the error. The stack trace may not provide enough detail to explain why the error was thrown, but it will show where the error originated.
<b>POP.011.0057E</b>	<b>JMSDestination.Subscriber, unable to create consumer on: "{0}"</b>
<b>Explanation</b>	The JMS provider appears to be disconnected.
<b>Action</b>	Verify that Broker is running and that My webMethods Server can connect to the computer on which Broker is running.

- POP.011.0058E**      **JMSDestination.Subscriber, unable to create session for: "{0}"**  
**Explanation**      The JMS provider appears to be disconnected.  
**Action**              Verify that Broker is running and that My webMethods Server can connect to the computer on which Broker is running.
- POP.011.0062E**      **Stream exhausted.**  
**Explanation**      An error occurred in decoding a BASE64 String.  
**Action**              Examine the \_problems\_.log file for the error stack trace. The stack trace may not provide enough detail to explain why the error was thrown, but it will show where the error originated.
- POP.011.0063E**      **BASE64Encoder: Bad Padding byte.**  
**Explanation**      An error occurred in decoding a BASE64 String.  
**Action**              Examine the \_problems\_.log file for the error stack trace. The stack trace may not provide enough detail to explain why the error was thrown, but it will show where the error originated.
- POP.011.0065**      **There must be a default entry --> default=icon\_def.gif.**  
**Explanation**      The iconMap.properties file is corrupted.  
**Action**              Revert any changes made to this file.
- POP.011.0068**      **Output stream not set for: "{0}"**  
**Explanation**      An error occurred during page rendering.  
**Action**              Check the logs for problems that result in this situation.
- POP.011.0076**      **Unable to convert data type "{0}" to "{1}"**  
**Explanation**      The system failed in the attempted type coercion.  
**Action**              If possible, check the input value to ensure that it can be properly coerced to the target data type.
- POP.012.0001.tagname\_error – Not a valid value!Tag Name cannot contain spaces.**  
**Explanation**      The Tag Name cannot contain spaces.  
**Action**              Make sure the value of the Tag Name field is correct.

**POP.012.0001.wm\_axsrftconfig – This action requires a custom anti-cross-site-request-forgery token.**

**Explanation** An invalid custom token is provided during portlet configuration.  
**Action** Check and, if needed, re-configure the New Secret Interval and Oldest Secret preferences in wm\_axsrftconfig.

**POP.012.0001.wm\_caf\_task – Cannot upload this file as it is empty.Uploading empty files is not allowed.**

**Explanation** Content cannot contain an empty file, therefore uploading is not allowed  
**Action** Make sure that the file contains content.

**POP.012.0001.wm\_calendar – Illegal "{0}" parameter value: "{1}".**

**Explanation** The start date of an entry in the calendar is missing.  
**Action** Specify the start date of the entry in the calendar.

**POP.012.0001.wm\_cforms\_layout – Recursive use of Composite Form for "{0}".**

**Explanation** The composite form for "{0}" is attempting to display an item that displays the same composite form for "{0}". For instance, the composite form for "{0}" is displaying a form containing the same composite form for "{0}"  
**Action** Change the composite form for "{0}" "view" property to a different item.

**POP.012.0001.wm\_commonsearchbar – Search Context Portlet URI is not valid: {0}**

**Explanation** Search context portlet URI is not valid.  
**Action** Specify a valid search context portlet.

**POP.012.0001.wm\_commonsearchresults – Search Context Portlet URI is not valid: {0}**

**Explanation** The search context portlet URI is not valid.  
**Action** Specify a valid search context portlet.

**POP.012.0001.wm\_contentrendererE – Unable to parse regexps: {0}**

**Explanation** The My webMethods Server installation is missing RegEx support jars.  
**Action** Reinstall My webMethods Server.

**POP.012.0001.wm\_dirsearchcontext – This portlet is not intended to be viewed standalone**

**Explanation** This portlet is not intended to be viewed as standalone.  
**Action** Do not view this portlet as a standalone portlet.

**POP.012.0001.wm\_discotres\_forumview – Forum or category not specified.**

**Explanation** The forum or category should not be null.  
**Action** Specify the forum or category for the forum view.

**POP.012.0001.wm\_discotres\_forumwizard – Must specify "parent" property.**

**Explanation** The "parent" property must not be empty.  
**Action** Enter a valid "parent" property.

**POP.012.0001.wm\_discotres\_messageview – Forum message not specified.**

**Explanation** The forum requires some messages for proper notification.  
**Action** Provide the messages needed for the message view resources.

**POP.012.0001.wm\_discotres\_topicview – Forum topic not specified.**

**Explanation** Specify the correct forum topic.  
**Action** Specify a valid forum topic.

**POP.012.0001.wm\_fabric\_addtostart – You already have an instance of this portlet on the target page.**

**Explanation** You already have an instance of this portlet on the target page.  
**Action** Choose another portlet to add.

**POP.012.0001.wm\_formattedxml – No content available for {0}.**

**Explanation** No content can be retrieved from the specified style sheet.  
**Action** Make sure that the style sheet has content.

**POP.012.0001.wm\_inlinecontent – No content available for {0}.**

**Explanation** No content can be retrieved.  
**Action** Make sure the resource has content.

**POP.012.0001.wm\_jazzy – Not a valid dictionary identifier: "{0}".**

**Explanation** The dictionary ID provided is not valid.  
**Action** Provide a valid dictionary ID.

**POP.012.0001.wm\_mws\_diagnostics – No Performance Service is currently available. To enable the Service, please go to the properties page of this portlet.**

**Explanation** No performance service is currently enabled.  
**Action** To enable a service, go to the properties page of the Performance Analysis portlet.

**POP.012.0001.wm\_noodle – Cannot load page content.**

**Explanation** The page fails to load the content.  
**Action** Check if the file exists and if the path of the file is correct.

**POP.012.0001.wm\_noodle\_context\_wiring – This portlet has no UI.**

**Explanation** The specified portlet deployed on the server has no user interface.  
**Action** Go to Folders > Administrative Folders > Administration Dashboard > Configuration > Install Administration and re-install the portlet.

**POP.012.0001.wm\_ntlmv2authadmin – NTLM authentication failed because login has been disabled for the {0} user.**

**Explanation** The Directory Service reports that the 'Diisabled' attribute for the user record is set to true. This user cannot authenticate with My webMethods Server.  
**Action** To enable this user to authenticate with My webMethods Server, set the 'Diisabled' attribute to false in the appropriate directory server.

**POP.012.0001.wm\_portletinportletE – Recursive use of Portlet-in-Portlet for "{0}".**

**Explanation** Portlet-in-Portlet is attempting to display an item that displays the same Portlet-in-Portlet (for instance, the Portlet-in-Portlet is displaying a portal page containing the same Portlet-in-Portlet).  
**Action** Change the Portlet-in-Portlet's "Portal Page" property to a different item.

**POP.012.0001.wm\_principalprofileadmin – You don't have rights to modify the properties of this item.**

**Explanation** The current user does not have sufficient privileges to make changes to this portlet  
**Action** Contact a My webMethods Server system administrator to modify the current user's permissions.

**POP.012.0001.wm\_propertiesE – {0} is not specified.**

**Explanation** The Properties portlet could not locate the object to show its properties.  
**Action** Close and reopen the internet browser window.

**POP.012.0001.wm\_publish.NotLicensed – The "Publish" feature is disabled because this deployment is not licensed.**

**Explanation** The requested feature is not part of the used license.  
**Action** If you want to use this feature, you should buy and install the appropriate license.

**POP.012.0001.wm\_publish.ToEnable – To enable the "Publish" feature please contact webMethods to obtain a Portal license.**

**Explanation** The requested feature is not part of the used license. Contact Software AG to obtain the Portal license to enable the "Publish" feature.  
**Action** To use the "Publish" feature, you should buy and install the appropriate Portal license.

**POP.012.0001.wm\_sessionmonitor – The view "{0}" is not available.**

**Explanation** Unable to fetch the view context from the server.  
**Action** Try republishing the portlet to the server.

**POP.012.0001.wm\_shelladmin – A shell with the system name "{0}" already exists.**

**Explanation** The same system name is not allowed for two different shells. This error occurs when an attempt is made to save a shell with a system name that already exists.  
**Action** Specify a unique system name for the shell.

**POP.012.0001.wm\_shelleditorE – Cannot clone parent's shell section because it is not a Portal Page.**

**Explanation** Some legacy shells created before Portal 6.2 or customer-created shells may have a raw JSP page assigned to a shell section. Such shells cannot be cloned.  
**Action** Rework the legacy shell to use portal pages instead of JSP pages.

**POP.012.0001.wm\_skinadmin – A skin with the system name "{0}" already exists.**

**Explanation** The same system name is not allowed for two different skins. This error occurs when an attempt is made to save a skin with a system name that already exists.  
**Action** Specify a unique system name for the skin.

**POP.012.0001.wm\_skineditorE – {0} is not a valid skin.**

**Explanation** The specified skin object is not a valid portal skin.  
**Action** Log off from My webMethods and log back in.

**POP.012.0001.wm\_spm\_commandex – "{0}" does not identify a user or group.**

**Explanation** The supplied URI is not a valid user or group.  
**Action** Specify a correct URI.

**POP.012.0001.wm\_sysdirsvc – Unable to locate principal: {0}**

**Explanation** The principal cannot be retrieved using the provided principal URI.  
**Action** Check the server log for the principal URI that was used and make sure the principal URI is valid. Contact an administrator if the principal URI is valid but the issue persists.

**POP.012.0001.wm\_table – Illegal "{0}" property value: "{1}".**

**Explanation** An invalid value is specified for the property.  
**Action** Check the log for information about the value that was specified for the property. Specify a valid value for the property.

**POP.012.0001.wm\_tabs – Illegal "{0}" property value: "{1}".**

**Explanation** An invalid value is specified for the property.  
**Action** Check the log for information about the value that was specified for the property. Specify a valid value for the property.

**POP.012.0001.wm\_thumbnailagentE – Error executing external process**

**Explanation** The Thumbnail agent has failed to execute an external process to prepare thumbnails.  
**Action** Use the Install Administration portlet to reinstall the wm\_thumbnailagent portlet.

**POP.012.0001.wm\_tree – Illegal "{0}" property value: "{1}".**

**Explanation** An invalid value is used for the specified property.  
**Action** Check the server log for the value used for the property. Make sure a valid value is used.

**POP.012.0001.wm\_universalpicker – Cannot resolve portlet ID for "{0}".**

**Explanation** Cannot retrieve the thing using the specified ID.

**Action** Check the server log for the ID that cannot be retrieved and make sure that the ID is valid. Contact an administrator if you think that the ID is valid but the error persists.

**POP.012.0001.wm\_userhomefolderE – Empty "{0}" property.**

**Explanation** The user ID is either invalid or was not found.

**Action** Use the User Home folder portlet to refresh the page.

**POP.012.0001.wm\_userprofilewiring – This portlet has no UI.**

**Explanation** The specified portlet deployed on the server has no user interface.

**Action** Go to Folders > Administrative Folders > Administration Dashboard > Configuration > Install Administration and re-install the portlet.

**POP.012.0001.wm\_versionE – Unable to acquire publish portlet controller bean.**

**Explanation** An internal portlet error has occurred.

**Action** Log off from My webMethods and log back in.

**POP.012.0001.wm\_webclipE – Cannot clip from "{0}" because it is not an HTTP resource.**

**Explanation** The Webclip portlet has failed to connect to the specified URL and get its HTML content.

**Action** Check the URL specified for the Webclip portlet.

**POP.012.0001.wm\_wiringE – Can only wire portlets**

**Explanation** An attempt was made to wire a non-portlet.

**Action** You can only wire portlets.

**POP.012.0001.wm\_xt\_dbdirsvc – Directory could not authenticate this user**

**Explanation** The user cannot be authenticated with the specified credentials.

**Action** Make sure the user credentials are valid.

**POP.012.0001.wm\_xt\_dbrole – An error occurred executing the SQL query: "{0}". Please type a valid query and try again.**

**Explanation** The SQL query is invalid.

**Action** The server log contains the invalid SQL query. Use a valid SQL query.

**POP.012.0001.wm\_xt\_extdirsvc – Directory could not authenticate this user**

**Explanation** The user cannot be authenticated with the specified credentials.

**Action** Make sure the user credentials are valid.

**POP.012.0001.wm\_xt\_ldapdirsvc – This directory service does not support creating Users or Groups**

**Explanation** The LDAP directory service does not support creating users or groups.

**Action** Contact an administrator if you want to create users or groups.

**POP.012.0001.wm\_xt\_oauthsvc – Verification of the IdToken failed!**

**Explanation** Verification of the ID Token (security token) that contains claims about the authentication of a user by an authorization server failed. The failure may occur due to the following reasons: 1.The issuer identifier for the OpenID Provider obtained during discovery does not match the value of the iss (issuer) claim.2. The ID Token does not list the client (client\_id) as a valid audience (aud).

**Action** Check the OAuth configuration 'OAuth 2.0 Client Identifier' parameter.

**POP.012.0001.wm\_xt\_portalrules – Unknown rule thing: {0}**

**Explanation** The type of rule cannot be determined.

**Action** Check the server log for the rule ID that cannot be determined and make sure that the ID is valid. Contact an administrator if you think that the ID is valid but the error persists.

**POP.012.0001.wm\_xt\_rssfeed – age not found: {0}**

**Explanation** The specified RSS Feed Resource age "{0}" does not exist.

**Action** Examine the warning message and confirm that the age {0} exists.

**POP.012.0001.wm\_xt\_ruleE – The current IDirectoryUser is null.**

**Explanation** Rule matching has failed to load the user.

**Action** Log off from My webMethods and log back in.

**POP.012.0001.wm\_xt\_samlsecurityservice – The input document contains no elements.**

**Explanation** The input document contains no elements.  
**Action** Make sure that a valid document that is not empty is passed.

**POP.012.0001.wm\_xt\_shell – Cannot delete "{0}" because it is the default system shell.**

**Explanation** The default system shell cannot be deleted.  
**Action** Do not attempt to delete the default system shell.

**POP.012.0001.wm\_xt\_shortcutE – Unhandled object type found for the wm\_xt\_shortcut URL property: {0}**

**Explanation** An invalid object type was referenced by a shortcut.  
**Action** Delete the specified object and start over.

**POP.012.0001.wm\_xt\_skinE – Cannot delete "{0}" because it is the default system skin.**

**Explanation** The portal skin specified as the default skin cannot be deleted.  
**Action** Before deleting the skin, use the Skin Administration portlet to specify another skin as the default.

**POP.012.0001.wm\_xt\_ssolink – Failed to generate SAML artifact, artifact is null**

**Explanation** The SAML artifact cannot be generated.  
**Action** Make sure that the item thing ID and user ID are valid, and that the SAML service is running.

**POP.012.0001.wm\_xtypeviewE – You have not specified an object to display in this portlet.**

**Explanation** The Xtype View portlet does not have a valid target object to display.  
**Action** Update the Xtype View portlet properties and specify a valid DBO to display.

**POP.012.0002.wm\_caf\_task – Cannot connect to webMethods Content Service Platform Server on {0} : {1} . Please make sure the server is available.**

**Explanation** webMethods Content Service Platform is either not running, disconnected, or the environment configuration defined in My webMethods is incorrect.  
**Action** Make sure the CSP server is running; ensure that network connectivity is available; check the CSP environment configuration in My webMethods and verify the connection values.

**POP.012.0002.wm\_commonsearchbar – Search Context Portlet does not implement ISearchContext interface**

**Explanation** The search context portlet does not implement the ISearchContext interface.

**Action** Make sure the search context portlet implements the ISearchContext interface.

**POP.012.0002.wm\_commonsearchresults – Search Context Portlet does not implement ISearchContext interface**

**Explanation** The search context portlet does not implement the ISearchContext interface.

**Action** Make sure the search context portlet implements the ISearchContext interface.

**POP.012.0002.wm\_contentrenderere – Requested content was not found: "{0}"**

**Explanation** The server attempted to download invalid content.

**Action** Verify that valid content is present at the source location and can be downloaded.

**POP.012.0002.wm\_dirsearchcontext – Failed to move to next principal in directory services, service={0}, error={1}**

**Explanation** The directory search cannot continue because an exception was thrown when attempting to go to the next page search. No search results are returned.

**Action** Check the My webMethods Server log for the directory service used for the search and the exception that was thrown. Provide the log details to an administrator.

**POP.012.0002.wm\_discotres\_forumview – Can display listing for forum or category only.**

**Explanation** Only the listing for forum or category is displayed successfully.

**Action** No action required.

**POP.012.0002.wm\_discotres\_forumwizard – Must specify "target" property.**

**Explanation** The "target" property must not be empty.

**Action** Enter a valid "target" property.

**POP.012.0002.wm\_discotres\_messageview – Can display forum message only.**

**Explanation** Only forum messages are displayed successfully.

**Action** No action is required.

**POP.012.0002.wm\_discotres\_topicview – Can display listing for forum topic only.**

**Explanation** Only the listing for forum topic is displayed successfully.  
**Action** No action required.

**POP.012.0002.wm\_jazzy – Not a valid dictionary: "{0}".**

**Explanation** The dictionary specified is not valid.  
**Action** Provide a valid dictionary.

**POP.012.0002.wm\_publish – Please select a type to publish.**

**Explanation** The 'type' input parameter must be set to 'publish'.  
**Action** Provide an allowed value. The 'type' input parameter must be set to 'publish'.

**POP.012.0002.wm\_sessionmonitor – Use this portlet to monitor real-time user activity and send status messages to user(s) via e-mail. Click the appropriate column heading to sort by User Name, Location (Host ID), or Administrator status.**

**Explanation** Use this portlet to monitor real-time user activity and to send status messages to users by e-mail. Click the appropriate column heading to sort by User Name, Location (Host ID), or Administrator status.  
**Action** For more information, see the PDF publication, "My webMethods Server Portlet Reference."

**POP.012.0002.wm\_shelladmin – A shell with the display name "{0}" already exists.**

**Explanation** The same display name is not allowed for two different shells. This error occurs when an attempt is made to save a shell with a display name that already exists.  
**Action** Specify a unique system name for the shell.

**POP.012.0002.wm\_skinadmin – A skin with the display name "{0}" already exists.**

**Explanation** The same display name is not allowed for two different skins. This error occurs when an attempt is made to save a skin with a display name that already exists.  
**Action** Specify a unique display name for the skin.

**POP.012.0002.wm\_skineditor – feature not recognized: {0}**

**Explanation** The feature is not recognized.  
**Action** Contact Software AG Global Support. For contact information, log in to <https://empower.softwareag.com/>.

**POP.012.0002.wm\_spm\_commandex – Invalid argument supplied.**

**Explanation** An invalid argument was supplied as a parameter in the request map.  
**Action** Check the arguments for the command request.

**POP.012.0002.wm\_sysdirsvc – Password attribute is missing**

**Explanation** No password information is provided when creating a new principal.  
**Action** Provide a password attribute when creating a new principal.

**POP.012.0002.wm\_systemcontent – <div class="portlet-msg-error"><h3>Attempted redirect to a restricted host. </h3></div>**

**Explanation** My webMethods Server does not allow redirects to arbitrary URLs. In this case the URL was not configured as an acceptable redirect host.  
**Action** Ask the My webMethods Server administrator to modify the Server Redirect WhiteList to allow redirects to this foreign URL.

**POP.012.0002.wm\_userhomefolder – This user does not have a home folder. Note that the Portal typically does not create a home folder for a user until the user logs in for the first time.**

**Explanation** The user does not have a home folder.  
**Action** Note that the Portal typically does not create a home folder for a user until the user logs in for the first time. Contact an administrator if this problem persists after the user logs in.

**POP.012.0002.wm\_versionE – Unable to acquire target resource: {0}**

**Explanation** An internal portlet error has occurred.  
**Action** Log off from My webMethods and log back in.

**POP.012.0002.wm\_wiringE – {0} is not a normal thing**

**Explanation** An attempt was made to wire an invalid portlet instance.  
**Action** Delete the specified portlet and locate the correct portlet.

**POP.012.0002.wm\_xt\_extdirsvc – This directory service does not support creating Users or Groups**

**Explanation** This external directory service does not support creating users or groups.  
**Action** Create an administrator if you want to create users or groups.

**POP.012.0002.wm\_xt\_ldapdirsvc – This directory service does not support deleting Users or Groups**

**Explanation** The LDAP directory service does not support deleting users or groups.  
**Action** Contact an administrator if you want to delete users or groups.

**POP.012.0002.wm\_xt\_oauthsvc – The discovery document response is not valid.**

**Explanation** Unable to obtain configuration information about the OpenID provider, including information about all the necessary endpoints and public key location.  
**Action** Check the OAuth configuration 'Discovery Document URL' parameter.

**POP.012.0002.wm\_xt\_portalrules – Unable to resolve user id: {0}**

**Explanation** The principal information cannot be retrieved using the specified ID.  
**Action** Check the server log for the principal ID that cannot be retrieved and make sure that the ID is valid. Contact an administrator if you think that the ID is valid but the error persists.

**POP.012.0002.wm\_xt\_rssfeed – refresh interval not found: {0}**

**Explanation** The specified RSS Feed Resource refresh interval "{0}" does not exist.  
**Action** Provide a valid value for the input variable refresh interval :{0}.

**POP.012.0002.wm\_xt\_samlsecurityservice – The SAML artifact is invalid or has expired.**

**Explanation** The SAML artifact is invalid because it provides wrong information for the cluster index.  
**Action** Make sure the SAML artifact has the correct information.

**POP.012.0002.wm\_xt\_shell – Cannot delete "{0}" because it is the base system shell.**

**Explanation** The base system shell cannot be deleted.  
**Action** Do not attempt to delete the base system shell.

**POP.012.0002.wm\_xt\_skinE – Cannot delete "{0}" because it is the base system skin.**

**Explanation** The portal skin specified as the base system skin cannot be deleted.  
**Action** The base portal skin cannot be deleted because it is used as a parent for all other portal skins.

**POP.012.0002.wm\_xt\_wikiobject – Wiki with such name already exists**

**Explanation** A wiki with such a name already exists.  
**Action** Use a unique name for the wiki.

**POP.012.0003.wm\_commonsearchbar – None of the portlet tabs are visible**

**Explanation** None of the portlet tabs are visible for the search bar.  
**Action** Make sure that the search options are set.

**POP.012.0003.wm\_commonsearchresultsE – Failed to parse the max search results setting of "{0}", using default of "{1}"**

**Explanation** The common search code is attempting to build a search query object from a query string that was passed into it. The query string supplied contains an invalid value for the 'maxResults' setting. The warning message is written to the logs and the process continues with the default maxResults value.  
**Action** Make sure the portlet that invokes the API supplies a valid number for the 'maxResults' setting in the search query string. Typically, the end user would not cause this scenario because the wm\_commonsearchbar portlet that usually builds the query string validates the maxResults field before allowing the submission of the search form.

**POP.012.0003.wm\_contentseviceadmin – Cannot start a new content import process because another content import process is currently running.**

**Explanation** You cannot start a new content import process because another content import process is currently running.  
**Action** Wait until the content import in progress completes.

**POP.012.0003.wm\_dirsearchcontext – Failed to convert short move to next principal in directory services, service={0}, error={1}**

**Explanation** The internal ID is not a valid integer.  
**Action** Check the My webMethods Server log for the directory service used for the search and the exception that was thrown. Provide the log details to an administrator.

**POP.012.0003.wm\_discotres\_topicview – Must specify "target" property.**

**Explanation** The "target" property must not be empty.  
**Action** Enter a valid "target" property.

**POP.012.0003.wm\_jazzy – Cannot load dictionary "{0}" because an I/O error occurred.**

**Explanation** The specified dictionary cannot be loaded.  
**Action** Make sure that the dictionary is accessible.

**POP.012.0003.wm\_noodle – Cannot load portlet content.**

**Explanation** The portlet fails to load the content.  
**Action** Check if the portlet has content and if the path of the portlet is correct.

**POP.012.0003.wm\_ntlmv2authadmin – Field [{0}] is required.**

**Explanation** A necessary form field was not provided.  
**Action** Review the form and fill out all required fields, then resubmit.

**POP.012.0003.wm\_sessionmonitor – No sessions are available for this Portal Node.**

**Explanation** No sessions are available for this portal node.  
**Action** Try republishing the portlet to the server.

**POP.012.0003.wm\_shelladminE – The URI "{0}" does not identify a valid shell.**

**Explanation** The shell instance is not a valid portal shell object type.  
**Action** Restart the My webMethods Server to flush the internal caches.

**POP.012.0003.wm\_skinadminE – The URI "{0}" does not identify a valid skin.**

**Explanation** The skin instance is not a valid portal skin type.  
**Action** Restart My webMethods Server to flush the internal caches.

**POP.012.0003.wm\_skineditor – property not recognized: {0}**

**Explanation** The property is not recognized.  
**Action** Make sure this particular editor resource is declared correctly.

**POP.012.0003.wm\_spm\_commandex – Cannot create env entry. Entry already exists.**

**Explanation** There is a duplicate entry with that name.  
**Action** Specify a different name for the entry.

**POP.012.0003.wm\_tree – The "{0}" property value must begin with a '{' character.**

**Explanation** The property value should begin with a "{" character.  
**Action** Make sure that the property value begins with a "{" character.

**POP.012.0003.wm\_wiring – You don't have rights to modify the wiring of this item.**

**Explanation** The current user does not have sufficient permissions to modify the wiring properties of this portlet.  
**Action** Contact your My webMethods Server administrator to modify your user permissions.

**POP.012.0003.wm\_xt\_dbdirsvc – This directory service does not support deleting Users or Groups**

**Explanation** The database directory service does not support deleting users or groups.  
**Action** Contact an administrator if you want to delete users or groups.

**POP.012.0003.wm\_xt\_extdirsvc – This directory service does not support deleting Users or Groups**

**Explanation** This external directory service does not support deleting users or groups.  
**Action** Contact an administrator if you want to delete users or groups.

**POP.012.0003.wm\_xt\_ldapdirsvc – This directory service does not support modifying User or Group memberships**

**Explanation** The LDAP directory service does not support modifying users or groups.  
**Action** Contact an administrator if you want to modify users or groups.

**POP.012.0003.wm\_xt\_oauthsvc – Unable to obtain OSGI service reference: {0}**

**Explanation** The lookup for the OAuth user service failed.  
**Action** If a user service application is defined in the OAuth configuration, check if the user service application is deployed correctly.

**POP.012.0003.wm\_xt\_portalrules – Deprecated method {0} is not valid on wm\_xt\_portalrules**

**Explanation** The method is deprecated and should not be invoked.  
**Action** Use only supported methods.

**POP.012.0003.wm\_xt\_rssfeedE – Unable to find suitable factory for: {0}**

**Explanation** An RSS feed has failed to parse RSS content.

**Action** Choose another RSS feed.

**POP.012.0003.wm\_xt\_samlsecurityservice – Unable to locate principal "{0}".**

**Explanation** Directory principal information cannot be retrieved.

**Action** Make sure the SAML artifact contains correct directory principal information.

**POP.012.0004.wm\_commonsearchbar – Saved Search Name has already been used.**

**Explanation** The saved search name has already been used.

**Action** Specify a different search name.

**POP.012.0004.wm\_commonsearchresults – Failed to retrieve data from : {0} LDAPs**

**Explanation** The specified directory services failed to return a result due to an error.

**Action** Check the My webMethods Server logs for errors related to the specified directory services.

**POP.012.0004.wm\_contentseviceadminE – Content service not found: "{0}".**

**Explanation** The content service is no longer valid.

**Action** If you cannot reconfigure the offending content service by using the Content Service Admin portlet, contact Software AG Global Support for a reset directive.

**POP.012.0004.wm\_dirsearchcontext – Failed to evaluate expression for object, exp={0}, obj={1}, error={2}**

**Explanation** The expression cannot be evaluated.

**Action** Check the My webMethods Server log to determine the expression and the exception that was thrown. Provide the log details to an administrator.

**POP.012.0004.wm\_mws\_diagnostics – Performance Service does not support serialization.**

**Explanation** The currently running performance service does not support data serialization, therefore a snapshot cannot be exported.

**Action** Switch to a performance service that supports serialization.

**POP.012.0004.wm\_ntlmv2authadmin – Jespa library is required.**

**Explanation** NTLMV2 will not function without the Jespa library.

**Action** Contact Software AG Global Support for information about downloading the Jespa library from [jespa.org](http://jespa.org).

**POP.012.0004.wm\_portalaliassearchcontext – One or more of the requested aliases can not be removed**

**Explanation** One or more of the requested aliases can not be removed.

**Action** Before deleting an alias, verify that it exists and that it is not a system alias.

**POP.012.0004.wm\_shelladminE – Cannot delete "{0}" because it is the default system shell.**

**Explanation** The default portal shell cannot be deleted.

**Action** Use the Shell Administration portlet to specify another shell as the default, and then delete the first shell.

**POP.012.0004.wm\_skineditor – can't resolve input source: {0}**

**Explanation** The input resource provided is incorrect.

**Action** Provide the correct input resource.

**POP.012.0004.wm\_spm\_commandex – "{0}" argument not supplied.**

**Explanation** The required argument is not provided.

**Action** Check the provided arguments.

**POP.012.0004.wm\_tree – Cannot render resource as tree fragment.**

**Explanation** The resource content is empty.

**Action** Make sure that the resource has content.

**POP.012.0004.wm\_wiki\_createnew – Please provide the container for wiki**

**Explanation** The container is not provided for the wiki.

**Action** Provide the container for the wiki.

**POP.012.0004.wm\_xt\_dbdirsvc – This directory service does not support modifying User or Group memberships**

**Explanation** The database directory service does not support modifying users or groups.

**Action** Contact an administrator if you want to modify users or groups.

**POP.012.0004.wm\_xt\_extdirsvc – This directory service does not support modifying User or Group memberships**

**Explanation** This external directory service does not support modifying users or groups.

**Action** Contact an administrator if you want to modify users or groups.

**POP.012.0004.wm\_xt\_ldapdirsvc – No valid "{0}" found for the principal "{1}" from "{2}" directory service. Please check if ID attribute is valid in the Directory Services Configuration**

**Explanation** No principal is found in the LDAP directory service using the specified name.

**Action** Use a valid name when searching for the principal in the LDAP directory service.

**POP.012.0004.wm\_xt\_portalrules – Web application is not deployed or available {0}. Cannot evaluate {1}**

**Explanation** The specified web application is not deployed or available. As a result, My webMethods Server cannot evaluate the specified function.

**Action** Make sure that the specified web application is deployed and available.

**POP.012.0005.wm\_contentserviceadminE – Cannot remove default content service.**

**Explanation** The default content service cannot be deleted.

**Action** My webMethods Server disallows the deletion of the default content service.

**POP.012.0005.wm\_dirsearchcontext – Failed to create a directory service iterator, dirService={0}, error={1}**

**Explanation** A problem was encountered while trying to iterate through a directory service.

**Action** Check the server log for information about the directory service and the exception that was thrown. Provide the log details to an administrator.

**POP.012.0005.wm\_jazzy – Please specify text to check.**

**Explanation** The specified text is empty.

**Action** Specify the text to check.

**POP.012.0005.wm\_mws\_diagnostics – Wrong Import File format.**

**Explanation** The file you are trying to import was exported from a performance service that is different from the one currently running.

**Action** Check the portlet preferences and make sure the correct performance service is running.

---

**POP.012.0005.wm\_ntlmv2authadmin – Configuration test failed. Please double check all the required parameters.**

**Explanation** The specified configuration is not valid. NTLMv2 authentication will not succeed until the parameters are corrected.

**Action** Review the NTLMv2 configuration and modify parameters as required.

**POP.012.0005.wm\_portalaliassearchcontext – Unable to add alias "{0}" because an alias with that name already exists.**

**Explanation** Unable to add alias because an alias with that name already exists.

**Action** Create a unique alias name.

**POP.012.0005.wm\_shelladminE – Cannot delete "{0}" because it is the base system shell.**

**Explanation** The shell could not be deleted because it is a parent shell for other deployed shells.

**Action** My webMethods Server explicitly disallows deletion of the base shell.

**POP.012.0005.wm\_skineditor – cannot rename "{0}" to "{1}"**

**Explanation** The field name "{1}" already exists.

**Action** Specify a unique field name.

**POP.012.0005.wm\_spm\_commandex – Neither "{0}" or "{1}" arguments are supplied.**

**Explanation** Neither the first nor the second argument was provided.

**Action** Provide at least one argument.

**POP.012.0005.wm\_xt\_dbdirsvc – Directory could not load principal data, "{0}" attribute is missing**

**Explanation** The principal data cannot be loaded because the specified attribute is missing.

**Action** Check the log file for the missing attribute. Contact an administrator to make sure the specific principal is valid and has the specified attribute.

**POP.012.0005.wm\_xt\_extdirsvc – No data service defined**

**Explanation** The OSGi external directory service could not be found.

**Action** Check if the external directory service is defined correctly.

**POP.012.0005.wm\_xt\_ldapdirsvc – Unable to locate "{0}" directory service. It might have been disabled.**

**Explanation** The LDAP directory service cannot be located.  
**Action** Make sure the LDAP directory service is enabled.

**POP.012.0006.wm\_contentsserviceadmin – You do not have sufficient rights to modify content service "{1}".**

**Explanation** You do not have sufficient rights to modify this content service.  
**Action** An administrator must assign modify permission to the current user. Otherwise, modify the content service as an Administrator user.

**POP.012.0006.wm\_dirsearchcontext – Not a valid attribute filter string, string={0}**

**Explanation** The attribute filter string specified is not valid.  
**Action** Provide a valid attribute filter string. The server log file contains information about the invalid value.

**POP.012.0006.wm\_portalaliassearchcontext – Unable to update alias "{0}" because an existing alias with that name could not be found.**

**Explanation** Unable to update alias because an existing alias with that name could not be found.  
**Action** Select an existing alias to update, or create a new alias.

**POP.012.0006.wm\_shelladmin – "{0}" does not identify a legacy shell.**

**Explanation** The shell instance is not a valid legacy shell object type.  
**Action** Restart the My webMethods Server to flush the internal caches.

**POP.012.0006.wm\_spm\_commandex – Could not modify environment variable. Variable not found**

**Explanation** The variable was not found.  
**Action** Check and refresh the environment variables list.

**POP.012.0006.wm\_xt\_dbdirsvc – An error occurred executing the SQL query: "{0}". Please type a valid query and try again.**

**Explanation** The SQL query is invalid.  
**Action** Make sure that the SQL query is valid. Contact an administrator if you are sure your SQL is valid.

**POP.012.0006.wm\_xt\_extdirsvc – Unable to instantiate class: {0}**

**Explanation** The OSGi external directory service is not defined or exposed correctly.  
**Action** Check if the external directory service is defined correctly.

**POP.012.0006.wm\_xt\_samlsecurityservice – Unable to locate server within cluster to validate the SAML artifact, index={0}**

**Explanation** The server specified in the SAML artifact cannot be located within the cluster.  
**Action** Make sure the SAML artifact contains the correct server index information.

**POP.012.0007.wm\_contentserviceadmin – A content service with a name of "{0}" already exists.**

**Explanation** A content service with the same name already exists.  
**Action** Define a unique name when adding a new content service,

**POP.012.0007.wm\_dirsearchcontext – Not a valid attribute filter string, missing separator, string={0}**

**Explanation** The specified string does not have a valid attribute filter separator.  
**Action** Provide a valid attribute filter separator. You can find the invalid value in the server log file.

**POP.012.0007.wm\_mws\_diagnostics – Performance Service is not running. No data is available.**

**Explanation** No performance service currently is running, so there is no data to display.  
**Action** Enable a performance service and allow time for it to collect some data, then retry.

**POP.012.0007.wm\_portalaliassearchcontext – This portlet is not intended to be viewed standalone**

**Explanation** This portlet is not intended to be viewed as an individual portlet, outside of another portlet.  
**Action** Avoid using this portlet as a single stand-alone portlet.

**POP.012.0007.wm\_shelladmin – Cannot convert legacy shell because it uses JSP pages instead of Portal pages.**

**Explanation** My webMethods Server cannot convert a legacy shell because it uses JSP pages instead of Portal pages.  
**Action** Contact Software AG Global Support. For contact information, log in to <https://empower.softwareag.com/>.

**POP.012.0007.wm\_xt\_dbdirsvc – {0} is required**

**Explanation** The SQL query is invalid because the required property is missing.  
**Action** Make sure the SQL query includes the required property.

**POP.012.0007.wm\_xt\_extdirsvc – Unable to get the OSGI service: {0}**

**Explanation** The OSGi external directory service is not defined or exposed correctly.  
**Action** Check if the external directory service is defined correctly.

**POP.012.0008.wm\_contentserviceadmin – A content service with a root of "{0}" already exists.**

**Explanation** A content service with the same root already exists.  
**Action** Verify that no other service uses the same root location.

**POP.012.0008.wm\_dirsearchcontext – Unable to locate the attribute provider for URI={0}**

**Explanation** The principal attribute provider for the specific directory service cannot be found.  
**Action** Find the directory service in the server log and contact an administrator with the log information.

**POP.012.0008.wm\_migration – Your download should begin shortly.**

**Explanation** Informational message indicating that the download to begin shortly.  
**Action** No action required.

**POP.012.0008.wm\_portalaliassearchcontext – Unable to remove alias "{0}" because it is a system alias**

**Explanation** Unable to remove the alias because it is a system alias.  
**Action** No action available. You cannot delete a system alias.

**POP.012.0008.wm\_xt\_dbdirsvc – {0} "{1}" is invalid. It is missing required field "{2}"**

**Explanation** The SQL query is invalid because the required property is missing.  
**Action** Make sure the SQL query includes the required property.

**POP.012.0009.wm\_portalaliassearchcontext – Unable to remove alias "{0}" because it does not exist**

**Explanation** Unable to remove the alias because it does not exist.  
**Action** Before attempting to delete an alias, verify that it exists.

**POP.012.0009.wm\_xt\_dbdirsvc – {0} "{1}" is invalid. It does not implement case-insensitive lookup for uid attribute**

**Explanation** The database directory service does not support case-insensitive lookup for the UID attribute.

**Action** Check the server log for information about the UID attribute and the query. Contact an administrator to make sure that the database directory service supports case-insensitive lookup for the UID attribute.

**POP.012.0010.wm\_xt\_dbdirsvc – Directory could not load principal "{0}"**

**Explanation** No principal is found in the database directory service using the specified name.

**Action** Use a valid name when searching the principal in the database directory service.

**POP.012.0012.wm\_skineditor – You can not set skin parent to itself**

**Explanation** The skin parent cannot be set to itself.

**Action** The skin parent cannot be set to itself because it is used as a parent for all others.

**POP.012.0015.wm\_migration – May not export resource which does not have a parent**

**Explanation** You cannot export a resource that does not have a parent.

**Action** Ensure that the resource has a valid parent.

**POP.012.0019.wm\_migration – Export failed : Calender Id/Name Invalid**

**Explanation** An invalid Calendar ID or Name is specified for Task Definition export.

**Action** Specify a valid Calendar ID or Name for export. Consult the log file at ..\MWS\server\\logs for further information.

**POP.012.0020.wm\_migration – Export failed : Shell Id/Name Invalid**

**Explanation** An invalid Shell ID or Name is specified for Task Definition export.

**Action** Specify a valid Shell ID or Name for export. Consult the log file at ..\MWS\server\\logs for further information.

**POP.012.0020.wm\_securityrealmadmin – Warning: Selecting 'OK' will permanently remove the SecurityRealm from the system.**

**Explanation** Before proceeding, verify that permanent deletion of the security realm will not affect your application or solution.

**Action** Click OK to permanently remove the security realm from the system.

**POP.012.0021.wm\_migration – Export failed : Skin Id/Name Invalid**

**Explanation** An invalid Skin ID or Name is specified for Task Definition export.

**Action** Specify a valid Skin ID or Name for export. Consult the log file at ..\MWS\server\\logs for further information.

**POP.012.0021.wm\_securityrealmadmin – Warning: Selecting 'OK' will permanently remove this Container and all its contents from the system.**

**Explanation** Before proceeding, verify that permanent deletion of the container will not affect your application or solution.

**Action** Clcik OK to permanently remove this container and all its contents from the system.

**POP.012.0022.wm\_migration – Export failed : Security Realm Id/Name Invalid**

**Explanation** An invalid Security Realm ID or Name is specified for Task Definition export.

**Action** Specify a valid Security Realm ID or Name for export. Consult the log file at ..\MWS\server\\logs for further information.

**POP.012.0023.wm\_migration – Exception Closing Stream continuing with processing**

**Explanation** An exception occurred during resource migration.

**Action** Check the detailed error message and take appropriate action.

**POP.012.0024.wm\_migration – Export failed : Certificate Id/Name Invalid**

**Explanation** An invalid Shell ID or Name was specified for Task Definition export.

**Action** Specify a valid Shell ID or Name for export. Consult the log file at ..\MWS\server\\logs for further information.

**POP.012.0025.wm\_migration – Export failed : Invalid depth specified {0}**

**Explanation** An invalid depth is specified for Task Definition export.

**Action** Specify the valid path for Task Definition export. Consult the log file at ..\MWS\server\\logs for further information.

**POP.012.0026.wm\_migration – Export failed : Invalid URI/alias specified for Export**

**Explanation** An invalid URL or alias has been specified for Task Definition export.

**Action** Specify a valid URL or alias for export. Consult the log file at ..\MWS\server\\logs for further information.

**POP.012.0027.wm\_migration – Export did not containing any DLS Objects**

**Explanation** The DLS object specified for export is not found.  
**Action** Specify the correct object for export. Consult the logs at ..\MWS\server\\logs for more details.

**POP.012.0028.wm\_migration – Export failed : Invalid ID/URI/alias/Name specified for Task Definition Export**

**Explanation** An invalid ID, URL, alias, or Name is specified for Task Definition export.  
**Action** Specify a valid ID, URL, alias, or Name for export. Consult the log file at ..\MWS\server\\logs for further information.

**POP.012.0029.wm\_migration – Export failed : Unable to get the skin archive content for {0}**

**Explanation** Unable to get the field value using the specified path.  
**Action** Consult the log file at ..\MWS\server\\logs for further information.

**POP.012.0032.wm\_migration – The Descriptor file specified is invalid**

**Explanation** An invalid Descriptor file is specified.  
**Action** Specify a valid Descriptor file for export. See the log files in <Software AG\_directory>\MWS\server\\logs for further information.

**POP.012.0033.wm\_migration – Please specify valid target folder path**

**Explanation** An invalid target folder path was encountered while trying to execute migration.  
**Action** Specify a valid target folder path.

**POP.012.0034.wm\_migration – Import failed for entry :-> {0}**

**Explanation** An invalid entry is specified for Task Definition export.  
**Action** See the log files in <Software AG\_directory>\MWS\server\\logs for further information.

**POP.012.0035.wm\_migration – No Task Instances found for Task application name {0} and task\_type\_id {1}**

**Explanation** No task instances are found that match the specified search criteria.  
**Action** Verify that the task application name and task type ID specified for the task instance search are valid. Consult the log file at ..\MWS\server\\logs for further information.

**POP.012.0036.wm\_migration – Export failed : Invalid ID/URI/alias/Name specified for Task Rules Export**

**Explanation** An invalid ID, URL, alias, or Name is specified for Task Rules export.  
**Action** Consult the log file at ..\MWS\server\

**POP.012.0037.wm\_migration – Export successful for :--> {0}**

**Explanation** The specified export completed successfully.  
**Action** No action required.

**POP.012.0038.wm\_migration – Failed to get bizPolicy for :--> {0}**

**Explanation** An invalid bizpolicy is specified.  
**Action** Specify a valid bizPolicy. Consult the log file at ..\MWS\server\

**POP.012.0039.wm\_migration – Failed to get view details for thingID:--> {0}**

**Explanation** The view details for the specified object could not be retrieved.  
**Action** Consult the log file at ..\MWS\server\

**POP.012.0041.wm\_migration – Import functionality is not supported.**

**Explanation** The import function is not supported.  
**Action** No action required.

**POP.012.0055.wm\_migration – Import info file {0} is invalid**

**Explanation** The migration portlet was unable to find the control file that lists the My webMethods Server assets to be imported.  
**Action** The user has specified an invalid path and file for the import control file. Check that the specified file exists and has read permission for the current user.

**POP.012.0056.wm\_migration – Failed to list principals from directory service {0}**

**Explanation** My webMethods Server failed to build a list of principals from the specified directory service. This can happen if the directory service is non-functional and cannot access the underlying directory provider, such as an LDAP server or database.  
**Action** Check the Directory Services Administration portlet to verify that the directory service provider is correctly configured and is enabled. Also check the error logs for directory service provider connection failures.

**POP.012.0058.wm\_migration – WARNING:Command not found: {0}**

**Explanation** My webMethods Server was unable to locate an internal command by name.  
**Action** This is an internal failure and cannot be remedied by the end-user.

**POP.012.0059.wm\_migration – Error applying ACL for {0}**

**Explanation** A general error occurred applying an import ACL to a principal.  
**Action** This is a system error that cannot be remedied by the end-user.

**POP.012.0060.wm\_migration – WARNING: Profile Attribute Import failed: {0}**

**Explanation** A general error occurred when applying the profile attributes to a user during import. The details of the failure will be appended to the error message.  
**Action** This is a system error that cannot be remedied by the end-user.

**POP.012.0061.wm\_migration – Error importing skin {0}**

**Explanation** A general error occurred when importing a skin. The details of the failure are appended to this message.  
**Action** This is a general message meant to capture any errors that occur during skin import. Refer to the My webMethods Server logs or the additional error text to troubleshoot the specific problem.

**POP.012.0062.wm\_migration – Error occurred post-processing ACLs**

**Explanation** A general error occurred applying ACLs to imported users, groups, or roles.  
**Action** This is a general message meant to capture any errors that occur when applying ACLs. Refer to the My webMethods Server logs or the additional error text to troubleshoot the specific problem.

**POP.012.0063.wm\_migration – Rule target not found for {0}.**

**Explanation** The target of a My webMethods Server rule could not be resolved to a specific My webMethods Server object. For example, a shell rule would display this error if it referenced a shell that did not exist.  
**Action** Examine the rule that is reporting the warning to determine the rule target, then confirm that the rule target exists.

**POP.012.0065.wm\_migration – Unable to register datasource {0}**

**Explanation** A general failure occurred importing a datasource.

**Action** This is a general message meant to capture any errors that occur during datasource import. Refer to the My webMethods Server logs or the additional error text to troubleshoot the specific problem.

**POP.012.0067.wm\_migration – Unable to import saved search for {0}**

**Explanation** A general error occurred when importing a set of saved searches for the specified resource (for example, Task List Management or My Inbox).

**Action** This is a general message meant to capture any errors that occur during a saved search import. Refer to the My webMethods Server logs or the additional error text to troubleshoot the specific problem.

**POP.012.0068.wm\_migration – Unable to locate principal for applying saved searches to {0}**

**Explanation** The import includes private saved searches for a user that does not exist in the target My webMethods Server.

**Action** Import or create the missing user and then import the saved searches. Otherwise, this error can be ignored, and the private saved searches will not be imported.

**POP.012.0069.wm\_migration – Unable to locate principal for {0}**

**Explanation** A general warning message that the import references a user, group, or role that could not be located in the target My webMethods Server.

**Action** Make sure any users, groups, or roles used by the asset that generates this warning are imported or created prior to the import.

**POP.012.0070.wm\_migration – Unable to apply members to {0}**

**Explanation** A general error occurred importing the role or group membership.

**Action** This is a general message meant to capture any errors that occur during import. Refer to the My webMethods Server logs or the additional error text to troubleshoot the specific problem.

**POP.012.0073.wm\_migration – Attempting to import deprecated XType {0}**

**Explanation** The import contained a My webMethods Server asset that is no longer supported in My webMethods Server. For example, older versions of wm\_xt\_savedsearch are no longer supported in 8.0 and generate this warning.

**Action** Because the My webMethods Server asset that generated this error is no longer supported, the message is for informational purposes only.

**POP.012.0107.wm\_portalcontent – This is not meant to be viewed**

- Explanation** An attempt was made to view a portal content resource that does not have a user interface.
- Action** Do not attempt to view the portal content resource directly. If the resource must be viewed, you must create a renderer that is capable of displaying a user interface for the object.

**POP.012.1001.wm\_mws\_diagnostics – Cannot find file to parse.**

- Explanation** Unable to load the file for analysis.
- Action** Select a file to upload for analysis.

**POP.012.1002.wm\_mws\_diagnostics – Unable to parse the log file; possible wrong log file format.**

- Explanation** The selected log file cannot be parsed. It is possible that the log file is in an incorrect format.
- Action** Make sure the selected log file is in the appropriate format.

**POP.012.1003.wm\_mws\_diagnostics – Error during XML marshalling. Possible wrong log file format.**

- Explanation** My webMethods Server was unable to parse the xml log file.
- Action** Select a log file generated by My webMethods Server and upload again.

**POP.012.1004.wm\_mws\_diagnostics – Unable to locate default {0}**

- Explanation** Unable to locate default {0}
- Action** Check the My webMethods Server instance configuration.

**POP.012.1005.wm\_mws\_diagnostics – The given host: {0} does not exist**

- Explanation** My webMethods Server was not able to reach the remote host.
- Action** Check the connection settings for the remote host, verify that My webMethods Server has network access to the host, then try again.

**POP.012.1006.wm\_mws\_diagnostics – An error has occurred while downloading the file: {0}**

- Explanation** There was a problem when parsing the file.
- Action** Check the My webMethods Server logs for more details. See  
..\MWS\server\\logs

**POP.012.1007.wm\_mws\_diagnostics – An error has occurred while processing the downloaded file: {0}**

**Explanation** There was a problem processing the file.  
**Action** Check the My webMethods Server logs for more details. See  
..\MWS\server\\logs

**POP.012.wm\_httpheaderauth.userDisabled – HTTP header authentication failed because login has been disabled for the {0} user.**

**Explanation** A My webMethods Administrator disabled the user.  
**Action** Contact your My webMethods Administrator. If the user is not disabled, but this message still appears, contact Software AG.

**POP.013.0005E This item is either inactive or deleted and can not be viewed.**

**Explanation** The item is deleted but has not yet been purged.  
**Action** Use the Deleted Items Administration portlet to remove the deleted items completely from the user interface.

**POP.013.0096 This was not meant to be viewed**

**Explanation** An attempt was made to view a My webMethods DBO that does not have a user interface.  
**Action** Do not attempt to view the resource directly. If the resource must be viewed, you must create a renderer that is capable of displaying a user interface for the object.

**POP.013.0097 Datasource {0} not found**

**Explanation** A portlet is attempting to open a database connection to a data source that is not available on the My webMethods Server.  
**Action** The My webMethods Server administrator should add the missing database connection information using the "Data Sources" portlet.

**POP.013.0099 Unable to construct a secure URL because the MWS secure front end URL is not available**

**Explanation** Constructing a secure URL is not possible because the My webMethods Server secure front-end URL is not available.  
**Action** Make sure that the front-end URL has been specified.

---

<b>POP.013.0100</b>	<b>You must enable JavaScript to use this site.</b>
<b>Explanation</b>	You must enable JavaScript to use this site.
<b>Action</b>	Make sure that JavaScript is enabled.
<b>POP.015.0001</b>	<b>No constant was specified for {0}.</b>
<b>Explanation</b>	When the system attempted to parse a My webMethods Server rule, the syntax expected a number and none was found.
<b>Action</b>	Review the recently modified or uploaded rule to ensure that the syntax is valid.
<b>POP.015.0002</b>	<b>Incorrect number of children. Expected {0} and found {1}.</b>
<b>Explanation</b>	When the system attempted to parse a My webMethods Server rule, the parser expected to find another term and none was found. For instance, the rule might have been a comparison, and only one term was found to compare.
<b>Action</b>	Review the recently modified or uploaded rule to ensure that the syntax is valid.
<b>POP.015.0003</b>	<b>Both child terms must be numbers.</b>
<b>Explanation</b>	When the system attempted to parse a My webMethods Server rule, the parser expected to find a numeric value or a value that can be converted into a number. None was found.
<b>Action</b>	Review the recently modified or uploaded rule to ensure that the syntax is valid.
<b>POP.015.0006</b>	<b>Unknown types for comparison: {0} and {1}.</b>
<b>Explanation</b>	When the system attempted to parse a My webMethods Server rule, the parser expected to find valid terms that can be compared to each other but was unable to do so.
<b>Action</b>	Review the recently modified or uploaded rule to ensure that the syntax is valid.
<b>POP.015.0007</b>	<b>Unable to find object Reference: {0}.</b>
<b>Explanation</b>	When the system attempted to evaluate a My webMethods Server rule, the rule referred to an object reference which could not be located.
<b>Action</b>	Review the recently modified or uploaded rule to ensure that the syntax is valid.

<b>POP.015.0008</b>	<b>No object Reference name is set.</b>
<b>Explanation</b>	When the system attempted to parse a My webMethods Server rule, the parser expected to find an object identifier and none was found.
<b>Action</b>	Review the recently modified or uploaded rule to ensure that the syntax is valid.
<b>POP.015.0009</b>	<b>Incorrect number of children. Expected 0 or 1 and found {0}.</b>
<b>Explanation</b>	When the system attempted to parse a My webMethods Server rule, the parser found an unexpected term in the sequence.
<b>Action</b>	Review the recently modified or uploaded rule to ensure that the syntax is valid.
<b>POP.015.0010</b>	<b>Incorrect number of children. Expected 2 or more and found {0}.</b>
<b>Explanation</b>	When the system attempted to parse a My webMethods Server rule, the parser expected to find additional terms and no more were found. For instance, the rule might have been a comparison, and only one term was found to compare.
<b>Action</b>	Review the recently modified or uploaded rule to ensure that the syntax is valid.
<b>POP.015.0011</b>	<b>Unable to find method to invoke: {0}.</b>
<b>Explanation</b>	When the system attempted to evaluate a My webMethods Server rule, it was unable to invoke the specified method.
<b>Action</b>	Review the recently modified or uploaded rule to ensure that the syntax is valid.
<b>POP.015.0012</b>	<b>Incorrect number of children. Expected 1 or more and found {0}.</b>
<b>Explanation</b>	When the system attempted to parse a My webMethods Server rule, the parser expected to find additional terms and no more were found. For instance, the rule might have been a comparison, and only one term was found to compare.
<b>Action</b>	Review the recently modified or uploaded rule to ensure that the syntax is valid.
<b>POP.015.0013</b>	<b>XML Parse Exception. Expected {0} tag and found {1} tag.</b>
<b>Explanation</b>	When the system attempted to parse a My webMethods Server rule, the parser was unable to find the correct XML schema.
<b>Action</b>	Review the recently modified or uploaded rule to ensure that the syntax is valid.

---

<b>POP.015.0014</b>	<b>XML Parse Exception while parasing tag {0}.</b>
<b>Explanation</b>	When the system attempted to parse a My webMethods Server rule, the parser was unable to find the correct XML schema.
<b>Action</b>	Review the recently modified or uploaded rule to ensure that the syntax is valid.
<b>POP.015.0015</b>	<b>Parse Exception at char: {0} {1}.</b>
<b>Explanation</b>	When the system attempted to parse a My webMethods Server rule, the parser encountered a syntax error at the specified position.
<b>Action</b>	Review the recently modified or uploaded rule to ensure that the syntax is valid.
<b>POP.015.0029</b>	<b>Expected to find matching char "{0}"</b>
<b>Explanation</b>	When the system attempted to parse a My webMethods Server rule, the parser encountered a syntax error at the specified position.
<b>Action</b>	Review the recently modified or uploaded rule to ensure that the syntax is valid.
<b>POP.016.0001</b>	<b>unbalanced end element: expected "{0}" but was "{1}"</b>
<b>Explanation</b>	The optional PrettyPrintingResponseWriter that was enabled manually by the developer to tidy up the rendered html for a page in the web.xml of the webapp, has detected html that was not well-formed.
<b>Action</b>	This should never happen. If this happens a defect in one of the JSF component renderers has not properly closed one of the html tags that was written to the response writer.
<b>POP.016.0002</b>	<b>Portlet Preferences are only available inside the Portlet Context</b>
<b>Explanation</b>	This error message is not used in the current trunk code anymore.
<b>Action</b>	N/A
<b>POP.016.0003</b>	<b>Else control must be preceded directly by If control</b>
<b>Explanation</b>	The CAF view contains an "Else" control without a sibling "If" control.
<b>Action</b>	The developer should change the "Else" control to an "If" control or remove it from the CAF view.

<b>POP.016.0004</b>	<b>Duplicate component ID: {0} (IDs must be unique within naming-container)</b>
<b>Explanation</b>	In a CAF view two controls have the same ID value.
<b>Action</b>	The developer must change the ID of all the controls that are using the same ID to make the control's ID unique.
<b>POP.016.0005</b>	<b>Resource bundle is not available: {0}</b>
<b>Explanation</b>	The specified resource bundle could not be loaded.
<b>Action</b>	The developer should check the resource bundle name to make sure it is correct and make sure the resource bundle file is included in the war file.
<b>POP.016.0006</b>	<b>View source is not found: {0}</b>
<b>Explanation</b>	When attempting to load a CAF .view file, the file was not found.
<b>Action</b>	The developer should inspect the deployed war file to make sure the missing view file exists.
<b>POP.016.0007</b>	<b>Can only switch portlet modes within an action request</b>
<b>Explanation</b>	A portlet attempted to change the portlet mode outside of an action request which is not allowed per the JSR-168 specification.
<b>Action</b>	The developer should change the portlet source code and not attempt to change the portlet mode from a code path that does not originate in a portlet action handler.
<b>POP.016.0008</b>	<b>Unable to locate control ID {0} in view: {1}</b>
<b>Explanation</b>	There was no control in the view that had the specified control id.
<b>Action</b>	The developer should review their application code to make sure the correct control ID is used for the lookup.
<b>POP.016.0009</b>	<b>Connection failed to datasource {0}. Caused by: {1}</b>
<b>Explanation</b>	A SQLException was caught while retrieving the data for a RowSetTableContentProvider.
<b>Action</b>	Review the server log file to inspect the stack trace of the exception to try to determine the cause of the error.

---

<b>POP.016.0010</b>	<b>Search Results Table Control could not be located</b>
<b>Explanation</b>	The Export Table Button control could not find the table control to use for exporting data.
<b>Action</b>	The developer should check the Export For property of the Export Table Button control to make sure it matches the ID of the table control.
<b>POP.016.0011</b>	<b>DateInput component value must be a java.util.Date instance</b>
<b>Explanation</b>	The value bound to a Date Input control is not the expected data type.
<b>Action</b>	The developer should review the binding expression of the Date Input control to make sure it resolves to a java.util.Date object.
<b>POP.016.0012</b>	<b>DateRangeInput component value must be a com.webmethods.caf.faces.data.object.DateRange instance</b>
<b>Explanation</b>	The value bound to a Date Range Input control is not the expected data type.
<b>Action</b>	The developer should review the binding expression of the Date Range Input control to make sure it resolves to a com.webmethods.caf.faces.data.object.DateRange object.
<b>POP.016.0013</b>	<b>managed-bean-scope value "pageflow" should be changed to "session" for managed-bean "{0}" in application "{1}".</b>
<b>Explanation</b>	A managed-bean declaration in the faces-config.xml is using the deprecated pageflow managed-bean-scope.
<b>Action</b>	The application developer should change the managed-bean-scope value pageflow to session for the managed-bean and then rebuild and redeploy the application.
<b>POP.016.0014</b>	<b>ScheduleInput component value must be a com.webmethods.caf.faces.data.object.Schedule instance</b>
<b>Explanation</b>	The value bound to a Schedule Input control is not the expected data type.
<b>Action</b>	The developer should review the binding expression of the Schedule Input control to make sure it resolves to a com.webmethods.caf.faces.data.object.Schedule object.
<b>POP.016.0015</b>	<b>Interval must be set to calculate previous or next date</b>
<b>Explanation</b>	The Schedule.nextDate(..) or Schedule.previousDate(..) api was called but the schedule does not have an interval configured.
<b>Action</b>	Set the interval on the Schedule object before attempting to calculate the next or previous date.

<b>POP.016.0016</b>	<b>Source table provider does not expose currentRow data and thus cannot be used with PageableTableContentProvider.</b>
<b>Explanation</b>	Source table provider does not expose currentRow data and cannot be used with the PageableTableContentProvider.
<b>Action</b>	Review the configuration of the table content provider to ensure that it is configured properly.
<b>POP.016.0017</b>	<b>Cannot find value for script parameter: {0}</b>
<b>Explanation</b>	The value of a script parameter is null.
<b>Action</b>	The developer should review the source of the script parameter value to determine why it has no value.
<b>POP.016.0018</b>	<b>Cannot find control with id "{1}" for script parameter: {0}</b>
<b>Explanation</b>	The control id specified as the value of a script parameter did not match a control in the view.
<b>Action</b>	The developer should review the script parameter value to ensure it matches an existing control in the view.
<b>POP.016.0019</b>	<b>Cannot create null method binding.</b>
<b>Explanation</b>	An attempt was made to create a method binding object without supplying an expression string.
<b>Action</b>	The developer should review the application code to determine why the expression is null.
<b>POP.016.0020</b>	<b>Cannot create null value binding.</b>
<b>Explanation</b>	An attempt was made to create a value binding object without supplying an expression string.
<b>Action</b>	The developer should review the application code to determine why the expression is null.
<b>POP.016.0021</b>	<b>Cannot convert null locale string.</b>
<b>Explanation</b>	The com.webmethods.caf.faces.convert.ConvertUtils.getLocalFromToString API was called with a null string.
<b>Action</b>	The developer should review the application code to determine why the supplied locale string is null.

---

<b>POP.016.0022</b>	<b>Portlet control can only be used within a portlet request</b>
<b>Explanation</b>	The Portlet Include control is used in a non-portlet environment.
<b>Action</b>	Do not use the Portlet Include control in a standalone CAF web application.
<b>POP.016.0023</b>	<b>Cannot export from this context or phase</b>
<b>Explanation</b>	An attempt was made to export a file, but a compatible export handler was not found.
<b>Action</b>	You should not get this error.
<b>POP.016.0024</b>	<b>Cannot export control of specified type (id={0},type={1})</b>
<b>Explanation</b>	An attempt was made to export a control but the control specified was not an UIData based control so it cannot be exported.
<b>Action</b>	The developer should review the configuration of the export button to make sure the correct control is being exported.
<b>POP.016.0027</b>	<b>Cannot parse string "{0}" as date (using pattern "{1}").</b>
<b>Explanation</b>	A Date Import control value was a string but it could not be converted to a Date object.
<b>Action</b>	The developer should verify that the value pattern matches the format of the string bound to the control.
<b>POP.016.0029</b>	<b>The "rowVariable" property must be set to use BoundPropertiesSelectedItemGroupProvider.</b>
<b>Explanation</b>	The rowVariable property must be set to use BoundPropertiesSelectedItemGroupProvider.
<b>Action</b>	The developer should review the application code to ensure that the rowVariable property was set.
<b>POP.016.0030</b>	<b>The "rowType" property must be set to use as an IUpdateableTableContentProvider.</b>
<b>Explanation</b>	An attempt was made to add a new row to an updatable table content provider but the row type was not specified.
<b>Action</b>	The developer should review the application code to ensure that the rowType property was set.

<b>POP.016.0031</b>	<b>Cannot create response for {0}.</b>
<b>Explanation</b>	The CAF view handler was unable to get a response writer to render the output.
<b>Action</b>	This should not occur. If this error occurred, there is a catastrophic problem with the server instance. Other errors in the server logs might provide some guidance.
<b>POP.016.0032</b>	<b>AutoRefresh is not supported</b>
<b>Explanation</b>	An attempt was made to autorefresh a LazyNodeTreeContentProvider instance that does not support autorefresh.
<b>Action</b>	The developer should review the application code to remove any calls to the autorefresh API.
<b>POP.016.0033</b>	<b>NeedRefresh is not supported</b>
<b>Explanation</b>	An attempt was made to mark a LazyNodeTreeContentProvider instance as needing a refresh that does not support autorefresh.
<b>Action</b>	The developer should review the application code to remove any calls to the setNeedRefresh API.
<b>POP.016.0034</b>	<b>Child not in parent's children list</b>
<b>Explanation</b>	There is a problem building the structure of a LazyNodeTreeContentProvider instance.
<b>Action</b>	The developer should review the application code that is providing the values to the tree content provider to make sure that the parent/child relationships of the tree data are correct.
<b>POP.016.0035</b>	<b>The "rowIdBinding" property must be set to add or remove rows to or from a SelectableListTableContentProvider. If the table does not need to be selectable, try using a ListTableContentProvider instead.</b>
<b>Explanation</b>	The rowIdBinding property must be set to add or remove rows to or from a SelectableListTableContentProvider. If the table does not need to be selectable, try using a ListTableContentProvider instead.
<b>Action</b>	Set the rowIdBinding property for a SelectableListTableContentProvider. If the table does not need to be selectable, try using a ListTableContentProvider instead.
<b>POP.016.0036</b>	<b>The "rowIdBinding" property must be set to move rows within a SelectableListTableContentProvider.</b>
<b>Explanation</b>	The rowIdBinding property must be set to move rows within a SelectableListTableContentProvider.
<b>Action</b>	This error message is no longer used.

---

<b>POP.016.0037</b>	<b>Saved Search Not Found: {0}</b>
<b>Explanation</b>	An attempt was made to change the active saved search for a SearchBar control but the target saved search no longer exists.
<b>Action</b>	The end user should refresh the page and select a saved search.
<b>POP.016.0039</b>	<b>cannot load external resource: {0}</b>
<b>Explanation</b>	When loading an app-nav.xml file, there was a reference to an external resource which is not allowed.
<b>Action</b>	The developer should review the app-nav.xml and remove the references to external resources.
<b>POP.016.0040</b>	<b>cannot have more than one root page</b>
<b>Explanation</b>	When loading an app-nav.xml file more than one root page element was detected.
<b>Action</b>	The developer should review the app-nav.xml file to ensure that there is only one root page declared.
<b>POP.016.0042</b>	<b>Error updating control value ("{1}" property of "{0}" control).</b>
<b>Explanation</b>	An error was detected updating a control value. The cause of the error is contain within the message details displayed to the user.
<b>Action</b>	Review the error message details displayed to the user to determine the cause of the error.
<b>POP.016.0043</b>	<b>Toggle target control "{0}" could not be located.</b>
<b>Explanation</b>	The For property in a Toggle control does not resolve to a control.
<b>Action</b>	The application developer should review the application code to ensure that the For property of the toggle control matches the expected target control.
<b>POP.016.0043.details – Check the configuration of the control with this id: {0}</b>	
<b>Explanation</b>	Provides additional details for the "POP.016.0043" error.
<b>Action</b>	See action for the "POP.016.0043" error.
<b>POP.016.0044</b>	<b>Calendar StartDay is not set</b>
<b>Explanation</b>	A calendar control is being rendered but the start day has not been set.
<b>Action</b>	The developer should review the application code to ensure that the calendar has a start day.

- POP.016.0045**      **Invalid value for height property of the "{0}" control.**  
**Explanation**      The value of the height property of a Static Row or Static Cell control is not a valid height.  
**Action**              The developer should review the application code to ensure that the height value is a valid unit of measure.
- POP.016.0046**      **Invalid value for width property of the "{0}" control.**  
**Explanation**      The value of the width property of a Static Row or Static Cell control is not a valid width.  
**Action**              The developer should review the application code to ensure that the width value is a valid unit of unit of measure.
- POP.016.0047**      **Can only reset portlet navigation state within an action request**  
**Explanation**      Portlet navigation state such as if portlet maximized or minimized can only be changed from an ActionRequest  
**Action**              Do not attempt to change the portlet navigate state from the RenderRequest. Use ActionRequest.
- POP.016.0048**      **The target action was invalid**  
**Explanation**      Request portlet action in PortletUrl is invalid and cannot be found  
**Action**              Check the name action being requested and determine if it is defined in the portlet Java code
- POP.016.0048.detail – The target action was: {0}**  
**Explanation**      The request portlet action in PortletUrl is invalid and cannot be found  
**Action**              Check the name action being request and determine if it is defined in the portlet Java code
- POP.016.0049**      **The target action was invalid**  
**Explanation**      It is possible to invoke actions on the designated portlet via PortletURL. To prevent a malicious user from invoking an arbitrarily action on the portlet, each action defined must be annotated in Java code with @PortletAction annotation which instructs MWS runtime that a given action code is allowed when invoked from a url.  
**Action**              Check portlet action definition code, and determine if it has the @PortletAction annotation defined.

**POP.016.0049.detail – The target action requires a @PortletAction annotation: {0}**

**Explanation** It is possible to invoke actions on the designated portlet via PortletURL. To prevent malicious user to invoke an arbitrarily action on the portlet, each action defined must be annotated in Java code with @PortletAction annotation which instructs MWS runtime that a given action code is allowed from a url.

**Action** Check portlet action definition code if it has @PortletAction annotation defined

**POP.016.0050 The target action was invalid**

**Explanation** To prevent cross-site scripting attacks when malicious script might invoke a portlet action using a URL, the URL used to call a portlet action must obtain and use AXSRF token.

**Action** When producing a Portlet URL, make sure that the AXSRF token is included in the URL using com.webmethods.caf.portlet.IPortletUrl.setAXSRFT(true) API.

**POP.016.0050.detail – The target action "{0}" requires an anti-xsrft token.**

**Explanation** To prevent cross-site scripting attacks when malicious script might invoke a portlet action using an URL, the URL used to call a portlet action must obtain and use an AXSRF token.

**Action** When producing a Portlet URL, make sure that an AXSRF token is included in the URL using com.webmethods.caf.portlet.IPortletUrl.setAXSRFT(true) API.

**POP.016.0051 The target action was invalid**

**Explanation** To prevent cross-site scripting attacks when malicious script might invoke a portlet action using an URL, the URL used to call a portlet action must obtain and use a valid AXSRF token.

**Action** When producing a Portlet Url, make sure that AXSRF token is included in the URL using com.webmethods.caf.portlet.IPortletUrl.setAXSRFT(true) API.

**POP.016.0052 The target action was invalid**

**Explanation** The Portlet Url can invoke portlet actions from a URL. If the CAF application does not force use of Annotated Portlet Actions, see CAF documentation for more details, then it is possible to use a JSF binding expression to specify the action to invoke. This error is thrown if binding expression does not resolve to a valid method.

**Action** Check and correct the binding expression used for portlet action because it does not resolve to a valid action method.

**POP.016.0052.detail – The target action was: {0}**

**Explanation** The Portlet Url can invoke portlet actions from a URL. If the CAF application does not force the use of Annotated Portlet Actions, see the CAF documentation for more details, then it is possible to use a JSF binding expression to specify the action to invoke. This error is thrown if binding expression does not resolve to a valid action method.

**Action** Check and correct binding expression used for portlet action because it does not resolve to a valid action method.

**POP.016.0053 Invalid content type. The allowed content types are: {0}**

**Explanation** An attempt was made to upload a file of an unsupported type to an Attachment Panel control.

**Action** Upload a file of a supported type for attachments.

**POP.016.0054 Invalid file extension. The allowed file extensions are: {0}**

**Explanation** An attempt was made to upload a file of an unsupported type to an Attachment Panel control.

**Action** Upload a file type that is supported as an attachment.

**POP.016.0055 Invalid file size. The maximum file size is: {0}**

**Explanation** The file uploaded to an Attachment Panel control is larger than the allowed size of an attachment.

**Action** Upload a smaller file.

**POP.017.0001 Task is locked and you may not update it at this time. Please wait till task is unlocked**

**Explanation** Task instance is locked in following cases: when a task is being updated, or when task events and assignments are being processed. To ensure state consistency when a task is locked, no other updates to the task are possible (though the task can still be read and searched on). Typically lock time is very short (similar to database transaction).

**Action** Enable MWS "task" logging category Debug logging and investigate timing and duration of task locks.

**POP.017.0003 Task auditing level is not sufficient to rollback task state**

**Explanation** Task state should be kept in task audit in order for task rollback to function. If task state is not present in the audit, rollback is not possible

**Action** Make sure to audit full task state. Task audit options can be controlled as properties on task definition object. You must login as sysadmin, browse to /task.storage, navigate to "Task Definitions" and open properties of task type, then change audit settings.

---

<b>POP.017.0004</b>	<b>You don't have permissions to queue new task</b>
<b>Explanation</b>	User does not have a task functional privilege to queue task of specific task type.
<b>Action</b>	Configure Permissions on the user to enable "Queue Task" functional privilege.
<b>POP.017.0007</b>	<b>You don't have permissions to view this task</b>
<b>Explanation</b>	<p>The current user does not have permission to view task information.</p> <p>Prior to MWS_7.1.3_Fix9, the mechanism to determine if a user had permission to view a task required the user to hold "view task data" permission. With the introduction of MWS_7.1.3_Fix9, the user/role must have this permission and also must be present in the "assigned to" or "delegated to" lists. Under these conditions, if the user holds only "view task data" permission, permission to view the task is denied and this error occurs.</p> <p>A task client option, task.base.permission, is available to apply the simpler "view task data" permission even if MWS_7.1.3_Fix9 is applied. For more information, see the Task Engine Optional Settings section in the PDF publication, Task Engine User's Guide.</p>
<b>Action</b>	<p>If your system does not have MWS_7.1.3_Fix9 applied, make sure that the user holds "view task data" permission.</p> <p>If your system has MWS_7.1.3_Fix9 applied, make sure the user holds "view task data" permission and is also present on the "assigned to" or "delegated to" lists. Also, see the explanatory text above concerning the task.base.permission option.</p>
<b>POP.017.0008</b>	<b>You don't have permissions to view task data</b>
<b>Explanation</b>	Current User does not have permissions to view task business data.
<b>Action</b>	Configure Permissions on the user to enable "View Task Data" functional privilege.
<b>POP.017.0009</b>	<b>You don't have permissions to view audit log</b>
<b>Explanation</b>	Current user does not have permissions to view task audit.
<b>Action</b>	Configure Permissions on the user to enable "View Task Audit" functional privilege.
<b>POP.017.0010</b>	<b>You don't have permissions to accept this task</b>
<b>Explanation</b>	Current user does not have permissions to accept task instance.
<b>Action</b>	Configure Permissions on the user to enable "Accept Task" functional privilege.

<b>POP.017.0011</b>	<b>You don't have permissions to accept other users on this task</b>
<b>Explanation</b>	Current user does not have permissions to accept task instance.
<b>Action</b>	Configure Permissions on the user to enable "Accept Task" functional privilege.
<b>POP.017.0012</b>	<b>You don't have permissions to assign this task</b>
<b>Explanation</b>	Current user does not have permissions to assign task instance.
<b>Action</b>	Configure Permissions on the user to enable "Assign Task" functional privilege.
<b>POP.017.0013</b>	<b>You don't have permissions to rollback this task</b>
<b>Explanation</b>	Current user does not have permissions to rollback task instance.
<b>Action</b>	Configure Permissions on the user to enable "Rollback Task" functional privilege.
<b>POP.017.0014</b>	<b>You don't have permissions to modify task data</b>
<b>Explanation</b>	Current user does not have permissions to update task business data.
<b>Action</b>	Configure Permissions on the user to enable "Modify Task Data" functional privilege.
<b>POP.017.0015</b>	<b>You don't have permissions to modify task info</b>
<b>Explanation</b>	Current user does not have permissions to update generic task info properties.
<b>Action</b>	Configure Permissions on the user to enable "Modify Task Info" functional privilege.
<b>POP.017.0016</b>	<b>Task Type ID is not valid {0}</b>
<b>Explanation</b>	This error is reported when attempting to queue a task and specifying an invalid task type ID (from APIs).
<b>Action</b>	Check if the specified Task Type is deployed to MWS.
<b>POP.017.0017</b>	<b>Task ID is not valid {0}</b>
<b>Explanation</b>	This error is reported when attempting to operate on invalid task.
<b>Action</b>	Check if the specified task is still available in MWS, it may already be deleted.
<b>POP.017.0018</b>	<b>Unable to find task client bean: {0}</b>
<b>Explanation</b>	During task searches, assignments and events evaluation, Task Engine needs access to task generated beans which are part of task application. This error is reported when it fails to instantiate these beans.
<b>Action</b>	Check if task application was deployed properly, and if there are any errors in the install.log, re-install task application.

---

<b>POP.017.0020</b>	<b>Cannot obtain FacesContext for Task application: {0}</b>
<b>Explanation</b>	Indicates that task application was not properly deployed.
<b>Action</b>	Investigate any possible errors during task application installation. Re-install task application.
<b>POP.017.0022</b>	<b>You don't have permissions to delegate this task</b>
<b>Explanation</b>	Current user does not have permissions to delegate task instance.
<b>Action</b>	Configure Permissions on the user to enable "Delegate Task" functional privilege.
<b>POP.017.0024</b>	<b>You don't have permissions to complete this task</b>
<b>Explanation</b>	Current user does not have permissions to complete task instance.
<b>Action</b>	Configure Permissions on the user to enable "Complete Task" functional privilege.
<b>POP.017.0025</b>	<b>You don't have permissions to cancel this task</b>
<b>Explanation</b>	Current user does not have permissions to cancel task instance.
<b>Action</b>	Configure Permissions on the user to enable "Cancel Task" functional privilege.
<b>POP.017.0026</b>	<b>You don't have permissions to suspend this task</b>
<b>Explanation</b>	Current user does not have permissions to suspend task instance.
<b>Action</b>	Configure Permissions on the user to enable "Suspend Task" functional privilege.
<b>POP.017.0027</b>	<b>You don't have permissions to resume this task</b>
<b>Explanation</b>	Current user does not have permissions to resume task instance.
<b>Action</b>	Configure Permissions on the user to enable "Resume Task" functional privilege.
<b>POP.017.0028</b>	<b>User {0} not found</b>
<b>Explanation</b>	This error is reported when using Task Engine API from WmTaskClient IS package and "impersonated" user name is not valid.
<b>Action</b>	Check the name of the "impersonated" user in the Task Engine API calls.
<b>POP.017.0029</b>	<b>You can not rollback non-Active task</b>
<b>Explanation</b>	Only tasks in "Active" state can be rolled back.
<b>Action</b>	Set the status of the task to "Active".

<b>POP.017.0030</b>	<b>You can not queue new task. Task type is not enabled</b>
<b>Explanation</b>	Task Type, which the task is about to be queued for, is disabled.
<b>Action</b>	Enable the Task Type from the Task Engine Administration.
<b>POP.017.0032</b>	<b>Connecting user does not have Impersonate Users privilege</b>
<b>Explanation</b>	When using remote Task Engine API (from WmTaskClient IS package or web services), the API allows to impersonate user so task operations are performed on behalf of a different user. This is useful because typically passwords of end user are not known, so 'sysadmin' account should be used for remote APIs invocation. It is possible to connect to remote API using a non-sysadmin account, but in this case the user account needs to have "Impersonate Users for Remote Clients" Task Engine privilege.
<b>Action</b>	Grant the user the "Impersonate Users for Remote Clients" Task Engine privilege.
<b>POP.017.0033</b>	<b>You can not update non-Active task: {1}</b>
<b>Explanation</b>	Tasks whose status is "Completed", "Cancelled" or "Expired" cannot be updated.
<b>Action</b>	Administrator can set task status back to "Active".
<b>POP.017.0034</b>	<b>You can not rollback non-Active task</b>
<b>Explanation</b>	Tasks whose status is "Completed", "Cancelled" or "Expired" cannot be rolled back.
<b>Action</b>	Administrator can set task status back to "Active".
<b>POP.017.0037</b>	<b>Task is out of date, please refresh</b>
<b>Explanation</b>	Task Engine updates from UI or API implement "optimistic locking" to ensure that data being updated is up-to-date. This error is reported if task data being passed in from UI or API call is not the latest.
<b>Action</b>	UI needs to be refreshed to reload up-to-date task data. When using Task Engine APIs task data needs to be re-loaded.
<b>POP.017.0039</b>	<b>You don't have permissions to add task comments</b>
<b>Explanation</b>	Current user does not have permissions to add comments to task instance.
<b>Action</b>	Configure Permissions on the user to enable "Add Comment" functional privilege.

---

<b>POP.017.0040</b>	<b>You don't have permissions to delete task comments</b>
<b>Explanation</b>	Current user does not have permissions to delete comments from task instance.
<b>Action</b>	Configure Permissions on the user to enable "Delete Comments" functional privilege.
<b>POP.017.0041</b>	<b>You don't have permissions to delete other user's task comments</b>
<b>Explanation</b>	Current user does not have permissions to delete comments from task instance which were created by other people.
<b>Action</b>	Configure Permissions on the user to enable "Delete Other People's Comment" functional privilege.
<b>POP.017.0042</b>	<b>You don't have permissions to create new collaboration tasks</b>
<b>Explanation</b>	Current user does not have permissions to queue collaboration task of another task.
<b>Action</b>	Configure Permissions on the user to enable "Queue Collaboration Tasks" functional privilege.
<b>POP.017.0045</b>	<b>You can not update suspended task</b>
<b>Explanation</b>	If current task status is "Suspended", it can only be updated back to "Active" status. No other updates are allowed.
<b>Action</b>	Administrator can set task status back to "Active".
<b>POP.017.0051</b>	<b>You can not set the parent task ID using the self task ID</b>
<b>Explanation</b>	This error is reported when attempting to update an existing task via APIs and set its "parentTaskID" property to the ID of the task itself.
<b>Action</b>	Check "parentTaskID" being set.
<b>POP.017.0052</b>	<b>You can not set the parent task ID using non integer value</b>
<b>Explanation</b>	This error is reported when updating or queuing a new task via API and "parentTaskID" property is not a valid task ID value.
<b>Action</b>	Check value of "parentTaskID" being used.
<b>POP.017.0053</b>	<b>You can not set the parent task ID using invalid task ID</b>
<b>Explanation</b>	This error is reported when updating or queuing a new task via API and "parentTaskID" property is not a valid task ID value.
<b>Action</b>	Check "parentTaskID" value used.

**POP.017.0061      You can not set the delegated to or delegated from list if their size does not match**

**Explanation**      When updating task delegation via APIs both "delegatedFromList" and "delegatedToList" list values should contain the same number of items.

**Action**              Check "delegatedFromList" and "delegatedToList" values used.

**POP.017.0071      Task indexTableDis is null or emptys**

**Explanation**      Invalid task index configuration is provided from taskDefinition.xml file.

**Action**              Re-create task index configuration by re-configuring task index fields in Designer.

**POP.017.0072      Task indexTableDis format is invalid: {0}**

**Explanation**      Invalid task index configuration is supplied in taskDefinition.xml file.

**Action**              Re-create task index configuration by re-configuring task index fields in Designer.

**POP.017.0090      Failed to invoke IS service: {0}**

**Explanation**      Failed to invoke IS service when executing task decision table assignment. The reason could be that related rule project is not deployed on the corresponding IS server, or that IS service parameters, such as project name, rule set name, etc. are invalid.

**Action**              Please make sure the related rule project is deployed and correct IS service parameters are used when configuring task decision table assignment.

**POP.017.0091      You can not change status of scheduled task**

**Explanation**      If the current status of the task is "scheduled", no other status updates are allowed.

**POP.017.0092      You can not update task schedule date if task not in scheduled status**

**Explanation**      The task schedule date field cannot be updated if the task is not in a "scheduled" status.

**POP.017.0093      Task Schedule Date cannot be before current date**

**Explanation**      The Task Schedule Date attribute specifies the start time of the schedule. However, the value specified in the Task Schedule Date element is for a start time that is before the current time.

**Action**              Specify a date/time value for the Task Schedule Date attribute that is after the current time.

---

<b>POP.017.0094</b>	<b>Task Schedule Date cannot be after Expire date</b>
<b>Explanation</b>	The Task Schedule Date attribute specifies the start time of the schedule. However, the value specified in the Task Schedule Date element is for starting the schedule after the Expire date of the schedule.
<b>Action</b>	Specify a date/time value for the Task Schedule Date attribute that is before the Expire date.
<b>POP.017.0095</b>	<b>You can not change status of active/suspended task to scheduled</b>
<b>Explanation</b>	Tasks with an "active" or "suspended" status cannot be updated to "scheduled".
<b>POP.017.0096</b>	<b>You can not accept a scheduled task</b>
<b>Explanation</b>	Tasks with a "scheduled" status cannot be accepted.
<b>POP.017.0097</b>	<b>Child task schedule date cannot be before parent task schedule date</b>
<b>Explanation</b>	A child task should be scheduled to start after its parent task started.
<b>Action</b>	Reschedule the child task for a date after the parent task's start date. Alternatively, move back the parent task schedule date.
<b>POP.017.0098</b>	<b>Child task schedule date cannot be after parent task expiredate</b>
<b>Explanation</b>	A child task should be scheduled for a date before its parent task expires.
<b>Action</b>	Reschedule the child task for a date before the parent task's expiration date. Alternatively, extend the parent task's expiration date.
<b>POP.017.0100</b>	<b>Task has reached maximum number of modifications</b>
<b>Explanation</b>	The task has reached the maximum number of modifications set by the Infinite Loop task rule.
<b>Action</b>	Keep a smaller number of modifications to avoid such an error.
<b>POP.017.0101</b>	<b>Unhandled Exception during rule processing. Rule [{0}]</b>
<b>Explanation</b>	An exception was caught during processing Task Rules.
<b>Action</b>	Check the My webMethods Server logs at ..\MWS\server\ <instancename>\logs for additional exception details to determine the cause.</instancename>

<b>POP.017.0102</b>	<b>Unhandled Exception during task change processing</b>
<b>Explanation</b>	An exception was thrown while publishing a new notification or processing task events.
<b>Action</b>	Check the My webMethods Server logs at ... \MWS\server\<instanceName>\logs for additional exception details to determine the cause.
<b>POP.017.0103</b>	<b>Unable to deliver task completion to Process runtime (PRT)</b>
<b>Explanation</b>	Task completion cannot be delivered to the Process runtime.
<b>Action</b>	Check the My webMethods Server logs at .. \MWS\server\<instanceName>\logs for additional exception details to determine the cause.
<b>POP.017.0104</b>	<b>Process runtime (PRT) task step failed</b>
<b>Explanation</b>	An exception was thrown while processing the task completion. Most likely the time for redelivery was exceeded.
<b>Action</b>	Check the My webMethods Server logs at .. \MWS\server\<instanceName>\logs for additional exception details to determine the cause.
<b>POP.017.0106</b>	<b>Indexed task searches are not available in Preview Server. Please use standalone MWS server instead</b>
<b>Explanation</b>	Indexed task searches are not available when the portal system is running in a preview server mode.
<b>Action</b>	Use a standalone My webMethods Server instead.
<b>POP.017.0107</b>	<b>Cannot process rule [{0}] for Task [{1}] due to [{2}]</b>
<b>Explanation</b>	An exception was thrown while processing the task rule, which may mean that the task cannot be found.
<b>Action</b>	Check the My webMethods Server logs at .. \MWS\server\<instanceName>\logs for additional exception details to determine the cause.
<b>POP.017.0108</b>	<b>Failed to acquire lock for [{0}] in {1} milliseconds</b>
<b>Explanation</b>	The exception occurs when a timeout occurs while waiting to acquire a task lock in the task locking service.
<b>Action</b>	Internally used. Some handlers may re-send an event to be re-delivered later.

---

<b>POP.017.0120</b>	<b>RuleName is null or empty</b>
<b>Explanation</b>	The RuleName attribute of the schedule rule to be added or updated cannot be null.
<b>Action</b>	Specify a valid non-null RuleName attribute.
<b>POP.017.0121</b>	<b>TaskTypeID is null or empty</b>
<b>Explanation</b>	The TaskTypeID attribute of the schedule rule to be added or updated cannot be null.
<b>Action</b>	Specify a valid non-null TaskTypeID attribute.
<b>POP.017.0122</b>	<b>StartDate is null or empty</b>
<b>Explanation</b>	The StartDate attribute of the schedule rule to be added or updated cannot be null.
<b>Action</b>	Specify a valid non-null StartDate attribute.
<b>POP.017.0123</b>	<b>Failed to obtain a task index engine manager for: {0}.</b>
<b>Explanation</b>	Task Engine cannot obtain a task index engine manager of the specified type.
<b>Action</b>	Verify whether: 1. The specified task index manager is registered as an OSGi service. 2. The OSGi service id for the task index manager is correct. 3. The service is running without errors in the My webMethods Server OSGi runtime.
<b>POP.018.0001</b>	<b>IView object does not support indexed properties</b>
<b>Explanation</b>	A binding expression attempted to resolve a property of an IView object by index. This operation is not supported.
<b>Action</b>	The ViewPropertyResolver does not support lookup of a property by index. Change the application code so that it does not attempt an unsupported operation.
<b>POP.018.0002</b>	<b>IView object is readonly</b>
<b>Explanation</b>	A binding expression attempted to update a property of an IView object which is not supported.
<b>Action</b>	The ViewPropertyResolver does not support update of an IView property. Change the application code so that it does not attempt an unsupported operation.
<b>POP.018.0003.DirSearchProvider – Failed to move to next principal in directory services, service={0}, error={1}</b>	
<b>Explanation</b>	An unexpected exception occurred during the directory service search API call.
<b>Action</b>	Review the server log files for the stack trace of the cause.

**POP.018.0004.DirSearchProvider – Failed to evaluate expression for object, exp={0}, obj={1}, error={2}**

**Explanation** An unexpected error was caught while evaluating the value of the property used to sort the principal.

**Action** Review the server log files for the stack trace of the cause.

**POP.018.0005.DirSearchProvider – Failed to create a directory service iterator, dirService={0}, error={1}**

**Explanation** An unexpected error was caught while creating a directory service iterator.

**Action** Review the server log files for the stack trace of the cause.

**POP.018.0006.DirSearchProvider – Unable to locate the attribute provider for URI={0}**

**Explanation** While filtering a principal by an attribute, the provider of the attribute was not located.

**Action** Check the server to make sure the logged provider URI resolves to a attribute provider.

**POP.018.0007.AttachmentsProvider – Attachments container id is not valid: {0}**

**Explanation** The attachments provider for an Attachment Panel control does not have a valid container id for read/write of attachment files.

**Action** The developer should review the application code to ensure the attachment provider container id is a valid folder id or alias.

**POP.018.0008.AttachmentsProvider – Specified attachments container id is not a container: {0}**

**Explanation** The attachments provider for an Attachment Panel control does not have a valid container id for read/write of attachment files.

**Action** The developer should review the application code to verify that the attachment provider container id is a valid folder id or alias.

**POP.018.0009.AttachmentsProvider – Attachment id has not been specified**

**Explanation** The attachments provider updateAttachment or removeAttachment API was called but the attachment id parameter was null.

**Action** The developer should review the application code to verify that the API calls are passing an attachment id value that is not null.

**POP.018.0010.AttachmentsProvider – FileItem has not been specified**

**Explanation** The attachments provider addAttachment or updateAttachment API was called but the fileItem parameter was null.

**Action** The developer should review the application code to verify that the API calls are passing a fileItem value that is not null.

**POP.018.0011.AttachmentsProvider – The specified attachment id is not a child of the attachment container: {0}**

**Explanation** The attachments provider updateAttachment or removeAttachment API was called with an attachment id that is not a child of the attachments container.

**Action** The developer should review the application code to verify that the API calls are passing an attachment id value that is a child of the attachments folder.

**POP.019.0001 Unable to convert data type "{0}" to "{1}"**

**Explanation** The system failed to convert an object from the source data type to the destination data type.

**Action** Review the error stack trace in the My webMethods Server server logs to determine the cause.

**POP.019.0002 Cannot load "{0}" because it is not an HTTP resource**

**Explanation** The html parser failed to load the resource.

**Action** Inspect the error stack trace in the My webMethods Server server logs to determine the cause.

**POP.023.0001 Failed to start HPSTRA engine**

**Explanation** An error occurred and the HPSTRA engine failed to start.

**Action** Check the HPSTRA configuration and restart My webMethods Server.

**POP.023.0002 Failed to save HPSTRA configuration**

**Explanation** An internal error occurred when saving the specified HPSTRA configuration.

**Action** Gather error information from the logs and contact Software AG Global Support.

**POP.023.0003 Failed to configure HPSTRA engine**

**Explanation** An error occurred when configuring the HPSTRA engine.

**Action** Gather error information from the logs and contact Software AG Global Support.

**POP.023.0004 Error occurred while stopping HPSTRA**

**Explanation** An internal error occurred when stopping the HPSTRA engine.

**Action** Gather error information from the logs and contact Software AG Global Support.

- POP.023.0005**      **Invalid HPSTRA configuration specified. Details: {0}**  
**Explanation**      The specified HPSTRA congfiguration is invalid or incomplete.  
**Action**              Check the HPSTRA configuration and retry the previous operation.
- POP.023.0006**      **Failed to perform operation, HPSTRA engine is not enabled. Please configure it properly**  
**Explanation**      The HPSTRA engine is disabled and cannot perform the requested operation.  
**Action**              Enable the HPSTRA engine and retry the operation.
- POP.023.0007**      **HPSTRA action execution failed, Reason:**  
**Explanation**      An internal error occurred and the HPSTRA engine failed to execute the requested operation.  
**Action**              Gather error information from the server logs and contact Software AG Global Support.
- POP.023.0009**      **Failed to authenticate against an Elasticsearch instance, please check your credentials**  
**Explanation**      The user name and/or password, specified in the HPSTRA configuration are not valid.  
**Action**              Check your credentials in the Authentication section of the HPSTRA configuration and retry the operation.
- POP.023.0010**      **An Elasticsearch exception occurred. Details: {0}**  
**Explanation**      The Elasticsearch server returned an error message in response to the request from the HPSTRA engine.  
**Action**              Gather error information from the logs and contact Software AG Global Support.
- POP.101.0001.com.softwareag.caf.shared.diagnostics – The directory does not exist**  
**Explanation**      The specified directory is not found.  
**Action**              Provide a valid directory location as a parameter.
- POP.101.0002.com.softwareag.caf.shared.diagnostics – The specified path is not a valid directory**  
**Explanation**      The specified location is not a directory.  
**Action**              Provide a valid directory location as a parameter.

**POP.101.0006.com.softwareag.caf.shared.diagnostics – Unsupported report type**

**Explanation** A report was generated by an AeventProcessor which is not supported.  
**Action** Use an existing report or add the new one to the list of supported reports in LogAnalyzer.java

**POP.101.0007.com.softwareag.caf.shared.diagnostics – An error occurs while adding a root element to the analyzed log file**

**Explanation** A root element cannot be added to the analyzed log file.  
**Action** Check the log file for any discrepancies.

**POP.101.0010.com.softwareag.caf.shared.diagnostics – Either one or both of the provided documents are null**

**Explanation** The method load() was not invoked beforehand or it was invoked using incorrect parameters.  
**Action** You need to call the load() method before you continue using EnvDiff API.

**POP.101.0011.com.softwareag.caf.shared.diagnostics – At least one argument has to differ from null**

**Explanation** This invocation is not supported.  
**Action** Contact Software AG Global Support.

**POP.101.0012.com.softwareag.caf.shared.diagnostics – Cannot read the following file: {0}**

**Explanation** The file cannot be read.  
**Action** Check file and directory permissions; if the file is accessed over a network, check network connectivity.

**POP.101.0013.com.softwareag.caf.shared.diagnostics – No output channel found**

**Explanation** This behavior is not supported.  
**Action** Contact Software AG Global Support.

**POP.101.0014.com.softwareag.caf.shared.diagnostics – Input directory or file does not exist: {0}**

**Explanation** The specified directory or file does not exist.  
**Action** Specify an existing directory or file.

**POP.101.0015.com.softwareag.caf.shared.diagnostics – The system variable %1\$s and the %2\$s parameter are not set**

**Explanation** The required system properties are incorrect or are not set.

**Action** Set the system variables using proper values. For more information, see the product documentation.

**POP.101.0016.com.softwareag.caf.shared.diagnostics – Similarity level must be in the following range: 0-100**

**Explanation** Similarity level is not set to a valid value.

**Action** Set a similarity level between 0 and 100.

**POP.101.0017.com.softwareag.caf.shared.diagnostics – Java artifact mapping file does not exist in: {0}; cannot generate {1} report.**

**Explanation** A Java artifact mapping file cannot be found. The report cannot be generated.

**Action** Specify a valid Java artifact mapping XML file. Use the --java-artifact-mapping parameter to specify the path.

**POP.101.0018.com.softwareag.caf.shared.diagnostics – File not found in: {0}**

**Explanation** The specified file does not exist.

**Action** Specify an existing file.

**POP.101.0019.com.softwareag.caf.shared.diagnostics – File name is null**

**Explanation** The name of the file was not set in java artifact mapping XML file and this is a unsupported scenario.

**Action** Contact Software AG Global Support.

**POP.101.0020.com.softwareag.caf.shared.diagnostics – Product ID is null.**

**Explanation** The product ID was not set in a Java artifact mapping XML file; this is a unsupported scenario.

**Action** Contact Software AG Global Support.

**POP.101.0021.com.softwareag.caf.shared.diagnostics – Database configuration is not specified**

**Explanation** This error occurs when the file mws.db.xml is not specified or cannot be found.

**Action** Specify a valid mws.db.xml file.

**POP.102.0001.com.webmethods.caf.shared.bpm.common – This configuration is missing important parameters! Session and node id are mandatory!**

**Explanation** This error occurs: 1) when a node id is not provided when trying to search for a content type, or 2) when a session is not opened.

**Action** For 1), select a node that the searched content is associated with. For 2), verify that the CSP server is running, properly configured, and connected.

**POP.102.0002.com.webmethods.caf.shared.bpm.common – Illegal connection parameters**

**Explanation** An attempt has been made to connect to the CSP server without providing username/password values.

**Action** In My webMethods, check the Environment entries for the "wm\_csp\_task" portlet. If they are empty, next check the Global Environment entries. If no values are provided, specify a value for "csp/default/username" and "csp/default/password" entries. In general, the user name and password are specified in the Global Environment entries, except in cases when you have multiple CSP servers and want different portlets to connect to different servers. Otherwise, the Global Environment values are inherited by all portlets.

**POP.102.0003.com.webmethods.caf.shared.bpm.common – The provided session is null!**

**Explanation** The session which is the client primary access point to the CSP server is not instantiated.

**Action** Verify that the username and password are correct in the CSP configuration in My webMethods Server.

**POP.102.0005.com.webmethods.caf.shared.bpm.common – Error while marshalling!**

**Explanation** This error indicates that a low-level communication problem exists between Task Engine and webMethods Content Service Platform.

**Action** Stop and restart the Task Engine and the CSP server and try again. If the problem persists, contact Software AG Global Support.

**POP.102.0006.com.webmethods.caf.shared.bpm.common – Error while unmarshaling result!**

**Explanation** This error indicates that a low-level communication problem exists between Task Engine and webMethods Content Service Platform.

**Action** Stop and restart the Task Engine and the CSP server and try again. If the problem persists, contact Software AG Global Support.

**POP.102.0008.com.webmethods.caf.shared.bpm.common – This configuration is missing important parameters! Content id is mandatory!**

**Explanation** The Content ID value is not set.

**Action** Verify that a Content ID is set for this provider; ensure that the binding expression is correctly configured.

**POP.102.0009.com.webmethods.caf.shared.bpm.common – No retrieval module initiated! Please set proper session!**

**Explanation** The CSP session is not set for the provider; the retrieval module cannot be initiated.

**Action** Verify that a session is set for this provider; ensure that the binding expression is correctly configured.

**PerformanceMonitorDefaultviewView.errorMessage.unsupportedPerfServiceImpl – Currently enabled performance service implementation {0} does not support analysis. Cannot proceed.**

**Explanation** The performance service implementation specified for support analysis is not supported. Without these mandatory parameters, the execution cannot proceed.

**Action** Provide the supported parameters required for the currently enabled performance service.

**WSC.001.0002 Failed to bind to endPoint: {0} and interface: {1}**

**Explanation** The error occurs at binding to the WS-Stack registry.

**Action** Inspect the stack trace in the My webMethods Server log files to determine the cause of the exception.

**WSC.001.0004 Context instance does not allow access of inbound SOAP request interceptors**

**Explanation** An exception occurred while registering the interceptor with a context at the WS Server service provider.

**Action** Inspect the stack trace in the My webMethods Server log files to determine the cause of the exception.

**WSC.001.0005 Context instance does not allow access of outbound SOAP request interceptors**

**Explanation** An exception occurred while registering the request interceptor with the context.

**Action** Verify that the context is an instance of ProxyContext.

---

<b>WSC.001.0006</b>	<b>Exception occurred while invoking webservice: {0}. Details: {1}</b>
<b>Explanation</b>	An exception occurred while invoking the specified web service.
<b>Action</b>	Inspect the stack trace in the My webMethods Server log files to determine the cause of the exception.
<b>WSC.001.0007</b>	<b>Unable to connect to web service at {0}</b>
<b>Explanation</b>	The reason for the web service connection failure is specified in the error message.
<b>Action</b>	Check the detailed error message and take the appropriate action.
<b>WSC.002.0002</b>	<b>SAML artifact not found in request</b>
<b>Explanation</b>	The exception occurs when SAML authentication has to be performed, and indicates that the SAML artifact was not found within the SOAP headers of the incoming SOAP request.
<b>Action</b>	Check the SOAP request regarding the SAML artifact.
<b>WSC.002.0009</b>	<b>SAML Assertion is missing the subject name</b>
<b>Explanation</b>	An exception was thrown during the verification of the SAML Assertion showing that the subject name is missing.
<b>Action</b>	Check the subject name.
<b>WSC.002.0010</b>	<b>SAML Assertion has an invalid authentication method, method: {0}</b>
<b>Explanation</b>	The SAML Assertion passed is not valid.
<b>Action</b>	Specify a valid authentication method.
<b>WSC.002.0012</b>	<b>SAML Assertion has an invalid statement format</b>
<b>Explanation</b>	While validating the SAML Assertion the format of the statement is invalid.
<b>Action</b>	Specify a valid statement format.
<b>WSC.002.0013</b>	<b>SAML Assertion has an invalid assertion id.</b>
<b>Explanation</b>	The SAML Assertion has an invalid assertion ID.
<b>Action</b>	Check the assertion ID.

**WSC.002.0014      The credential type is not supported: {0}**  
**Explanation**      An exception occurred during realm authentication.  
**Action**              Supply a correct credential type.

**WSC.002.0015      User failed to authenticate with basic auth: {0}**  
**Explanation**      An exception occurred during realm authentication.  
**Action**              Check the username and password supplied.

**ascii.only.name.validation.msg – Name cannot contain non ASCII characters!**

**Explanation**      The Name field can contain only ASCII characters.  
**Action**              Remove the non-ASCII characters from the Name field.

**config.connection.authentication.password.value – 'Password' cannot be null or empty**

**Explanation**      My webMethods Server stores the configuration for the HPSTRA engine in the hpstra\_config.json file. This exception occurs when the configuration file was modified manually, and the "password" key under connection > authentication does not exist, or has a null or empty value.  
**Action**              Check the HPSTRA configuration file, supply a valid password for connecting to the Elasticsearch server, and restart My webMethods Server.

**config.connection.authentication.username.value – 'Username' cannot be null or empty**

**Explanation**      My webMethods Server stores the configuration for the HPSTRA engine in the hpstra\_config.json file. This exception occurs when the configuration file was modified manually, and the "username" key under connection > authentication does not exist, or has a null or empty value.  
**Action**              Check the HPSTRA configuration file, supply a valid user name for connecting to the Elasticsearch server, and restart My webMethods Server.

**config.connection.autoDiscovery.pollingInterval.value – Autodiscovery 'polling interval' parameter should be greater or equal to 1**

**Explanation**      My webMethods Server stores the configuration for the HPSTRA engine in the hpstra\_config.json file. This exception occurs when the configuration file was modified manually, and the "pollingInterval" key under connection > autoDiscovery has an invalid value.  
**Action**              Check the HPSTRA configuration file, supply a valid value for the "pollingInterval" key, and restart My webMethods Server. Valid values are positive integers from 1 to 2147483647.

**config.connection.connectTimeout.value – The 'connect timeout' parameter should be greater or equal to 1**

**Explanation** My webMethods Server stores the configuration for the HPSTRA engine in the hpstra\_config.json file. This exception occurs when the configuration file was modified manually, and the "connectTimeout" key under connection has an invalid value.

**Action** Check the HPSTRA configuration file, supply a valid value for the "connectTimeout" key, and restart My webMethods Server. Valid values are positive integers from 1 to 2147483647.

**config.connection.connectionPool.maxConnections.value – The 'maximum pool connections' parameter should be greater or equal to 1**

**Explanation** My webMethods Server stores the configuration for the HPSTRA engine in the hpstra\_config.json file. This exception occurs when the configuration file was modified manually, and the "maxConnections" key under connection has an invalid value.

**Action** Check the HPSTRA configuration file, supply a valid value for the "maxConnections" key, and restart My webMethods Server. Valid values are positive integers from 1 to 2147483647.

**config.connection.requestTimeout.value – The 'request timeout' parameter should be greater or equal to 1**

**Explanation** My webMethods Server stores the configuration for the HPSTRA engine in the hpstra\_config.json file. This exception occurs when the configuration file was modified manually, and the "requestTimeout" key under connection has an invalid value.

**Action** Check the HPSTRA configuration file, supply a valid value for the "requestTimeout" key, and restart My webMethods Server. Valid values are positive integers from 1 to 2147483647.

**config.connection.servers.size.value – The 'servers' parameter should contains at least one server URL (http, https)**

**Explanation** My webMethods Server stores the configuration for the HPSTRA engine in the hpstra\_config.json file. This exception occurs when the configuration file was modified manually, and the "servers" key under connection is empty, or has an invalid value.

**Action** Check the HPSTRA configuration file, supply a valid value for the "servers" key, and restart My webMethods Server. Valid values are unique http or https URLs.

**config.connection.servers.type.value – All entries of the 'servers' parameter should be unique and valid server URLs (http, https)**

**Explanation** My webMethods Server stores the configuration for the HPSTRA engine in the hpstra\_config.json file. This exception occurs when the configuration file was modified manually, and the "servers" key under connection has one or more invalid values.

**Action** Check the HPSTRA configuration file, supply valid values for the "servers" key, and restart My webMethods Server. Valid values are unique http or https URLs.

**config.connection.value – Configuration's connection information cannot be null**

**Explanation** My webMethods Server stores the configuration for the HPSTRA engine in the hpstra\_config.json file. This exception occurs when the configuration file was modified manually, and the "connection" key does not exist.

**Action** Check the HPSTRA configuration file, supply a valid configuration under the "connection" key, and restart My webMethods Server.

**config.persistence.consistency.value – Index operation 'consistency' parameter should be either null (use default settings) or one of the values: 'one' | 'quorum' | 'all'**

**Explanation** My webMethods Server stores the configuration for the HPSTRA engine in the hpstra\_config.json file. This exception occurs when the configuration file was modified manually, and the "consistency" key under "persistence" has an invalid value.

**Action** Check the HPSTRA configuration file, supply a valid value for the "consistency" key, and restart My webMethods Server. Valid values are null (default), "one", "quorum", and "all".

**config.persistence.createIndex.numberOfReplicas.value – The parameter 'number\_of\_replicas' for the index should be greater or equal to 1**

**Explanation** My webMethods Server stores the configuration for the HPSTRA engine in the hpstra\_config.json file. This exception occurs when the configuration file was modified manually, and the "numberOfReplicas" key under connection > createIndex has an invalid value.

**Action** Check the HPSTRA configuration file, supply a valid value for the "numberOfReplicas" key, and restart My webMethods Server. Valid values are positive integers from 1 to 2147483647.

**config.persistence.createIndex.numberOfShards.value – The parameter 'number\_of\_shards' for the index should be greater or equal to 1**

**Explanation** My webMethods Server stores the configuration for the HPSTRA engine in the hpstra\_config.json file. This exception occurs when the configuration file was modified manually, and the "numberOfShards" key under connection > createIndex has an invalid value.

**Action** Check the HPSTRA configuration file, supply a valid value for the "numberOfShards" key, and restart My webMethods Server. Valid values are positive integers from 1 to 2147483647.

**config.persistence.timeout.value – Index operation 'timeout' parameter should be greater or equal to 1**

**Explanation** My webMethods Server stores the configuration for the HPSTRA engine in the hpstra\_config.json file. This exception occurs when the configuration file was modified manually, and the "timeout" key under "persistence" has an invalid value.

**Action** Check the HPSTRA configuration file, supply a valid value for the "timeout" key, and restart My webMethods Server. Valid values are positive integers from 1 to 2147483647.

**config.search.searchType.value – Search operation 'search\_type' parameter should be either null (use default settings) or one of the values: 'query\_then\_fetch' | 'dfs\_query\_then\_fetch'**

**Explanation** My webMethods Server stores the configuration for the HPSTRA engine in the hpstra\_config.json file. This exception occurs when the configuration file was modified manually, and the "searchType" key under "search" has an invalid value.

**Action** Check the HPSTRA configuration file, supply a valid value for the "searchType" key, and restart My webMethods Server. Valid values are null (default), "query\_then\_fetch", and "dfs\_query\_then\_fetch".

**config.search.timeout.value – Search operation 'timeout' parameter should be greater or equal to 1**

**Explanation** My webMethods Server stores the configuration for the HPSTRA engine in the hpstra\_config.json file. This exception occurs when the configuration file was modified manually, and the "timeout" key under "search" has an invalid value.

**Action** Check the HPSTRA configuration file, supply a valid value for the "timeout" key, and restart My webMethods Server. Valid values are positive integers from 1 to 2147483647.

**config.synchronization.batchSize.value – Synchronization's 'batch size' parameter should be greater or equal to 1**

**Explanation** My webMethods Server stores the configuration for the HPSTRA engine in the hpstra\_config.json file. This exception occurs when the configuration file was modified manually, and the "batchSize" key under "synchronization" has an invalid value.

**Action** Check the HPSTRA configuration file, supply a valid value for the "batchSize" key, and restart My webMethods Server. Valid values are positive integers from 1 to 2147483647.

**config.synchronization.lockTimeout.value – Synchronization's 'lock timeout' parameter should be greater or equal to 1**

**Explanation** My webMethods Server stores the configuration for the HPSTRA engine in the hpstra\_config.json file. This exception occurs when the configuration file was modified manually, and the "lockTimeout" key under "synchronization" has an invalid value.

**Action** Check the HPSTRA configuration file, supply a valid value for the "lockTimeout" key, and restart My webMethods Server. Valid values are positive integers from 1 to 2147483647.

**config.synchronization.pollingInterval.value – Synchronization's 'polling interval' parameter should be greater or equal to 1**

**Explanation** My webMethods Server stores the configuration for the HPSTRA engine in the hpstra\_config.json file. This exception occurs when the configuration file was modified manually, and the "pollingInterval" key under "synchronization" has an invalid value.

**Action** Check the HPSTRA configuration file, supply a valid value for the "pollingInterval" key, and restart My webMethods Server. Valid values are positive integers from 1 to 2147483647.

**error.msg.noDebug The requested URL {0} resulted in an error.**

**Explanation** An error occurred while processing the URL.

**Action** Verify that the URL is correct.

**error.msg.withDebug – The requested URL {0} resulted in an error in {1}.**

**Explanation** An error occurred while processing the URL.

**Action** Verify that the URL is correct.

**g11n.Spregistration.propertygroup.customErrMsg6 – SAML Attribute Name cannot be empty**

**Explanation** You did not provide a value in the required field SAML Attribute Name.

**Action** Provide a valid value in the SAML Attribute Name field.

**g11n.Spregistration.propertyline.non-ascii – Only alphabet, numbers and underscores allowed and Length should not be more than 25**

**Explanation** The Attributes field can contain up to 25 symbols. Only alphanumerical characters and underscores are allowed.

**Action** Remove any illegal or excess characters from the field.

**g11n.UmConnectionConfiguration.service.unavailable – Configuration store service unavailable**

**Explanation** The OSGI service that stores the SSL configuration in the platform secure store is not available.

**Action** Retry saving the SSL configuration. If the issue persist, contact your system administrator.

**g11n.UmConnectionConfiguration.validation.path – Invalid path specified**

**Explanation** The location of the truststore/keystore for CA/client certificates is not a valid file path.  
**Action** Check the specified path and supply a valid entry.

**http.status.401 Unauthorized**

**Explanation** Invalid basic authentication credentials.  
**Action** Contact the security officer/web master for this resource and obtain the proper authorization for your credentials.

**http.status.403 Forbidden**

**Explanation** The action is prohibited.  
**Action** The owner of this resource does not allow access to the resource. Contact the security officer/web master for this resource and obtain the proper authorization for your credentials.

**http.status.404 Not Found**

**Explanation** The specified value was not found.  
**Action** Verify that the URL is correct. This error most often occurs when the resource has been removed from the server. It can also be caused by a DNS failure, if the server has been assigned a new IP address, or if the server no longer exists.

**http.status.405 Method Not Allowed**

**Explanation** This HTTP method (GET, PUT, etc.) is not allowed on this server for the specified URL.  
**Action** Use only supported methods. Contact the security officer/web master for this resource for more information.

**http.status.406 Not Acceptable**

**Explanation** The content returned from the server is not specified as acceptable by the client.  
**Action** Investigate the problem by looking at the Accept headers generated by the client system and the data stream returned by the web server.

<b>http.status.407</b>	<b>Proxy Authentication Required</b>
<b>Explanation</b>	Access to the URL resource requires the prior use of a proxy server that needs authentication which has not been provided.
<b>Action</b>	Log in to the proxy server with valid credentials and retry.
<b>http.status.408</b>	<b>Request Time-out</b>
<b>Explanation</b>	The interval of time between the establishment of an IP connection (socket) between the client and the server and the receipt of any data on that socket is too long. The server has dropped the connection.
<b>Action</b>	Attempt reconnecting to the resource. This error is typically caused by high server loads or network traffic. Contact the web master for this resource if the problem persists.
<b>http.status.409</b>	<b>Conflict</b>
<b>Explanation</b>	The request submitted by the client cannot be completed because it conflicts with an existing condition or rule. For example, a file on the server cannot be replaced with a file that has an older timestamp.
<b>Action</b>	Examine the client action and consult with the web master for this resource.
<b>http.status.413</b>	<b>Request Entity Too Large</b>
<b>Explanation</b>	The HTTP data stream sent by the client is too large to be accepted by the server.
<b>Action</b>	Attempt sending data in smaller batches. Otherwise, consult with the web master for this resource.
<b>http.status.415</b>	<b>Unsupported Media Type</b>
<b>Explanation</b>	The HTTP data stream sent by the client identifies a URL resource with a media type that does not agree with the media type specified on the request, is incompatible with the current data for the resource, or is incompatible with the HTTP method specified on the request.
<b>Action</b>	Examine the request and correct the media type if possible. Otherwise, consult with the web master for this resource.
<b>http.status.422</b>	<b>Unprocessable Entity (WebDAV)</b>
<b>Explanation</b>	The request was well-formed but was unable to be processed due to semantic errors.[
<b>Action</b>	Examine and correct the entity definition.

---

<b>http.status.423</b>	<b>Locked (WebDAV)</b>
<b>Explanation</b>	The resource that is being accessed is locked.
<b>Action</b>	Unlock the resource if possible. Otherwise, contact the web master for this resource.
<b>http.status.424</b>	<b>Failed Dependency (WebDAV)</b>
<b>Explanation</b>	The method could not be performed on the resource because the requested action depended on another action and that action failed (for example, a PROPPATCH).
<b>Action</b>	Examine the action request, correct as necessary, and perform again.
<b>http.status.500</b>	<b>Internal Server Error</b>
<b>Explanation</b>	The server encountered an unexpected condition that prevented it from fulfilling the request by the client.
<b>Action</b>	Make sure that the required services are running, communication channels are accessible, and parameters are valid. Examine the server logs for more information if possible. Otherwise, contact the server administrator.
<b>http.status.501</b>	<b>Not Implemented</b>
<b>Explanation</b>	The server does not understand or does not support the HTTP method it finds in the HTTP data stream sent to it by the client.
<b>Action</b>	Make sure the request contains a valid HTTP method.
<b>http.status.507</b>	<b>Insufficient Storage (WebDAV)</b>
<b>Explanation</b>	The method could not be performed on the resource because the server is unable to store the representation needed to successfully complete the request.
<b>Action</b>	This condition is usually temporary. If persistent, verify that sufficient storage is available on the server, or contact the system administrator. If the request that received this status code was the result of a user action, the request must not be repeated until it is requested by a separate user action.
<b>install.fixes.1</b>	<b>Installing update XML component {0}</b>
<b>Explanation</b>	The update XML file must be in the proper format and an installation location must be specified.
<b>Action</b>	Make sure the file contains the correct XML format and specify the correct location.

**install.fixes.2**      **Failed to install update XML component {0}**  
**Explanation**      Update manager has attempted to install the update XML component but the attempt has failed.  
**Action**              Make sure that My webMethods Server is running and is connected to the network, and that network connectivity exists to the server. Retry the installation. Otherwise, contact the system administrator.

**install.fixes.3**      **Failed to delete update XML component {0}**  
**Explanation**      Update Manager attempted to delete the XML component but was not successful.  
**Action**              Make sure that My webMethods Server is running and is connected to the network, and that network connectivity exists to the server. Retry the deletion. Check the server log file for more information. Otherwise, contact the system administrator.

**install.fixes.4**      **Failed to process all update XML components**  
**Explanation**      The update XML components operation could not be processed.  
**Action**              Verify that the parameters are appropriately specified in the request. Otherwise, contact the system administrator.

**install.fixes.5** **Not Used – Completed processing of update XML components**  
**Explanation**      XML components were updated successfully.  
**Action**              No action required.

**ldap.exceptions**    **Unable to retrieve data from {0} Idaps**  
**Explanation**      The specified directory services failed to return a result due to an error.  
**Action**              Check the My webMethods Server logs for errors related to the specified directory services.

**message.um.remoteupdate.fail** – **MWS node with name "{0}" failed to update with new Universal Messaging URL.**  
**Explanation**      During an update of the cluster configuration, the specified node failed to be updated.  
**Action**              Log into the specified node, and on the Cluster Administration page, click Reload to manually update the node.

**message.um.remoteupdate.fail.ctx – MWS failed to acquire user context, before notifying other nodes about UM URL change.**

**Explanation** During an update of the cluster configuration, the specified node failed to be updated.  
**Action** Log into the specified node, and on the Cluster Administration page, click Reload to manually update the node.

**message.um.update.fail – Current MWS node failed to update with new Universal Messaging URL.**

**Explanation** While updating the JNDI URL of the specified node, the JMS system of that node failed to reload.  
**Action** Restart the node. If My webMethods Server cannot connect to Universal Messaging, check the logs for errors. If the errors are not related to network connectivity, contact Software AG.

**message.um.url.invalid – The specified JNDI URL "{0}" is not valid.**

**Explanation** The specified JNDI URL does not conform to the Universal Messaging standards.  
**Action** The URL must start with a valid UM protocol, such as nsp, nsps, nhp, or nhps, for example: nsp://myurl:9000.

# 20 OSGi Messages

---

<b>OGICRE0003</b>	<b>Expected String [2] but its length is "{0}"</b>
<b>Explanation</b>	There is a problem with the user-defined credentials that are passed to the server in order to authenticate the user before creating MBeanServerConnection.
<b>Action</b>	The expected user-defined credentials are a username and password. Provide these security credentials only.
<b>OGICRE0004</b>	<b>Authentication fails with user "{0}"</b>
<b>Explanation</b>	There is a problem with authentication of the current user.
<b>Action</b>	Check the provided username and password.
<b>OGICRE0015</b>	<b>"{0}" property is not set, cannot proceed.</b>
<b>Explanation</b>	JMX authentication configuration property " <code>com.softwareag.platform.startup.jmx.auth.config</code> " is not set, cannot proceed.
<b>Action</b>	Set the JMX authentication configuration property " <code>com.softwareag.platform.startup.jmx.auth.config</code> " and provide a valid value to it.
<b>OGICRE0016</b>	<b>JAAS login configuration property "{0}" is not set, cannot proceed.</b>
<b>Explanation</b>	During the startup routine, the OSGi platform attempts to prepare JAAS configuration. The platform expects that the " <code>com.softwareag.platform.startup.jaas.login.config</code> " property is set and points to a valid JAAS configuration file. The error message is displayed when the property is not available at platform startup.
<b>Action</b>	Ensure that the " <code>com.softwareag.platform.startup.jaas.login.config</code> " is set and points to a valid JAAS configuration file.

<b>OGICRE0019</b>	<b>System property "java.io.tmpdir" is not set or empty, cannot ensure that the directory exists.</b>
<b>Explanation</b>	The 'java.io.tmpdir' property is expected to be set by the JVM. The platform startup cannot ensure that the directory pointed by this property is available if the property is empty or undefined.
<b>Action</b>	If you want to use a temporary file directory, make sure that it exists and is set to the JVM.
<b>OGICRE0021</b>	<b>Java temporary directory pointed by "java.io.tmpdir" system property: "{0}" does not exist and cannot be created.</b>
<b>Explanation</b>	The java temporary directory pointed by the "java.io.tmpdir" JVM property does not exist and automatic creation of this directory failed.
<b>Action</b>	Ensure that the directory pointed by the "java.io.tmpdir" JVM property exists.
<b>OGICRI0008</b>	<b>Standard JMX Management is used.</b>
<b>Explanation</b>	Custom authentication is not enabled. The standard JMX Management is used.
<b>Action</b>	If you want to enable custom authentication, set a System property with name "com.softwareag.jmx.noCustomAuthentication" and set it to "false".
<b>OGICRI0013</b>	<b>Using JMX authentication configuration: "{0}"</b>
<b>Explanation</b>	Information about the value of "com.softwareag.platform.startup.jmx.auth.config" JMX authentication configuration parameter.
<b>Action</b>	None.
<b>OGICRI0014</b>	<b>Using JAAS login configuration: "{0}".</b>
<b>Explanation</b>	Information about the value of "java.security.auth.login.config" JAAS configuration parameter.
<b>Action</b>	None.
<b>OGICRI0022</b>	<b>Successfully created Java temporary directory: {0}</b>
<b>Explanation</b>	Directory pointed by "java.io.tmpdir" system property did not exist and the OSGi platform startup bundle created it automatically.
<b>Action</b>	None.

<b>OGICRW0017</b>	<b>Configured JMX RMI Agent port: "{0}" is not valid; default port "{1}" will be used instead.</b>
<b>Explanation</b>	The platform startup routine is attempting to initialize the JMX RMI Agent using the port configured in the "com.softwareag.platform.startup.jmx.rmi.agent.port" key. The property is not a valid number.
<b>Action</b>	Set a valid port number in the "com.softwareag.platform.startup.jmx.rmi.agent.port" key.
<b>OGICRW0020</b>	<b>The parent directory of the Java temporary directory ({0}) is not write enabled.</b>
<b>Explanation</b>	Cannot write into the parent directory of the temporary directory pointed by the "java.io.tmpdir" system property. Automatic creation of the temporary directory will fail.
<b>Action</b>	Ensure that the user who started the platform has permissions to write into the parent directory of the temporary files directory.
<b>OGICRW0023</b>	<b>The parent directory of the Java temporary directory pointed by "java.io.tmpdir" system property: "{0}" does not exist and cannot be created.</b>
<b>Explanation</b>	When the OSGi platform is started it attempts to ensure that the temporary files directory (denoted by the "java.io.tmpdir" system property) exists. If the directory does not exist on the file system, the OSGi platform startup bundle attempts to create it. This message is displayed when the OSGi platform startup bundle fails to create the parent directory of the temporary files directory.
<b>Action</b>	Ensure that the directory pointed by the "java.io.tmpdir" JVM property exists.
<b>OGIMIGE0002</b>	<b>ERROR: Missing file in source installation - {0}</b>
<b>Explanation</b>	This message is displayed when no source file is found.
<b>Action</b>	Check if the file exists and is readable for the user.
<b>OGIMIGE0003</b>	<b>ERROR: Missing file in destination installation - {0}</b>
<b>Explanation</b>	This message is displayed when no destination file is found under path: <installdir_new_version>/profiles<some_profile>/configuration/com.softwareag.platform.config.propsloader/
<b>Action</b>	Check if the file exists and is readable for the user.
<b>OGIMIGE0004</b>	<b>ERROR: Backup failed for destination file - {0}</b>
<b>Explanation</b>	The file is backed up before merging . Losing this file might be crucial.
<b>Action</b>	Make sure that the file can be written in the parent directory.

<b>OGIMIGE0006</b>	<b>ERROR: Error while opening file - {0}</b>
<b>Explanation</b>	In order to migrate a file its content should be read. This error occurs because the file could not be opened properly.
<b>Action</b>	Make sure the file is not locked (for example, the file may be already opened by another program).
<b>OGIMIGE0007</b>	<b>ERROR: Result configuration file in destination installation was not found - {0}</b>
<b>Explanation</b>	After merging, the result is either a new file, or an updated overwritten destination file.
<b>Action</b>	Please make sure the file exists and is readable for the user.
<b>OGIMIGE0010</b>	<b>ERROR: More than one in the destination installation - {0} were found under {1}</b>
<b>Explanation</b>	This message is displayed when more than one destination file is found. This is not expected if a clean destination installation is done.
<b>Action</b>	Check the log file to see where are the files. Remove the unneeded files and leave only one file - the default one.
<b>OGIMIGE0013</b>	<b>ERROR: Loading source properties layout configuration failed. The source file is: from file {0}</b>
<b>Explanation</b>	When we load our properties we also load the comments and blank lines the file contains.
<b>Action</b>	Make sure that you source file is a valid java property file and it is not corrupted.
<b>OGIMIGE0014</b>	<b>ERROR: Cannot identify version of product {0}. Cannot find any locally installed products in the specified installation directory: {1}</b>
<b>Explanation</b>	The migration application attempted to identify the version of a locally installed product with the given product prop file name (without the .prop suffix), but no locally installed products were found in the specified installation directory.
<b>Action</b>	Specify the source version of the product when prompted to.
<b>OGIMIGE0015</b>	<b>ERROR: Cannot identify version of product {0}. Cannot find this product in the list of locally installed products in the specified installation directory: {1}</b>
<b>Explanation</b>	The migration application attempted to identify the version of a locally installed product with the given product prop file name (without the .prop suffix), but such locally installed product was not found in the specified installation directory.
<b>Action</b>	Specify the source version of the product when prompted to.

---

<b>OGIMIGE0018</b>	<b>ERROR: Storing result properties configuration layout failed.</b>
<b>Explanation</b>	The property file with all the properties and their comments failed on the saving step.
<b>Action</b>	Check the file access permissions of your target installation.
<b>OGIMIGE0019</b>	<b>ERROR: JAAS configuration {0} does not exist.</b>
<b>Explanation</b>	The JAAS configuration file is missing and the migration cannot proceed.
<b>Action</b>	Migration for JAAS configuration was not successful. Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0020</b>	<b>ERROR: JAAS configuration {0} is not a file.</b>
<b>Explanation</b>	The JAAS configuration file is not a valid file and the migration cannot proceed.
<b>Action</b>	Migration for JAAS configuration was not successful. Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0021</b>	<b>ERROR: Destination JAAS configuration {0} does not exist.</b>
<b>Explanation</b>	The JAAS configuration file is missing and the migration cannot proceed.
<b>Action</b>	Migration for JAAS configuration was not successful. Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0022</b>	<b>ERROR: Destination JAAS configuration {0} is not a file.</b>
<b>Explanation</b>	The destination JAAS configuration file is not a valid file and the migration cannot proceed.
<b>Action</b>	Migration for JAAS configuration was not successful. Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0023</b>	<b>ERROR: Backup failed for destination JAAS configuration file.</b>
<b>Explanation</b>	Creating a backup of the original file was not successful and it is unsafe for the migration to continue.
<b>Action</b>	Migration for JAAS configuration was not successful. Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0024</b>	<b>ERROR: Error parsing source JAAS configuration</b>
<b>Explanation</b>	An error is found in the source JAAS configuration and the migration cannot proceed.
<b>Action</b>	Migration for JAAS configuration was not successful. Refer to the upgrade documentation and execute the required manual steps.

<b>OGIMIGE0025</b>	<b>ERROR: Error parsing destination JAAS configuration</b>
<b>Explanation</b>	Migration of the JAAS configuration was not successful. An error was found in the destination JAAS configuration and the migration cannot proceed.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0026</b>	<b>ERROR: Error saving destination JAAS configuration.</b>
<b>Explanation</b>	An error occurred while storing the migrated JAAS configuration and the migration cannot proceed.
<b>Action</b>	Migration for JAAS configuration was not successful. Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0028</b>	<b>ERROR: Source server.xml configuration {0} does not exist.</b>
<b>Explanation</b>	The server.xml file could not be migrated because the file does not exist.
<b>Action</b>	Check if the source server.xml file exists and is readable for the user.
<b>OGIMIGE0029</b>	<b>ERROR: Source server.xml configuration {0} is not a file.</b>
<b>Explanation</b>	The server.xml is not a proper file.
<b>Action</b>	Check the server.xml file.
<b>OGIMIGE0030</b>	<b>ERROR: Parsing server.xml file {0}.</b>
<b>Explanation</b>	The server.xml file is not a valid XML file.
<b>Action</b>	Check the server.xml file.
<b>OGIMIGE0031</b>	<b>ERROR: Reading server.xml file {0}.</b>
<b>Explanation</b>	The server.xml file could not be read properly.
<b>Action</b>	Check the server.xml file.
<b>OGIMIGE0032</b>	<b>ERROR: Parser Configuration server.xml file {0}.</b>
<b>Explanation</b>	Parser error occurs when parsing the server.xml file.
<b>Action</b>	Check the server.xml file.

---

<b>OGIMIGE0033</b>	<b>ERROR: Backup file {0}.</b>
<b>Explanation</b>	The file could not be backed up successfully.
<b>Action</b>	Check the source location and target location paths and files.
<b>OGIMIGE0034</b>	<b>ERROR: Reading file {0}.</b>
<b>Explanation</b>	The error occurs because the file could not be read properly.
<b>Action</b>	Check the source location and target location paths,files, and permissions.
<b>OGIMIGE0035</b>	<b>ERROR: Writing file {0}.</b>
<b>Explanation</b>	The error occurs because the file could not be written properly.
<b>Action</b>	Check the source location and target location paths,files, and permissions.
<b>OGIMIGE0036</b>	<b>ERROR: Create/Update file {0}.</b>
<b>Explanation</b>	The error occurs because the file could not be created or updated properly.
<b>Action</b>	Check the source location and target location paths,files, and permissions.
<b>OGIMIGE0042</b>	<b>ERROR: Configuration migration finished with failure(s).</b>
<b>Explanation</b>	Migration failed for the server.xml, web.xml, and config.xml, *.jks files.
<b>Action</b>	Check the detailed error messages displayed by the migration tool.
<b>OGIMIGE0048</b>	<b>ERROR: Cannot identify version of product {0}. The product installation under {1} does not contain any build modules for the current installer platform: {0}</b>
<b>Explanation</b>	The migration application attempted to identify the version of a locally installed product, but the local product is targeting a different installer platform (operating system and architecture) and the product information could not be loaded.
<b>Action</b>	Specify the source version of the product when prompted to.
<b>OGIMIGE0049</b>	<b>ERROR: Cannot parse version of product {0}. The product version of {1} does not have valid syntax. Expecting a version in the format &lt;major&gt;.&lt;minor&gt;.&lt;micro&gt;.&lt;fixnum&gt;.&lt;buildnum&gt;.</b>
<b>Explanation</b>	The migration application attempted to identify the source version of a locally installed product but the product version did not have the expected format.
<b>Action</b>	Specify the source version of the product when prompted to.

<b>OGIMIGE0052</b>	<b>ERROR: User repository file does not exist in the expected location: {0}</b>
<b>Explanation</b>	Migration for common/conf entries was not successful. The users.txt file was not found in the expected location.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0053</b>	<b>ERROR: Error reading user repository file: {0}</b>
<b>Explanation</b>	Migration for common/conf entries was not successful. The users.txt file could not be read from the expected location.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0054</b>	<b>ERROR: User repository file version cannot be retrieved: {0}</b>
<b>Explanation</b>	Migration for common/conf entries was not successful. The users.txt file was not migrated. An unexpected error occurred during the retrieval of the users.txt file version.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0055</b>	<b>ERROR: User repository version is not compatible. Required minimal version is: {0}, found version is: {1}. Manual steps are required.</b>
<b>Explanation</b>	Migration for common/conf entries was not successful. The users.txt file cannot be migrated if the files in both locations are not with compatible versions.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0056</b>	<b>ERROR: User repository version could not be retrieved: {0}</b>
<b>Explanation</b>	Migration for common/conf entries was not successful. An unexpected error occurred during the compatibility check of the users.txt file. The users.txt file must be migrated manually.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0058</b>	<b>ERROR: Source user repository file does not exist: {0}</b>
<b>Explanation</b>	Migration for common/conf entries was not successful. The source user repository file users.txt cannot be found in the specified location.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.

---

<b>OGIMIGE0059</b>	<b>ERROR: Destination user repository file does not exist: {0}</b>
<b>Explanation</b>	Migration for common/conf entries was not successful. The destination user repository file users.txt cannot be found in the specified location.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0060</b>	<b>ERROR: Source user repository file could not be copied to destination.</b>
<b>Explanation</b>	Migration for common/conf entries was not successful. The source user repository file users.txt cannot be copied to destination due to an unexpected error.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0066</b>	<b>ERROR: Missing source SSH configuration file {0}</b>
<b>Explanation</b>	Migration of the SSH configuration was not successful. The source file with the SSH configuration is not found and the migration cannot proceed.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0067</b>	<b>ERROR: Error reading source SSH configuration file {0}</b>
<b>Explanation</b>	Migration of the SSH configuration was not successful. An error occurred while reading the source SSH configuration file and the migration cannot proceed.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0068</b>	<b>ERROR: Missing destination SSH configuration file {0}</b>
<b>Explanation</b>	Migration for SSH configuration was not successful. The destination configuration file for the SSH configuration cannot be found and the migration cannot proceed.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0069</b>	<b>ERROR: Error backing up destination SSH configuration file {0}</b>
<b>Explanation</b>	Migration of the SSH configuration was not successful. An error occurred while trying to backup the original destination SSH configuration file and the migration cannot proceed.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0071</b>	<b>ERROR: Destination SSH config file not found {0}</b>
<b>Explanation</b>	Migration for the SSH configuration was not successful. The destination SSH config file was not found and the migration cannot proceed.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.

<b>OGIMIGE0072</b>	<b>ERROR: Error storing migrated SSH configuration {0}</b>
<b>Explanation</b>	Migration of the SSH configuration was not successful. An error occurred while storing the migrated SSH configuration and the migration cannot proceed.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0073</b>	<b>Invalid source installation directory specified: {0}. No {1} subdirectory is present, this directory is required for the {2} migration to proceed.</b>
<b>Explanation</b>	The migration application requires the specified product subdirectory to be available in the source installation in order to proceed, but the directory was not found. This can happen if the product, for which the migration is executed is not available in the source installation directory.
<b>Action</b>	Make sure that the specified source installation contains the product that is being migrated.
<b>OGIMIGE0081</b>	<b>In file {0} Keystore/Truststore file referenced from HTTPS Connector in attribute {1} that can not be found, creating a valid HTTPS configuration not possible.</b>
<b>Explanation</b>	The server.xml file contains a Keystore/Truststore configuration (keystoreFile=truststoreFile=), pointing to a file that cannot be found. Migrating this would lead in an unusable HTTPS configuration.
<b>Action</b>	In your profile check the file /tomcat/conf/server.xml and the properties keystoreFile="TheKeystoreFilename" truststoreFile="TheTrustStoreFileName". Also check that the file(s) TheKeystoreFilename/TheTrustStoreFileName are existing and valid keystore/truststore files or reference the delivered default one: keystoreFile='C:\SAG32\profiles\CIP\configuration\tomcat\conf\localhost_dont_use_in_production.jks' and start the migration again.
<b>OGIMIGE0083</b>	<b>ERROR: Backup file cannot be created - invalid value for destination file passed.</b>
<b>Explanation</b>	While trying to create a backup of the original file, an invalid original file was passed.
<b>Action</b>	Check the log for more details.
<b>OGIMIGE0084</b>	<b>Cannot identify installer platform for specified installation directory: {0}. Reason: Cannot read installation metadata file: {1}</b>
<b>Explanation</b>	The migration application needs to verify that the source installation is created for the same operating system and architecture as the destination installation. This is done by inspecting the installation metadata located under install/products directory in the installation. If the installation metadata is missing or corrupt, or the process does not have read permissions for the specified file, the platform identification will fail and the migration cannot proceed.
<b>Action</b>	Make sure that the specified installation directory contains proper installation metadata (install/products directory containing installer property files for installed products) and the process has the correct privileges to read it.

---

<b>OGIMIGE0086</b>	<b>Failed to read file "{0}".</b>
<b>Explanation</b>	The platform migration utility could not read the specified file.
<b>Action</b>	Make sure the file exists and the user executing the migration is authorized to read it.
<b>OGIMIGE0087</b>	<b>Failed to close file stream "{0}".</b>
<b>Explanation</b>	An I/O error occurred while closing the file stream.
<b>Action</b>	Make sure the file exists and the user executing the migration is authorized to read it.
<b>OGIMIGE0089</b>	<b>An invalid path property "{0}" was found in file "{1}". Path should not be null or empty.</b>
<b>Explanation</b>	A path property sent for transformation has a null or empty value. Transformation cannot proceed with an invalid argument.
<b>Action</b>	Ensure that the property referenced in the given file has a valid path value.
<b>OGIMIGE0092</b>	<b>The path "{0}" is referenced in file "{1}"; it should be available as "{2}", but could not be found. Hence the path cannot be migrated.</b>
<b>Explanation</b>	The path transformer has discovered that a path referenced in a file in the source installation points to a file inside the source installation. The file does not exist and the configuration is invalid.
<b>Action</b>	Ensure that the path referenced in the specified file points to a valid file on the file system.
<b>OGIMIGE0095</b>	<b>The absolute path "{0}" referenced in file "{1}" does not exist on the file system.</b>
<b>Explanation</b>	The path transformer has discovered that a path referenced in a file in the source installation points to a file outside the source installation. The file does not exist and the configuration is invalid.
<b>Action</b>	Ensure that the path referenced in the specified file points to a valid file on the file system.
<b>OGIMIGE0097</b>	<b>Could not determine original installation location for "{0}".</b>
<b>Explanation</b>	The path transformer failed to determine the original source installation root directory, which is required in order for the transformer to function properly.
<b>Action</b>	Make sure the migration source directory contains a "profiles" folder with at least one valid profile inside.

**OGIMIGE0098**      **The original source directory "{0}" exists on this file system but the current migration is using "{1}" as a source. Path transformation is not supported.**

**Explanation**      Path transformer determined that the migration source directory is different from the original source installation root directory (which could be the case when you are migrating from a zip file or from a mapped/mounted directory). However, the original source installation root directory exists on this file system but it is not used as a migration source directory. This is not a supported path transformation scenario as the system may not reliably validate the transformed paths.

**Action**            If the original source installation directory is available on the same file system it should be used directly as a migration source directory.

**OGIMIGE0099**      **The target directory "{0}" must be the same as the installation root directory "{1}".**

**Explanation**      The target directory in the migrated profile config.ini file is different from the migration target directory. The target installation is corrupted.

**Action**            Make sure that the migration target directory is not moved or tampered with.

**OGIMIGE0102**      **Failed to copy transformed file path from "{0}" to "{1}".**

**Explanation**      Path transformer transformed a file path from the migration source directory to the migration target directory. The file copy operation failed.

**Action**            Make sure that the user executing the migration is able to physically copy the source file to the destination.

**OGIMIGE0103**      **An invalid URL property "{0}" was found in file "{1}". URL should not be null or empty.**

**Explanation**      A URL property sent for transformation has a null or empty value. Transformation cannot proceed with an invalid argument.

**Action**            Ensure that the property referenced in the given file has a valid URL value.

**OGIMIGE0107**      **Source installation directory ({0}) uses "{1}" platform, while destination installation directory ({2}) uses "{3}".**

**Explanation**      The migration cannot proceed if the source and destination installation platforms are different.

**Action**            Make sure the source and destination directories contain installations of one and the same platform.

---

<b>OGIMIGE0111</b>	<b>ERROR: copy file{0}.</b>
<b>Explanation</b>	Copy file operation failed.
<b>Action</b>	Make sure the file exists and is not used or opened by an application.
<b>OGIMIGE0113</b>	<b>Error occurred while merging the properties from '{0}' to '{1}'.</b>
<b>Explanation</b>	Merging the .properties files failed with an error.
<b>Action</b>	Check the logs for more information.
<b>OGIMIGE0115</b>	<b>ERROR: Error during finalization of the JAAS configuration.</b>
<b>Explanation</b>	An error occurred while finalizing the migrated JAAS configuration and the migration could not proceed.
<b>Action</b>	Contact Software AG Global support.
<b>OGIMIGE0116</b>	<b>Abort migration due to errors while evaluating source installation {0}</b>
<b>Explanation</b>	Migration of roles.txt entries was not successful due to problems with the source SAG product installation.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0117</b>	<b>Abort migration due to errors while evaluating destination installation {0}</b>
<b>Explanation</b>	Migration of roles.txt entries was not successful due to problems with the source SAG product installation.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0118</b>	<b>Error while reading source 'roles.txt': {0}</b>
<b>Explanation</b>	Unexpected error occurred while reading the 'roles.txt' file from the source SAG product installation.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0119</b>	<b>Error while reading destination 'roles.txt': {0}</b>
<b>Explanation</b>	Unexpected error occurred while reading the 'roles.txt' file from the destination SAG product installation.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.

<b>OGIMIGE0121</b>	<b>Cannot backup {0}. Migration is not safe. Proceeding with next migration.</b>
<b>Explanation</b>	Cannot create backup copy of the 'roles.txt' file. Migration might be successful but if it fails the previous content of the 'roles.txt' file can't be restored. Therefore, we skip the migration for this particular 'roles.txt' file.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0122</b>	<b>Error while merging {0} and {1}</b>
<b>Explanation</b>	Unexpected error occurred while merging the content of source and destination installation 'roles.txt' files. The current migration will be skipped and the original 'roles.txt' content will be restored.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0123</b>	<b>'config.ini' doesn't exist or is not file: {0}</b>
<b>Explanation</b>	Cannot proceed with the migration since the required configuration file 'config.ini' doesn't exist.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0126</b>	<b>Configuration location {0} doesn't exist or is not file.</b>
<b>Explanation</b>	The specified configuration location doesn't exist and therefore the migration process will be skipped.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0127</b>	<b>Configuration location {0} does not exist.</b>
<b>Explanation</b>	The specified configuration location doesn't exist and therefore the migration process will be skipped.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGE0128</b>	<b>Configuration location {0} is not a file.</b>
<b>Explanation</b>	The specified configuration location doesn't exist and therefore the migration process will be skipped.
<b>Action</b>	Refer to the upgrade documentation and execute the required manual steps.

---

<b>OGIMIGE0129</b>	<b>Cannot create backup file: {0}</b>
<b>Explanation</b>	The migration is not able to create a backup file for the JAAS configuration.
<b>Action</b>	Check the source location and target location paths, files, and permissions.
<b>OGIMIGE0130</b>	<b>This is not a valid destination backup file location: null</b>
<b>Explanation</b>	Missing destination backup file location.
<b>Action</b>	Check the source location and target location paths, files, and permissions.
<b>OGIMIGE0131</b>	<b>The destination backup file location '{0}' does not exist</b>
<b>Explanation</b>	The destination backup file location does not exist.
<b>Action</b>	Check the source location and target location paths, files, and permissions.
<b>OGIMIGE0134</b>	<b>JKS '{0}' with file {1} is missing mandatory property for password from the configuration file.</b>
<b>Explanation</b>	If truststoreFile property is present in configuration there should be truststorePass property. The same rule applies for keystoreFile and keystorePass.
<b>Action</b>	Check the properties of HTTPS connectors.
<b>OGIMIGE0135</b>	<b>The backup of '{0}' failed.</b>
<b>Explanation</b>	The problem might be that the pointed file cannot be copied or deleted after backup.
<b>Action</b>	Check for permissions on the file.
<b>OGIMIGE0136</b>	<b>The migration of key/certificates from '{0}' to '{1}' failed.</b>
<b>Explanation</b>	The migration of certificates and/or keys is failing for the pointed Java Key Stores. The following keystores are migrated as a part of the HTTPS configuration migration.
<b>Action</b>	Check if property files are pointing to the correct locations of trustore and keystore in the source installation. Check if password given in the configuration is correct. Check if the given configuration is actually operational.
<b>OGIMIGE0133</b>	<b>This login context is skipped by migration, because it contained SSX login module, but In version 10.x SSX is no longer available and migration is not possible</b>

<b>OGIMIGW0005</b>	<b>WARNING: File could not be deleted - {0}.</b>
<b>Explanation</b>	An error occurred while deleting incompatible destination file. This is a warning message because deleting this file should not be crucial for the functionality of the application.
<b>Action</b>	Delete this file manually as it may cause future conflicts.
<b>OGIMIGW0008</b>	<b>WARNING: Referenced file was found in the source installation but was not found in the destination installation: "{0}" . Check if the file was migrated and if not migrate it manually.</b>
<b>Explanation</b>	Configurations could have properties with values that contain paths to files. During migration these paths could become invalid. To prevent the migration of such paths that make the configurations unusable, a check is done if the file exists in the new installation. This warning shows that the file was successfully located in the source installation, but was missing from the destination.
<b>Action</b>	Check if the path from the configuration is valid after the migration. If the path is not valid, migrate the file manually and edit the path if needed.
<b>OGIMIGW0009</b>	<b>WARNING: Referenced file was not found in the destination system: "{0}"</b>
<b>Explanation</b>	Configurations could have properties with values that contain paths to files. During migration these paths could become invalid. To prevent the migration of such paths that make the configurations unusable, a check is done if the file exists in the new installation.
<b>Action</b>	Check if the path from the configuration is valid after the migration. If the path is not valid, migrate the file manually and edit the path if needed.
<b>OGIMIGW0011</b>	<b>WARNING: Property value could not be transformed properly.</b>
<b>Explanation</b>	When a migration is done, some properties require special transformation for their values. For this reason special transformer classes are used. This message is shown when there is a problem with finding the class, the class could not be instantiated or the class is not a valid Transformer class. This could lead to invalid property values.
<b>Action</b>	Check the value of the migrated property.
<b>OGIMIGW0012</b>	<b>WARNING: Installer client jar not available, falling back on custom installer metadata parser.</b>
<b>Explanation</b>	Migration framework did not find a required jar for reading the installation metadata, it will attempt to read the metadata by parsing the prop file instead.
<b>Action</b>	No action is required.

---

<b>OGIMIGW0016</b>	<b>WARNING: Properties for transformation were not loaded.This might make your configuration unusable.</b>
<b>Explanation</b>	We are using special files that map properties which need some kind of transformation for their value or key. In order to use them we have to load them from a file. This step has failed.
<b>Action</b>	Contact Software AG global support.
<b>OGIMIGW0017</b>	<b>WARNING: Transformer class was not found for the following property:</b>
<b>Explanation</b>	We allow custom property transformation which is done via a class. The loading of this class has failed. One or more properties were not transformed correctly.
<b>Action</b>	Contact Software AG global support.
<b>OGIMIGW0027</b>	<b>WARNING: Some runtime componets were not enabled in the source configuration - {0}. Migration exits successfully.</b>
<b>Explanation</b>	Some runtime componets like JMX, SSH are not enabled in the source configuration. The migartion will not migrate any data from these source configurations.
<b>Action</b>	If you want to disable the component explicitly please do so by changing the port property in the connector in the destination installation.
<b>OGIMIGW0037</b>	<b>WARNING: Error on read file {0}.</b>
<b>Explanation</b>	The error occurs because the file could not be read properly.
<b>Action</b>	Check the source location and target location paths,files, and permissions.
<b>OGIMIGW0038</b>	<b>WARNING: Error on write file {0}.</b>
<b>Explanation</b>	The error occurs because the file could not be written properly.
<b>Action</b>	Check the source location and target location paths,files, and permissions.
<b>OGIMIGW0051</b>	<b>WARNING: Using the default 'localhost_dont_use_in_production.jks' file in file {0} property name {1}, because the file referenced in the older version could not be found. Change the file specified in the property.</b>
<b>Explanation</b>	The specified property in the specified properties file points to the default .jks keystore file, because the keystore file referenced in the older version could not be found.
<b>Action</b>	Change the property to point to a valid existing production .jks keystore file.

<b>OGIMIGW0065</b>	<b>WARNING: SSH port is not set in source configuration {0}. Migration exits successfully.</b>
<b>Explanation</b>	SSH port is not set in source configuration so there is nothing to migrate.
<b>Action</b>	SSH port is not set in configuration and nothing is done. If this is not the case, refer to the upgrade documentation and execute the required manual steps.
<b>OGIMIGW0104</b>	<b>Value for JAAS configuration in config.ini could not be processed.</b>
<b>Explanation</b>	The JAAS configuration modifications will be made to the original JAAS configuration located in the profile folder.
<b>Action</b>	Define an absolute path to the current location of the JAAS configuration to be migrated or move it in the profile configuration folder.
<b>OGIMIGW0108</b>	<b>WARNING: source internal user repository file users.txt not present : "{0}" Skip the migration of users.txt; groups.txt, roles.txt.</b>
<b>Explanation</b>	The users.txt internal user repository file is not present in common/conf directory. The file(s) could not be migrated.
<b>Action</b>	Check the profiles/TheProfile/configuration/jaas.config for the following entry: internalRepository="ADirectory/users.txt" and check if this is migrated by the jaas config migration. Do the same for the groups.txt and roles.txt files. If there is no such entry, a migration of that file is not necessary, because no internal user repository for authentication is enabled or configured.
<b>OGIMIGW0112</b>	<b>WARNING: security configuration source file scPassMan.config.xml missing. File is mandatory! Skipping migration of all passman files.</b>
<b>Explanation</b>	Passman security configuration files are normally 3 files : scPassMan.config.xml ; defaultPassStore.dat and mpw.dat . The .dat files are optional, but the .xml is important and without it migration cannot be done.
<b>Action</b>	Check whether the scPassMan.config.xml file is present in the following location: installdir/profiles/TheProfile/configuration/security. With the xml file present, retry migration or migrate manually.
<b>OGIMIGW0132</b>	<b>Found SSX login module {2} in source {0}. SSX is removed in 10.0, so login context {1} will not be migrated.</b>
<b>Explanation</b>	SSX login module is found in source installation, but SSX is removed in version 10.0, so we can't migrate it properly
<b>Action</b>	Migrate login context by hand as it is not possible not migrate it automatically.

# 21 Platform Manager Messages

<b>SPMADME0000</b>	<b>Administration SPI for "{0}" and namespace "{1}" not found.</b>
<b>Explanation</b>	The Administration SPI for the specified entity and namespace should be registered beforehand.
<b>Action</b>	Check if the correct entity ID and namespace are provided or if the product plug-in is available.
<b>SPMADME0001</b>	<b>Error while invoking "{0}" Administration function with arguments "{2},{3}" of "{1}" and namespace "{4}".</b>
<b>Explanation</b>	The specified administration function is either not available, the arguments used to invoke the function are incorrect, or unchecked exception has been thrown.
<b>Action</b>	Check the functions supported by the Administration SPI.
<b>SPMADME0002</b>	<b>Administration function "{0}" with arguments "{2},{3}" of "{1}" and namespace "{4}" not found.</b>
<b>Explanation</b>	The specified administration function is not defined for the entity with the specified arguments.
<b>Action</b>	Check the functions supported by the Administration SPI.
<b>SPMADME0003</b>	<b>{0} process finished with error code {1}. Requested command: {2} Output: {3}</b>
<b>Explanation</b>	The requested command could not be executed successfully.
<b>Action</b>	Check the upgrade and migration help for the product.

**SPMCCPEMIE0001 An error occurred during a call to wm.monitor.util:configSettings. The error reported is: {}.**

**Explanation** An error occurred during the service call to write the configuration settings to WmMonitor. A probable cause for the error is failing to access the IntegrationServer\packages\WmMonitor\config\monitor.cnf file. The error could also occur when the monitor.cnf file is not present initially and the service call to write the configuration settings creates and populates the file with default values.

**Action** Ensure that the IntegrationServer\packages\WmMonitor\config\monitor.cnf file is present, contains name=value pairs, and the name=value pairs are valid. Also, ensure that the name-value pairs are acceptable for your configuration.

**SPMCCPEMIE0002 Only BASIC authentication is supported.**

**Explanation** The specified authentication is not supported.

**Action** Change authentication to BASIC.

**SPMCCPEMIE0003 The My webMethods Server URL is not valid.**

**Explanation** The URL for pingging My webMethods Server is not valid.

**Action** Check that your WmMonitor configuration values for host, port, username and password are valid.

**SPMCCPEMIE0009 No My webMethods Server credentials were provided.**

**Explanation** The connection to My webMethods Server cannot be validated without proper credentials.

**Action** Specify values for username and password.

**SPMCCPEMIE0014 The My webMethods Server host, port, and/or connection protocol were not provided.**

**Explanation** You must specify values for the My webMethods Server host, port, and connection protocol.

**Action** Specify values for host, port, and connection protocol.

**SPMCCPEMIE0015 The values are required.**

**Explanation** You must specify values in the fields.

**Action** Specify values for these fields.

**SPMCCPEMIW0000 My webMethods Server password was not provided.**

**Explanation** The password is a required field.

**Action** Provide a password for My webMethods Server.

**SPMCCPEMIW0004 The My webMethods Server URL is not accessible. Click Show Details for more information.**

**Explanation** The URL for pinging My webMethods Server is not accessible.

**Action** Check that your WmMonitor configuration values for host, port, username and password are valid, and also confirm that My webMethods Server is reachable on the network.

**SPMCCPEMIW0005 My webMethods Server credentials are not valid.**

**Explanation** The username or password are incorrect.

**Action** Check that the username and password are correct.

**SPMCCPEMIW0011 The password is required.**

**Explanation** You must specify a password.

**Action** Specify a password.

**SPMCCPEMIW0012 No value was provided for 'Data Level Security Administrator'**

**Explanation** A value for the Data Level Security, DLS, super user was not provided.

**Action** No action is required if the default value of '\Administrator\' is acceptable.

**SPMCCPEMIW0013 A default value of 'Administrator' was provided; it will be displayed upon Save.**

**Explanation** Because no value was provided for the Data Level Security super user, the default value of '\Administrator\' is used.

**Action** Set a value for Data Level Security Administrator.

**SPMCFCE0012 Properties serializer supports only instances of java.util.Properties**

**Explanation** The user is trying to use a Properties serializer on an inappropriate object type.

**Action** Use proper serializer for your object.

<b>SPMCFCE0023</b>	<b>There is no registered ConfigurationSerializer under runtimeComponentId {0} and configurationTypeId {1}</b>
<b>Explanation</b>	No registered ConfigurationSerializer exists under the entered runtimeComponentId and configurationTypeId.
<b>Action</b>	Register a ConfigurationSerializer under the entered runtimeComponentId and configurationTypeId.
<b>SPMCFCE0026</b>	<b>ConfigurationManager should be registered with the runtimeComponentId and configurationTypeId properties.</b>
<b>Explanation</b>	ConfigurationManager should be registered with the runtimeComponentId and configurationTypeId properties. They cannot be null.
<b>Action</b>	Register ConfigurationManager and set values for the runtimeComponentId and configurationTypeId properties.
<b>SPMCFCE0030</b>	<b>Error occurred during serialization/deserialization.</b>
<b>Explanation</b>	Error occurred during serialization/deserialization.
<b>Action</b>	Check for user permissions and hardware failures and try again.
<b>SPMCFCE0048</b>	<b>ConfigurationSerializer SPI could not be found for RuntimeComponentId "{0}" and ConfigurationTypeId "{1}" .</b>
<b>Explanation</b>	Platform Manager could not find a registered ConfigurationSerializer that can handle ConfigurationInstances with these properties.
<b>Action</b>	Register a ConfigurationSerializer SPI implementation that can handle ConfigurationInstances with these properties.
<b>SPMCFCE0049</b>	<b>Configuration is not available for this component.</b>
<b>Explanation</b>	The component requires a configuration to function properly.
<b>Action</b>	Set the configuration for this component.
<b>SPMCFCI0000</b>	<b>Port Settings</b>
<b>Explanation</b>	PortSettingsConfigurationType Display Name
<b>Action</b>	None.

---

<b>SPMCFCI0001</b>	<b>Listener ports configuration</b>
<b>Explanation</b>	PortSettingsConfigurationType description.
<b>Action</b>	None.
<b>SPMCFCI0019</b>	<b>The keystore truststore settings cannot be null.</b>
<b>Explanation</b>	The keystore truststore settings cannot be set to null.
<b>Action</b>	Provide a valid keystore truststore setting.
<b>SPMCFCI0028</b>	<b>There can be only one primary pool defined in the JDBC configuration.</b>
<b>Explanation</b>	There can be only one primary pool defined in the JDBC configuration.
<b>Action</b>	Specify only one pool with the primary as true.
<b>SPMCFGE0000</b>	<b>The configuration type argument is not set.</b>
<b>Explanation</b>	The configuration type argument is not set.
<b>Action</b>	Set the configuration type argument.
<b>SPMCFGE0001</b>	<b>Configuration type {0} cannot be found.</b>
<b>Explanation</b>	A Configuration Manager that can handle configuration type {0} cannot be found.
<b>Action</b>	Make sure that configuration type {0} is supported, for example check if there is a Configuration Manager registered for it.
<b>SPMCFGE0002</b>	<b>A Configuration instance with ID = {0} does not exist.</b>
<b>Explanation</b>	A Configuration instance with the provided ID does not exist.
<b>Action</b>	Use the ID of an existing Configuration instance.
<b>SPMCFGE0003</b>	<b>Loaded configuration cannot be null.</b>
<b>Explanation</b>	The requested configuration cannot be null.
<b>Action</b>	Provide valid runtimeComponent, configurationInstance, and configurationStatus.
<b>SPMCFGE0004</b>	<b>The Configuration Manager Service is not set.</b>
<b>Explanation</b>	The Configuration Manager Service is not set.
<b>Action</b>	Set the Configuration Manager Service.

<b>SPMCFGE0005</b>	<b>The component ID or configurationType ID is wrong.</b>
<b>Explanation</b>	The component ID or configurationType argument ID is wrong.
<b>Action</b>	Use an appropriate component ID or configurationType ID.
<b>SPMCFGE0006</b>	<b>Configuration is not available for this component.</b>
<b>Explanation</b>	This component needs configuration in order to function.
<b>Action</b>	Set the configuration for this component.
<b>SPMCFGE0007</b>	<b>ConfigurationSerializer SPI could not be found for RuntimeComponentId "{0}" and ConfigurationTypeId "{1}" .</b>
<b>Explanation</b>	Platform Manager did not find registered ConfigurationSerializer that can handle ConfigurationInstances with these properties.
<b>Action</b>	Register ConfigurationSerializer SPI implementation that can handle ConfigurationInstances with these properties.
<b>SPMCFGE0008</b>	<b>Id cannot be null.</b>
<b>Explanation</b>	When creating a configuration instance, the id argument cannot be null.
<b>Action</b>	Provide a non-null id argument.
<b>SPMCFGE0009</b>	<b>ConfigurationTypeId cannot be null.</b>
<b>Explanation</b>	When creating a configuration instance, the ConfigurationTypeId argument cannot be null.
<b>Action</b>	Provide a non-null id argument.
<b>SPMCFGE0010</b>	<b>DisplayName cannot be null.</b>
<b>Explanation</b>	When creating a configuration instance, the displayName argument cannot be null.
<b>Action</b>	Provide a non-null id argument.
<b>SPMCFGE0011</b>	<b>The component to be updated is null.</b>
<b>Explanation</b>	The runtime component to be updated cannot be null.
<b>Action</b>	Provide a non-null runtime component.

---

<b>SPMCFGE0012</b>	<b>Protocol value cannot be changed.</b>
<b>Explanation</b>	The protocol value for an existing port configuration cannot be changed.
<b>Action</b>	Retry the operation without changing the protocol.
<b>SPMCFGE0013</b>	<b>Create command is not supported.</b>
<b>Explanation</b>	Create configuration command is not supported by this configuration manager.
<b>Action</b>	Check the logs.
<b>SPMCFGE0020</b>	<b>ConfigurationService is not set.</b>
<b>Explanation</b>	ConfigurationService is not set.
<b>Action</b>	Register a ConfigurationService.
<b>SPMCFGE0021</b>	<b>New configuration is null.</b>
<b>Explanation</b>	The configuration sent for validation is null.
<b>Action</b>	Send a valid configuration that is not null.
<b>SPMCFGE0022</b>	<b>Delete command is not supported</b>
<b>Explanation</b>	Delete configuration command is not supported by this configuration manager.
<b>Action</b>	Check the logs.
<b>SPMCFGE0023</b>	<b>The new configuration to be validated can not be null.</b>
<b>Explanation</b>	The new configuration to be validated can not be null.
<b>Action</b>	Send a valid configuration that is not null for validation.
<b>SPMCFGE0024</b>	<b>Duplicate truststore aliases in the existing instances.</b>
<b>Explanation</b>	Duplicate truststore aliases are present in the existing instances.
<b>Action</b>	Use a unique truststore alias.
<b>SPMCFGE0025</b>	<b>Duplicate truststore aliases are present in the existing instances.</b>
<b>Explanation</b>	Duplicate truststore aliases are present in the existing instances.
<b>Action</b>	Use a unique truststore alias.

<b>SPMCFGE0026</b>	<b>Duplicate keystore aliases in existing instances.</b>
<b>Explanation</b>	Duplicate keystore alias is present in the existing instances.
<b>Action</b>	Use a unique keystore alias.
<b>SPMCFGE0027</b>	<b>Duplicate keystore alias is present in existing instances.</b>
<b>Explanation</b>	Duplicate keystore alias is present in the existing instances.
<b>Action</b>	Use a unique keystore alias.
<b>SPMCFGE0028</b>	<b>The file location provided in the keystore could not be found.</b>
<b>Explanation</b>	The file location provided in the keystore could not be found.
<b>Action</b>	The file location provided in the keystore configuration must point to an existing file. Use an existing file location.
<b>SPMCFGE0040</b>	<b>The keystore location information is missing.</b>
<b>Explanation</b>	The keystore location information is missing in the new configuration.
<b>Action</b>	Use a valid keystore location that points to an existing file.
<b>SPMCFGE0041</b>	<b>The keystore location information is either null or empty. It should point to an existing file.</b>
<b>Explanation</b>	The keystore location information is either null or empty. It should point to an existing file.
<b>Action</b>	The keystore location should point to an existing file.
<b>SPMCFGE0042</b>	<b>An exception occurred when trying to get the existing aliases.</b>
<b>Explanation</b>	The PlatformManagerException exception occurred when trying to get the existing aliases.
<b>Action</b>	You need to correct the existing configuration instances with valid aliases.
<b>SPMCFGE0043</b>	<b>An exception occurred when trying to get the existing aliases.</b>
<b>Explanation</b>	The IOException exception occurred when trying to get the existing aliases.
<b>Action</b>	Provide a valid runtime ID and configuration type ID to the validator.

---

<b>SPMCFGE0049</b>	<b>Configuration of type Common-JDBC is null.</b>
<b>Explanation</b>	Configuration object for Common-JDBC is null.
<b>Action</b>	Specify the valid configuration object for Common-JDBC.
<b>SPMCFGE0051</b>	<b>Duplicate alias for Jdbc Pool is found.</b>
<b>Explanation</b>	Alias for Jdbc Pool is not unique. This is not a valid configuration.
<b>Action</b>	Specify a unique Jdbc Pool alias.
<b>SPMCFGE0053</b>	<b>There can be only one pool with primary as true.</b>
<b>Explanation</b>	There is more than one pool defined as primary. This is not valid.
<b>Action</b>	Specify only one pool with primary as true.
<b>SPMCFGE0055</b>	<b>JDBC Pool information is not available. Specify valid JDBC Pool Settings.</b>
<b>Explanation</b>	JDBC Pool information is not available in the JDBC Settings Configuration Object. This is not valid.
<b>Action</b>	Specify valid JDBC Pool Settings.
<b>SPMCFGE0058</b>	<b>An exception occurred when trying to get the existing aliases.</b>
<b>Explanation</b>	The PlatformManagerException exception occurred when trying to get the existing aliases.
<b>Action</b>	You need to correct the existing configuration instances with valid JDBC pool aliases.
<b>SPMCFGE0059</b>	<b>The JDBC connection failed.</b>
<b>Explanation</b>	The JDBC connection failed because it was invalid.
<b>Action</b>	Specify valid JDBC connection data.
<b>SPMCFGE0060</b>	<b>Failed to close a valid JDBC connection.</b>
<b>Explanation</b>	Failed to close a valid JDBC connection.
<b>Action</b>	Contact your system administrator.
<b>SPMCFGE0061</b>	<b>Password verification failed.</b>
<b>Explanation</b>	The password provided to load the certificate is incorrect.
<b>Action</b>	You need to provide a valid password and try again.

<b>SPMCFGE0065</b>	<b>Configuration Instance "{0}" does not exist.</b>
<b>Explanation</b>	Configuration Instances should be backed up by existing source.
<b>Action</b>	Make sure this particular Configuration Instance is declared correctly.
<b>SPMCFGE0066</b>	<b>Configuration Instance "{0}" is not a valid URL.</b>
<b>Explanation</b>	Configuration Instance "{0}" should be backed up by valid URL source.
<b>Action</b>	Make sure this particular Configuration Instance is declared correctly.
<b>SPMCFGE0067</b>	<b>Unknown property name "{0}".</b>
<b>Explanation</b>	The property is not recognized.
<b>Action</b>	Make sure this particular Configuration Instance is declared correctly.
<b>SPMCFGE0068</b>	<b>The specified port number is already in use. The port number is bound to an application outside the current installation of Software AG Suite of products.</b>
<b>Explanation</b>	The specified port number is already in use. The port number is bound to an application outside the current installation of Software AG Suite of products.
<b>Action</b>	Specify a different port number or shut down the component that is running on this port.
<b>SPMCFGE0071</b>	<b>The value {0} cannot be used. A non-negative number is expected.</b>
<b>Explanation</b>	The specified value must not be a negative number.
<b>Action</b>	Specify a non-negative number.
<b>SPMCFGE0073</b>	<b>The value of the Threadpool Min parameter cannot be equal to or more than the value for the Threadpool Max parameter.</b>
<b>Explanation</b>	The value of the Threadpool Min parameter cannot be equal to or more than the value of the Threadpool Max parameter.
<b>Action</b>	Change the configuration to make the value of the Threadpool Max parameter more than the value of the Threadpool Min parameter.
<b>SPMCFGE0078</b>	<b>The configuration contains duplicate log file name entries.</b>
<b>Explanation</b>	Duplicate log file names exist in the log configuration appendices.
<b>Action</b>	Make sure each log file name in the log configuration is unique.

---

<b>SPMCFGE0079</b>	<b>Log file name {0} already exists.</b>
<b>Explanation</b>	The specified log file name exists in another runtime component's log configuration.
<b>Action</b>	Make sure each file name is unique across runtime components.
<b>SPMCFGE0080</b>	<b>Not enough disk space.</b>
<b>Explanation</b>	The disk partition free space is less than 10Mb.
<b>Action</b>	Make sure the disk partition has enough free space.
<b>SPMCFGE0081</b>	<b>The user does not have privileges to perform file operations. Check the current security policy.</b>
<b>Explanation</b>	The user performing the file operation does not have the proper privileges necessary to create or write to a log file.
<b>Action</b>	Make sure the user has adequate privileges to perform the operation.
<b>SPMCFGE0082</b>	<b>Error creating temp file in {0}. Make sure the specified directory is valid.</b>
<b>Explanation</b>	The log configuration validation failed because the specified log directory is not valid or does not exist.
<b>Action</b>	Make sure the specified log directory is valid.
<b>SPMCFGE0084</b>	<b>The "from" or "to" email address is not correct.</b>
<b>Explanation</b>	In Platform Manager, during validation of sending a test email, if the "from" or "to" email address is not correct, this error is thrown.
<b>Action</b>	Ensure that the "from" or "to" email address is correct, and try again.
<b>SPMCFGE0086</b>	<b>Not able to connect to the SMTP server {0}.</b>
<b>Explanation</b>	In Platform Manager, the socket connection is not able to connect to the SMTP server with the given credentials.
<b>Action</b>	Ensure the server is running and the specified credentials are correct.
<b>SPMCFGE0088</b>	<b>Unable to send a test mail to the recipient {1} using the SMTP server {0}.</b>
<b>Explanation</b>	In Platform Manager, an error occurs when sending an email to the recipient.
<b>Action</b>	The email ID is non-existent. Enter a valid email ID and try again.

<b>SPMCFGE0090</b>	<b>An exception occurred when trying to get the existing aliases.</b>
<b>Explanation</b>	The IOException exception occurred when trying to get the existing aliases.
<b>Action</b>	Provide a valid runtime ID and configuration type ID to the validator.
<b>SPMCFGE0091</b>	<b>An exception occurred when trying to get the existing JDBC pools defined as primary.</b>
<b>Explanation</b>	The PlatformManagerException exception occurred when trying to get the existing JDBC pools defined as primary.
<b>Action</b>	You need to correct the existing configuration instances with only one JDBC pool as primary.
<b>SPMCFGE0092</b>	<b>An exception occurred when trying to get the existing JDBC pools defined as primary.</b>
<b>Explanation</b>	The IOException exception occurred when trying to get the existing JDBC pools defined as primary.
<b>Action</b>	Provide a valid runtime ID and configuration type ID to the validator.
<b>SPMCFGE0093</b>	<b>No value was specified for the Protocol parameter.</b>
<b>Explanation</b>	No value was specified for the Protocol parameter.
<b>Action</b>	Specify a value for the Protocol parameter.
<b>SPMCFGE0094</b>	<b>The keystore truststore setting is empty.</b>
<b>Explanation</b>	The keystore truststore setting does not contain any fields.
<b>Action</b>	Provide either the keystore, truststore or extended properties.
<b>SPMCFGE0095</b>	<b>The keystore truststore setting does not contain any element.</b>
<b>Explanation</b>	The keystore truststore setting should either have the keystore, the truststore, or the extended properties, which is missing.
<b>Action</b>	Add the keystore, the truststore, or the extended properties to the keystore truststore setting.
<b>SPMCFGE0096</b>	<b>There can be only one primary pool defined in the JDBC configuration.</b>
<b>Explanation</b>	There can be only one primary pool defined in the JDBC configuration.
<b>Action</b>	Specify only one pool with the primary as true.

---

<b>SPMCFGE0097</b>	<b>The JDBC Pool name is not unique.</b>
<b>Explanation</b>	The JDBC Pool name is not unique.
<b>Action</b>	Specify a unique JDBC Pool name.
<b>SPMCFGE0098</b>	<b>The JDBC driver class should not be null when the database server type is Custom.</b>
<b>Explanation</b>	The JDBC driver class should not be null when the database server type is Custom.
<b>Action</b>	Specify the JDBC Driver class if the database server type is Custom.
<b>SPMCFGE0099</b>	<b>The database server host should not be null when the database server type is non-custom and the URL is not specified.</b>
<b>Explanation</b>	The database server host should not be null when the database server type is non-custom and the URL is not specified.
<b>Action</b>	Specify the hostname for the database server when the server type is non-custom and the database URL is not specified.
<b>SPMCFGE0100</b>	<b>The database server port number should not be null when the database server type is non-custom and the URL is not specified.</b>
<b>Explanation</b>	The database server port number should not be null when the database server type is non-custom and the URL is not specified.
<b>Action</b>	Specify the port number for the database server when the server type is non-custom and the database URL is not specified.
<b>SPMCFGE0101</b>	<b>The database server SID should not be null when the database server type is Oracle and the URL is not specified.</b>
<b>Explanation</b>	The database server SID should not be null when the database server type is Oracle and the URL is not specified.
<b>Action</b>	Specify the Oracle SID when the database server type is Oracle and the database URL is not specified.
<b>SPMCFGE0102</b>	<b>The database server's database name should not be null when the database server type is non-Oracle and the URL is not specified.</b>
<b>Explanation</b>	The database server's database name should not be null when the database server type is non-Oracle and the URL is not specified.
<b>Action</b>	Specify the database name when the database server type is non-Oracle and the URL is not specified.

<b>SPMCFGE0103</b>	<b>An error occurred while getting either the runtime components or configuration instances using the configuration or inventory service.</b>
<b>Explanation</b>	An error occurred while getting either the runtime components or configuration instances using the configuration or inventory service.
<b>Action</b>	Retry the action.
<b>SPMCFGE0105</b>	<b>Configuration instance and its configuration manager must have the same configuration type.</b>
<b>Explanation</b>	Configuration instance and its configuration manager must have the same configuration type.
<b>Action</b>	Check the type of the provided configuration instance.
<b>SPMCFGE0106</b>	<b>Not able to connect to the SMTP server(s) {0} with the given credentials and also not able to send a test mail to the recipient using the SMTP server(s) {1}.</b>
<b>Explanation</b>	In Platform Manager, the socket connection is not able to connect to the SMTP server with the given credentials (if provided). Also, a test mail to the recipient using the SMTP server is also not sent.
<b>Action</b>	Ensure the server is running and the server credentials entered are correct. Also, enter the correct email address and try again.
<b>SPMCFGE0109</b>	<b>The license file can not be empty.</b>
<b>Explanation</b>	In Platform Manager, when an empty license file is uploaded, this message is seen.
<b>Action</b>	You need to ensure to upload a license file that is not empty.
<b>SPMCFGE0110</b>	<b>The truststore location information is missing.</b>
<b>Explanation</b>	The truststore location information is missing in the new configuration.
<b>Action</b>	Use a valid truststore location that points to an existing file.
<b>SPMCFGE0111</b>	<b>The truststore location information is either null or empty. It should point to an existing file.</b>
<b>Explanation</b>	The truststore location information is either null or empty. It should point to an existing file.
<b>Action</b>	The truststore location should point to an existing file.

---

<b>SPMCFGE0112</b>	<b>The specified port is already bound by configuration instance {0} of runtime {1} and is enabled.</b>
<b>Explanation</b>	The specified port is already bound by configuration instance {0} of runtime {1} and is enabled.
<b>Action</b>	Change the port number and retry.
<b>SPMCFGE0114</b>	<b>The specified Bind Address value of {0} is invalid.</b>
<b>Explanation</b>	The value of {0} is invalid for Bind Address.
<b>Action</b>	Specify a valid bind address and retry.
<b>SPMCFGE0115</b>	<b>The specified port {0} is already in use by another configuration instance.</b>
<b>Explanation</b>	The specified port {0} is already in use by configuration instance {1} of runtime {2}.
<b>Action</b>	Change the port number and retry.
<b>SPMCFGE0117</b>	<b>The specified port number {0} is already in use.</b>
<b>Explanation</b>	The specified port number {0} is already in use. The port number is bound to an application outside the current installation of Software AG Suite of products.
<b>Action</b>	Specify a different port number or shut down the component that is running on this port.
<b>SPMCFGE0120</b>	<b>License file location is not specified in License Location Manager.</b>
<b>Explanation</b>	The location of the license file is not specified in the License Location Manager.
<b>Action</b>	Specify a valid license file location in License Location Manger before loading the License instance.
<b>SPMCFGE0121</b>	<b>The configured license is not valid for this product : {0}</b>
<b>Explanation</b>	The product code in the license file does not match with the product installed.
<b>Action</b>	Contact your system administrator or Software AG Global Support.
<b>SPMCFGE0122</b>	<b>The configured license is not valid for this version : {0}</b>
<b>Explanation</b>	The product version in the license file does not match with the product installed version.
<b>Action</b>	Contact your system administrator or Software AG Support.

<b>SPMCFGE0125</b>	<b>The provided port alias {0} already exists.</b>
<b>Explanation</b>	The provided port alias {0} already exists for this runtime component.
<b>Action</b>	Provide a unique port alias for the runtime component.
<b>SPMCFGE0126</b>	<b>The specified port alias {0} differs from the existing port alias {1}</b>
<b>Explanation</b>	The specified port alias {0} differs from the existing port alias {1}
<b>Action</b>	Do not change the port alias when you execute an update operation.
<b>SPMCFGE0127</b>	<b>The JDBC Pool alias cannot be changed once it is created.</b>
<b>Explanation</b>	While updating a JDBC Pool, the alias was modified. The alias for the JDBC Pool must not change after creating the pool.
<b>Action</b>	Specify the same JDBC Pool alias in the request, or remove it.
<b>SPMCFGE0128</b>	<b>Configuration of type COMMON-JNDI is null.</b>
<b>Explanation</b>	The configuration object for COMMON-JNDI is null.
<b>Action</b>	Specify the valid configuration object for COMMON-JNDI.
<b>SPMCFGE0129</b>	<b>Configuration of type COMMON-JNDI should have one JNDI element.</b>
<b>Explanation</b>	A configuration of type COMMON-JNDI should have one JNDI element.
<b>Action</b>	Provide one JNDI element for this configuration.
<b>SPMCFGE0130</b>	<b>Configuration of type COMMON-JNDI should have JNDI element with valid alias.</b>
<b>Explanation</b>	A configuration of type COMMON-JNDI should have a JNDI element with a valid alias.
<b>Action</b>	Provide URL friendly alias for the JNDI element.
<b>SPMCFGE0131</b>	<b>Configuration of type COMMON-JNDI should have JNDI element with unique alias.</b>
<b>Explanation</b>	A configuration of type COMMON-JNDI should have a JNDI element with a unique alias.
<b>Action</b>	Provide a unique alias for the JNDI element.

---

<b>SPMCFGE0132</b>	<b>Error occurred while retrieving the JNDI configuration instances.</b>
<b>Explanation</b>	An error occurred while retrieving the JNDI configuration instances.
<b>Action</b>	See the Platform Manager logs for more details.
<b>SPMCFGE0133</b>	<b>Provide a URL for the specified JNDI provider type.</b>
<b>Explanation</b>	The URL for the specified JNDI provider type is missing.
<b>Action</b>	Specify the URL for the specified JNDI provider type.
<b>SPMCFGE0134</b>	<b>Provide Initial Context Factory for the specified JNDI provider type.</b>
<b>Explanation</b>	The specified JNDI provider type does not have an Initial Context Factory.
<b>Action</b>	Specify the Initial Context Factory for the specified JNDI provider type.
<b>SPMCFGE0135</b>	<b>DbFunctional alias was not found.</b>
<b>Explanation</b>	A DbFunctional alias with the specified alias value could not be found.
<b>Action</b>	Check if a DbFunctional alias with the provided alias value is available.
<b>SPMCFGE0136</b>	<b>Element value is not set.</b>
<b>Explanation</b>	The value of an integral element has not been set.
<b>Action</b>	Ensure that the specified data contains valid values for all required elements.
<b>SPMCFGE0137</b>	<b>Invalid DbFunctional alias.</b>
<b>Explanation</b>	The provided DbFunctional alias is invalid.
<b>Action</b>	Check the provided DbFunctional alias for invalid characters.
<b>SPMCFGE0138</b>	<b>Duplicate DbFunctional alias.</b>
<b>Explanation</b>	The provided alias already exists.
<b>Action</b>	Provide a new alias.
<b>SPMCFGE0139</b>	<b>Invalid Pool alias.</b>
<b>Explanation</b>	The provided Pool alias is invalid.
<b>Action</b>	Provide a new Pool alias.

<b>SPMCFGE0140</b>	<b>Problem detected while trying to read/write DbFunctional alias data.</b>
<b>Explanation</b>	The read/write operation failed.
<b>Action</b>	Check if the DbFunctional alias data file is available.
<b>SPMCFGE0141</b>	<b>Configuration of type COMMON-JMS should have JMS element with valid alias.</b>
<b>Explanation</b>	A configuration of type COMMON-JMS should have a JMS element with a valid alias.
<b>Action</b>	Specify a URL friendly alias for the JMS element.
<b>SPMCFGE0142</b>	<b>Configuration of type COMMON-JMS is null.</b>
<b>Explanation</b>	Configuration object for COMMON-JMS is null.
<b>Action</b>	Specify the valid configuration object for COMMON-JMS.
<b>SPMCFGE0143</b>	<b>Configuration of type COMMON-JMS should have a JMS element.</b>
<b>Explanation</b>	A configuration of type COMMON-JMS should have a JMS element.
<b>Action</b>	Specify a JMS element for this configuration.
<b>SPMCFGE0144</b>	<b>Provide URL for the specified JMS provider type.</b>
<b>Explanation</b>	The URL for the specified JMS provider type is missing.
<b>Action</b>	Provide a URL for the specified JMS provider type.
<b>SPMCFGE0145</b>	<b>Provide an existing JNDI alias for the specified JMS provider type.</b>
<b>Explanation</b>	The JNDI alias provided for the specified JMS provider type does not exist.
<b>Action</b>	Provide an existing JNDI alias for the specified JMS provider type.
<b>SPMCFGE0146</b>	<b>The provided JNDI alias does not exist. Provide an existing JNDI alias for the specified JMS provider type.</b>
<b>Explanation</b>	The JNDI alias provided for the specified JMS provider type does not exist.
<b>Action</b>	Provide an existing JNDI alias for the specified JMS provider type.
<b>SPMCFGE0147</b>	<b>Configuration of type COMMON-JMS should have JMS element with unique alias.</b>
<b>Explanation</b>	A configuration of type COMMON-JMS should have a JMS element with a unique alias.
<b>Action</b>	Provide unique alias for the JMS element.

---

<b>SPMCFGE0148</b>	<b>Error occurred while retrieving the JMS configuration instances.</b>
<b>Explanation</b>	An error occurred while retrieving the JMS configuration instances.
<b>Action</b>	See the Platform Manager logs for mode details.
<b>SPMCFGE0149</b>	<b>ConfigurationUiBindingService is not set.</b>
<b>Explanation</b>	The ConfigurationUiBindingService is not set.
<b>Action</b>	Register the ConfigurationUiBindingService.
<b>SPMCFGE0150</b>	<b>Configuration ui binding for {0} runtimeComponent and {1} configurationType cannot be retrieved.</b>
<b>Explanation</b>	The configuration user interface binding cannot be retrieved because of incorrect search parameters or incorrect SPI implementation.
<b>Action</b>	Provide a valid runtimeComponent ID and configurationType ID or check the SPI implementation.
<b>SPMCFGE0151</b>	<b>Error occurred while trying to unmarshal ui binding XML data.</b>
<b>Explanation</b>	An error occurred while trying to unmarshal the user interface binding XML data.
<b>Action</b>	Check if the XML file is well-formed and valid.
<b>SPMCFGE0152</b>	<b>Error occurred while trying to parse XSD Schema.</b>
<b>Explanation</b>	An error occurred while trying to parse the XSD Schema.
<b>Action</b>	Check if the XSD schema is valid.
<b>SPMCFGE0153</b>	<b>Client group for webMethods Messaging alias is invalid or not specified.</b>
<b>Explanation</b>	While configuring webMethods Messaging alias, if provider type is Broker, Client Group cannot be empty.
<b>Action</b>	Provide a valid Client Group while configuring webMethods Messaging alias.
<b>SPMCFGE0154</b>	<b>Broker messaging alias must have valid authentication configuration.</b>
<b>Explanation</b>	If the webMethods Messaging alias provider is Broker, you must specify valid authentication configuration.
<b>Action</b>	Provide a valid authentication while configuring webMethods Messaging alias.

<b>SPMCFGE0155</b>	<b>Broker Messaging alias must have a valid user.</b>
<b>Explanation</b>	While configuring webMethods Messaging alias, if provider type is Broker, you must specify a valid user.
<b>Action</b>	Provide a valid user while configuring webMethods Messaging alias.
<b>SPMCFGE0156</b>	<b>Broker Messaging alias must have a valid password.</b>
<b>Explanation</b>	When the messaging alias provider is Broker, the alias should have a valid password.
<b>Action</b>	Provide a valid password for a messaging alias with provider type Broker.
<b>SPMCFGE0157</b>	<b>Broker Messaging alias must have a valid keystore definition.</b>
<b>Explanation</b>	When the messaging alias provider is Broker, it should have valid keystore definition.
<b>Action</b>	Provide a valid keystore for a messaging alias with provider type Broker.
<b>SPMCFGE0158</b>	<b>Broker Messaging alias must have a valid encryption definition.</b>
<b>Explanation</b>	When the messaging alias provider is Broker, the alias should have a valid encryption definition.
<b>Action</b>	Provide a valid encryption definition for a messaging alias with provider type Broker.
<b>SPMCFGE0159</b>	<b>Specify at least one server log facility to be updated.</b>
<b>Explanation</b>	When updating the server logger, you must specify at least one server log facility.
<b>Action</b>	Ensure that you specify a server log facility.
<b>SPMCFGE0160</b>	<b>While updating a global variable, you can modify only the value for the global variable.</b>
<b>Explanation</b>	You attempted to modify the key while updating a global variable. You can modify only the value for the global variable.
<b>Action</b>	Ensure that you modify only the value for the global variable.
<b>SPMCFGE0161</b>	<b>Configuration of type COMMON-LOCAL-USERS should have User element with a valid id.</b>
<b>Explanation</b>	The User element should have an ID that contains only URL friendly symbols.
<b>Action</b>	Provide URL friendly ID for the User element.

---

<b>SPMCFGE0162</b>	<b>Configuration of type COMMON-LOCAL-USERS should have one User instance.</b>
<b>Explanation</b>	Configuration of type COMMON-LOCAL-USERS should have one User instance.
<b>Action</b>	Provide one User element for this configuration.
<b>SPMCFGE0163</b>	<b>Configuration of type COMMON-LOCAL-USERS should have User element with unique id.</b>
<b>Explanation</b>	The ID should be unique among all configurations of type COMMON-LOCAL-USERS.
<b>Action</b>	Provide a unique ID for the User element.
<b>SPMCFGE0164</b>	<b>Retrieving COMMON-LOCAL-USERS configuration instances failed.</b>
<b>Explanation</b>	An error occurred while retrieving the configuration instances of type COMMON-LOCAL-USERS.
<b>Action</b>	Check the error logs for more information.
<b>SPMCFGE0165</b>	<b>Configuration of type COMMON-LOCAL-USERS should have password.</b>
<b>Explanation</b>	A password is required for the User element, but it is missing.
<b>Action</b>	Provide a password for the User.
<b>SPMCFGE0166</b>	<b>The User element id for existing configuration of type COMMON-LOCAL-USERS cannot be updated.</b>
<b>Explanation</b>	User ID cannot be changed on update operation.
<b>Action</b>	Use the the same User ID from the existing configuration.
<b>SPMCFGE0167</b>	<b>Configuration of type COMMON-CLUSTER is null.</b>
<b>Explanation</b>	The configuration object for COMMON-CLUSTER is null.
<b>Action</b>	Specify the valid configuration object for COMMON-CLUSTER.
<b>SPMCFGE0168</b>	<b>The provided server name should be unique within the landscape.</b>
<b>Explanation</b>	The provided server name already exists in the landscape.
<b>Action</b>	Provide a server name that is unique within the landscape.

<b>SPMCFGE0169</b>	<b>Error occurred while retrieving the COMMON-CLUSTER configuration instances.</b>
<b>Explanation</b>	An error occurred while retrieving the COMMON-CLUSTER configuration instances.
<b>Action</b>	See the Platform Manager logs for mode details.
<b>SPMCFGE0170</b>	<b>Path to the internal user repository file cannot be found.</b>
<b>Explanation</b>	File {0} does not exist.
<b>Action</b>	Specify a valid path to the user.txt file relative to profile or product suite directories.
<b>SPMCFGE0171</b>	<b>User does not exist.</b>
<b>Explanation</b>	User with id {0} is not found in the User repository file.
<b>Action</b>	Try to refresh the configuration metadata.
<b>SPMCFGE0172</b>	<b>One of the existing servers has changed name.</b>
<b>Explanation</b>	One of the existing servers has a changed name.
<b>Action</b>	The names of existing servers should not change.
<b>SPMCFGE0173</b>	<b>Invalid value of Init Size.</b>
<b>Explanation</b>	Only positive integers are allowed.
<b>Action</b>	Provide Init Size greater than zero.
<b>SPMCFGE0174</b>	<b>Path to users.txt not specified.</b>
<b>Explanation</b>	The path to the users.txt file is not specified in the component XML data.
<b>Action</b>	Specify a property named "usersRepoPath" with a value relative to profile or Software AG installation directories.
<b>SPMCFGE0175</b>	<b>Missing or invalid ProxyServer alias.</b>
<b>Explanation</b>	The ProxyServer alias is missing or invalid.
<b>Action</b>	Provide a valid ProxyServer alias.
<b>SPMCFGE0176</b>	<b>Protocol or Host value is not set.</b>
<b>Explanation</b>	The value of a required element (Host or Protocol) has not been set.
<b>Action</b>	Ensure that the specified data contains valid values for Host and Protocol.

---

<b>SPMCFGE0177</b>	<b>Duplicate ProxyServer alias.</b>
<b>Explanation</b>	The provided alias already exists.
<b>Action</b>	Provide a new alias.
<b>SPMCFGE0178</b>	<b>Invalid Protocol value.</b>
<b>Explanation</b>	The provided Protocol value is invalid.
<b>Action</b>	Provide a valid Protocol value.
<b>SPMCFGE0179</b>	<b>Invalid Host value.</b>
<b>Explanation</b>	The provided Host value is invalid.
<b>Action</b>	Provide a valid Host value.
<b>SPMCFGE0180</b>	<b>Problem detected while trying to read/write Proxy data.</b>
<b>Explanation</b>	The read/write operation failed.
<b>Action</b>	Check if the Proxy data file is available.
<b>SPMCFGE0181</b>	<b>Invalid value of Max Size.</b>
<b>Explanation</b>	Only positive integers greater than Init Size are allowed.
<b>Action</b>	Provide Max Size greater than zero and greater than Init Size.
<b>SPMCFGE0182</b>	<b>Error in configuration changed event handler for run-time component {0}.</b>
<b>Explanation</b>	An event was raised but most likely this run-time component does not exist anymore.
<b>Action</b>	Change the configuration for existing run-time components.
<b>SPMCFGE0183</b>	<b>Missing or invalid Component Endpoint alias.</b>
<b>Explanation</b>	The Component Endpoint alias is missing or invalid.
<b>Action</b>	Provide a valid Component Endpoint alias.
<b>SPMCFGE0184</b>	<b>Duplicate Component Endpoint alias.</b>
<b>Explanation</b>	The provided alias already exists.
<b>Action</b>	Provide a new unique alias.

<b>SPMCFGE0185</b>	<b>Problem detected while trying to read/write configuration data.</b>
<b>Explanation</b>	The read/write operation failed.
<b>Action</b>	Check if the configuration data file is available.
<b>SPMCFGE0186</b>	<b>There is no existing ProxySettings configuration instance with the provided ProxyAlias.</b>
<b>Explanation</b>	The provided ProxyAlias was not found in the existing ProxySettings aliases.
<b>Action</b>	Provide existing ProxyAlias.
<b>SPMCFGE0187</b>	<b>There is no existing Keystore configuration instance with the provided KeystoreAlias.</b>
<b>Explanation</b>	The provided KeystoreAlias was not found in the existing Keystore aliases.
<b>Action</b>	Provide existing KeystoreAlias.
<b>SPMCFGE0188</b>	<b>There is no existing Truststore configuration instance with the provided TruststoreAlias.</b>
<b>Explanation</b>	The provided TruststoreAlias was not found in the existing Truststore aliases.
<b>Action</b>	Provide existing TruststoreAlias.
<b>SPMCFGE0189</b>	<b>Missing or empty BASIC authentication user.</b>
<b>Explanation</b>	The BASIC authentication user is missing or empty.
<b>Action</b>	Provide BASIC authentication user.
<b>SPMCFGE0190</b>	<b>Either KeystoreAlias or KeystoreDefinition can be specified, but not both.</b>
<b>Explanation</b>	Either KeystoreAlias or KeystoreDefinition can be specified, but not both at the same time.
<b>Action</b>	Provide either KeystoreAlias or KeystoreDefinition.
<b>SPMCFGE0191</b>	<b>Either TruststoreDefinition or TruststoreAlias can be used, but not both.</b>
<b>Explanation</b>	Either TruststoreDefinition or TruststoreAlias can be used, but not both at the same time.
<b>Action</b>	Provide either TruststoreDefinition or TruststoreAlias.

---

<b>SPMCFGE0193</b>	<b>The "configuration" property is not set.</b>
<b>Explanation</b>	The "configuration" property defines where the proxy settings are stored.
<b>Action</b>	Set the "configuration" property.
<b>SPMCFGE0194</b>	<b>This configuration instance is not intended to be deleted.</b>
<b>Explanation</b>	This configuration can only be modified.
<b>Action</b>	Modify the configuration instead of deleting it.
<b>SPMCFGE0195</b>	<b>Configuration password decryption failed. The provided value for shared secret is incorrect.</b>
<b>Explanation</b>	Decrypting the configuration password has failed. The value specified for the shared secret is incorrect.
<b>Action</b>	Check if the values for shared secret on Command Central and Platform Manager are the same.
<b>SPMCFGE0196</b>	<b>The server cannot be null.</b>
<b>Explanation</b>	The creation of a cluster configuration requires servers.
<b>Action</b>	Specify at least one server.
<b>SPMCFGE0197</b>	<b>Wrong configuration ID.</b>
<b>Explanation</b>	The configuration ID is not recognized.
<b>Action</b>	Re-try using a valid configuration ID.
<b>SPMCFGE0198</b>	<b>LDAP configuration file not found.</b>
<b>Explanation</b>	An LDAP configuration file with the specified alias is not found.
<b>Action</b>	Specify a valid configuration instance ID.
<b>SPMCFGE0199</b>	<b>Configuration {0} can not be deleted.</b>
<b>Explanation</b>	The configuration file can not be deleted.
<b>Action</b>	Make sure that a configuration with the specified alias exists.

<b>SPMCFGE0201</b>	<b>Error while processing jaas.config entries.</b>
<b>Explanation</b>	Cannot store the JAAS configuration file.
<b>Action</b>	Check the wrapper log for details about the error.
<b>SPMCFGE0202</b>	<b>{0} process finished with error code "{1}".</b>
<b>Explanation</b>	CMD: {2}, OUTPUT: {3}
<b>Action</b>	Check the upgrade and migration help for the product.
<b>SPMCFGE0204</b>	<b>There is no existing Credentials configuration instance with the provided alias {0}.</b>
<b>Explanation</b>	The specified alias {0} was not found in the existing credentials configuration instances.
<b>Action</b>	Specify an existing credentials alias.
<b>SPMCFGE0205</b>	<b>Credentials configuration file not found.</b>
<b>Explanation</b>	A credentials configuration file with the specified alias is not found.
<b>Action</b>	Specify a valid configuration instance ID.
<b>SPMCFGE0206</b>	<b>Specified alias is reserved for default credentials and cannot be used.</b>
<b>Explanation</b>	The default credentials have reserved aliases, such as NONE, TRUSTED or DEFAULT_ADMINISTRATOR.
<b>Action</b>	Specify a valid alias.
<b>SPMCFGE0207</b>	<b>Configuration instance with alias {0} does not exist.</b>
<b>Explanation</b>	The specified configuration instance does not exist.
<b>Action</b>	Specify a valid alias of an existing configuration instance.
<b>SPMCFGE0209</b>	<b>Proxy configuration file not found.</b>
<b>Explanation</b>	The configuration instance ID is not valid.
<b>Action</b>	Specify a valid configuration instance ID.
<b>SPMCFGE0210</b>	<b>A realm with the same name already exists.</b>
<b>Explanation</b>	A JAAS realm with the same name already exists.
<b>Action</b>	Specify a unique realm name.

---

<b>SPMCFG10108</b>	<b>No primary or HTTPS ports are found for {0} component and its parent/child relations.</b>
<b>Explanation</b>	No primary or HTTPS ports were found for {0} component and its parent/child relations.
<b>Action</b>	Check configured and available ports for availability and collisions.
<b>SPMCFGW0029</b>	<b>The validator with the given type is not able to instantiate a KeyStore.</b>
<b>Explanation</b>	The validator with the given type is not able to instantiate a KeyStore.
<b>Action</b>	Provide the correct certificate information.
<b>SPMCFGW0030</b>	<b>An exception occurred when trying to load the keystore certificate.</b>
<b>Explanation</b>	The NoSuchAlgorithmException exception occurred when trying to load the keystore certificate.
<b>Action</b>	Provide the correct certificate information.
<b>SPMCFGW0031</b>	<b>An exception occurred while trying to load the keystore certificate.</b>
<b>Explanation</b>	The CertificateException exception occurred while trying to load the keystore certificate.
<b>Action</b>	Provide the correct certificate information.
<b>SPMCFGW0032</b>	<b>An exception occurred when trying to load the keystore certificate.</b>
<b>Explanation</b>	The IOException exception occurred when trying to load the keystore certificate.
<b>Action</b>	Provide the correct certificate information.
<b>SPMCFGW0033</b>	<b>An exception occurred when trying to load the keystore certificate.</b>
<b>Explanation</b>	The URISyntaxException exception occurred when trying to load the keystore certificate.
<b>Action</b>	Provide the correct certificate information.
<b>SPMCFGW0034</b>	<b>The file location provided in the truststore could not be found.</b>
<b>Explanation</b>	The file location provided in the truststore could not be found.
<b>Action</b>	Provide the correct certificate information.

<b>SPMCFGW0035</b>	<b>An exception occurred when trying to load the truststore certificate.</b>
<b>Explanation</b>	The KeyStoreException exception occurred when trying to load the truststore certificate.
<b>Action</b>	Provide the correct certificate information.
<b>SPMCFGW0036</b>	<b>An exception occurred when trying to load the certificate.</b>
<b>Explanation</b>	The NoSuchAlgorithmException exception occurred when trying to load the certificate.
<b>Action</b>	Provide the correct certificate information.
<b>SPMCFGW0037</b>	<b>An exception occurred when trying to load the certificate.</b>
<b>Explanation</b>	The CertificateException exception occurred when trying to load the certificate.
<b>Action</b>	Provide the correct certificate information.
<b>SPMCFGW0038</b>	<b>The validator could not load the certificate because of an exception.</b>
<b>Explanation</b>	The validator could not load the certificate when trying to load the certificate because of the IOException exception.
<b>Action</b>	Provide the correct certificate information.
<b>SPMCFGW0039</b>	<b>URI syntax provided is incorrect.</b>
<b>Explanation</b>	The URISyntaxException occurred when trying to load the certificate.
<b>Action</b>	Provide the correct certificate information.
<b>SPMCFGW0057</b>	<b>Platform Manager is unable to load JDBC driver class.</b>
<b>Explanation</b>	Platform Manager is unable to load JDBC driver class because the driver class is not specified in the classpath.
<b>Action</b>	Specify the driver class in the classpath.
<b>SPMCFGW0083</b>	<b>The path of the log file {0} is not fully qualified.</b>
<b>Explanation</b>	The specified log file path is not fully qualified.
<b>Action</b>	Provide the absolute path for the log file.

<b>SPMCFGW0104</b>	<b>Could not perform configuration validation for {0} because {1} error was encountered.</b>
<b>Explanation</b>	Could not perform configuration validation for {0} because {1} error was encountered.
<b>Action</b>	Retry the action.
<b>SPMCFGW0113</b>	<b>The specified port is already bound by configuration instance {0} of runtime {1} and is not enabled.</b>
<b>Explanation</b>	The specified port is already bound by configuration instance {0} of runtime {1} and is not enabled.
<b>Action</b>	Change the port number and retry.
<b>SPMCFGW0116</b>	<b>The specified port {0} is already in use by another configuration instance.</b>
<b>Explanation</b>	The specified port {0} is already in use by configuration instance {1} of runtime {2}, but is not enabled.
<b>Action</b>	Specify a different port number.
<b>SPMCFGW0203</b>	<b>Advanced Memory settings are deprecated.</b>
<b>Explanation</b>	Using the COMMON-MEMORY configuration type to set up advanced memory settings is deprecated.
<b>Action</b>	Use the COMMON-JVM-OPTIONS configuration type to configure the advanced memory settings.
<b>SPMCFRE0000</b>	<b>The content of the response is not acceptable according to the accept headers</b>
<b>Explanation</b>	The content of the response is not acceptable according to the accept headers.
<b>Action</b>	Check the response and the accept headers.
<b>SPMCFRE0001</b>	<b>Unexpected exception occurred.</b>
<b>Explanation</b>	Unexpected exception occurred.
<b>Action</b>	Check the logs.
<b>SPMCFRE0002</b>	<b>Configuration partial failure for runtime component: {0}, instance: {1} with type {2} - with linked exception:</b>
<b>Explanation</b>	Configuration partial failure for runtime component: {0}, instance: {1} with type {2} - with linked exception:
<b>Action</b>	Check the logs.

<b>SPMCFRE0003</b>	<b>ConfigurationSerializersRegistry is not available.</b>
<b>Explanation</b>	ConfigurationSerializersRegistry is not available.
<b>Action</b>	Contact Software AG Global Support.
<b>SPMCFRE0004</b>	<b>ConfigurationSerializer SPI could not be found for RuntimeComponentId "{0}" and ConfigurationTypeId "{1}" .</b>
<b>Explanation</b>	Platform Manager could not find a registered ConfigurationSerializer that can handle ConfigurationInstances with these properties.
<b>Action</b>	Register a ConfigurationSerializer SPI implementation that can handle ConfigurationInstances with these properties.
<b>SPMCFRE0005</b>	<b>A ConfigurationTypeId "{0}" doesn't exist for RuntimeComponentId "{1}" .</b>
<b>Explanation</b>	There is not registered ConfigurationType with the provided ID for the required RuntimeComponent.
<b>Action</b>	Provide valid ConfigurationTypeId for the required RuntimeComponent.
<b>SPMCFRE0006</b>	<b>Configuration Service cannot handle Configuration Model "{0}". Supported models are: {1}. Check Configuration Type "{2}" definition.</b>
<b>Explanation</b>	Most likely there is an error in the definition of the Configuration Type SPI in the respective product plug-in.
<b>Action</b>	Check the Configuration Type "{2}" definition.
<b>SPMCLTE0014</b>	<b>ConfigurationSerializer SPI could not be found for RuntimeComponentId "{0}" and ConfigurationTypeId "{1}" .</b>
<b>Explanation</b>	Platform Manager could not find a registered ConfigurationSerializer that can handle ConfigurationInstances with these properties.
<b>Action</b>	Register a ConfigurationSerializer SPI implementation that can handle ConfigurationInstances with these properties.
<b>SPMCLTE0015</b>	<b>Authentication call to SPM failed to execute.</b>
<b>Explanation</b>	Authentication call to SPM failed to execute.
<b>Action</b>	Make sure that the user has valid access rights to the service.

---

<b>SPMCLTE0016</b>	<b>Cannot retrieve the delegated assertion for the current user.</b>
<b>Explanation</b>	Cannot retrieve the delegated assertion for the current user.
<b>Action</b>	Check if the user has valid delegated rights.
<b>SPMCLTE0017</b>	<b>Internal Error processing Platform Manager request</b>
<b>Explanation</b>	The server encountered an error and it cannot complete the request.
<b>Action</b>	Contact your system administrator.
<b>SPMCLTE0018</b>	<b>The specified runtime component {0} could not be found on node {1}.</b>
<b>Explanation</b>	There is no component called {0} registered for node {1}. The data could not be retrieved.
<b>Action</b>	Check the components for Platform Manager node {1}.
<b>SPMCLTE0020</b>	<b>{0} is not a valid type for the runscript request</b>
<b>Explanation</b>	The type for the runscript request is not valid. Valid types are fix or product.
<b>Action</b>	Resubmit the request with a valid type.
<b>SPMCLTE0021</b>	<b>No artifacts specified in uninstall request</b>
<b>Explanation</b>	The uninstall request does not specify any products or fixes.
<b>Action</b>	Resubmit the request with a valid list of products and fixes.
<b>SPMCLTE0022</b>	<b>Invalid artifact type for uninstall</b>
<b>Explanation</b>	The artifact type must be product or fix.
<b>Action</b>	Specify valid artifacts in the request.
<b>SPMCLTE0023</b>	<b>Invalid repository type: {0}</b>
<b>Explanation</b>	The specified repository type is not supported.
<b>Action</b>	Use fix or product as the repository type.
<b>SPMCLTE0024</b>	<b>No such repository: {0}</b>
<b>Explanation</b>	The repository does not exist.
<b>Action</b>	Specify a valid repository.

<b>SPMCLTE0025</b>	<b>Unsupported repository type: {0}</b>
<b>Explanation</b>	Fix and product are the only supported repository types.
<b>Action</b>	Use fix or product as the repository type.
<b>SPMCLTE0026</b>	<b>Unsupported repository type: {0}</b>
<b>Explanation</b>	Fix and product are the only supported repository types.
<b>Action</b>	Specify a valid repository type.
<b>SPMCLTE0027</b>	<b>The response cannot be converted to java.util.Properties: {0}</b>
<b>Explanation</b>	The response does not comply with the java.util.Properties text or XML format.
<b>Action</b>	Make sure the format is correct or contact Software AG Global Support.
<b>SPMCLTE0028</b>	<b>{0} is not a valid type for the install request.</b>
<b>Explanation</b>	The type for the install request is not valid. Valid types are fix or product.
<b>Action</b>	Resubmit the request with a valid type.
<b>SPMCLTE0030</b>	<b>Failed to store license metering time stamp.</b>
<b>Explanation</b>	The products on the platform {0} were metered by the license metering tool of Command Central, but the time stamp when this metering was performed by node {1} could not be stored.
<b>Action</b>	Make sure that the harddisc on the specified server is not full or contact Software AG Global Support.
<b>SPMCLTE0031</b>	<b>Remote task failed: {0}</b>
<b>Explanation</b>	Remote task failed: {0}
<b>Action</b>	Check the corresponding Platform Manager logs for more details about the error.
<b>SPMCLTI0009</b>	<b>Internal Server Error</b>
<b>Explanation</b>	Internal server error.
<b>Action</b>	Make sure that the required services are running, communication channels are accessible, and parameters are valid.

---

<b>SPMCLTI0010</b>	<b>Unknown Error</b>
<b>Explanation</b>	An unspecified error occurred during communication.
<b>Action</b>	Make sure that the required services are running, communication channels are accessible, and parameters are valid.
<b>SPMCLTI0011</b>	<b>Error occurred during execution of the command!</b>
<b>Explanation</b>	An error occurred during communication.
<b>Action</b>	Make sure that the required services are running, communication channels are accessible, and parameters are valid.
<b>SPMCLTW0001</b>	<b>An exception has occurred while retrieving remotely RuntimeStatus from: {0}</b>
<b>Explanation</b>	This might be happening due to a number of reasons, such as missing monitoring implementation in the product plugin, network interference, and others.
<b>Action</b>	See detailed stack trace in order to define the actual reason for this exception.
<b>SPMCOME0000</b>	<b>{0} is unknown runtime component.</b>
<b>Explanation</b>	This component ID does not exist.
<b>Action</b>	Use runtimeComponentId that already exists.
<b>SPMCOME0001</b>	<b>{0} is an unknown product.</b>
<b>Explanation</b>	The required productId does not exist in the list of InventoryService.getInstalledProducts()
<b>Action</b>	Use a productId of a product that is already installed.
<b>SPMCOME0002</b>	<b>No available implementation for {0}.</b>
<b>Explanation</b>	Displayed status of a product plug-in after calling a specific operation that is not available.
<b>Action</b>	Use an available operation.
<b>SPMCOME0003</b>	<b>The PortSettings XML cannot be empty.</b>
<b>Explanation</b>	The PortSettings XML response cannot be empty.
<b>Action</b>	Add data in the PortSettings XML response.

<b>SPMCOME0004</b>	<b>PortSettings contains property keys that do not match properties in the config.ini file.</b>
<b>Explanation</b>	PortSettings contains property keys that do not match properties in the config.ini file.
<b>Action</b>	Check the property keys and try to find the matching one or fix the config.ini file.
<b>SPMCOME0005</b>	<b>Load configuration error.</b>
<b>Explanation</b>	Indicates issues with reading/writing a configuration.
<b>Action</b>	Fix any issues related to reading or writing the configuration.
<b>SPMCOME0006</b>	<b>Unexpected exception.</b>
<b>Explanation</b>	An unexpected exception occurred while reading/writing a configuration.
<b>Action</b>	Fix the unexpected exception.
<b>SPMCOME0007</b>	<b>Un-handled internal server error. {0}</b>
<b>Explanation</b>	A Platform Manager Exception occurred.
<b>Action</b>	Resolve the exception.
<b>SPMCOME0010</b>	<b>Error:</b>
<b>Explanation</b>	This is most likely an error that is not expected.
<b>Action</b>	None.
<b>SPMCOME0017</b>	<b>Provided configuration is not valid.</b>
<b>Explanation</b>	The provided configuration does not conform with the rules for the specified configuration type.
<b>Action</b>	Check the provided configuration for errors and rule breaches.
<b>SPMCOME0018</b>	<b>Unexpected component status: {0} but should have one of {1}</b>
<b>Explanation</b>	The requested operation cannot be completed because the component cannot do the operation in its current runtime status.
<b>Action</b>	Ensure that the component is in one of the expected statuses to complete this operation. For ONLINE status, start the parent runtime instance.

---

<b>SPMCOME0020</b>	<b>A Configuration instance with ID = {0} does not exist.</b>
<b>Explanation</b>	A Configuration instance with the provided ID does not exist.
<b>Action</b>	Use the ID of an existing Configuration instance.
<b>SPMCOME0029</b>	<b>Server did not find anything matching the request URI.</b>
<b>Explanation</b>	There is no resource for this URI.
<b>Action</b>	Check if the URI is correct. Check if the resource IDs are valid.
<b>SPMCOME0030</b>	<b>The request cannot be understood by the server.</b>
<b>Explanation</b>	Inconsistent or empty body.
<b>Action</b>	Do not retry without modifications of the request.
<b>SPMCOME0031</b>	<b>The request is not acceptable as stated in the accept headers.</b>
<b>Explanation</b>	Platform Manager cannot return the response in the desired format.
<b>Action</b>	Either change the accept headers, or the data format of the response.
<b>SPMCOME0033</b>	<b>The KPI {0} contains invalid data and cannot be created.</b>
<b>Explanation</b>	The error occurs when the RuntimeStateZone can not be calculated. Possible reasons for this issue are that the given values for max, marginal, and normal are null or in the wrong format.
<b>Action</b>	Check the content of the KPI and provide correct data.
<b>SPMCOME0043</b>	<b>Node version is not supported.</b>
<b>Explanation</b>	Command Central connects to an old Platform Manager node.
<b>Action</b>	Remove the old Platform Manager node.
<b>SPMCOME0045</b>	<b>Failed provisioning operation.</b>
<b>Explanation</b>	The failed status is {0}.
<b>Action</b>	Try to correct the situation. Retry the operation.
<b>SPMCOME0046</b>	<b>Operation failed due to unsatisfied dependencies: {0}</b>
<b>Explanation</b>	There are missing dependencies.
<b>Action</b>	Try to correct the situation. Retry the operation.

<b>SPMCOME0047</b>	<b>The specified repository does not exist.</b>
<b>Explanation</b>	The specified repository was not found.
<b>Action</b>	Check the repository name and provide the name of an existing repository.
<b>SPMCOME0048</b>	<b>Configuration password decryption failed. The provided value for shared secret is incorrect.</b>
<b>Explanation</b>	Decrypting the configuration password has failed. The value specified for the shared secret is incorrect.
<b>Action</b>	Check if the values for shared secret on Command Central and Platform Manager are the same.
<b>SPMCOME0049</b>	<b>Un-handled internal server error.</b>
<b>Explanation</b>	A Platform Manager Exception occurred.
<b>Action</b>	Resolve the exception.
<b>SPMCOME0051</b>	<b>Cannot connect to the repository due to {0}.</b>
<b>Explanation</b>	Internet access is required to connect to this repository. The error occurred either because the proxy for the local Platform Manager is not configured, or the metadata and the URL for the repository are not correct.
<b>Action</b>	Make sure the proxy for the local Platform Manager is configured and the given repository URL is valid. To find the URL, run 'sagcc list repository products properties=*'.
<b>SPMCOME0053</b>	<b>Service {0} is not available.</b>
<b>Explanation</b>	The service did not start in time.
<b>Action</b>	Retry the operation or refresh.
<b>SPMCOME0055</b>	<b>Cannot connect to the repository. {0}</b>
<b>Explanation</b>	The selected release is an innovation release to which you do not currently have access.
<b>Action</b>	For more information about the innovation release and how to get access, visit <a href="http://empower.softwareag.com/innovationrelease/">http://empower.softwareag.com/innovationrelease/</a>

---

<b>SPMCOME0057</b>	<b>Cannot connect to the repository.</b>
<b>Explanation</b>	The supplied credentials are not valid.
<b>Action</b>	See the Command Central documentation for information on troubleshooting credentials.
<b>SPMCOME0058</b>	<b>Cannot connect to the repository {0}.</b>
<b>Explanation</b>	The proxy for the local Platform Manager is not configured.
<b>Action</b>	See the Command Central documentation for information on configuring proxies.
<b>SPMCOME0061</b>	<b>Error reading metering data cache file.</b>
<b>Explanation</b>	The metering data cache file could not be read.
<b>Action</b>	Check the access rights to the metering folder.
<b>SPMCOME0062</b>	<b>Error writing to metering data cache file.</b>
<b>Explanation</b>	Writing to the metering data cache file failed.
<b>Action</b>	Check the access rights to the metering folder.
<b>SPMCOMI0008</b>	<b>The command is disabled.</b>
<b>Explanation</b>	Most probably an important OSGi service is not registered.
<b>Action</b>	None.
<b>SPMCOMI0009</b>	<b>No help available.</b>
<b>Explanation</b>	This command does not provide a help message.
<b>Action</b>	None.
<b>SPMCOMI0011</b>	<b>[DISABLED]</b>
<b>Explanation</b>	A command with this info line prefix cannot be executed.
<b>Action</b>	None.
<b>SPMCOMI0032</b>	<b>Unsupported operation.</b>
<b>Explanation</b>	The attempted operation is currently not supported by the Platform Manager server.
<b>Action</b>	Contact you administrator.

<b>SPMCONE0001</b>	<b>Error while loading configuration.</b>
<b>Explanation</b>	An error occurred while loading configuration.
<b>Action</b>	Provide valid arguments.
<b>SPMCONE0006</b>	<b>Error while getting a configuration type.</b>
<b>Explanation</b>	An error occurred while getting a configuration type.
<b>Action</b>	Resubmit the request.
<b>SPMCONE0007</b>	<b>Error during serialization</b>
<b>Explanation</b>	An error occurred during the serialization step.
<b>Action</b>	Resubmit the serialization step.
<b>SPMCONE0013</b>	<b>Error while updating configuration.</b>
<b>Explanation</b>	An error occurred while updating the configuration.
<b>Action</b>	Resubmit the configuration.
<b>SPMCONE0015</b>	<b>Error while getting configuration status.</b>
<b>Explanation</b>	Error while getting configuration status.
<b>Action</b>	Get the configuration status correctly.
<b>SPMCONE0024</b>	<b>Error while getting configuration instances.</b>
<b>Explanation</b>	An error occurred while getting configuration instances.
<b>Action</b>	Resubmit the configuration instances get operation.
<b>SPMCONI0000</b>	<b>The command is not recognized. Type {0} for help.</b>
<b>Explanation</b>	The typed command is not recognized.
<b>Action</b>	Type spm for help.
<b>SPMCONI0002</b>	<b>{0} - get configuration values for the given configuration type</b>
<b>Explanation</b>	Missing configuration values for the given configuration type.
<b>Action</b>	Get configuration values for the given configuration type.

---

<b>SPMCONI0003</b>	<b>Configuration (JavaModel): {0}</b>
<b>Explanation</b>	Configuration (JavaModel) information.
<b>Action</b>	None.
<b>SPMCONI0004</b>	<b>Configuration (Text): {0}</b>
<b>Explanation</b>	Configuration (Text) information.
<b>Action</b>	None.
<b>SPMCONI0005</b>	<b>No load configuration.</b>
<b>Explanation</b>	No load configuration.
<b>Action</b>	None.
<b>SPMCONI0008</b>	<b>Configuration status: {0}</b>
<b>Explanation</b>	Information about the configuration status.
<b>Action</b>	None.
<b>SPMCONI0009</b>	<b>No configuration status.</b>
<b>Explanation</b>	No configuration status.
<b>Action</b>	None.
<b>SPMCONI0010</b>	<b>The specified resource doesn't exist.</b>
<b>Explanation</b>	The specified resource doesn't exist.
<b>Action</b>	None.
<b>SPMCONI0011</b>	<b>There is no configuration type found for this runtime component.</b>
<b>Explanation</b>	There is no configuration type found for this runtime component.
<b>Action</b>	None.
<b>SPMCONI0012</b>	<b>{0} - Submit configuration and get the configuration status</b>
<b>Explanation</b>	The configuration status is missing or the configuration is not submitted.
<b>Action</b>	Submit the configuration and get the configuration status.

<b>SPMCONI0014</b>	<b>Bad URI - {0}</b>
<b>Explanation</b>	Bad URI is submitted.
<b>Action</b>	None.
<b>SPMCONI0016</b>	<b>Configuration status: {0}</b>
<b>Explanation</b>	Information about the configuration status.
<b>Action</b>	None.
<b>SPMCONI0017</b>	<b>No configuration status.</b>
<b>Explanation</b>	No configuration status.
<b>Action</b>	None.
<b>SPMCONI0018</b>	<b>{0} - query for the current configuration status.</b>
<b>Explanation</b>	A query for the current configuration status.
<b>Action</b>	None.
<b>SPMCONI0019</b>	<b>No configuration instance.</b>
<b>Explanation</b>	No configuration instance.
<b>Action</b>	None.
<b>SPMCONI0020</b>	<b>No configuration instances.</b>
<b>Explanation</b>	No configuration instances.
<b>Action</b>	None.
<b>SPMCONI0021</b>	<b>Configuration Instance description: {0}</b>
<b>Explanation</b>	Configuration Instance description.
<b>Action</b>	None.
<b>SPMCONI0022</b>	<b>Configuration Instance ID: {0}</b>
<b>Explanation</b>	Information about the Configuration Instance ID.
<b>Action</b>	None.

---

<b>SPMCONI0023</b>	<b>Configuration Instance name: {0}</b>
<b>Explanation</b>	Information about the Configuration Instance name.
<b>Action</b>	None.
<b>SPMCONI0025</b>	<b>{0} - list of the configuration instances for a given runtime component</b>
<b>Explanation</b>	List of the configuration instances for a given runtime component.
<b>Action</b>	None.
<b>SPMCONI0026</b>	<b>JobManagerService is not available.</b>
<b>Explanation</b>	JobManagerService is not available.
<b>Action</b>	None.
<b>SPMCONI0027</b>	<b>Invalid job ID: {0}</b>
<b>Explanation</b>	Information about an invalid job ID.
<b>Action</b>	None.
<b>SPMCONI0028</b>	<b>Number of jobs: {0}</b>
<b>Explanation</b>	Information about the number of jobs.
<b>Action</b>	None.
<b>SPMCONI0029</b>	<b>Job ID: {0}</b>
<b>Explanation</b>	Information about the job ID.
<b>Action</b>	None.
<b>SPMCONI0030</b>	<b>The status of the job with ID ({0}) is {1}.</b>
<b>Explanation</b>	Information about the job status.
<b>Action</b>	None.
<b>SPMCONI0031</b>	<b>The job started at {0}.</b>
<b>Explanation</b>	Information about when the job started.
<b>Action</b>	None.

**SPMCONI0032**      **The job ended at {0}.**  
**Explanation**      Information about when the job ended.  
**Action**            None.

**SPMCONI0033**      **The job is still running.**  
**Explanation**      The job is still running.  
**Action**            None.

**SPMCONI0034**      **The duration of the job so far is {0} seconds.**  
**Explanation**      Information about the duration of the job.  
**Action**            None.

**SPMCONI0035**      **{0} - lists all (not done) jobs or status of a specific job**  
**Explanation**      Lists all (not done) jobs or status of a specific job.  
**Action**            None.

**SPMCONI0036**      **{0} - runtime status of the component identified by this ID.**  
**Explanation**      Runtime status of the component identified by this ID.  
**Action**            None.

**SPMCONI0037**      **No RuntimeState found for {0}.**  
**Explanation**      No RuntimeState found.  
**Action**            None.

**SPMCONI0038**      **{0} - list of the runtime components**  
**Explanation**      List of the runtime components.  
**Action**            None.

**SPMCONI0039**      **{0} - list of the installed products**  
**Explanation**      List of the installed products.  
**Action**            None.

---

<b>SPMCONI0040</b>	<b>{0} - starts the runtime component with this ID with safe mode enabled.</b>
<b>Explanation</b>	Starts the runtime component with this ID with safe mode enabled.
<b>Action</b>	None.
<b>SPMCONI0041</b>	<b>{0} - starts the runtime component with this ID with debug mode enabled.</b>
<b>Explanation</b>	Starts the runtime component with this ID with debug mode enabled.
<b>Action</b>	None.
<b>SPMCONI0042</b>	<b>{0} - stops the runtime component with this ID.</b>
<b>Explanation</b>	Stops the runtime component with this ID.
<b>Action</b>	None.
<b>SPMCONI0043</b>	<b>{0} - starts the runtime component with this ID.</b>
<b>Explanation</b>	Starts the runtime component with this ID.
<b>Action</b>	None.
<b>SPMCONI0044</b>	<b>{0} - resumes the runtime component with this ID.</b>
<b>Explanation</b>	Resumes the runtime component with this ID.
<b>Action</b>	None.
<b>SPMCONI0045</b>	<b>{0} - restarts the runtime component with this ID.</b>
<b>Explanation</b>	Restarts the runtime component with this ID.
<b>Action</b>	None.
<b>SPMCONI0046</b>	<b>{0} - pauses the runtime component with this ID.</b>
<b>Explanation</b>	Pauses the runtime component with this ID.
<b>Action</b>	None.
<b>SPMCONI0047</b>	<b>{0} - creates a new configuration instance for a given runtime component and a given configuration type.</b>
<b>Explanation</b>	Creates a new configuration instance for a given runtime component and a given configuration type.
<b>Action</b>	None.

<b>SPMCONI0048</b>	<b>Error during creating configuration</b>
<b>Explanation</b>	Error during creating configuration
<b>Action</b>	None.
<b>SPMCONI0049</b>	<b>{0} - Delete configuration and get the configuration status.</b>
<b>Explanation</b>	Delete configuration and get the configuration status.
<b>Action</b>	Delete configuration and get the configuration status.
<b>SPMCONI0050</b>	<b>ConfigurationSerializer is not found for runtimeComponent with ID: {0} and configurationType with ID: {1}</b>
<b>Explanation</b>	ConfigurationSerializer is not found for runtimeComponent with ID: {0} and configurationType with ID: {1}.
<b>Action</b>	None.
<b>SPMCONI0051</b>	<b>{0} - runtime state of the comonent identified by this ID</b>
<b>Explanation</b>	Runtime state of the comonent identified by this ID
<b>Action</b>	None
<b>SPMCORE0001</b>	<b>Exception handling directory change events.</b>
<b>Explanation</b>	An exception occurred when handling directory change events.
<b>Action</b>	Contact your Command Central Administrator.
<b>SPMCORE0002</b>	<b>Exception processing directory change events.</b>
<b>Explanation</b>	An exception occurred when processing directory change events.
<b>Action</b>	Contact your Command Central Administrator.
<b>SPMCORE0003</b>	<b>The provided observer should not be null.</b>
<b>Explanation</b>	The provided observer should not be null.
<b>Action</b>	Provide a non-null observer to the Directory Watcher infrastructure.
<b>SPMCORE0004</b>	<b>The provided observed directory should not be null.</b>
<b>Explanation</b>	The provided observed directory should not be null.
<b>Action</b>	Provide a non-null observed directory to the Directory Watcher infrastructure.

<b>SPMCORE0005</b>	<b>The provided observed directory change types should not be null or empty.</b>
<b>Explanation</b>	The provided observed directory change types should not be null or empty.
<b>Action</b>	Provide valid observed directory change types to the Directory Watcher infrastructure.
<b>SPMCORI0000</b>	<b>TestMessage</b>
<b>Explanation</b>	Test message to be removed.
<b>Action</b>	None.
<b>SPMDBCE0000</b>	<b>Unsupported parameter name: {0}</b>
<b>Explanation</b>	The parameter name is not supported.
<b>Action</b>	See the Command Central documentation for a list of supported parameters.
<b>SPMDIAE0000</b>	<b>Log source not found: {0}</b>
<b>Explanation</b>	The requested log source does not exist.
<b>Action</b>	Use getLogSources() prior to retrieveLog().
<b>SPMDIAE0001</b>	<b>{0} does not exist or is not a directory.</b>
<b>Explanation</b>	The specified location does not exist or is not a directory.
<b>Action</b>	Provide a location that exists and is a directory.
<b>SPMDIAW0002</b>	<b>Missing 'logDirs' configuration property for DefaultLogAccess service component configuration.</b>
<b>Explanation</b>	An SPM bundle has a LogAccess service component that is missing its 'logDirs' configuraiton property.
<b>Action</b>	The OSGI service configuration must include this property if log files are to be collected.
<b>SPMDIAW0003</b>	<b>{0} cannot be evaluated.</b>
<b>Explanation</b>	The path expression {0} cannot be evaluated.
<b>Action</b>	Make sure the component definition has the correct path expression.

<b>SPMDIAW0004</b>	<b>The instance management service did not return a proper instance name.</b>
<b>Explanation</b>	The default log access component definition did not provide an instance name regular expression and the instance management service did not return a proper instance name.
<b>Action</b>	Provide an instance name regular expression or a proper implementation of the instance management service.
<b>SPMDIRE0000</b>	<b>{0} not found!</b>
<b>Explanation</b>	A runtime component or a log was not found.
<b>Action</b>	Verify the requested item is really present in the system.
<b>SPMIMGE0000</b>	<b>Product {0} does not support instance management.</b>
<b>Explanation</b>	The Platform Manager plugin for product {0} does not support instance management.
<b>Action</b>	See the Software AG Platform Manager documentation to double check if product {0} supports instance management. If the product supports instance management, contact Software AG Global Support.
<b>SPMIMGE0002</b>	<b>Properties for {0} cannot be returned.</b>
<b>Explanation</b>	A server error occurred during properties extraction.
<b>Action</b>	Contact Software AG Global Support.
<b>SPMIMGE0003</b>	<b>{0} cannot be matched against {1}</b>
<b>Explanation</b>	The specified regular expression in the component definition does not match the run-time component ID.
<b>Action</b>	Revise the regular expression in the component definition or contact Software AG Global Support.
<b>SPMIMGE0004</b>	<b>Mandatory property {0} is not specified.</b>
<b>Explanation</b>	A required property in the component definition is missing.
<b>Action</b>	Specify the required property in the component definition.
<b>SPMIMGE0005</b>	<b>Instance management script {0} cannot be resolved.</b>
<b>Explanation</b>	The instance management script was not found on the file system or there is another I\O error.
<b>Action</b>	Make sure the instance management script has the correct name and is in the correct location.

---

<b>SPMIMGE0007</b>	<b>This instance management command cannot be performed because the following input properties are missing: {0}</b>
<b>Explanation</b>	The input properties are insufficient for performing the requested instance management operation.
<b>Action</b>	Provide the input properties that are missing or contact Software AG Global Support.
<b>SPMIMGE0008</b>	<b>Instance management operation failed with exit code: {0}</b>
<b>Explanation</b>	The execution of the instance management operation failed.
<b>Action</b>	Check the logs for more details or contact SoftwareAG Global Support.
<b>SPMIMGE0009</b>	<b>Instance Management process finished with error code "{0}".</b>
<b>Explanation</b>	CMD: {1}, OUTPUT: {2}
<b>Action</b>	Check the administration documentation for the specified product instance.
<b>SPMIMGE0010</b>	<b>Property [{0}] has an invalid value [{1}].</b>
<b>Explanation</b>	Null or empty values are not allowed.
<b>Action</b>	Provide a valid value and try again.
<b>SPMIMPE0000</b>	<b>Unable to locate configuration source property for persistent ID: {0}; configuration properties for this PID are: {1}.</b>
<b>Explanation</b>	Most probably the persistent ID configuration is not provided by Dynamic Configurator.
<b>Action</b>	Provide the persistent ID using Dynamic Configurator.
<b>SPMIMPE0001</b>	<b>The configuration source location for the persistent ID {0} is not a valid URL: {1}</b>
<b>Explanation</b>	The configuration source location is not a valid URL.
<b>Action</b>	Dynamic Configurator should point to a valid URL for the given persistent ID.
<b>SPMINRI0000</b>	<b>Nothing found for ID = {0}</b>
<b>Explanation</b>	Nothing found for this ID.
<b>Action</b>	None.

<b>SPMINRI0001</b>	<b>Inventory Service is not set.</b>
<b>Explanation</b>	Inventory Service is not set.
<b>Action</b>	None.
<b>SPMINVI0000</b>	<b>Product cannot be null.</b>
<b>Explanation</b>	Product cannot be null.
<b>Action</b>	None.
<b>SPMINVI0001</b>	<b>Category cannot be null.</b>
<b>Explanation</b>	Category cannot be null.
<b>Action</b>	None.
<b>SPMINVI0002</b>	<b>ID must start with productId.</b>
<b>Explanation</b>	ID must start with productId.
<b>Action</b>	None.
<b>SPMJBRE0000</b>	<b>A job with ID {0} cannot be found.</b>
<b>Explanation</b>	A job with the specified ID may have never existed or it may have completed long before this request.
<b>Action</b>	Use the following URI to list all jobs that are running or recently completed: /spm/jobmanager/jobs
<b>SPMJOB0001</b>	<b>Maximum number of non-done jobs reached. Try again later or increase {2}. Current jobs: {0} max jobs: {1}.</b>
<b>Explanation</b>	The job manager queue is full and new jobs cannot be scheduled.
<b>Action</b>	Wait a few moments or increase com.softwareag.platform.management.jobmanager.impl.Configuration.SYS_PROP_MAX_JOBS.
<b>SPMJOB0002</b>	<b>Job sequence exhausted. Try again later or set a bigger {0}</b>
<b>Explanation</b>	All job sequence IDs have been consumed.
<b>Action</b>	Wait a few moments or set a bigger com.softwareag.platform.management.jobmanager.impl.Configuration.SYS_PROP_JOB_SEQUENCE_MAX_SIZE

---

<b>SPMJOB0003</b>	<b>Job {0} failed!</b>
<b>Explanation</b>	The task being carried out by this job has failed.
<b>Action</b>	Inspect the logs to troubleshoot the problem or contact SoftwareAG Global Support.
<b>SPMJOB0000</b>	<b>This job is done or not available due to a problem.</b>
<b>Explanation</b>	The Null Job status.
<b>Action</b>	None.
<b>SPMLCCE0000</b>	<b>runtimeComponentId for productId {0} is null.</b>
<b>Explanation</b>	The AdvancedLifecycleOperations service is registered in with productID that does not contain the given runtimeComponentId.
<b>Action</b>	Make sure that your product plugin has correct productId and runtimeComponentId IDs.
<b>SPMLCCE0001</b>	<b>Runtime component "{0}" does not support life cycle operation "{1}".</b>
<b>Explanation</b>	This Runtime component does not support the specified life cycle operation.
<b>Action</b>	Make sure you execute life cycle operations supported by this run-time component.
<b>SPMLCCE0015</b>	<b>The run-time status of runtimeComponent {0} is not {1}.</b>
<b>Explanation</b>	The lifecycle operation did not complete as expected.
<b>Action</b>	Check the logs for details about the error.
<b>SPMLCCE0016</b>	<b>Runtime status of component with id: {0} can not be retrieved or component is not stopped on time.</b>
<b>Explanation</b>	The run-time status of the component with id: {0} can not be retrieved on time.
<b>Action</b>	Check the logs for details about the error.
<b>SPMLCCE0032</b>	<b>The runtimeComponent with id: {0} does not have LifecycleOperations SPI registered.</b>
<b>Explanation</b>	A LifecycleOperations SPI has not been found for runtimeComponent : {0}
<b>Action</b>	Check the component definition, used for registering the SPI.

<b>SPMLCRE0000</b>	<b>The lifecycle operation to execute is unknown.</b>
<b>Explanation</b>	The operation is not a part of the predefined list of lifecycle operations that can be executed: start, stop, restart, pause, resume, start in debug, and start in safe mode.
<b>Action</b>	Specify an operation from the predefined list.
<b>SPMMICE0000</b>	<b>Extracting source version failed.</b>
<b>Explanation</b>	Failed to extract the source version from the bundles.info file.
<b>Action</b>	Ensure that the bundles.info file is at the correct location.
<b>SPMMONE0000</b>	<b>Could not get JMXConnector for runtime component with id {0} because JMX port configuration was not found.</b>
<b>Explanation</b>	This particular run-time component does not have a configured JMX port or there was a problem obtaining the configuration.
<b>Action</b>	Check if the run-time component is online and that at least one enabled JMX port configuration is available.
<b>SPMMWSE0000</b>	<b>Provide "sysadmin" credentials in CCE for "{0}"</b>
<b>Explanation</b>	When BASIC authentication is used, credentials for the "sysadmin" user must be supplied in Command Central for the My webMethods Server component.
<b>Action</b>	Verify that BASIC authentication for the My webMethods component uses credentials for "sysadmin" user.
<b>SPMMWSE0002</b>	<b>Primary port not set for {0}</b>
<b>Explanation</b>	A primary port is required to connect to My webMethods Server.
<b>Action</b>	Provide primary port value for {0}.
<b>SPMMWSE0003</b>	<b>Invalid URI</b>
<b>Explanation</b>	The supplied URI for connection to My webMethods Server does not have a valid syntax according to RFC 3986.
<b>Action</b>	Verify that the correct hostname and port are provided.
<b>SPMMWSE0004</b>	<b>An error occurred while constructing the URL</b>
<b>Explanation</b>	The connection URL to My webMethods Server is malformed.
<b>Action</b>	Verify that the correct hostname and port are provided.

---

<b>SPMMWSE0005</b>	<b>Root context path "{0}" is invalid.</b>
<b>Explanation</b>	The context path may start with a slash and can contain only the following characters: uppercase or lowercase letters, decimal digits, hyphen, period, and underscore.
<b>Action</b>	Verify that the root context path contains only valid characters.
<b>SPMMWSE0006</b>	<b>Invalid credentials set for user "sysadmin"</b>
<b>Explanation</b>	The password supplied for the "sysadmin" user is not correct.
<b>Action</b>	Provide the correct password for the "sysadmin" user in the authentication information in Command Central.
<b>SPMMWSE0007</b>	<b>First Name is required</b>
<b>Explanation</b>	The First Name field must not be empty.
<b>Action</b>	Enter a first name.
<b>SPMMWSE0008</b>	<b>Last Name is required</b>
<b>Explanation</b>	The Last Name field must not be empty.
<b>Action</b>	Enter a last name.
<b>SPMMWSE0009</b>	<b>Unable to find server log directory: {0}</b>
<b>Explanation</b>	Unable to read the server log directory path from systemPaths.properties
<b>Action</b>	Check if there is a connection to the My webMethods Server database.
<b>SPMMWSE0010</b>	<b>Encryption failed for: {0}</b>
<b>Explanation</b>	The encryption of a value failed.
<b>Action</b>	Contact Software AG Global Support. Provide the logs for Platform Manager and My webMethods Server and the reproduction steps for the issue.
<b>SPMMWSE0011</b>	<b>Decryption failed for: {0}</b>
<b>Explanation</b>	The decryption of a value failed.
<b>Action</b>	Contact Software AG Global Support. Provide the Platform Manager and My webMethods Server logs and the reproduction steps of the issue.

<b>SPMMWSE0012</b>	<b>Primary datasource cannot be deleted</b>
<b>Explanation</b>	You cannot delete the primary My webMethods Server database connection datasource.
<b>Action</b>	None required.
<b>SPMMWSE0013</b>	<b>Adding a Derby data source is not supported</b>
<b>Explanation</b>	My webMethods Server does not support additional Derby data sources.
<b>Action</b>	Add a datasource of one of the supported database types.
<b>SPMMWSE0014</b>	<b>Missing or invalid db.xml</b>
<b>Explanation</b>	A My webMethods Server system configuration file is either missing or invalid.
<b>Action</b>	Contact the My webMethods Server system administrator.
<b>SPMMWSE0015</b>	<b>Only TRUSTED and BASIC authentication are supported</b>
<b>Explanation</b>	The specified authentication is not supported.
<b>Action</b>	Change authentication to TRUSTED or BASIC.
<b>SPMOGIE0000</b>	<b>Could not obtain the runtime component id from "cplm" file: {0}</b>
<b>Explanation</b>	There was a problem obtaining metadata information about a specific profile.
<b>Action</b>	Check the profile folder structure and if cplm.xml contains any errors.
<b>SPMOGIE0002</b>	<b>Following exception occurred "{0}" while parsing "{1}".</b>
<b>Explanation</b>	One of the profiles contains wrong metadata.
<b>Action</b>	Check listed file for errors.
<b>SPMOGIE0003</b>	<b>The Common Platform Lifecycle Management (cplm-v.xml) file is malformed.</b>
<b>Explanation</b>	The profile metadata file contains errors.
<b>Action</b>	Try to check cplm.xml file for errors in the specific profile.
<b>SPMOGIE0005</b>	<b>Operation "{0}" is not defined in the "cplm" file.</b>
<b>Explanation</b>	There was lifecycle operation for the specific component that is not defined inside cplm.xml.
<b>Action</b>	Try to repair cplm.xml file in the component profile folder.

---

<b>SPMOGIE0008</b>	<b>Common Platform Lifecycle Management (cplm-v.xml) file not found!</b>
<b>Explanation</b>	A file called cplm.xml is expected inside the profile folder.
<b>Action</b>	Try to create cplm.xml file for the component.
<b>SPMOGIE0009</b>	<b>Configuration with version "{0}" was not found in the metadata file.</b>
<b>Explanation</b>	No configuration with the specified version exists inside the cplm.xml file.
<b>Action</b>	Check the profile folder for cplm.xml and make sure it is up to date.
<b>SPMOGIE0010</b>	<b>Recursive actions not allowed.</b>
<b>Explanation</b>	A recursive action exists inside cplm.xml file.
<b>Action</b>	Check the cplm.xml file in the profile and remove any recursive actions.
<b>SPMOGIE0011</b>	<b>Malformed action "{0}".</b>
<b>Explanation</b>	Wrong metadata information exists inside the profile cplm.xml file.
<b>Action</b>	Check the cplm.xml file for the profile and correct errors.
<b>SPMOGIE0012</b>	<b>Action "{0}" not found.</b>
<b>Explanation</b>	Unknown action defined inside cplm.xml.
<b>Action</b>	Correct the cplm.xml file for the profile.
<b>SPMOGIE0013</b>	<b>Script "{0}" does not exist.</b>
<b>Explanation</b>	The specified script cannot be found in cplm.xml.
<b>Action</b>	Specify valid script/path inside the profile cplm.xml file.
<b>SPMOGIE0014</b>	<b>Failed executing: {0}</b>
<b>Explanation</b>	A problem occurred while executing the specified script.
<b>Action</b>	Check the specified script for errors.
<b>SPMOGIE0015</b>	<b>Missing value data for element "argument".</b>
<b>Explanation</b>	Wrong data format inside the profile cplm.xml file.
<b>Action</b>	Provide valid data inside cplm.xml.

<b>SPMOGIE0016</b>	<b>More than one "action" element with the same name exist.</b>
<b>Explanation</b>	A naming conflict exists inside cplm.xml.
<b>Action</b>	Provide different action names.
<b>SPMOGIE0017</b>	<b>Two "configuration" elements have the same version.</b>
<b>Explanation</b>	A conflict exists inside cplm.xml file.
<b>Action</b>	Provide different versions for "configuration" elements.
<b>SPMOGIE0018</b>	<b>Missing attribue "path" or "actionReference" for element "execute".</b>
<b>Explanation</b>	Wrong data exists inside the profile cplm.xml.
<b>Action</b>	Provide the missing data.
<b>SPMOGIE0019</b>	<b>Cannot specify both "path" and "actionReference" attributes in one "execute" element.</b>
<b>Explanation</b>	Wrong data exists inside cplm.xml.
<b>Action</b>	Correct cplm.xml file inside the profile folder.
<b>SPMOGIE0026</b>	<b>Unable to find configuration instances for the runtime component with ID: "{0}". The "{1}" system property is not set.</b>
<b>Explanation</b>	Such a property should be available in the config.ini file located under the configuration folder of this runtime component.
<b>Action</b>	Add the property by hand. The value must be the absolute path to the folder that contains the configuration properties files.
<b>SPMOGIE0027</b>	<b>Unable to find configuration instances for the runtime component with ID: "{0}". "{1}" is either not existing or is not a directory.</b>
<b>Explanation</b>	This folder should contain the configuration properties files.
<b>Action</b>	Check if the location is configured properly in the config.ini file.
<b>SPMOGIE0029</b>	<b>Unable to load the configuration instance with ID "{0}" for the "{1}" runtime component.</b>
<b>Explanation</b>	None of the available configuration handlers can load the configuration instance. The configuration instance type might not be supported.
<b>Action</b>	Check the supported configuration instance types.

---

<b>SPMOGIE0030</b>	<b>Unable to update the configuration instance with ID "{0}" for the "{1}" runtime component.</b>
<b>Explanation</b>	None of the available configuration handlers can update the configuration instance. The configuration instance type might not be supported.
<b>Action</b>	Check the supported configuration instance types.
<b>SPMOGIE0031</b>	<b>Unable to load the configuration instance with ID: "{0}" for the "{1}" runtime component. The "{2}" property is not available but is required.</b>
<b>Explanation</b>	Unable to load the instance because of invalid set of configuration properties. The required properties must be available.
<b>Action</b>	Add the required property and report the invalid configuration instance.
<b>SPMOGIE0032</b>	<b>Unsupported protocol for configuration instance {0}.</b>
<b>Explanation</b>	Unknown protocol for the specified configuration instance.
<b>Action</b>	Check documentation for supported protocols.
<b>SPMOGIE0033</b>	<b>The update of the "{0}" configuration instance for the "{1}" runtime component failed. The port settings are empty.</b>
<b>Explanation</b>	The incoming configuration is empty. No port settings data is available.
<b>Action</b>	Port settings data should be present inside incoming configuration.
<b>SPMOGIE0034</b>	<b>No port available in configuration instance {0}.</b>
<b>Explanation</b>	Port number cannot be found inside the configuration instance.
<b>Action</b>	Provide port number inside the configuration instance.
<b>SPMOGIE0035</b>	<b>The update of the "{0}" configuration instance for the "{1}" runtime component failed. The available port configurations are more than one.</b>
<b>Explanation</b>	The configuration instance should contain only one port configuration.
<b>Action</b>	Remove obsolete port configurations.
<b>SPMOGIE0036</b>	<b>The update of the "{0}" configuration instance for the "{1}" runtime component failed. The port is null.</b>
<b>Explanation</b>	The port settings do not contain any port configuration.
<b>Action</b>	Provide port configuration.

<b>SPMOGIE0037</b>	<b>Invalid port number: "{0}"</b>
<b>Explanation</b>	The validation of the port number failed. The port number should be greater than 1024 and less than 65535.
<b>Action</b>	Check the source of the port number and provide a value in the specified range.
<b>SPMOGIE0038</b>	<b>Error writing the new configuration. An attempt was made to overwrite an existing configuration file "{0}" with the new configuration.</b>
<b>Explanation</b>	The port number is a part of the configuration file name. Therefore, if the user sets a port that is already used in another configuration, a collision in the file names occurs. In such case the write operation is aborted because configuration data might be lost.
<b>Action</b>	Check if the port number set in the configuration that is being written is not used in another configuration of the same type.
<b>SPMOGIE0039</b>	<b>The new configuration could not be written. Unable to delete the original configuration instance file: "{0}"</b>
<b>Explanation</b>	A problem occurred while deleting the configuration instance file.
<b>Action</b>	For more details, check the I/O exceptions in the log file.
<b>SPMOGIE0040</b>	<b>ConfigurationService not found!</b>
<b>Explanation</b>	Most probably spm configuration bundle was not started.
<b>Action</b>	Try to start spm the configuration bundle.
<b>SPMOGIE0042</b>	<b>No connector configurations or connector port found for component: {0}</b>
<b>Explanation</b>	Expected data is missing for the specified component.
<b>Action</b>	Provide configuration for the specified component.
<b>SPMOGIE0045</b>	<b>Cannot start "{0}" profile in debug mode without debug port configuration.</b>
<b>Explanation</b>	It is possible that wrong data exists inside the cplm.xml file.
<b>Action</b>	Escape single quote with another single quote.
<b>SPMOGIE0046</b>	<b>Cannot start "{0}" profile in debug mode because the debug port configuration is disabled.</b>
<b>Explanation</b>	It is possible that wrong data exists inside the cplm.xml file.
<b>Action</b>	Escape single quote with another single quote.

---

<b>SPMOGIE0048</b>	<b>Exception occurred while obtaining port configurations for profile "{0}".</b>
<b>Explanation</b>	A problem occurred while reading profile port configurations.
<b>Action</b>	Check profile port configurations for errors.
<b>SPMOGIE0050</b>	<b>{0} cannot be null.</b>
<b>Explanation</b>	{0} cannot be null.
<b>Action</b>	Make sure the parameter is not null.
<b>SPMOGIE0051</b>	<b>{0} must begin with {1}</b>
<b>Explanation</b>	{0} must begin with {1}
<b>Action</b>	Make sure {0} begins with {1}.
<b>SPMOGIE0055</b>	<b>A log configuration not found: {0}</b>
<b>Explanation</b>	A log configuration was not found.
<b>Action</b>	Check your configuration instance path.
<b>SPMOGIE0056</b>	<b>Could not retrieve parent runtime component with id {0} for child runtime component with id {1}.</b>
<b>Explanation</b>	An error occurred while obtaining information for the runtime component.
<b>Action</b>	Check if the runtime component is online and at least one enabled JMX port configuration is available.
<b>SPMOGIE0057</b>	<b>Could not get JMXConnector for a runtime component of category {0}. Runtime component id is {1}.</b>
<b>Explanation</b>	An error occurred while obtaining information for the runtime component.
<b>Action</b>	Check if the runtime component is online and at least one enabled JMX port configuration is available.
<b>SPMOGIE0058</b>	<b>Could not get JMXConnector because no JMX port configuration is available for runtime component with id {0}.</b>
<b>Explanation</b>	An error occurred while obtaining information for the runtime component.
<b>Action</b>	Check if the runtime component is online and at least one enabled JMX port configuration is available.

<b>SPMOGIE0059</b>	<b>Could not get JMXConnector for runtime component with id {0} because none of the configured JMX ports is open.</b>
<b>Explanation</b>	An error occurred while obtaining information for the runtime component.
<b>Action</b>	Check if the runtime component is online and at least one enabled JMX port configuration is available.
<b>SPMOGIE0060</b>	<b>Could not get SubsystemMBean for a runtime component of a type different than ENGINE. Category : {0}, runtime component id : {1}</b>
<b>Explanation</b>	An error occurred while obtaining information for the runtime component.
<b>Action</b>	Check if the runtime component is online and at least one enabled JMX port configuration is available.
<b>SPMOGIE0061</b>	<b>No subsystem with id {0} is found for runtime component with id {1}.</b>
<b>Explanation</b>	An error occurred while obtaining information for the runtime component.
<b>Action</b>	Check if the runtime component is online and at least one enabled JMX port configuration is available.
<b>SPMOGIE0062</b>	<b>Exactly one subsystem is expected for runtime component with id {0}.</b>
<b>Explanation</b>	Exactly one subsystem is expected for the given runtime component.
<b>Action</b>	Make sure there is exactly one subsystem specified for runtime component.
<b>SPMOGIE0064</b>	<b>Executing "{0}" lifecycle operation shell script "{1}" returned non-zero exit code: {2}.</b>
<b>Explanation</b>	Non-zero exit code indicates an error.
<b>Action</b>	Check the product and Platform Manager logs for more details. Try to execute the script from the command line.
<b>SPMOGIE0065</b>	<b>Cannot start "{0}" profile in debug mode because the configured debug port is already in use.</b>
<b>Explanation</b>	Another application is started using the same port number.
<b>Action</b>	Stop the other product using the same port for debug mode.
<b>SPMOGIE0066</b>	<b>Platform Manager is unable to find configuration instances for the runtime component with ID: "{0}". "{1}" is either not existing or is not a directory.</b>
<b>Explanation</b>	No configuration instances were found in the listed location.
<b>Action</b>	Check if the location is configured correctly in the config.ini file.

---

<b>SPMOGIE0067</b>	<b>Platform Manager is unable to find configuration instances for the runtime component with ID: "{0}". "{1}" is empty.</b>
<b>Explanation</b>	Platform Manager is unable to find configuration instances for the runtime component. This folder should contain the profile-related folders and files for the specified runtime component. The path is configured in the config.ini file.
<b>Action</b>	Check if this folder is empty.
<b>SPMOGIE0070</b>	<b>Error while getting runtime status.</b>
<b>Explanation</b>	A problem occurred while obtaining data from an Engine.
<b>Action</b>	Check if the connection and credentials are OK.
<b>SPMOGIE0081</b>	<b>"{0}" operation failed for runtime component with id {1}. Reason:{2}</b>
<b>Explanation</b>	Executing operation against engine failed.
<b>Action</b>	Check JMX credentials and properties for this engine.
<b>SPMOGIE0090</b>	<b>No alias provided for the port configuration.</b>
<b>Explanation</b>	Providing a value for the alias during the creation of the port configuration is required.
<b>Action</b>	Specify an alias for the port configuration.
<b>SPMOGIE0091</b>	<b>The provided port alias is not URL friendly.</b>
<b>Explanation</b>	The provided port alias contains symbols that are not URL friendly.
<b>Action</b>	Provide only URL friendly symbols for the port alias.
<b>SPMOGIE0092</b>	<b>Failed to construct the Configuration Instance ID.</b>
<b>Explanation</b>	Platform Manager failed to construct the Configuration Instance ID.
<b>Action</b>	Check the configuration file for this instance.
<b>SPMOGIE0093</b>	<b>Missing common port alias. This configuration will be ignored.</b>
<b>Explanation</b>	The common port alias is missing and the configuration will be ignored.
<b>Action</b>	Provide an alias for this port configuration.

<b>SPMOGIE0094</b>	<b>Failed to construct the configuration instance.</b>
<b>Explanation</b>	Platform Manager failed to construct the configuration instance.
<b>Action</b>	Provide valid configuration data.
<b>SPMOGIE0096</b>	<b>Cannot read config.ini file for RuntimeComponent with ID {0}. Fall back on default product: {1}.</b>
<b>Explanation</b>	Cannot retrieve the parent product for the specified run-time component because an error occurred while reading the corresponding config.ini file. The default product will be used instead.
<b>Action</b>	Check if the config.ini is a valid properties file.
<b>SPMOGIW0001</b>	<b>Could not pass the validating schema. The "cplm" file will not be validated.</b>
<b>Explanation</b>	File called cplm.xml does not contain expected metadata.
<b>Action</b>	Check profile folder files called cplm.xml for errors.
<b>SPMOGIW0028</b>	<b>Unable to find configuration instances for the runtime component with ID: "{0}". "{1}" is empty.</b>
<b>Explanation</b>	This folder should contain the configuration properties files for the specified runtime component. The path is configured in the config.ini file.
<b>Action</b>	Check if this folder should be empty.
<b>SPMOGIW0054</b>	<b>Could not retrieve engines for runtime component with id : {0}.</b>
<b>Explanation</b>	Most likely the component with the specified ID was offline.
<b>Action</b>	Check if the runtime component is online and at least one enabled JMX port configuration is available.
<b>SPMPROE0003</b>	<b>Script failed with status {0}</b>
<b>Explanation</b>	A fix script job failed with indicated status.
<b>Action</b>	Refer to the Software AG Update Manager log for more information.
<b>SPMPROE0004</b>	<b>Install fixes is not supported.</b>
<b>Explanation</b>	The requested feature is not supported yet.
<b>Action</b>	Use the runscript method to install fixes.

---

<b>SPMPROE0005</b>	<b>Nothing to install.</b>
<b>Explanation</b>	None of the artifacts exist in the specified repository.
<b>Action</b>	Use different artifacts or install from a different repository.
<b>SPMPROE0006</b>	<b>Install from local repository not supported.</b>
<b>Explanation</b>	The feature is not yet supported.
<b>Action</b>	Export artifacts from the repository into an image archive and install from the archive.
<b>SPMPROE0007</b>	<b>No repository found for {0}</b>
<b>Explanation</b>	The specified repository does not exist.
<b>Action</b>	Create the repository or use a different one.
<b>SPMPROE0008</b>	<b>Install from remote repository is not supported.</b>
<b>Explanation</b>	Installing from a remote repository is not supported.
<b>Action</b>	Create an image archive using installer client, and install from the archive.
<b>SPMPROE0009</b>	<b>Unable to process fix script.</b>
<b>Explanation</b>	Failures occurred processing a fix script.
<b>Action</b>	See the Software AG Update Manager logs and exception for failure details.
<b>SPMPROE0010</b>	<b>Invalid Type: {0}</b>
<b>Explanation</b>	The type of script is unrecognized. Valid types are either product, or fix.
<b>Action</b>	Use product or fix as the script type.
<b>SPMPROE0011</b>	<b>Uninstall of fixes is not supported by the uninstall method.</b>
<b>Explanation</b>	The operation is not supported.
<b>Action</b>	Use runscript to remove fixes.
<b>SPMPROE0012</b>	<b>Invalid artifact type: {0}</b>
<b>Explanation</b>	The artifact was not a product or fix artifact.
<b>Action</b>	Use a valid artifact.

<b>SPMPROE0013</b>	<b>Script failed with exit code {0}. See log at {1} for more information.</b>
<b>Explanation</b>	An installation script failed.
<b>Action</b>	Refer to the log for more details on the failure.
<b>SPMPROE0014</b>	<b>The provided configuration does not include the <code>com.softwareag.plm.spm.provisioning.pathtosum</code> property.</b>
<b>Explanation</b>	The property must be specified in the configuration.
<b>Action</b>	Include a <code>com.softwareag.plm.spm.provisioning.pathtosum</code> property setting that references the Software AG Update Manager installation directory.
<b>SPMPROE0016</b>	<b>The <code>com.softwareag.plm.spm.provisioning.pathtosum</code> property does not reference an existing directory.</b>
<b>Explanation</b>	The property must reference the installation directory of Software AG Update Manager.
<b>Action</b>	Specify a valid directory.
<b>SPMPROE0018</b>	<b>Removal of ProvisioningService configuration is not supported.</b>
<b>Explanation</b>	The ProvisioningService requires a configuration.
<b>Action</b>	None required.
<b>SPMPROE0020</b>	<b>No such repository, {0}</b>
<b>Explanation</b>	The install request specified a nonexistent repository.
<b>Action</b>	Specify a valid repository ID.
<b>SPMPROE0021</b>	<b>No matching products to uninstall.</b>
<b>Explanation</b>	The uninstall request specified products that are not installed.
<b>Action</b>	Ensure that the correct product list or managed node is included in the request.
<b>SPMPROE0022</b>	<b>{0} is not in repository {1} or the required products {2} are not installed.</b>
<b>Explanation</b>	The fix cannot be installed because it does not reside in the source repository or required products are not installed.
<b>Action</b>	Specify a different fix repository. Verify with Update Manager if the fix can be resolved.

---

<b>SPMPROE0023</b>	<b>Multiple fixes with id, {0}, reside in the repository {1}</b>
<b>Explanation</b>	Platform Manager cannot determine which fix version to install.
<b>Action</b>	Specify a complete version number for the fix (<fixname>_<version>).
<b>SPMPROE0024</b>	<b>Script failed with exit code {0};{1}. See log at {2} for more details.</b>
<b>Explanation</b>	The execution of the script failed.
<b>Action</b>	Rerun script after resolving the errors listed in the log.
<b>SPMPROE0025</b>	<b>Script failed with status {0}: {1}</b>
<b>Explanation</b>	The execution of the fix script failed.
<b>Action</b>	Rerun the script after resolving the errors.
<b>SPMPROE0026</b>	<b>Unrecognized repository type: {0}</b>
<b>Explanation</b>	The repository is not a supported type.
<b>Action</b>	Use a valid repository type.
<b>SPMPROE0027</b>	<b>Unsupported repository. Use P2 enabled repository for provisioning artifacts.</b>
<b>Explanation</b>	Only P2 enabled repositories are supported.
<b>Action</b>	Use a P2 enabled repository for provisioning artifacts.
<b>SPMPROE0028</b>	<b>Artifact with id "{0}" and version "{1}" not found in the repositories {2}</b>
<b>Explanation</b>	The repositories do not contain any of the desired artifacts.
<b>Action</b>	Check the template and repository definitions.
<b>SPMPROE0030</b>	<b>Platform Manager restart failed.</b>
<b>Explanation</b>	The attempt at restarting Platform Manager failed.
<b>Action</b>	Check the Platform Manager logs.
<b>SPMPROE0031</b>	<b>Failed detecting Platform Manager Components.</b>
<b>Explanation</b>	The attempt to identify whether Platform Manager components (for example, the product plug-ins) are about to be provisioned has failed.
<b>Action</b>	Check the Platform Manager logs.

<b>SPMPROE0032</b>	<b>Platform Manager will be restarted.</b>
<b>Explanation</b>	Platform Manager will be restarted because Platform Manager components have been installed.
<b>Action</b>	Wait for Platform Manager to start. Check the logs for more details.
<b>SPMPROI0000</b>	<b>Fix installation completed with exit code: {0}</b>
<b>Explanation</b>	The fix script has completed with the indicated exit status.
<b>Action</b>	If status is nonzero, review the Software AG Update Manager logs for possible problems.
<b>SPMPROI0001</b>	<b>Launching: {0}</b>
<b>Explanation</b>	A fix script is being started in a separate process. The specific shell command is included in the message.
<b>Action</b>	None required.
<b>SPMPROI0002</b>	<b>Failed to launch fix script.</b>
<b>Explanation</b>	A script could not be launched. The associated job will be given an error status.
<b>Action</b>	Refer to the exception included in the message to resolve the problem.
<b>SPMPROW0029</b>	<b>{0} is not in repository {1} or the required products are not installed.</b>
<b>Explanation</b>	The fix cannot be installed because it does not reside in the source repository or required products are not installed.
<b>Action</b>	Specify a different fix repository. Verify with Update Manager if the fix can be resolved.
<b>SPMREPE0000</b>	<b>Unsupported operation.</b>
<b>Explanation</b>	The getContent operation is not supported for fix images.
<b>Action</b>	Use UpdateManager to view fixes.
<b>SPMREPE0001</b>	<b>Unsupported operation.</b>
<b>Explanation</b>	The import operation is only supported on local product repositories.
<b>Action</b>	None required.

---

<b>SPMREPE0002</b>	<b>Invalid configuration detected for repository, {0}</b>
<b>Explanation</b>	The location property of the repository is invalid. The configuration refers to a fix image, which must be a local file.
<b>Action</b>	Delete the configuration.
<b>SPMREPE0003</b>	<b>Repository not found at {0} for configuration, {1}</b>
<b>Explanation</b>	A configuration was found for a fix image repository that does not exist.
<b>Action</b>	Remove the configuration.
<b>SPMREPE0004</b>	<b>Unsupported operation.</b>
<b>Explanation</b>	The export operation is not supported for this artifact type or repository.
<b>Action</b>	None required.
<b>SPMREPE0005</b>	<b>Unsupported operation.</b>
<b>Explanation</b>	The repository type does not support dependencies.
<b>Action</b>	None required.
<b>SPMREPE0006</b>	<b>Unsupported operations.</b>
<b>Explanation</b>	Publishing is not supported for this repository type.
<b>Action</b>	None required.
<b>SPMREPE0007</b>	<b>Unable to parse canonical in {1}: {0}</b>
<b>Explanation</b>	The product properties could not be processed. The file is not a valid image archive.
<b>Action</b>	Use a valid image archive.
<b>SPMREPE0008</b>	<b>Importing of artifacts into an image archive is not supported.</b>
<b>Explanation</b>	Importing artifacts into an image archive is not supported.
<b>Action</b>	To create an image archive, use the export feature.
<b>SPMREPE0009</b>	<b>URI scheme for image archive repository, {0}, must be file</b>
<b>Explanation</b>	The repository configuration is invalid.
<b>Action</b>	Specify a local file as the archive location.

<b>SPMREPE0010</b>	<b>Repository not found at {0}</b>
<b>Explanation</b>	There is no archive at the specified location.
<b>Action</b>	Specify a valid location for the archive.
<b>SPMREPE0011</b>	<b>Exporting from images is not supported.</b>
<b>Explanation</b>	The function is not supported.
<b>Action</b>	None required.
<b>SPMREPE0012</b>	<b>Dependencies not available for image archives.</b>
<b>Explanation</b>	The function is not supported.
<b>Action</b>	Non required.
<b>SPMREPE0013</b>	<b>Publish feature is not supported for image archives.</b>
<b>Explanation</b>	Only local repositories may be published.
<b>Action</b>	None required.
<b>SPMREPE0016</b>	<b>Platform Manager cannot list product or fix repositories of release 9.7 or earlier.</b>
<b>Explanation</b>	The listing of product or fix repositories is not supported for releases 9.7 or earlier.
<b>Action</b>	Start the Software AG Installer and select the release that includes the products you want to see, or start the Software AG Update Manager and select the release and products that include the fixes you want to see.
<b>SPMREPE0017</b>	<b>Sandboxes are not modifiable.</b>
<b>Explanation</b>	Importing into sandboxes is not supported.
<b>Action</b>	None required.
<b>SPMREPE0018</b>	<b>Exporting from sandboxes is not supported.</b>
<b>Explanation</b>	The function is not supported.
<b>Action</b>	Use the installer client to export images from legacy sandboxes.
<b>SPMREPE0019</b>	<b>Dependencies not available for sandboxes.</b>
<b>Explanation</b>	The function is not supported.
<b>Action</b>	Use installer client to interact with legacy sandboxes.

---

<b>SPMREPE0020</b>	<b>Only local repositories can be published.</b>
<b>Explanation</b>	Sandboxes cannot be published.
<b>Action</b>	None required.
<b>SPMREPE0021</b>	<b>Unable to load/create repository at {0}</b>
<b>Explanation</b>	Platform Manager was not able to read the repository content.
<b>Action</b>	See to logs for more information. The repository may have been corrupted.
<b>SPMREPE0024</b>	<b>Unable to verify archive: {0} due to {1}</b>
<b>Explanation</b>	The file could not be verified as a ZIP archive.
<b>Action</b>	Ensure the path to the archive is correct.
<b>SPMREPE0025</b>	<b>The specified file {0} is not a valid image file.</b>
<b>Action</b>	To validate a product image, open the Software AG Installer and go to Advanced Options > Images. If necessary, re-create the {product   fix} image using the instructions in Using the Software AG Installer (product image) or Using the Software AG Update Manager (fix image), and then try again.
<b>SPMREPE0026</b>	<b>Local repository, {0}, has an invalid location: {1}</b>
<b>Explanation</b>	The repository configuration is invalid.
<b>Action</b>	Delete the configuration.
<b>SPMREPE0027</b>	<b>Unable to create repository at {0}</b>
<b>Explanation</b>	The repository could not be created.
<b>Action</b>	See the logs for more information.
<b>SPMREPE0028</b>	<b>Exporting of fixes is not supported.</b>
<b>Explanation</b>	The function is not supported.
<b>Action</b>	Use Software AG Update Manager to export fixes.
<b>SPMREPE0037</b>	<b>Unsupported operation.</b>
<b>Explanation</b>	getContent is not supported for remote fix repositories.
<b>Action</b>	Use Software AG Update Manager to view repository content.

<b>SPMREPE0038</b>	<b>Unsupported operation.</b>
<b>Explanation</b>	Import is not supported for remote fix repositories.
<b>Action</b>	Use Software AG Update Manager to manage fix repositories.
<b>SPMREPE0039</b>	<b>Unsupported operation.</b>
<b>Explanation</b>	Export is not supported for remote fix repositories.
<b>Action</b>	Use Software AG Update Manager to manage fix repositories.
<b>SPMREPE0040</b>	<b>Unsupported operation.</b>
<b>Explanation</b>	Dependencies not supported for remote fix repositories.
<b>Action</b>	Use Software AG Update Manager to manage fix repositories.
<b>SPMREPE0041</b>	<b>Unsupported operation.</b>
<b>Explanation</b>	Publish is not supported for remote fix repositories.
<b>Action</b>	Use Software AG Update Manager to manage fix repositories.
<b>SPMREPE0042</b>	<b>Unable to access SD Security Service.</b>
<b>Explanation</b>	The security service used to access remote repositories is not available.
<b>Action</b>	Try to restart the security service.
<b>SPMREPE0043</b>	<b>Unable to obtain security token for user, {0}, for the {1} repository.</b>
<b>Explanation</b>	The attempt to login to the SD security service failed.
<b>Action</b>	Ensure correct credentials are set for the repository.
<b>SPMREPE0044</b>	<b>Unable to load remote repository, {0}, due to {1}</b>
<b>Explanation</b>	A failure was detected attempting to access the repository.
<b>Action</b>	See the logs for more information.
<b>SPMREPE0045</b>	<b>Unsupported operation.</b>
<b>Explanation</b>	Importing into a remote repository is not supported.
<b>Action</b>	None required.

---

<b>SPMREPE0047</b>	<b>Unsupported operation.</b>
<b>Explanation</b>	Exporting from a remote repository is not supported.
<b>Action</b>	Import the artifacts into a local repository, then export from the local repository.
<b>SPMREPE0048</b>	<b>Unsupported operation.</b>
<b>Explanation</b>	Publish is not supported for remote repositories. They are already published.
<b>Action</b>	None required.
<b>SPMREPE0049</b>	<b>{0} not found in repository.</b>
<b>Explanation</b>	The specified artifact does not exist in the repository.
<b>Action</b>	Verify that the correct artifact is used.
<b>SPMREPE0050</b>	<b>Unable to list repositories.</b>
<b>Explanation</b>	Failures occurred while reading repository configuration.
<b>Action</b>	Ensure read access is provided for repositories defined in the SPM profile.
<b>SPMREPE0051</b>	<b>Unable to list repositories.</b>
<b>Explanation</b>	Failures occurred while reading repository configuration.
<b>Action</b>	Ensure read access is provided for the repositories defined in the SPM profile.
<b>SPMREPE0053</b>	<b>Location can not be null.</b>
<b>Explanation</b>	When adding a new repository configuration, the location property must be provided.
<b>Action</b>	Provide a location for the repository being configured.
<b>SPMREPE0054</b>	<b>Invalid content type: {0}</b>
<b>Explanation</b>	The type of a repository must be either product or fix.
<b>Action</b>	Provide a valid repository type.
<b>SPMREPE0055</b>	<b>Repository already configured for {0}</b>
<b>Explanation</b>	A repository at this location is already configured.
<b>Action</b>	None required.

<b>SPMREPE0057</b>	<b>{0} is an invalid path.</b>
<b>Explanation</b>	The location cannot be represented as a valid URI.
<b>Action</b>	Use a valid path.
<b>SPMREPE0058</b>	<b>Location does not exist: {0}</b>
<b>Explanation</b>	There is no fix image archive at the specified location.
<b>Action</b>	Provide the location of an existing fix image archive.
<b>SPMREPE0062</b>	<b>Unable to delete configuration properties: {0}</b>
<b>Explanation</b>	The configuration properties for a repository could not be deleted.
<b>Action</b>	Manually delete the property file.
<b>SPMREPE0064</b>	<b>Must specify repository type.</b>
<b>Explanation</b>	The type argument for listing repositories cannot be null.
<b>Action</b>	Specify the repository type, either product or fix.
<b>SPMREPE0065</b>	<b>No such repository - {0}</b>
<b>Explanation</b>	There is no repository with the given ID.
<b>Action</b>	Use a known repository configuration.
<b>SPMREPE0066</b>	<b>Source and destination arguments cannot be null.</b>
<b>Explanation</b>	Both source and destination arguments must be specified for the import operation.
<b>Action</b>	Provide valid source and destination repository arguments.
<b>SPMREPE0067</b>	<b>No such repository registered, {0}</b>
<b>Explanation</b>	The source repository for the import operation does not exist.
<b>Action</b>	Provide a valid source repository argument.
<b>SPMREPE0068</b>	<b>No such repository registered, {0}</b>
<b>Explanation</b>	The destination repository for the import operation does not exist.
<b>Action</b>	Provide a valide destination repository.

---

<b>SPMREPE0069</b>	<b>Incompatible repositories.</b>
<b>Explanation</b>	The source and destination repositories must have the same content type.
<b>Action</b>	Ensure that both repositories are either product, or fix repositories.
<b>SPMREPE0070</b>	<b>Cannot import into remote repository, {0}</b>
<b>Explanation</b>	Importing into remote repositories is not supported.
<b>Action</b>	Specify a local repository as the destination.
<b>SPMREPE0071</b>	<b>Unable to create path to provisioning configuration: {0}</b>
<b>Explanation</b>	Unable to create provisioning configuration directory.
<b>Action</b>	Ensure that the Platform Manager configuration directory is writable.
<b>SPMREPE0072</b>	<b>Invalid repository type: {0}</b>
<b>Explanation</b>	The repository type must be product or fix.
<b>Action</b>	Specify a valid repository type.
<b>SPMREPE0073</b>	<b>No repository name provided.</b>
<b>Explanation</b>	A repository name must be provided for discovering fix repositories.
<b>Action</b>	Provide the repository name.
<b>SPMREPE0074</b>	<b>Invalid server or repository name: {0}</b>
<b>Explanation</b>	The server or name arguments contain invalid characters for a URL.
<b>Action</b>	Specify valid server and names for the fix repository.
<b>SPMREPE0075</b>	<b>Repository discovery failed: No ProductRepositoryManagementService available</b>
<b>Explanation</b>	Unable to discover product repositories as the necessary services are not active.
<b>Action</b>	See the logs to determine why the repository manager service is inactive.
<b>SPMREPE0076</b>	<b>Cannot connect to Software AG repository: {0}</b>
<b>Action</b>	Make sure the Platform Manager has Internet access and the proxy configuration is present and correct. You can also check the logs for the Platform Manager. Then try again to connect.

<b>SPMREPE0077</b>	<b>Source repository cannot be null.</b>
<b>Explanation</b>	A source repository must be specified for the export operation.
<b>Action</b>	Specify the local repository to use for export.
<b>SPMREPE0078</b>	<b>Path cannot be null.</b>
<b>Explanation</b>	The path to the destination archive must be specified for the export operation.
<b>Action</b>	Provide a path where the archive should be created.
<b>SPMREPE0079</b>	<b>No such repository registered, {0}</b>
<b>Explanation</b>	There is no repository with the given ID.
<b>Action</b>	Specify a valid source repository.
<b>SPMREPE0080</b>	<b>Unsupported operation.</b>
<b>Explanation</b>	Platform Manager cannot export from archive.
<b>Action</b>	Specify a local repository from which to export.
<b>SPMREPE0081</b>	<b>Cannot export into existing file: {0}</b>
<b>Explanation</b>	Exporting cannot be used to add to an existing archive.
<b>Action</b>	Specify the location to create a new archive.
<b>SPMREPE0082</b>	<b>Artifact must be specified.</b>
<b>Explanation</b>	An artifact argument for get dependencies was null.
<b>Action</b>	Specify the artifact for its list of dependencies.
<b>SPMREPE0083</b>	<b>Source repository cannot be null.</b>
<b>Explanation</b>	The source repository for get dependencies cannot be null.
<b>Action</b>	Specify a valid repository in which to search for dependencies.
<b>SPMREPE0084</b>	<b>No such repository registered, {0}</b>
<b>Explanation</b>	The specified repository does not exist.
<b>Action</b>	Specify a valid repository in which to search for dependencies.

---

<b>SPMREPE0085</b>	<b>No such repository: {0}</b>
<b>Explanation</b>	The specified repository does not exist.
<b>Action</b>	Specify a valid local repository to publish.
<b>SPMREPE0086</b>	<b>Source and destination repositories are the same.</b>
<b>Explanation</b>	The source and destination repositories must refer to different repositories.
<b>Action</b>	Specify valid repositories.
<b>SPMREPE0087</b>	<b>{0} not found in repository.</b>
<b>Explanation</b>	The specified artifact does not exist in the repository.
<b>Action</b>	Verify that the correct artifact is used.
<b>SPMREPE0088</b>	<b>Unsupported operation.</b>
<b>Explanation</b>	The publishing of local repositories is not supported in this release.
<b>Action</b>	None required.
<b>SPMREPE0089</b>	<b>Unsupported operation.</b>
<b>Explanation</b>	The unpublish operation is not supported for repository type.
<b>Action</b>	None required.
<b>SPMREPE0090</b>	<b>No such repository registered, {0}</b>
<b>Explanation</b>	The specified repository is not registered.
<b>Action</b>	Specify a valid repository, or add the repository.
<b>SPMREPE0091</b>	<b>Failures occurred attempting to publish a repository: {0}</b>
<b>Explanation</b>	Internal errors prevented the publish operation from completing.
<b>Action</b>	Depends on the specific error. Check the logs for the error details.
<b>SPMREPE0092</b>	<b>The repository, {0}, is already published with context, {1}</b>
<b>Explanation</b>	Specify the correct repository or republish to use a different context.
<b>Action</b>	To change context, unpublish, then republish with new context.

<b>SPMREPE0093</b>	<b>Web publishing service is unavailable.</b>
<b>Explanation</b>	The necessary service to publish repositories is not active.
<b>Action</b>	None required.
<b>SPMREPE0094</b>	<b>Invalid context: {0}</b>
<b>Explanation</b>	The context in the publish request may not be null and must start with /
<b>Action</b>	Check if the context of the publish request is null and verify that it starts with /
<b>SPMREPE0095</b>	<b>Invalid context: {0}</b>
<b>Explanation</b>	The context must not be null and start with /
<b>Action</b>	Use a valid context.
<b>SPMREPE0096</b>	<b>Repository {0}, is not published.</b>
<b>Explanation</b>	The request assumes the repository has been published.
<b>Action</b>	None required.
<b>SPMREPE0097</b>	<b>Failures detected while unpublishing repository: {0}</b>
<b>Explanation</b>	The unpublishing operation failed.
<b>Action</b>	Depends on the type of failure. Check the logs for the error details.
<b>SPMREPE0098</b>	<b>No credentials for accessing the remote fix repository, {0}, have been configured.</b>
<b>Explanation</b>	You must provide user credentials to access remote repositories.
<b>Action</b>	Specify the user and password properties for the repository.
<b>SPMREPE0099</b>	<b>The location of a repository is invalid: {0}</b>
<b>Explanation</b>	The URI of a repository does not have a valid path.
<b>Action</b>	Specify a valid location when registering repositories.
<b>SPMREPE0100</b>	<b>No repository found at the specified location: {0}</b>
<b>Explanation</b>	The location specified did not match any known repository.
<b>Action</b>	Specify a valid location.

---

<b>SPMREPE0101</b>	<b>No fix service available.</b>
<b>Explanation</b>	A required service for managing fix repositories is unavailable.
<b>Action</b>	Review the Platform Manager logs for indications of fix service failures.
<b>SPMREPE0103</b>	<b>{0} is an invalid path. It must be relative.</b>
<b>Explanation</b>	To create a new local repository, you must use only relative paths.
<b>Action</b>	Specify a relative path.
<b>SPMREPE0104</b>	<b>Login to repository, {1}, failed for user, {0},</b>
<b>Explanation</b>	Repository configured with incorrect credentials.
<b>Action</b>	Reconfigure the repository credentials.
<b>SPMREPE0105</b>	<b>Only one platform may be specified in the provided filter .</b>
<b>Explanation</b>	The repository operation included a filter with multiple platforms.
<b>Action</b>	Specify only one platform in the filter and retry the operation.
<b>SPMREPE0106</b>	<b>The repository, {0}, is currently in use.</b>
<b>Explanation</b>	The operation cannot be processed until the specified repository becomes available.
<b>Action</b>	Retry when all provisioning operations are completed.
<b>SPMREPE0107</b>	<b>Failed to load repository, {0}</b>
<b>Explanation</b>	An error occurred while attempting to access the repository.
<b>Action</b>	Check the logs for the error details.
<b>SPMREPE0108</b>	<b>Publish with non-default realm or roles is not supported.</b>
<b>Explanation</b>	The requested operation is not supported.
<b>Action</b>	Retry the request without specifying a realm or roles.
<b>SPMREPE0109</b>	<b>{0} is not in repository {1}</b>
<b>Explanation</b>	Unable to export the specified fix into the archive because the fix does not reside in the source repository.
<b>Action</b>	Specify a different fix or repository.

<b>SPMREPE0110</b>	<b>Invalid SDC installer properties.</b>
<b>Explanation</b>	The servers/production/versions property in the server.properties file is missing.
<b>Action</b>	This is an internal error and should be reported. Contact Software AG Global Support.
<b>SPMREPE0111</b>	<b>No such repository, {0}</b>
<b>Explanation</b>	The specified repository is not registered.
<b>Action</b>	Specify an valid repository, or create one.
<b>SPMREPE0112</b>	<b>Unsupported operation.</b>
<b>Explanation</b>	The getReadme operation is not supported by the repository.
<b>Action</b>	Specify an appropriate repository.
<b>SPMREPE0113</b>	<b>Unable to load remote repository {0}. The server returned null result.</b>
<b>Explanation</b>	The attempt to load to the specified remote repository failed.
<b>Action</b>	Ensure that the correct repository metadata is provided and try again.
<b>SPMREPE0114</b>	<b>Update Manager threw unexpected exception: {0}.</b>
<b>Explanation</b>	Update Manager threw unexpected exception: {0}.
<b>Action</b>	Check the Update Manager installation.
<b>SPMREPE0115</b>	<b>Login failed for user: {0} and location: {1}</b>
<b>Explanation</b>	The login operation failed for user: {0} and location: {1}
<b>Action</b>	Provide valid credentials and valid repository location.
<b>SPMREPE0116</b>	<b>The Repository Validation parameter should not be null.</b>
<b>Explanation</b>	The Repository Validation parameter should not be null.
<b>Action</b>	Provide a valid (not null) Repository Validation parameter.
<b>SPMREPE0117</b>	<b>The repository path should not be empty.</b>
<b>Explanation</b>	The repository path should not be empty.
<b>Action</b>	Provide a valid non-empty repository path.

---

<b>SPMREPE0118</b>	<b>The provided username or password should not be empty.</b>
<b>Explanation</b>	The username or password should not be empty.
<b>Action</b>	Provide non-empty valid username or password.
<b>SPMREPE0119</b>	<b>Fixes repository validation failed.</b>
<b>Explanation</b>	The fixes repository validation failed.
<b>Action</b>	Analyze the error and provide valid input.
<b>SPMREPE0120</b>	<b>Products repository validation failed.</b>
<b>Explanation</b>	The products repository validation failed.
<b>Action</b>	Analyze the error and provide valid input.
<b>SPMREPE0121</b>	<b>Trusted authentication failed while trying to log in {0} repository.</b>
<b>Explanation</b>	Connecting to the specified repository using trusted authentication failed.
<b>Action</b>	See the Platform Manager wrapper log for more details.
<b>SPMREPE0122</b>	<b>Repository {0} not found.</b>
<b>Explanation</b>	The specified repository is not registered.
<b>Action</b>	Check the repository name or register a repository with the same name.
<b>SPMREPI0014</b>	<b>Importing into {0}</b>
<b>Explanation</b>	Importing of artifacts is starting.
<b>Action</b>	None required.
<b>SPMREPI0015</b>	<b>Import failed: {0}</b>
<b>Explanation</b>	An import operation failed.
<b>Action</b>	See the installation log for more information.
<b>SPMREPI0023</b>	<b>Creating local repository at {0}</b>
<b>Explanation</b>	A new local repository is being created.
<b>Action</b>	None required.

<b>SPMREPI0029</b>	<b>No matching products found in {0} repository</b>
<b>Explanation</b>	The request to mirror a repository is ignored as none of the specified artifacts reside in the repository.
<b>Action</b>	None required.
<b>SPMREPI0030</b>	<b>Import from {0} to {1} failed.</b>
<b>Explanation</b>	The import operation failed.
<b>Action</b>	See the logs for more information.
<b>SPMREPI0031</b>	<b>Importing all products from {0} to {1}</b>
<b>Explanation</b>	All products in the source repository will be imported.
<b>Action</b>	None required.
<b>SPMREPI0032</b>	<b>Importing products fro {0} to {1}</b>
<b>Explanation</b>	A subset of products is being imported. The specific products are listed as subsequent log entries.
<b>Action</b>	None required.
<b>SPMREPI0033</b>	<b>{0}</b>
<b>Explanation</b>	The id of a product being imported.
<b>Action</b>	None required.
<b>SPMREPI0034</b>	<b>Import from {0} to {1} was successful.</b>
<b>Explanation</b>	The import operation completed successfully..
<b>Action</b>	None required.
<b>SPMREPI0035</b>	<b>Exporting artifacts from {0} to {1}</b>
<b>Explanation</b>	An export operation is starting.
<b>Action</b>	None required.
<b>SPMREPI0036</b>	<b>Export from {0} to {1} failed due to {2}</b>
<b>Explanation</b>	The export operation failed.
<b>Action</b>	See the logs for more information.

---

<b>SPMREPI0056</b>	<b>The configuration of repository {0} has an invalid location property: {0}</b>
<b>Explanation</b>	The location property is not a valid URL.
<b>Action</b>	Remove the repository.
<b>SPMREPI0059</b>	<b>Unable to add repository {0}.</b>
<b>Explanation</b>	The location is an invalid URL.
<b>Action</b>	Noe required.
<b>SPMREPI0060</b>	<b>Unable to add repository {0}.</b>
<b>Explanation</b>	The attempt to configure the remote repository failed.
<b>Action</b>	See the logs for more information.
<b>SPMREPI0061</b>	<b>Failures occurred during removal of repository {0}.</b>
<b>Explanation</b>	The repository configuration may not have been completely removed.
<b>Action</b>	See the logs for further information.
<b>SPMREPI0063</b>	<b>Removed repository configuration, {0}</b>
<b>Explanation</b>	The repository was successfully removed.
<b>Action</b>	None required.
<b>SPMREPW0022</b>	<b>Unable to delete {0}</b>
<b>Explanation</b>	The directory of the local repository to be created was not empty.
<b>Action</b>	None required.
<b>SPMREPW0046</b>	<b>Failed to remove password handle for repository, {0}</b>
<b>Explanation</b>	Cleanup of passman data was incomplete while removing the repository.
<b>Action</b>	None required.
<b>SPMREPW0052</b>	<b>Unable to initialize repository {0}.</b>
<b>Explanation</b>	The repository could not be validated.
<b>Action</b>	Remove the repository configuration.

<b>SPMREPW0102</b>	<b>Failed to remove password handle for repository, {0}</b>
<b>Explanation</b>	The passman cleanup was incomplete.
<b>Action</b>	None required.
<b>SPMRMCE0001</b>	<b>Invalid input data.</b>
<b>Explanation</b>	The submitted data failed to un-marshall or validate against the schema.
<b>Action</b>	Correct the reported problem in the input data and retry the request.
<b>SPMRMCE0002</b>	<b>Internal Error processing the request.</b>
<b>Explanation</b>	The server encountered an error and cannot execute the request.
<b>Action</b>	Contact your system administrator.
<b>SPMRMCE0003</b>	<b>Invalid client request.</b>
<b>Explanation</b>	The submitted client request is rejected by the server.
<b>Action</b>	Check the status code for more details or consult the Software AG Platform Manager documentation. Correct the problem and resubmit the request.
<b>SPMRMCE0005</b>	<b>The requested functionality is not supported.</b>
<b>Explanation</b>	Platform Manager does not support the requested functionality.
<b>Action</b>	See the Software AG Platform Manager documentation for the supported requests for this resource.
<b>SPMRMCI0000</b>	<b>Configuration partial failure for runtime component: {0}, instance: {1} with type {2} - with linked exception:</b>
<b>Explanation</b>	The configuration operation for the specified run-time component, instance, and type failed with the specified exception.
<b>Action</b>	Check the logs for the error details.
<b>SPMRPIE0000</b>	<b>Use RepositoryService to create new repository configurations.</b>
<b>Explanation</b>	The ConfigurationService cannot be used to add repository configurations.
<b>Action</b>	Use the RepositoryService to configure new repositories.

---

<b>SPMRPRE0000</b>	<b>Invalid filter specification.</b>
<b>Explanation</b>	A request was made that included a product filter and the useInventory option.
<b>Action</b>	Resubmit with the appropriate filter. Use either a product list or the useInventory option, not both at the same time.
<b>SPMRPRE0001</b>	<b>No repository with id, {0}, and type, {1} exists</b>
<b>Explanation</b>	The request references a non-existent repository.
<b>Action</b>	Specify the correct repository ID and/or type.
<b>SPMSCOE0000</b>	<b>No Credentials in Data Store for handle: {0}</b>
<b>Explanation</b>	Searching for exact credentials match does not return results.
<b>Action</b>	Search again for existing credentials.
<b>SPMSCOE0001</b>	<b>No Credentials available in Secured Store for handle: {0}</b>
<b>Explanation</b>	Searching for exact credentials match does not return results.
<b>Action</b>	Search again for existing credentials.
<b>SPMSURE0000</b>	<b>Some of the required properties for retrieving a UiBinding are not provided. Please provide values for {0} and a value for one of {1}.</b>
<b>Explanation</b>	Some of the required properties for retrieving a UiBinding are not provided.
<b>Action</b>	Provide the full set of required properties.
<b>SPMSURE0002</b>	<b>Could not transfer the file to the target destination {0}. Reason: {1}.</b>
<b>Explanation</b>	The file could not be transferred due to an error.
<b>Action</b>	Check if the target host has enough disk space or the provided file name is valid.
<b>SPMSURW0001</b>	<b>Some of the required properties for retrieving a UiBinding are not provided. Provide values for {0}.</b>
<b>Explanation</b>	Some of the properties required for retrieving a UiBinding are not provided.
<b>Action</b>	Provide the full set of required properties.

<b>SPMTEME0000</b>	<b>Error occurred while reading the configuration instances for {0}</b>
<b>Explanation</b>	The error occurred while creating a template that includes configuration information.
<b>Action</b>	Check whether the configuration instances for the specified runtime component are available by querying them explicitly. Check the logs for errors if the query fails.
<b>SPMTEME0001</b>	<b>Error occurred while applying template {0}</b>
<b>Explanation</b>	The error occurred when applying the specified template.
<b>Action</b>	Check the logs for more details.
<b>SPMTEME0006</b>	<b>Error occurred during template creation {0}</b>
<b>Explanation</b>	The error occurred when creating a template.
<b>Action</b>	Check the logs for more details about the error.
<b>SPMTEME0012</b>	<b>Error occurred while executing a task with id: {0} and status: {1}</b>
<b>Explanation</b>	Executing the specified task failed.
<b>Action</b>	Check the Platform Manager logs for more information.
<b>SPMTEME0014</b>	<b>Deleting configuration instance with type {0} is not supported operation.</b>
<b>Explanation</b>	Platform Manager does not support deleting the configuration instance with the specified type.
<b>Action</b>	Check the warning to determine if any damage to the system will occur.
<b>SPMTEME0015</b>	<b>Skipping deleting configuration instance ({0}) for runtime component - {1}. Reason: {2}</b>
<b>Explanation</b>	The error occurred because either the runtime component, or a configuration manager for the configuration instance is missing in the Platform Manager.
<b>Action</b>	Check if the specified runtime component is present or that the appropriate SPM plugin is installed. Check the warning to determine if any damage to the system will occur.
<b>SPMTEME0016</b>	<b>Skipping deleting configuration instance ({0}) for the missing runtime component - {1}</b>
<b>Explanation</b>	The specified runtime component is missing in the Platform Manager.
<b>Action</b>	Check if the specified runtime component is present in the Platform Manager. Check the warning to determine if any damage to the system will occur.

---

<b>SPMTEME0017</b>	<b>Task with id: {0} and status {1} did not finish in the expected period of time.</b>
<b>Explanation</b>	The timeout period, configured through a system property, is not sufficient to complete the task.
<b>Action</b>	Try to execute the operation again or increase the timeout value.
<b>SPMTEME0018</b>	<b>Task with id: {0} and status: {1} was canceled.</b>
<b>Explanation</b>	The execution of the operation is interrupted.
<b>Action</b>	Try to execute the operation again.
<b>SPMTEME0019</b>	<b>Error occurred during execution of operation {0} on template {1}</b>
<b>Explanation</b>	The error occurred when executing the specified operation.
<b>Action</b>	Check the logs for more details about the error.
<b>SPMTEME0020</b>	<b>The repository cannot be empty.</b>
<b>Explanation</b>	A repository should be specified in order to apply the template.
<b>Action</b>	Specify a repository to be used for applying the template.
<b>SPMTEME0021</b>	<b>The required services are not initialized.</b>
<b>Explanation</b>	The services required for applying are template are not initialized.
<b>Action</b>	Check whether all required bundles are started.
<b>SPMTEME0022</b>	<b>Template alias cannot be empty.</b>
<b>Explanation</b>	Template alias must be specified when creating or applying a template.
<b>Action</b>	Specify a template alias.
<b>SPMTEME0023</b>	<b>Template metadata cannot be empty.</b>
<b>Explanation</b>	Template metadata must be specified when creating or applying a template.
<b>Action</b>	Specify template metadata.
<b>SPMTEME0024</b>	<b>Template options cannot be empty.</b>
<b>Explanation</b>	Template options should be specified when creating or applying a template.
<b>Action</b>	Specify template options.

<b>SPMTEME0025</b>	<b>The provided template or template metadata does not contain any products.</b>
<b>Explanation</b>	A request to install products is made, however, the template or the template metadata does not contain any products.
<b>Action</b>	Check whether the template operation request is correct.
<b>SPMTEME0026</b>	<b>Fix Installation properties cannot be empty.</b>
<b>Explanation</b>	Fix Installation properties cannot be empty.
<b>Action</b>	Specify fix installation properties.
<b>SPMTEME0027</b>	<b>Arguments can not be null.</b>
<b>Explanation</b>	Neither of the arguments can be null.
<b>Action</b>	Specify proper arguments.
<b>SPMTEME0028</b>	<b>The script for this template is empty.</b>
<b>Explanation</b>	The script that is used for provisioning of this template is empty.
<b>Action</b>	Provide proper arguments to ensure successful generation of the script.
<b>SPMTEME0029</b>	<b>The provided template does not have a script for the specified type.</b>
<b>Explanation</b>	The template does not support the specified provisioning operation.
<b>Action</b>	Check the template metadata for discrepancy.
<b>SPMTEME0030</b>	<b>Job cannot be null.</b>
<b>Explanation</b>	An issue occurred during a template operation.
<b>Action</b>	Contact Software AG Global Support.
<b>SPMTEME0031</b>	<b>Configuration instance {0} threw unexpected exception during processing.</b>
<b>Explanation</b>	The composite template encountered an error while processing configuration instance {0}. This behavior is to be expected in some cases, for example when the run-time component on which the configuration is applied is not up and running.
<b>Action</b>	No action required. The composite template retries the configuration operation automatically. Check the final job log after the last retry.

---

<b>SPMTEME0032</b>	<b>The thread was interrupted while waiting for runtime status.</b>
<b>Explanation</b>	During the apply template configuration operation, the checking of the runtime status of a component was interrupted.
<b>Action</b>	Check the logs for JVM errors.
<b>SPMTEME0033</b>	<b>Exception occurred while getting runtime status.</b>
<b>Explanation</b>	An exception occurred during the apply template configuration operation, when checking the runtime status of a component.
<b>Action</b>	Check the SPM logs for system errors
<b>SPMTEME0034</b>	<b>The thread was interrupted while setting runtime status.</b>
<b>Explanation</b>	During the apply template configuration operation, the checking of the runtime status of a component was interrupted.
<b>Action</b>	Check the logs for JVM errors
<b>SPMTEME0035</b>	<b>Applying template was interrupted.</b>
<b>Explanation</b>	The thread applying the template was interrupted.
<b>Action</b>	Check the logs for more details.
<b>SPMTEME0036</b>	<b>Can not retrieve the imported template: {0}</b>
<b>Explanation</b>	Platform Manager can not retrieve the imported template: {0}
<b>Action</b>	Check the imported template metadata for inconsistent entries.
<b>SPMTEME0037</b>	<b>The template file can not be deleted.</b>
<b>Explanation</b>	The template file can not be deleted.
<b>Action</b>	Ensure that the template file is not locked on the file system.
<b>SPMTEME0038</b>	<b>The provided template alias should not be null.</b>
<b>Explanation</b>	The provided template alias should not be null.
<b>Action</b>	Provide a valid, non-null template alias.

<b>SPMTEME0039</b>	<b>Can not retrieve the imported template metadata: {0}</b>
<b>Explanation</b>	Can not retrieve the imported template metadata: {0}
<b>Action</b>	Check the imported template metadata for inconsistent entries.
<b>SPMTEME0040</b>	<b>Waiting for product with Id: {0} is interrupted.</b>
<b>Explanation</b>	Waiting for product with Id: {0} is interrupted.
<b>Action</b>	Double-check the logs for more details related to this error.
<b>SPMTEME0047</b>	<b>Configuration Type {0} does not support "text/plain" representation. Use JSON or XML.</b>
<b>Explanation</b>	The configuration data contained in the template is not in the expected format.
<b>Action</b>	Change the configuration definition in the template.
<b>SPMTEME0048</b>	<b>Could not deserialize Configuration Instance {0} for Runtime Component {1} having Configuration Type {2}.</b>
<b>Explanation</b>	The Configuration Data contained in the Template is not in the expected format.
<b>Action</b>	Change the Configuration definition in the Template.
<b>SPMTEMW0002</b>	<b>Applying the template completed with the following warnings: {0}</b>
<b>Explanation</b>	When applying a template, unexpected events occurred, but they did not prevent the process from executing.
<b>Action</b>	Check the warnings with extra caution to determine whether any damage to the system will occur.
<b>SPMTEMW0003</b>	<b>Skipping creating configuration instance ({0}) for the missing runtime component - {1}</b>
<b>Explanation</b>	The specified runtime component is missing in the specified Platform Manager.
<b>Action</b>	Check if the specified runtime component is present. Check the warning to determine if any damage to the system will occur.
<b>SPMTEMW0004</b>	<b>Skipping creating configuration instance ({0}) for runtime component - {1}. Reason: {2}</b>
<b>Explanation</b>	The error occurred because either the runtime component, or a configuration manager for the configuration instance is missing in the specified Platform Manager.
<b>Action</b>	Check if the specified runtime component is present and that the appropriate Platform Manager plugin is installed. Check the warning to determine if any damage to the system will occur.

---

<b>SPMTEMW0005</b>	<b>Creating configuration instance with type {0} is not supported operation.</b>
<b>Explanation</b>	Platform Manager does not support the create operation for the configuration instance with the specified type.
<b>Action</b>	Check the warning to determine if any damage to the system will occur.
<b>SPMTEMW0007</b>	<b>Skipping updating configuration instance ({0}) for the missing runtime component - {1}</b>
<b>Explanation</b>	The specified runtime component is missing in the Platform Manager.
<b>Action</b>	Check if the specified runtime component is present. Check the warning to determine if any damage to the system will occur.
<b>SPMTEMW0008</b>	<b>Template operation "{1}" completed with the following warnings: {0}</b>
<b>Explanation</b>	During template operation "{1}" unexpected events occurred but they did not prevent the operation from completing.
<b>Action</b>	Check the warnings to figure out what was successfully processed as part of operation "{1}".
<b>SPMTEMW0009</b>	<b>Skipping updating configuration instance ({0}) for runtime component - {1}. Reason: {2}</b>
<b>Explanation</b>	The error occurred because either the runtime component, or a configuration manager for the configuration instance is missing in the Platform Manager.
<b>Action</b>	Check if the specified runtime component is present or that the appropriate Platform Manager plugin is installed. Check the warning to determine if any damage to the system will occur.
<b>SPMTEMW0010</b>	<b>Skipping storage of item with id : {0} . Reason : {1}</b>
<b>Explanation</b>	The issue occurred during item serialization.
<b>Action</b>	Check the Platform Manager logs for more information about the error.
<b>SPMTEMW0011</b>	<b>Updating configuration instance with type {0} is not supported operation.</b>
<b>Explanation</b>	Platform Manager does not support updating the configuration instance with the specified type.
<b>Action</b>	Check the warning to determine if any damage to the system will occur.

**SPMTEMW0013**     **Skipping storage of configuration instance ({0}) for runtime component - {1}. Reason: {2}**

**Explanation**     An error occurred while loading the configuration instance and it will not be included in the template that will be created.

**Action**            Check the logs for more details about the error.

**SPMTEMW0046**     **Reserved instance name {0}.**

**Explanation**     Instance name {0} is reserved for internal use only.

**Action**            Use a different instance name.

**SPMTERE0000**     **Template log file not available.**

**Explanation**     The Platform Manager log access service was unable to locate the template log file.

**Action**            Contact Software AG Global Support.

**SPMTERE0001**     **Installer and Update Manager logs unavailable.**

**Explanation**     The Installer or Update Manager logs cannot be located.

**Action**            Contact Software AG Global Support.

**SPMUTLE0000**     **Invalid URL.**

**Explanation**     The URL does not fit the specification.

**Action**            Specify a valid URL.

**SPMUTLE0001**     **URL string cannot be parsed as a URI reference**

**Explanation**     The URL does not fit the specification.

**Action**            Specify a valid URL.

**SPMUTLE0002**     **Problem with saglicutil execution.**

**Explanation**     The saglicutil utility cannot be started.

**Action**            Contact Software AG Global Support.

**SPMUTLE0003**     **Error occurred: Saglicutil verifier tool is missing!**

**Explanation**     The saglicutil verifier tool is not found at the expected location.

**Action**            Contact Software AG Global Support.

---

<b>SPMUTLE0004</b>	<b>Unable to collect NetworkInterface details; caught this: type({0}), msg({1})</b>
<b>Explanation</b>	An attempt to use java.lang.NetworkInterface to collect MAC address information failed.
<b>Action</b>	Determine whether the current user has permission to collect this information.
<b>SPMUTLE0005</b>	<b>Collected {0} MAC addresses before failure.</b>
<b>Explanation</b>	This message will always be logged with SPMULTLE0004
<b>Action</b>	No action required.
<b>SPMUTLE0006</b>	<b>Error occurred: Execution of saglicutil verifier tool failed!</b>
<b>Explanation</b>	The execution of the saglicutil verifier tool may fail due to the latest Windows patches not being installed or due to a corrupted installation environment.
<b>Action</b>	Ensure that the latest Windows patches are installed or contact Software AG Global Support.
<b>SPMUTLE0007</b>	<b>Error occurred: Processor core type information is missing!</b>
<b>Explanation</b>	The saglicutil verifier tool does not provide the processor core type information.
<b>Action</b>	Contact Software AG Global Support.
<b>SPMUTLE0008</b>	<b>Error occurred: Processor core count information is missing!</b>
<b>Explanation</b>	The saglicutil verifier tool does not provide the processor core count information.
<b>Action</b>	Contact Software AG Global Support.
<b>SPMUTLW0009</b>	<b>Abnormal termination of command {0} with result {1}</b>
<b>Explanation</b>	The internal command execution returned non-zero exit code.
<b>Action</b>	No user action is required.
<b>SPMWTNE0000</b>	<b>Integration Server password was not provided</b>
<b>Explanation</b>	The password is a required field.
<b>Action</b>	Provide an Integration Server password.

- SPMWTNE0001    Integration Server URL is not valid**  
**Explanation**    The Integration Server URL is malformed  
**Action**    Check that your Task Engine configuration values for host, port, username and password are valid.
- SPMWTNE0002    Only BASIC authentication is supported**  
**Explanation**    The provided authentication is not supported.  
**Action**    Change authentication to BASIC.
- SPMWTNE0009    No Integration Server credentials were provided**  
**Explanation**    The connection to Integration Server cannot be validated without proper credentials.  
**Action**    Provide values for username and password.
- SPMWTNE0014    Integration Server host, port, and/or connection protocol were not provided**  
**Explanation**    The Integration Server host, port, and connection protocol are required values.  
**Action**    Provide values for host, port, and connection protocol.
- SPMWTNISE0000    My webMethods Server password was not provided.**  
**Explanation**    The password is a required field.  
**Action**    Provide a password for My webMethods Server.
- SPMWTNISE0001    An error occurred during a call to `wm.task.taskclient:getConfig`. The error reported is: `{0}`.**  
**Explanation**    An error occurred during the service call to write the configuration settings to `WmTaskClient`. The error might be caused by accessing the `IntegrationServer\packages\WmTaskClient\config\taskclient.properties` file. This message will also occur if the file was initially not present and the service call to write the configuration settings created the file and populated it with default values.  
**Action**    Make sure that the `IntegrationServer\packages\WmTaskClient\config\taskclient.properties` file is present, contains `name=value` pairs, and the `name=value` pairs are valid. Note: This message will also occur if the file was initially not present and the service call to write the configuration settings created the file and populated it with default values. Check that the name-value pairs are acceptable for your configuration.

**SPMWTNISE0002 Only BASIC authentication is supported**

**Explanation** The specified authentication is not supported.

**Action** Change authentication to BASIC.

**SPMWTNISE0003 The My webMethods Server URL is not valid.**

**Explanation** The URL for pinging My webMethods Server is not valid.

**Action** Check that your WmTaskClient configuration values for host, port, username and password are valid.

**SPMWTNISE0009 No My webMethods Server credentials were provided.**

**Explanation** The connection to My webMethods Server cannot be validated without proper credentials.

**Action** Specify values for username and password.

**SPMWTNISE0011 The password is required.**

**Explanation** You must specify a password.

**Action** Specify a password.

**SPMWTNISE0014 The My webMethods Server host, port, and/or connection protocol were not provided.**

**Explanation** You must specify values for the My webMethods Server host, port, and connection protocol.

**Action** Specify values for host, port, and connection protocol.

# 23 Process Engine Messages

---

JL.execution(PRTMessageConstants.AA\_CASE\_CREATE) – {1}, {2}: Created Case with id {0}

JL.execution(PRTMessageConstants.AA\_CASE\_ERROR) – {1}, {2}: Failed to create case: {0}

JL.execution(PRTMessageConstants.AA\_CASE\_RESPONSE) – Received message from AgileApps: {0}

JL.execution(PRTMessageConstants.AA\_CASE\_UNK\_STATUS) – {1}, {2}: Received status from AgileApps: {0}

JL.execution(PRTMessageConstants.AA\_NO\_CASE\_RECORD\_ID) – {0}: Case creation was unsuccessful. AgileApps returned status: {1} and error message: {2}

JL.execution(PRTMessageConstants.AA\_PROCESS\_RESPONSE) – {1}: Sending message to AgileApps: {0}

JL.execution(PRTMessageConstants.AL\_ERRPUB\_OPTIMIZE) – {1}: exception publishing Optimize log event {2}: {0}

JL.execution(PRTMessageConstants.AL\_ERRPUB\_OPTIMIZE\_STEP) – {1}, {2}: exception publishing Optimize log event {3}: {0}

**JL.execution(PRTMessageConstants.AL\_ERR\_GET\_AUDIT\_RUNTIME) – {1}: exception getting audit runtime: {0}**

**JL.execution(PRTMessageConstants.AL\_ERR\_GET\_STACK) – {1}, {2}: exception retrieving process stack: {0}**

**JL.execution(PRTMessageConstants.AL\_NO\_MID\_FOR\_PID) – {1}: exception getting model identifier: {0}**

**JL.execution(PRTMessageConstants.AL\_PIPEERR\_STEP0) – {1}, {2}: exception trying to encode step pipeline: {0}**

**JL.execution(PRTMessageConstants.DUPLICATE\_TASK\_CALLBACK) – {0}, {1}: ignoring duplicate callback from Task Engine for TaskId {2}.**

**JL.execution(PRTMessageConstants.EP\_ERRPUB\_EDA) – {1}, {2}: exception publishing EDA Event: {0}**

**JL.execution(PRTMessageConstants.EP\_PIPEERR0) – {1}, {2}: exception encoding transition pipeline to {3}: {0}**

**JL.execution(PRTMessageConstants.EP\_SENDDTX0) – {0}, {1}: sending live transition to {2}**

**JL.execution(PRTMessageConstants.EP\_SENDDTX0\_DEADPATH) – {0}, {1}: sending dead transition to {2}**

**JL.execution(PRTMessageConstants.EP\_SEND\_PROCESS\_CASE\_CONTROL) – {0}: publishing case control event to AgileApps with control "{1}"**

**JL.execution(PRTMessageConstants.EP\_SEND\_PROCESS\_CHANGE) – {0}: sending process instance change EDA Event: {1}**

**JL.execution(PRTMessageConstants.EP\_SEND\_PROCESS\_ERROR) – {0}: sending process error EDA Event: {1}**

**JL.execution(PRTMessageConstants.EP\_SEND\_PROCESS\_LOG\_CUSTOM\_ID) – {0}: sending process log custom id EDA Event: {1}**

**JL.execution(PRTMessageConstants.EP\_SEND\_PROCESS\_LOG\_MESSAGE) – {0}: sending process log message EDA Event: {1}**

**JL.execution(PRTMessageConstants.EP\_SEND\_PROCESS\_STEP\_CHANGE) – {0}, {1}: sending process step instance change EDA Event: {2}**

**JL.execution(PRTMessageConstants.EP\_SEND\_PROCESS\_STEP\_ERROR) – {0}, {1}: sending process step error EDA Event: {2}**

**JL.execution(PRTMessageConstants.EP\_SEND\_PROCESS\_STEP\_LOOP\_CHANGE) – {0}, {1}: sending process step loop instance change EDA Event: {2}**

**JL.execution(PRTMessageConstants.EP\_SEND\_PROCESS\_STEP\_TRANSITION) – {0}, {1}: sending process step instance transition EDA Event: {2}**

**JL.execution(PRTMessageConstants.IL\_ERR\_CREATE\_LOGGER) – {1}: exception creating instance logger: {0}**

**JL.execution(PRTMessageConstants.IM\_CANCELLEDOK) – {0}, MID={1}, MVer={2}: process cancelled**

**JL.execution(PRTMessageConstants.IM\_CREATEOK) – {0}, MID={1}, MVer={2}: process started**

**JL.execution(PRTMessageConstants.IM\_FAILEDOK) – {0}, MID={1}, MVer={2}: process failed**

**JL.execution(PRTMessageConstants.IM\_FINISHOK) – {0}, MID={1}, MVer={2}: process completed**

JL.execution(PRTMessageConstants.IM\_RECREATE) – {0}, MID={1}, MVer={2}: process restarting

JL.execution(PRTMessageConstants.IM\_SVC\_CANCEL\_TX) – {0}, {1}: transitioning to cancel step

JL.execution(PRTMessageConstants.IM\_TRYCREATE0) – {0}, {1}: new process instance created on {2}

JL.execution(PRTMessageConstants.IM\_TRYCREATE2) – {0}, {1}: using existing pid on {2}

JL.execution(PRTMessageConstants.IM\_UPDATE\_TRACK) – {0}: updated track count by {1} to {2}

JL.execution(PRTMessageConstants.IS\_RETRYLIMIT) – {0}, {1}: step level retry count exceeded for service: {2}

JL.execution(PRTMessageConstants.IS\_SVC\_RETRY) – {1}, {2}: step level retry {3} of {4} in {5} ms: {0}

JL.execution(PRTMessageConstants.IS\_THRESHOLD) – {0}, {1}: thread threshold detected; retry abandoned

JL.execution(PRTMessageConstants.PRT\_EXCEPTION) – Exception: {0}

JL.execution(PRTMessageConstants.SDA\_AFTER\_STEP\_PIPE) – {0}, {1}: after step pipeline: {2}

JL.execution(PRTMessageConstants.SDA\_BEFORE\_STEP\_PIPE) – {0}, {1}: before step pipeline: {2}

JL.execution(PRTMessageConstants.SDA\_BEFORE\_STEP\_PIPE)...0 – {0}, {1}: before step pipeline: {2}

JL.execution(PRTMessageConstants.SDA\_CHANGE\_VERSION) – {0}, {1}: process version changed from {2} to {3}

JL.execution(PRTMessageConstants.SDA\_DEAD\_INGORED) – {0}, {1}: synchronization point ignoring dead path from {2}

JL.execution(PRTMessageConstants.SDA\_DYNAMIC\_CALL\_ACTIVITY\_STARTED) – {0}, {1}: Dynamic call activity step instantiated the following models:{2}

JL.execution(PRTMessageConstants.SDA\_DYNAMIC\_CALL\_ACTIVITY\_STARTED\_MODEL\_NOT\_WAITING) – {0} {1} instance(s) (not waiting for return)

JL.execution(PRTMessageConstants.SDA\_DYNAMIC\_CALL\_ACTIVITY\_STARTED\_MODEL\_WAITING) – {0} {1} instance(s) (waiting for return)

JL.execution(PRTMessageConstants.SDA\_DYNAMIC\_CALL\_ACTIVITY\_WAIT) – {0}, {1}: {2} of {3} callable instances completed

JL.execution(PRTMessageConstants.SDA\_ERR\_GENERAL) – {1}, {2}: exception executing step: {0}

JL.execution(PRTMessageConstants.SDA\_ERR\_HANDLEEVT\_CHANGE) – {1}: exception failing the process: {0}

JL.execution(PRTMessageConstants.SDA\_ERR\_OUT) – {1}, {2}: exception sending output {3} of {4}: {0}

JL.execution(PRTMessageConstants.SDA\_ERR\_SAVECTX) – {1}, {2}: exception saving step context: {0}

JL.execution(PRTMessageConstants.SDA\_ERR\_TX) – {1}, {2}: exception updating track count: {0}

JL.execution(PRTMessageConstants.SDA\_EVAL0) – {0}, {1}: transition condition {2} evaluated to {3}

JL.execution(PRTMessageConstants.SDA\_EVALF) – {0}, {1}: transition condition {2} is False

**JL.execution(PRTMessageConstants.SDA\_EVALT) – {0}, {1}: transition condition {2} is True**

**JL.execution(PRTMessageConstants.SDA\_EXC\_SEND\_DEAD\_PATH) – {1}, {2}: unable to send dead path transition with the following exception: {0}**

**JL.execution(PRTMessageConstants.SDA\_INVALID\_STEP) – {1}, {2}: deprecated step found: {0}**

**JL.execution(PRTMessageConstants.SDA\_LOGCUST) – {0}, {1}: logging custom audit data**

**JL.execution(PRTMessageConstants.SDA\_LOG\_STEP\_INPUT\_DATA) – {0}, {1}: logging step input data**

**JL.execution(PRTMessageConstants.SDA\_LOG\_STEP\_LOOP\_INPUT\_DATA) – {0}, {1}: logging step loop input data**

**JL.execution(PRTMessageConstants.SDA\_LOG\_STEP\_LOOP\_OUTPUT\_DATA) – {0}, {1}: logging step loop output data**

**JL.execution(PRTMessageConstants.SDA\_LOG\_STEP\_OUTPUT\_DATA) – {0}, {1}: logging step output data**

**JL.execution(PRTMessageConstants.SDA\_NOPIPE) – {0}, {1}: step not executed, enqueueing event**

**JL.execution(PRTMessageConstants.SDA\_PROCSTATS) – {0}, {1}: pushing step on suspended list**

**JL.execution(PRTMessageConstants.SDA\_PUBLISH1) – {0}, {1}: published output document {2}**

**JL.execution(PRTMessageConstants.SDA\_RETRIES) – {0}, {1}: step iteration count exceeded**

**JL.execution(PRTMessageConstants.SDA\_SVC) – {0}, {1}: executing {2} in package {3}**

JL.execution(PRTMessageConstants.SDA\_SVC\_ERR\_MSG) – {1}, {2}: exception invoking service {3}: {0}

JL.execution(PRTMessageConstants.SDA\_SVC\_ERR\_TX) – {0}, {1}: transitioning to error step {2}

JL.execution(PRTMessageConstants.SDA\_SVC\_SENDOUT) – {0}, {1}: sent {2} output events

JL.execution(PRTMessageConstants.SDA\_SYNCBEG) – {0}, {1}: start step execution

JL.execution(PRTMessageConstants.SDA\_SYNCEND) – {0}, {1}: end step execution

JL.execution(PRTMessageConstants.SDA\_TDELTA0) – {0}, {1}: no track count change

JL.execution(PRTMessageConstants.SDA\_TXASYNCH) – {0}, {1}: publishing transition to {2} on {3}

JL.execution(PRTMessageConstants.SDA\_TXASYNCH\_DEADPATH) – {0}, {1}: sending Dead Path PTE to {2} on {3}

JL.execution(PRTMessageConstants.SDA\_TXNOCOND) – {0}, {1}: sending dead transition to {2}

JL.execution(PRTMessageConstants.SDA\_TXSEND) – {0}, {1}: sending live transition to {2}

JL.execution(PRTMessageConstants.SDA\_UNABLE\_INVOKE\_ERROR\_STEP\_LOCALLY) – {1}, {2}: unable to invoke error step locally with the following exception: {0}

JL.execution(PRTMessageConstants.SDA\_UNSATISFIED\_JOIN) – {0}, {1}: taking unsatisfied join transition {2}

JL.execution(PRTMessageConstants.SDC\_ABSOLUTE\_TIME\_INVALID) – {0}, {1}: absolute timeout type is invalid

JL.execution(PRTMessageConstants.SDC\_DROPQ0) – {0}, {1}: dropping {2} events

JL.execution(PRTMessageConstants.SDC\_HANDLEJOINTIMER) – {0}, {1}: handling join timeout

JL.execution(PRTMessageConstants.SDC\_HANDLEPROCTIMER) – {0}: handling process timeout

JL.execution(PRTMessageConstants.SDC\_HANDLESTEPTIMER) – {0}, {1}: handling step timeout

JL.execution(PRTMessageConstants.SDC\_JOINTIME) – {0}, {1}: starting join timeout

JL.execution(PRTMessageConstants.SDC\_JOIN\_RSLT) – {0}, {1}: join evaluates to {2}

JL.execution(PRTMessageConstants.SDC\_PROCTIME) – {0}: starting process timeout

JL.execution(PRTMessageConstants.SDC\_QUEUE\_SZ) – {0}, {1}: {2} events in the queue. Event names: {3}. Join string: {4}. Join state: {5}

JL.execution(PRTMessageConstants.SDC\_STEPTIME) – {0}, {1}: starting step timeout

JL.execution(PRTMessageConstants.SDC\_TOHANDLE) – {0}, {1}: transitioning to timeout handler

JL.execution(PRTMessageConstants.SDC\_TOPIPEERR) – {1}, {2}: exception assembling pipeline: {0}

JL.execution(PRTMessageConstants.SD\_ACTIVITY\_NOT\_RUNNING) – {0}, {1}: boundary event {2} ignored because activity is not running

JL.execution(PRTMessageConstants.SD\_CORRELATE) – {0}, {1}: using correlation service {2}

JL.execution(PRTMessageConstants.SD\_CORRELATE\_DISABLED) – {0}, {1}: correlated to disabled model {2} version {3}

JL.execution(PRTMessageConstants.SD\_CORRELATE\_ERR) – {1}, {2}: exception invoking correlation svc {3}: {0}

JL.execution(PRTMessageConstants.SD\_CORRELATE\_FIELD) – {0}, {1}: using correlation field {2}

JL.execution(PRTMessageConstants.SD\_CORRELATE\_NEW) – {0}, {1}: correlated to process id

JL.execution(PRTMessageConstants.SD\_CORRELATE\_TN) – {0}, {1}: correlating to TN conversation id

JL.execution(PRTMessageConstants.SD\_CORRELBADMID) – {0}, {1}: correlated to {2}, expected {3}

JL.execution(PRTMessageConstants.SD\_ERR\_DISPATCH) – {1}, {2}: exception dispatching step: {0}

JL.execution(PRTMessageConstants.SD\_ERR\_HANDLEEVT) – {1}, {2}: exception handling transition event: {0}

JL.execution(PRTMessageConstants.SD\_INPUTMATCH) – {0}, {1}, document {3} is a valid published input

JL.execution(PRTMessageConstants.SD\_INVOKEDISPATCH) – {0}, {1}: dispatching step on new execution thread

JL.execution(PRTMessageConstants.SD\_NOINPUT1) – {0}, {1}: document {3} is NOT a valid published input

JL.execution(PRTMessageConstants.SD\_NOSTEPDEF) – {0}, {1}: no process fragment contains this step

JL.execution(PRTMessageConstants.SD\_PTE) – {0}, {1}: handling transition event from {2}

JL.execution(PRTMessageConstants.SD\_PUBLISH) – {0}, {1}: handling native document {3} on {2}

**JL.execution(PRTMessageConstants.SD\_STARTSTEP) – {0}, {1}: starting step execution**

**JL.execution(PRTMessageConstants.SD\_STEPSYNCH) – {0}, {1}: running step on same execution thread**

**JL.execution(PRTMessageConstants.SM\_ACTDONE) – {0}: process status changed to {1}**

**JL.execution(PRTMessageConstants.SM\_RESTARTPROC) – {0}: restarting process at step {1}**

**JL.execution(PRTMessageConstants.SM\_RESUMEPROC) – {0}: resuming process at {1}**

**JL.execution(PRTMessageConstants.SM\_START) – {0}: processing {1} request**

**JL.execution(PRTMessageConstants.ST\_DB\_CONNECT\_ERR1) – {1}: exception connecting to database: {0}**

**JL.execution(PRTMessageConstants.ST\_DB\_CONNECT\_ERR2) – {1}, {2}: exception connecting to database: {0}**

**JL.execution(PRTMessageConstants.ST\_LOCK\_FAIL) – {0}, {1}: step lock FAILED**

**JL.execution(PRTMessageConstants.ST\_LOCK\_SUCCESS) – {0}, {1}: step locked**

**JL.execution(PRTMessageConstants.ST\_LOCK\_TRY) – {0}, {1}: attempting step lock**

**JL.execution(PRTMessageConstants.TC\_INVOKE\_CONTROL\_TASKS) – {0}: invoking `wm.task.taskclient:controlTasks` with control "{1}"**

**JL.execution(PRTMessageConstants.TC\_INVOKE\_CONTROL\_TASKS\_ERR) – {1}: exception invoking `wm.task.taskclient:controlTasks` service: {0}**

JL.execution(PRTMessageConstants.TN\_ERR\_PROFIELD) – {1}: exception fetching data for field {2}: {0}

JL.execution(PRTMessageConstants.TN\_ERR\_PROSTORE) – {1}: exception fetching data from TN profile store: {0}

JL.execution(PRTMessageConstants.TO\_CANCEL\_JOIN) – {0}, {1}: cancelling join timeout

JL.execution(PRTMessageConstants.TO\_CANCEL\_PROCESS) – {0}: cancelling process timeout

JL.execution(PRTMessageConstants.TO\_CANCEL\_STEP) – {0}, {1}: cancelling step timeout

JL.execution(PRTMessageConstants.TO\_ERR\_INVOKE) – {1}, {2}: exception invoking timeout: {0}

JL.execution(PRTMessageConstants.TO\_KILLSTEPTHR) – {0}, {1}: killing step execution thread

JL.execution(PRTMessageConstants.TO\_MISSING\_JOIN\_TIMER\_TYPE) – {0}, {1}: cannot start Join timeout -- type not specified

JL.execution(PRTMessageConstants.TO\_MISSING\_PROCESS\_TIMER\_TYPE) – {0}: cannot start Process timeout -- type not specified

JL.execution(PRTMessageConstants.TO\_MISSING\_STEP\_TIMER\_TYPE) – {0}, {1}: cannot start Step timeout -- type not specified

JL.execution(PRTMessageConstants.TO\_NO\_TRANSITION) – {1}, {2}: no transition to handle timeout: {0}

JL.execution(PRTMessageConstants.TO\_STRT\_NO\_DURATION) – {0}, {1}: did not start timer, no end time specified.

JL.execution(PRTMessageConstants.TO\_STRT\_TIMER) – {0}, {1}: starting timeout: {2}

JL.execution(PRTMessageConstants.TO\_TIMEOUT\_JOIN) – {0}, {1}: join timer has expired

JL.execution(PRTMessageConstants.TO\_TIMEOUT\_PROCESS) – {0}: process timer has expired

JL.execution(PRTMessageConstants.TO\_TIMEOUT\_STEP) – {0}, {1}: step timer has expired

JL.general(PRTMessageConstants.ADM\_BPM\_ONLY\_USAGE) – This service cannot be invoked outside of an executing Business Process instance.

JL.general(PRTMessageConstants.ADM\_MWS\_INIT\_ERROR) – Unable to initialize MWS library. Business calendar based timeouts will not be able to be evaluated.

JL.general(PRTMessageConstants.ADM\_MWS\_INIT\_ERROR2) – Exception trying to initialize MWS library: {0}

JL.general(PRTMessageConstants.ADM\_MWS\_INIT\_ERROR\_GET\_POOL) – Error trying to get JDBC pool configuration using functional alias {0}. Business calendar based timeouts will not be able to be evaluated.

JL.general(PRTMessageConstants.ADM\_MWS\_INIT\_ERROR\_GET\_POOL2) – Exception trying to get JDBC pool configuration: {0}

JL.general(PRTMessageConstants.AL\_CANTPOP) – Exception trying to pop audit log context: {0}

JL.general(PRTMessageConstants.AL\_CANTPUSH) – Exception trying to push audit log context: {0}

JL.general(PRTMessageConstants.AL\_CUSTNOT) – Custom logging: cannot convert {0} to logging type {1} (value {2})

JL.general(PRTMessageConstants.AL\_CUSTNOU0) – Custom logging: cannot find value for {0}.{1} on path {2}

JL.general(PRTMessageConstants.AL\_ERRPUB1) – Exception publishing Audit Log Event {1}: {0}

JL.general(PRTMessageConstants.AL\_ERRPUB\_OPTIMIZE) – Exception publishing Optimize Log Event {1}: {0}

JL.general(PRTMessageConstants.AL\_ERR\_GET\_AUDIT\_RUNTIME2) – Exception getting audit runtime: {0}

JL.general(PRTMessageConstants.AL\_ERR\_LOG) – Exception logging audit entry: {0}

JL.general(PRTMessageConstants.AL\_ERR\_REG\_LOGGER) – Exception registering Process Logger: {0}

JL.general(PRTMessageConstants.AL\_FAILED\_AUDIT\_CACHE\_ADD) – Adding audit entry to failed process audit cache: {0}

JL.general(PRTMessageConstants.AL\_FAILED\_AUDIT\_CACHE\_ADD\_ERR) – Could not add audit entry to failed process audit cache: {0}

JL.general(PRTMessageConstants.AL\_FAILED\_AUDIT\_CACHE\_EMPTY) – All entries in the failed audit cache have been stored in the process audit database

JL.general(PRTMessageConstants.AL\_FAILED\_AUDIT\_CACHE\_STORED) – Stored {0} entries from the failed audit cache in the process audit database

JL.general(PRTMessageConstants.AL\_FAILED\_AUDIT\_CACHE\_STORE\_ERR) – Exception when trying to store entries from the failed audit cache in the process audit database: {0}

JL.general(PRTMessageConstants.AL\_NO\_MID\_FOR\_PID) – {1}: exception getting model identifier: {0}

**JL.general(PRTMessageConstants.AL\_PIPEERR\_STEP0) – Exception trying to encode step pipeline for {1}: {0}**

**JL.general(PRTMessageConstants.BT\_CFG\_ERROR) – [MID={1}] Problem reading BrainTribe config file: "{2}". {0}**

**JL.general(PRTMessageConstants.DASHBOARD) – Dashboard**

**JL.general(PRTMessageConstants.DASHBOARD\_DIAGNOSTIC) – Diagnostic**

**JL.general(PRTMessageConstants.DASHBOARD\_ENVIRONMENT) – Environment**

**JL.general(PRTMessageConstants.DASHBOARD\_ENV\_AUDIT\_SETTINGS) – Audit Logging Settings**

**JL.general(PRTMessageConstants.DASHBOARD\_ENV\_CONTROL\_TRIGGER) – Standard Control Triggers**

**JL.general(PRTMessageConstants.DASHBOARD\_ENV\_CR) – Content Repository View**

**JL.general(PRTMessageConstants.DASHBOARD\_ENV\_JDBC) – JDBC Connections**

**JL.general(PRTMessageConstants.DASHBOARD\_ENV\_JMS\_TRIGGER) – JMS Control Trigger**

**JL.general(PRTMessageConstants.DASHBOARD\_ENV\_SETTINGS) – Process Engine Settings**

**JL.general(PRTMessageConstants.DASHBOARD\_HEALTH\_AUDITLOG) – Audit Logging Status**

**JL.general(PRTMessageConstants.DASHBOARD\_HEALTH\_AUDIT\_LOGGING) – Audit Logging**

**JL.general(PRTMessageConstants.DASHBOARD\_HEALTH\_BROKER\_PUSH) – Broker Push**

JL.general(PRTMessageConstants.DASHBOARD\_PROCESS\_AUDIT\_DB) – Database

JL.general(PRTMessageConstants.DASHBOARD\_PROCESS\_AUDIT\_FILE) – File

JL.general(PRTMessageConstants.DASHBOARD\_PROCESS\_AUDIT\_SYNC) – Synchronous

JL.general(PRTMessageConstants.DASHBOARD\_PROCESS\_SETTINGS) – Settings

JL.general(PRTMessageConstants.DASHBOARD\_RESTART\_EFORM\_FAIL) – Failed to restart e-form listener for {0}.

JL.general(PRTMessageConstants.DASHBOARD\_RESTART\_EFORM\_SUCCESS) – Restart of e-form listener: {0} successful.

JL.general(PRTMessageConstants.DASHBOARD\_STATUS\_NO) – No

JL.general(PRTMessageConstants.DASHBOARD\_STATUS\_SUSPENDED) – Suspended

JL.general(PRTMessageConstants.DASHBOARD\_STATUS\_YES) – Yes

JL.general(PRTMessageConstants.DUP\_CHK\_BEGIN) – CheckDuplicates processing {0}, uuid, {1}

JL.general(PRTMessageConstants.DUP\_CHK\_END) – CheckDuplicates processed {0}, uuid, {1}, status, {2}

JL.general(PRTMessageConstants.DUP\_CHK\_ISEXP) – CheckDuplicates throwing ISRuntimeException {0}, uuid, {1}

JL.general(PRTMessageConstants.EF\_CFG\_ERROR) – [MID={1}] Problem reading E-form config file: "{2}". {0}

JL.general(PRTMessageConstants.EF\_LISTENER\_ADDED) – [MID={0}] Now listening to path: "{1}" for e-Forms on jcr "{2}"

JL.general(PRTMessageConstants.EF\_LISTENER\_ADD\_ERROR) – [MID={1}] Error adding listener to Content Repository "{2}". {0}

JL.general(PRTMessageConstants.EF\_LISTENER\_ALREADY\_EXISTS) – [MID={0}] Content Repository currently has a listener listening in that location. No new listener added to listening path: "{1}" for e-Forms on jcr "{2}".

JL.general(PRTMessageConstants.EF\_LISTENER\_CHANGE\_NOTALLOWED) – [MID={0}] Unable to change listener please disable all other models currently using this listener: "{1}"

JL.general(PRTMessageConstants.EF\_LISTENER\_DOCNOTFOUND) – [MID={0}] Cannot start e-form process because doc type: "{1}" does not exist. For e-form instance at: "{2}". Please recreate the e-form doc or rebuild the model(s).

JL.general(PRTMessageConstants.EF\_LISTENER\_ERROR) – [MID={1}] Error with Content Repository "{2}". Check if the repo is running, login credentials and repo connection information is correct. {0}

JL.general(PRTMessageConstants.EF\_LISTENER\_FIRED) – [MID={0}] Trying to publish E-form instance "{1}" for template "{2}". With doc type of "{3}". If process does not start please check error log for any pub.publish errors. IData:{4}

JL.general(PRTMessageConstants.EF\_LISTENER\_FIRED)...0 – [MID={0}] Trying to publish E-form instance "{1}" for template "{2}". With doc type of "{3}". If process does not start please check error log for any pub.publish errors. IData:{4}

JL.general(PRTMessageConstants.EF\_LISTENER\_NOTCONFIGURED) – [MID={0}] Content Repository "{1}" not configured.

JL.general(PRTMessageConstants.EF\_LISTENER\_NO\_DOCS) – Content Repository currently has no models associated to it. No reason to restart the repository at this time.

JL.general(PRTMessageConstants.EF\_LISTENER\_PORTS\_NOTADDED) – [MID={0}] Cannot edit access for PORT 15006. Please ensure to manually add access for "wm.prt.eforms:update" "wm.server:connect" "wm.server:disconnect" "wm.server:ping".

JL.general(PRTMessageConstants.EF\_LISTENER\_REMOVED) – [MID={0}] Listener for e-Forms at path: "{1}" has been disabled from jcr "{2}"

JL.general(PRTMessageConstants.EF\_LISTENER\_REMOVE\_ERROR) – [MID={1}] Error disabling/removing listener from Content Repository "{2}". {0}

JL.general(PRTMessageConstants.EF\_LISTENER\_RESTART\_ERROR) – [MID={1}] Error restarting listener(s) to Content Repository "{2}". {0}

JL.general(PRTMessageConstants.EF\_LISTENER\_RESTART\_MODEL\_NOTENABLED) – No model(s) enabled using this listener "{0}". Listener will not be restarted.

JL.general(PRTMessageConstants.EF\_METHOD\_SUCCEEDED) – The method succeeded.

JL.general(PRTMessageConstants.EF\_PASS\_ERROR) – [MID={1}] Cannot retrieve password: "{2}". {0}

JL.general(PRTMessageConstants.EF\_PUBLISH\_COULD\_NOT\_CREATE\_DOC) – Could not create the IS document type "{0}" from e-form instance "{1}"; make sure the e-form instance contents matches the IS document type.

JL.general(PRTMessageConstants.EF\_PUBLISH\_DOCNOTFOUND) – Cannot publish the e-form as an IS document because the IS document type "{0}" does not exist. Please create the IS document type from your e-form template.

JL.general(PRTMessageConstants.EF\_PUBLISH\_DOC\_PUBLISH\_FAILED) – Error publishing e-form instance: {0}

JL.general(PRTMessageConstants.EF\_PUBLISH\_FILENOTFOUND) – Cannot publish the e-form as an IS document because the e-form instance file "{0}" does not exist.

**JL.general(PRTMessageConstants.EF\_PUBLISH\_INPUTS\_NOT\_PROVIDED)** – The required input values were not provided; for this service though some inputs are optional you must provide either (instanceName and instanceByteStream) or (instanceFilePath). If both sets are provided, then (instanceName and instanceByteStream), takes precedence.

**JL.general(PRTMessageConstants.EF\_PUBLISH\_PUBLISH\_ATTEMPT)** – Trying to publish e-form instance "{0}" as IS document type "{1}". If any associated processes do not start, then please check the error log for any pub.publish:publish errors.

**JL.general(PRTMessageConstants.EF\_PUBLISH\_TEMPLATE\_NOT\_PROVIDED)** – The required input value, templateName, was not provided.

**JL.general(PRTMessageConstants.EP\_PIPEERR0)** – Exception encoding transition pipeline: {0}

**JL.general(PRTMessageConstants.EP\_SENDERR)** – Exception during send: {0}

**JL.general(PRTMessageConstants.HEALTHCHECK\_AUDITLOG\_DB\_RED)** – Process audit database could not be accessed

**JL.general(PRTMessageConstants.HEALTHCHECK\_AUDITLOG\_INIT\_RED)** – Error initializing audit logging

**JL.general(PRTMessageConstants.HEALTHCHECK\_AUDITLOG\_RED)** – Process Logger is either not enabled or not configured for the database

**JL.general(PRTMessageConstants.HEALTHCHECK\_BC\_RED)** – MWS library is not initialized

**JL.general(PRTMessageConstants.HEALTHCHECK\_BC\_YELLOW)** – JDBC pool functional alias "CentralUsers" is not configured

**JL.general(PRTMessageConstants.HEALTHCHECK\_BROKER\_RED)** – ControlTrigger is not enabled

**JL.general(PRTMessageConstants.HEALTHCHECK\_BROKER\_YELLOW) – Broker is not configured**

**JL.general(PRTMessageConstants.HEALTHCHECK\_JMS\_RED) – JMSControlTrigger is not enabled**

**JL.general(PRTMessageConstants.HEALTHCHECK\_MESSAGING\_YELLOW) – webMethods Messaging is not configured**

**JL.general(PRTMessageConstants.HEALTHCHECK\_OPTIMIZE\_NOT\_CONFIGURED) – JMS Server URL is not configured**

**JL.general(PRTMessageConstants.HEALTHCHECK\_OPTIMIZE\_NOT\_INIT) – Unable to initialize Optimize interface**

**JL.general(PRTMessageConstants.HEALTHCHECK\_PADB\_RED) – Process audit database could not be accessed**

**JL.general(PRTMessageConstants.HEALTHCHECK\_PADB\_VERSION\_RED) – Process audit database schema version is incorrect. Minimum version expected is {0}, actual version is {1}.**

**JL.general(PRTMessageConstants.HEALTHCHECK\_PA\_FAILED\_AUDIT\_CACHE\_NOT\_EMPTY\_RED) – Failed process audit cache contains records that need to be inserted into the process audit database**

**JL.general(PRTMessageConstants.HEALTHCHECK\_PA\_FAILED\_AUDIT\_CACHE\_NO\_EXIST\_RED) – Failed process audit cache does not exist**

**JL.general(PRTMessageConstants.HEALTHCHECK\_PEDB\_RED) – Process engine database could not be accessed**

**JL.general(PRTMessageConstants.HEALTHCHECK\_PEDB\_VERSION\_RED) – Process engine database schema version is incorrect. Minimum version expected is {0}, actual version is {1}.**

JL.general(PRTMessageConstants.HEALTHCHECK\_TRIGGER\_RED) – Trigger {0} is not enabled.

JL.general(PRTMessageConstants.IL\_ERR\_CREATE\_LOGGER) – Exception creating instance logger: {0}

JL.general(PRTMessageConstants.IL\_ERR\_LOG\_ENABLED) – Exception determining if model is enabled for instance logging: {0}

JL.general(PRTMessageConstants.IM\_CLEANUPEVERY) – Cache cleanup running every {0} seconds and every {1} instances

JL.general(PRTMessageConstants.IM\_MODINACTIVE0) – Warning. Process model {0} is inactive

JL.general(PRTMessageConstants.IM\_MODINACTIVE1) – Cannot suspend/resume {0}. Fragment for model {1} is missing

JL.general(PRTMessageConstants.IM\_NOCLEANUP) – Instance cleanup disabled.

JL.general(PRTMessageConstants.IS\_RETRYLIMIT) – Step Level Retry count exceeded for service: {0}

JL.general(PRTMessageConstants.IS\_SVC\_RETRY) – Exception: {0}. Step Level Retry configured for service: {1}. Retry {2} of {3} in {4} ms

JL.general(PRTMessageConstants.IS\_THRESHOLD) – Thread Threshold detected. Retry abandoned for {0}.

JL.general(PRTMessageConstants.JMS\_ALIAS\_ERROR) – JMS Connection Alias for PE 'PE\_NONTRANSACTIONAL\_ALIAS' has not been configured.

JL.general(PRTMessageConstants.JMS\_CREATE\_CONNECTION\_ERROR) – Error creating JMS connection alias: {0}

**JL.general(PRTMessageConstants.JMS\_CREATE\_TOPIC\_ERROR) – Error creating PE internal JMS topic: {0}**

**JL.general(PRTMessageConstants.JMS\_UPDATE\_CG\_PERMISSIONS\_ERROR) – Error updating client group permissions: {0}**

**JL.general(PRTMessageConstants.MM\_BADFRAGERR) – Exception loading model fragment {1}: {0}**

**JL.general(PRTMessageConstants.MM\_CANTMAKEDIR) – Unable to create directory: {0}**

**JL.general(PRTMessageConstants.MM\_DELETING) – Deleting {0} old fragments from {1}**

**JL.general(PRTMessageConstants.MM\_DELFILE) – Deleting XML file {0}**

**JL.general(PRTMessageConstants.MM\_DELFRAG) – Deleting model fragment: {0}**

**JL.general(PRTMessageConstants.MM\_FILEERR) – Exception reading fragment file {1}: {0}**

**JL.general(PRTMessageConstants.MM\_NEWFRAG) – Adding new process fragment (pkg={0}, file={1})**

**JL.general(PRTMessageConstants.MM\_READMOD) – Loading model fragment {0}**

**JL.general(PRTMessageConstants.MM\_READPKG) – Loading process models in package {0}**

**JL.general(PRTMessageConstants.MON\_INVALID\_ENABLE\_RESUBMISSION) – Enable Resubmission value must be either "True" or "False"**

**JL.general(PRTMessageConstants.MON\_INVALID\_LOGGING\_LEVEL) – Invalid Logging Level**

**JL.general(PRTMessageConstants.MON\_INVALID\_LOG\_TRANSITIONS) – Log Transitions value must be either "True" or "False"**

**JL.general(PRTMessageConstants.MON\_INVALID\_MODEL) – [MID={0}, MVers={1}] Model does not exist.**

**JL.general(PRTMessageConstants.MON\_INVALID\_PID) – Process instance {0} is not running or does not exist.**

**JL.general(PRTMessageConstants.MON\_LOGGING\_LEVEL\_TOO\_LOW) – [MID={0}] Logging level for Model cannot be set below minimum value of {1}.**

**JL.general(PRTMessageConstants.MON\_OLD\_MODEL\_VERSION) – [MID={0}] QoS cannot be changed because it was generated from a pre-7.0 version of Modeler.**

**JL.general(PRTMessageConstants.OL\_OPTIMIZE\_INIT\_ERROR) – Unable to get Optimize process data collector. Tracking enabled models will not be logged to Optimize.**

**JL.general(PRTMessageConstants.OL\_OPTIMIZE\_INIT\_ERROR2) – Exception trying to get Optimize process data collector: {0}**

**JL.general(PRTMessageConstants.OL\_OPTIMIZE\_SHUTDOWN\_ERROR) – Exception trying to shut down Optimize data collector: {0}**

**JL.general(PRTMessageConstants.PRT\_EXCEPTION) – Exception: {0}**

**JL.general(PRTMessageConstants.PRT\_MESSAGE) – {0}**

**JL.general(PRTMessageConstants.REPO\_DEFAULT\_ROOT\_PATH) – (optional)**

**JL.general(PRTMessageConstants.REPO\_EXE) – A RepositoryException occurred while trying to read data from the Content Repository: "{0}"**

---

JL.general(PRTMessageConstants.REPO\_FILE\_DOES\_NOT\_EXIST) – File does not exist in repository

JL.general(PRTMessageConstants.REPO\_IO\_EXE) – An IOException occurred while trying to read data from the Content Repository: "{0}"

JL.general(PRTMessageConstants.REPO\_PATH\_NOT\_FOUND\_EXE) – A PathNotFoundException occurred while trying to read data from the Content Repository: "{0}"

JL.general(PRTMessageConstants.REPO\_READ\_NODE\_ERROR) – An exception occurred while trying to read data from the Content Repository at: "{0}". Please check log for details.

JL.general(PRTMessageConstants.SDA\_ERR\_GENERAL) – Exception executing step {1}, {2}: {0}

JL.general(PRTMessageConstants.SDA\_ERR\_HANDLEEVT\_CHANGE) – Exception trying to fail the process \*{1}: {0}

JL.general(PRTMessageConstants.SDA\_ERR\_OUT) – Exception sending output {1} of {2} for PID {3} SID {4}: {0}

JL.general(PRTMessageConstants.SDA\_ERR\_SAVECTX) – Exception saving step context {1}, {2}: {0}

JL.general(PRTMessageConstants.SDA\_ERR\_TX) – Exception updating track count {1}, {2}: {0}

JL.general(PRTMessageConstants.SDA\_INVALID\_STEP) – Exception: Deprecated step found {1}, {2}: {0}

JL.general(PRTMessageConstants.SDA\_SVC\_ERR\_MSG) – Exception invoking service {1}, {2}, Svc={3}: {0}

JL.general(PRTMessageConstants.SDC\_TOPIPEERR) – Exception assembling pipeline {1}, {2}: {0}

JL.general(PRTMessageConstants.SD\_CORRELATE\_ERR) – Error invoking correlation svc {1}: {0}

JL.general(PRTMessageConstants.SD\_ERR\_DISPATCH) – Exception dispatching step: {0}

JL.general(PRTMessageConstants.SD\_ERR\_HANDLEEVT) – Exception handling transition event: {0}

JL.general(PRTMessageConstants.SD\_INPUTMATCH) – Document {0} is a valid published input

JL.general(PRTMessageConstants.SD\_NOINPUT1) – Document {0} is NOT a valid published input

JL.general(PRTMessageConstants.SD\_NOSTEP1) – Document {2} does not match to any step in process {0} on {1}

JL.general(PRTMessageConstants.SD\_PUBLISH) – Handling native document {0} on {1}

JL.general(PRTMessageConstants.SD\_STEPMATCH) – Document {2} matches step in process {0} on {1}

JL.general(PRTMessageConstants.SM\_BAD\_ACTION) – {0} is not a valid Action.

JL.general(PRTMessageConstants.ST\_CACHE\_CONNECT\_ERR) – Exception: Unable to connect to cache!

JL.general(PRTMessageConstants.ST\_CACHE\_MGR\_NOT\_INITIALIZED) – Could not initialize cache manager

JL.general(PRTMessageConstants.ST\_CACHE\_NOT\_INITIALIZED) – Could not initialize cache: {0}

JL.general(PRTMessageConstants.ST\_CLEAN\_DURATION) – Storage cleaner: Duration {0} ms

**JL.general(PRTMessageConstants.ST\_CLEAN\_EVERY) – Storage cleaner: will run every {0} seconds**

**JL.general(PRTMessageConstants.ST\_CLEAN\_JDBC) – Storage cleaner: executing embedded SQL**

**JL.general(PRTMessageConstants.ST\_CLEAN\_PROC) – Storage cleaner: executing stored procedure**

**JL.general(PRTMessageConstants.ST\_DB\_CONNECT\_ERR) – Exception: Unable to connect to database!**

**JL.general(PRTMessageConstants.ST\_DB\_ERR) – Storage exception: {0}**

**JL.general(PRTMessageConstants.ST\_FAILED\_PROC\_EXPIRE) – Storage cleaner: expiration for failed processes: {0} seconds**

**JL.general(PRTMessageConstants.ST\_LOCK\_INSERT\_FAIL) – Failed to insert Lock ID: {0} -- attempt {1} of {2}**

**JL.general(PRTMessageConstants.ST\_NO\_CLEAN) – Storage cleaner: Disabled**

**JL.general(PRTMessageConstants.ST\_NO\_CLEAN\_FAILED\_PROC) – Storage cleaner: clean up for completed processes is disabled**

**JL.general(PRTMessageConstants.ST\_NO\_LOCK) – Storage cleaner: cannot acquire lock. Exception: {0}**

**JL.general(PRTMessageConstants.ST\_PROC\_EXPIRE) – Storage cleaner: expiration for completed processes: {0} seconds**

**JL.general(PRTMessageConstants.TM\_DFLTSPORT) – Default PE transport is {0}**

**JL.general(PRTMessageConstants.TM\_DFLTSPORT\_DEF) – Default PE transport is {0}; deferred**

**JL.general(PRTMessageConstants.TM\_PUSH\_ATTEMPT) – Pushing doctypes to webMethods Messaging**

**JL.general(PRTMessageConstants.TM\_PUSH\_ERROR) – webMethods Messaging push error: {0}**

**JL.general(PRTMessageConstants.TM\_PUSH\_NOCONN) – Not performing webMethods Messaging push (not connected)**

**JL.general(PRTMessageConstants.TM\_SEND) – Sending {2} over {0} to {1}**

**JL.general(PRTMessageConstants.TM\_SENDABBR) – Sending {1} over {0}**

**JL.general(PRTMessageConstants.TN\_DISPATCH0) – DocID={0}, DocType={1}, ConvId={2}: processing incoming TN document**

**JL.general(PRTMessageConstants.TN\_ERR\_BADFILTER) – Exception evaluating TN document filter: {0}**

**JL.general(PRTMessageConstants.TN\_ERR\_PROFIELD) – Exception fetching data for field {1}: {0}**

**JL.general(PRTMessageConstants.TN\_ERR\_PROSTORE) – Exception fetching data from TN profile store: {0}**

**JL.general(PRTMessageConstants.TN\_NOMATCH) – DocID={0}, DocType={1}, ConvId={2}: no Model match for TN document**

**JL.general(PRTMessageConstants.TN\_NOSTEPMATCH) – DocID={0}, DocType={1}, ConvId={2}, MID={3}: no Step match for TN document**

**JL.general(PRTMessageConstants.TN\_STARTORJOIN) – ConvId={0}, PID={1}: starting/joining TN process**

**JL.general(PRTMessageConstants.TOU\_INVALID\_BIZ\_CAL\_ALIAS) – Business calendar alias {0} does not exist**

**JL.general(PRTMessageConstants.TOU\_INVALID\_BIZ\_CAL\_EVALUATOR) – Business calendar evaluator does not exist**

**JL.general(PRTMessageConstants.TOU\_INVALID\_BIZ\_TIMEOUT) – Business timeout is invalid: {0}**

**JL.general(PRTMessageConstants.TO\_ERR\_INVOKE) – Exception invoking timeout for {1}, {2}: {0}**

**JL.general(PRTMessageConstants.TO\_TIMER\_THREAD\_INTERRUPTED) – Timer thread interrupted: {0}**

**JL.string(PRTMessageConstants.BT\_CFG\_ERROR) – [MID={1}] Problem reading BrainTribe config file: "{2}". {0}**

**JL.string(PRTMessageConstants.DASHBOARD\_PROCESSLOG\_ALL\_EVENTS) – 5 - Process and All Events and Activities**

**JL.string(PRTMessageConstants.EF\_METHOD\_SUCCEEDED) – The method succeeded.**

**JL.string(PRTMessageConstants.EF\_PUBLISH\_COULD\_NOT\_CREATE\_DOC) – Could not create the IS document type "{0}" from e-form instance "{1}"; make sure the e-form instance contents matches the IS document type.**

**JL.string(PRTMessageConstants.EF\_PUBLISH\_DOCNOTFOUND) – Cannot publish the e-form as an IS document because the IS document type "{0}" does not exist. Please create the IS document type from your e-form template.**

**JL.string(PRTMessageConstants.EF\_PUBLISH\_DOC\_PUBLISH\_FAILED) – Error publishing e-form instance: {0}**

**JL.string(PRTMessageConstants.EF\_PUBLISH\_FILENOTFOUND)** – Cannot publish the e-form as an IS document because the e-form instance file "{0}" does not exist.

**JL.string(PRTMessageConstants.EF\_PUBLISH\_INPUTS\_NOT\_PROVIDED)** – The required input values were not provided; for this service though some inputs are optional you must provide either (instanceName and instanceByteStream) or (instanceFilePath). If both sets are provided, then (instanceName and instanceByteStream), takes precedence.

**JL.string(PRTMessageConstants.EF\_PUBLISH\_PUBLISH\_ATTEMPT)** – Trying to publish e-form instance "{0}" as IS document type "{1}". If any associated processes do not start, then please check the error log for any pub.publish:publish errors.

**JL.string(PRTMessageConstants.EF\_PUBLISH\_TEMPLATE\_NOT\_PROVIDED)** – The required input value, templateName, was not provided.

**JL.string(PRTMessageConstants.HEALTHCHECK\_PADB\_VERSION\_RED)** – Process audit database schema version is incorrect. Minimum version expected is {0}, actual version is {1}.

**JL.string(PRTMessageConstants.HEALTHCHECK\_PEDB\_VERSION\_RED)** – Process engine database schema version is incorrect. Minimum version expected is {0}, actual version is {1}.

**JL.string(PRTMessageConstants.IM\_CANCELLEDOK)** – \*PID={0}, MID={1}, MVer={2}; process cancelled

**JL.string(PRTMessageConstants.IM\_FAILEDOK)** – \*PID={0}, MID={1}, MVer={2}; process failed

**JL.string(PRTMessageConstants.IM\_UPDATE\_TRACK)** – \*{0}, {1}: updated track count by {2} to {3}

**JL.string(PRTMessageConstants.REPO\_DEFAULT\_ROOT\_PATH)** – (optional)

**JL.string(PRTMessageConstants.REPO\_EXE)** – A RepositoryException occurred while trying to read data from the Content Repository: "{0}"

**JL.string(PRTMessageConstants.REPO\_FILE\_DOES\_NOT\_EXIST) – File does not exist in repository**

**JL.string(PRTMessageConstants.REPO\_IO\_EXE) – An IOException occurred while trying to read data from the Content Repository: "{0}"**

**JL.string(PRTMessageConstants.REPO\_PATH\_NOT\_FOUND\_EXE) – A PathNotFoundException occurred while trying to read data from the Content Repository: "{0}"**

**JL.string(PRTMessageConstants.REPO\_READ\_NODE\_ERROR) – An exception occurred while trying to read data from the Content Repository at: "{0}". Please check log for details.**

**JL.string(PRTMessageConstants.RULE\_SVC\_PIPEI) – Prepared pipeline to invoke Rule as: "{0}"**

**JL.string(PRTMessageConstants.SDA\_BEFORE\_STEP\_PIPE) – \*{0}, {1}: after step pipeline: {2}**

**JL.string(PRTMessageConstants.SDA\_BEFORE\_STEP\_PIPE)...0 – \*{0}, {1}: before step pipeline: {2}**

**JL.string(PRTMessageConstants.SDA\_DEAD\_INGORED) – \*{0}, {1}: synchronization point ignoring dead path from {2}**

**JL.string(PRTMessageConstants.SD\_ACTIVITY\_IN\_DEBUG) – Boundary event ignored because process was started in Debugger [PID={0}, ACTIVITY\_SID={1}, BOUNDARY\_SID={2}]**

**JL.string(PRTMessageConstants.SD\_ACTIVITY\_NOT\_RUNNING) – \*{0}, {1}: boundary event {2} ignored because activity is not running**

**JL.string(PRTMessageConstants.ST\_CACHE\_CONNECT\_ERR) – Exception: Unable to connect to cache!**

**JL.string(PRTMessageConstants.ST\_CACHE\_MGR\_NOT\_INITIALIZED) – Could not initialize cache manager**

**JL.string(PRTMessageConstants.ST\_CACHE\_NOT\_CONFIGURED) – Could not configure Shared Cache for Join locks**

**JL.string(PRTMessageConstants.ST\_CACHE\_NOT\_INITIALIZED) – Could not initialize cache: {0}**

**JL.string(PRTMessageConstants.ST\_LOCK\_INSERT\_FAIL) – Failed to insert Lock ID: {0} -- attempt {1} of {2}**

**JL.string(PRTMessageConstants.TU\_DELTHR\_CACHE) – Deleting thread from cluster cache, thread id={0}**

**JL.string(PRTMessageConstants.TU\_SETTHR\_CACHE\_ALIVE) – Marking thread alive in cluster cache, thread id={0}**

**JL.string(PRTMessageConstants.TU\_SETTHR\_CACHE\_KILLED) – Marking thread killed in cluster cache, thread id={0}**

**PRT.0101.0024E      Exception trying to encode step pipeline for {1}: {0}**

**Explanation**      Unable to encode the pipeline for audit logging.

**Action**            Check the exception message for details.

**PRT.0101.0025      Failed to encode pipeline for step {0}: {1}**

**PRT.0101.0026E      Custom logging: cannot find value for {0},{1} on path {2}**

**Explanation**      Unable to get the field value using the specified path.

**Action**            Make sure the field name and the path are correct.

**PRT.0101.0028E      Custom logging: cannot convert {0} to logging type {1} (value {2})**

**Explanation**      Failed to execute custom fields logging because the type of the field value cannot be determined.

**Action**            Verify that the custom field value is the correct field type.

- PRT.0101.1743 Restart of e-form listener: {0} successful.
- PRT.0101.9123E No value was supplied for the required parameter {0}.  
**Explanation** A parameter is missing or corrupted.  
**Action** Make sure that the parameter object exists.

---

<b>PRT.0101.9124E</b>	<b>An invalid value was supplied for the required parameter {0}. The bad value was {1}.</b>
<b>Explanation</b>	The value of the specified key is invalid.
<b>Action</b>	Make sure the value is the specified type.
<b>PRT.0101.9125E</b>	<b>Service {0} failed.</b>
<b>Explanation</b>	Caught a service exception.
<b>Action</b>	Check the service exception message in the Integration Server error logs for details.
<b>PRT.0101.9135E</b>	<b>Cannot read frag file {0}: the file does not exist.</b>
<b>Explanation</b>	An error occurred while reading the process model file: the file does not exist.
<b>Action</b>	Make sure the model has been generated correctly.
<b>PRT.0101.9136E</b>	<b>Cannot read frag file {0}: the file is not readable.</b>
<b>Explanation</b>	An error occurred while reading the process model file: the file is not readable.
<b>Action</b>	Check the file permissions.
<b>PRT.0101.9137E</b>	<b>Malformed frag file {0}: the file does not contain the 'fragment' key.</b>
<b>Explanation</b>	Unable to read the process model file; the file may be corrupted.
<b>Action</b>	Regenerate the process model.
<b>PRT.0101.9138E</b>	<b>IOException reading frag file {0}</b>
<b>Explanation</b>	An error occurred while reading the process model file.
<b>Action</b>	Refer to the process exception in the Integration Server error logs for details.
<b>PRT.0101.9139E</b>	<b>Cannot write frag file {0}: the file already exists and is not writeable.</b>
<b>Explanation</b>	An error occurred while saving the process model file: the file already exists.
<b>Action</b>	Check the file permissions.
<b>PRT.0101.9151E</b>	<b>Cannot rebind role {0} from partner ID {1} to partner ID {2}</b>
<b>Explanation</b>	Unable to add a TN sender or receiver role because the current public role information indicates a different partner ID.
<b>Action</b>	Make sure the sender or receiver matches the partner ID, then restart the process.

<b>PRT.0101.9195E</b>	<b>Could not enable model "{0}" version "{1}" for {2}</b>
<b>Explanation</b>	Cannot get a lock for global data.
<b>Action</b>	Determine whether another step in the process currently has a lock on global data.
<b>PRT.0101.9196E</b>	<b>Could not disable model "{0}" version "{1}" for {2}</b>
<b>Explanation</b>	Cannot get a lock for global data.
<b>Action</b>	Determine whether another step in the process currently has a lock on global data.
<b>PRT.0101.9197E</b>	<b>Could not acquire lock "{0}"</b>
<b>Explanation</b>	A field is not present in global data when using BPEL assign.
<b>Action</b>	Make sure the data exists.
<b>PRT.0101.9201</b>	<b>Correlated process ID {0} is incorrect; a process already exists with that process ID and a different model ID</b>
<b>PRT.0101.9204E</b>	<b>The CID returned from {0} is too long. CID length is {1}; maximum allowed is {2}</b>
<b>Explanation</b>	The conversation ID has exceeded the maximum allowed length.
<b>Action</b>	Shorten the conversation ID and rerun the process.
<b>PRT.0101.9205E</b>	<b>Correlation ID joins to a process instance that is no longer running. PID: {0}</b>
<b>Explanation</b>	Joins are not allowed on process instances that are not in running status.
<b>Action</b>	Change the state to running or start a new process instance.
<b>PRT.0101.9206</b>	<b>Intermediate Receive Step {2} of model {0} version {1} does not correlate to existing Process ID</b>
<b>PRT.0101.9215E</b>	<b>Cannot start process {0}; unable to determine the appropriate model</b>
<b>Explanation</b>	The process model ID has not been properly stored in the Process Engine DB.
<b>Action</b>	Check that the DB is working properly and rerun the process.

---

<b>PRT.0101.9216E</b>	<b>Cannot start process {0} with model {1} at step {2}: there is no fragment defined that contains that step</b>
<b>Explanation</b>	The process model fragment file does not contain the definition for the specified step.
<b>Action</b>	Check that the step is properly generated in the fragment file. If not, regenerate the process.
<b>PRT.0101.9217E</b>	<b>Cannot start process {0} at step {1}: there is no such step defined in fragment {2}</b>
<b>Explanation</b>	The process model fragment file does not contain the definition for the specified step.
<b>Action</b>	Check that the step is properly generated in the fragment file. If not, regenerate the process.
<b>PRT.0101.9218</b>	<b>Error changing version for process {0} with model {1} at step {2} from version {3} to {4}: there is no fragment defined that contains that step</b>
<b>PRT.0101.9228E</b>	<b>Missing ConversationID for call to getInstanceId()</b>
<b>Explanation</b>	Cannot start a process because a conversation ID was not present in the Trading Networks document envelope.
<b>Action</b>	Make sure that the conversation ID is properly defined and extracted.
<b>PRT.0101.9229E</b>	<b>Model {0} was specified, but there is no step in this model for a bizdoc of type {1}</b>
<b>Explanation</b>	Cannot find any step in the model that subscribes to this document.
<b>Action</b>	Make sure the model has a step that subscribes to this document.
<b>PRT.0101.9230E</b>	<b>Couldn't start process. Either the model is disabled or this document targets a non-start step.</b>
<b>Explanation</b>	The process cannot be started either because the model is disabled or the step subscribing to this document is not a start step.
<b>Action</b>	Make sure the model is enabled and that the step that subscribes to this document is a start step.
<b>PRT.0101.9231E</b>	<b>No ConversationID available; PE bizdoc processing fails</b>
<b>Explanation</b>	Cannot start a new process or join an existing process because a conversation ID was not present in the TN document envelope.
<b>Action</b>	Make sure that conversation ID is properly defined and extracted.

<b>PRT.0101.9244E</b>	<b>PID {0}: Cannot {1} process; status is {2}</b>
<b>Explanation</b>	The process instance has one of the following statuses: STAT_UNKNOWN, STAT_RUNNING, STAT_SUSPENDED, STAT_FAILED, STAT_CANCELLED, or STAT_DONE. Because the process instance is in one of these states, it cannot run the requested action. The requested action will be one of the following: START, SUSPEND, RESUME, CANCEL, FAIL, RESTART, QUIET, or DONE.
<b>Action</b>	Make sure the action is allowed on processes with the specified status.
<b>PRT.0101.9245E</b>	<b>PID {0}: Bad command RESTART; target step is missing</b>
<b>Explanation</b>	Unable to restart the process because of a missing or corrupted target step ID in the pipeline.
<b>Action</b>	Check the pipeline then restart the process.
<b>PRT.0101.9246E</b>	<b>PID {0}: Bad command RESTART; pipeline is missing</b>
<b>Explanation</b>	Unable to restart the process because of a missing or corrupted pipeline.
<b>Action</b>	Check the pipeline then restart the process.
<b>PRT.0101.9248E</b>	<b>PID {0}: Bad command RESTART; pipeline is missing /ProcessData</b>
<b>Explanation</b>	Unable to restart the process because of a missing or corrupted ProcessData object in pipeline.
<b>Action</b>	Check the pipeline then restart the process.
<b>PRT.0101.9249E</b>	<b>PID {0}: Bad command RESTART; pipeline is missing /ProcessData/LastEvents</b>
<b>Explanation</b>	The process instance was not restarted because the pipeline is missing.
<b>Action</b>	Make sure that the pipeline is properly logged.
<b>PRT.0101.9250E</b>	<b>PID {0}: Bad command RESTART; RestartParameters is missing</b>
<b>Explanation</b>	Cannot restart the process instance because some or all of the restart parameters are missing.
<b>Action</b>	Make sure that all of the restart parameters are present in the pipeline.
<b>PRT.0101.9251E</b>	<b>PID {0}: restart failed because the supplied pipeline contains an invalid ProcessInstanceID {1}</b>
<b>Explanation</b>	Unable to restart due to a invalid process instance ID.
<b>Action</b>	Check the pipeline then restart the process.

---

<b>PRT.0101.9253E</b>	<b>MID {0}: Cannot restart process; frag {1} step {2} does not define bizdoc {3} as input</b>
<b>Explanation</b>	Process cannot be restarted because the target step does not define the document as an input.
<b>Action</b>	Make sure that the target step specifies the document as an input.
<b>PRT.0101.9254E</b>	<b>PID {0}: failed to restart at step {1} because at least one valid event is needed in path /ProcessData/LastEvents/ of the supplied pipeline {2}</b>
<b>Explanation</b>	The process cannot be restarted because all documents in the pipeline have been removed.
<b>Action</b>	Start a new instance of the process.
<b>PRT.0101.9255E</b>	<b>MID {0} Failed to restart the process because Model {0} is not enabled</b>
<b>Explanation</b>	The process cannot be restarted because the model is disabled.
<b>Action</b>	Enable the model and restart again.
<b>PRT.0101.9256</b>	<b>PID {0} Failed to execute process instance status change</b>
<b>PRT.0101.9262E</b>	<b>PID {0}: Could not get a connection in {1}</b>
<b>Explanation</b>	An error occurred while trying to connect to Process Engine DB storage.
<b>Action</b>	Make sure that Process Engine DB storage is properly configured and running.
<b>PRT.0101.9263E</b>	<b>PID {0}: Update thread count failed</b>
<b>Explanation</b>	An error occurred while communicating with the Process Engine DB.
<b>Action</b>	Make sure that the Process Engine DB is properly configured and running.
<b>PRT.0101.9264</b>	<b>Cannot create new instance of model {0} version {1}, it is not enabled</b>
<b>PRT.0101.9265</b>	<b>Step {2} of model {0} version {1} is not a start step</b>
<b>PRT.0101.9285E</b>	<b>Could not create TN facade</b>
<b>Explanation</b>	Unable to create a Trading Networks implementation.
<b>Action</b>	Check the process exception message in the Integration Server error logs for details.

<b>PRT.0101.9286E</b>	<b>Could not handle doc output</b>
<b>Explanation</b>	Error while handling the output of a business document (bizdoc).
<b>Action</b>	Check the process exception message in the Integration Server error logs for details.
<b>PRT.0101.9287E</b>	<b>bizdoc_output() failed because pipeline object {0} is not a TN bizdoc object</b>
<b>Explanation</b>	The specified document is the wrong type.
<b>Action</b>	Make sure the document is a Trading Networks document.
<b>PRT.0101.9301E</b>	<b>Exception occurred during correlation or cross-reference operation</b>
<b>Explanation</b>	Unable to perform ID correlation because an error occurred while connecting to Process Engine DB storage.
<b>Action</b>	Refer to the process exception in the Integration Server error logs for details.
<b>PRT.0101.9306</b>	<b>Correlation field {0} does not exist in published document {1}</b>
<b>Explanation</b>	A correlation field is specified for the document starting this step, but the correlation field does not exist in the document at run time.
<b>Action</b>	Ensure that the correlation field is specified in the published document to establish correlation.
<b>PRT.0101.9316</b>	<b>Could not get process ID from conversation ID</b>
<b>PRT.0101.9321</b>	<b>Thread sleep wait interrupted: {0}</b>
<b>PRT.0101.9322</b>	<b>Variable "{0}" does not exist in the pipeline</b>
<b>PRT.0101.9340E</b>	<b>Bad join expression; invalid character {0}</b>
<b>Explanation</b>	The specified character is not allowed in the join expression.
<b>Action</b>	Verify that the join expression is valid.
<b>PRT.0101.9341E</b>	<b>Bad XOR join specification {0}; id required</b>
<b>Explanation</b>	The XOR join expression does not contain an unique ID.
<b>Action</b>	Make sure that a unique ID is present for the XOR join expression.

---

<b>PRT.0101.9342E</b>	<b>Bad XOR join specification; unparseable timeout {0}</b>
<b>Explanation</b>	The timeout value of the XOR join expression is not in a valid format.
<b>Action</b>	Make sure the timeout value for the XOR join expression is in milliseconds.
<b>PRT.0101.9343E</b>	<b>Bad join expression; one or more unmatched )</b>
<b>Explanation</b>	Missing parenthesis in a join expression.
<b>Action</b>	Make sure the join expression is valid.
<b>PRT.0101.9344E</b>	<b>Bad join expression; one or more unmatched (</b>
<b>Explanation</b>	Missing parenthesis in a join expression.
<b>Action</b>	Make sure the join expression is valid.
<b>PRT.0101.9345E</b>	<b>Bad join expression; bad standalone join spec {0}</b>
<b>Explanation</b>	Invalid standalone in a join expression.
<b>Action</b>	Make sure the join expression is valid.
<b>PRT.0101.9346</b>	<b>Global data is no longer supported. Model {0} : SID {1}</b>
<b>PRT.0101.9356E</b>	<b>Can not set track count to {0}; only 1 allowed for TransitionMetaData</b>
<b>Explanation</b>	The track count is not 0 or 1.
<b>Action</b>	Make sure the track count is 0 or 1.
<b>PRT.0101.9358E</b>	<b>Exception while executing SQL statement</b>
<b>Explanation</b>	The SQL processor failed to execute this statement because there is an error in the statement itself - a reference to a non-existent table, a non-existent (misspelled) field, or an incorrect SQL keyword.
<b>Action</b>	Check the process exception message in the Integration Server error logs for details.
<b>PRT.0101.9360</b>	<b>XPath data is no longer supported. Model {0} : SID {1}</b>

**PRT.0101.9412**      **PID {0}: Cannot execute step {1} because the process was terminated already**

**PRT.0101.9417E**      **Cannot publish {0}. Document is not in pipeline.**

**Explanation**      Cannot publish document; the document is not in the pipeline.

**Action**              Check for improper or missing mapping in the Integration Server flow service.

**PRT.0101.9432**      **Task execution was unsuccessful. The task engine returned status: {0} and error message: {1}**

**Explanation**      The Task Engine has returned an error to the Process Engine

**Action**              Check the My webMethods Server logs in  
.. \MWS\server\instances\\logs.

**PRT.0101.9467**      **Cannot enqueue an event with a null ID**

**PRT.0101.9469**      **Error encountered: Document with duplicate correlation ID submitted.**

**PRT.0101.9613**      **There are no enabled Processes matching this trigger: {0}**

**Explanation**      A document has arrived on a subscriptionTrigger but there are no enabled processes associated with this trigger. Therefore, the document is ignored.

**Action**              In most cases this means your process is not enabled. Log in to My webMethods and use webMethods Monitor to select the process and enable it for execution, then try again.

**PRT.0101.9862**      **This service has been deprecated and is no longer supported.**

**Explanation**      The service executed is no longer supported in the current release.

**Action**              Consult the release readme file and the Process Engine Administrator's guide for deprecated and removed services to determine if there is a replacement service.

**PRTEExceptionConstants.EXC\_AA\_CASE\_ERROR – AgileApps returned status: {0} and error message: {1}**

**PRTEExceptionConstants.EXC\_AA\_CASE\_NOCREATE – Case type {0} has circular dependency on Model {1}**

**PRTEExceptionConstants.EXC\_EFORM\_DUP\_FRIENDLYNAME** – Friendly name: {0} already in use please choose another.

**PRTEExceptionConstants.EXC\_FILE\_UTILS\_FILE\_EXISTS** – File "{0}" already exists.

**PRTEExceptionConstants.EXC\_FILE\_UTILS\_VALIDATE\_DIR** – File or directory "{0}" is not in the "{1}" directory.

**PRTEExceptionConstants.EXC\_PT\_JOINTIMEOUT** – The step "{2}" of model "{0}" with process id of "{1}" has join timed out, with no timeout step or error step to process.

**PRTEExceptionConstants.EXC\_SDA\_CA\_DYNAMIC\_DUPLICATE\_FIELD\_ERR** – Dynamic Call Activity document list contains duplicate values for {0} field.

**PRTEExceptionConstants.EXC\_SDA\_CA\_DYNAMIC\_MISSING\_FIELD\_ERR** – Dynamic Call Activity document does not contain {0} field.

**PRTEExceptionConstants.EXC\_SDA\_CA\_DYNAMIC\_MISSING\_ROOT\_DOC\_ERR** – Dynamic Call Activity CallActivityModels document list does not exist.

**PRTEExceptionConstants.EXC\_SD\_CIDLONG2** – The Correlation ID is too long. The length is {0}; maximum allowed is {1}

**PRTEExceptionConstants.EXC\_SM\_FORBID** – PID {0} Cannot restart process; It was initiated from AgileApps

**PRTEExceptionConstants.EXC\_SM\_NOACTFORSTAT...0** – PID {0}; Cannot {1} a process instance with a status of {2}.

**PRTEExceptionConstants.EXC\_TRANSITION\_NOT\_FOUND** – Transition Key {0} could not be found for Process ID {1}.

# 24

<b>WEPRME0104</b>	<b>Unrecognized semantic exception. Please report the SQL statement to your software supplier.</b>

- WEPRME0105**      The {0} argument of the {1} aggregation must be numeric.
  
- WEPRME0106**      The types of the arguments of the aggregation do not match the required argument types.
  
- WEPRME0107**      The field {0} is unknown or not visible.
  
- WEPRME0108**      The argument of the ABS function must be numeric.
  
- WEPRME0109**      In the case function, the type of the {0} result expression does not match the types of the previous result expressions ({1}, {2}).
  
- WEPRME0110**      The signature of the user-defined function {0} does not match the specified types ({1}).
  
- WEPRME0111**      The user-defined function {0} is unknown or not visible.
  
- WEPRME0112**      The {0} argument of the {1} must be numeric.
  
- WEPRME0113**      The {0} argument of the {1} must be of character/string type.
  
- WEPRME0114**      The types of the arguments of the operation do not match the required argument types.
  
- WEPRME0115**      The arguments of the {0} comparison cannot be compared ({1}, {2}).
  
- WEPRME0116**      The expression list contains constants of different types.
  
- WEPRME0117**      The types of the expression and the constants in the expression list cannot be compared ({0}, {1}).

---

<b>WEPRME0118</b>	<b>Only expressions and star selections are permitted in a selection list.</b>
<b>WEPRME0119</b>	<b>An aggregate is not allowed inside a WHERE clause.</b>
<b>WEPRME0120</b>	<b>Only expressions are permitted in a GROUP BY clause.</b>
<b>Explanation</b>	The GROUP BY clause contains an entry that is not an expression.
<b>Action</b>	Replace the entry by a valid expression.
<b>WEPRME0121</b>	<b>The {0} constant listed in the set condition must have the same size as the specified field list.</b>
<b>WEPRME0122</b>	<b>The types of the field and the constants in the constant list cannot be compared ({0}, {1}).</b>
<b>WEPRME0123</b>	<b>The source {0} is unknown or not visible.</b>
<b>WEPRME0124</b>	<b>The size of a count-based window must be greater than zero.</b>
<b>Explanation</b>	The query contains an invalid size. This refers to the ROWS argument in an SQL query, or the size attribute of a window element in an XML query.
<b>Action</b>	Specify a valid size.
<b>WEPRME0125</b>	<b>The sliding size specification of a count-based window must be greater than zero.</b>
<b>Explanation</b>	The query contains an invalid sliding size. This refers to the SLIDE argument in an SQL query, or the increment attribute of a window element in an XML query.
<b>Action</b>	Specify a valid sliding size.
<b>WEPRME0126</b>	<b>The duration of a time-based window must be greater than zero.</b>
<b>Explanation</b>	The query contains an invalid duration. This refers to the RANGE argument in an SQL query, or the size attribute of a window element in an XML query.
<b>Action</b>	Specify a valid duration.

<b>WEPRME0127</b>	<b>The sliding size specification of a time-based window must be greater than zero.</b>
<b>Explanation</b>	The query contains an invalid sliding size. This refers to the SLIDE argument in an SQL query, or the increment attribute of a window element in an XML query.
<b>Action</b>	Specify a valid sliding size.
<b>WEPRME0128</b>	<b>The DURATION argument of a MATCHING clause must be greater than zero.</b>
<b>WEPRME0129</b>	<b>The WITHIN argument of a MATCHING clause must be greater than zero.</b>
<b>WEPRME0130</b>	<b>Duplicate definition for the pattern state "{0}".</b>
<b>WEPRME0131</b>	<b>The DEFINE clause does not define all the pattern states required by the specified pattern.</b>
<b>WEPRME0132</b>	<b>The field {0} is already defined by the input query.</b>
<b>WEPRME0133</b>	<b>The type of the defined field and the type of its default value do not match ({0}, {1}).</b>
<b>WEPRME0134</b>	<b>The type of the defined field and the type of the assigned value do not match ({0}, {1}).</b>
<b>WEPRME0135</b>	<b>The field names "START_TIMESTAMP" and "END_TIMESTAMP" are reserved for additional information provided by pattern matching.</b>
<b>WEPRME0136</b>	<b>The identifier for a pattern state must be a single character.</b>
<b>WEPRME0137</b>	<b>An aggregate is not allowed inside the condition in an action definition.</b>
<b>WEPRME0138</b>	<b>The condition of an action definition must be a predicate.</b>

- WEPRME0139**      **An aggregate is not allowed inside an action definition in a MATCHING clause.**
- WEPRME0140**      **The right-hand side of an action definition must be an expression.**
- WEPRME0143**      **Only predicates are permitted in the ON clause of a join.**
- WEPRME0144**      **Only predicates are permitted in a WHERE clause.**
- WEPRME0145**      **The {0} operation requires identical output format of the involved subqueries.**
- WEPRME0146**      **Only predicates are permitted in a disjunction.**
- WEPRME0147**      **Only predicates are permitted in a conjunction.**
- WEPRME0148**      **Only predicates are permitted in a negation.**
- WEPRME0149**      **The EXISTS clause is currently not supported.**
- WEPRME0150**      **An SQL expression list in a relational expression is currently not supported.**
- WEPRME0152**      **Only an expression is permitted as the first argument of a comparison.**
- WEPRME0153**      **Only an expression is permitted as the second argument of a comparison.**
- WEPRME0154**      **Only constants are allowed in the set of an IN clause.**
- WEPRME0155**      **A subquery in an IN clause is currently not supported.**

- WEPRME0156**      Only expressions are permitted as the first argument of a BETWEEN clause.
- WEPRME0157**      Only expressions are permitted as the second argument of a BETWEEN clause.
- WEPRME0158**      The arguments of the BETWEEN clause cannot be compared ({0}, {1}).
- WEPRME0159**      The first argument of the BETWEEN clause is greater than the second argument.
- WEPRME0160**      Only expressions are permitted in the IS NULL clause.
- WEPRME0161**      Only expressions are permitted in {0}.
- WEPRME0162**      Only expressions are permitted in an exponentiation.
- WEPRME0163**      Only expressions are permitted in a unary operation.
- WEPRME0164**      Only expressions are permitted in the WHEN clause of a simple CASE statement.
- WEPRME0165**      Only expressions are permitted in the THEN clause of a simple CASE statement.
- WEPRME0166**      Only expressions are permitted in the ELSE clause of a simple CASE statement.
- WEPRME0167**      Only predicates are permitted in the WHEN clause of a boolean CASE statement.
- WEPRME0168**      Only expressions are permitted in the THEN clause of a boolean CASE statement.
- WEPRME0169**      Only expressions are permitted in the ELSE clause of a boolean CASE statement.

<b>WEPRME0170</b>	<b>Duplicate field definition in recursive query.</b>
<b>WEPRME0171</b>	<b>The number of defined fields in the recursive query does not match the number of fields in the subquery.</b>
<b>WEPRME0172</b>	<b>The defined field name does not match the field name in the subquery.</b>
<b>WEPRME0173</b>	<b>The defined field type does not match the field type in the subquery.</b>
<b>WEPRME0174</b>	<b>Check the specified aggregation.</b>
<b>WEPRME0175</b>	<b>Check the specified SELECT item.</b>
<b>WEPRME0176</b>	<b>Check the specified DEFINE condition.</b>

- WEPRME1387**      **The provided server source parameters should not be null.**  
**Explanation**      The input parameter server source parameters is null. A valid server source parameters object should be provided.

---

<b>WEPRME1388</b>	<b>The provided query parameters should not be null.</b>
<b>Explanation</b>	The input parameter query parameters is null. A valid query parameters object should be provided.
<b>WEPRME1389</b>	<b>The provided query language should not be null.</b>
<b>Explanation</b>	The input parameter query language is null. A valid query language object should be provided.
<b>WEPRME1390</b>	<b>The provided query string should not be null.</b>
<b>Explanation</b>	The input parameter query string is null. A valid query string object should be provided.
<b>WEPRME1391</b>	<b>The command prepareQuery2 is not supported by the server.</b>
<b>Explanation</b>	The client tried to send the command prepareQuery2 to the server. The current server version does not support handling of this command. There is a mismatch between client version and server version.
<b>WEPRME1392</b>	<b>The query {0} cannot be subscribed to using subscription mode {1} as subscriptions to this query were restricted to times when no element is valid.</b>
<b>Explanation</b>	The query was prepared using the query parameter 'isSubscribableOnlyWhenNoElementValid'. Subscriptions to such queries may not use other subscription modes than 'ALL'.
<b>Action</b>	Use subscription mode 'ALL'.
<b>WEPRME1393</b>	<b>The query {0} can currently not be subscribed to as subscriptions to this query were restricted to times when no element is valid.</b>
<b>WEPRME1394</b>	<b>The query {0} cannot be unsubscribed from using subscription mode {1} as subscriptions to this query were restricted to times when no element is valid.</b>
<b>Explanation</b>	The query was prepared using the query parameter 'isSubscribableOnlyWhenNoElementValid'. Unsubscriptions to such queries may not use other subscription modes than 'ALL'.
<b>Action</b>	Use subscription mode 'ALL'.

- WEPRME1395**      **An exception related to {0} occurred in the underlying connection.**
  
- WEPRME1396**      **Creation of empty arrays is not supported.**
  
- WEPRME1397**      **All values in an array value construction must have the same type.**
  
- WEPRME1398**      **Only field expressions can be used as child nodes of an array element reference expression.**
  
- WEPRME1399**      **Limiting subscriptions to times when no element is valid is currently not supported in HA mode.**
  
- WEPRME1400**      **The field {0} is not of type ARRAY.**
  
- WEPRME1401**      **The method {0} is not yet supported in class {1}.**
  
- WEPRME1402**      **The XML query is not a valid XML document.**
  
- WEPRME1404**      **The XML query contains semantical errors.**
  
- WEPRME1405**      **An operator providing a chronon stream must not use end timestamps other than start timestamp +1.**
  
- WEPRME1406**      **Unknown timezone: {0}.**
  
- WEPRME1407**      **The time unit "{0}" is unknown.**
  
- WEPRME1408**      **Connection to {0} system lost.**

<b>WEPRME1409</b>	<b>Client lost connection to server with address {0}.</b>
<b>WEPRME1425</b>	<b>The Positive-Negative approach is currently not supported when running in high availability mode.</b>
<b>WEPRME1427</b>	<b>NullPointerException occurred while accepting new connection on address {0}.</b>
<b>WEPRME1428</b>	<b>CommunicationException occurred while accepting new connection on address {0}.</b>
<b>WEPRME1429</b>	<b>Exception occurred while accepting new connection on address {0}.</b>
<b>WEPRME1431</b>	<b>The pattern contains illegal characters. Supported characters are letters and the meta characters '*', '+', '?', '.', ' ', '(', ')', '[, ]', '^', '{, }', " and digits.</b>
<b>WEPRME1432</b>	<b>An aggregate is not allowed in this context.</b>
<b>Explanation</b>	The query contains an aggregate, but in a context that does not permit aggregates. Aggregates are only allowed in the SELECT and HAVING clauses of an SQL query, or inside an aggregate operator of an XML query.
<b>Action</b>	Correct the query and resubmit.
<b>WEPRME1433</b>	<b>An Ehcache with the name {0} already exists.</b>
<b>Explanation</b>	The system has tried to create a new Ehcache but it already existed in the CacheManager.
<b>Action</b>	Make sure the existing Ehcache is removed from the CacheManager.
<b>WEPRME1434</b>	<b>Ehcache configuration error: {0}.</b>
<b>Explanation</b>	The provided ehcache configuration file is not valid.
<b>Action</b>	Make sure the provided ehcache configuration file is valid.
<b>WEPRME1435</b>	<b>Problem creating new Ehcache: {0}.</b>
<b>Explanation</b>	The system tried to create a new Ehcache but encountered problems.
<b>Action</b>	See detailed message for further information.

<b>WEPRME1436</b>	<b>Invalid value of join attribute "{0}".</b>
<b>Explanation</b>	Join attributes refer to the input operators of a join by specifying their 0-based index. They are thus composed of a list of indexes, where only 0 and 1 are valid indexes. As an additional constraint, the list must not contain duplicates.
<b>Action</b>	Correct the specified join attribute.
<b>WEPRME1437</b>	<b>The child nodes with the UIDs "{0}" and "{1}" are not equivalent in the equivalence node.</b>
<b>Explanation</b>	Two of the child nodes in the equivalence node have different record metadata. All direct children of an equivalence node in a query graph must have the same record metadata (resulting schema).
<b>Action</b>	Adapt the equivalence node so that all child nodes have the same record metadata.
<b>WEPRME1438</b>	<b>Regular expression is invalid at offset {0}.</b>
<b>Explanation</b>	The query contains a PATTERN clause, but its regular expression has invalid syntax. The offset contained in the message is the 0-based offset within the regular expression where the failure was detected.
<b>Action</b>	Correct the regular expression syntax and resubmit the query.
<b>WEPRME1439</b>	<b>Barrier can only await one single set of connections.</b>
<b>WEPRME1440</b>	<b>The connection barrier has not been passed yet.</b>
<b>WEPRME1441</b>	<b>Connection for ID {0} could not be used as it connected too late.</b>
<b>WEPRME1442</b>	<b>Unexpected incoming recovery connection for ID {0}.</b>
<b>WEPRME1443</b>	<b>Duplicate incoming recovery connection for ID {0}.</b>
<b>WEPRME1444</b>	<b>Wrong user or password for recovery connection for ID {0}.</b>

---

<b>WEPRME1445</b>	<b>The connection is already authenticated.</b>
<b>WEPRME1447</b>	<b>Unable to cast the {0} value {1} to {2}.</b>
<b>Explanation</b>	The specified CAST function tries to cast the specified value to the shown type, but this is not possible.
<b>Action</b>	Either change the value in a way that it can be casted to the specified type or change the type accordingly.
<b>WEPRME1449</b>	<b>Unable to read the given event.</b>
<b>WEPRME1450</b>	<b>Unable to write the given event.</b>
<b>WEPRME1451</b>	<b>Percentage of delays must be in [0,1].</b>
<b>Explanation</b>	Percentage of delays must be in [0,1].
<b>Action</b>	Configure delay to be in [0,1].
<b>WEPRME1452</b>	<b>Exclusion threshold for delays must be greater than or equal zero.</b>
<b>Explanation</b>	Exclusion threshold for delays must be greater than or equal zero.
<b>Action</b>	Set exclusion threshold for delays to be greater than or equal zero.
<b>WEPRME1453</b>	<b>The weighting factor alpha must be in [0,1].</b>
<b>Explanation</b>	The weighting factor alpha must be in [0,1].
<b>Action</b>	Set the weighting factor alpha to be in [0,1].
<b>WEPRME1454</b>	<b>Size for the queue must be greater 1.</b>
<b>Explanation</b>	Size for the queue must be greater 1.
<b>Action</b>	Set size for the queue to be greater 1.
<b>WEPRME1455</b>	<b>Missing Ehcache configuration.</b>
<b>Explanation</b>	The useEhcache query parameter was set, but there was no Ehcache configuration present in the RTM system configuration.
<b>Action</b>	Either remove the useEhcache query parameter, or extend the RTM system configuration to include an Ehcache configuration.

<b>WEPRME1456</b>	<b>Element must not be null.</b>
<b>Explanation</b>	Element must not be null.
<b>Action</b>	Insert only elements not being null.
<b>WEPRME1458</b>	<b>Only one overload detector can be registered at a time.</b>
<b>Explanation</b>	Only one overload detector can be registered at a time.
<b>Action</b>	Register only one overload detector.
<b>WEPRME1459</b>	<b>The DURATION expression of a MATCHING clause must be evaluable to a numeric type.</b>
<b>Explanation</b>	The specified DURATION expression evaluates to a type that is not numeric, e.g., STRING. But DURATION expressions must be numeric.
<b>Action</b>	Change the DURATION expression such taht is evaluates to a numeric type.
<b>WEPRME1460</b>	<b>The WITHIN expression of a MATCHING clause must be evaluable to a numeric type.</b>
<b>Explanation</b>	The specified WITHIN expression evaluates to a type that is not numeric, e.g., STRING. But WITHIN expressions must be numeric.
<b>Action</b>	Change the WITHIN expression such taht is evaluates to a numeric type.
<b>WEPRME1461</b>	<b>Check the DURATION expression.</b>
<b>Explanation</b>	The DURATION expression contains an unspecific error.
<b>Action</b>	Check the DURATION expression.
<b>WEPRME1462</b>	<b>Check the WITHIN expression.</b>
<b>Explanation</b>	The WITHIN expression contains an unspecific error.
<b>Action</b>	Check the WITHIN expression.
<b>WEPRME1469</b>	<b>The maximum window size must not be smaller than or equal to 0.</b>
<b>Explanation</b>	The maximum windo size specifies the maximum validity an event can get applied by the window operator. As validities are always greater than zero the maximum window size also has to be.
<b>Action</b>	Specify a maximum window size that is greater than 0.

---

<b>WEPRME1471</b>	<b>The size of a count-based window can only be specified using a numeric constant.</b>
<b>Explanation</b>	Count-based windows does not support window size specification using numeric expressions.
<b>Action</b>	Replace the window size expression by a numeric constant.
<b>WEPRME1472</b>	<b>Check the window size expression.</b>
<b>Explanation</b>	The window size expression contains an unspecific error.
<b>Action</b>	Check the window size expression.
<b>WEPRME1473</b>	<b>Only constant maximum windows sizes, i.e., milliseconds, seconds, minutes or hours, are allowed for time-based windows.</b>
<b>Explanation</b>	The maximum window size must be evaluable to a constant amount of milliseconds. For this reason only constant time units are supported.
<b>Action</b>	Use a constant unit, i.e., millisecond, second, minute or hour, when specifying a maximum window size.
<b>WEPRME1474</b>	<b>The size of a time-based window can't be specified using a non-numeric constant.</b>
<b>Explanation</b>	The window size is specified by a non-numeric constant.
<b>Action</b>	Replace the non-numeric constant window size specification by a numeric constant or an expression that can be evaluated to a numeric type.
<b>WEPRME1475</b>	<b>The window size must not be greater than the specified maximum window size.</b>
<b>Explanation</b>	The computed window size was greater than the specified maximum window size.
<b>Action</b>	Check the window size expression if it could be limited to results that are less than or equal to the specified maximum window size or adapt (or remove) the specified maximum window size.
<b>WEPRME1476</b>	<b>The user {0} does not have the privilege to refresh the table.</b>
<b>WEPRME1477</b>	<b>The table {0} does not support triggered cache refresh!</b>
<b>Explanation</b>	The table is configured with no support for a a-periodic, triggered cached refreshed.
<b>Action</b>	Change the AccessProperties of the table and enable supportsTriggeredRefresh option to enable a-periodic triggering of table refreshes.

<b>WEPRME1479</b>	<b>The required complete-from timestamp cannot be guaranteed by the source.</b>
<b>Explanation</b>	The source operator cannot guarantee the semantic subscription time requested when preparing the query.
<b>Action</b>	Change or remove the requested semantic subscription time when preparing the query.
<b>WEPRME1480</b>	<b>The required complete-from timestamp cannot be guaranteed by the source adapter (not an intra source adapter).</b>
<b>Explanation</b>	Only intra source adapters are able to guarantee semantic subscription time requests when preparing a query.
<b>Action</b>	Use registered intra source adapters or remove the requested semantic subscription time when preparing the query.
<b>WEPRME1481</b>	<b>The required complete-from timestamp cannot be guaranteed by the source adapter (intra source adapter does not support requesting semantic subscription times).</b>
<b>Explanation</b>	The used intra source adapter does not support guaranteed semantic subscription time requests when preparing a query.
<b>Action</b>	Use intra source adapters supporting this feature or remove the requested semantic subscription time when preparing the query.
<b>WEPRME1482</b>	<b>The required complete-from timestamp cannot be guaranteed by the source adapter (intra source adapter is not able to provide the requested semantic subscription time).</b>
<b>Explanation</b>	The used intra source adapter is not able to guarantee the semantic subscription time requested when preparing the query.
<b>Action</b>	Change or remove the semantic subscription time requested when preparing the query.
<b>WEPRME1483</b>	<b>The required complete-from timestamp cannot be guaranteed by the operator.</b>
<b>Explanation</b>	The operator is already opened and the requested semantic subscription time cannot be guaranteed anymore.
<b>Action</b>	Modify or remove the semantic subscription time requested when preparing the query.

---

<b>WEPRME1484</b>	<b>The required complete-from timestamp cannot be guaranteed by the count-based window.</b>
<b>Explanation</b>	Count-based windows does not support requesting semantic subscription times when preparing a query.
<b>Action</b>	Remove the count-based window from the query or remove the semantic subscription time request when preparing the query.
<b>WEPRME1485</b>	<b>The duration must not be NULL.</b>
<b>Explanation</b>	The duration expression was evaluated to NULL.
<b>Action</b>	The duration expression must not return NULL as it cannot be interpreted as a duration value. Modify the expression in such a way that it cannot return NULL when being evaluated using the incoming data.
<b>WEPRME1486</b>	<b>The within must not be NULL.</b>
<b>Explanation</b>	The within expression was evaluated to NULL.
<b>Action</b>	The within expression must not return NULL as it cannot be interpreted as a within value. Modify the expression in such a way that it cannot return NULL when being evaluated using the incoming data.
<b>WEPRME1487</b>	<b>The window size must not be NULL.</b>
<b>Explanation</b>	The window size expression was evaluated to NULL.
<b>Action</b>	The window size expression must not return NULL as it cannot be interpreted as a window size value. Modify the expression in such a way that it cannot return NULL when being evaluated using the incoming data.
<b>WEPRME1488</b>	<b>Execution is already started.</b>
<b>WEPRME1489</b>	<b>Execution is already stopped and may not be restarted.</b>
<b>WEPRME1490</b>	<b>Execution is not started, yet.</b>
<b>WEPRME1491</b>	<b>Execution is already stopped.</b>

- WEPRME1505**      **No such metaDataIdentifier found: {0}.**
  
- WEPRME1506**      **Unsupported parameter type: {0}.**

---

<b>WEPRME1508</b>	<b>Aggregates are not allowed in the GROUP BY clause.</b>
<b>Explanation</b>	As the grouping is applied before the aggregates are computed on the groups it is not allowed to use aggregates in the GROUP BY clause.
<b>Action</b>	Remove the aggregate from the GROUP BY clause.
<b>WEPRME1509</b>	<b>Check the specified group expression.</b>
<b>Explanation</b>	The group expression contains an unspecific error.
<b>Action</b>	Check the group expression for errors.
<b>WEPRME1510</b>	<b>Check the specified predicate (having clause).</b>
<b>Explanation</b>	The predicate contains an unspecific error.
<b>Action</b>	Check the predicate for errors.
<b>WEPRME1511</b>	<b>Only operators can be used as child nodes of a limit operator.</b>
<b>Explanation</b>	A non-operator node was passed as the input node of a limit operator, where only an operator node is allowed.
<b>Action</b>	Supply an operator node as the child of a limit operator.
<b>WEPRME1512</b>	<b>Only operators can be used as child nodes of an order operator.</b>
<b>Explanation</b>	A non-operator node was passed as the input node of an order operator, where only an operator node is allowed.
<b>Action</b>	Supply an operator node as the child of an order operator.
<b>WEPRME1513</b>	<b>Translation mode does not support operators of type {0}.</b>
<b>Explanation</b>	An unsupported operator was found during the translation of an SQL statement. The operator may be invalid for the current mode , but valid in other translation mode.
<b>Action</b>	Avoid SQL statements using the offending operator, or use a translation mode that supports it.
<b>WEPRME1514</b>	<b>Invalid aggregate in ORDER BY clause.</b>
<b>Explanation</b>	An ORDER BY clause was found to contain an aggregate function, which was not specified earlier in the same query. This is not allowed, an ORDER BY clause must not introduce new aggregate functions.
<b>Action</b>	Correct SQL statement, e.g. by adding the aggregate in question to the SELECT list.

<b>WEPRME1515</b>	<b>Check the specified part of the ORDER BY clause.</b>
<b>Explanation</b>	The ORDER BY clause was found to contain some invalid construct.
<b>Action</b>	Inspect ORDER BY clause and remove any invalid expressions.
<b>WEPRME1516</b>	<b>Subquery not allowed in this context.</b>
<b>Explanation</b>	A subquery was found in a context, where it is not supported.
<b>Action</b>	Correct statement according to the language specification.
<b>WEPRME1517</b>	<b>Subquery results in more than one column, where it must be a single column.</b>
<b>Explanation</b>	A subquery in a comparison of the where clause must result in a single column.
<b>Action</b>	Correct SQL statement.
<b>WEPRME1518</b>	<b>Invalid frame bound.</b>
<b>Explanation</b>	A window definition contained an invalid frame bound. A frame bound of UNBOUNDED FOLLOWING is not allowed on the left hand side of a window frame BETWEEN definition, and a frame bound of UNBOUNDED PRECEDING is not allowed on the right hand side.
<b>Action</b>	Correct SQL statement.
<b>WEPRME1519</b>	<b>Window function not allowed in this context.</b>
<b>Explanation</b>	A window function was found in a context, where it is not supported.
<b>Action</b>	Correct statement according to the language specification.
<b>WEPRME1520</b>	<b>Check the specified part of the window specification.</b>
<b>Explanation</b>	A window specification was found to contain some invalid construct.
<b>Action</b>	Inspect window specification and remove any invalid expressions.
<b>WEPRME1521</b>	<b>Only operators can be used as child nodes of a window aggregation operator.</b>
<b>Explanation</b>	A non-operator node was passed as the input node of a window aggregation operator, where only an operator node is allowed.
<b>Action</b>	Supply an operator node as the child of a window aggregation operator.

---

<b>WEPRME1524</b>	<b>Invalid nested aggregate function reference.</b>
<b>Explanation</b>	The argument of a set function invocation cannot be another set function.
<b>Action</b>	Correct SQL statement.
<b>WEPRME1535</b>	<b>The 2nd argument of the ROUND function must be of type integer.</b>
<b>Explanation</b>	The 2nd argument of the given ROUND function call is not of type integer which is mandatory.
<b>Action</b>	Change the expression specifying the 2nd argument of ROUND function such that it is of type integer.
<b>WEPRME1536</b>	<b>Unable to parse long value due to wrong number format. {0}</b>
<b>Explanation</b>	The given literal does not comply with the structure of an integral number, i.e. it contains characters other than 0-9,+,-.
<b>Action</b>	Please remove any invalid characters from your integer literal.
<b>WEPRME1537</b>	<b>Unable to parse integer value due to wrong number format. {0}</b>
<b>Explanation</b>	The given literal does not comply with the structure of an integral number, i.e. it contains characters other than 0-9,+,-.
<b>Action</b>	Please remove any invalid characters from your integer literal.
<b>WEPRME1538</b>	<b>If FROM is specified in the TRIM function, either the trim specification (LEADING, TRAILING, or BOTH) or the trim character or both have to be specified.</b>
<b>Explanation</b>	If FROM is specified in the TRIM function, either the trim specification (LEADING, TRAILING, or BOTH) or the trim character or both have to be specified.
<b>Action</b>	Either add the trim specification, the trim character or both. Alternatively remove the FROM clause.
<b>WEPRME1539</b>	<b>Only expressions are permitted for the trim source argument of the TRIM function.</b>
<b>Explanation</b>	Only expressions are permitted for the trim source argument of the TRIM function.
<b>Action</b>	Use an expression for the trim source argument.
<b>WEPRME1540</b>	<b>Only expressions are permitted for the trim character argument of the TRIM function.</b>
<b>Explanation</b>	Only expressions are permitted for the trim character argument of the TRIM function.
<b>Action</b>	Use an expression for the trim character argument.

<b>WEPRME1541</b>	<b>The {1} function only supports STRING values as argument for the substring source.</b>
<b>Explanation</b>	The {1} function only supports STRING values as argument for the substring source.
<b>Action</b>	Use a STRING value as argument for the substring source.
<b>WEPRME1542</b>	<b>The {1} function only supports INTEGER values as argument for the start position.</b>
<b>Explanation</b>	The {1} function only supports INTEGER values as argument for the start position.
<b>Action</b>	Use an INTEGER value as argument for the start position.
<b>WEPRME1543</b>	<b>The {1} function only supports INTEGER values as argument for the string length.</b>
<b>Explanation</b>	The {1} function only supports INTEGER values as argument for the string length.
<b>Action</b>	Use and INTEGER value as argument for the string length.
<b>WEPRME1544</b>	<b>The {1} function only supports STRING values as argument for the trim character.</b>
<b>Explanation</b>	The {1} function only supports STRING values as argument for the trim character.
<b>Action</b>	Use a STRING value as argument for the trim character.
<b>WEPRME1545</b>	<b>The {1} function only supports STRING values as argument for the trim source.</b>
<b>Explanation</b>	The {1} function only supports STRING values as argument for the trim source.
<b>Action</b>	Use a STRING value as argument for the trim source.
<b>WEPRME1546</b>	<b>The argument of the {0} function must be of type STRING or CHARACTER.</b>
<b>Explanation</b>	The argument of the LOWER and the UPPER function must be of type STRING or CHARACTER.
<b>Action</b>	Use a STRING or CHARACTER value as argument for the LOWER and the UPPER function.
<b>WEPRME1547</b>	<b>For the SUBSTRING function the substring source must be of type STRING and the start position and string length must be of type INTEGER.</b>
<b>Explanation</b>	For the SUBSTRING function the substring source must be of type STRING and the start position and string length must be of type INTEGER.
<b>Action</b>	Use a STRING value for the substring source and an INTEGER value for the start position and the string length.

---

<b>WEPRME1548</b>	<b>For the TRIM function the trim source must be of type STRING and the trim character must be of type STRING or CHARACTER.</b>
<b>Explanation</b>	For the TRIM function the trim source must be of type STRING and the trim character must be of type STRING or CHARACTER.
<b>Action</b>	Use a STRING value for the trim source and a STRING or CHARACTER value for the trim character.
<b>WEPRME1549</b>	<b>A {0} operation must have exactly three sub-expressions.</b>
<b>Explanation</b>	A {0} operation must have exactly three sub-expressions.
<b>Action</b>	Ensure that the {0} operation has exactly three sub-expressions.
<b>WEPRME1550</b>	<b>The LOWER and the UPPER function only support STRING and CHARACTER values.</b>
<b>Explanation</b>	The LOWER and the UPPER function only support STRING and CHARACTER values.
<b>Action</b>	Ensure that only STRING and CHARACTER values are used.
<b>WEPRME1551</b>	<b>The trim character for the TRIM function must have exactly one character.</b>
<b>Explanation</b>	The trim character for the TRIM function must have exactly one character.
<b>Action</b>	Use a single character as trim character for the TRIM function.
<b>WEPRME1552</b>	<b>The values for start position and start length of the SUBSTRING function are not valid.</b>
<b>Explanation</b>	The values for start position and start length of the SUBSTRING function are not valid.
<b>Action</b>	Use correct values for start position and start length of the SUBSTRING function.
<b>WEPRME1555</b>	<b>The return type of method {0} needs to be assignable to {1}. Found: {2}.</b>
<b>WEPRME1556</b>	<b>The first parameter of method {0} needs to be the same class or a super-class of {1}. Found: {2}.</b>

<b>WEPRME1761</b>	<b>The JSON input contains an unmatched END-ARRAY token.</b>
<b>Explanation</b>	The underlying JSON parser produced an END-ARRAY token without an according START-ARRAY token.
<b>Action</b>	Check the processed JSON input.
<b>WEPRME1762</b>	<b>The JSON input contains an unexpected {0} token.</b>
<b>Explanation</b>	The JSON parser produced an unexpected token.
<b>Action</b>	Check the processed JSON input.
<b>WEPRME1763</b>	<b>The JSON input contains an unmatched START-OBJECT token.</b>
<b>Explanation</b>	The JSON parser produced a START-OBJECT token without an according END-Object token.
<b>Action</b>	Check the processed JSON input.
<b>WEPRME1764</b>	<b>Unable to read JSON input.</b>
<b>Explanation</b>	An I/O exception occurred while reading the JSON input.
<b>Action</b>	Check the processed JSON input.
<b>WEPRME1765</b>	<b>The connection locale may not be null.</b>

---

WEPRME1766	Unable to open the specified file {0}.
WEPRME1767	Unable to reset buffered reader.
WEPRME1769	The following error has been reported {0} times and any recurrences will be suppressed: {1}
WEPRME1770	Unable to compute stream metadata for user-defined source factory.
WEPRME1771	Exception occurred while inferring schema.
WEPRME1772	Super column value is incompatible with defined type. Configured "{0}" but actually was "{1}".
WEPRME1773	Super column metadata differs among source factories for the same pull source. Expected "{0}", but was "{1}".
WEPRME1774	SearchAttribute name at index {0} must not be null.
WEPRME1775	The given search attribute {0} cannot be found.
WEPRME1776	Dynamic indexing is not supported for search attribute {0} as it is of type {1}.
WEPRME1778	Return type of UDX {0} does not comply with the schema: expected {1} but found {2}.
WEPRME1779	Null not allowed as return value of UDX {0}.
WEPRME1780	Method getComputedNext() may only be used after next().

<b>WEPRME1781</b>	<b>Could not find a source node in external subquery graph.</b>
<b>WEPRME1782</b>	<b>Error closing communication: {0}.</b>
<b>WEPRME1784</b>	<b>Failed to create directory {0}.</b>
<b>WEPRME1786</b>	<b>Repository contains an artefact of unexpected type {0} with owner {1} and identifier {2} that is using a pull query.</b>
<b>WEPRME1787</b>	<b>Unable to parse the given XML document: {0}.</b>
<b>Explanation</b>	An error occurred while parsing the given XML document.
<b>Action</b>	Check the underlying exception's message
<b>WEPRME1788</b>	<b>The query language {0} is not supported.</b>
<b>Explanation</b>	The specified query language parameter is not supported by this method.
<b>Action</b>	Change the query language parameter to one of the supported query languages, e.g., SQL or XML.
<b>WEPRME1789</b>	<b>The constructor of RemotePullSourceFactory requires two to four parameters ([host [port]] user password).</b>
<b>Explanation</b>	The constructor was called with the wrong number of String arguments.
<b>Action</b>	Call the constructor with the parameters (host, port, user, password) or (host, user, password) or (user, password).
<b>WEPRME1790</b>	<b>Unable to prepare the XML representation of the external subquery for the remote RTM system.</b>
<b>Explanation</b>	An error occurred when preparing the external subquery that should be executed by the remote RTM system.
<b>WEPRME1791</b>	<b>The external subquery does not have any registered source.</b>

---

<b>WEPRME1792</b>	<b>The external subquery does have more than one registered source.</b>
<b>WEPRME1793</b>	<b>Grouping set(s) not supported in this context.</b>
<b>Explanation</b>	A query contained a group by clause that specifies any of GROUPING SETS, ROLLUP, or CUBE, or an empty grouping set. This is not supported with either a SetCondition, nor with push processing mode.
<b>Action</b>	Modify query in order to obey the restriction on grouping sets.
<b>WEPRME1794</b>	<b>Grouping operation argument must be a group expression.</b>
<b>Explanation</b>	The query contains a grouping operation with an invalid argument. The arguments of a grouping operation must be grouping expressions.
<b>Action</b>	Modify query to contain only group expressions as arguments of a grouping operation.
<b>WEPRME1795</b>	<b>Grouping-set bit index may not be larger than number of group expressions. Was {0} &gt; {1}.</b>
<b>WEPRME1796</b>	<b>Grouping-set multiplicity may not be less than 1. Was {0}.</b>
<b>WEPRME1797</b>	<b>Grouping-sets do not cover all group expressions. Uncovered indices: {0}.</b>
<b>WEPRME1798</b>	<b>The GROUPING function currently supports only up to 64 arguments. Found {0}.</b>
<b>WEPRME1799</b>	<b>Parallel computation of GROUPING-SETS operator was interrupted.</b>
<b>WEPRME1800</b>	<b>Exactly one parameter expected.</b>
<b>WEPRME1801</b>	<b>Parameter type not supported by wrapped Aggregator.</b>

<b>WEPRMW1940</b>	<b>BigMemory was not able to execute the Search API query against a cache.</b>
<b>WEPRMW1946</b>	<b>Exact average value {0} is not accurately representable as a double. The BigDecimal representation is {1}.</b>
<b>WEPRMW1991</b>	<b>{0} push-down failed as there already is an Aggregation being pushed-down.</b>

# 25 Security Messages

---

<b>SINAZE0000</b>	<b>FileBasedAuthzStoreImpl: Storage cannot be loaded: {0}</b>
<b>Explanation</b>	Role storage (roles.txt) can not be loaded.
<b>Action</b>	Check the existance of the roles.txt file or the relevant storage.
<b>SINAZE0001</b>	<b>FileBasedAuthzStoreImpl: Storage location {0} is missing.</b>
<b>Explanation</b>	Role storage (roles.txt) is missing.
<b>Action</b>	The location passed to the service does not point to the existing file/storage. Check the availablity to the file.
<b>SINAZE0002</b>	<b>Cannot open storage file {0}</b>
<b>Explanation</b>	Role storage (roles.txt) cannot be opened.
<b>Action</b>	Check if the storage (file) is available and accessible.
<b>SINAZE0003</b>	<b>{0} is not readable!</b>
<b>Explanation</b>	Role storage (roles.txt) cannot be read.
<b>Action</b>	Check if the storage (file) has proper access rights, and whether it is not locked.
<b>SINAZE0004</b>	<b>Invalid entry in storage file. Invalid line in the storage file.</b>
<b>Explanation</b>	Role storage (roles.txt) syntax is not correct. Invalide entry is found.
<b>Action</b>	Check the storage (file) and validate the syntax.

<b>SINAZE0005</b>	<b>cannot open {0}</b>
<b>Explanation</b>	Role storage (roles.txt) cannot be opened/accessed.
<b>Action</b>	Check the storage (file).
<b>SINAZE0006</b>	<b>Cannot write to storage file {0}. File does not exist.</b>
<b>Explanation</b>	Cannot write to storage file. File does not exist.
<b>Action</b>	Check the availability of the storage/file.
<b>SINAZE0007</b>	<b>{0} is not writable!</b>
<b>Explanation</b>	Role storage (roles.txt) is not editable.
<b>Action</b>	Check access rights for the storage file.
<b>SINESE0000</b>	<b>/{0} not found.</b>
<b>Explanation</b>	Internal error. A file used by the product is missing.
<b>Action</b>	Contact SoftwareAG global support.
<b>SINESE0001</b>	<b>Error loading /{0}</b>
<b>Explanation</b>	Internal error. A file used by the product cannot be processed.
<b>Action</b>	Contact SoftwareAG global support.
<b>SINESE0002</b>	<b>/{0} not found.</b>
<b>Explanation</b>	Internal error. A validation properties file used by the product is missing.
<b>Action</b>	Contact SoftwareAG global support.
<b>SINESE0003</b>	<b>Error loading /{0}</b>
<b>Explanation</b>	Internal error. A validation properties file used by the product cannot be processed.
<b>Action</b>	Contact SoftwareAG global support.
<b>SINESE0004</b>	<b>Unknown System Type!</b>
<b>Explanation</b>	System type cannot be recognized.
<b>Action</b>	Contact SoftwareAG global support.

---

<b>SINESE0005</b>	<b>System property {0} is set, but file '{1}' doesn't exist</b>
<b>Explanation</b>	System property com.softwareag.sin.esapi.resources has a value that points to an invalid file or a file that doesn't have proper rights.
<b>Action</b>	Check the value of the system property com.softwareag.sin.esapi.resources and update it to point to a valid readable ESAPI.properties file.
<b>SINJCE0003</b>	<b>Initialize: JAAS property not set: {0}</b>
<b>Explanation</b>	The login module requires a 'DUMMY_USER_PROPERTY_URL' option representing a URL to the user properties file to load, but such option is not configured.
<b>Action</b>	Configure a 'DUMMY_USER_PROPERTY_URL' option for the DummyLoginModule. The option value must be a URL to a standard Java properties file containing users, groups and roles information.
<b>SINLDE0048</b>	<b>Authentication failed</b>
<b>Explanation</b>	LDAPLoginModule - authentication against LDAP failed. User name or password are wrong.
<b>Action</b>	Re-enter the user name and password. Check if their values are correct.
<b>SINLDE0056</b>	<b>No configured servers.</b>
<b>Explanation</b>	No configured servers were found.
<b>Action</b>	Ensure that the servers are configured properly.
<b>SINLDE0057</b>	<b>No configured servers.</b>
<b>Explanation</b>	No configured servers were found.
<b>Action</b>	Ensure that the servers are configured properly.
<b>SINLDE0058</b>	<b>No configured servers.</b>
<b>Explanation</b>	No configured servers were found.
<b>Action</b>	Ensure that the servers are configured properly.
<b>SINLDE0059</b>	<b>No configured servers.</b>
<b>Explanation</b>	No configured servers were found.
<b>Action</b>	Ensure that the servers are configured properly.

<b>SINLDE0060</b>	<b>LDAP keystore load error</b>
<b>Explanation</b>	An error occurred during extraction of a keystore. Possible causes are invalid URL, invalid algorithm, invalid certificate, invalid argument, etc.
<b>Action</b>	Ensure that the requested keystore and its URL are valid.
<b>SINLDE0061</b>	<b>LDAP truststore load error.</b>
<b>Explanation</b>	An error occurred during extraction of a truststore. Possible causes are invalid URL, invalid algorithm, invalid certificate, invalid argument, etc.
<b>Action</b>	Ensure that the requested truststore and its URL are valid.
<b>SINLDE0062</b>	<b>This principal {0} is with wrong type. Should be {1}</b>
<b>Explanation</b>	An error occurred while checking principal type. The principal type must be GROUP_TYPE.
<b>Action</b>	Change the principal type to GROUP_TYPE.
<b>SINLDW0063</b>	<b>More than one result returned uidprop: {0} uid: {1}</b>
<b>Explanation</b>	A single result is expected when getting DN from UID.
<b>Action</b>	Ensure that the UID contains a single DN corresponding to the search filter.
<b>SINLDW0064</b>	<b>More than one result returned gidprop: {0} gid: {1}</b>
<b>Explanation</b>	A single result is expected when getting DN from GID.
<b>Action</b>	Ensure that the GID contains a single DN corresponding to the search filter.
<b>SINLDW0066</b>	<b>Problem listing group properties.</b>
<b>Explanation</b>	An issue has occurred while listing group properties.
<b>Action</b>	Ensure that the group properties are valid.
<b>SINLDW0067</b>	<b>Empty [DN Prefix/Suffix]</b>
<b>Explanation</b>	Empty DN Prefix and DN Suffix were found when listing users during an LDAP configuration.
<b>Action</b>	Ensure that the DN Prefix and/or DN Suffix are present.

---

<b>SINLDW0070</b>	<b>Problem checking if DN is a group.</b>
<b>Explanation</b>	There was an issue while checking if the DN is a group when trying to get the group ID.
<b>Action</b>	Ensure that the DN is a group.
<b>SINLDW0071</b>	<b>Problem checking if dn is a user</b>
<b>Explanation</b>	There was an issue while checking if the DN is a user when trying to get the user ID
<b>Action</b>	Ensure that the DN is a user.
<b>SINLDW0081</b>	<b>Property {0} is unknown, but is found in server configuraion. Please check spelling of the properties.</b>
<b>Explanation</b>	A wrong property was found in the server configuration. Properties are case sensitive.
<b>Action</b>	Check the spelling and capitalization of the properties in the server configuration.
<b>SINLME0012</b>	<b>Initialize: failed to create X509CRL from the CRL URL: {0} {1}</b>
<b>Explanation</b>	CRLException was thrown during the initialization of the CRL. Possible reasons: the CRL file is broken or it is not in CRL format - <a href="http://docs.oracle.com/javase/7/docs/api/java/security/cert/X509CRL.html">http://docs.oracle.com/javase/7/docs/api/java/security/cert/X509CRL.html</a> .
<b>Action</b>	Double check in the JAAS configuration the value of the "crl_url" property and verify if the defined CRL file is a valid CRL file.
<b>SINLME0013</b>	<b>Initialize: failed to create URL or InputStream from the CRL URL: {0} {1}</b>
<b>Explanation</b>	IOException exception during initialization of the CRL. Possible reasons: the URL is broken or the file is not found.
<b>Action</b>	Double check in the JAAS configuration the value of the "crl_url" property and verify if this is a valid URL. If the CRL is on the file system, make sure the value for the "crl_url" begins with "file://".
<b>SINLME0014</b>	<b>Initialize: failed to create CRL - CRL location: {0} {1}</b>
<b>Explanation</b>	Unknown exception during initialization of the CRL.
<b>Action</b>	Double check the log files about the exception type and the explanation.

<b>SINLME0015</b>	<b>Initialize: CRL location is not specified.</b>
<b>Explanation</b>	The "check_crl_status" property is set to true but the "crl_url" property is not set up.
<b>Action</b>	1. Disable CRL check by setting up the "check_crl_status" property to false or by removing it; 2. Specify the "crl_url" property correctly.
<b>SINLME0190</b>	<b>login: unsupported callback {0}</b>
<b>Explanation</b>	Supplied Callback is not supported. Software AG Security Infrastructure supports only SagCredentialCallback, PasswordCallback and NameCallback.
<b>Action</b>	Check which Callback is used.
<b>SINLME0191</b>	<b>Engine failed to load with options: {0}</b>
<b>Explanation</b>	Authentication failed in RoleLoginModule. Storage is not loaded properly.
<b>Action</b>	Check logs for more details about the reasons.
<b>SINLME0192</b>	<b>Provider class cannot be found {0}</b>
<b>Explanation</b>	Role storage implementation provider is not found.
<b>Action</b>	Check the value of the "provider_class" property in the JAAS configuration file.
<b>SINLME0193</b>	<b>Provider class cannot be instantiated {0}</b>
<b>Explanation</b>	Role storage implementation provider cannot be instantiated.
<b>Action</b>	Check the value of the "provider_class" property in the JAAS configuration file.
<b>SINLME0194</b>	<b>Provider class cannot be accessible {0}</b>
<b>Explanation</b>	Role storage implementation provider class is not accessible.
<b>Action</b>	Check the value of the "provider_class" property in JAAS configuration file. Check classloaders, if the requested provider class is available.
<b>SINLME0195</b>	<b>resolveArtifact: ArtifactParseException {0}</b>
<b>Explanation</b>	An error occurred while parsing the artifact.
<b>Action</b>	Check the JAAS configuration.

---

<b>SINLME0197</b>	<b>resolveArtifact: ArtifactParserException {0}</b>
<b>Explanation</b>	An error occurred while parsing the artifact.
<b>Action</b>	Check the JAAS configuration.
<b>SINLME0198</b>	<b>resolveArtifact: Exception {0}</b>
<b>Explanation</b>	An error occurred while parsing the artifact.
<b>Action</b>	Check the JAAS configuration.
<b>SINLME0199</b>	<b>resolveArtifact: no name could be found in the SAML response. Returning NULL.</b>
<b>Explanation</b>	No name was found in the parsed artifact and the resolving failed.
<b>Action</b>	Check the JAAS configuration and the artifact creator.
<b>SINLME0204</b>	<b>authenticate() failed. Principal not available in the servlet request.</b>
<b>Explanation</b>	The configuration requires a principal, but the HTTP request does not contain one.
<b>Action</b>	Check the JAAS configuration.
<b>SINLME0205</b>	<b>authenticate() failed. X509Certificate Chain is not available in the servlet request.</b>
<b>Explanation</b>	The configuration requires a certificate, but the HTTP request does not contain one.
<b>Action</b>	Check the JAAS configuration.
<b>SINLME0206</b>	<b>authenticate() failed. SAML Artifact is not available in the servlet request.</b>
<b>Explanation</b>	The configuration requires a SAML artifact, but the HTTP request does not contain one.
<b>Action</b>	Check the JAAS configuration.
<b>SINLME0207</b>	<b>authenticate() failed. SAML Artifact header field name is not set in the JAAS configuration.</b>
<b>Explanation</b>	The configuration expects to find the HTTP header field used to search for a SAML Artifact, but the HTTP header is not set.
<b>Action</b>	Check the JAAS configuration.

<b>SINLME0208</b>	<b>authenticate() failed. Netegrity SiteMinder is not available in the servlet request.</b>
<b>Explanation</b>	The configuration requires a Netegrity SiteMinder, but the HTTP request does not contain one.
<b>Action</b>	Check the JAAS configuration.
<b>SINLME0209</b>	<b>authenticate() failed. Netegrity SiteMinder header field name is not set in the JAAS configuration.</b>
<b>Explanation</b>	The configuration expects to find the HTTP header field used to search for a Netegrity SiteMinder, but the HTTP header is not set.
<b>Action</b>	Check the JAAS configuration.
<b>SINLME0210</b>	<b>authenticate() failed. '{0}' custom header is not available in the servlet request.</b>
<b>Explanation</b>	The configuration requires a custom header name, but the HTTP request does not contain one.
<b>Action</b>	Check the JAAS configuration.
<b>SINLME0211</b>	<b>authenticate() failed. Custom header name property is not set in the JAAS configuration.</b>
<b>Explanation</b>	The configuration expects to find the HTTP header field used to search for a custom header, but the HTTP header is not set.
<b>Action</b>	Check the JAAS configuration.
<b>SINLME0212</b>	<b>authenticate: SAML Assertion identity provider key not available. Authentication failed.</b>
<b>Explanation</b>	The SAML Assertion identity provider key is not available.
<b>Action</b>	Check the JAAS configuration.
<b>SINLME0213</b>	<b>authenticate: SAML Assertion validation process failed. Authentication failed.</b>
<b>Explanation</b>	The SAML Assertion validation process failed.
<b>Action</b>	Check the JAAS configuration.
<b>SINLME0214</b>	<b>authenticate: no username returned. Authentication failed.</b>
<b>Explanation</b>	The SAML assertion does not contain a username.
<b>Action</b>	Check the JAAS configuration.

---

<b>SINLME0215</b>	<b>initConfiguration: failed!</b>
<b>Explanation</b>	An error was found in the LoginModule configuration.
<b>Action</b>	Check the JAAS configuration.
<b>SINLME0216</b>	<b>Initialize: trust store location is not specified. The default one will be used: {0}; trust store type: {1}</b>
<b>Explanation</b>	The trust store location is not specified and the default one will be used.
<b>Action</b>	Check the JAAS configuration.
<b>SINLME0217</b>	<b>Initialize: failed to create KeyStore from the trust store URL: {0}, keystore type: {1}</b>
<b>Explanation</b>	Failed to create a KeyStore from the trust store url.
<b>Action</b>	Check the JAAS configuration.
<b>SINLME0218</b>	<b>Failed to read certificate from trust store!</b>
<b>Explanation</b>	Failed to read the certificate from the trust store.
<b>Action</b>	Check the JAAS configuration.
<b>SINLME0219</b>	<b>validateAssertion: no name could be found in the SAML assertion</b>
<b>Explanation</b>	The SAML assertion does not contain a username.
<b>Action</b>	Check the JAAS configuration.
<b>SINLME0220</b>	<b>authenticate() failed. Basic authentication information is not available in the servlet request.</b>
<b>Explanation</b>	The configuration requires Basic authentication information, but the HTTP request does not contain it.
<b>Action</b>	Check the JAAS configuration.
<b>SINLME0221</b>	<b>authenticate() failed. The Authorization header required for Basic authentication is not available in the servlet request.</b>
<b>Explanation</b>	The configuration expects to find the Authorization HTTP header, but the HTTP header is not set.
<b>Action</b>	Check the JAAS configuration.

<b>SINLME0222</b>	<b>initConfiguration: failed! Can not load the key store {0}</b>
<b>Explanation</b>	Failed to initiate the configuration on the AppleDSLoginModule. Cannot load truststore.
<b>Action</b>	Verify that the location of the truststore is valid, the file is not corrupted and password is not missing or invalid.
<b>SINLME0223</b>	<b>Error in parsing the HTTP header cookie: {0}</b>
<b>Explanation</b>	An error occurred while authenticating with the AppleDSLoginModule.
<b>Action</b>	Make sure that the HTTP request is valid and contains all required headers.
<b>SINLME0224</b>	<b>authenticate: There is no cookie header in the HttpServletRequest.</b>
<b>Explanation</b>	While trying to authenticate with AppleDSLoginModule, the cookie header could not be found in the HttpServletRequest.
<b>Action</b>	Make sure that the HTTP request is valid and contains all required headers.
<b>SINLME0225</b>	<b>Cookie is not found in cookie header.</b>
<b>Explanation</b>	While trying to authenticate with AppleDSLoginModule, the cookie could not be found in the cookie header.
<b>Action</b>	Make sure that the HTTP request is valid and contains all required headers.
<b>SINLME0226</b>	<b>Cannot read response data</b>
<b>Explanation</b>	A read error occurred while trying to parse the input content.
<b>Action</b>	Make sure that the HTTP response does not contain corrupted data.
<b>SINLME0227</b>	<b>The personal id - {0}, is not returned by the server</b>
<b>Explanation</b>	The user principal does not contain a name attribute. The name attribute is expected from the HTTP response.
<b>Action</b>	Make sure that HTTP request is present and contains all necessary data. Check whether the login module is configured with the proper personal ID.
<b>SINLME0228</b>	<b>AppleUrlCreator could not be created. Invalid parameters.</b>
<b>Explanation</b>	An error has occurred while trying to create an instance of AppleUrlCreator. The input parameters are NULL.
<b>Action</b>	Make sure that HTTP request is present and contains all necessary data. Check whether the login module is configured with the proper cookie header.

---

<b>SINLME0229</b>	<b>constructURL: Neither URL ({0}), nor URL without query ({1}) is specified</b>
<b>Explanation</b>	An error occurred when trying to construct a URL, because the URL is not specified in the configuration.
<b>Action</b>	Make sure you correctly specify an URL in the configuration.
<b>SINLME0230</b>	<b>constructURL: Application admin password ({0}) is required!</b>
<b>Explanation</b>	An error occurred when trying to construct a URL, because the application administrator password is not specified in the configuration.
<b>Action</b>	Make sure you correctly specify the application administrator password in the configuration.
<b>SINLME0231</b>	<b>Application ID ({0}) is not specified as config property.</b>
<b>Explanation</b>	If the auth URL contains an <appId> placeholder, the application ID be must also be specified as a property.
<b>Action</b>	Set the application ID property.
<b>SINLME0232</b>	<b>Application ID ({0}) is not specified in the URL</b>
<b>Explanation</b>	The application ID must be contained in the authentication URL.
<b>Action</b>	Make sure that the application ID is contained in the URL.
<b>SINLME0233</b>	<b>The IP placeholder - {0}, could not be found in the URL</b>
<b>Explanation</b>	The auth URL must contain the IP placeholder.
<b>Action</b>	Make sure that the machine IP is contained in the URL.
<b>SINLME0234</b>	<b>The application admin password placeholder - {0}, could not be found in the URL</b>
<b>Explanation</b>	The auth URL must contain the application admin password placeholder.
<b>Action</b>	Make sure that the application admin password placeholder is contained in the URL.
<b>SINLME0235</b>	<b>The cookie placeholder - {0}, could not be found in the URL</b>
<b>Explanation</b>	The auth URL must contain the cookie placeholder.
<b>Action</b>	Make sure that the cookie placeholder is present in the URL.

<b>SINLME0236</b>	<b>Cannot create URL from {0}</b>
<b>Explanation</b>	An error occurred while trying to create a URL from the auth URL.
<b>Action</b>	Make sure that the authentication URL is valid and does not contain any restricted characters.
<b>SINLME0237</b>	<b>CookieValidator: Validation failed while reading URL data.</b>
<b>Explanation</b>	The URL validation failed while reading URL data.
<b>Action</b>	Make sure that the response from the URL does not contains corrupted data.
<b>SINLME0238</b>	<b>Validation failed! The URL is not specified.</b>
<b>Explanation</b>	The URL validation failed - the URL is NULL.
<b>Action</b>	Make sure that the provided authentication URL is valid.
<b>SINLME0241</b>	<b>Validation failed! Invalid line in the HTTP response.</b>
<b>Explanation</b>	Content validation failed due to an invalid line in the HTTP response.
<b>Action</b>	Make sure that the HTTP response does not contain invalid data.
<b>SINLME0242</b>	<b>Validation failed! Status code is {0}</b>
<b>Explanation</b>	Content validation has failed.
<b>Action</b>	Make sure that the HTTP response is successful and has SUCCESS status code.
<b>SINLME0243</b>	<b>Required func and returned values are different</b>
<b>Explanation</b>	The check of the required principal fails due to inconsistency between the required func and the returned values.
<b>Action</b>	Make sure that the property attributes of the principal are not null.
<b>SINLME0244</b>	<b>login: username not found: {0}</b>
<b>Explanation</b>	The configured properties file that represents the user store of the login module does not contain an entry for the specified user.
<b>Action</b>	The properties file that represents the user store of the login module must contain a 'userid's' property with a comma-separated list of user identifiers. For each identifier, a separate <identifier>.name property must be configured which represents the human-readable user name. If the username is not found, this means that respective configuration (user identifier and/or name) is not present in the properties file. If the user should be allowed to log in, then this user information must be added to the properties file.

---

<b>SINLME0245</b>	<b>login: passwords don't match for user {0}</b>
<b>Explanation</b>	The specified password does not match the configured password for the user.
<b>Action</b>	Double-check the specified password. The password for the user is configured via the "<userid>.passhash" property in the properties file configured for the login module. The value of the property is the SHA-1 digest of the plain text password encoded as a hexadecimal number.
<b>SINLME0246</b>	<b>login: SHA-1 hashing algorithm not found</b>
<b>Explanation</b>	The Java virtual machine does not contain a security provider which supports the SHA-1 hashing algorithm.
<b>Action</b>	Make sure you use a Java version which supports SHA-1 hashing algorithm or configure a Java security provider which supports this algorithm.
<b>SINLME0247</b>	<b>Resource not found: {0}</b>
<b>Explanation</b>	The specified resource file cannot be found in the classpath.
<b>Action</b>	Please check if the security infrastructure java archives are not corrupted and whether they contain the mentioned resource.
<b>SINRME0139</b>	<b>Wrong password format.</b>
<b>Explanation</b>	Password entry for the user is not correct. It must start with "\$6a\$" or "\$6\$".
<b>Action</b>	Check users.txt file.
<b>SINRME0140</b>	<b>Duplicates in user name.</b>
<b>Explanation</b>	User names are duplicated in the users.txt.
<b>Action</b>	Check the users.txt file that is used.
<b>SINRME0141</b>	<b>Duplicates in user name.</b>
<b>Explanation</b>	User names are duplicated in the users.txt.
<b>Action</b>	Check the users.txt file that is used.
<b>SINRME0142</b>	<b>Failed to initialize CipherUtil.</b>
<b>Explanation</b>	CipherUtil cannot be initialized due to some of following reasons: missing or invalid algorithm or key; invalid padding scheme; provider doesn't support a CipherSpi implementation for the specified algorithm; provider doesn't support a MacSpi implementation for the specified algorithm; provider doesn't support a SecretKeyFactorySpi implementation for the specified algorithm; the given key specification is inappropriate for this secret-key factory to produce a secret key; the given key is inappropriate for initializing MAC.
<b>Action</b>	General security error. Contact SoftwareAG global support.

<b>SINSCE0000</b>	<b>URL is missing in configuration!</b>
<b>Explanation</b>	Store cannot be added due to missing URL in the configuration.
<b>Action</b>	Ensure that a valid URL is specified.
<b>SINSOE0000</b>	<b>Cannot initialize Web SSO config context.</b>
<b>Explanation</b>	The Web SSO configuration could not be properly initialized.
<b>Action</b>	Make sure that your configuration is valid.
<b>SINSOE0001</b>	<b>Cannot initialize Web SSO config context.</b>
<b>Explanation</b>	The Web SSO configuration could not be properly initialized.
<b>Action</b>	Make sure that your configuration is valid.
<b>SINSOE0002</b>	<b>Failed to initialize Saml2 engine - all SAML operations will fail.</b>
<b>Explanation</b>	Internal error. The Saml2 engine failed to initialize properly. All SAML operations will fail.
<b>Action</b>	Contact SoftwareAG global support.
<b>SINSOE0003</b>	<b>Error initializing keystore.</b>
<b>Explanation</b>	Keystore cannot be found or the credentials are wrong.
<b>Action</b>	Ensure that the keystore exists and you have provided valid credentials.
<b>SINSOE0004</b>	<b>Error initializing keystore.</b>
<b>Explanation</b>	Keystore cannot be found or the credentials are wrong.
<b>Action</b>	Ensure that the keystore exists and you have provided valid credentials.
<b>SINSOE0005</b>	<b>Cannot load IDPSSODescriptor from metadata.</b>
<b>Explanation</b>	The error occurred because of invalid IDP metadata.
<b>Action</b>	Make sure that the provided IDP metadata is correct and has the SSO services defined.
<b>SINSOE0006</b>	<b>Cannot load SPSSODescriptor from metadata.</b>
<b>Explanation</b>	The error occurred because of invalid SP metadata.
<b>Action</b>	Make sure that the provided SP metadata is correct and has the consumer services defined.

---

<b>SINSOE0007</b>	<b>IDP cannot be determined.</b>
<b>Explanation</b>	IDP is missing in the metadata.
<b>Action</b>	Ensure that you have provided IDP metadata.
<b>SINSOE0008</b>	<b>Cannot get dynamic configuration.</b>
<b>Explanation</b>	Internal error. The service that provides configurations cannot be obtained.
<b>Action</b>	Contact SoftwareAG global support.
<b>SINSOE0009</b>	<b>The configuration could not be found.</b>
<b>Explanation</b>	Internal error. The service that provides configurations cannot be obtained.
<b>Action</b>	Contact SoftwareAG global support.
<b>SINSOE0010</b>	<b>The configuration could not be found.</b>
<b>Explanation</b>	Internal error. The service that provides configurations cannot be obtained.
<b>Action</b>	Contact SoftwareAG global support.
<b>SINSOE0011</b>	<b>Configuration Admin service is not available.</b>
<b>Explanation</b>	Internal error. The service that provides configurations cannot be obtained.
<b>Action</b>	Contact SoftwareAG global support.
<b>SINSOE0012</b>	<b>Can't obtain key from the keystore or generate key info for credential: {0}, {1}</b>
<b>Explanation</b>	A key cannot be obtained from the keystore with the provided credentials.
<b>Action</b>	Make sure the provided credentials are valid.
<b>SINSOW0013</b>	<b>Password for key alias: '{0}' is missing. This might lead to failure to load the respective key from key store</b>
<b>Explanation</b>	A password is not provided for the given alias.
<b>Action</b>	Check your configuration and add a password for the specified alias.
<b>SINSOW0014</b>	<b>Cannot obtain SPSSODescriptor. Default Web SSO profile will be used.</b>
<b>Explanation</b>	Cannot fetch metadata for the given provider (SPSSODescriptor).
<b>Action</b>	Check whether the Service Provider metadata contains the required data if the usage of the default value is not desired.

**SINSSE0022**      **SSOS properties could not be updated after sso properties file creation. Restart may be needed.**

**Explanation**      SSO Service properties could not be updated after sso properties file creation.

**Action**      Restart of the SSO service may be needed.

**SINSSE0023**      **CacheManager cannot be instantiated. {0}**

**Explanation**      CacheManager cannot be instantiated. The service will work without cache. This could cause some performance degradation.

**Action**      Check the value of the "com.softwareag.security.idp.ehcache.location" property in the com.softwareag.sso.pid.properties dynamic configuration file.

**SINSSE0024**      **Ehcache cannot be initialized. cacheManager = {0}**

**Explanation**      Ehcache cannot be initialized. The cachemanager in not available.

**Action**      Switch logging to debug and check the log file for more details.

**SINSSE0025**      **Ehcache in null**

**Explanation**      Ehcache in null.

**Action**      Switch logging to debug and check the log file for more details.

**SINSSE0026**      **Return NULL. Missing user ID in the assertion.**

**Explanation**      Wrong SAML assertion format. The required ID attribute is missing.

**Action**      Check the SAML assertion syntax.

**SINSSE0027**      **parseAssertion(String) throws SAMLException {0}**

**Explanation**      Parsing of the SAML assertion failed.

**Action**      Activate debug logging and check log file for more details.

**SINSSE0028**      **Return NULL. Missing user ID in the assertion.**

**Explanation**      Wrong SAML assertion format. The required ID attribute is missing.

**Action**      Check the SAML assertion syntax.

---

<b>SINSSE0029</b>	<b>{0}</b>
<b>Explanation</b>	Parsing of the SAML assertion failed.
<b>Action</b>	Activate debug logging and check log file for more details.
<b>SINSSE0030</b>	<b>generateAssertion() throws GeneralSecurityException {0}</b>
<b>Explanation</b>	Generation of the SAML assertion failed with GeneralSecurityException.
<b>Action</b>	Activate debug logging and check log file for more details.
<b>SINSSE0031</b>	<b>generateAssertion() throws XMLSignatureException {0}</b>
<b>Explanation</b>	Generation of the SAML assertion failed with XMLSignatureException.
<b>Action</b>	Activate debug logging and check log file for more details.
<b>SINSSE0032</b>	<b>generateAssertion() throws MarshalException {0}</b>
<b>Explanation</b>	Generation of the SAML assertion failed with MarshalException.
<b>Action</b>	Activate debug logging and check log file for more details.
<b>SINSSE0033</b>	<b>generateAssertion() throws MarshallingException {0}</b>
<b>Explanation</b>	Generation of the SAML assertion failed with MarshallingException.
<b>Action</b>	Activate debug logging and check log file for more details.
<b>SINSSE0034</b>	<b>Error loading truststore or keystore. Services will be unregistered.</b>
<b>Explanation</b>	Keystore or truststore cannot be found or the credentials are missing.
<b>Action</b>	Ensure that the keystore/truststore exists and you have provided valid credentials.
<b>SINSSE0035</b>	<b>Error loading truststore. Services will be unregistered.</b>
<b>Explanation</b>	Truststore cannot be found or the credentials are missing.
<b>Action</b>	Ensure that the truststore exists and you have provided valid credentials.
<b>SINSSE0036</b>	<b>Error during STS API initialization: {0}</b>
<b>Explanation</b>	An algorithm is not supported by the JVM.
<b>Action</b>	Ensure that unlimited strength JCE (Java Cryptographic Extension) is available on the system. If it is available, contact Software AG Global Support.

<b>SINSSE0037</b>	<b>Error during AuthResponse generation: {0}</b>
<b>Explanation</b>	A signature cannot be created or the element being signed cannot be marshalled.
<b>Action</b>	Ensure that the identity provider keystore is available and contains a signing key with the configured alias and credentials.
<b>SINSSE0038</b>	<b>Unsupported request type - expected AuthnRequest but was {0}</b>
<b>Explanation</b>	The received request is not a SAML AuthnRequest.
<b>Action</b>	Ensure the received SAML message is a valid SAML AuthnRequest.
<b>SINSSE0039</b>	<b>Error during request parsing: {0}</b>
<b>Explanation</b>	The received SAML AuthRequest cannot be parsed.
<b>Action</b>	Ensure the received XML message is a valid SAML AuthnRequest message.
<b>SINSSE0040</b>	<b>Missing signature in the request, ID: {0}</b>
<b>Explanation</b>	The received SAML AuthnRequest does not contain a signature.
<b>Action</b>	Ensure the received SAML AuthnRequest is signed by the respective relying party issuing the request.
<b>SINSSE0041</b>	<b>Insufficient input data: destination not provided!</b>
<b>Explanation</b>	A SAML response cannot be generated due to missing destination URL.
<b>Action</b>	Ensure a valid destination URL is provided when generating the SAML Response message.
<b>SINSSE0042</b>	<b>Insufficient input data: userId not provided!</b>
<b>Explanation</b>	A SAML response cannot be generated due to missing user ID.
<b>Action</b>	Ensure valid user ID is provided when generating SAML Response. The user ID is required to generate the SAML assertion's subject information.
<b>SINSSE0044</b>	<b>Missing request ID</b>
<b>Explanation</b>	Validation of SAML AuthRequest message is failing due to missing ID attribute.
<b>Action</b>	Ensure the SAML AuthnRequest message contains a valid ID attribute.

---

<b>SINSSE0045</b>	<b>Missing request issue instant</b>
<b>Explanation</b>	Validation of SAML AuthnRequest fails due to missing IssueInstant attribute.
<b>Action</b>	Ensure the SAML AuthnRequest message contains a valid IssueInstant attribute, which represents the time instant of issue for the request.
<b>SINSSE0046</b>	<b>SAML AuthnRequest version is not SAML 2.0</b>
<b>Explanation</b>	The SAML AuthnRequest has invalid Version attribute, the only supported version is SAML 2.0
<b>Action</b>	Ensure SAML AuthnRequest message uses SAML 2.0 version.
<b>SINSSE0047</b>	<b>Missing issuer in the request.</b>
<b>Explanation</b>	SAML AuthnRequest message does not specify an issuer.
<b>Action</b>	Ensure the SAML AuthnRequest message specifies an issuer, which identifies the entity that generated the request message.
<b>SINSSE0048</b>	<b>No relying party configuration found for entityId {0}</b>
<b>Explanation</b>	The identity provider is not configured with a relying party for the given entity identifier.
<b>Action</b>	Check if the relying party identified by the specified entityId is trusted, and if so, configure a relying party with this identifier in the identity provider configuration.
<b>SINSSE0049</b>	<b>Unexpected signature algorithm: {0}</b>
<b>Explanation</b>	The signature algorithm of the received SAML AuthnRequest message does not match the signature algorithm configured for the respective relying party in the identity provider configuration.
<b>Action</b>	The expected relying party signature algorithm must be specified in the relying party configuration. To disable checking the signature algorithm, do not configure a signature algorithm for the relying party.
<b>SINSXE0000</b>	<b>Initialize: keystore password is not specified.</b>
<b>Explanation</b>	Keystore password is missing.
<b>Action</b>	Make sure that the keystore password is specified.

<b>SINSXE0001</b>	<b>No token returned from IAF.</b>
<b>Explanation</b>	Internal error.
<b>Action</b>	Contact SoftwareAG global support.
<b>SINSXE0002</b>	<b>Signature creation failed.</b>
<b>Explanation</b>	Certificate cannot be found or error occurred during signing operation.
<b>Action</b>	Make sure that the provided certificate is valid.
<b>SINSXE0003</b>	<b>Unsupported encoding.</b>
<b>Explanation</b>	Internal error. Encoding with not supported charset.
<b>Action</b>	Contact SoftwareAG global support.
<b>SINSXE0004</b>	<b>verifySignature: Given certificate is NULL</b>
<b>Explanation</b>	Cannot verify given signature. The certificate is missing.
<b>Action</b>	Set certificate for verification of the signature.
<b>SINSXE0005</b>	<b>Utility path is not specified</b>
<b>Explanation</b>	The utility path is not specified in the JAAS configuration.
<b>Action</b>	Make sure that the utility path is specified in the JAAS configuration.
<b>SINSXE0006</b>	<b>RMI Port must be a valid integer.</b>
<b>Explanation</b>	The specified RMI port is invalid.
<b>Action</b>	Set a valid RMI port in the configuration.
<b>SINSXE0007</b>	<b>Remote classes are not currently bound</b>
<b>Explanation</b>	Internal error.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0008</b>	<b>Problem with clearing credentials</b>
<b>Explanation</b>	Internal error. User credentials cannot be cleared. Logout operation failed.
<b>Action</b>	Contact Software AG global support.

---

<b>SINSXE0009</b>	<b>Problem creating repository manager</b>
<b>Explanation</b>	Internal error. RMI registry function was not found or could not obtain remote reference to the repository.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0010</b>	<b>TEMPLATE_SECTION must not be null or empty.</b>
<b>Explanation</b>	Template section option is not specified in the JAAS configuration.
<b>Action</b>	Make sure that the template section option is specified in the JAAS configuration.
<b>SINSXE0011</b>	<b>Error opening SSX Repository</b>
<b>Explanation</b>	The error is thrown by the SSX repository during opening operation.
<b>Action</b>	Make sure that the provided SSX parameters are valid.
<b>SINSXE0012</b>	<b>Cannot obtain lock</b>
<b>Explanation</b>	Internal error. An interruption occurred when obtaining the remote registry.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0013</b>	<b>Cannot obtain lock</b>
<b>Explanation</b>	Internal error. An interruption occurred when obtaining the remote registry.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0014</b>	<b>Cannot obtain lock</b>
<b>Explanation</b>	Internal error. An interruption occurred when obtaining groups from the repository.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0015</b>	<b>Cannot obtain lock</b>
<b>Explanation</b>	Internal error. An interruption occurred when obtaining users from the repository.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0016</b>	<b>Cannot obtain lock</b>
<b>Explanation</b>	Internal error. An interruption occurred when obtaining user groups from the repository.
<b>Action</b>	Contact Software AG global support.

<b>SINSXE0017</b>	<b>Cannot obtain lock</b>
<b>Explanation</b>	Internal error. An interruption occurred when obtaining the users in a group from the repository.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0018</b>	<b>Cannot obtain lock</b>
<b>Explanation</b>	Internal error. An interruption occurred when obtaining the principles in a group from the repository.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0019</b>	<b>Cannot obtain lock</b>
<b>Explanation</b>	Internal error. An interruption occurred when checking if a group exists in the repository.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0020</b>	<b>Cannot obtain lock</b>
<b>Explanation</b>	Internal error. An interruption occurred when checking if a user exists in the repository.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0021</b>	<b>Cannot obtain lock</b>
<b>Explanation</b>	Internal error. An interruption occurred when obtaining user principals from the repository.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0022</b>	<b>Cannot obtain lock</b>
<b>Explanation</b>	Internal error. An interruption occurred when obtaining group principals from the repository.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0023</b>	<b>Cannot obtain lock</b>
<b>Explanation</b>	Internal error. An interruption occurred when obtaining the repository type.
<b>Action</b>	Contact Software AG global support.

---

<b>SINSXE0024</b>	<b>Cannot obtain lock</b>
<b>Explanation</b>	Internal error. An interruption occurred when specifying page size.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0025</b>	<b>Cannot obtain lock</b>
<b>Explanation</b>	Internal error. An interruption occurred when specifying principals data to IAF.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0026</b>	<b>LoadAccessList: Cannot read file {0} {1}</b>
<b>Explanation</b>	The URL of the load access list is not provided.
<b>Action</b>	Make sure that the "load access list" command line option is present.
<b>SINSXE0027</b>	<b>This client has no permissions for authentication. Please contact with your RMI server administrator.</b>
<b>Explanation</b>	The client has no permissions for authentication.
<b>Action</b>	Contact your RMI server administrator.
<b>SINSXE0028</b>	<b>authenticate: could not logout.</b>
<b>Explanation</b>	Internal error. Logout operation failed.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0029</b>	<b>authenticate: could not login the user with credentials: {0} {1}</b>
<b>Explanation</b>	Logon failed.
<b>Action</b>	Make sure the used credentials are valid.
<b>SINSXE0030</b>	<b>logout: user data parameter is null during the remote logout!</b>
<b>Explanation</b>	Internal error. Logout operaiton failed. User doesn't exist.
<b>Action</b>	Try again later, if that doesn't solve the issue, contact Software AG global support.
<b>SINSXE0031</b>	<b>logoutUser: could not logout the user: {0} {1}</b>
<b>Explanation</b>	Internal error. Logout operation failed.
<b>Action</b>	Contact Software AG global support.

<b>SINSXE0032</b>	<b>logoutUser: this context could not be fund in the cache. User data: {0}</b>
<b>Explanation</b>	Internal error. Context is missing from the cache.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0033</b>	<b>Could not obtain lock</b>
<b>Explanation</b>	Internal error. An interruption occured when obtaining the remote registry.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0034</b>	<b>Could not obtain lock</b>
<b>Explanation</b>	Internal error. An interruption occured when obtaining an access token frim the remote token manager.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0035</b>	<b>Invalid parameter!</b>
<b>Explanation</b>	Passed arguments during initialization of the remote SSX server are not registry port or configuration file.
<b>Action</b>	Make sure that either URL configuration or port number is present in the command line options.
<b>SINSXE0036</b>	<b>key store password parameter is missing</b>
<b>Explanation</b>	Keystore password is missing.
<b>Action</b>	Provide valid keystore password.
<b>SINSXE0037</b>	<b>Error starting the server</b>
<b>Explanation</b>	Error occurred during initialization/start of the server.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0038</b>	<b>Error running the server</b>
<b>Explanation</b>	Internal error.
<b>Action</b>	Contact global Software AG support.

---

<b>SINSXE0039</b>	<b>Error unbinding services</b>
<b>Explanation</b>	Error occurred during shutdown of the server.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0040</b>	<b>Can't get all groups: {0}</b>
<b>Explanation</b>	Groups cannot be obtained. The SSX repository cannot be opened.
<b>Action</b>	Make sure that the provided SSX repository parameters are valid. If the parameters are correct, contact global Software AG support.
<b>SINSXE0041</b>	<b>This principal {0} is with wrong.</b>
<b>Explanation</b>	Internal error. The principal has wrong user type.
<b>Action</b>	Contact global Software AG support.
<b>SINSXE0042</b>	<b>This {0} has wrong type</b>
<b>Explanation</b>	This {0} has wrong user type.
<b>Action</b>	Contact global Software AG support.
<b>SINSXE0043</b>	<b>This {0} is not user.</b>
<b>Explanation</b>	Error when verifying user.
<b>Action</b>	Contact global Software AG support.
<b>SINSXE0044</b>	<b>This principal: {0} has wrong type</b>
<b>Explanation</b>	Wrong principal type.
<b>Action</b>	Contact global Software AG support.
<b>SINSXE0045</b>	<b>This {0} is not group.</b>
<b>Explanation</b>	Error when verifying group.
<b>Action</b>	Contact global Software AG support.
<b>SINSXE0046</b>	<b>This method is not supported!</b>
<b>Explanation</b>	Specifying page size is not yet supported.
<b>Action</b>	Do not use this method.

<b>SINSXE0047</b>	<b>Input data cannot be null</b>
<b>Explanation</b>	Input data (password) is missing or incorrect.
<b>Action</b>	Make sure that the input data (password) is correct.
<b>SINSXE0048</b>	<b>Token type is not IAF token or artifact.</b>
<b>Explanation</b>	Access token is invalid, it does not contain a IAF token or artifact.
<b>Action</b>	Contact global Software AG support.
<b>SINSXE0049</b>	<b>Cannot retrieve access token {0}</b>
<b>Explanation</b>	Internal error. Repository cannot be opened.
<b>Action</b>	Contact global Software AG support.
<b>SINSXE0050</b>	<b>Can not get manifest file.</b>
<b>Explanation</b>	Cannot obtain the manifest of the SSX jar file.
<b>Action</b>	Contact Software AG global support.
<b>SINSXE0051</b>	<b>Can not receive user groups properties.</b>
<b>Explanation</b>	Internal error. Native code executed. Cannot receive user groups properties.
<b>Action</b>	Contact global Software AG support.
<b>SINSXE0052</b>	<b>Can not receive user properties.</b>
<b>Explanation</b>	Internal error. Native code executed. Cannot receive user properties.
<b>Action</b>	Contact global Software AG support.
<b>SINSXE0053</b>	<b>Can not receive group properties.</b>
<b>Explanation</b>	Internal error. Native code executed. Cannot receive group properties.
<b>Action</b>	Contact global Software AG support.
<b>SINSXE0054</b>	<b>Server not responding for a long time.</b>
<b>Explanation</b>	Connectivity issues.
<b>Action</b>	Contact global Software AG support.

<b>SINSXE0055</b>	<b>There is no SAG User Database Module in the manifest file.</b>
<b>Explanation</b>	The manifest file of the Software AG security extension java archive does not contain a 'SAG User Database Module' attribute section.
<b>Action</b>	Contact Software AG Global Support.

---

<b>INOAAE0001</b>	<b>Function not selected : name</b>
<b>Explanation</b>	The server extension function is not selected so that the parameter cannot be modified.
<b>Action</b>	Select the server extension function first.
<b>INOAAE0004</b>	<b>Cannot modify journal space</b>
<b>Explanation</b>	The journal space of the specified database cannot be modified.
<b>Action</b>	Check whether the data space is already in use. Check the database location for remaining disk space.
<b>INOAAE0018</b>	<b>Port number 'port' for 'name' indication</b>
<b>Explanation</b>	The port number cannot be used.
<b>Action</b>	Change the port parameter value.
<b>INOAAE0019</b>	<b>fail - delete database dbname read only parameter is set</b>
<b>Explanation</b>	The database parameter "read only" must be cleared before the database can be deleted.
<b>Action</b>	Remove the read only flag in the database parameters.
<b>INOAAE0020</b>	<b>Modify Email notification properties failed</b>
<b>Explanation</b>	The modification of Email notification properties failed.
<b>Action</b>	Look at the detailed error message and action.

<b>INOAAE0022</b>	<b>mvcount spaces successfully moved from oldloc to newloc, one or more spaces couldn't be moved because of errors/warnings</b>
<b>Explanation</b>	The given number of spaces were moved successfully but one or more spaces could not be moved because an error or a warning occurred during the execution of the command.
<b>Action</b>	Find out why spaces were not moved and try to move them via the 'Move' command of the database spaces entry.
<b>INOAAE0024</b>	<b>Change License file failed</b>
<b>Explanation</b>	Change license file failed.
<b>Action</b>	Check the license file.
<b>INOAAE0026</b>	<b>The parallel option is not supported for incremental backups</b>
<b>Explanation</b>	Options "parallel" and "incremental" are mutually exclusive.
<b>Action</b>	Select only one of the options.
<b>INOAAE0032</b>	<b>Cannot activate dynamic property 'name'</b>
<b>Explanation</b>	The property cannot be updated in the current server session, but will be active after a restart of the database.
<b>Action</b>	Restart the database to activate the property.
<b>INOAAE0038</b>	<b>Cannot open file path, file does not exist or is opened by another one or not enough access rights</b>
<b>Explanation</b>	The file does not exist or is already open.
<b>Action</b>	Check the filename.
<b>INOAAE0039</b>	<b>Unknown database space number</b>
<b>Explanation</b>	The database space number is not valid for this database.
<b>Action</b>	Use a valid database space number.
<b>INOAAE0040</b>	<b>This command is valid for journal space only</b>
<b>Explanation</b>	The database space type is not valid for this command.
<b>Action</b>	Use the journal space.

---

<b>INOAAE0042</b>	<b>CD database information file not found</b>
<b>Explanation</b>	The error message information file for the CD database not found.
<b>Action</b>	Check the path and filename.
<b>INOAAE0043</b>	<b>CD database information file doesn't contain all necessary data or was created on a different platform</b>
<b>Explanation</b>	The content of the information file is not complete or the file is not the required information file is from a different operating system.
<b>Action</b>	Check the content of the information file.
<b>INOAAE0044</b>	<b>CD database from different operating system cannot be registered</b>
<b>Explanation</b>	Only CD databases from the same operating system can be registered.
<b>Action</b>	Use a CD database that was created on the same operating system.
<b>INOAAE0045</b>	<b>Operation not allowed on CD database or read only database</b>
<b>Explanation</b>	The operation is not allowed on a CD database or read only database.
<b>Action</b>	No action required.
<b>INOAAE0054</b>	<b>The "Add database space" function has failed</b>
<b>Explanation</b>	The attempt to add one or more of the database spaces failed.
<b>Action</b>	Check the database locations for remaining disk space. The server property "read only" may be set to "yes".
<b>INOAAE0055</b>	<b>More than one replication database is not yet supported</b>
<b>Explanation</b>	Only one replication database is allowed.
<b>Action</b>	No action required.
<b>INOAAE0056</b>	<b>Re-invert of database dbName has failed</b>
<b>Explanation</b>	The re-invert operation failed. Possible reasons are that the database is not active or, if active, one or more indices could not be repaired.
<b>Action</b>	Check your database status.

<b>INOAAE0058</b>	<b>Invalid Access Control Element name</b>
<b>Explanation</b>	Function names cannot be part of paths.
<b>Action</b>	Use either a function name or a path but not both.
<b>INOAAE0059</b>	<b>Invalid master database name</b>
<b>Explanation</b>	The master database name specified is invalid.
<b>Action</b>	Specify another database name for the master database.
<b>INOAAE0060</b>	<b>Specification of key parameter is mandatory</b>
<b>Explanation</b>	The parameter must be specified.
<b>Action</b>	Specify the parameter and try again.
<b>INOAAE0065</b>	<b>Server extension 'name' not defined</b>
<b>Explanation</b>	The specified server extension does not exist.
<b>Action</b>	No action required.
<b>INOAAE0066</b>	<b>Internal configuration store key _default not found</b>
<b>Explanation</b>	The default internal configuration store key could not be found.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0067</b>	<b>File 'path' not found</b>
<b>Explanation</b>	The specified file could not be found.
<b>Action</b>	Specify a valid filename.
<b>INOAAE0068</b>	<b>Different server extension names: name1 is different from name2</b>
<b>Explanation</b>	The server extension names differ.
<b>Action</b>	No action required.
<b>INOAAE0069</b>	<b>File 'path' not extracted</b>
<b>Explanation</b>	The server extension installation file was not extracted.
<b>Action</b>	No action required.

---

<b>INOAAE0070</b>	<b>File 'path' already installed</b>
<b>Explanation</b>	The server extension installation file was previously installed.
<b>Action</b>	No action required.
<b>INOAAE0072</b>	<b>Document 'path' not installed</b>
<b>Explanation</b>	The server extension installation document was not installed.
<b>Action</b>	The action depends on previous error messages. Please check the previous messages for more information.
<b>INOAAE0073</b>	<b>File 'path' not created</b>
<b>Explanation</b>	The server extension installation file was not created.
<b>Action</b>	Correct the access rights for the directory and retry the operation.
<b>INOAAE0074</b>	<b>Server extension name 'name' not defined</b>
<b>Explanation</b>	The name of the server extension is not defined.
<b>Action</b>	Specify the name of the server extension and retry the operation.
<b>INOAAE0075</b>	<b>Server extension name 'name' already defined</b>
<b>Explanation</b>	The name of the server extension already exists.
<b>Action</b>	Change the name of the server extension and retry the operation.
<b>INOAAE0076</b>	<b>Directory 'path' already exists</b>
<b>Explanation</b>	The server extension installation directory already exists.
<b>Action</b>	Remove the directory and retry the operation.
<b>INOAAE0077</b>	<b>Document 'path' already installed</b>
<b>Explanation</b>	The server extension installation document is already installed.
<b>Action</b>	Remove the server extension installation document.
<b>INOAAE0078</b>	<b>Execution failed: command</b>
<b>Explanation</b>	The specified operating system command failed.
<b>Action</b>	The action depends on previous error messages. Please check the previous messages for more information.

<b>INOAAE0079</b>	<b>Database name not defined</b>
<b>Explanation</b>	The required database name was not specified.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0080</b>	<b>No functions defined: name</b>
<b>Explanation</b>	There are no functions defined in the server extension.
<b>Action</b>	Add functions to the server extension and retry the installation.
<b>INOAAE0081</b>	<b>The Tamino server returned an invalid server extension response document</b>
<b>Explanation</b>	The server extension response document does not correspond to the agreed protocol with the Tamino server.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0082</b>	<b>Server extension 'name' does not exist</b>
<b>Explanation</b>	The specified server extension does not exist.
<b>Action</b>	Correct the name of the server extension and retry the operation.
<b>INOAAE0083</b>	<b>File 'path' already open</b>
<b>Explanation</b>	The server extension installation package is already open.
<b>Action</b>	Wait until the package is not being used and retry the operation.
<b>INOAAE0084</b>	<b>File 'path' not open</b>
<b>Explanation</b>	The server extension installation package is not open.
<b>Action</b>	Wait until the package is not being used and retry the operation.
<b>INOAAE0085</b>	<b>File 'path' not previously closed</b>
<b>Explanation</b>	The server extension installation package is not closed.
<b>Action</b>	Wait until the package is not being used and retry the operation.
<b>INOAAE0086</b>	<b>Operation 'type' not implemented</b>
<b>Explanation</b>	The requested operation is not implemented.
<b>Action</b>	No action required.

---

<b>INOAAE0087</b>	<b>Command 'type' not allowed</b>
<b>Explanation</b>	This command is not allowed for the requested server extension.
<b>Action</b>	Ensure that you use one of the commands allowed for the server extension.
<b>INOAAE0088</b>	<b>message</b>
<b>Explanation</b>	This is a generic container for Tamino error messages.
<b>Action</b>	See the content of the message during online Tamino operation for further information.
<b>INOAAE0089</b>	<b>Not an installation package: path</b>
<b>Explanation</b>	The provided file is not a server extension installation package.
<b>Action</b>	Use a valid installation package.
<b>INOAAE0092</b>	<b>Error during write to inodmn, write interrupted or socket closed by inodmn</b>
<b>Explanation</b>	This is an internal error. It could be caused by not fully compatible versions of Tamino and System Management Hub.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0093</b>	<b>Error during read from inodmn, read interrupted or socket closed by inodmn</b>
<b>Explanation</b>	This is an internal error. It could be caused by not fully compatible versions of Tamino and System Management Hub.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0094</b>	<b>Command is an illegal number</b>
<b>Explanation</b>	This is an internal error in the event logging protocol.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0095</b>	<b>This command requires a different database state</b>
<b>Explanation</b>	An attempt was made to execute a command that either requires an active database, but the database is inactive, or the command can be executed only in inactive mode, but the database is active.
<b>Action</b>	Start or stop the database to bring it into the appropriate mode (active or inactive) and retry the command.

<b>INOAAE0096</b>	<b>The command requested cannot be executed because it is already running</b>
<b>Explanation</b>	The command you wish to execute is already being executed by someone else, but the command cannot be executed in parallel.
<b>Action</b>	Wait until the running command has completed. The argevsrv process keeps track of running commands. If the command is blocked although it is obviously not running, try restarting the argevsrv process.
<b>INOAAE0097</b>	<b>Insufficient resources to complete the command</b>
<b>Explanation</b>	This is an internal error in the event logging protocol. Some resource (usually disk or main storage) is exhausted and the function failed to complete.
<b>Action</b>	Check if there is enough free disk space. Delete temporary and otherwise expandable files, then try again.
<b>INOAAE0098</b>	<b>Path 'path/name' not created</b>
<b>Explanation</b>	The specified path name is too long.
<b>Action</b>	Choose another file structure with shorter path names.
<b>INOAAE0099</b>	<b>Path 'path' not converted</b>
<b>Explanation</b>	The specified path name was not converted to a URL or vice versa. Either the path name or the URL is too long.
<b>Action</b>	Choose another file structure with shorter path names.
<b>INOAAE0110</b>	<b>Internal error with database startup by changing replication database to a normal database</b>
<b>Explanation</b>	An internal error occurred when starting the database.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0111</b>	<b>No valid destination directory for backup files given.</b>
<b>Explanation</b>	No valid destination directory was given.
<b>Action</b>	Specify at least one valid directory with write access for Tamino and enough space for the backups.

---

<b>INOAAE0113</b>	<b>Path 'path' not extracted</b>
<b>Explanation</b>	The specified path was not extracted from the internal configuration store. This is an internal error.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0114</b>	<b>Execution mode 'name' not extracted</b>
<b>Explanation</b>	This is an internal error.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0115</b>	<b>Execution mode not compatible: mode1 != mode2</b>
<b>Explanation</b>	The specified execution modes are not compatible.
<b>Action</b>	Select a compatible execution mode.
<b>INOAAE0116</b>	<b>GUID not extracted</b>
<b>Explanation</b>	The GUID was not extracted from the internal configuration store. This is an internal error.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0117</b>	<b>DLL 'path' is not registered</b>
<b>Explanation</b>	The specified DLL cannot be used.
<b>Action</b>	Specify another DLL.
<b>INOAAE0118</b>	<b>DLL 'path' not unregistered</b>
<b>Explanation</b>	The specified DLL cannot be used.
<b>Action</b>	Specify another DLL.
<b>INOAAE0119</b>	<b>Remove of all server extensions failed</b>
<b>Explanation</b>	The server extensions could not be removed.
<b>Action</b>	Check the extensions.
<b>INOAAE0120</b>	<b>XML port not defined for database 'name'</b>
<b>Explanation</b>	The XML port value is missing in the internal configuration store.
<b>Action</b>	Please contact your software supplier.

<b>INOAAE0121</b>	<b>Not enough memory</b>
<b>Explanation</b>	There is not enough memory for an http request.
<b>Action</b>	Close some of your applications.
<b>INOAAE0122</b>	<b>XML template processing failed, template template missing or incorrect</b>
<b>Explanation</b>	This is an internal error of the Tamino Manager browser interface.
<b>Action</b>	Check if the quoted template file exists and if it is intact. If not, either reinstall or contact your software supplier.
<b>INOAAE0123</b>	<b>No package name defined: name</b>
<b>Explanation</b>	For a server extension the Java package name is required.
<b>Action</b>	If you generated the Java package yourself, use a unique name for your Java package. If it is a third-party product, get a new package from your software vendor.
<b>INOAAE0124</b>	<b>Unknown database dbname : rename failed or no information from Software AG XTS Directory Server</b>
<b>Explanation</b>	The database to be renamed could not be found.
<b>Action</b>	Check if the specified database exists and if the Software AG XTS Directory Server is running.
<b>INOAAE0125</b>	<b>Directory 'path' not deleted</b>
<b>Explanation</b>	The directory is in use. Therefore it cannot be deleted.
<b>Action</b>	Wait until the directory is no longer in use and try again.
<b>INOAAE0126</b>	<b>No valid location type found</b>
<b>Explanation</b>	The location type parameter is missing.
<b>Action</b>	Specify the location type parameter.
<b>INOAAE0127</b>	<b>Location type 'type' is unknown</b>
<b>Explanation</b>	An unknown location type is specified.
<b>Action</b>	Specify a valid location type.

---

<b>INOAAE0128</b>	<b>File 'path' not copied</b>
<b>Explanation</b>	The specified file was not copied to the target file.
<b>Action</b>	Check your permissions or check your disk space.
<b>INOAAE0129</b>	<b>Please specify at least the location path</b>
<b>Explanation</b>	The path parameter is missing.
<b>Action</b>	Specify the path parameter.
<b>INOAAE0130</b>	<b>Path path exceeds the maximum path length of maxpathlen characters</b>
<b>Explanation</b>	The length of the specified path exceeds the allowed maximum length of a directory path.
<b>Action</b>	Specify a shorter directory path.
<b>INOAAE0131</b>	<b>Location path path includes no valid directory</b>
<b>Explanation</b>	The root of the specified directory path is invalid. A possible cause is that the specified directory path could be on a removable drive or RAM disk.
<b>Action</b>	Specify a valid directory path.
<b>INOAAE0132</b>	<b>Location path path is located on a remote drive. Please choose a local drive.</b>
<b>Explanation</b>	A remote drive is not allowed for a location path.
<b>Action</b>	Specify the location path on a local drive.
<b>INOAAE0133</b>	<b>Name name exceeds the maximum name length of maxnamelen characters</b>
<b>Explanation</b>	The length of the specified name exceeds the allowed maximum length.
<b>Action</b>	Specify a shorter name.
<b>INOAAE0134</b>	<b>Name name already exists as database location name</b>
<b>Explanation</b>	The specified location name is the name of an existing database location.
<b>Action</b>	Change the location name.
<b>INOAAE0135</b>	<b>Path path already exists as database location path</b>
<b>Explanation</b>	The specified location path is the path of an existing database location.
<b>Action</b>	Change the location path specification.

<b>INOAAE0136</b>	<b>Database location name not found</b>
<b>Explanation</b>	The specified location name was not found in the internal configuration store.
<b>Action</b>	Specify an existing location name.
<b>INOAAE0137</b>	<b>Location name is the current default location</b>
<b>Explanation</b>	Deleting the current default location is not allowed.
<b>Action</b>	Change the default location.
<b>INOAAE0138</b>	<b>Location name is the current default backup location</b>
<b>Explanation</b>	Deleting the current default backup location is not allowed.
<b>Action</b>	Change the default backup location.
<b>INOAAE0140</b>	<b>Database dbname uses database location name with location path path as 'category'. If you still want to delete the location, all spaces from that location must be moved to another location before you can delete it.</b>
<b>Explanation</b>	The specified location is defined as a category location for a database, so deleting is not allowed. Move the database spaces on that location to another one.
<b>Action</b>	Change the default database location category specification.
<b>INOAAE0141</b>	<b>No response document received</b>
<b>Explanation</b>	There was no response document received from the server.
<b>Action</b>	Check if the network communication is established.
<b>INOAAE0142</b>	<b>Value for property 'name' too small - minimum is minval</b>
<b>Explanation</b>	The value for the given property is smaller than the minimum allowed.
<b>Action</b>	Specify a larger value.
<b>INOAAE0143</b>	<b>Value for property 'name' too large - maximum is maxval</b>
<b>Explanation</b>	The value is larger than the maximum allowed.
<b>Action</b>	Specify a smaller value.

---

<b>INOAAE0144</b>	<b>Invalid numeric value for property 'name'</b>
<b>Explanation</b>	The property is a numeric property and the value has the wrong type.
<b>Action</b>	Change the property value to numeric.
<b>INOAAE0145</b>	<b>Property 'name' must be 'yes' or 'no'</b>
<b>Explanation</b>	The property is a boolean property and the value has the wrong type.
<b>Action</b>	Change the property value to 'yes' or 'no'.
<b>INOAAE0146</b>	<b>The sequence of backup spaces is not complete.</b>
<b>Explanation</b>	One or more streams or extents are missing in the selected backup spaces. Only complete backups can be restored. Spaces missing at the end of the sequence will be only detected at runtime when data is loaded into the new database.
<b>Action</b>	Check the stream or extent numbers of the selected backup spaces and add missing spaces. Check if the sequence of backup spaces (Extent 1, Extent 2, ..) is correct.
<b>INOAAE0149</b>	<b>Web server wsname already assigned</b>
<b>Explanation</b>	The web server is already assigned to the specified database.
<b>Action</b>	Check the specified web servers and the web server assignments.
<b>INOAAE0153</b>	<b>Web server wsname not assigned</b>
<b>Explanation</b>	The specified web server is not assigned to the specified database, therefore the assignment cannot be deleted.
<b>Action</b>	Check the web server assignments to the specified database.
<b>INOAAE0154</b>	<b>Error retrieving collection/doctype information: the requested document(s) could not be locked</b>
<b>Explanation</b>	The document is already locked or cannot be locked. A possible reason can also be an unclosed session.
<b>Action</b>	Wait for a short time and try this command again.
<b>INOAAE0155</b>	<b>Unknown location location name</b>
<b>Explanation</b>	The given location does not exist.
<b>Action</b>	Choose a valid location.

<b>INOAAE0157</b>	<b>Parameter parameter name missing</b>
<b>Explanation</b>	The parameter with the given name is not specified.
<b>Action</b>	Specify the required parameter.
<b>INOAAE0158</b>	<b>parameter name: invalid path, directory does not exist or is not writable</b>
<b>Explanation</b>	The given path does not exist or is not writeable.
<b>Action</b>	Use a path that exists and is writable.
<b>INOAAE0159</b>	<b>Database dbname already exists</b>
<b>Explanation</b>	The "rename database" command failed because the database name already exists.
<b>Action</b>	Use a different name or remove the database.
<b>INOAAE0162</b>	<b>Cannot delete database space spaceNo</b>
<b>Explanation</b>	The specified database space cannot be deleted from the location.
<b>Action</b>	Check whether the database space is already in use.
<b>INOAAE0165</b>	<b>Cannot expand database space spaceNo</b>
<b>Explanation</b>	The specified database space cannot be expanded.
<b>Action</b>	Check whether the database space is already in use. Check the database location for remaining disk space. If the database is read-only it cannot be expanded.
<b>INOAAE0169</b>	<b>Database database name exists</b>
<b>Explanation</b>	A database with the same name exists either on the local computer, or in the scope of XTS Directory Service (which may know databases on multiple computers).
<b>Action</b>	Choose a different name. On Windows platforms, it is not sufficient to have two names differ only in upper/lowercase.
<b>INOAAE0170</b>	<b>Configuration 'configuration' already exists for external backup method 'method'</b>
<b>Explanation</b>	The configuration name already exists for this external backup method.
<b>Action</b>	Specify a new configuration name which does not exist already.

---

<b>INOAAE0174</b>	<b>Could not initialize TCP stack</b>
<b>Explanation</b>	This is an internal error in the event logging protocol. The communication between a logging client and the logging server could not be established. Basic functions and commands may be unaffected by this failure but messages will not be stored permanently or displayed in the Tamino Manager browser interface.
<b>Action</b>	This failure is most likely due to extreme shortage of resources, or missing operating system components. Check the disk space. Check the integrity of the installation. Contact you software supplier to check if there is a software update.
<b>INOAAE0175</b>	<b>Error in inodmn conversation: unexpected response buffer</b>
<b>Explanation</b>	This is an internal error of the event logging protocol.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0177</b>	<b>Error in inodmn conversation: invalid number</b>
<b>Explanation</b>	This is an internal error in the event logging protocol.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0178</b>	<b>Function not implemented</b>
<b>Explanation</b>	This is an internal error of the event logging protocol, a feature is not implemented in the version installed. Basic functions and commands are probably not affected.
<b>Action</b>	No action necessary. Please contact your software supplier for a possible software update.
<b>INOAAE0179</b>	<b>Error in inodmn conversation: request failed</b>
<b>Explanation</b>	This is an internal error in the event logging protocol. It could be caused by not fully compatible Tamino and System Management Hub versions.
<b>Action</b>	Please contact your software supplier for a possible software update.
<b>INOAAE0180</b>	<b>Too many parameters</b>
<b>Explanation</b>	A parameter has been specified repeatedly, but is only allowed once.
<b>Action</b>	Change the command and retry.

<b>INOAAE0181</b>	<b>Database does not exist</b>
<b>Explanation</b>	There is no database with the given name.
<b>Action</b>	Choose a valid database name.
<b>INOAAE0182</b>	<b>Space space is not a valid backup space</b>
<b>Explanation</b>	The file or tape specified has not been recognized as a valid Tamino backup. The file or tape could be damaged or access to the medium could be denied.
<b>Action</b>	Use a valid backup space.
<b>INOAAE0183</b>	<b>Backup spaces have not been specified in the sequence determined by their extent or stream numbers</b>
<b>Explanation</b>	The spaces are not ordered by their extent or stream number. The first space does not have the extent number 1.
<b>Action</b>	Specify backup spaces in the order of the extent or stream number.
<b>INOAAE0184</b>	<b>Creation of directory path failed</b>
<b>Explanation</b>	The directory at the given path could not be created.
<b>Action</b>	Check the permissions for the given path.
<b>INOAAE0186</b>	<b>Unknown command</b>
<b>Explanation</b>	The command is unknown in this context.
<b>Action</b>	Specify a valid command for this context.
<b>INOAAE0187</b>	<b>Missing parameter</b>
<b>Explanation</b>	A parameter specification is missing.
<b>Action</b>	Specify the needed parameter.
<b>INOAAE0188</b>	<b>Not allowed to set a location of type 'type' as default location</b>
<b>Explanation</b>	The location represents a type which is not allowed to be set as the default location.
<b>Action</b>	Set another location as the default location.

---

<b>INOAAE0189</b>	<b>No valid location category specified</b>
<b>Explanation</b>	The specified category is not a valid location category.
<b>Action</b>	Specify a valid location category.
<b>INOAAE0190</b>	<b>Memory fault</b>
<b>Explanation</b>	An error has occurred while allocating memory storage.
<b>Action</b>	Reboot the system.
<b>INOAAE0191</b>	<b>database space spaceNo at location oldLoc not found</b>
<b>Explanation</b>	A database space cannot be moved from one location to another, because the space does not exist at the source location.
<b>Action</b>	Search for the space at another location.
<b>INOAAE0192</b>	<b>database space spaceNo at location newLoc already exists</b>
<b>Explanation</b>	The database space cannot be moved to the new location. The space already exists.
<b>Action</b>	Delete the space from the new location.
<b>INOAAE0193</b>	<b>Cannot remove database space spaceNo from location oldLoc</b>
<b>Explanation</b>	A database space cannot be removed from the source location.
<b>Action</b>	Check the permissions for the database space. The database space could be in use by a running database. Do a shutdown of the database and try again.
<b>INOAAE0194</b>	<b>Cannot write internal configuration store</b>
<b>Explanation</b>	The write operation into the internal configuration store failed.
<b>Action</b>	Check the permissions.
<b>INOAAE0195</b>	<b>Unknown database dbname or no information from Software AG XTS Directory Server</b>
<b>Explanation</b>	The database is unknown or there is no information from the Software AG XTS Directory Server.
<b>Action</b>	Check the database name, and check if the Software AG XTS Directory Server is running.

<b>INOAAE0196</b>	<b>Database dbname ID or port not found</b>
<b>Explanation</b>	The database ID or port was not found in the internal configuration store.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0197</b>	<b>Database dbname already active</b>
<b>Explanation</b>	The database is already active.
<b>Action</b>	Stop the database and re-execute the operation.
<b>INOAAE0198</b>	<b>Database dbname not active</b>
<b>Explanation</b>	The database is not active.
<b>Action</b>	Start the database and re-execute the operation.
<b>INOAAE0203</b>	<b>Function 'name' not found</b>
<b>Explanation</b>	The function was deleted, but the display has not been refreshed.
<b>Action</b>	Refresh your display.
<b>INOAAE0204</b>	<b>Invalid function type 'type'</b>
<b>Explanation</b>	The type of a server extension function was invalid. This is an internal error.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0205</b>	<b>File 'path' not added</b>
<b>Explanation</b>	The file was not added to the server extension package. This is an internal error.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0208</b>	<b>Not allowed to specify a recoverydate with recoveryoption=no</b>
<b>Explanation</b>	If a recoverydate is specified, recoveryoption=no is not allowed.
<b>Action</b>	Specify recoveryoption=yes or do not use the recoveryoption parameter.
<b>INOAAE0209</b>	<b>Access Violation - You are not allowed to access the requested database</b>
<b>Explanation</b>	You are not authorized to access the database.
<b>Action</b>	Get authorization from the database administrator.

---

<b>INOAAE0210</b>	<b>Min Port must be lower than Max Port and Port Ranges cannot overlap</b>
<b>Explanation</b>	An invalid port range was specified. Min Port must be lower than Max Port and Port Ranges cannot overlap.
<b>Action</b>	Change the ports and retry the operation.
<b>INOAAE0212</b>	<b>Error reading database locations</b>
<b>Explanation</b>	An error occurred while reading database locations from the internal configuration store.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0215</b>	<b>Unknown category</b>
<b>Explanation</b>	The agent was called with an invalid category.
<b>Action</b>	Use a valid category for this agent.
<b>INOAAE0216</b>	<b>Missing database name</b>
<b>Explanation</b>	The database name is missing in the object ID.
<b>Action</b>	Use a valid object ID.
<b>INOAAE0217</b>	<b>Missing Object ID</b>
<b>Explanation</b>	The object ID is missing in the agent call parameter.
<b>Action</b>	Use a valid object ID.
<b>INOAAE0218</b>	<b>Missing database space type</b>
<b>Explanation</b>	The database space type is missing in the agent call parameter.
<b>Action</b>	Use a valid database space type.
<b>INOAAE0219</b>	<b>Unknown database space category</b>
<b>Explanation</b>	The database space category in the agent call parameter is unknown.
<b>Action</b>	Use a valid database space category .
<b>INOAAE0220</b>	<b>The database dbname does not exist</b>
<b>Explanation</b>	One of the following errors may have occurred: - XTS not configured in the "hosts" file - the XTS service not running - the database is not specified in the XTS configuration file xturl.cfg.
<b>Action</b>	Choose another database name, check XTS configuration.

<b>INOAAE0222</b>	<b>The database dbname must be offline</b>
<b>Explanation</b>	The database must be stopped for this operation.
<b>Action</b>	Shut down the database.
<b>INOAAE0225</b>	<b>Leave command request on Event Service failed</b>
<b>Explanation</b>	This request is part of the command synchronization scheme. This scheme synchronizes the execution of commands that might interfere otherwise and it prevents parallel execution of commands that should be executed only once per database at a time (like a backup).
<b>Action</b>	Check if the Event Service is running. If it is running, stop and re-start the service to initialize command synchronization
<b>INOAAE0226</b>	<b>Database status request on event demon failed</b>
<b>Explanation</b>	The status of a database could not be received from the event demon.
<b>Action</b>	Check if the event demon is running.
<b>INOAAE0229</b>	<b>Tape path does not exist</b>
<b>Explanation</b>	The tape with the specified path does not exist.
<b>Action</b>	Specify an existing tape path.
<b>INOAAE0230</b>	<b>Device path does not exist</b>
<b>Explanation</b>	The device with the specified path does not exist.
<b>Action</b>	Specify an existing device path.
<b>INOAAE0231</b>	<b>Could not create location name at path</b>
<b>Explanation</b>	Creating the location failed because of an internal configuration store error.
<b>Action</b>	Check access rights (privileges) of the connected user; the user must be a power user (administrator).
<b>INOAAE0232</b>	<b>Could not delete location name</b>
<b>Explanation</b>	Deleting the location failed because of an internal configuration store error.
<b>Action</b>	Please contact your software supplier.

---

<b>INOAAE0233</b>	<b>Could not rename location name to newname</b>
<b>Explanation</b>	Renaming the location failed because of an internal configuration store error.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0234</b>	<b>Could not set location name as default database location</b>
<b>Explanation</b>	Setting the location as the default location failed because of an internal configuration store error.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0235</b>	<b>Could not set location name as default backup database location</b>
<b>Explanation</b>	Setting the location as the default backup location failed because of an internal configuration store error.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0236</b>	<b>Could not modify default of database location category 'category'</b>
<b>Explanation</b>	Modifying the default database location category failed because of an internal configuration store error.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0238</b>	<b>Archive path is empty</b>
<b>Explanation</b>	The archive is empty or corrupt. Try with a correct archive.
<b>Action</b>	Correct the archive you want to work with.
<b>INOAAE0242</b>	<b>No database name specified</b>
<b>Explanation</b>	The database name must be specified.
<b>Action</b>	Specify the database name.
<b>INOAAE0243</b>	<b>database registration failed</b>
<b>Explanation</b>	The registration of a read only database failed.
<b>Action</b>	Check the source file/path and database name.

<b>INOAAE0268</b>	<b>Move command for location type 'type' not supported</b>
<b>Explanation</b>	The move command is not supported for some location types, especially tape.
<b>Action</b>	Specify a valid location type as the target of the move command.
<b>INOAAE0272</b>	<b>Backup date 'bckDate' specifies no valid backup set for database dbName</b>
<b>Explanation</b>	The given date was not found as a savepoint entry in the internal configuration store.
<b>Action</b>	Specify a valid date which corresponds to a valid savepoint entry in the internal configuration store.
<b>INOAAE0274</b>	<b>No collection name specified</b>
<b>Explanation</b>	The collection name must be specified for this operation.
<b>Action</b>	Specify the collection name.
<b>INOAAE0284</b>	<b>Unregister is not allowed for normal databases; use "delete" command</b>
<b>Explanation</b>	Use the "delete" command to remove a normal database.
<b>Action</b>	Use the batch command "delete" instead of "unregister".
<b>INOAAE0285</b>	<b>Delete is not allowed for CD databases; use "unregister" command</b>
<b>Explanation</b>	Use the "unregister" command to remove a CD database.
<b>Action</b>	Use the batch command "unregister" instead of "delete".
<b>INOAAE0287</b>	<b>External function name exceeds 80 characters</b>
<b>Explanation</b>	The length of the external function name may not exceed 80 characters.
<b>Action</b>	Specify a shorter function name.
<b>INOAAE0294</b>	<b>No file restored : name</b>
<b>Explanation</b>	No file was restored. Maybe there are no server extensions installed.
<b>Action</b>	If there are server extensions installed check your database.
<b>INOAAE0295</b>	<b>Directory not created : path</b>
<b>Explanation</b>	The specified directory was not created.
<b>Action</b>	Check the permissions of your file system.

---

<b>INOAAE0296</b>	<b>Directory not found : path</b>
<b>Explanation</b>	The specified directory was not found.
<b>Action</b>	Check the permissions of your file system.
<b>INOAAE0297</b>	<b>Database not running : name</b>
<b>Explanation</b>	The specified database is not running.
<b>Action</b>	Start the database.
<b>INOAAE0298</b>	<b>Server returned error code : type</b>
<b>Explanation</b>	The Tamino server returned an error code.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0304</b>	<b>Fail - command log switch to mode buffers buffers</b>
<b>Explanation</b>	This is a result message for a batch command.
<b>Action</b>	Check the database.
<b>INOAAE0305</b>	<b>Parameter not defined : name</b>
<b>Explanation</b>	No value given for a mandatory parameter.
<b>Action</b>	Retry the command with the specified parameter value.
<b>INOAAE0306</b>	<b>Invalid object identification : name</b>
<b>Explanation</b>	The given object identification is invalid.
<b>Action</b>	Retry the command with a correct object identification.
<b>INOAAE0307</b>	<b>Update of settings failed : name</b>
<b>Explanation</b>	The update of the given settings parameter failed.
<b>Action</b>	Check the job log for further information.
<b>INOAAE0310</b>	<b>Path exists; please remove it or use another one</b>
<b>Explanation</b>	This is an error message for creating a CD database in batch mode. A specified pathname exists already, so a different pathname must be supplied or the existing path must be removed.
<b>Action</b>	Remove the path or use another one.

<b>INOAAE0311</b>	<b>Invalid character used in the specified location name at position position</b>
<b>Explanation</b>	An invalid character has been specified in the location name. This can be a non-ASCII character or one of the special characters " %&,;! \=#[ ] \ < > "".
<b>Action</b>	Change the character.
<b>INOAAE0312</b>	<b>Invalid character used in the specified path at position position</b>
<b>Explanation</b>	An invalid character has been specified in the given path. This can be a non-ASCII character or one of the special characters "\.:*?\"> &\"" for Windows or ".*? \> ,;&!\" for all other operating systems.
<b>Action</b>	Change the character.
<b>INOAAE0313</b>	<b>Mapped documents exist : name</b>
<b>Explanation</b>	Mapped XML documents exist for the server extension.
<b>Action</b>	Delete the XML documents before uninstalling the server extension.
<b>INOAAE0314</b>	<b>Command not allowed if no function is selected</b>
<b>Explanation</b>	The server extension must contain at least one selected function.
<b>Action</b>	Select some functions from the object being packed.
<b>INOAAE0315</b>	<b>Database name contains invalid character "&amp;" (ampersand)</b>
<b>Explanation</b>	A database name can't contain the "&" character.
<b>Action</b>	Remove the "&" from the database name.
<b>INOAAE0347</b>	<b>Database could not be connected</b>
<b>Explanation</b>	The security manager could not connect to Tamino.
<b>Action</b>	Check if the database has been started.
<b>INOAAE0355</b>	<b>The first and last character of a name should not be a blank</b>
<b>Explanation</b>	Blanks are not allowed at the beginning and end of a name.
<b>Action</b>	Change the first/last character.

---

<b>INOAAE0356</b>	<b>ACL name contains invalid character:</b>
<b>Explanation</b>	Special characters are not allowed.
<b>Action</b>	Remove special characters from ACL name.
<b>INOAAE0359</b>	<b>Group name contains invalid allowed character:</b>
<b>Explanation</b>	Special characters are not allowed.
<b>Action</b>	Remove special characters from the group name.
<b>INOAAE0361</b>	<b>User ID contains invalid character:</b>
<b>Explanation</b>	Special characters are not allowed.
<b>Action</b>	Remove special characters from the user ID.
<b>INOAAE0362</b>	<b>User created with escaped XML special characters in description</b>
<b>Explanation</b>	XML special characters are not allowed.
<b>Action</b>	Remove special characters from the description.
<b>INOAAE0363</b>	<b>Special characters are not allowed in an ACE name:</b>
<b>Explanation</b>	Special characters are not allowed in an ACE name.
<b>Action</b>	Remove special character from ACE name.
<b>INOAAE0370</b>	<b>TSM@DLL_PARSE_ERR</b>
<b>Explanation</b>	The retrieved XML-document is invalid or the XML parser could not retrieve data.
<b>Action</b>	Shut down the database and restart it.
<b>INOAAE0372</b>	<b>TSM@DLL_UNKNOWN_ACL_OR_ACL_NOT_RETRIEVABLE</b>
<b>Explanation</b>	The mentioned ACL is no longer available. Maybe another concurrent session deleted it.
<b>Action</b>	Refresh the data within the Tamino Manager and try again.
<b>INOAAE0373</b>	<b>TSM@DLL_UNKNOWN_GROUP</b>
<b>Explanation</b>	The mentioned GROUP is no longer available. Maybe another concurrent session deleted it.
<b>Action</b>	Refresh the data within the Tamino Manager and try again

<b>INOAAE0377</b>	<b>Access control element 'name' already exists in access control list</b>
<b>Explanation</b>	The access control element already exists in an access control list.
<b>Action</b>	Change the name of the access control element.
<b>INOAAE0378</b>	<b>Version with compatibility level level of Tamino not found</b>
<b>Explanation</b>	For reading the backup, a Tamino version of the same compatibility level is required.
<b>Action</b>	Install a Tamino version of the required compatibility level.
<b>INOAAE0381</b>	<b>No container size information in backup file filename found</b>
<b>Explanation</b>	The backup file does not contain important information for restoring.
<b>Action</b>	Check the backup file or generate a new one.
<b>INOAAE0382</b>	<b>Not enough free memory</b>
<b>Explanation</b>	Not enough free memory.
<b>Action</b>	try closing other applications to free memory.
<b>INOAAE0386</b>	<b>Access Control List 'name' already exists</b>
<b>Explanation</b>	An access control list with the specified name already exists.
<b>Action</b>	Change the name of the access control list.
<b>INOAAE0387</b>	<b>User 'name' already exists</b>
<b>Explanation</b>	The given user already exists in the ino:user doctype.
<b>Action</b>	Supply a new user ID.
<b>INOAAE0388</b>	<b>User 'name' does not exist</b>
<b>Explanation</b>	The user ID has not been found in the ino:user doctype.
<b>Action</b>	Create the required user ID.
<b>INOAAE0389</b>	<b>Access control list 'name' does not exist</b>
<b>Explanation</b>	The access control list has not been found in the ino:acl doctype.
<b>Action</b>	Create the required access control list.

---

<b>INOAAE0390</b>	<b>User group 'name' does not exist</b>
<b>Explanation</b>	A user group with the given name has not been found in the ino:group doctype.
<b>Action</b>	Create the required group.
<b>INOAAE0391</b>	<b>Acename has not been defined</b>
<b>Explanation</b>	The command line parameter "acename" has not been provided.
<b>Action</b>	Provide the "acename" parameter.
<b>INOAAE0392</b>	<b>Permission has not been defined</b>
<b>Explanation</b>	The command line parameter "permission" has not been provided.
<b>Action</b>	Provide the parameter "permission".
<b>INOAAE0393</b>	<b>Aclname has not been defined</b>
<b>Explanation</b>	The command line parameter "aclname" has not been provided.
<b>Action</b>	Provide the parameter "aclname".
<b>INOAAE0394</b>	<b>Database is readonly</b>
<b>Explanation</b>	The database is readonly, updates are not possible.
<b>Action</b>	No action required.
<b>INOAAE0395</b>	<b>UserID has not been defined</b>
<b>Explanation</b>	The command line parameter "userid" has not been provided.
<b>Action</b>	Provide the parameter "userid".
<b>INOAAE0396</b>	<b>Groupname has not been defined</b>
<b>Explanation</b>	The command line parameter "groupname" has not been provided.
<b>Action</b>	Provide the parameter "groupname".
<b>INOAAE0397</b>	<b>Ace permission is not defined</b>
<b>Explanation</b>	The permission for the access control element is not defined.
<b>Action</b>	Provide the permission for the access control element.

<b>INOAAE0398</b>	<b>Permission has to be set to an allowed value</b>
<b>Explanation</b>	Permission has not been set to an allowed value.
<b>Action</b>	Set permission to an allowed value.
<b>INOAAE0399</b>	<b>Description has not been defined</b>
<b>Explanation</b>	Description has not been provided.
<b>Action</b>	Provide description.
<b>INOAAE0400</b>	<b>User group 'name' already exists</b>
<b>Explanation</b>	The usr group already exists in the ino:group doctype.
<b>Action</b>	Change the group name to one that does not already exist.
<b>INOAAE0401</b>	<b>Missing compatibility level : type</b>
<b>Explanation</b>	The source or target compatibility level was not specified.
<b>Action</b>	Specify the compatibility level and execute the command again.
<b>INOAAE0402</b>	<b>Set database version failed</b>
<b>Explanation</b>	The "set database" action failed. Read the error messages to get more information.
<b>Action</b>	Check the error messages that are generated before this message at runtime to get the reason.
<b>INOAAE0408</b>	<b>Some databases may be still active at system shutdown</b>
<b>Explanation</b>	An error occurred while all active databases were stopped.
<b>Action</b>	Shut down manually all active databases prior to the system shutdown; get assistance from your software supplier to fix the problems that were reported.
<b>INOAAE0412</b>	<b>This request is in conflict with another request that is currently being executed</b>
<b>Explanation</b>	Some commands that access the same resources are mutually exclusive. This message can also appear if a process has been killed with operating system means or has crashed while the crash held the critical section locked.
<b>Action</b>	Retry later. If no other command is active and no one else is currently executing administrative commands, shut down and restart the System Management Hub Event Layer Service.

---

<b>INOAAE0413</b>	<b>The request cannot be executed because a condition is missing</b>
<b>Explanation</b>	The request requires another command to be active.
<b>Action</b>	No action possible. Please contact your software supplier.
<b>INOAAE0414</b>	<b>Restore of database dbName failed</b>
<b>Explanation</b>	An error occurred while restoring the specified database.
<b>Action</b>	Try to detect the error, otherwise contact your software supplier.
<b>INOAAE0417</b>	<b>Web server 'wsname' does not exist</b>
<b>Explanation</b>	The IP address and/or port of web server cannot be changed; the specified web server does not exist.
<b>Action</b>	Use an existing web server.
<b>INOAAE0418</b>	<b>IP address of web server 'wsname' is invalid</b>
<b>Explanation</b>	The IP address of the web server is invalid.
<b>Action</b>	Specify the IP address in a valid format.
<b>INOAAE0419</b>	<b>File 'path' already exists</b>
<b>Explanation</b>	The server extension installation file already exists.
<b>Action</b>	Select another path name.
<b>INOAAE0423</b>	<b>Unable to execute command with version 'argbatchversion' for database from version 'version'. Please use 'version=version' parameter for argbatch command, or change your environment : 'argbatch set environment version=version'.</b>
<b>Explanation</b>	A Tamino agent was called from the wrong version.
<b>Action</b>	Use the "version" parameter for the argbatch command or change your environment with: "argbatch set environment version=...".
<b>INOAAE0428</b>	<b>Web server 'wsname' not defined</b>
<b>Explanation</b>	The specified web server is not defined in the web server management.
<b>Action</b>	Add the specified web server in the web server management.

<b>INOAAE0439</b>	<b>Tamino plug-in for argevsrv not installed or not properly initialized</b>
<b>Explanation</b>	The Tamino plug-in was not installed, or the System Management Hub Event Service was unable to load it. Tamino will work without it but some administrative commands will not be be synchronized. This will cause problems only in rare conditions when multiple databases are created at the same time on the same computer.
<b>Action</b>	Avoid creating multiple databases at the same time on the same computer; please contact your software supplier to find out why the Tamino plug-in was not loaded by the System Management Hub Event Service.
<b>INOAAE0441</b>	<b>version of database not found</b>
<b>Explanation</b>	The database was found but not the version of Tamino that it requires.
<b>Action</b>	Check if the correct Tamino version for database is installed or set the version to one installed on the machine.
<b>INOAAE0442</b>	<b>Tamino version not found</b>
<b>Explanation</b>	The specified Tamino version was not found.
<b>Action</b>	Check if the Tamino version is installed on the machine.
<b>INOAAE0443</b>	<b>highest Tamino version not found</b>
<b>Explanation</b>	The highest Tamino version was not found.
<b>Action</b>	Check if Tamino is installed on the machine
<b>INOAAE0444</b>	<b>Max and/or Min port not found or RGS error</b>
<b>Explanation</b>	The Max and/or Min port was not found, or there was an RGS error.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0456</b>	<b>The "Move database space" function failed</b>
<b>Explanation</b>	An attempt to move a database space failed. Additional information is supplied in error messages that have occurred earlier.
<b>Action</b>	Please follow the actions of the error messages displayed earlier in the same job log.
<b>INOAAE0459</b>	<b>The "Create Database" function failed</b>
<b>Explanation</b>	An attempt to create a database failed. Additional information is supplied in error messages that have occurred earlier.
<b>Action</b>	Please follow the actions of the error messages displayed earlier in the same job log.

---

<b>INOAAE0462</b>	<b>The "Delete Database" function failed</b>
<b>Explanation</b>	An attempt to delete a database failed. Additional information is supplied in error messages that have occurred earlier.
<b>Action</b>	No action required. Please follow the actions of the error messages displayed earlier in the same job log.
<b>INOAAE0463</b>	<b>The database information is available in ONLINE mode only</b>
<b>Explanation</b>	The information can only be determined when the database is started.
<b>Action</b>	Start the database and call the information function again.
<b>INOAAE0472</b>	<b>Backup of database dbName failed</b>
<b>Explanation</b>	Errors occurred while backing up the specified database. A possible reason could be low system memory.
<b>Action</b>	Try to detect the error, otherwise contact your software supplier.
<b>INOAAE0474</b>	<b>Start of database dbName failed</b>
<b>Explanation</b>	Errors occurred while starting the database.
<b>Action</b>	Try to detect the error, otherwise contact your software supplier.
<b>INOAAE0475</b>	<b>Stop of database dbName failed</b>
<b>Explanation</b>	Errors occurred while stopping the specified database.
<b>Action</b>	If you cannot identify the error from a previous error message, please contact your software supplier.
<b>INOAAE0480</b>	<b>Add database space spaceNo to location newLoc failed</b>
<b>Explanation</b>	An attempt to add database spaces to the specified location failed.
<b>Action</b>	No action required.
<b>INOAAE0481</b>	<b>Not enough space on location newLoc</b>
<b>Explanation</b>	The new location to which the database space should be moved is not big enough.
<b>Action</b>	Choose a larger location for moving the database space.

<b>INOAAE0491</b>	<b>Error(s) occurred during modify of database properties</b>
<b>Explanation</b>	An error occurred while attempting to modify database properties. Only the properties with an error message or a warning were not modified. All other properties are changed.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0509</b>	<b>External function name already used : name</b>
<b>Explanation</b>	The external name of a server extension function is already in use.
<b>Action</b>	Change the external function name and retry the operation.
<b>INOAAE0510</b>	<b>Java classpath not modified : text</b>
<b>Explanation</b>	The Java classpath was not modified according to the modification rules.
<b>Action</b>	Correct the modification parameters and retry the operation.
<b>INOAAE0534</b>	<b>File 'path' not deleted</b>
<b>Explanation</b>	The server extension DLL file could not be deleted.
<b>Action</b>	Delete the DLL manually.
<b>INOAAE0547</b>	<b>Directory path does not exist</b>
<b>Explanation</b>	The directory with the specified path does not exist.
<b>Action</b>	Specify an existing path.
<b>INOAAE0548</b>	<b>No location name specified</b>
<b>Explanation</b>	No location name was specified.
<b>Action</b>	Specify a location name.
<b>INOAAE0549</b>	<b>Character " not allowed as part of location name</b>
<b>Explanation</b>	The character '\' is not allowed as part of the location name, because this name is used as internal configuration store key, and the '\' is the internal configuration store key delimiter.
<b>Action</b>	Replace this character by another one.

---

<b>INOAAE0567</b>	<b>There is currently only one location defined. Please create at least one more file system location using the Location Management 'Add' command.</b>
<b>Explanation</b>	No second location is defined that can be used as destination location for the move command .
<b>Action</b>	Create a second location and then start this command again.
<b>INOAAE0605</b>	<b>Wrong date or date format. Format 'datepattern' required.</b>
<b>Explanation</b>	An invalid date is specified or an invalid date format is used.
<b>Action</b>	Specify a valid date (use same format as used in 'argbatch show backups').
<b>INOAAE0608</b>	<b>No other Tamino version installed, set version not possible</b>
<b>Explanation</b>	Because there is no other Tamino version installed, it makes no sense to change the version.
<b>Action</b>	No action required.
<b>INOAAE0611</b>	<b>Named pipe path does not exist</b>
<b>Explanation</b>	The named pipe with the specified path does not exist.
<b>Action</b>	Specify an existing named pipe path.
<b>INOAAE0619</b>	<b>Device path is not a named pipe</b>
<b>Explanation</b>	The specified path is not a named pipe.
<b>Action</b>	Specify an existing named pipe path.
<b>INOAAE0637</b>	<b>Directory name 'path' not compatible with object identification 'name'</b>
<b>Explanation</b>	The directory name must consist of the first part of the object identification.
<b>Action</b>	Create a new server extension package with the correct directory name.
<b>INOAAE0638</b>	<b>Server extension function 'name' does not exist</b>
<b>Explanation</b>	The specified server extension function does not exist.
<b>Action</b>	Correct the function name.

<b>INOAAE0639</b>	<b>Server extension function parameter 'name' does not exist</b>
<b>Explanation</b>	The specified server extension function parameter does not exist.
<b>Action</b>	Correct the parameter name.
<b>INOAAE0641</b>	<b>Internal error from DSIF interface name returncode returncode error number errornr</b>
<b>Explanation</b>	This is an internal error message.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0645</b>	<b>Stop of XML session 'session' failed</b>
<b>Explanation</b>	Errors occurred while stopping the specified XML session.
<b>Action</b>	Try to detect the error, otherwise contact your software supplier.
<b>INOAAE0646</b>	<b>Error reading backup methods for database dbname</b>
<b>Explanation</b>	No backup methods were found in the internal configuration store for the database.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0648</b>	<b>Error reading parameters of backup method 'method'</b>
<b>Explanation</b>	No parameters were found for the backup method in the internal configuration store.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0651</b>	<b>Could not set global parameters for external backup method 'method' of database dbname</b>
<b>Explanation</b>	Setting of global parameters failed because of an internal configuration store error.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0653</b>	<b>Could not set configuration parameters for external backup method 'method' of database dbname</b>
<b>Explanation</b>	Setting of configuration parameters failed because of an internal configuration store error.
<b>Action</b>	Please contact your software supplier.

---

<b>INOAAE0656</b>	<b>Could not delete configuration 'configuration' of method 'method' of database dbname</b>
<b>Explanation</b>	The deletion of the configuration failed.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0658</b>	<b>Error reading configurations for database dbname of backup method 'method'</b>
<b>Explanation</b>	An error occurred while reading the configuration data.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0659</b>	<b>No configuration found for database dbname of backup method 'method'</b>
<b>Explanation</b>	No configuration data was specified for this method and database.
<b>Action</b>	Specify configuration data for this method and database using the 'External Backup Environment' dialog.
<b>INOAAE0660</b>	<b>Replication database name expected</b>
<b>Explanation</b>	The replication database name must be specified for this function.
<b>Action</b>	Specify the replication database name
<b>INOAAE0662</b>	<b>The database replication_db cannot be added into the permission list</b>
<b>Explanation</b>	An error occurred while adding the replication database name to the permission list.
<b>Action</b>	Check the subsequent error messages for more details.
<b>INOAAE0665</b>	<b>Database database cannot be set as replication database</b>
<b>Explanation</b>	An error occurred during the type change. The database cannot be set to a replication database. Possible reason: This database is a master database.
<b>Action</b>	Check for related additional messages.
<b>INOAAE0667</b>	<b>Replication database database cannot be reset to normal type</b>
<b>Explanation</b>	The database cannot be reset to a normal database.
<b>Action</b>	See the subsequent error messages.

<b>INOAAE0668</b>	<b>Database master_database is not active or is not a master database</b>
<b>Explanation</b>	The master database must be in the active state or permit this database to be replicated.
<b>Action</b>	Start up the master database and check the permission list for replication databases.
<b>INOAAE0669</b>	<b>Replication of master database master_database is not permitted</b>
<b>Explanation</b>	Permission to replicate the master database was denied.
<b>Action</b>	Ask the administrator to permit replication access to the master database.
<b>INOAAE0672</b>	<b>Not enough space at location newLoc for additional newsize MB - maximum free is freesize MB</b>
<b>Explanation</b>	The new location to which the database space should be moved or added is not big enough.
<b>Action</b>	Choose a larger location for the database space operation.
<b>INOAAE0680</b>	<b>Backup(s) not found wrongbackups please use one of the following backups</b>
<b>Explanation</b>	Wrong backups were specified.
<b>Action</b>	Use only valid backups of the database. You can see all backups with the command "argbatch show backups database=mydatabase".
<b>INOAAE0681</b>	<b>At least one backup must be given or don't use keepbackups</b>
<b>Explanation</b>	For the option keepbackups, at least one backup must be given/selected.
<b>Action</b>	Give/select at least one backup.
<b>INOAAE0683</b>	<b>Switching log space for database dbName has failed</b>
<b>Explanation</b>	Errors occurred while switching log space for the database.
<b>Action</b>	Try to detect the error, otherwise contact your software supplier.
<b>INOAAE0684</b>	<b>At least one destination directory must be given with parameter "destinationdirectory_0"</b>
<b>Explanation</b>	the option "keep backup files" needs at least one destination directory.
<b>Action</b>	Specify a destination directory with the parameter "destinationdirectory_0".

---

<b>INOAAE0685</b>	<b>For option "keepbackups=selected" at least one backup date and at least one destination directory must be given with parameter "destinationdirectory_0", "backupdate_0"</b>
<b>Explanation</b>	Give at least one backup date and one destination directory in the parameter list.
<b>Action</b>	Use the parameter "backupdate_0" to specify a backup to be kept and "destinationdirectory_0" for the destination directory.
<b>INOAAE0691</b>	<b>Could not add backup method 'method' for database dbname</b>
<b>Explanation</b>	Adding the backup method failed because of an internal configuration store error.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0694</b>	<b>Could not delete method 'method' of database dbname</b>
<b>Explanation</b>	Deleting the backup method failed because of an internal configuration store error.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0696</b>	<b>Internal error errno during modify property 'name' to 'value'</b>
<b>Explanation</b>	An error occurred while setting a new property value.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0699</b>	<b>Deletion of backup 'bckDate' of database dbName failed</b>
<b>Explanation</b>	An error occurred while deleting the specified backup.
<b>Action</b>	Check the additional messages.
<b>INOAAE0707</b>	<b>No permission to modify the type of the database</b>
<b>Explanation</b>	To change the type of a database to a replication database or to set it back to a normal one, the user needs to have administrator rights. Other possible reason: The database is not allowed to replicate the master database.
<b>Action</b>	Log in as administrator and try the operation again and check whether this database is in the permission list of the master database.
<b>INOAAE0708</b>	<b>Update server sessions exist</b>
<b>Explanation</b>	The database has already update sessions so that it cannot be used to replicate another database.
<b>Action</b>	Use a newly created database and retry this operation.

<b>INOAAE0709</b>	<b>Passwords not matched</b>
<b>Explanation</b>	The passwords entered do not match.
<b>Action</b>	Please ensure the passwords match.
<b>INOAAE0725</b>	<b>Error while changing port ranges</b>
<b>Explanation</b>	An error occurred while changing the port ranges.
<b>Action</b>	Please contact you software supplier.
<b>INOAAE0727</b>	<b>path is not a raw section</b>
<b>Explanation</b>	The specified path must be a raw section.
<b>Action</b>	Ensure that the path specifies a raw section.
<b>INOAAE0728</b>	<b>Unable to load data for CD databases</b>
<b>Explanation</b>	This database is a CD database. Data load not possible.
<b>Action</b>	No action required.
<b>INOAAE0731</b>	<b>Rename web server failed</b>
<b>Explanation</b>	The web server could not be renamed, the operation failed.
<b>Action</b>	The reason why the web server could not be renamed is in the job log. Check it and retry.
<b>INOAAE0733</b>	<b>Add web server failed</b>
<b>Explanation</b>	The web server could not be added, the operation failed.
<b>Action</b>	The reason why the web server could not be added is in the job log. Check it and retry.
<b>INOAAE0737</b>	<b>Delete web server failed</b>
<b>Explanation</b>	The web server could not be deleted, the operation failed.
<b>Action</b>	The reason why the web server could not be deleted is in the job log. Check it and retry.

---

<b>INOAAE0740</b>	<b>Modify web server failed</b>
<b>Explanation</b>	The web server could not be modified, the operation failed.
<b>Action</b>	The reason why the web server could not be modified is in the job log. Check it and retry.
<b>INOAAE0741</b>	<b>Domain 'name' does not exist</b>
<b>Explanation</b>	Domain has not been defined.
<b>Action</b>	Please check the defined domains list in Tamino and create the domain if necessary.
<b>INOAAE0744</b>	<b>parameter name: must not be a location on a raw section, is only allowed on DATA, INDEX, JOURNAL and RESERVED location</b>
<b>Explanation</b>	A location on raw section is only allowed as DATA, INDEX, JOURNAL and RESERVED location.
<b>Action</b>	Use a location that is not located on a raw section.
<b>INOAAE0745</b>	<b>All reserved locations are located on raw section(s), at least one location must not be located on a raw section</b>
<b>Explanation</b>	At least one reserved location for a database must not be on a raw section.
<b>Action</b>	Use at lease one location not located on a raw section.
<b>INOAAE0746</b>	<b>Location locname is of type type, this type is not allowed for loctype</b>
<b>Explanation</b>	Some location types are only allowed for special locations. For example locations on a tape are only allowed for backup locations.
<b>Action</b>	Use a location which is allowed for the current location type.
<b>INOAAE0747</b>	<b>Not allowed to set a location of type 'type' as default backup location</b>
<b>Explanation</b>	The default backup location cannot be in a location of type "raw".
<b>Action</b>	Use a location of a type that is allowed for a backup location.
<b>INOAAE0749</b>	<b>This command is deprecated. Please use the new command "show acs".</b>
<b>Explanation</b>	The command has been replaced by a new command.
<b>Action</b>	Please use the new command.

<b>INOAAE0750</b>	<b>This command is deprecated. Please use the new command "show groups".</b>
<b>Explanation</b>	The command is deprecated.
<b>Action</b>	Please use the new command.
<b>INOAAE0753</b>	<b>Query internal configuration store key key failed</b>
<b>Explanation</b>	An error occurred when querying the given internal configuration store key.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0754</b>	<b>This command is deprecated. Please use the new command "show users".</b>
<b>Explanation</b>	The command is deprecated.
<b>Action</b>	Please use the new command.
<b>INOAAE0755</b>	<b>Access to internal configuration store value value key key failed</b>
<b>Explanation</b>	An error occurred when getting the given internal configuration store key value.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0761</b>	<b>parameter name: must be the logical name of an existing location</b>
<b>Explanation</b>	The parameter must specify the short, "logical" name of a location (not its entire path), and the location must exist.
<b>Action</b>	Display the the "Locations" tree node in the System Management Hub (under the "Tamino" node) to display a list of existing locations or to add a new location.
<b>INOAAE0762</b>	<b>parameter name: must contain only digits 0 to 9</b>
<b>Explanation</b>	The value for this parameter must be an integer number with no fractional parts.
<b>Action</b>	Re-enter the parameter using only digits 0-9.
<b>INOAAE0763</b>	<b>parameter name: must be "yes" or "no"</b>
<b>Explanation</b>	This parameter must have either the value "yes" or "no", all lowercase characters.
<b>Action</b>	Re-enter either "yes" or "no" (without the double quotes).
<b>INOAAE0764</b>	<b>parameter name: must only contain digits 0-9, comma, dot, "E" or "e" for exponentiation</b>
<b>Explanation</b>	The value for this parameter must be a valid floating point number, or a number with an exponent.
<b>Action</b>	Re-enter he parameter value as floating point number, or with an exponent. Depending on the locale settings on the local computer, the decimal sign may be expected either as "," or as a ".".

<b>INOAAE0766</b>	<b>Size for space type extent extend is missing and no default size available</b>
<b>Explanation</b>	No default size could be obtained for this space type.
<b>Action</b>	A size must be specified, and it must be above the minimum value for this space type.
<b>INOAAE0767</b>	<b>The size specified for space type extent extend is under the minimum (minimum size Mb)</b>
<b>Explanation</b>	The given size for the extent is too small.
<b>Action</b>	A size of at least the given minimum must be specified.
<b>INOAAE0768</b>	<b>At least one backup location must be in the filesystem if no tape is supplied as initial backup</b>
<b>Explanation</b>	If no tape is supplied to create the database from (in the "Create From Backup" command) the initial backup is created at creation time as a file and requires a location that is in the file system. Before this message was issued, attempts were made to create it in one of the provided backup locations, in the default backup location and in the default location.
<b>Action</b>	Create a location in the file system using the "Add" command the System Management Hub browser interface, tree node Tamino/DB Locations and make it the default location (by clicking the new location and executing the "Set Default" command).
<b>INOAAE0769</b>	<b>At least one backup location is required for the initial backup of the new database</b>
<b>Explanation</b>	Specify one or more location where backups shall be created later on. This location is already required and used during the creation of the new database.
<b>Action</b>	Specify one or more writable, random accessible backup locations for the database to be created
<b>INOAAE0774</b>	<b>Database version with compatibility level of CD database not installed or found</b>
<b>Explanation</b>	A Tamino of the same compatibility level of CD database must be installed to use the CD database
<b>Action</b>	Install a database of the same compatibility level.
<b>INOAAE0775</b>	<b>Database name contains invalid character "*" (asterisk)</b>
<b>Explanation</b>	A database name cannot contain the "*" character.
<b>Action</b>	Remove the "*" from the database name.

<b>INOAAE0776</b>	<b>This command is deprecated. Please use the new command "show users".</b>
<b>Explanation</b>	This command is not supported as the user descriptions can be seen in the results of the new command.
<b>Action</b>	Please do not use this command and use the new one instead.
<b>INOAAE0778</b>	<b>Database name contains invalid character "/" (slash)</b>
<b>Explanation</b>	A database name cannot contain "/" character.
<b>Action</b>	Remove the "/" from database name.
<b>INOAAE0779</b>	<b>Port address 'buf' is invalid. Valid range is 0 - 65535.</b>
<b>Explanation</b>	The specified port address is not valid.
<b>Action</b>	Specify a valid port address in the range 0 to 65535.
<b>INOAAE0784</b>	<b>Database name contains invalid character "&lt;" (less than)</b>
<b>Explanation</b>	A database name cannot contain the "<" character.
<b>Action</b>	Remove the "<" from database name.
<b>INOAAE0785</b>	<b>Database name contains invalid character "&gt;" (greater than)</b>
<b>Explanation</b>	A database name cannot contain the ">" character.
<b>Action</b>	Remove the ">" from database name
<b>INOAAE0786</b>	<b>This command is deprecated. Please use the new command "show acesofacl".</b>
<b>Explanation</b>	The command is deprecated.
<b>Action</b>	Please use the new command.
<b>INOAAE0787</b>	<b>Domain parameters missing</b>
<b>Explanation</b>	Some or all of the necessary parameters for the domain creation/modification are missing.
<b>Action</b>	Please ensure that all necessary domain parameters are defined.
<b>INOAAE0788</b>	<b>Unrecognized domain parameters</b>
<b>Explanation</b>	The domain parameters defined are not valid for the domain type being created/modified.
<b>Action</b>	Please ensure that the correct domain parameters for the domain type being created/modified are defined.

---

<b>INOAAE0792</b>	<b>Namespace declarations required. Please check that all namespaces are defined.</b>
<b>Explanation</b>	There are some namespace prefixes for which no namespace declarations have been defined.
<b>Action</b>	Please ensure namespace declarations exist for all namespace prefixes.
<b>INOAAE0794</b>	<b>Internal error occurred</b>
<b>Explanation</b>	Internal error code 41 occurred.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0797</b>	<b>Domain 'name' already exists</b>
<b>Explanation</b>	A domain with the same name exists.
<b>Action</b>	Please choose another name.
<b>INOAAE0798</b>	<b>Failed to open input file filename for data load</b>
<b>Explanation</b>	The file cannot be opened or does not exist.
<b>Action</b>	Check the input and start the operation again.
<b>INOAAE0799</b>	<b>Parameter 'newname' or 'new_name' missing. The 'new_name' parameter is deprecated, please use the 'newname' parameter for the new name of the database.</b>
<b>Explanation</b>	No parameter with the new name of the database was given.
<b>Action</b>	Provide the database name using the parameter 'newname'.
<b>INOAAE0802</b>	<b>Could not connect to inodmn. Port number not found in internal configuration store, probably not installed.</b>
<b>Explanation</b>	The Software AG EventLayer Service is not installed correctly.
<b>Action</b>	Try re-installing the System Management Hub. Check for a fix or an update from your software supplier.
<b>INOAAE0803</b>	<b>Could not connect to inodmn, service not running</b>
<b>Explanation</b>	The "Software AG EventLayer Service" is not running, database functions and commands are probably unaffected.
<b>Action</b>	Restart the service. If the problem persists, contact your software supplier for an update or fix.

<b>INOAAE0807</b>	<b>Invalid parameter name 'name' specified.</b>
<b>Explanation</b>	The parameter name specified is not valid since it contains one or more space characters.
<b>Action</b>	Specify a parameter name that does not contain space characters.
<b>INOAAE0812</b>	<b>Web server IP address 'ipAddress' is invalid</b>
<b>Explanation</b>	The specified web server IP address is invalid.
<b>Action</b>	Specify a valid IP address. The valid range is 0 - 255.
<b>INOAAE0817</b>	<b>No license for raw section support</b>
<b>Explanation</b>	The use of raw sections requires an appropriate license option.
<b>Action</b>	Contact your software supplier for a license option to support raw sections.
<b>INOAAE0818</b>	<b>No raw section support for the used platform</b>
<b>Explanation</b>	There is no raw section support for the used platform.
<b>Action</b>	Do not use raw sections.
<b>INOAAE0819</b>	<b>Raw section support internal error</b>
<b>Explanation</b>	There was an internal error while processing a raw section.
<b>Action</b>	Please contact your software supplier.
<b>INOAAE0820</b>	<b>Raw section initialization failed</b>
<b>Explanation</b>	An error occurred while initializing a raw section.
<b>Action</b>	Check the raw section.
<b>INOAAE0825</b>	<b>Master database must be restarted before a replication database can be set up</b>
<b>Explanation</b>	A restart of the master database is necessary.
<b>Action</b>	Restart the master database and try to set up the replication database again.
<b>INOAAE0826</b>	<b>Inconsistency detected while setting the database to replication type</b>
<b>Explanation</b>	This database is not suitable to be set as the replication database of the specified master database. Perhaps the versions are not identical or this one was not created from the backup of the master. Also possible is that this database has its own updates after the creation.
<b>Action</b>	Use another database to replicate the master.

---

<b>INOAAE0831</b>	<b>Only one location specified for parallel backup</b>
<b>Explanation</b>	More than one location is required for parallel backup.
<b>Action</b>	Please specify more than one location for the parallel backup.
<b>INOAAE0832</b>	<b>Renaming a replication database master is not allowed.</b>
<b>Explanation</b>	Renaming a replication database master is not allowed, because the link between the master and replication databases would be lost.
<b>Action</b>	No action required.
<b>INOAAE0834</b>	<b>Database is a replication database master database. Deleting the replication database master is not allowed. No replication databases can be updated from this master database if this database is deleted.</b>
<b>Explanation</b>	Deleting this master database would mean that no replication databases could be updated from this master database. If you really want to delete this replication master database use the "force=yes" parameter for argbatch or check the "Force Delete of Replication Master Database" checkbox in the GUI.
<b>Action</b>	Use the "force=yes" parameter for argbatch or check the "Force Delete of Replication Master Database" checkbox in the GUI.
<b>INOAAE0835</b>	<b>Data load for database dbName failed</b>
<b>Explanation</b>	Load of data failed with error.
<b>Action</b>	Check the other related messages for more information.
<b>INOAAE0836</b>	<b>Unload data from database dbName failed</b>
<b>Explanation</b>	An error occurred while data was being unloaded from the database.
<b>Action</b>	Check for other messages related to this error for possible reasons.
<b>INOAAE0837</b>	<b>Location path path is read only</b>
<b>Explanation</b>	The location path specified is read only.
<b>Action</b>	Specify a location path with write access.
<b>INOAAE0838</b>	<b>Server extension does not contain a function</b>
<b>Explanation</b>	It was detected that no function has been defined for the server extension. Such a server extension is considered as invalid.
<b>Action</b>	Extend your server extension by at least one function.

<b>INOAAE0841</b>	<b>Uninstall of server extension name aborted</b>
<b>Explanation</b>	The uninstall operation for the server extension has not been completed due to functions that are used in some schema.
<b>Action</b>	Restart the uninstall operation with the parameter "force" set to "yes" (batch command).
<b>INOAAE0842</b>	<b>Uninstall of server extension 'name' failed</b>
<b>Explanation</b>	The uninstall operation failed.
<b>Action</b>	Check the job log to find the reason for the failure.
<b>INOAAE0843</b>	<b>Please specify either parameter IP address or node</b>
<b>Explanation</b>	The specification of the IP address or node is invalid.
<b>Action</b>	Please specify either the IP address or the node.
<b>INOAAE0844</b>	<b>Unable to find the replication database name from the permission list</b>
<b>Explanation</b>	The replication database name is not in the permission list.
<b>Action</b>	Check the parameter.
<b>INOAAE0845</b>	<b>Please specify either parameter IP address or node</b>
<b>Explanation</b>	Either the parameter IP address or node must be specified.
<b>Action</b>	Please specify either the parameter IP address or node.
<b>INOAAE0846</b>	<b>Upgrade from this database to Vversion not possible</b>
<b>Explanation</b>	This error occurs because the database cannot be upgraded directly to the target version.
<b>Action</b>	Upgrade to the next higher version and after that try a "set version" to the target version.
<b>INOAAE0847</b>	<b>Named pipe path not allowed for the specified location type</b>
<b>Explanation</b>	A named pipe is not allowed to set for the specified target location. Only the backup location type accepts named pipes.
<b>Action</b>	Specify another location for the target location.

---

<b>INOAAE0849</b>	<b>Cannot open event log session</b>
<b>Explanation</b>	Open event log session on argevsrv failed.
<b>Action</b>	Check that argevsrv is running.
<b>INOAAE0850</b>	<b>parameter name: must be of type FileSystem or RAW Section</b>
<b>Explanation</b>	Data, Index and Journal location must be of type FileSystem or RAW Section.
<b>Action</b>	Use a location of type FileSystem or RAW Section.
<b>INOAAE0852</b>	<b>This command is deprecated. Please use the new command "inoload".</b>
<b>Explanation</b>	This command is set to deprecated, use the new command instead.
<b>Action</b>	Use inoload to load or unload data in batch mode.
<b>INOAAE0855</b>	<b>Output directory directory does not exist</b>
<b>Explanation</b>	The output directory should exist.
<b>Action</b>	Create the output directory or check the permission if it already exists.
<b>INOAAE0868</b>	<b>Stop request requestid failed :errortext</b>
<b>Explanation</b>	Stop of a request failed.
<b>Action</b>	Check the error text for an explanation of why the operation failed.
<b>INOAAE0870</b>	<b>Query current active requests failed : message</b>
<b>Explanation</b>	A query of the current requests failed.
<b>Action</b>	Check the error message for more information.
<b>INOAAF0002</b>	<b>Version 'version' of Tamino not found. Please use 'set version' command to change the version to the installed version.</b>
<b>Explanation</b>	The specified Tamino version was not found.
<b>Action</b>	Use the "set version" command and change the version of the database.
<b>INOAAF0007</b>	<b>Cannot create database: reason</b>
<b>Explanation</b>	A database cannot be created with the parameters specified.
<b>Action</b>	Alter specified parameter value or provide missing parameter.

<b>INOAAF0253</b>	<b>Error reading savepoints for database dbname</b>
<b>Explanation</b>	An error occurred when reading database savepoint entries in the internal configuration store.
<b>Action</b>	Please contact your software supplier.
<b>INOAAF0254</b>	<b>Could not create XML document</b>
<b>Explanation</b>	An error occurred when creating an XML document.
<b>Action</b>	Reboot and restart the system.
<b>INOAAF0256</b>	<b>Open of event log failed</b>
<b>Explanation</b>	An error occurred when creating an event session.
<b>Action</b>	Check the event demon.
<b>INOAAF0262</b>	<b>Error reading database locations for savepoint 'savepoint'</b>
<b>Explanation</b>	No database locations were found in the internal configuration store for the savepoint.
<b>Action</b>	Please contact your software supplier.
<b>INOAAF0264</b>	<b>Duplicate parameter name parameter</b>
<b>Explanation</b>	The parameter appears more than once in the parameter list, but only a single value is allowed.
<b>Action</b>	Check where the parameter given is repeated and issue the command again without it.
<b>INOAAF0265</b>	<b>Job initialization failed</b>
<b>Explanation</b>	The job log could not be initialized because of insufficient resources. This could be memory or SMP resources like locks or threads.
<b>Action</b>	Free resources and retry.
<b>INOAAF0267</b>	<b>Rename database failed</b>
<b>Explanation</b>	The database could not be renamed.
<b>Action</b>	The reason why the database could not renamed is in the job log. Check it and retry.

---

<b>INOAAF0369</b>	<b>TSM@DLL *** FATAL ERROR NO ROLLBACK POSSIBLE (SESSION LOST) ***</b>
<b>Explanation</b>	Tamino reported an invalid session ID.
<b>Action</b>	Shut down the database and restart it.
<b>INOAAI0000</b>	<b>Change License file</b>
<b>Explanation</b>	Change license file.
<b>Action</b>	No action required.
<b>INOAAI0003</b>	<b>Modify journal space of database dbname</b>
<b>Explanation</b>	The size of the journal space is being modified.
<b>Action</b>	No action required.
<b>INOAAI0005</b>	<b>Modify journal space successfully finished</b>
<b>Explanation</b>	This message indicates that the "Modify journal space" function completed successfully.
<b>Action</b>	No action required.
<b>INOAAI0006</b>	<b>Modification and reorganization of journal space in location Location from oldsize MB to one journal space of newsize MB</b>
<b>Explanation</b>	The journal space size is being modified at the given location. If more the one journal space exists, the journal space is reorganized to one of the given size.
<b>Action</b>	No action required.
<b>INOAAI0008</b>	<b>Modify properties of Email notification</b>
<b>Explanation</b>	Email notification properties are being modified.
<b>Action</b>	No action required.
<b>INOAAI0009</b>	<b>Add location name at path</b>
<b>Explanation</b>	Start of the "add location" function.
<b>Action</b>	Information message, no action required.
<b>INOAAI0010</b>	<b>Delete location name</b>
<b>Explanation</b>	Start of the "delete location" function.
<b>Action</b>	Information message, no action required.

<b>INOAAI0011</b>	<b>Moving location oldloc to newloc</b>
<b>Explanation</b>	Start of the "move location" function.
<b>Action</b>	Information message, no action required.
<b>INOAAI0012</b>	<b>Rename location name to newname</b>
<b>Explanation</b>	Start of the "rename location" function.
<b>Action</b>	Information message, no action required.
<b>INOAAI0013</b>	<b>Set location name as default database location</b>
<b>Explanation</b>	Start of the "set default location" function.
<b>Action</b>	Information message, no action required.
<b>INOAAI0014</b>	<b>Set location name as default backup database location</b>
<b>Explanation</b>	Start of the "set default backup location" function.
<b>Action</b>	Information message, no action required.
<b>INOAAI0015</b>	<b>Modify default of database location category 'category'</b>
<b>Explanation</b>	Start of the "modify default of database location category" function.
<b>Action</b>	Information message, no action required.
<b>INOAAI0016</b>	<b>Database Version set to version</b>
<b>Explanation</b>	The database was set to the specified version.
<b>Action</b>	Information message, no action required.
<b>INOAAI0017</b>	<b>Modify Email notification properties successfully finished</b>
<b>Explanation</b>	Email notification properties have been modified successfully.
<b>Action</b>	No action required.
<b>INOAAI0021</b>	<b>Unregistering database dbName</b>
<b>Explanation</b>	This is a job log identification message.
<b>Action</b>	No action required.

---

<b>INOAAI0023</b>	<b>New license file successfully applied.</b>
<b>Explanation</b>	The license file was successfully applied.
<b>Action</b>	No action required.
<b>INOAAI0025</b>	<b>Please log in again to the web application in order to use the new product license!</b>
<b>Explanation</b>	The new functionality is available after you log in again.
<b>Action</b>	Log in again and restart your web applications.
<b>INOAAI0028</b>	<b>Confirmed all pending alerts</b>
<b>Explanation</b>	All warnings, errors and fatal errors of the job records specified have been acknowledged.
<b>Action</b>	No action required.
<b>INOAAI0033</b>	<b>New value of dynamic property 'name' is effective now</b>
<b>Explanation</b>	The property value has been updated and is active from now on.
<b>Action</b>	No action required.
<b>INOAAI0035</b>	<b>Database has been successfully unregistered</b>
<b>Explanation</b>	This message indicates, that the "Unregister Database" function is completed.
<b>Action</b>	No action required.
<b>INOAAI0037</b>	<b>Pending alerts of all jobs have been confirmed</b>
<b>Explanation</b>	All warnings, errors and fatal errors have been confirmed. The job records may be deleted now.
<b>Action</b>	No action required.
<b>INOAAI0048</b>	<b>Server extension command execution</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INOAAI0049</b>	<b>Command Name : name</b>
<b>Explanation</b>	This message specifies the command name of a server extension.
<b>Action</b>	No action required.

<b>INOAAI0050</b>	<b>Collection Name : name</b>
<b>Explanation</b>	This message specifies the collection name of an XML document.
<b>Action</b>	No action required.
<b>INOAAI0051</b>	<b>Master database set to masterdb</b>
<b>Explanation</b>	The database named is the master database.
<b>Action</b>	No action required.
<b>INOAAI0063</b>	<b>Tamino will close the current log space extent and open a new one when the current log space block has been filled up</b>
<b>Explanation</b>	Tamino writes log information in blocks. When the currently used block has been filled up completely, Tamino will close the current log space extent and open a new one. As a consequence, you might encounter a minimal growth of the current log space before a new one is created.
<b>Action</b>	No action required.
<b>INOAAI0148</b>	<b>The name 'location_name' is not the name of an existing location; the default location is used instead</b>
<b>Explanation</b>	An invalid location name was specified or extracted from a backup. It could be a valid location on the host where the backup was created.
<b>Action</b>	No action required. The location defined as default in the location management will be used.
<b>INOAAI0152</b>	<b>No item selected for modification</b>
<b>Explanation</b>	No item was selected to be modified.
<b>Action</b>	Select an item and retry.
<b>INOAAI0160</b>	<b>Delete database space of database dbname</b>
<b>Explanation</b>	The database space with the highest extent is being deleted. The deletion will not proceed when the space is in use.
<b>Action</b>	No action required.

---

<b>INOAAI0161</b>	<b>Delete database space successfully finished</b>
<b>Explanation</b>	This message indicates that the "Delete database spaces" function completed successfully.
<b>Action</b>	No action required.
<b>INOAAI0163</b>	<b>Expand database space of database dbname</b>
<b>Explanation</b>	The last database space is being expanded.
<b>Action</b>	No action required.
<b>INOAAI0164</b>	<b>Expand database space successfully finished</b>
<b>Explanation</b>	This message indicates that the "Expand database spaces" function completed successfully.
<b>Action</b>	No action required.
<b>INOAAI0167</b>	<b>Deleting database space spaceNo from location Location</b>
<b>Explanation</b>	The specified database space is being deleted from the given location.
<b>Action</b>	No action required.
<b>INOAAI0168</b>	<b>Expanding database space spaceNo in location Location from oldsize MB to newsize MB</b>
<b>Explanation</b>	The specified database space is being expanded at the given location.
<b>Action</b>	No action required.
<b>INOAAI0176</b>	<b>Restoring of database dbName without further recovery successfully completed</b>
<b>Explanation</b>	The specified database has been restored successfully. Changes that occurred later than the backup time were not reapplied.
<b>Action</b>	No action required.
<b>INOAAI0211</b>	<b>Data load in collection collectionname</b>
<b>Explanation</b>	Data has been loaded into the named collection.
<b>Action</b>	No action required.

<b>INOAAI0227</b>	<b>Data unload from collection collectionname</b>
<b>Explanation</b>	Data will be unloaded into the named collection.
<b>Action</b>	No action required.
<b>INOAAI0237</b>	<b>mvcount spaces successfully moved from oldloc to newloc</b>
<b>Explanation</b>	The specified number of spaces were moved from one location to another one.
<b>Action</b>	Information message, no action required.
<b>INOAAI0248</b>	<b>Document path : path</b>
<b>Explanation</b>	This message specifies the path name of an XML document.
<b>Action</b>	No action required.
<b>INOAAI0249</b>	<b>Query string : text</b>
<b>Explanation</b>	This message specifies the query string to retrieve XML documents.
<b>Action</b>	No action required.
<b>INOAAI0250</b>	<b>Schema name : name</b>
<b>Explanation</b>	This message specifies the schema name of a XML Document.
<b>Action</b>	No action required.
<b>INOAAI0269</b>	<b>Execution of command 'name' successful</b>
<b>Explanation</b>	A server extension command was successfully executed.
<b>Action</b>	No action required.
<b>INOAAI0273</b>	<b>Location locCount : locName</b>
<b>Explanation</b>	This is an informational message for one default database location of the category.
<b>Action</b>	Information message, no action required.
<b>INOAAI0275</b>	<b>No pending alerts found</b>
<b>Explanation</b>	An attempt was made to confirm all pending alerts, but no job with pending alerts was found. Either there are no alerts in the display, or the alerts in the display have been confirmed meanwhile by someone else.
<b>Action</b>	No action required.

---

<b>INOAAI0276</b>	<b>When all pending alerts are confirmed, the "Pending Alerts" folder is cleared. Each individual job is still in the "Running Jobs" or in the "Completed Jobs" folder until it is deleted by automatic cleanup; up to that point, the warning, error and alert messages are still visible in the single job view.</b>
<b>Explanation</b>	No job or message is really removed when alerts are confirmed; they are just moved away from the Alerts folder.
<b>Action</b>	No action required
<b>INOAAI0277</b>	<b>When a job record is deleted, it is removed from the job log and its disk file is deleted. Jobs that are not completed (i.e. stopped or still running) and jobs that have unconfirmed alert messages are not deleted and remain in their respective folders.</b>
<b>Explanation</b>	Only finished jobs with no pending alerts are deleted.
<b>Action</b>	No action required
<b>INOAAI0280</b>	<b>Object Identification : text</b>
<b>Explanation</b>	The given text provides the object identification of the server extension.
<b>Action</b>	No action required.
<b>INOAAI0286</b>	<b>Execution type: type</b>
<b>Explanation</b>	The specified type is the selected server extension execution type.
<b>Action</b>	No action required.
<b>INOAAI0288</b>	<b>Backing up all server extensions for database 'name'</b>
<b>Explanation</b>	All server extensions in the specified database are being backed up.
<b>Action</b>	No action required.
<b>INOAAI0289</b>	<b>Backup of all server extensions successful</b>
<b>Explanation</b>	All server extensions have been backed up successfully.
<b>Action</b>	No action required.
<b>INOAAI0290</b>	<b>Restoring server extension for database 'name'</b>
<b>Explanation</b>	A server extension of the specified database is being restored.
<b>Action</b>	No action required.

<b>INOAAI0291</b>	<b>Restore of server extension 'name' successful</b>
<b>Explanation</b>	The specified server extension has been restored successfully.
<b>Action</b>	No action required.
<b>INOAAI0292</b>	<b>Restoring all server extensions for database 'name'</b>
<b>Explanation</b>	All server extensions of the specified database are being restored.
<b>Action</b>	No action required.
<b>INOAAI0293</b>	<b>Restore of all server extensions successful</b>
<b>Explanation</b>	All server extensions have been restored successfully.
<b>Action</b>	No action required.
<b>INOAAI0299</b>	<b>Storing binary file 'path'</b>
<b>Explanation</b>	A binary file is being stored in the database.
<b>Action</b>	No action required.
<b>INOAAI0300</b>	<b>Restoring binary file 'path'</b>
<b>Explanation</b>	A binary file is being restored from the database.
<b>Action</b>	No action required.
<b>INOAAI0301</b>	<b>Removing binary file 'path'</b>
<b>Explanation</b>	A binary file is being removed from the database.
<b>Action</b>	No action required.
<b>INOAAI0303</b>	<b>Command log switched mode buffers buffers</b>
<b>Explanation</b>	This is a result message for a batch command.
<b>Action</b>	No action required.
<b>INOAAI0308</b>	<b>Update of settings successful : name</b>
<b>Explanation</b>	The update of the given settings parameter value was successful.
<b>Action</b>	No action necessary.

---

<b>INOAAI0316</b>	<b>Backing up server extension for database 'name'</b>
<b>Explanation</b>	A server extension in the specified database is being backed up.
<b>Action</b>	No action required.
<b>INOAAI0317</b>	<b>Backup of server extension 'name' successful</b>
<b>Explanation</b>	The specified server extension has been backed up successfully.
<b>Action</b>	No action required.
<b>INOAAI0318</b>	<b>Deleting document : name</b>
<b>Explanation</b>	The XML document will be deleted.
<b>Action</b>	No action necessary.
<b>INOAAI0319</b>	<b>No mapped document : name</b>
<b>Explanation</b>	No XML document is mapped to the server extension.
<b>Action</b>	No action necessary.
<b>INOAAI0320</b>	<b>Trace server extensions in database 'name'</b>
<b>Explanation</b>	The server extension trace mode is changed in the specified database.
<b>Action</b>	No action required.
<b>INOAAI0321</b>	<b>Trace switched on successfully</b>
<b>Explanation</b>	The server extension trace is switched on.
<b>Action</b>	No action required.
<b>INOAAI0322</b>	<b>Trace switched off successfully</b>
<b>Explanation</b>	The server extension trace is switched off.
<b>Action</b>	No action required.
<b>INOAAI0323</b>	<b>Store server extensions in database 'name'</b>
<b>Explanation</b>	The storing of server extension files is changed to the specified database.
<b>Action</b>	No action required.

<b>INOAAI0324</b>	<b>Store server extension files switched on successfully</b>
<b>Explanation</b>	The storing of server extension files is switched on.
<b>Action</b>	No action required.
<b>INOAAI0325</b>	<b>Store server extension files switched off successfully</b>
<b>Explanation</b>	The storing of server extension files is switched off.
<b>Action</b>	No action required.
<b>INOAAI0326</b>	<b>Analyze object for a new server extension</b>
<b>Explanation</b>	The object for a new server extension will be analyzed.
<b>Action</b>	No action required.
<b>INOAAI0327</b>	<b>Object File : path</b>
<b>Explanation</b>	This specifies the object file for the new server extension.
<b>Action</b>	No action required.
<b>INOAAI0328</b>	<b>Analysis of new server extension object successful</b>
<b>Explanation</b>	The analysis of the object for the new server extension was successful.
<b>Action</b>	No action required.
<b>INOAAI0329</b>	<b>Remove server extension object</b>
<b>Explanation</b>	The object of a new server extension will be removed.
<b>Action</b>	No action required.
<b>INOAAI0330</b>	<b>Select function for a new server extension</b>
<b>Explanation</b>	The function for a new server extension will be selected.
<b>Action</b>	No action required.
<b>INOAAI0331</b>	<b>Select function for a new server extension successful</b>
<b>Explanation</b>	The function for a new server extension was successfully selected.
<b>Action</b>	No action required.

---

<b>INOAAI0332</b>	<b>Display trace state successful</b>
<b>Explanation</b>	The server extension trace state is displayed successfully.
<b>Action</b>	No action required.
<b>INOAAI0333</b>	<b>Create Database from Backup</b>
<b>Explanation</b>	Button Create Database from Backup
<b>Action</b>	none
<b>INOAAI0357</b>	<b>Access Control List 'name' created</b>
<b>Explanation</b>	A new access control list has been created. Details are generally provided in other messages.
<b>Action</b>	No action required.
<b>INOAAI0358</b>	<b>User group 'name' created</b>
<b>Explanation</b>	A new user group has been created.
<b>Action</b>	No action required.
<b>INOAAI0360</b>	<b>User 'name' created</b>
<b>Explanation</b>	A new user has been created. Details are generally provided in other messages.
<b>Action</b>	No action required.
<b>INOAAI0364</b>	<b>Access control list 'name' modified</b>
<b>Explanation</b>	The current ACL has been modified.
<b>Action</b>	No action required.
<b>INOAAI0365</b>	<b>User group 'name' modified</b>
<b>Explanation</b>	The user group has been modified.
<b>Action</b>	No action required.
<b>INOAAI0366</b>	<b>User 'name' modified</b>
<b>Explanation</b>	The user has been modified.
<b>Action</b>	No action required.

<b>INOAAI0368</b>	<b>Access control element 'name' added to the access control list</b>
<b>Explanation</b>	An ACE has been added successfully to an ACL.
<b>Action</b>	No action required.
<b>INOAAI0374</b>	<b>Access control list 'name' deleted</b>
<b>Explanation</b>	The access control list has been deleted.
<b>Action</b>	No action required.
<b>INOAAI0375</b>	<b>User 'name' deleted</b>
<b>Explanation</b>	The user has been deleted.
<b>Action</b>	No action required.
<b>INOAAI0376</b>	<b>User group 'name' deleted</b>
<b>Explanation</b>	The user group has been deleted.
<b>Action</b>	No action required.
<b>INOAAI0406</b>	<b>Shutdown of all active databases completed</b>
<b>Explanation</b>	All active databases are about to shut down, or they are already inactive.
<b>Action</b>	No action required.
<b>INOAAI0407</b>	<b>All autostart databases checked</b>
<b>Explanation</b>	All databases with autostart parameter set have been started.
<b>Action</b>	No action required.
<b>INOAAI0410</b>	<b>op of operation done</b>
<b>Explanation</b>	This message provides information about operation progress.
<b>Action</b>	No action required
<b>INOAAI0424</b>	<b>New value : text</b>
<b>Explanation</b>	This describes a new value for a Java public or private classpath.
<b>Action</b>	No action required.

---

<b>INOAAI0425</b>	<b>Starting autostart databases of version version</b>
<b>Explanation</b>	Databases with the autostart parameter set to 'yes' are being started.
<b>Action</b>	No action required.
<b>INOAAI0426</b>	<b>Stopping all active databases of version version</b>
<b>Explanation</b>	Active databases are being stopped
<b>Action</b>	No action required.
<b>INOAAI0429</b>	<b>Confirming all alerts</b>
<b>Explanation</b>	Fatal error, error and warning messages are being confirmed. Once all alerts are confirmed, a job will be scheduled for cleanup (will be removed later), or it can be delete explicitly as a single job or along with all completed jobs.
<b>Action</b>	No action required.
<b>INOAAI0431</b>	<b>Deleting all completed jobs</b>
<b>Explanation</b>	All jobs without unconfirmed alerts are being deleted.
<b>Action</b>	No action required.
<b>INOAAI0432</b>	<b>All job records of completed jobs successfully deleted by user (except jobs with pending alerts)</b>
<b>Explanation</b>	Deleted job records will not appear in the job monitor list any more; the corresponding files have been deleted on disk.
<b>Action</b>	No action required.
<b>INOAAI0445</b>	<b>Setting version for database 'dbName'</b>
<b>Explanation</b>	Set the version of a specific database.
<b>Action</b>	Data must be unloaded and loaded into a new database manually.
<b>INOAAI0446</b>	<b>No property has been modified. All properties already set to the given values.</b>
<b>Explanation</b>	A property will be changed when the new property value is different from the value stored in the internal configuration store.
<b>Action</b>	No action required.

<b>INOAAI0448</b>	<b>'param' has been changed from 'oldValue' to 'newValue'</b>
<b>Explanation</b>	A database property was changed successfully by the "modify property" command.
<b>Action</b>	No action required.
<b>INOAAI0451</b>	<b>Adding database space for database dbName</b>
<b>Explanation</b>	This message indicates the beginning of the execution of the "Add database spaces" function.
<b>Action</b>	No action required.
<b>INOAAI0452</b>	<b>Add database space successfully finished</b>
<b>Explanation</b>	This message indicates that the "Add database spaces" function completed successfully.
<b>Action</b>	No action required.
<b>INOAAI0454</b>	<b>Moving database space for database dbName</b>
<b>Explanation</b>	This message indicates the beginning of the execution of the "Move database spaces" function.
<b>Action</b>	No action required.
<b>INOAAI0455</b>	<b>Move database space successfully finished</b>
<b>Explanation</b>	This message indicates that the "Move database spaces" function completed successfully.
<b>Action</b>	No action required.
<b>INOAAI0457</b>	<b>Creating database dbName</b>
<b>Explanation</b>	This message indicates the beginning of the execution of the "Create Database" function.
<b>Action</b>	No action required.
<b>INOAAI0458</b>	<b>Create database successfully finished</b>
<b>Explanation</b>	This message indicates that the database was created successfully.
<b>Action</b>	No action required.

---

<b>INOAAI0460</b>	<b>Deleting database dbName</b>
<b>Explanation</b>	This message indicates the beginning of the execution of the "Delete Database" function.
<b>Action</b>	No action required.
<b>INOAAI0461</b>	<b>Database has been successfully deleted</b>
<b>Explanation</b>	This message indicates that the "Delete Database" function completed successfully.
<b>Action</b>	No action required.
<b>INOAAI0465</b>	<b>Start of database dbName successful</b>
<b>Explanation</b>	This message indicates that the specified database has been started successfully.
<b>Action</b>	No action required.
<b>INOAAI0467</b>	<b>Stop of database dbName successful</b>
<b>Explanation</b>	This message indicates that the specified database has been stopped successfully.
<b>Action</b>	No action required.
<b>INOAAI0468</b>	<b>Backup of database dbName</b>
<b>Explanation</b>	This message indicates that a backup of the specified database is being created.
<b>Action</b>	No action required.
<b>INOAAI0469</b>	<b>Restore database dbName using backup 'bckDate' with recovery</b>
<b>Explanation</b>	This message indicates the beginning of the execution of a database restore function with a database recovery based on the log spaces.
<b>Action</b>	No action required.
<b>INOAAI0470</b>	<b>Restore database dbName using backup 'bckDate' without recovery</b>
<b>Explanation</b>	This message indicates the beginning of the execution of a database restore function without a database recovery based on the log spaces.
<b>Action</b>	No action required.
<b>INOAAI0471</b>	<b>Backup of database dbName successfully completed</b>
<b>Explanation</b>	This message indicates that the specified database has been backed up successfully.
<b>Action</b>	No action required.

<b>INOAAI0476</b>	<b>Restoring and recovering of database dbName successfully completed</b>
<b>Explanation</b>	The specified database has been restored and recovered successfully.
<b>Action</b>	No action required.
<b>INOAAI0477</b>	<b>Moving database space spaceNo from location oldLoc to newLoc</b>
<b>Explanation</b>	A database space is being moved from one location to another.
<b>Action</b>	No action required.
<b>INOAAI0479</b>	<b>Adding size MB database space to location newLoc</b>
<b>Explanation</b>	The specified database space is being added to the given location.
<b>Action</b>	No action required.
<b>INOAAI0484</b>	<b>Uninstalling all server extensions in database 'name'</b>
<b>Explanation</b>	All server extensions in a database are being uninstalled from the specified database and the file system. If a restore is being performed the server extensions will be recovered from the backup database.
<b>Action</b>	No action required.
<b>INOAAI0490</b>	<b>Modify database properties successfully finished</b>
<b>Explanation</b>	Database properties have been modified successfully.
<b>Action</b>	No action required.
<b>INOAAI0492</b>	<b>Modify properties for database dbName</b>
<b>Explanation</b>	Database properties are being modified.
<b>Action</b>	No action required.
<b>INOAAI0493</b>	<b>Restore database dbName using backup 'bckDate' with partial recovery</b>
<b>Explanation</b>	A database restore function with partial recovery has been started.
<b>Action</b>	No action required.
<b>INOAAI0494</b>	<b>Checking and repairing database dbName</b>
<b>Explanation</b>	A function to check and repair the database has been started.
<b>Action</b>	No action required.

---

<b>INOAAI0495</b>	<b>Check and repair of database dbName finished successfully</b>
<b>Explanation</b>	The check and repair function was successfully applied to the specified database, i.e. the recreation of the indices was successful.
<b>Action</b>	No action required.
<b>INOAAI0497</b>	<b>help</b>
<b>Explanation</b>	This is a standard information message to show the server version in space and property commands.
<b>Action</b>	No action required.
<b>INOAAI0501</b>	<b>Uninstall of all server extensions successful</b>
<b>Explanation</b>	All server extensions in a database have been uninstalled successfully. This is an informational message.
<b>Action</b>	No action required.
<b>INOAAI0502</b>	<b>Registering Java class 'path'</b>
<b>Explanation</b>	The installation count for the Java class is added to the internal configuration. This is an informational message.
<b>Action</b>	No action required.
<b>INOAAI0505</b>	<b>Function name: 'name'</b>
<b>Explanation</b>	This is the name of a server extension function. This is an informational message.
<b>Action</b>	No action required.
<b>INOAAI0506</b>	<b>External name: 'name'</b>
<b>Explanation</b>	This is the external name of a server extension function. This is an informational message.
<b>Action</b>	No action required.
<b>INOAAI0511</b>	<b>Parameter 'para' not valid</b>
<b>Explanation</b>	The specified parameter is not valid for the current command.
<b>Action</b>	Check the spelling of the parameter. If the spelling is correct, check whether the parameter is valid in the current context.

<b>INOAAI0514</b>	<b>message</b>
<b>Explanation</b>	This is an informational message about a server extension document that has been returned from the Tamino server.
<b>Action</b>	No action required.
<b>INOAAI0515</b>	<b>Listing server extensions in database 'name'</b>
<b>Explanation</b>	A list of all installed server extensions for the specified database is being generated.
<b>Action</b>	No action required.
<b>INOAAI0516</b>	<b>Installing server extension in database 'name'</b>
<b>Explanation</b>	A new server extension is being installed in the specified database.
<b>Action</b>	No action required.
<b>INOAAI0517</b>	<b>Package file: path</b>
<b>Explanation</b>	The specified path is the pathname of the packed server extension file.
<b>Action</b>	No action required.
<b>INOAAI0518</b>	<b>Execution mode: mode</b>
<b>Explanation</b>	The specified mode is the selected server extension execution mode.
<b>Action</b>	No action required.
<b>INOAAI0519</b>	<b>Installation of server extension 'name' successful</b>
<b>Explanation</b>	The specified server extension was installed successfully.
<b>Action</b>	No action required.
<b>INOAAI0520</b>	<b>Uninstalling server extension from database 'name'</b>
<b>Explanation</b>	A server extension is being uninstalled from the specified database.
<b>Action</b>	No action required.
<b>INOAAI0521</b>	<b>Server extension name: 'name'</b>
<b>Explanation</b>	This message specifies the name of a server extension.
<b>Action</b>	No action required.

---

<b>INOAAI0522</b>	<b>Uninstall of server extension 'name' successful</b>
<b>Explanation</b>	The specified server extension has been uninstalled successfully.
<b>Action</b>	No action required.
<b>INOAAI0523</b>	<b>Modifying server extension in database 'name'</b>
<b>Explanation</b>	A server extension in the specified database is being modified.
<b>Action</b>	No action required.
<b>INOAAI0524</b>	<b>Modification of server extension 'name' successful</b>
<b>Explanation</b>	The specified server extension has been modified successfully.
<b>Action</b>	No action required.
<b>INOAAI0525</b>	<b>Deleting help URL 'path'</b>
<b>Explanation</b>	The specified help file for a server extension is being deleted.
<b>Action</b>	No action required.
<b>INOAAI0526</b>	<b>Executing command 'call'</b>
<b>Explanation</b>	The specified operating system command is being executed.
<b>Action</b>	No action required.
<b>INOAAI0527</b>	<b>De-registering server extension DLL 'path'</b>
<b>Explanation</b>	The specified server extension DLL file is being de-registered.
<b>Action</b>	No action required.
<b>INOAAI0528</b>	<b>Deleting server extension DLL 'path'</b>
<b>Explanation</b>	The specified server extension DLL file is being deleted.
<b>Action</b>	No action required.
<b>INOAAI0529</b>	<b>Deselect function of a new server extension</b>
<b>Explanation</b>	A selected function for a new server extension is being deselected. This is an informational message.
<b>Action</b>	No action required.

<b>INOAAI0530</b>	<b>Extracting entry 'name'</b>
<b>Explanation</b>	An entry is being extracted from a packed file.
<b>Action</b>	No action required.
<b>INOAAI0531</b>	<b>Inserting document 'path'</b>
<b>Explanation</b>	The URL of a help file for a server extension is being inserted into the server extension's installation document.
<b>Action</b>	No action required.
<b>INOAAI0532</b>	<b>Registering DLL 'path'</b>
<b>Explanation</b>	A server extension DLL file is being registered.
<b>Action</b>	No action required.
<b>INOAAI0533</b>	<b>DLL 'path' already registered</b>
<b>Explanation</b>	The specified server extension DLL file is already registered.
<b>Action</b>	No action required.
<b>INOAAI0535</b>	<b>Deleting file 'name'</b>
<b>Explanation</b>	The specified server extension installation file is being deleted.
<b>Action</b>	No action required.
<b>INOAAI0536</b>	<b>Deleting directory 'path'</b>
<b>Explanation</b>	The specified server extension installation directory is being deleted.
<b>Action</b>	No action required.
<b>INOAAI0537</b>	<b>Showing server extension attributes in database 'name'</b>
<b>Explanation</b>	The attributes of a server extension in the specified database are being listed.
<b>Action</b>	No action required.
<b>INOAAI0538</b>	<b>Setting access rights for server extension in database 'name'</b>
<b>Explanation</b>	The access rights of a server extension are being set in the specified database.
<b>Action</b>	No action required.

---

<b>INOAAI0543</b>	<b>Stopping database dbName in normal mode</b>
<b>Explanation</b>	This message indicates that the specified database is being stopped in normal mode.
<b>Action</b>	No action required.
<b>INOAAI0544</b>	<b>Stopping database dbName in abort mode</b>
<b>Explanation</b>	This message indicates that the specified database is being stopped in abort mode.
<b>Action</b>	No action required.
<b>INOAAI0545</b>	<b>Stopping database dbName in rollback mode</b>
<b>Explanation</b>	This message indicates that the specified database is being stopped in rollback mode.
<b>Action</b>	No action required.
<b>INOAAI0568</b>	<b>Unexpected messages received</b>
<b>Explanation</b>	This message is the header for subsequent messages.
<b>Action</b>	No action required.
<b>INOAAI0569</b>	<b>Edit details for a new server extension</b>
<b>Explanation</b>	Details for a new server extension will be edited.
<b>Action</b>	No action required.
<b>INOAAI0570</b>	<b>Description: text</b>
<b>Explanation</b>	This is a short description of the new server extension.
<b>Action</b>	No action required.
<b>INOAAI0571</b>	<b>Author name: name</b>
<b>Explanation</b>	This is the name of the new server extension author.
<b>Action</b>	No action required.
<b>INOAAI0572</b>	<b>Help file: name</b>
<b>Explanation</b>	This is the name of a help file for the new server extension.
<b>Action</b>	No action required.

<b>INOAAI0573</b>	<b>Editing of new server extension details successful</b>
<b>Explanation</b>	The editing of the new server extension details was successful.
<b>Action</b>	No action required.
<b>INOAAI0574</b>	<b>Starting database dbName</b>
<b>Explanation</b>	A Tamino database is being started.
<b>Action</b>	No action required.
<b>INOAAI0577</b>	<b>Unloading document 'path'</b>
<b>Explanation</b>	The server extension object information document is being unloaded.
<b>Action</b>	No action required.
<b>INOAAI0578</b>	<b>Edit details for a new server extension function</b>
<b>Explanation</b>	Details for a new server extension function will be edited.
<b>Action</b>	No action required.
<b>INOAAI0579</b>	<b>Function type: text</b>
<b>Explanation</b>	This message displays the type of a server extension function.
<b>Action</b>	No action required.
<b>INOAAI0580</b>	<b>Editing of new server extension function details successful</b>
<b>Explanation</b>	The editing of the new server extension function details was successful.
<b>Action</b>	No action required.
<b>INOAAI0581</b>	<b>Loading document 'path'</b>
<b>Explanation</b>	A server extension analyzer document is being loaded.
<b>Action</b>	No action required.
<b>INOAAI0582</b>	<b>Start Database</b>
<b>Explanation</b>	This is a command for the Tamino agent dbagent.
<b>Action</b>	No action required.

---

<b>INOAAI0583</b>	<b>Stop Database</b>
<b>Explanation</b>	This is a command for the Tamino agent dbagent.
<b>Action</b>	No action required.
<b>INOAAI0584</b>	<b>Delete Database</b>
<b>Explanation</b>	This is a command for the Tamino agent dbagent.
<b>Action</b>	No action required.
<b>INOAAI0587</b>	<b>Check and Repair</b>
<b>Explanation</b>	This is a command for the Tamino agent dbagent.
<b>Action</b>	No action required.
<b>INOAAI0589</b>	<b>Information</b>
<b>Explanation</b>	This is a command for the Tamino agent dbagent.
<b>Action</b>	No action required.
<b>INOAAI0591</b>	<b>Database Spaces</b>
<b>Explanation</b>	This is a command for the Tamino agent dbagent.
<b>Action</b>	No action required.
<b>INOAAI0592</b>	<b>Properties</b>
<b>Explanation</b>	This is a command for the Tamino agent dbagent.
<b>Action</b>	No action required.
<b>INOAAI0598</b>	<b>Register CD Database</b>
<b>Explanation</b>	This is a command button for the Tamino agent dblast.
<b>Action</b>	No action required.
<b>INOAAI0599</b>	<b>Prepare for CD</b>
<b>Explanation</b>	This is a command for the Tamino agent dblast.
<b>Action</b>	No action required.

<b>INOAAI0600</b>	<b>Unregister CD Database</b>
<b>Explanation</b>	This is a command button for the Tamino agent dbagent.
<b>Action</b>	No action required.
<b>INOAAI0601</b>	<b>Create a new server extension package</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INOAAI0602</b>	<b>Package path: path</b>
<b>Explanation</b>	This is the pathname of the server extension package.
<b>Action</b>	No action required.
<b>INOAAI0603</b>	<b>Creation of package 'name' successful</b>
<b>Explanation</b>	A server extension package was created successfully.
<b>Action</b>	No action required.
<b>INOAAI0604</b>	<b>Port range successfully changed</b>
<b>Explanation</b>	The port range was successfully changed.
<b>Action</b>	none
<b>INOAAI0607</b>	<b>inodmp return erg</b>
<b>Explanation</b>	This message shows a return value of inodmp.
<b>Action</b>	No action required.
<b>INOAAI0612</b>	<b>Deselection of function 'name' successful</b>
<b>Explanation</b>	The server extension function was successfully deselected.
<b>Action</b>	No action required.
<b>INOAAI0613</b>	<b>Modify parameter of server extension function</b>
<b>Explanation</b>	The parameter name and XML type of a selected server extension function will be modified.
<b>Action</b>	Insert the corresponding values.

---

<b>INOAAI0614</b>	<b>Parameter name: name</b>
<b>Explanation</b>	This specifies the name of the parameter being modified.
<b>Action</b>	No action required.
<b>INOAAI0615</b>	<b>Modified name: name</b>
<b>Explanation</b>	This specifies the modified name of the parameter.
<b>Action</b>	No action required.
<b>INOAAI0616</b>	<b>XML type: type</b>
<b>Explanation</b>	This specifies the modified XML type of the parameter.
<b>Action</b>	No action required.
<b>INOAAI0617</b>	<b>Modification of parameter 'name' successful</b>
<b>Explanation</b>	A server extension function parameter was successfully modified.
<b>Action</b>	No action required.
<b>INOAAI0618</b>	<b>Preparation of CD database successful</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INOAAI0625</b>	<b>Renaming database dbname to newdbname</b>
<b>Explanation</b>	The database is being renamed.
<b>Action</b>	No action required.
<b>INOAAI0626</b>	<b>Database successfully renamed</b>
<b>Explanation</b>	The database was renamed successfully.
<b>Action</b>	No action required.
<b>INOAAI0627</b>	<b>Server extension class 'name'</b>
<b>Explanation</b>	This message specifies the Java class name of a server extension.
<b>Action</b>	No action required.

<b>INOAAI0629</b>	<b>database successfully registered</b>
<b>Explanation</b>	A database has been successfully registered.
<b>Action</b>	No action required.
<b>INOAAI0630</b>	<b>Registering CD database dbname</b>
<b>Explanation</b>	The CD database is being registered.
<b>Action</b>	No action required.
<b>INOAAI0631</b>	<b>Location name at path successfully added</b>
<b>Explanation</b>	The location was successfully added.
<b>Action</b>	No action required.
<b>INOAAI0632</b>	<b>Location name successfully deleted</b>
<b>Explanation</b>	The location was successfully deleted.
<b>Action</b>	No action required.
<b>INOAAI0633</b>	<b>Location name successfully renamed to newname</b>
<b>Explanation</b>	The location was successfully renamed.
<b>Action</b>	No action required.
<b>INOAAI0634</b>	<b>Location name successfully set as default database location</b>
<b>Explanation</b>	The location was successfully set as the default database location.
<b>Action</b>	No action required.
<b>INOAAI0635</b>	<b>Location name successfully set as default backup database location</b>
<b>Explanation</b>	The location was successfully set as the default backup location.
<b>Action</b>	No action required.
<b>INOAAI0636</b>	<b>Default of database location category 'category' successfully modified</b>
<b>Explanation</b>	The default database location category was successfully modified.
<b>Action</b>	No action required.

---

<b>INOAAI0642</b>	<b>Stopping XML session</b>
<b>Explanation</b>	The XML session is being stopped.
<b>Action</b>	No action required.
<b>INOAAI0649</b>	<b>Setting global parameters for external backup method 'method' of database dbname</b>
<b>Explanation</b>	Global parameters for external backup method are being set.
<b>Action</b>	No action required, information message.
<b>INOAAI0650</b>	<b>Global parameters for external backup method 'method' of database dbname successfully set</b>
<b>Explanation</b>	The global parameters were successfully set.
<b>Action</b>	No action required, information message.
<b>INOAAI0652</b>	<b>Setting configuration parameters for external backup method 'method' of database dbname</b>
<b>Explanation</b>	The configuration parameters for the external backup method are being set.
<b>Action</b>	No action required, information message.
<b>INOAAI0654</b>	<b>Configuration parameters for external backup method 'method' of database dbname successfully set</b>
<b>Explanation</b>	The configuration parameters were successfully set.
<b>Action</b>	No action required, information message.
<b>INOAAI0655</b>	<b>Deleting configuration 'configuration' of method 'method' of database dbname</b>
<b>Explanation</b>	The "delete configuration" function was started.
<b>Action</b>	No action required, information message.
<b>INOAAI0657</b>	<b>Configuration 'configuration' of method 'method' of database dbname successfully deleted</b>
<b>Explanation</b>	The configuration parameters were successfully deleted.
<b>Action</b>	No action required, information message.

<b>INOAAI0661</b>	<b>Replication database name replication_db added into the permission list</b>
<b>Explanation</b>	This is a status report that the replication database name has been added into the permission list.
<b>Action</b>	No action required.
<b>INOAAI0663</b>	<b>Replication database name replication_db removed from the permission list</b>
<b>Explanation</b>	The replication database name has been removed from the permission list.
<b>Action</b>	No action required, this is an information message.
<b>INOAAI0664</b>	<b>Database database set to replication type</b>
<b>Explanation</b>	The database is set to the type "replication database".
<b>Action</b>	No action required, this is an information message.
<b>INOAAI0666</b>	<b>Replication database database has been reset to normal type</b>
<b>Explanation</b>	The replication database was reset so that it is a normal database.
<b>Action</b>	No action required, this is an information message.
<b>INOAAI0670</b>	<b>Private Classpath: path</b>
<b>Explanation</b>	The displayed path is the server extension private Java classpath.
<b>Action</b>	No action required.
<b>INOAAI0671</b>	<b>type Classpath: path</b>
<b>Explanation</b>	The specified operation type is performed with the server extension private Java classpath.
<b>Action</b>	No action required.
<b>INOAAI0673</b>	<b>Keep files from backup datetime</b>
<b>Explanation</b>	This indicates that the backup files will be saved.
<b>Action</b>	No action required, information message.
<b>INOAAI0674</b>	<b>Move backup space to "destination"</b>
<b>Explanation</b>	The backup space is being moved moved to new location.
<b>Action</b>	No action required, information message.

---

<b>INOAAI0682</b>	<b>Switching log space for database dbName</b>
<b>Explanation</b>	A switch of the log space is initiated.
<b>Action</b>	No action required.
<b>INOAAI0687</b>	<b>Nothing has changed: mode</b>
<b>Explanation</b>	The specified server extension attribute did not change.
<b>Action</b>	No action required.
<b>INOAAI0688</b>	<b>Attribute: mode</b>
<b>Explanation</b>	This specifies a new attribute of the parameter.
<b>Action</b>	No action required.
<b>INOAAI0689</b>	<b>Default value : text</b>
<b>Explanation</b>	This specifies the default value of the parameter.
<b>Action</b>	No action required.
<b>INOAAI0690</b>	<b>Adding backup method 'method' for database dbname</b>
<b>Explanation</b>	An external backup method of the database is being added.
<b>Action</b>	No action required, information message.
<b>INOAAI0692</b>	<b>Backup method 'method' successfully added for database dbname</b>
<b>Explanation</b>	The backup method has been successfully added.
<b>Action</b>	No action required, information message.
<b>INOAAI0693</b>	<b>Deleting method 'method' of database dbname</b>
<b>Explanation</b>	An external backup method of the database is being deleted.
<b>Action</b>	No action required, information message.
<b>INOAAI0695</b>	<b>Method 'method' of database dbname successfully deleted</b>
<b>Explanation</b>	The backup method has been successfully deleted.
<b>Action</b>	No action required, information message.

<b>INOAAI0697</b>	<b>Deleting backup 'bckDate' of database dbName</b>
<b>Explanation</b>	The backup of the database is being deleted.
<b>Action</b>	Information message, no action required.
<b>INOAAI0698</b>	<b>Deletion of backup 'bckDate' of database dbName successfully completed</b>
<b>Explanation</b>	The specified database backup has been deleted successfully.
<b>Action</b>	Information message, no action required.
<b>INOAAI0701</b>	<b>Remove permitted replication database name replicationdb from master database masterdb</b>
<b>Explanation</b>	This is a title for the messages for removing a database name from the permission list.
<b>Action</b>	No action required.
<b>INOAAI0702</b>	<b>Add permitted replication database name</b>
<b>Explanation</b>	This is a title for adding database name into the permission list.
<b>Action</b>	No action required.
<b>INOAAI0704</b>	<b>Set type to normal database</b>
<b>Explanation</b>	This is a title for setting the database type to a normal one.
<b>Action</b>	No action required.
<b>INOAAI0705</b>	<b>Create replication database list</b>
<b>Explanation</b>	This is a title for create replication database list.
<b>Action</b>	No action required.
<b>INOAAI0706</b>	<b>Retrieve replication database information</b>
<b>Explanation</b>	This is a title for retrieving the information of databases.
<b>Action</b>	No action required.
<b>INOAAI0711</b>	<b>Domain 'name' created</b>
<b>Explanation</b>	The domain has been created.
<b>Action</b>	No action required.

---

<b>INOAAI0713</b>	<b>Domain 'name' modified</b>
<b>Explanation</b>	The domain has been modified.
<b>Action</b>	No action required.
<b>INOAAI0715</b>	<b>Domain 'name' deleted</b>
<b>Explanation</b>	The domain has been deleted.
<b>Action</b>	No action required.
<b>INOAAI0718</b>	<b>Creating database dbName from backup dated timestamp</b>
<b>Explanation</b>	A new database is created with the content of a given backup. The log spaces belonging to the backup are not recovered.
<b>Action</b>	No action required.
<b>INOAAI0721</b>	<b>Web server assignments changed.</b>
<b>Explanation</b>	The web server assignments for this database have changed.
<b>Action</b>	No action required.
<b>INOAAI0722</b>	<b>Setting port ranges for Tamino databases</b>
<b>Explanation</b>	The static and dynamic port ranges are being set.
<b>Action</b>	No action required.
<b>INOAAI0726</b>	<b>Port ranges successfully changed</b>
<b>Explanation</b>	The port ranges were successfully changed.
<b>Action</b>	No action required.
<b>INOAAI0729</b>	<b>Renaming web server 'wbsname' to 'newwbsname'</b>
<b>Explanation</b>	The web server is being renamed.
<b>Action</b>	No action required.
<b>INOAAI0730</b>	<b>Web server successfully renamed</b>
<b>Explanation</b>	The web server was successfully renamed.
<b>Action</b>	No action required.

<b>INOAAI0732</b>	<b>Web server successfully added.</b>
<b>Explanation</b>	The web server was added successfully.
<b>Action</b>	No action required.
<b>INOAAI0734</b>	<b>Adding web server 'newwbsname'</b>
<b>Explanation</b>	The web server is being added.
<b>Action</b>	No action required.
<b>INOAAI0735</b>	<b>Deleting web server 'wbsname'</b>
<b>Explanation</b>	The web server is being deleted.
<b>Action</b>	No action required.
<b>INOAAI0736</b>	<b>Web server successfully deleted</b>
<b>Explanation</b>	The web server was deleted successfully.
<b>Action</b>	No action required.
<b>INOAAI0738</b>	<b>Modifying web server 'wbsname'. New IP address: 'ipaddress', new node: 'node', new port: 'port'.</b>
<b>Explanation</b>	The web server is being modified.
<b>Action</b>	No action required.
<b>INOAAI0739</b>	<b>Web server successfully modified</b>
<b>Explanation</b>	The web server was modified successfully.
<b>Action</b>	No action required.
<b>INOAAI0751</b>	<b>Preparing CD database dbname</b>
<b>Explanation</b>	A CD database is being prepared.
<b>Action</b>	No action required.
<b>INOAAI0770</b>	<b>Could not create database, cleaning up now</b>
<b>Explanation</b>	The "Create Database" or "Create Database From Backup" command has failed. Files, internal configuration store entries and XTS entries made during this process are deleted.
<b>Action</b>	No action required.

---

<b>INOAAI0771</b>	<b>Location location selected for initial backup</b>
<b>Explanation</b>	The initial backup could not be created in the first backup location specified. It has been created in the location indicated in the message text instead.
<b>Action</b>	No action required.
<b>INOAAI0781</b>	<b>The command requires an active database</b>
<b>Explanation</b>	An attempt was made to execute a command that requires an active database, but the the database is inactive.
<b>Action</b>	The database must be started before the command can be executed.
<b>INOAAI0782</b>	<b>The command requires an inactive database</b>
<b>Explanation</b>	An attempt was made to execute a command but the database is active and the command requires an inactive database.
<b>Action</b>	The database must be stopped before the command can be executed.
<b>INOAAI0789</b>	<b>Web server assignments changed. Please restart all databases which have this web server assigned to make your changes effective.</b>
<b>Explanation</b>	The web server assignments for this database have changed.
<b>Action</b>	Please restart all databases which have this web server assigned to make your changes effective.
<b>INOAAI0795</b>	<b>Set type to replication database with simultaneous query</b>
<b>Explanation</b>	The flag for simultaneous query for replication is set to 'enabled'.
<b>Action</b>	No action required.
<b>INOAAI0796</b>	<b>Set type to replication database without simultaneous query</b>
<b>Explanation</b>	The flag to allow simultaneous query for replication is disabled.
<b>Action</b>	No action required.
<b>INOAAI0821</b>	<b>Initialize raw section</b>
<b>Explanation</b>	This is an event log message while the raw section is being initialized.
<b>Action</b>	No action required.

<b>INOAAI0822</b>	<b>Raw section successfully initialized</b>
<b>Explanation</b>	The raw section has been successfully initialized.
<b>Action</b>	No action required.
<b>INOAAI0827</b>	<b>Set static min port min</b>
<b>Explanation</b>	The static minimum port is being set. All Tamino database static ports must be greater than or equal to this value.
<b>Action</b>	No action required.
<b>INOAAI0828</b>	<b>Set static max port max</b>
<b>Explanation</b>	The static maximum port is being set. All Tamino database static ports must be lower than or equal to this value.
<b>Action</b>	No action required.
<b>INOAAI0829</b>	<b>Set dynamic min port dmin</b>
<b>Explanation</b>	The dynamic minimum port is being set. Tamino databases use the port range for dynamically allocated ports. This port range should not be used by any other software.
<b>Action</b>	No action required.
<b>INOAAI0830</b>	<b>Set dynamic max port dmax</b>
<b>Explanation</b>	The dynamic maximum port is being set. Tamino databases use the port range for dynamically allocated ports. This port range should not be used by any other software.
<b>Action</b>	No action required.
<b>INOAAI0840</b>	<b>Function func is used in collection coll, schema schm, doc type doc</b>
<b>Explanation</b>	The server extension to be uninstalled contains a function that is still used in the given context.
<b>Action</b>	Typically no action is required but be aware that in the case of a forced uninstall the corresponding functions cannot be executed any longer.
<b>INOAAI0848</b>	<b>Restart parameter ignored, because only dynamic properties changed</b>
<b>Explanation</b>	A restart parameter was given, but a restart is only useful if a static property is changed.
<b>Action</b>	No action required.

<b>INOAAI0865</b>	<b>Moving database space spaceNo of database dbname from oldLoc to newLoc</b>
<b>Explanation</b>	The database space of the named database is being moved from one location to another location.
<b>Action</b>	No action required.
<b>INOAAI0866</b>	<b>Stop current request(s)</b>
<b>Explanation</b>	Stop a current running request.
<b>Action</b>	No action required.
<b>INOAAI0867</b>	<b>Request requestid successfully stopped</b>
<b>Explanation</b>	A request has been successfully stopped.
<b>Action</b>	No action required.
<b>INOAAI0869</b>	<b>No current active requests found</b>
<b>Explanation</b>	No requests are running on the XML Server.
<b>Action</b>	No action required.
<b>INOAAW0071</b>	<b>Higher server extension versions exist : name</b>
<b>Explanation</b>	In other databases, higher versions of this server extension exist.
<b>Action</b>	Back up the server extension.
<b>INOAAW0150</b>	<b>Backup spaces are copied because one or more spaces could still be part of an existing backup generation</b>
<b>Explanation</b>	To protect integrity of backup generations, spaces with the Tamino backup filename extension "1B0" are always copied because they could be part of a backup generation on the local host, or another remote host.
<b>Action</b>	Make sure that the selected backup spaces are not used in a backup generation by a local database or elsewhere, and then change their filename extension to something different from "1B0".
<b>INOAAW0166</b>	<b>Parameter 'para' unknown</b>
<b>Explanation</b>	The specified database parameter name is not known by the Tamino server.
<b>Action</b>	Check the spelling of the parameter. If the spelling is correct, check whether the parameter is valid in the current context.

**INOAAW0206**      **Required spacetype size could not be obtained from the backup, using minimum sizes where not specified otherwise**

**Explanation**      Minimum sizes will be used if not specified otherwise but the new database might refuse to start with these settings.

**Action**      Specify the effective spaces of the saved database if creating with the minimum sizes does not succeed.

**INOAAW0271**      **Cannot move space of database database, because the database is online**

**Explanation**      The database of the database space to move is in an active state.

**Action**      Stop the database.

**INOAAW0411**      **Show progress aborted**

**Explanation**      The progress information process is aborted because no more progress is determined, but operation is not finished.

**Action**      No action required.

**INOAAW0422**      **An error has occurred when user user attempted to remove the records of all completed jobs without pending alerts from the joblog**

**Explanation**      One or more job records may remain in the given job log after the attempt to delete all due records.

**Action**      Check if the service is running. If the problem persists, job records can be deleted "physically" by deleting the files with the extensions "OG0" and "OF0" in the directory where job records are stored (try the "log" directory in the Tamino or System Management Hub root directory) and restarting the service. This however will also delete records with pending alerts and records of active commands and should only be done as a last resort.

**INOAAW0433**      **File 'path' not deleted**

**Explanation**      The server extension file could not be deleted.

**Action**      No action necessary.

**INOAAW0434**      **File 'path' not found**

**Explanation**      The specified file could not be found.

**Action**      No action necessary.

---

<b>INOAAW0435</b>	<b>Directory 'path' not deleted</b>
<b>Explanation</b>	The directory is in use. Therefore it cannot be deleted.
<b>Action</b>	Wait until the directory is not in use, then retry the operation.
<b>INOAAW0436</b>	<b>Directory 'path' not found</b>
<b>Explanation</b>	The specified directory was not found.
<b>Action</b>	Check the permissions of your file system.
<b>INOAAW0440</b>	<b>Automatic assign of ports for the database failed, please assign the ports manually</b>
<b>Explanation</b>	The database is not usable until the ports are assigned manually.
<b>Action</b>	Assign the ports for the database manually.
<b>INOAAW0640</b>	<b>After restarting the Tamino server the server extension will be updated correctly</b>
<b>Explanation</b>	The Tamino server crashed. The server extension will be usable after restart.
<b>Action</b>	Restart the Tamino server to use this server extension .
<b>INOAAW0676</b>	<b>Please store the tape(s) from backup datetime in a safe place!</b>
<b>Explanation</b>	Tapes cannot be saved, the user must store them in a safe place.
<b>Action</b>	Keep the backup in a safe place.
<b>INOAAW0677</b>	<b>Please store the files from external backup datetime in a safe place!</b>
<b>Explanation</b>	External backups cannot be saved, the user must store them in a safe place.
<b>Action</b>	Keep the external backup in a safe place.
<b>INOAAW0700</b>	<b>Updating existing server extension 'name'</b>
<b>Explanation</b>	A previous version of the server extension is already installed in the database and will be updated.
<b>Action</b>	No action required.
<b>INOAAW0800</b>	<b>Disabling autostart for database dbName</b>
<b>Explanation</b>	The parameter "autostart" of the database has been set to "false".
<b>Action</b>	No action required.

<b>INOAAW0804</b>	<b>No property changed, property name and value is missing</b>
<b>Explanation</b>	There is no property name in the command.
<b>Action</b>	Supply the name of the property and the new value (propertyname=value) at the end of the batch command.
<b>INOAAW0815</b>	<b>Parameter 'name' is ignored for server extensions with execution type 'type'</b>
<b>Explanation</b>	The parameter cannot be used for server extensions of the given execution type.
<b>Action</b>	No action required.
<b>INOAAW0833</b>	<b>Force ignore replication database master status is set.</b>
<b>Explanation</b>	Normally it is not allowed to delete a replication database master, so force ignore replication master status is set. The database will be removed.
<b>Action</b>	No action required.
<b>INOAAW0839</b>	<b>Server extension name is used in schema</b>
<b>Explanation</b>	In some node of a schema a function of the server extension name is used.
<b>Action</b>	See the following messages for detailed information.
<b>INOAAW0851</b>	<b>No backups with user data found, please don't use option "Keep Backups"</b>
<b>Explanation</b>	No backups with user data found, please don't use option "Keep Backups".
<b>Action</b>	Do not use the option "Keep Backups".
<b>INOAAW0853</b>	<b>This command is deprecated. Please use the new command "inoload".</b>
<b>Explanation</b>	This command is set to the deprecated state and will be disabled in the next version
<b>Action</b>	Use the new command inoload instead of this command.
<b>INOAAW0854</b>	<b>COM server extension registration/deregistration suppressed</b>
<b>Explanation</b>	When packaging the COM server extension, the option to suppress the registration/deregistration commands has been used.
<b>Action</b>	It is the installer's responsibility to make sure the COM objects are correctly registered/deregistered using the methods provided by the underlying infrastructure.

---

<b>INOAAW0871</b>	<b>Can't connect to XTS directory server rc = xtsrc</b>
<b>Explanation</b>	Can't connect to XTS directory server. This server is necessary for Tamino databases.
<b>Action</b>	Check the XTS directory server.
<b>INOCVE8065</b>	<b>Collection collection contains non-migrated indexes</b>
<b>Explanation</b>	The upgrade was rejected because there are non-migrated indexes in Tamino 4.1.4.
<b>Action</b>	Please migrate the indexes. Refer to the migration documentation for details.
<b>INOCVE8067</b>	<b>Collection collection contains doctypes that are not namespace clean</b>
<b>Explanation</b>	The upgrade was rejected because at least one doctype in the database is not namespace clean.
<b>Action</b>	Please perform a namespace cleanup. Refer to the migration documentation for details.
<b>INOCVE8069</b>	<b>Conversion of data mapping to version version has failed with response response</b>
<b>Explanation</b>	An error occurred during the conversion of data mapping for standard index and collations.
<b>Action</b>	Please contact your software supplier.
<b>INOCVE8070</b>	<b>number TSD2 user collections exist</b>
<b>Explanation</b>	TSD2 user collections exist and must be migrated to TSD3.
<b>Action</b>	Please use the migration tool to migrate the TSD2 user collections.
<b>INOCVE8071</b>	<b>The count of existing user collections has failed with response response</b>
<b>Explanation</b>	The query to count existing user collections has failed.
<b>Action</b>	Please contact your software supplier.
<b>INOCVE8073</b>	<b>number installed COM server extensions found, conversion not allowed</b>
<b>Explanation</b>	It is not possible to convert a Tamino database to this version as COM server extensions are installed.
<b>Action</b>	Contact your software supplier for help with switching versions.

<b>INOCVE8074</b>	<b>Counting existing COM server extensions has failed with response response</b>
<b>Explanation</b>	The query to count existing COM server extensions has failed.
<b>Action</b>	Contact your software supplier for help with switching versions.
<b>INOCVE8075</b>	<b>Request to create indexes for doctype doctype in collection collection is pending</b>
<b>Explanation</b>	A request to create indexes is pending.
<b>Action</b>	Please correct the current status using the admin-command ino:repairIndex with option CONTINUE or DROP.
<b>INOCVE8077</b>	<b>The schema check for existing user collections has failed</b>
<b>Explanation</b>	The test define of existing user collection during "set version" has failed.
<b>Action</b>	Please contact your software supplier.
<b>INOCVE8078</b>	<b>The check for server extension installation has failed</b>
<b>Explanation</b>	The query to check whether a server extension is installed has failed.
<b>Action</b>	Please contact your software supplier.
<b>INOCVW8066</b>	<b>Schema "schema" in collection "collection" contains unknown attributes</b>
<b>Explanation</b>	The given schema in the given collection contains unknown attributes.
<b>Action</b>	Remove additional attributes before next schema update.
<b>INOCVW8076</b>	<b>The schema check for schema schema in collection collection has failed with response response</b>
<b>Explanation</b>	The test of defining all existing user collections during "set version" has failed.
<b>Action</b>	Please check the schema using the following admin-command ino:CheckSchema(collection-name, schema-name). Correct the schema and update it in Tamino.
<b>INODCE6507</b>	<b>Parameter structure mismatch</b>
<b>Explanation</b>	A parameter structure mismatch was detected.
<b>Action</b>	Please check and correct the given parameters and try again.

---

<b>INODCE6508</b>	<b>Not enough memory to create communication area</b>
<b>Explanation</b>	There was not enough memory to create the communication area.
<b>Action</b>	Please free some memory and try again.
<b>INODCE6509</b>	<b>Fatal error - unload aborted</b>
<b>Explanation</b>	A fatal error was detected and the unload was aborted.
<b>Action</b>	Please check for other error messages to obtain the cause of the abort.
<b>INODCE6510</b>	<b>Specify either the '-database' or the '-server' parameter, but do not specify both parameters together</b>
<b>Explanation</b>	Please specify either the '-database' or the '-server' parameter, but do not specify both parameters together.
<b>Action</b>	Please do not specify both parameters together.
<b>INODCE6511</b>	<b>Processing failed - cannot get server version</b>
<b>Explanation</b>	The processing failed because it was not possible to get the server version.
<b>Action</b>	Please check that you are using a version of the data loader client which is compatible with the server.
<b>INODCE6512</b>	<b>Path and/or file name too long</b>
<b>Explanation</b>	The path and/or file name is too long.
<b>Action</b>	Please change the file name and try again.
<b>INODCE6514</b>	<b>Cannot open log file 'file'</b>
<b>Explanation</b>	It was not possible to open the log file.
<b>Action</b>	Please make sure the log file can be written and try again.
<b>INODCE6515</b>	<b>Processing failed - corrupted response from server</b>
<b>Explanation</b>	Processing failed because a corrupted response was received from the server.
<b>Action</b>	Please contact your software supplier.

<b>INODCE6517</b>	<b>Server does not support mass loading of data</b>
<b>Explanation</b>	The server does not support mass loading of data.
<b>Action</b>	No action required.
<b>INODCE6518</b>	<b>Cannot retrieve information for input file 'file'</b>
<b>Explanation</b>	It was not possible to retrieve information for the input file.
<b>Action</b>	Please make sure the input file can be read and try again.
<b>INODCE6519</b>	<b>Cannot process an empty input file 'file'</b>
<b>Explanation</b>	It is not possible to process the input file because it is empty.
<b>Action</b>	Please make sure you specify the correct input file and try again.
<b>INODCE6520</b>	<b>Cannot open input file 'file'</b>
<b>Explanation</b>	It was not possible to open the input file.
<b>Action</b>	Please make sure the input file can be read and try again.
<b>INODCE6521</b>	<b>WSAStartup failed</b>
<b>Explanation</b>	WSAStartup failed.
<b>Action</b>	Please check the network configuration.
<b>INODCE6522</b>	<b>Winsock version mismatch</b>
<b>Explanation</b>	A Winsock version mismatch was detected.
<b>Action</b>	Please check the network configuration.
<b>INODCE6523</b>	<b>Not enough memory to create client host name</b>
<b>Explanation</b>	There was not enough memory to create client host name.
<b>Action</b>	Please free some memory and try again.
<b>INODCE6524</b>	<b>Invalid cursor handle delivered</b>
<b>Explanation</b>	An invalid cursor handle was delivered.
<b>Action</b>	Please contact your software supplier.

---

<b>INODCE6525</b>	<b>No cursor handle delivered</b>
<b>Explanation</b>	No cursor handle was delivered.
<b>Action</b>	Please contact your software supplier.
<b>INODCE6526</b>	<b>Not enough memory to create query object</b>
<b>Explanation</b>	There was not enough memory to create the query object.
<b>Action</b>	Please free some memory and try again.
<b>INODCE6527</b>	<b>Not enough memory to create query name buffer</b>
<b>Explanation</b>	There was not enough memory to create the query name buffer.
<b>Action</b>	Please free some memory and try again.
<b>INODCE6528</b>	<b>Cannot open output file 'file'</b>
<b>Explanation</b>	It was not possible to open the named output file.
<b>Action</b>	Please make sure the output file can be written and try again.
<b>INODCE6529</b>	<b>Invalid output format</b>
<b>Explanation</b>	An invalid output format was detected.
<b>Action</b>	Please contact your software supplier.
<b>INODCE6530</b>	<b>Cannot unload non-XML documents into a single file</b>
<b>Explanation</b>	It is not possible to unload non-XML documents into a single file.
<b>Action</b>	Please make sure you specified a valid output location for non-XML documents and try again.
<b>INODCE6531</b>	<b>Unload to a single file is not allowed</b>
<b>Explanation</b>	An unload to a single file is not allowed.
<b>Action</b>	Please make sure you specified a valid output location and try again.
<b>INODCE6532</b>	<b>Unload to a directory is not allowed</b>
<b>Explanation</b>	An unload to a directory is not allowed.
<b>Action</b>	Please make sure you specified a valid output location and try again.

<b>INODCE6534</b>	<b>Cannot read input file - I/O error code</b>
<b>Explanation</b>	The input file could not be read due to an I/O error.
<b>Action</b>	Please make sure the input file can be read and try again.
<b>INODCE6536</b>	<b>Not enough memory to create save area</b>
<b>Explanation</b>	There was not enough memory to create the save area.
<b>Action</b>	Please free some memory and try again.
<b>INODCE6538</b>	<b>Cannot initialize multi thread context</b>
<b>Explanation</b>	It was not possible to initialize a multi thread context.
<b>Action</b>	Please contact your software supplier.
<b>INODCE6539</b>	<b>Not enough memory to create request</b>
<b>Explanation</b>	The was not enough memory to create a request.
<b>Action</b>	Please free some memory and try again.
<b>INODCE6543</b>	<b>Not enough memory to create file offset area</b>
<b>Explanation</b>	There was not enough memory to create the file offset area.
<b>Action</b>	Please free some memory and try again.
<b>INODCE6544</b>	<b>Processing failed - no response from server</b>
<b>Explanation</b>	The processing failed because there was no response from the server.
<b>Action</b>	Please contact your software supplier.
<b>INODCE6545</b>	<b>Received empty answer from Tamino server</b>
<b>Explanation</b>	An empty reply was received from the Tamino server.
<b>Action</b>	Please contact your software supplier.
<b>INODCE6547</b>	<b>Invalid function code detected</b>
<b>Explanation</b>	An invalid function code was detected.
<b>Action</b>	Please enter either "load", "unload" or "define" for the parameter "-function"

---

<b>INODCE6548</b>	<b>Parameter 'parm' is only available with function code 'func'</b>
<b>Explanation</b>	The given parameter is only available with the given function code.
<b>Action</b>	Please correct your input and try again.
<b>INODCE6549</b>	<b>Argument for parameter 'arg' missing</b>
<b>Explanation</b>	An argument for the given parameter is missing.
<b>Action</b>	Please correct your input and try again.
<b>INODCE6550</b>	<b>Query filter must be enclosed in brackets: [...]</b>
<b>Explanation</b>	A query filter must be enclosed in brackets: [...].
<b>Action</b>	Please correct your input and try again.
<b>INODCE6551</b>	<b>Please specify the parameter 'parm' only once</b>
<b>Explanation</b>	The given parameter was specified more than once. Please specify the parameter only once.
<b>Action</b>	Please correct your input and try again.
<b>INODCE6552</b>	<b>Doctype is required</b>
<b>Explanation</b>	A doctype is required.
<b>Action</b>	Please correct your input and try again.
<b>INODCE6553</b>	<b>Server name is required</b>
<b>Explanation</b>	The server name is required.
<b>Action</b>	Please correct your input and try again.
<b>INODCE6554</b>	<b>Port number is required</b>
<b>Explanation</b>	A port number is required.
<b>Action</b>	Please correct your input and try again.
<b>INODCE6555</b>	<b>Parameter 'p1' not allowed in conjunction with parameter 'p2'</b>
<b>Explanation</b>	The first parameter cannot be used together with the second parameter.
<b>Action</b>	Please correct your input and try again.

<b>INODCE6556</b>	<b>Memory allocation failed during parsing</b>
<b>Explanation</b>	Memory allocation failed during the parsing phase.
<b>Action</b>	Please free some memory and try again.
<b>INODCE6557</b>	<b>Invalid hexBinary parameter detected</b>
<b>Explanation</b>	An invalid hexBinary parameter was detected.
<b>Action</b>	Please correct your input and try again.
<b>INODCE6558</b>	<b>Invalid parameter detected: 'parm'</b>
<b>Explanation</b>	An invalid parameter was detected.
<b>Action</b>	Please correct your input and try again.
<b>INODCE6559</b>	<b>Invalid argument for parameter -outputformat detected</b>
<b>Explanation</b>	An invalid argument for parameter -outputformat was detected.
<b>Action</b>	Please enter either "singlefile" or "multifiles".
<b>INODCE6560</b>	<b>Invalid argument for parameter -docname detected</b>
<b>Explanation</b>	An invalid argument for parameter -docname was detected.
<b>Action</b>	Please enter either "no", "full", "name" or "nameext".
<b>INODCE6561</b>	<b>Specify both '-sessionid' and '-sessionkey' or neither</b>
<b>Explanation</b>	You must specify either both '-sessionid' and '-sessionkey' or neither.
<b>Action</b>	Please correct your input and try again.
<b>INODCE6562</b>	<b>Mandatory parameter '-server' or '-database' missing</b>
<b>Explanation</b>	The mandatory parameter '-server' or '-database' is missing.
<b>Action</b>	Please correct your input and try again.
<b>INODCE6563</b>	<b>Mandatory parameter '-collection' missing</b>
<b>Explanation</b>	The mandatory parameter '-collection' is missing.
<b>Action</b>	Please correct your input and try again.

---

<b>INODCE6566</b>	<b>msg</b>
<b>Explanation</b>	This is a general placeholder for a message text.
<b>Action</b>	See the text of the message in the job log for more details.
<b>INODCE6567</b>	<b>Cannot open rejects file 'file'</b>
<b>Explanation</b>	The rejects file could not be opened.
<b>Action</b>	Please make sure the rejects file can be opened and try again.
<b>INODCE6568</b>	<b>Cannot write rejects file 'file'</b>
<b>Explanation</b>	It was not possible to write to the rejects file.
<b>Action</b>	Please make sure the rejects file can be written and try again.
<b>INODCE6570</b>	<b>Access to Tamino Server denied</b>
<b>Explanation</b>	Because of security definitions access to the Tamino server is denied.
<b>Action</b>	Please check your security definitions and try again.
<b>INODCE6575</b>	<b>Cannot write to output file - I/O error code</b>
<b>Explanation</b>	The output file could not be written due to an I/O error.
<b>Action</b>	Please make sure the output file can be written and try again.
<b>INODCE6578</b>	<b>Tamino Data Loader finished with errors</b>
<b>Explanation</b>	The Tamino Data Loader has finished its processing with some error messages.
<b>Action</b>	Check the log output, correct errors and try again.
<b>INODCE6579</b>	<b>libxni provided data buffer of bsize bytes, minimum of nsize bytes needed</b>
<b>Explanation</b>	Internal error in massload utility detected.
<b>Action</b>	Please contact your software supplier.
<b>INODCE6580</b>	<b>Memory allocation failed while loading data</b>
<b>Explanation</b>	An out of memory condition occurred.
<b>Action</b>	Restart the command when virtual memory is available.

<b>INODCE6581</b>	<b>Invalid media type specified for input file 'file'</b>
<b>Explanation</b>	An invalid media type was specified. You can load only documents of media type xml to a xml doctype.
<b>Action</b>	Please specify a legal xml media type and try again.
<b>INODCE6582</b>	<b>Error reading from input file 'file' while writing reject file</b>
<b>Explanation</b>	A file read error occurred while backing up rejected data.
<b>Action</b>	Check the file storage or contact your software supplier.
<b>INODCE6583</b>	<b>Cannot contact Tamino Server - HTTP status code code received</b>
<b>Explanation</b>	Cannot contact Tamino Server - HTTP status code received.
<b>Action</b>	Please contact your system administrator.
<b>INODCE6584</b>	<b>The operation was canceled by the user</b>
<b>Explanation</b>	The operation was canceled by the user.
<b>Action</b>	No action required.
<b>INODCE6585</b>	<b>Invalid argument for parameter -streaming detected</b>
<b>Explanation</b>	An invalid argument for parameter -streaming was detected.
<b>Action</b>	Please enter either "on" or "off".
<b>INODCE6590</b>	<b>Server does not support mass deleting of data</b>
<b>Explanation</b>	The server does not support mass deleting of data.
<b>Action</b>	No action required.
<b>INODCE6592</b>	<b>Disconnect from server failed due to a serious communication error</b>
<b>Explanation</b>	Disconnect from server failed due to a serious communication error.
<b>Action</b>	Please check your network settings.
<b>INODCI6500</b>	<b>Tamino Data Loader vvers - (c) Copyright Software AG 2002-year. All rights reserved.</b>
<b>Explanation</b>	This is the Tamino Data Loader start message.
<b>Action</b>	No action required.

---

<b>INODCI6501</b>	<b>Loading documents to database 'db', collection 'coll', doctype 'doctype'</b>
<b>Explanation</b>	Documents are being loaded into the database.
<b>Action</b>	No action required.
<b>INODCI6502</b>	<b>Loading documents to database on 'server:port', collection 'coll', doctype 'doctype'</b>
<b>Explanation</b>	Documents are being loaded into the database.
<b>Action</b>	No action required.
<b>INODCI6503</b>	<b>Unloading documents from database 'db', collection 'coll', doctype 'doctype'</b>
<b>Explanation</b>	Documents are being unloaded from database.
<b>Action</b>	No action required.
<b>INODCI6504</b>	<b>Unloading documents from database on 'server:port', collection 'coll', doctype 'doctype'</b>
<b>Explanation</b>	Documents are being unloaded from the database.
<b>Action</b>	No action required.
<b>INODCI6505</b>	<b>Defining schemas to database 'db'</b>
<b>Explanation</b>	Schemas are being defined in the database.
<b>Action</b>	No action required.
<b>INODCI6506</b>	<b>Defining schemas to database on 'server:port'</b>
<b>Explanation</b>	Schemas are being defined in the database.
<b>Action</b>	No action required.
<b>INODCI6513</b>	<b>Unloading file 'file'</b>
<b>Explanation</b>	The given file is being unloaded.
<b>Action</b>	No action required.
<b>INODCI6516</b>	<b>Loading file 'file'</b>
<b>Explanation</b>	The given file is being loaded.
<b>Action</b>	No action required.

<b>INODCI6533</b>	<b>No matching documents found</b>
<b>Explanation</b>	The query you specified returned no results.
<b>Action</b>	Please specify another query and try again.
<b>INODCI6535</b>	<b>start MB of end MB loaded</b>
<b>Explanation</b>	This shows the progress information.
<b>Action</b>	No action required.
<b>INODCI6537</b>	<b>Loading document id</b>
<b>Explanation</b>	The given document is being loaded.
<b>Action</b>	No action required.
<b>INODCI6540</b>	<b>Unloading documents start to end</b>
<b>Explanation</b>	The documents in the range from "start" to "end" are being unloaded.
<b>Action</b>	No action required.
<b>INODCI6541</b>	<b>Data unloading completed, number of documents processed: num</b>
<b>Explanation</b>	The unload of the data has completed.
<b>Action</b>	No action required.
<b>INODCI6542</b>	<b>Committing loaded documents - this may take a while</b>
<b>Explanation</b>	The loaded documents are being committed. This activity can last a while.
<b>Action</b>	No action required.
<b>INODCI6546</b>	<b>Elapsed time: elapse second(s), data processed: amount</b>
<b>Explanation</b>	The elapsed time and the amount of data processed are shown here.
<b>Action</b>	No action required.
<b>INODCI6564</b>	<b>msg</b>
<b>Explanation</b>	This is a general placeholder for a message text.
<b>Action</b>	See the text of the message in the job log for more details.

---

<b>INODCI6565</b>	<b>Data loading completed, number of documents processed docsproc, loaded docsload, rejected docsrejected</b>
<b>Explanation</b>	The data processing has completed with the given number of loaded and rejected documents.
<b>Action</b>	No action required.
<b>INODCI6569</b>	<b>Process id: id</b>
<b>Explanation</b>	The process has the given ID.
<b>Action</b>	No action required.
<b>INODCI6571</b>	<b>Unloading schemas from database 'db', collection 'coll'</b>
<b>Explanation</b>	Schemas are being unloaded from the database.
<b>Action</b>	No action required.
<b>INODCI6572</b>	<b>Unloading schemas from database on 'server:port', collection 'coll'</b>
<b>Explanation</b>	Schemas are being unloaded from the given collection of the database on the given server and port.
<b>Action</b>	No action required.
<b>INODCI6573</b>	<b>Unloading schemas start to end</b>
<b>Explanation</b>	Schemas in the range from "start" to "end" are being unloaded.
<b>Action</b>	No action required.
<b>INODCI6574</b>	<b>Data unloading completed, number of schema files written: num</b>
<b>Explanation</b>	The unloading of data has completed.
<b>Action</b>	No action required.
<b>INODCI6576</b>	<b>Tamino Data Loader successfully finished</b>
<b>Explanation</b>	The Tamino Data Loader has successfully completed its processing.
<b>Action</b>	No action required.

<b>INODCI6586</b>	<b>Undefining schemas from database 'db'</b>
<b>Explanation</b>	Schemas are being undefined from the database.
<b>Action</b>	No action required.
<b>INODCI6587</b>	<b>Undefining schemas from database on 'server:port'</b>
<b>Explanation</b>	Schemas are being undefined from the database.
<b>Action</b>	No action required.
<b>INODCI6588</b>	<b>Deleting documents from database 'db', collection 'coll', doctype 'doctype'</b>
<b>Explanation</b>	Documents are being deleted from database.
<b>Action</b>	No action required.
<b>INODCI6589</b>	<b>Deleting documents from database on 'server:port', collection 'coll', doctype 'doctype'</b>
<b>Explanation</b>	Documents are being deleted from the database.
<b>Action</b>	No action required.
<b>INODCI6591</b>	<b>Data deleting completed, docsdel documents deleted</b>
<b>Explanation</b>	The data deleting has completed with the given number of deleted documents.
<b>Action</b>	No action required.
<b>INODCW6577</b>	<b>Tamino Data Loader finished with warnings</b>
<b>Explanation</b>	The Tamino Data Loader has finished its processing with some warning messages.
<b>Action</b>	Check the log output, correct errors and try again.
<b>INODSA1000</b>	<b>Starting autorepair after abnormal termination</b>
<b>Explanation</b>	The last server session of the database was terminated abnormally. Before the database can be used, the data consistency will be re-established, changes which had not been written to disk will be redone, and transactions which were open at the time of the abnormal server session termination will be reset.
<b>Action</b>	Wait for the end of the autorepair processing before using your database.

---

<b>INODSA1001</b>	<b>Start writing crash dump of database, writing to file filename</b>
<b>Explanation</b>	The server has encountered an error situation which causes a crash. In order to enable error analysis, the server writes status information to a file in the reserved location.
<b>Action</b>	Report the crash to your software supplier, together with the dump files in the reserved location.
<b>INODSA1002</b>	<b>name modierversionmodifier2 on system info</b>
<b>Explanation</b>	This is a generic message that is used for identification of an activity.
<b>Action</b>	No action required.
<b>INODSA1003</b>	<b>Starting recovery</b>
<b>Explanation</b>	The database recovery processing is starting. After restoring a database, the recovery processing re-applies all updates that were done since the database backup was created.
<b>Action</b>	Wait for the end of the recovery processing before using your database.
<b>INODSA1006</b>	<b>Skipping database recovery during restore</b>
<b>Explanation</b>	The database restore is being performed without recovery processing. Log space information will be marked as skipped.
<b>Action</b>	Wait for the end of the recovery skipping before using your database.
<b>INODSA1007</b>	<b>Starting recovery until time</b>
<b>Explanation</b>	The database recovery processing is starting. After restoring a database, the recovery processing re-applies all updates that were done between the database backup creation and the specified time.
<b>Action</b>	Wait for the end of the recovery processing before using your database.
<b>INODSA1249</b>	<b>Starting recovery until time</b>
<b>Explanation</b>	The database recovery processing is starting. After restoring a database, the recovery processing re-applies all updates that were done between the database backup creation and the specified time.
<b>Action</b>	Wait for the end of the recovery processing before using your database.

<b>INODSA2278</b>	<b>Tamino name modifierversionmodifier2 on system info</b>
<b>Explanation</b>	This is a generic message that is used for identification of an activity.
<b>Action</b>	No action required.
<b>INODSE1015</b>	<b>Expanding the database has failed, because the licensed database size would have been exceeded</b>
<b>Explanation</b>	The allowed database size is limited by the amount allowed in your license file. The attempted expansion of the database would have exceeded the allowed size.
<b>Action</b>	Please contact your software supplier for an enhanced license which allows a larger database size.
<b>INODSE1025</b>	<b>Source and destination of the copy operation specify the same object (source)</b>
<b>Explanation</b>	Source and destination of a copy operation must not specify the same object.
<b>Action</b>	Please specify another source or destination for the copy operation.
<b>INODSE1026</b>	<b>Copy operation (src to dest) incomplete, copied done of expect bytes</b>
<b>Explanation</b>	The copy operation was incomplete due to a system error.
<b>Action</b>	Please consult your manufacturer's manual.
<b>INODSE1027</b>	<b>System error errno during operation call on file file</b>
<b>Explanation</b>	There was an operating system error while performing the specified operation on the specified file.
<b>Action</b>	Please consult your manufacturer's manual.
<b>INODSE1028</b>	<b>pathname does not specify a valid raw section (returned type error)</b>
<b>Explanation</b>	The given path does not specify a valid raw section.
<b>Action</b>	Specify a valid raw section.
<b>INODSE1029</b>	<b>Size of raw section section was computed as 0</b>
<b>Explanation</b>	The size of the given raw section could not be determined.
<b>Action</b>	Please contact your software supplier.

---

<b>INODSE1030</b>	<b>Raw section section is not empty and must not be reset</b>
<b>Explanation</b>	The specified raw section is not empty and must not be reset.
<b>Action</b>	Specify another raw section or deallocate all entries from the specified one.
<b>INODSE1031</b>	<b>database space space number of database server in raw section section is in use and must not be changed</b>
<b>Explanation</b>	The specified container is still in use and must not be changed.
<b>Action</b>	Ensure that the container is not in use before trying to change it.
<b>INODSE1032</b>	<b>Incremental backup cannot be used for database creation</b>
<b>Explanation</b>	The backup file selected is an incremental one, but databases can only be created from full backups.
<b>Action</b>	Use a full backup for database creation.
<b>INODSE1036</b>	<b>database space space number of database server in raw section section is in use and must not be deallocated</b>
<b>Explanation</b>	The specified database space is currently in use and must not be deallocated.
<b>Action</b>	No action required.
<b>INODSE1037</b>	<b>database space space number of database server in raw section section is in use and must not be reallocated</b>
<b>Explanation</b>	The specified database space is in use and must not be reallocated.
<b>Action</b>	No action required.
<b>INODSE1042</b>	<b>Incremental backup is not enabled</b>
<b>Explanation</b>	Incremental backup cannot be issued because the feature is not enabled.
<b>Action</b>	Switch on the server parameter for enabling incremental backup.
<b>INODSE1043</b>	<b>Incremental backup is not possible</b>
<b>Explanation</b>	Incremental backup is not possible because there is no valid associated full or incremental backup present, or for some reason the server has deactivated the incremental block collection.
<b>Action</b>	Perform a full backup to resolve this situation.

<b>INODSE1045</b>	<b>Incremental Backup is disabled at the database to be restored</b>
<b>Explanation</b>	The database is not prepared to receive the given incremental backup.
<b>Action</b>	Check the database. Possibly you must restore a full backup first.
<b>INODSE1046</b>	<b>Backup file has invalid or missing incremental backup data</b>
<b>Explanation</b>	The backup file to be restored incrementally has no incremental backup data, or the backup data is corrupted.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1048</b>	<b>Backup numbers do not fit together: database dbnr, backup bcknr</b>
<b>Explanation</b>	The incremental backup file and the database to receive the backup file no not fit together according the backup numbers. The backup number of the backup file must be one higher than the current backup number of the database
<b>Action</b>	Check all your backup files and their numbers.
<b>INODSE1051</b>	<b>Structure level mismatch on log space from session session number</b>
<b>Explanation</b>	The log space was generated by a previous Tamino version.
<b>Action</b>	Use the previous Tamino version for restore/recovery and then switch again to the current version.
<b>INODSE1052</b>	<b>Internal error occurred: error string, location location</b>
<b>Explanation</b>	An internal error has occurred. The database can still be used.
<b>Action</b>	Please contact your software supplier and provide the message text.
<b>INODSE1055</b>	<b>Preparing for an emergency restart</b>
<b>Explanation</b>	The server has terminated due to shortage of journal space. This has caused a situation in which the autorestart processing that will run automatically at the start of the next server session cannot be guaranteed to resolve internal data inconsistencies from the current terminated session. Therefore, the next server session will start with an emergency restart.
<b>Action</b>	Restart the server. If the emergency restart completes without error, the database is in a consistent state and can be used normally. If the emergency start fails, you must recover your data using the latest backup.

---

<b>INODSE1056</b>	<b>During database restart, an error has occurred in an index on doctype doctype (ID). All indexes on this doctype have been dropped.</b>
<b>Explanation</b>	There was an error in an operation on an index during the database restart processing. All indexes on the affected doctype have been dropped, but the doctype still is available.
<b>Action</b>	After the restart has finished, recreate all indexes by choosing the "Check and Repair" function for the database in the Tamino Manager.
<b>INODSE1057</b>	<b>During database restart, an error has occurred on doctype doctype (ID). The doctype is no longer accessible.</b>
<b>Explanation</b>	There was an error in an operation on the doctype during the database restart processing. The doctype has been destroyed.
<b>Action</b>	After the restart has finished, restore the doctype.
<b>INODSE1058</b>	<b>Incremental Backup does not fit to latest database restore (different database backup ID)</b>
<b>Explanation</b>	The incremental backup to be restored into the database cannot be performed because there the associated full database restore was a different one.
<b>Action</b>	Check whether incremental backup file and its restored master full backup fit together.
<b>INODSE1060</b>	<b>Invalid internal database key found</b>
<b>Explanation</b>	The database's internal database key is corrupt.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1061</b>	<b>No space left in raw section pathname for database space space number of database server</b>
<b>Explanation</b>	The specified raw section does not contain enough contiguous space to allocate the specified database space.
<b>Action</b>	Specify another raw section for this database space or free space in the given raw section.
<b>INODSE1063</b>	<b>database space space number of database server already present in raw section section</b>
<b>Explanation</b>	The required database space is already present.
<b>Action</b>	Remove the database space from the specified raw section.

<b>INODSE1066</b>	<b>Associated full backup not found for incremental backup savepoint</b>
<b>Explanation</b>	A full backup as a base of a selected incremental backup was not found.
<b>Action</b>	There is possibly a corruption of the internal configuration store.
<b>INODSE1068</b>	<b>The raw section section overlaps with a mounted file system</b>
<b>Explanation</b>	Raw sections must not overlap with file systems since this can result in data corruption.
<b>Action</b>	Define the raw section so that it does not overlap with a mounted file system.
<b>INODSE1069</b>	<b>Error accessing the mount table</b>
<b>Explanation</b>	The operating system's mount table could not be processed.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1070</b>	<b>Decreasing the size of the raw section section failed</b>
<b>Explanation</b>	An attempt to decrease the size of the specified raw section failed because the required new size is too small. Only free space at the end of a raw section can be removed.
<b>Action</b>	Specify a raw section partition with a larger size.
<b>INODSE1071</b>	<b>Raw section section is already initialized</b>
<b>Explanation</b>	An attempt was made to initialize a raw section that is already initialized. A raw section can be initialized only once.
<b>Action</b>	No action required.
<b>INODSE1072</b>	<b>No space for database space space number of database server at specified position in raw section pathname</b>
<b>Explanation</b>	At the specified position in the raw section there is not enough contiguous space to allocate the specified database space.
<b>Action</b>	Specify another raw section or another position.
<b>INODSE1073</b>	<b>Overflow on raw section section</b>
<b>Explanation</b>	The raw section contains too many database spaces in the management area.
<b>Action</b>	Choose another raw section or remove obsolete database spaces.

---

<b>INODSE1074</b>	<b>Error allocating database space space number of database server on raw section section</b>
<b>Explanation</b>	An error occurred while trying to allocate space on the specified raw section.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1076</b>	<b>System error errno during operation call on raw section section</b>
<b>Explanation</b>	There was an operating system error while performing the specified operation on the specified raw section.
<b>Action</b>	Please consult the manufacturer's manual.
<b>INODSE1077</b>	<b>Raw section section is corrupted or not initialized</b>
<b>Explanation</b>	The data on the specified raw section is corrupted.
<b>Action</b>	Please contact your software supplier if the section had been initialized.
<b>INODSE1079</b>	<b>path is a block device and cannot be used for raw sections</b>
<b>Explanation</b>	An attempt was made to define a raw device on a block device. Raw sections must not be block devices.
<b>Action</b>	No action required.
<b>INODSE1080</b>	<b>I/O error on block no in database space space no (operating system error errno)</b>
<b>Explanation</b>	There has been an I/O error during an operation (initialization of a database space). This does not, however, lead to a loss of data.
<b>Action</b>	Check the affected device: is it on-line, are the permissions correct, can operating system tools access the device? If you cannot find the reason for the read error by yourself, please contact your software supplier.
<b>INODSE1081</b>	<b>Journal space must be writable</b>
<b>Explanation</b>	The system could not write the specified database space.
<b>Action</b>	Check the attributes (e.g. permissions) of the database space.
<b>INODSE1082</b>	<b>Error when opening database space space number (at path)</b>
<b>Explanation</b>	The database space could not be opened.
<b>Action</b>	Check the affected device: is it on-line, are the permissions correct, can operating system tools access the device? If you cannot find the reason for the read error by yourself, please contact your software supplier.

<b>INODSE1083</b>	<b>System error errno when opening database space space no (path)</b>
<b>Explanation</b>	The specified operating system error has occurred.
<b>Action</b>	Please consult the manufacturer's manual.
<b>INODSE1084</b>	<b>Invalid block size block size</b>
<b>Explanation</b>	The given block size is not allowed.
<b>Action</b>	Provide a valid block size.
<b>INODSE1085</b>	<b>No space for source left on path</b>
<b>Explanation</b>	There is not enough space on the device.
<b>Action</b>	Specify another device or free some space.
<b>INODSE1086</b>	<b>Tape handling error: blocking factor not supported</b>
<b>Explanation</b>	The specified tape device cannot be written because the blocking factor is not supported.
<b>Action</b>	Change the blocking factor of the tape device. It must be either variable or a multiple of 1024.
<b>INODSE1087</b>	<b>Data error on source</b>
<b>Explanation</b>	The file structure of the specified file does not match the expectations of the system.
<b>Action</b>	Check the file's content and the defined structure.
<b>INODSE1088</b>	<b>A further extent of source cannot be created (reason reason, error err, errtxt)</b>
<b>Explanation</b>	During any given server session, there is a limit on how much the database can grow. This limit has been reached in the current server session.
<b>Action</b>	Stop the current server session and restart the database. In the new server session, the database can be extended.
<b>INODSE1090</b>	<b>Inconsistency detected when checking backup for timestamp savepoint</b>
<b>Explanation</b>	A series of incremental backups cannot be restored completely.
<b>Action</b>	Check if all incremental backups exist. If no backup is missing, please contact your software supplier.

---

<b>INODSE1091</b>	<b>Incremental Backup does not fit to latest database restore (database modified meanwhile)</b>
<b>Explanation</b>	The incremental backup to be restored into the database cannot be performed because there were some updates to the database in the meantime.
<b>Action</b>	Check if the database has been started between the restore of all involved backups and if there were any updates.
<b>INODSE1092</b>	<b>Incremental Backup does not fit to latest database restore (different backup sequence)</b>
<b>Explanation</b>	The incremental backup to be restored into the database cannot be performed because the latest incremental or full backup restored and the given incremental backup are not in the expected chain.
<b>Action</b>	Check if the incremental backup file and the most recently restored backup file really fit together.
<b>INODSE1093</b>	<b>Options "parallel" and "incremental" are mutually exclusive</b>
<b>Explanation</b>	An incremental parallel backup is not supported.
<b>Action</b>	Select only one of the options.
<b>INODSE1094</b>	<b>Tape device required</b>
<b>Explanation</b>	A tape device is required, but the specified path does not point to a tape device.
<b>Action</b>	Correct the path.
<b>INODSE1095</b>	<b>Incremental backup from timestamp must not be deleted</b>
<b>Explanation</b>	A single incremental backup must not be deleted.
<b>Action</b>	Select only full backups to be deleted. When deleting a full backup, associated incremental backups will be deleted as well.
<b>INODSE1096</b>	<b>Error errno has been signalled in the execution of an asynchronous I/O for id</b>
<b>Explanation</b>	An asynchronous I/O operation has failed due to an operating system error.
<b>Action</b>	Check for problems with the device. Check whether the device is off-line or read-only. In the case of a logical volume, try to access all of its physical devices by using operating system commands. Check the system log file for appropriate error messages.

<b>INODSE1097</b>	<b>An incremental backup must not be used to create a database</b>
<b>Explanation</b>	Only full backups are allowed to be used to create a database.
<b>Action</b>	Select a full backup to create a database.
<b>INODSE1098</b>	<b>Inconsistent backup count count1 found, expected count is count2</b>
<b>Explanation</b>	The existing incremental backups do not represent a valid sequence.
<b>Action</b>	Check if all incremental backups exist. If no backup is missing, please contact your software supplier.
<b>INODSE1099</b>	<b>Ambiguous keyword</b>
<b>Explanation</b>	The input does not uniquely identify a keyword.
<b>Action</b>	Please specify an unambiguous keyword.
<b>INODSE1100</b>	<b>Internal database error error on doctype doctype (ID). No further recovery on this doctype.</b>
<b>Explanation</b>	There was an error in an operation on a doctype. The doctype has been excluded from further recovery processing.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1101</b>	<b>Internal error n f g h r in text index</b>
<b>Explanation</b>	A text index has encountered an error.
<b>Action</b>	Please contact your support center and provide them with the information given in the error message and with a backup copy of your database.
<b>INODSE1102</b>	<b>Internal error n f g h x in text index</b>
<b>Explanation</b>	A text index has encountered an error.
<b>Action</b>	Please contact your support center and provide them with the information given in the error message and with a backup copy of your database.
<b>INODSE1103</b>	<b>Loading of text index failed due to operating system error errno</b>
<b>Explanation</b>	This message indicates an installation error.
<b>Action</b>	Please consult the manufacturer's manual. If you cannot fix the error, contact your software supplier.

<b>INODSE1104</b>	<b>Journal overflow during recovery processing</b>
<b>Explanation</b>	The journal space was insufficient. Recovery processing was terminated.
<b>Action</b>	Provide more journal space. Restart the terminated activity.
<b>INODSE1105</b>	<b>Invalid structure for log space from session session number</b>
<b>Explanation</b>	The log space does not contain correct log information.
<b>Action</b>	Check if files have been moved or copied to the log space location.
<b>INODSE1106</b>	<b>Doctype doctype not found, no further recovery on this doctype</b>
<b>Explanation</b>	A doctype required for recovery processing was not found. The doctype has been excluded from further recovery processing.
<b>Action</b>	If the previous recovery processing aborted, restart the restore and recovery.
<b>INODSE1107</b>	<b>Doctype doctype locked, no further recovery on this doctype</b>
<b>Explanation</b>	A doctype required for recovery processing was locked. The doctype has been excluded from further recovery processing.
<b>Action</b>	The doctype may be locked due to an abort of previous recovery processing. Restart the restore and recovery.
<b>INODSE1108</b>	<b>Internal database error error on index index name of doctype doctype (ID). All indexes on this doctype have been dropped.</b>
<b>Explanation</b>	There was an error in an operation on an index of a doctype. The index of the doctype has been disabled.
<b>Action</b>	After the recovery has finished, recreate the index by choosing the "Check and Repair" function for the database in the Tamino Manager.
<b>INODSE1109</b>	<b>The index of doctype doctype is not accessible, recovery of this doctype will not include index</b>
<b>Explanation</b>	The index remains in a disabled state from a previous abort during recovery processing.
<b>Action</b>	After the recovery has finished, recreate the index by choosing the "Check and Repair" function for the database in the Tamino Manager.

<b>INODSE1111</b>	<b>Utility sub-function has not yet been implemented</b>
<b>Explanation</b>	Although the sub-function is a valid function request, it has not yet been implemented for the utility. This is an internal message.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1112</b>	<b>Utility handling not implemented</b>
<b>Explanation</b>	This is an internal message.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1117</b>	<b>No more memory can be allocated</b>
<b>Explanation</b>	A utility issued a request to allocate temporary memory, but this request failed. The utility will now terminate, and the administration agent will carry out any necessary recovery tasks.
<b>Action</b>	No action required. Please contact your system administrator for further information.
<b>INODSE1118</b>	<b>Internal configuration error</b>
<b>Explanation</b>	An internal configuration error has occurred. The utility will now terminate, and the administration agent will carry out any necessary recovery tasks.
<b>Action</b>	No action required. Please contact your system administrator for further information.
<b>INODSE1119</b>	<b>Invalid date/time specified. Valid format is YYYY-MM-DD:hh:mm:ss</b>
<b>Explanation</b>	The date and time specified is invalid.
<b>Action</b>	Specify a date and time using format YYYY-MM-DD:hh:mm:ss.
<b>INODSE1120</b>	<b>Sub-function is not valid for utility</b>
<b>Explanation</b>	A sub-function was specified that is not valid for the utility.
<b>Action</b>	Specify a valid sub-function for the utility.
<b>INODSE1121</b>	<b>Open of file path has failed due to operating system error errno</b>
<b>Explanation</b>	The virtual operating system could not open the requested file.
<b>Action</b>	Make sure that the file is available.

---

<b>INODSE1122</b>	<b>Service name for server servername not found</b>
<b>Explanation</b>	The service name for the server was not found in the configuration store.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1123</b>	<b>SCM open failed with error rsp</b>
<b>Explanation</b>	Service Control Manager open failed.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1124</b>	<b>Utility cannot run because of a pending autorepair on the database</b>
<b>Explanation</b>	An attempt was made to start a utility against a database that had not terminated correctly.
<b>Action</b>	Start the database, and let the autorepair processing complete. Then rerun the utility.
<b>INODSE1125</b>	<b>A syntax error has occurred in a utility</b>
<b>Explanation</b>	A syntax error was detected in the parameters of a utility.
<b>Action</b>	Correct the syntax error and rerun the utility.
<b>INODSE1127</b>	<b>SCM service open failed with error rsp</b>
<b>Explanation</b>	Service Control Manager open service failed.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1128</b>	<b>System error errno occurred during file synchronization</b>
<b>Explanation</b>	A file synchronization operation has failed at the operating system level.
<b>Action</b>	Check the manufacturer's manual.
<b>INODSE1130</b>	<b>System error errno occurred during semaphore operation</b>
<b>Explanation</b>	An error has occurred while an operation on a semaphore was requested from the operating system.
<b>Action</b>	Check the manufacturer's manual.
<b>INODSE1131</b>	<b>Invalid server session number session number found in log space block block number</b>
<b>Explanation</b>	The log space does not contain correct log information.
<b>Action</b>	Check if files have been moved or copied to the log space location.

<b>INODSE1132</b>	<b>Invalid block sequence found in log space - expected block number1, current is block number2</b>
<b>Explanation</b>	The log space does not contain correct log information.
<b>Action</b>	Check if files have been moved or copied to the log space location.
<b>INODSE1133</b>	<b>Error opening log space: error message</b>
<b>Explanation</b>	The log space could not be opened. The recovery function has been stopped.
<b>Action</b>	Check if files have been moved or copied to the log space location.
<b>INODSE1134</b>	<b>SCM service start failed with error rsp</b>
<b>Explanation</b>	Service Control Manager start service failed.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1135</b>	<b>SCM query service status failed with error rsp</b>
<b>Explanation</b>	Service Control Manager query service status failed.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1136</b>	<b>Transaction aborted due to transaction timeout</b>
<b>Explanation</b>	A transaction has been aborted. All changes of this transaction have been undone.
<b>Action</b>	Check whether a higher transaction timeout value would make sense in your environment. Restart the transaction.
<b>INODSE1137</b>	<b>Transaction aborted due to non-active connection</b>
<b>Explanation</b>	A transaction has been aborted. All changes of this transaction have been undone.
<b>Action</b>	Check the reason for the transaction abort. Restart the transaction.
<b>INODSE1138</b>	<b>Transaction aborted because server session had been stopped by administrator</b>
<b>Explanation</b>	A server session was explicitly stopped by the administrator. All changes of this transaction have been undone.
<b>Action</b>	No action required.

---

<b>INODSE1139</b>	<b>Transaction aborted due to overflow in journal space journal space</b>
<b>Explanation</b>	A transaction has been aborted because there was not enough space to log all the changes of the transaction or because too many transactions were active at the same time. All changes of this transaction have been undone.
<b>Action</b>	Consider enlarging the journal space. Restart the transaction.
<b>INODSE1140</b>	<b>Transaction aborted due to security violation</b>
<b>Explanation</b>	A transaction has been aborted. All changes of this transaction have been undone.
<b>Action</b>	No action required.
<b>INODSE1141</b>	<b>Transaction aborted due to deadlock</b>
<b>Explanation</b>	A transaction has been aborted because its locking requirements caused a deadlock with other transactions. All changes of this transaction have been undone.
<b>Action</b>	Restart the transaction.
<b>INODSE1142</b>	<b>Transaction aborted due to internal error reason</b>
<b>Explanation</b>	A transaction has been aborted. All changes of this transaction have been undone.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1143</b>	<b>Internal database error error has occurred</b>
<b>Explanation</b>	The specified database error has occurred.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1144</b>	<b>The data of doctype doctype is not accessible</b>
<b>Explanation</b>	The doctype may be locked or may have been corrupted by a previous action (e.g. failed server restart).
<b>Action</b>	If the doctype is locked, wait until it is unlocked, then retry. If the doctype was corrupted by a previous action, the system administrator must rebuild the doctype from backups.
<b>INODSE1145</b>	<b>The indexes of doctype doctype are not accessible</b>
<b>Explanation</b>	The indexes may have been corrupted by a previous action (e.g. failed server restart).
<b>Action</b>	Wait for a short while, then retry. If the problem persists, this might indicate that the indexes have to be rebuilt. To rebuild the indexes, choose the "Check and Repair" function for the database in the Tamino Manager.

<b>INODSE1148</b>	<b>I/O error on database space db space number</b>
<b>Explanation</b>	The operating system has signalled an I/O error. This is typically caused by a hardware error.
<b>Action</b>	Check whether any disk devices have gone offline. Check the error log for hardware errors.
<b>INODSE1149</b>	<b>Too many paths specified for a location</b>
<b>Explanation</b>	Only 8 paths are allowed to be specified for a location.
<b>Action</b>	Use less paths for the location to be set up.
<b>INODSE1150</b>	<b>The indexes of doctype doctype are corrupt, reason rsp</b>
<b>Explanation</b>	An internal inconsistency has been found in the indexes.
<b>Action</b>	The indexes have to be rebuilt. To rebuild the indexes, choose the "Check and Repair" function for the database in the Tamino Manager.
<b>INODSE1153</b>	<b>filename is an invalid file name for a database space</b>
<b>Explanation</b>	The specified file name for a database space is not valid.
<b>Action</b>	Specify a valid file name for a database space.
<b>INODSE1154</b>	<b>Internal database error has occurred</b>
<b>Explanation</b>	An internal error occurred. This could result in incorrect data.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1155</b>	<b>filename is not a database space for server dbname</b>
<b>Explanation</b>	The specified file name is not a database space for the given database name.
<b>Action</b>	Make sure that the file name of the database space is a database space of the specified database.
<b>INODSE1158</b>	<b>I/O subsystem error (e1/e2): error text</b>
<b>Explanation</b>	An error in an I/O related function has occurred.
<b>Action</b>	Please contact your software supplier.

---

<b>INODSE1167</b>	<b>standard length out of range</b>
<b>Explanation</b>	The specified length value is invalid.
<b>Action</b>	Correct the length specification.
<b>INODSE1171</b>	<b>FI only allowed if standard-length is given</b>
<b>Explanation</b>	The FI option is only allowed if a non-zero standard length is given.
<b>Action</b>	Correct the input line.
<b>INODSE1172</b>	<b>Wrong input file assigned</b>
<b>Explanation</b>	The wrong input file has been used for the utility.
<b>Action</b>	Ensure that the correct input file is being used by the utility.
<b>INODSE1173</b>	<b>Checked and repaired database. Number of corrupted indexes was number. Of these, repairing failed for failed.</b>
<b>Explanation</b>	The database could not be completely repaired.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1175</b>	<b>Invalid load data structure at file (ID id, length length)</b>
<b>Explanation</b>	The structure of the data to be loaded is invalid.
<b>Action</b>	Ensure that the correct input file is being used. Send the load files (extension 1C0/1C1) to your software supplier.
<b>INODSE1176</b>	<b>Unable to attach to shared memory</b>
<b>Explanation</b>	It is not possible to attach the process to the shared memory.
<b>Action</b>	Ensure that there is enough available memory, and contact your software supplier if required.
<b>INODSE1181</b>	<b>An unexpected server response (response) has occurred</b>
<b>Explanation</b>	The specified response has been returned by the server.
<b>Action</b>	Determine the reason for the response, or contact your support center.

<b>INODSE1182</b>	<b>Database server is not accessible</b>
<b>Explanation</b>	It is not possible to access the database server.
<b>Action</b>	Determine the reason why the database server is not accessible and retry the operation.
<b>INODSE1189</b>	<b>Reorganize database is not permitted while database is active</b>
<b>Explanation</b>	To preserve data consistency, the database must not be active while reorganize function is processed.
<b>Action</b>	Shut down the database
<b>INODSE1194</b>	<b>An internal buffer is too large (size)</b>
<b>Explanation</b>	The size of an internal buffer has caused a record to overflow.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1198</b>	<b>Event token not supplied</b>
<b>Explanation</b>	The recovery function was started without supplying an event token.
<b>Action</b>	Check the usage of the administration tool.
<b>INODSE1199</b>	<b>Logging not disabled</b>
<b>Explanation</b>	When the recovery function is started, logging must be disabled. In this case, the recovery function was started with logging enabled.
<b>Action</b>	Check the usage of the administration tool.
<b>INODSE1200</b>	<b>Database name is too long</b>
<b>Explanation</b>	The specified database name is too long. If the database name consists of ASCII characters, it can be up to 16 characters long. If the database name consists of multibyte characters, the total number of bytes required to store the database name must not exceed 16.
<b>Action</b>	Please specify a shorter database name.
<b>INODSE1201</b>	<b>Database name contains invalid character "," (comma)</b>
<b>Explanation</b>	A database name cannot contain a comma.
<b>Action</b>	Please modify the database name.

---

<b>INODSE1202</b>	<b>Database name contains an invalid character</b>
<b>Explanation</b>	A database name cannot contain certain characters, such as # " . [ ] .
<b>Action</b>	Please modify the database name.
<b>INODSE1203</b>	<b>Database name contains invalid character "" (backslash)</b>
<b>Explanation</b>	A database name cannot contain a backslash.
<b>Action</b>	Please modify the database name.
<b>INODSE1204</b>	<b>Administration function terminated with error errornumber: errorstring</b>
<b>Explanation</b>	An administration function failed with given error string.
<b>Action</b>	Please restart the command using the option to write a job log and check if there is additional error information. If not, contact your software supplier.
<b>INODSE1205</b>	<b>Replication permission denied for hostname</b>
<b>Explanation</b>	The host name is not in the master's list of permitted databases for replication
<b>Action</b>	Add the host name of the replication instance to allow replication.
<b>INODSE1206</b>	<b>Cannot connect to master dbname on hostname</b>
<b>Explanation</b>	An attempt accessing the master database failed.
<b>Action</b>	Check that the master database is active on the specified node and retry the command.
<b>INODSE1209</b>	<b>Maximum number of space files reached</b>
<b>Explanation</b>	The maximum allowed number of data/index files has been reached.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1210</b>	<b>Size of space file too large</b>
<b>Explanation</b>	The size of the file to be created exceeds the limits of the operating system or of the underlying storage medium. For example, you want to create a file with a size greater than 2GB, but the operating system does not support this.
<b>Action</b>	Select a smaller file size.

<b>INODSE1212</b>	<b>Internal free space error</b>
<b>Explanation</b>	An unexpected free space management error occurred when adding a new database file.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1213</b>	<b>Error error accessing or modifying information in the internal configuration store</b>
<b>Explanation</b>	The information for a log space or a savepoint entry could not be retrieved or set up.
<b>Action</b>	Check the reasons for errors accessing and updating the internal configuration store (for example permissions or low disk space).
<b>INODSE1214</b>	<b>An error occurred during a create index process on doctype doctype</b>
<b>Explanation</b>	The error is caused by an attempt to create a unique index on data that contains non-unique values.
<b>Action</b>	No action required.
<b>INODSE1215</b>	<b>Database name contains a space</b>
<b>Explanation</b>	A database name cannot contain a space.
<b>Action</b>	Please modify the database name.
<b>INODSE1217</b>	<b>Error when opening database space, compressed state is not permitted (at path)</b>
<b>Explanation</b>	The database file has the compressed attribute, which is not permitted, because write errors should be avoided if the device is getting full.
<b>Action</b>	Remove the compressed attribute from the database file.
<b>INODSE1221</b>	<b>Error error when accessing internal information for savepoint savepoint</b>
<b>Explanation</b>	The information for a savepoint entry could not be retrieved.
<b>Action</b>	Contact your software supplier.
<b>INODSE1222</b>	<b>Error error when trying to move or delete file name</b>
<b>Explanation</b>	A backup file or a file for recovery purpose could not be moved or removed.
<b>Action</b>	Contact your software supplier.

---

<b>INODSE1223</b>	<b>Log space not found for savepoint savepoint, session number session number</b>
<b>Explanation</b>	A log space entry for the given savepoint and session number could not be found.
<b>Action</b>	Contact your software supplier.
<b>INODSE1224</b>	<b>Backup space not found for savepoint savepoint</b>
<b>Explanation</b>	A backup space for the given savepoint could not be found.
<b>Action</b>	Contact your software supplier.
<b>INODSE1225</b>	<b>Backup file type file type is invalid for savepoint savepoint</b>
<b>Explanation</b>	The internal information for the file type associated with a savepoint is set up incorrectly.
<b>Action</b>	Contact your software supplier.
<b>INODSE1226</b>	<b>Unexpected return code error when executing function function</b>
<b>Explanation</b>	An internal error occurred.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1231</b>	<b>Errors have occurred during autorepair</b>
<b>Explanation</b>	The autorepair from the crash of the previous server session was not completely successfully.
<b>Action</b>	Check the detailed error messages and repair the affected data.
<b>INODSE1232</b>	<b>Database space is too large</b>
<b>Explanation</b>	The database space specified for the current operation is too large.
<b>Action</b>	Retry the operation specifying a smaller database space.
<b>INODSE1233</b>	<b>The limit of extents for container_name has been reached</b>
<b>Explanation</b>	No more extents of the specified space type can be created because the maximum number has been reached.
<b>Action</b>	Retry the operation with a smaller number of extents specified.

<b>INODSE1234</b>	<b>Server parameter 'number of backup generations' larger than 1 required</b>
<b>Explanation</b>	Supplying replication data requires log spaces to be kept for more than one backup.
<b>Action</b>	For a master server set the server property 'number of backup generations' to value larger than 1.
<b>INODSE1235</b>	<b>Crash dump file filename could not be created due to operating system error system errno (errtxt)</b>
<b>Explanation</b>	The backup file needed for error analysis could not be created due to the given reason.
<b>Action</b>	Please consult the manufacturer's manual.
<b>INODSE1236</b>	<b>Recovery skipping has terminated with an error</b>
<b>Explanation</b>	An error occurred during recovery skipping. This message indicates an internal inconsistency.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1247</b>	<b>Replication processing disabled because master database was restored without full recovery</b>
<b>Explanation</b>	When the master database was restored not using 'recover all' option, synchronization is lost by updates already replicated but not recovered for the master database.
<b>Action</b>	Delete the replication database and set it up again using a backup created after the restore was done.
<b>INODSE1289</b>	<b>Error when opening database space space no (at path): size mismatch</b>
<b>Explanation</b>	The size of the database space is not equal to the size expected by the server.
<b>Action</b>	Please contact your software supplier.
<b>INODSE1290</b>	<b>I/O error occurred on database space space no. System error errno caused by operation operation on block block number.</b>
<b>Explanation</b>	The operating system has signalled that the specified I/O operation has failed.
<b>Action</b>	Please consult the manufacturer's manual.
<b>INODSE1292</b>	<b>Creation of database space space no (path) has failed</b>
<b>Explanation</b>	The database space could not be created at the specified location.
<b>Action</b>	Look for other error messages to find the reason for the failure.

---

<b>INODSE1293</b>	<b>Creation of database space space no (path) has failed due to system error errno</b>
<b>Explanation</b>	The database space could not be created at the specified location because of an error signalled by the operating system.
<b>Action</b>	Please consult the manufacturer's manual.
<b>INODSE1295</b>	<b>Creation of journal space 1 (path) has failed</b>
<b>Explanation</b>	The database space could not be created at the specified location.
<b>Action</b>	Look for other error messages to find the reason for the failure.
<b>INODSE1318</b>	<b>Internal server error during database creation, reason: reason</b>
<b>Explanation</b>	The system has tried to allocate a new database space, probably because the existing database spaces did not contain enough free space. The allocation has failed.
<b>Action</b>	Check which database space was affected by checking the free space. Allocate another database space manually.
<b>INODSE1320</b>	<b>Log space structure error error number</b>
<b>Explanation</b>	The log information which is needed to recover the database is corrupt, so the database recovery was stopped when the corruption was detected.
<b>Action</b>	Send the log space to your software supplier for analysis.
<b>INODSE1358</b>	<b>Creation of database space space no (path) has failed because the file already exists</b>
<b>Explanation</b>	The database space could not be created at the specified location because the file is already present.
<b>Action</b>	Remove or move the file to another location before repeating the action.
<b>INODSE1374</b>	<b>No abbreviation allowed for this keyword</b>
<b>Explanation</b>	The specified keyword must not be abbreviated.
<b>Action</b>	Please specify the keyword in full length.
<b>INODSE1375</b>	<b>Invalid keyword</b>
<b>Explanation</b>	The specified keyword is not recognized or invalid.
<b>Action</b>	Please specify a correct keyword.

<b>INODSE1376</b>	<b>Syntax error</b>
<b>Explanation</b>	An internal syntax error occurred.
<b>Action</b>	Please contact your software supplier to analyze the problem.
<b>INODSE1380</b>	<b>Given value not numeric</b>
<b>Explanation</b>	The given value has to be in a numeric format.
<b>Action</b>	Please specify a numeric value.
<b>INODSE1381</b>	<b>Only number value(s) allowed</b>
<b>Explanation</b>	The number of allowed list elements is exceeded.
<b>Action</b>	Please limit the number of list elements to the maximum allowed.
<b>INODSE1382</b>	<b>Value has to be greater than or equal to minvalue</b>
<b>Explanation</b>	The specified value is too low.
<b>Action</b>	Please enter a value greater than or equal to the required minimum.
<b>INODSE1383</b>	<b>Value has to be less than or equal to maxvalue</b>
<b>Explanation</b>	The specified value is too high.
<b>Action</b>	Please specify a value less than or equal to the allowed maximum.
<b>INODSE1385</b>	<b>Invalid range specified</b>
<b>Explanation</b>	The range specified is invalid.
<b>Action</b>	Please specify a range within the allowed limits.
<b>INODSE1386</b>	<b>At least minnum character(s) required</b>
<b>Explanation</b>	The specified number of characters was too low.
<b>Action</b>	Please specify a sufficient number of characters.
<b>INODSE1387</b>	<b>Only maxnum character(s) allowed</b>
<b>Explanation</b>	The maximum allowed number of characters was exceeded.
<b>Action</b>	Please specify no more than the maximum allowed number of characters.

---

<b>INODSE1390</b>	<b>Missing mandatory parameter param</b>
<b>Explanation</b>	The displayed mandatory parameter could not be found and a default value is not available.
<b>Action</b>	Supply the displayed mandatory parameter.
<b>INODSE1391</b>	<b>Invalid parameter value</b>
<b>Explanation</b>	The specified parameter value is invalid.
<b>Action</b>	Correct the input.
<b>INODSE1413</b>	<b>System error errno when opening database space space no (path)</b>
<b>Explanation</b>	The specified operating system error has occurred.
<b>Action</b>	Please consult the manufacturer's manual.
<b>INODSE1416</b>	<b>architecture mismatch detected, file from platform</b>
<b>Explanation</b>	The crash dump file is from a different platform.
<b>Action</b>	Go to the proper platform.
<b>INODSE1419</b>	<b>Incremental backup from timestamp must not be deleted</b>
<b>Explanation</b>	A single incremental backup must not be deleted.
<b>Action</b>	Select only full backups to be deleted. When deleting a full backup, associated incremental backups will be deleted as well.
<b>INODSE1421</b>	<b>Backup time has become invalid</b>
<b>Explanation</b>	An earlier backup was used for a restore not using the recover all option. Due to new modifications done on this base, the newer backup must not be used for restore/recover.
<b>Action</b>	Use another backup for restore/recover. The selected backup can only be used to create new database.
<b>INODSE1498</b>	<b>unknown option</b>
<b>Explanation</b>	The option specified is unknown.
<b>Action</b>	Correct the input line.

<b>INODSE1506</b>	<b>option not permitted</b>
<b>Explanation</b>	The supplied option is not permitted for this function.
<b>Action</b>	Check the input parameters.
<b>INODSE1512</b>	<b>transition to this level not allowed</b>
<b>Explanation</b>	The specified level number is not allowed in this context.
<b>Action</b>	Correct the input line.
<b>INODSE1523</b>	<b>reserved field name</b>
<b>Explanation</b>	The specified field name is reserved.
<b>Action</b>	Correct the field name.
<b>INODSE1538</b>	<b>Read-only mode is not permitted because the previous session was abnormally terminated</b>
<b>Explanation</b>	The Tamino server cannot be started in read-only mode because the previous session was abnormally terminated.
<b>Action</b>	Start the Tamino server in normal mode to do an autorepair for the abnormal termination. Restart the Tamino server in read-only mode.
<b>INODSE1539</b>	<b>Read-only mode is not permitted because of pending transactions</b>
<b>Explanation</b>	The Tamino server cannot be started in read-only mode because of pending global transactions.
<b>Action</b>	Start the Tamino server in normal mode and close the pending global transactions.
<b>INODSE1603</b>	<b>Error when adding a new type</b>
<b>Explanation</b>	An unexpected error occurred while adding a container.
<b>Action</b>	Check the device and the environment variable relating to the new container.
<b>INODSE1604</b>	<b>Number of additional cont extents currently exhausted</b>
<b>Explanation</b>	The maximum number of created database spaces within one session has been reached.
<b>Action</b>	Shut down and restart the database server and retry the operation.

<b>INODSE1605</b>	<b>No space for extending database space</b>
<b>Explanation</b>	There is no more space on the disk for extending the current database space.
<b>Action</b>	Check the disk size where the latest database space is located. Think about creating a new database space on another disk where space is available.
<b>INODSE1606</b>	<b>Database space to be removed is in use</b>
<b>Explanation</b>	The request to remove a database space failed because the file space at the end of the file is in use.
<b>Action</b>	Ensure that the database space is not in use and retry the operation.
<b>INODSE1633</b>	<b>Recovery terminated with error</b>
<b>Explanation</b>	An error occurred during database recovery.
<b>Action</b>	Check for additional error messages in the event log.
<b>INODSE1769</b>	<b>Invalid database root block header (size blocksize / next block)</b>
<b>Explanation</b>	A database root block linkage is invalid.
<b>Action</b>	Perform a restore/recover of the database.
<b>INODSE1898</b>	<b>The specified doctype is not available.</b>
<b>Explanation</b>	It is not possible to access the specified doctype.
<b>Action</b>	Check that the correct doctype name has been specified, and that it is currently available for use.
<b>INODSE1913</b>	<b>File file not loaded</b>
<b>Explanation</b>	The file with the given number could not be loaded
<b>Action</b>	Check whether the file exists or is not accessible.
<b>INODSE1945</b>	<b>Function not permitted while server is running</b>
<b>Explanation</b>	The given function is invalid with an active server.
<b>Action</b>	Shut down the server.

<b>INODSE1976</b>	<b>Internal database error error during recovery processing</b>
<b>Explanation</b>	While processing a log space, re-applying updates resulted in an error.
<b>Action</b>	Check if the database was in a different state than it was when the original command was executed. This may be caused by using a backup copy and log spaces inconsistently.
<b>INODSE1979</b>	<b>Database space space has reached the upper limit</b>
<b>Explanation</b>	The maximum size of the given database space has been reached. This means the database cannot be extended any more.
<b>Action</b>	A database redesign is necessary. Either delete doctypes from the database or create a second database.
<b>INODSE1984</b>	<b>Allocation of a new data space failed on required index allocation (reason)</b>
<b>Explanation</b>	The database space (data) cannot be enlarged. The new database space requires allocations in the index space, but the index space allocation failed due to the internal reason displayed.
<b>Action</b>	Investigate why the index database space cannot be enlarged.
<b>INODSE1987</b>	<b>Error when extending type</b>
<b>Explanation</b>	A database space extension failed, so the database could not be enlarged.
<b>Action</b>	View the subsequent error message for information about why the database could not be enlarged.
<b>INODSE1992</b>	<b>Invalid container request type</b>
<b>Explanation</b>	An internal error occurred while accessing a database container file.
<b>Action</b>	Contact your software supplier and report the number displayed in the message.
<b>INODSE1995</b>	<b>Access to configuration information for savepoint 'ts' failed: msg</b>
<b>Explanation</b>	The backup with the given representation could not be determined in the database configuration.
<b>Action</b>	Contact your software supplier to analyze the problem.

---

<b>INODSE1996</b>	<b>Database is inconsistent, restore required</b>
<b>Explanation</b>	The database is in an inconsistent state that cannot be handled by the autorepair process. The database must be restored.
<b>Action</b>	The reason for an inconsistent database can be re-applying a mass load during recovery. If no abort timestamp is shown in the event log of the aborted session, perhaps due to a power failure, restart with restore/recover. For any other reasons that will cause the error to re-occur, set up the restore/recover until a timestamp shortly before the recovery abort shown in the event log of the aborted session.
<b>INODSE1999</b>	<b>Internal database error error during recovery processing on doctype doctype</b>
<b>Explanation</b>	While processing a log space, re-applying the updates resulted in an error.
<b>Action</b>	Check if the database is in a different state than it was when the original command was executed. This may be caused by using a backup copy and log spaces inconsistently.
<b>INODSE2000</b>	<b>Starting replication failed</b>
<b>Explanation</b>	Replication processing could not be started.
<b>Action</b>	Check for for additional related messages in the event log.
<b>INODSE2001</b>	<b>Replication processing cannot be continued due to previous replication error</b>
<b>Explanation</b>	An error during the previous replication processing prevents the continuation of the replication.
<b>Action</b>	If the master database is lost, the Reset Replication function can be used to convert the database for usage as a substitution. In any other case, the replication database has to be recreated using a new backup from the master database.
<b>INODSE2004</b>	<b>Invalid operation detected</b>
<b>Explanation</b>	Replication cannot be continued because a function (e.g. restore without full recover) was executed on the master database which is not yet supported for replication
<b>Action</b>	A backup from the master database after the operation in question should be used to recreate the replication database.
<b>INODSE2013</b>	<b>Database identification already in use</b>
<b>Explanation</b>	The database identification supplied is already in use.
<b>Action</b>	Repeat the process using an unused database identification.

<b>INODSE2014</b>	<b>Failed to enumerate databases</b>
<b>Explanation</b>	An internal call has failed to enumerate the defined database names.
<b>Action</b>	Please contact your software supplier.
<b>INODSE2019</b>	<b>No log space data found for session session number</b>
<b>Explanation</b>	The master database could not find the log space to return the required log space data.
<b>Action</b>	Check the database properties for the number of backup generations and increase the value if set too low.
<b>INODSE2020</b>	<b>Replication database(s) defined, rename not allowed</b>
<b>Explanation</b>	The rename function is not allowed for a database which is to be used as a master database for replication purposes.
<b>Action</b>	Remove replication databases first before renaming the database. New replication databases can be created from a backup created after the rename operation.
<b>INODSE2022</b>	<b>Replication permission denied by master database</b>
<b>Explanation</b>	The name of the replication database was not found in the master database's list of permitted databases.
<b>Action</b>	Add the replication database name to the list of permitted replication databases of the master database.
<b>INODSE2023</b>	<b>Replication database origin mismatch</b>
<b>Explanation</b>	The replication database does not match the contents of the master database.
<b>Action</b>	Check whether the replication database was created using a backup from another database than the one specified as master database or check whether another database was renamed using the same database name as the master database's name.
<b>INODSE2024</b>	<b>An internal utility parameter error (location) has occurred</b>
<b>Explanation</b>	An internal parameter error has caused the utility to fail.
<b>Action</b>	Please contact your software supplier.

---

<b>INODSE2031</b>	<b>Internal error occurred: DSIF func [mod - line] what parameter param</b>
<b>Explanation</b>	An internal error occurred.
<b>Action</b>	Please contact your software supplier and provide the message text.
<b>INODSE2033</b>	<b>Internal error occurred: OVO func [mod - line] error</b>
<b>Explanation</b>	An internal error occurred.
<b>Action</b>	Please contact your software supplier and provide the message text.
<b>INODSE2034</b>	<b>Internal error occurred: SMP func [mod - line] error</b>
<b>Explanation</b>	An internal error occurred.
<b>Action</b>	Please contact your software supplier and provide the message text.
<b>INODSE2035</b>	<b>Server communication interface [mod - line] error error</b>
<b>Explanation</b>	An unexpected error was returned by the server communication interface.
<b>Action</b>	Please contact your software supplier and provide the message text.
<b>INODSE2036</b>	<b>path is not a valid directory</b>
<b>Explanation</b>	The directory specified does not exist.
<b>Action</b>	Specify a valid directory name.
<b>INODSE2037</b>	<b>Insufficient free disk space on path - available avail MB, needed needed MB</b>
<b>Explanation</b>	There is not enough space in the given directory to complete the operation.
<b>Action</b>	Free some disk space or specify another directory.
<b>INODSE2042</b>	<b>File file already exists in the destination directory dir</b>
<b>Explanation</b>	The file cannot be created in the destination directory because another file with the same name already exists.
<b>Action</b>	Change the destination directory parameter.
<b>INODSE2043</b>	<b>Infofile cannot be created, because otherwise the full path name of the info file would exceed operating system limit</b>
<b>Explanation</b>	The infofile path is too long.
<b>Action</b>	Please specify another directory for the CD database.

<b>INODSE2045</b>	<b>File path does not exist</b>
<b>Explanation</b>	An invalid path was specified.
<b>Action</b>	Specify a valid path.
<b>INODSE2046</b>	<b>Failed to parse infofile , line 'line'</b>
<b>Explanation</b>	The CD database infofile could not be parsed.
<b>Action</b>	Please contact your software supplier.
<b>INODSE2048</b>	<b>Cannot create database, because there are too many databases already</b>
<b>Explanation</b>	A new database cannot be created because there are too many databases already.
<b>Action</b>	Check if you still need all the databases you created and if possible delete some of them.
<b>INODSE2050</b>	<b>Requested operation not permitted in online mode</b>
<b>Explanation</b>	The server must be offline to perform the requested operation.
<b>Action</b>	Shut down the database.
<b>INODSE2061</b>	<b>Work pool too small</b>
<b>Explanation</b>	The work pool used is too small.
<b>Action</b>	Ensure that a sufficiently large work pool is available.
<b>INODSE2064</b>	<b>Invalid infofile format</b>
<b>Explanation</b>	The CD database information file has an invalid format.
<b>Action</b>	This error should not occur unless the file was modified manually. Avoid manual modification in the information file.
<b>INODSE2065</b>	<b>Incompatible operating system (original database was created on operating system)</b>
<b>Explanation</b>	The CD database cannot be created because the database is incompatible with the target platform.
<b>Action</b>	Create the CD database on the same platform as the original database.

---

<b>INODSE2067</b>	<b>Operation not allowed on read-only or CD databases</b>
<b>Explanation</b>	The required operation cannot be performed on a CD database or read-only database.
<b>Action</b>	Switch the "read only" server parameter to "no". This does not apply to databases on CD.
<b>INODSE2069</b>	<b>Location with the same name already exists</b>
<b>Explanation</b>	A location with the same name already exists.
<b>Action</b>	Choose another location name.
<b>INODSE2070</b>	<b>Cannot delete default location or default backup location</b>
<b>Explanation</b>	There was an attempt to delete the default location or default backup location. Delete operations on these locations are not allowed.
<b>Action</b>	No action required.
<b>INODSE2071</b>	<b>Location with the same path settings already exists</b>
<b>Explanation</b>	A location with the same path settings already exists
<b>Action</b>	Choose another location path.
<b>INODSE2072</b>	<b>Location locname not found</b>
<b>Explanation</b>	The specified location was not found.
<b>Action</b>	Correct the location name parameter and try again.
<b>INODSE2080</b>	<b>Internal error occurred: DSIF func [mod - line] not allowed in this context</b>
<b>Explanation</b>	An internal error occurred.
<b>Action</b>	Please contact your software supplier and provide the message text.
<b>INODSE2081</b>	<b>Internal error occurred: OVO memory what(bytes) [mod - line] error</b>
<b>Explanation</b>	An internal error occurred.
<b>Action</b>	Please contact your software supplier and provide the message text.
<b>INODSE2082</b>	<b>Granting port allocation lock failed with response err - int_err</b>
<b>Explanation</b>	Unexpected response received while trying to lock the port allocation lock.
<b>Action</b>	Please contact your software supplier.

<b>INODSE2084</b>	<b>Invalid port value port detected, valid port values are between portmin and portmax</b>
<b>Explanation</b>	An invalid port value was detected.
<b>Action</b>	Please specify a valid port value.
<b>INODSE2085</b>	<b>Invalid port range r1 - r2 detected, minimum min ports required in range</b>
<b>Explanation</b>	A port range has to contain a minimum number of ports.
<b>Action</b>	Please specify a valid port range.
<b>INODSE2086</b>	<b>Static port range r1 - r2 and dynamic port range r3 - r4 overlap</b>
<b>Explanation</b>	Static and dynamic port range overlap, which is not allowed.
<b>Action</b>	Please specify valid port ranges.
<b>INODSE2087</b>	<b>Port check function could not read static and / or dynamic port range</b>
<b>Explanation</b>	An error occurred while retrieving the static and dynamic port range.
<b>Action</b>	Please contact your software supplier.
<b>INODSE2088</b>	<b>The given dynamic port range r1 - r2 is not free</b>
<b>Explanation</b>	At least one port in the given dynamic port range is already in use by another server.
<b>Action</b>	Please specify a dynamic port range where no ports are used by other servers.
<b>INODSE2092</b>	<b>Internal error occurred: DSIF func [mod - line] invalid combination of parameters</b>
<b>Explanation</b>	An internal error occurred.
<b>Action</b>	Please contact your software supplier and provide the message text.
<b>INODSE2093</b>	<b>Web server webserver not registered</b>
<b>Explanation</b>	The given web server is not registered.
<b>Action</b>	Specify a registered web server.
<b>INODSE2094</b>	<b>Web server webserver not correctly registered</b>
<b>Explanation</b>	The web server is not correctly registered. Either the IP address or the port number is missing.
<b>Action</b>	Correct the web server registration.

---

<b>INODSE2095</b>	<b>Web server webserver not assigned to database dbname</b>
<b>Explanation</b>	The web server is not assigned to the database.
<b>Action</b>	Check your web server registrations.
<b>INODSE2096</b>	<b>Environment extension envext not registered for Tamino what what1</b>
<b>Explanation</b>	The environment extension is not registered in the Tamino configuration.
<b>Action</b>	No action required.
<b>INODSE2097</b>	<b>No environment extension registered for Tamino what what1</b>
<b>Explanation</b>	No environment extension registered for Tamino version or server.
<b>Action</b>	No action required.
<b>INODSE2099</b>	<b>No extension point definitions found for version version</b>
<b>Explanation</b>	No extension point definitions were found for the specified version.
<b>Action</b>	Check your configuration.
<b>INODSE2103</b>	<b>Invalid port range r1 - r2 detected</b>
<b>Explanation</b>	An invalid port range was detected.
<b>Action</b>	Specify a valid port range.
<b>INODSE2104</b>	<b>Component comp already exists for extension point extp in version vers</b>
<b>Explanation</b>	The component already exists for the extension point in the specified version.
<b>Action</b>	No action required.
<b>INODSE2105</b>	<b>Component comp already exists for extensions in version vers</b>
<b>Explanation</b>	The component already exists in the extension section of the specified version.
<b>Action</b>	No action required.
<b>INODSE2106</b>	<b>Component comp does not exist for extension point extp in version vers</b>
<b>Explanation</b>	The specified component is not defined for the given extension point and version.
<b>Action</b>	No action required.

<b>INODSE2107</b>	<b>Component comp does not exist in extensions for version vers</b>
<b>Explanation</b>	The specified component does not exist in the extensions for the given version.
<b>Action</b>	No action required.
<b>INODSE2108</b>	<b>Could not find function func for extension point extp, version vers, component comp</b>
<b>Explanation</b>	The extension point function was not found in the specified extension point library.
<b>Action</b>	Check library name, path and entry points of the extension point library.
<b>INODSE2109</b>	<b>Extension point extp does not exist in version vers</b>
<b>Explanation</b>	The specified extension point does not exist in the given version.
<b>Action</b>	No action required.
<b>INODSE2110</b>	<b>Could not load library lib for extension point extp, version vers, component comp</b>
<b>Explanation</b>	The extension point library could not be loaded via the specified path.
<b>Action</b>	Check the library name and path of the extension point definitions.
<b>INODSE2111</b>	<b>Could not allocate a port, because the static port range is full</b>
<b>Explanation</b>	No port could be allocated in the static port range, because it is full.
<b>Action</b>	Extend the static port range, use a port from outside the static port range or force reusage of a port from the static range.
<b>INODSE2114</b>	<b>Port allocation function could not read static and / or dynamic port range</b>
<b>Explanation</b>	An error occurred while retrieving the static and dynamic port range.
<b>Action</b>	Please contact your software supplier.
<b>INODSE2117</b>	<b>Granting raw section lock failed with response err - int_err</b>
<b>Explanation</b>	Unexpected response received while trying to lock the raw section lock.
<b>Action</b>	Please contact your software supplier.
<b>INODSE2121</b>	<b>Web server webserver is already registered, rename is not allowed</b>
<b>Explanation</b>	The web server specified is already registered. Therefore the rename is not allowed.
<b>Action</b>	Choose another name for the web server or delete the existing web server.

---

<b>INODSE2124</b>	<b>Internal error occurred: func [mod - line] what parameter param</b>
<b>Explanation</b>	An internal error occurred.
<b>Action</b>	Please contact your software supplier and provide the message text.
<b>INODSE2125</b>	<b>Web server webserver is already registered</b>
<b>Explanation</b>	The specified web server is already present.
<b>Action</b>	Update the web server.
<b>INODSE2126</b>	<b>database space of database server in raw section section is in use and must not be reallocated</b>
<b>Explanation</b>	The specified database spaces are in use and must not be reallocated.
<b>Action</b>	No action required.
<b>INODSE2127</b>	<b>database space of database server not present in raw section section</b>
<b>Explanation</b>	The specified database space(s) could not be found in the raw section.
<b>Action</b>	Please contact your software supplier.
<b>INODSE2129</b>	<b>pathname does not specify a regular file (returned type error)</b>
<b>Explanation</b>	The given path does not specify a regular file.
<b>Action</b>	Specify a regular file.
<b>INODSE2130</b>	<b>database space of database server in raw section section is in use and must not be deallocated</b>
<b>Explanation</b>	The specified database spaces are in use and must not be deallocated.
<b>Action</b>	No action required.
<b>INODSE2134</b>	<b>Index recreation not permitted at this item</b>
<b>Explanation</b>	This item has no data records, therefore a reinvert cannot be performed.
<b>Action</b>	Use the X-Machine programming command "admin" to recreate the index.
<b>INODSE2135</b>	<b>database space space number of server server not found</b>
<b>Explanation</b>	The specified database space could not be found.
<b>Action</b>	Correct the database space specification and try again.

**INODSE2136**      **database space of database server in raw section section is in use and must not be changed**

**Explanation**      The specified database space is in use and must not be changed.

**Action**      Ensure that the database space is not in use before changing it.

**INODSE2137**      **Database server is active, database spaces must not be moved**

**Explanation**      The database is active. Therefore database spaces must not be moved.

**Action**      Stop the database before moving any database spaces.

**INODSE2138**      **Granting container move lock failed with response err - int\_err**

**Explanation**      An unexpected response was received while trying to grant the container move lock.

**Action**      Please contact your software supplier.

**INODSE2140**      **Error while reading data reference block block into internal pool**

**Explanation**      An unexpected error occurred while reading a data reference block into the internal cache.

**Action**      Please contact your software supplier.

**INODSE2141**      **Load file has unexpected structure level lev (compatibility comp)**

**Explanation**      The input file for a data load operation has a structure level mismatch, or the file is corrupted.

**Action**      Check if the input file has the wrong structure level or is corrupted.

**INODSE2142**      **Internal error occurred: DSIF func [mod - line] invalid parameter handle (parhdl) supplied**

**Explanation**      An internal error occurred.

**Action**      Please contact your software supplier and provide the message text.

**INODSE2143**      **Server parameter "param" not available in current context**

**Explanation**      A server parameter was requested in an invalid context.

**Action**      Please contact your software supplier.

---

<b>INODSE2144</b>	<b>Invalid server parameter name "param" supplied</b>
<b>Explanation</b>	The given server parameter name is invalid.
<b>Action</b>	Specify a valid server parameter name.
<b>INODSE2145</b>	<b>Static server parameter "param" must not be changed online</b>
<b>Explanation</b>	Static server parameters must not be changed while the server is active.
<b>Action</b>	Stop the server before changing a static parameter.
<b>INODSE2157</b>	<b>Due to license restrictions, raw section access is not allowed</b>
<b>Explanation</b>	The license file does not contain the permission to access raw sections.
<b>Action</b>	Use the file system instead or obtain the required license from your software supplier.
<b>INODSE2160</b>	<b>Upgrade is not allowed for replication database</b>
<b>Explanation</b>	An upgrade is not allowed for a replication database.
<b>Action</b>	If the master database has been upgraded, the replication database must be newly created from the master backup.
<b>INODSE2162</b>	<b>Physical extent count 0 detected at typ</b>
<b>Explanation</b>	The management of physical database spaces has an empty counter.
<b>Action</b>	The database seems to be physically corrupted. Perform a restore/recover.
<b>INODSE2163</b>	<b>First Index blocksize incompatible (bls)</b>
<b>Explanation</b>	The blocksize field of first index space does not match the real blocksize.
<b>Action</b>	No action required.
<b>INODSE2164</b>	<b>Physical extent entry error (typ first - last)</b>
<b>Explanation</b>	The physical management of the database is corrupted.
<b>Action</b>	Perform a restore/recover.
<b>INODSE2167</b>	<b>Check for tape device failed on path. Check that the path is correct and whether tape is in drive.</b>
<b>Explanation</b>	It was no possible to verify that the specified path points to a tape device.
<b>Action</b>	Make sure that the path is correct, that the tape is in the drive, that the tape device is online and the tape device is properly connected to the system.

<b>INODSE2168</b>	<b>Location type mismatch - expected 'type1' , found 'type2'</b>
<b>Explanation</b>	This error can occur during 'Add Location', if the requested location type does not match the actual file type.
<b>Action</b>	Specify the correct location type.
<b>INODSE2169</b>	<b>Received response rsp (intrsp) while starting server</b>
<b>Explanation</b>	Starting the server failed.
<b>Action</b>	Please contact your software supplier.
<b>INODSE2170</b>	<b>Received response rsp (intrsp) while stopping server</b>
<b>Explanation</b>	Stopping the server failed.
<b>Action</b>	Please contact your software supplier.
<b>INODSE2173</b>	<b>Unexpected internal server error: errorstring</b>
<b>Explanation</b>	An internal server call failed with given error string.
<b>Action</b>	Please look into the server job log if there is additional error information. If not, contact your software supplier.
<b>INODSE2175</b>	<b>Unexpected internal server error: errorstring, location location</b>
<b>Explanation</b>	An internal server call failed with given error string.
<b>Action</b>	Please look into the server job log to see if there is additional error information. If not, contact your software supplier.
<b>INODSE2178</b>	<b>Doctype doctype is locked by another user</b>
<b>Explanation</b>	The doctype has a lock conflict with a running action of another user.
<b>Action</b>	Investigate which user is active and what activity is causing the lock.
<b>INODSE2179</b>	<b>Upgrade from version from_version to version to_version not supported</b>
<b>Explanation</b>	The required database conversion between the stated versions is not supported.
<b>Action</b>	Consult the documentation about possible upgrade options.

---

<b>INODSE2187</b>	<b>Cannot determine file type from path</b>
<b>Explanation</b>	An unexpected error occurred while Tamino tried to determine the file type of the displayed location.
<b>Action</b>	Check if the displayed location is accessible. If the location is accessible please contact your software supplier.
<b>INODSE2192</b>	<b>The maximum number of threads allowed per process (max_threads) is too low to start and manage the Tamino server</b>
<b>Explanation</b>	The current parameter configuration does not allow the creation of all necessary threads to start and manage the Tamino server.
<b>Action</b>	Either the system defined maximum number of threads per process is too low and should be increased, or the Tamino parameter configuration should be changed to decrease the number of threads to be created.
<b>INODSE2193</b>	<b>Insufficient system resources to create thread: thread 'name', error error returned by thread create function</b>
<b>Explanation</b>	There are not enough system resources available to create a new thread.
<b>Action</b>	There are not enough system resources available to create a new thread. The reason for that is either that the system defined maximum number of threads per process is exceeded, or that there is not enough memory available to allocate the necessary thread resources.
<b>INODSE2194</b>	<b>Restore from backup made in version old_version not supported to upgrade to new_version</b>
<b>Explanation</b>	A backup made in the old version cannot be used, e.g. because this old version is not supported any more. This only applies for databases that are already in a higher version than the backup.
<b>Action</b>	Use a more recent backup to restore the database.
<b>INODSE2200</b>	<b>Master database master dbname is not active</b>
<b>Explanation</b>	An attempt was made to execute a replication command that requires the master database to be active.
<b>Action</b>	Start the master database and retry the command.

<b>INODSE2201</b>	<b>Replication database replication dbname is active</b>
<b>Explanation</b>	An attempt was made to execute a replication command that requires the replication database to be offline.
<b>Action</b>	Stop the replication database and retry the command.
<b>INODSE2202</b>	<b>Master database must be restarted before a replication database can be set up</b>
<b>Explanation</b>	A restart of the master database is necessary.
<b>Action</b>	Restart the master database and try to set up the replication database again.
<b>INODSE2203</b>	<b>Update server sessions exist</b>
<b>Explanation</b>	The database already has update sessions so it cannot be used to replicate another database.
<b>Action</b>	Use a newly created database and retry this operation.
<b>INODSE2204</b>	<b>Replicate master database master dbname not permitted</b>
<b>Explanation</b>	Permission to replicate the master database was denied.
<b>Action</b>	Ask the administrator to permit replication access to the master database.
<b>INODSE2205</b>	<b>Inconsistency detected while setting the database to replication type</b>
<b>Explanation</b>	This database is not suitable to be set as the replication database of the specified master database. Perhaps the versions are not identical or this one was not created from the backup of the master. Also possible is that this database has its own updates after the creation.
<b>Action</b>	Use another database to replicate the master.
<b>INODSE2206</b>	<b>No permission to modify the type of the database</b>
<b>Explanation</b>	To change the type of a database to a replication database or to set it back to a normal one, the user needs to have administrator rights. Other possible reason: The database is not allowed to replicate the master database.
<b>Action</b>	Log in as administrator and try the operation again and check whether this database is in the permission list of the master database.

---

<b>INODSE2208</b>	<b>Internal error occurred: modification not allowed for replication database.</b>
<b>Explanation</b>	An internal error occurred. The server will be stopped.
<b>Action</b>	Please contact your software supplier and provide the message text.
<b>INODSE2211</b>	<b>No valid location provided for backup</b>
<b>Explanation</b>	There can be a number of reasons for this error, for example no free space or the location directory was deleted outside of Tamino. The exact reason for the error is contained in the job log.
<b>Action</b>	Study the job log to find the exact reason for the error. If the job log indicated that there is no space, free some space on the location device. Alternatively, you may provide another location for the backup.
<b>INODSE2212</b>	<b>The names of master and replication databases cannot be identical</b>
<b>Explanation</b>	Identical names have been supplied for the master and a replication database, but this is not allowed.
<b>Action</b>	Supply different names.
<b>INODSE2213</b>	<b>A former replication database cannot be set to replication type</b>
<b>Explanation</b>	After a replication database has been reset by 'Set Type to Normal Database', it cannot become a replication database any more.
<b>Action</b>	Delete the database, recreate it from a non-initial backup of the master and execute 'Set Type to Replication'.
<b>INODSE2214</b>	<b>Data field layout block rabn, invalid periodic group count count for fieldname</b>
<b>Explanation</b>	The data field layout block with the given number is corrupted.
<b>Action</b>	No action required.
<b>INODSE2215</b>	<b>Activity currently not permitted</b>
<b>Explanation</b>	This error may occur when the server is in the starting or stopping phase. During these phases the server is neither online nor offline. The other reason for this error is when the server is offline and there are some activities on the database in parallel, e.g. adding some index space.
<b>Action</b>	Wait until the server is definitely online or offline and than retry.

<b>INODSE2216</b>	<b>Operation is not permitted during a standby server session</b>
<b>Explanation</b>	The operation cannot run in parallel with another operation that requires the server to be running in standby mode.
<b>Action</b>	A standby session is used for the restore/recover operation. Wait until this operation is finished and the server is shut down.
<b>INODSE2217</b>	<b>Operation not allowed for external backup</b>
<b>Explanation</b>	An external backup is an invalid object for this operation.
<b>Action</b>	Some database operations are not allowed for external backups.
<b>INODSE2218</b>	<b>File currently locked</b>
<b>Explanation</b>	A recovery input file must not be moved because it is used by the server.
<b>Action</b>	Try to perform the operation later. A log space will be unlocked after a session switch. Other recovery input files will be unlocked after the termination of a mass load.
<b>INODSE2219</b>	<b>Savepoint not found for internal key key</b>
<b>Explanation</b>	Necessary configuration information was not found.
<b>Action</b>	Please contact your software supplier.
<b>INODSE2220</b>	<b>File filename does not exist</b>
<b>Explanation</b>	A registered backup or recovery file to be moved or deleted does not exist.
<b>Action</b>	Check the locations used for the database whether files have been lost due to unintended removal or restore operations.
<b>INODSE2221</b>	<b>File filename already exists</b>
<b>Explanation</b>	A registered backup or recovery file to be moved already exists.
<b>Action</b>	Check the locations used for the database whether files are present due to restore operations or files remaining from a deleted database.
<b>INODSE2222</b>	<b>File filename could not be moved</b>
<b>Explanation</b>	Moving a backup or recovery file failed.
<b>Action</b>	Check access control settings of the location where the file is to be moved.

---

<b>INODSE2223</b>	<b>File filename could not be removed</b>
<b>Explanation</b>	Removing a backup or recovery file failed.
<b>Action</b>	Check access control settings of the file to be deleted or of the source file to be moved.
<b>INODSE2229</b>	<b>Backup time has become invalid</b>
<b>Explanation</b>	An earlier backup was used for a restore not using the recover all option. Due to new modifications done on this base, the newer backup must not be used for restore/recover.
<b>Action</b>	Use another backup for restore/recover. The selected backup can only be used to create new database.
<b>INODSE2231</b>	<b>Cannot create initial backup</b>
<b>Explanation</b>	This error can appear during database creation. There are a number of reasons why the creation of the initial backup might fail e.g. a file with the same name already exists in the backup location, a tape is not ready (if the backup medium is tape) or no reading process is attached to a pipe (if backup medium is pipe). The root cause of the error will be given in the job log.
<b>Action</b>	Read the job log to find the root cause of the error. If there is the file with the same name as the initial backup name in the backup location on the file system, remove this file or move it to another place. If the backup medium is tape, ensure that the tape is ready. If the backup medium is a named pipe, ensure that there is a process reading from this pipe.
<b>INODSE2232</b>	<b>XML port must not be set to zero if the communication method includes native TCP/IP</b>
<b>Explanation</b>	If native TCP/IP is used as a communication method for the Tamino server the TCP/IP port used must not be set to zero.
<b>Action</b>	Use a valid port number for TCP/IP communication.
<b>INODSE2233</b>	<b>The database dbname must be online</b>
<b>Explanation</b>	The database must be started for this operation.
<b>Action</b>	Start the database.
<b>INODSE2236</b>	<b>Stopping database failed, reason: reason</b>
<b>Explanation</b>	In specific situations it is not possible to shut down the database with rolling back open transactions. This is: 1. a mass load is active 2. an external backup is active 3. there is a LOG file full situation.
<b>Action</b>	Wait until a mass load or external backup operation is finished and try again. If the log file is full, supply space for the LOG and try again.

<b>INODSE2237</b>	<b>No privilege to modify database, concurrent modifying process is currently active</b>
<b>Explanation</b>	There is another modifying job or process active or the server is within startup. Those actions must be serialized.
<b>Action</b>	Check your database state and wait until the server is up or check other modifying database actions.
<b>INODSE2241</b>	<b>Internal error occurred: DSIF func returncode returncode error error</b>
<b>Explanation</b>	This is an internal error message.
<b>Action</b>	Please contact your software supplier.
<b>INODSE2242</b>	<b>Replication instance replication dbname not found in the permission list</b>
<b>Explanation</b>	An attempt was made to remove a replication instance from the permission list which does not exist.
<b>Action</b>	Retry the command with a correct name.
<b>INODSE2243</b>	<b>Replication instance replication dbname already present in the permission list</b>
<b>Explanation</b>	An attempt was made to add a replication instance to the permission list which already exists .
<b>Action</b>	Retry the command with a correct name.
<b>INODSE2249</b>	<b>Physical file extent (extent) missing</b>
<b>Explanation</b>	The database file has been divided among more than one physical file extents. Now while processing this file the given extent is not specified.
<b>Action</b>	Specify all physical file extents.
<b>INODSE2250</b>	<b>A further extent of source cannot be created, because current file is incomplete</b>
<b>Explanation</b>	The support of multiple physical file extents requires that the current file is completely written. However with network file systems (e.g. NFS) if getting full, the current file is less in size than expected. Therefore the switch to the next location is impossible in this case. A local file system should not have those problems.
<b>Action</b>	Be sure that you have enough space at your file system because this one can only support one single file extent. Or take locally attached file systems.

---

<b>INODSE2258</b>	<b>Inconsistent usage or missing filetype file extent during processing extent extent</b>
<b>Explanation</b>	Multiple physical file extents specified by the user are not consistent. Either the extent is missing, unexpected or specified twice or the file does not come from the same database.
<b>Action</b>	Enter all required file extents and verify if they are from the same database.
<b>INODSE2263</b>	<b>(Re)Move of a single file extent is not possible because there is a reference from another database</b>
<b>Explanation</b>	If the backup consists of multiple file extents it is not possible to (re)move single extents when another database has a reference to it.
<b>Action</b>	Check which database references the backup.
<b>INODSE2264</b>	<b>Function not permitted for a replication database</b>
<b>Explanation</b>	An administration function could not be executed because it must not be used for a replication database.
<b>Action</b>	Check whether the function is to be executed for the master database.
<b>INODSE2265</b>	<b>Database is inconsistent and cannot be used</b>
<b>Explanation</b>	During migration or restore/recover, the database is in an undefined state which cannot be solved. The database cannot be started anymore.
<b>Action</b>	Recover from the latest valid backup or if not possible contact your software supplier.
<b>INODSE2268</b>	<b>Database refused startup after conversion</b>
<b>Explanation</b>	During migration the database cannot be started because of an internal error.
<b>Action</b>	View the server's startup text file (inosrv.txt) for more information.
<b>INODSE2274</b>	<b>Server died during startup</b>
<b>Explanation</b>	The server died during the startup phase.
<b>Action</b>	Inspect the server output file and correct the error.
<b>INODSE2275</b>	<b>Property propertyname must not be changed for read only / replication database</b>
<b>Explanation</b>	The operation mode of the database is not suited for changes in this property. Changing it would jeopardize the database consistency.
<b>Action</b>	For a read only database, if you really want to change the parameter, set the "read only" property to "no", modify the parameter, start the database, stop the database, set "read only" property to "yes".

<b>INODSE2279</b>	<b>Invalid version version of the conversion component</b>
<b>Explanation</b>	There is no conversion utility of the most recent version found.
<b>Action</b>	Upgrade the conversion only to the current one.
<b>INODSE2282</b>	<b>Open of source (path) has failed due to operating system error errno (errtxt)</b>
<b>Explanation</b>	The file specified cannot be opened due to an internal operating system error.
<b>Action</b>	Consult the manufacturer's manual.
<b>INODSE2283</b>	<b>io error error (errtxt) on block block no in database space space no</b>
<b>Explanation</b>	An I/O error has occurred on the given database space.
<b>Action</b>	Analyse the internal operating system error.
<b>INODSE2285</b>	<b>Creation of database space space no (path) has failed due to system error errno (errtxt)</b>
<b>Explanation</b>	A database space could not be created because of an operating system error.
<b>Action</b>	Analyse the system error and consult the manufacturer's manual.
<b>INODSE2289</b>	<b>Due to license restrictions, usage of replication management functions is not permitted</b>
<b>Explanation</b>	Your license does not permit usage of replication databases.
<b>Action</b>	Contact your software supplier for an upgrade of your license.
<b>INODSE2290</b>	<b>Due to license restrictions, server startup for replication database database name is not permitted</b>
<b>Explanation</b>	Your license does not permit usage of replication databases.
<b>Action</b>	Contact your software supplier for an upgrade of your license.
<b>INODSE2291</b>	<b>Due to license restrictions, server startup of database name as a master for replication databases is not permitted</b>
<b>Explanation</b>	Your license does not permit usage of replication databases.
<b>Action</b>	Contact your software supplier for an upgrade of your license.

---

<b>INODSE2293</b>	<b>Due to license restrictions, set version for replication master database dbname is not permitted</b>
<b>Explanation</b>	Your license does not permit usage of replication databases.
<b>Action</b>	Remove all databases from the master database's replication database table or contact your software supplier for an upgrade of your license.
<b>INODSE2298</b>	<b>Cannot establish connection to server</b>
<b>Explanation</b>	The utility cannot connect the server which is assumed to be online. Note that the communication goes over XTS.
<b>Action</b>	Check if the database is reachable over the XTS directory service. If you cannot find the reason switch on the XTS tracing facility.
<b>INODSE2340</b>	<b>Communication error when trying to contact server servername</b>
<b>Explanation</b>	An error was returned from the communication interface when trying to contact the server.
<b>Action</b>	Check whether the communication component is set up correctly and the communication process (e.g. Software AG XTS Directory Server) is running.
<b>INODSE2341</b>	<b>The last backup available must not be deleted</b>
<b>Explanation</b>	The last backup available must not be deleted because in the case of a database crash no restore is possible.
<b>Action</b>	No action required.
<b>INODSE2342</b>	<b>No valid location or directory specified</b>
<b>Explanation</b>	To create a backup, either a valid location or directory must be specified.
<b>Action</b>	Specify a valid location or directory.
<b>INODSE4055</b>	<b>Block size mismatch detected on database_space</b>
<b>Explanation</b>	A block size mismatch has been detected on the specified database space.
<b>Action</b>	Ensure that the block size of the database space to be restored is the same as that in the backup copy.

<b>INODSE4058</b>	<b>Database space storage (container) exhausted</b>
<b>Explanation</b>	The storage for database space is exhausted.
<b>Action</b>	Try to allocate more storage; if this is not possible contact your software supplier.
<b>INODSE4100</b>	<b>Failure accessing file</b>
<b>Explanation</b>	An error has occurred accessing a Tamino file. The file may possibly be corrupt.
<b>Action</b>	Check that it is the correct file and repeat the operation. If the error persists, contact your software supplier.
<b>INODSE4109</b>	<b>Failure calling external backup</b>
<b>Explanation</b>	Tamino could not start external backup processing.
<b>Action</b>	Check that the third party hardware and drivers are installed and working correctly. If the symptoms persist, contact your software supplier.
<b>INODSE4110</b>	<b>Failed to retrieve number of backup generations from internal configuration store</b>
<b>Explanation</b>	There is possibly a corruption of the internal configuration store.
<b>Action</b>	If the symptoms persist, contact your software supplier.
<b>INODSE4111</b>	<b>Failed to remove oldest savepoint information from internal configuration store.</b>
<b>Explanation</b>	There is possibly a corruption of the internal configuration store.
<b>Action</b>	If the symptoms persist, contact your software supplier.
<b>INODSE4113</b>	<b>Failed to retrieve server version</b>
<b>Explanation</b>	There is possibly a corruption of the internal configuration store.
<b>Action</b>	If the symptoms persist, contact your software supplier.
<b>INODSE4114</b>	<b>Failed to enumerate savepoint information</b>
<b>Explanation</b>	There is possibly a corruption of the internal configuration store.
<b>Action</b>	If the symptoms persist, contact your software supplier.
<b>INODSE4118</b>	<b>Failed to downgrade database</b>
<b>Explanation</b>	There is a problem with the database downgrade utility.
<b>Action</b>	If the symptoms persist, contact your software supplier.

---

<b>INODSE4120</b>	<b>Failed to execute inodmp utility</b>
<b>Explanation</b>	The Create/Backup/Restore utility cannot be executed, possibly due to a corruption in the internal configuration store.
<b>Action</b>	If the symptoms persist, contact your software supplier.
<b>INODSE4121</b>	<b>External Restore failed</b>
<b>Explanation</b>	Tamino could not start external restore processing.
<b>Action</b>	Check that the third party hardware and drivers are installed and working correctly. If the symptoms persist, contact your software supplier.
<b>INODSE4122</b>	<b>Failed to retrieve database identity</b>
<b>Explanation</b>	There is possibly a corruption of the internal configuration store.
<b>Action</b>	If the symptoms persist, contact your software supplier.
<b>INODSE5251</b>	<b>An inodmp client terminated with unexpected error err</b>
<b>Explanation</b>	Within parallel backup a client process of the dump utility terminated unexpectedly.
<b>Action</b>	The error value defines the exit code of the client process. There are generally additional error messages describing the situation in detail. Ask your software supplier for the reason of the given error.
<b>INODSE5261</b>	<b>Invalid or unsupported character set charset</b>
<b>Explanation</b>	The specified character set is not supported by the current software version.
<b>Action</b>	Check for possible typing errors in character set name.
<b>INODSE5267</b>	<b>Software configuration error</b>
<b>Explanation</b>	The Tamino software components that you are using are not compatible.
<b>Action</b>	Please request a new version of Tamino from your software supplier.
<b>INODSE5268</b>	<b>Failed to register server with the Software AG XTS Directory Server: why</b>
<b>Explanation</b>	The database server failed to register with the Software AG XTS Directory Server. The error returned from the XTS layer is displayed as part of the message.
<b>Action</b>	Fix the error situation described by the XTS message or contact your software supplier.

- INODSE5271**      **Failed to create the Software AG XTS Directory Server entries: why**  
**Explanation**      The server failed to create the necessary Software AG XTS Directory Server entries and the server startup failed. The reason for the failure is returned by the XTS layer.  
**Action**              Please check that the service "Software AG XTS Directory Server" is running. If not, please start it. On Windows this can be done using the Control Panel. On UNIX please use the scripts provided (which are normally executed at system start). If the service was running when the error occurred, and the XTS message does not specify enough details to fix the problem, please contact your software supplier.
- INODSE5272**      **Parameter setting for the Software AG XTS Directory Server failed: why**  
**Explanation**      The server failed to do the necessary parameter setting for the Software AG XTS Directory Server and the server startup failed. The reason for the failure is returned by the XTS layer.  
**Action**              Fix the error situation described by the XTS message or contact your software supplier.
- INODSE5283**      **Invalid parent field format for collation descriptor**  
**Explanation**      The format for the parent field of a collation descriptor is invalid. The only allowed parent formats are "wide" and "alphanumeric".  
**Action**              Check the collation descriptor definition.
- INODSE5287**      **Invalid collation locale s**  
**Explanation**      The locale name is misspelled or the locale is not supported.  
**Action**              Check the spelling.
- INODSE5300**      **Filename for database space container could not be determined**  
**Explanation**      It was not possible to determine the full filename for the specified database space.  
**Action**              This is an internal error. Please contact your software supplier.
- INODSE5309**      **Key id could not be changed, msg**  
**Explanation**      An internal error occurred changing a key value in the internal configuration store.  
**Action**              Please contact your software supplier.

---

<b>INODSE5310</b>	<b>Database name name could not be changed in the internal configuration store, msg</b>
<b>Explanation</b>	Because of an internal error the internal configuration could not be changed.
<b>Action</b>	Please contact your software supplier.
<b>INODSE5320</b>	<b>Database ID could not be determined, msg</b>
<b>Explanation</b>	Internal error, while requesting database ID information.
<b>Action</b>	Contact your software supplier.
<b>INODSE5321</b>	<b>Database name could not be determined, msg</b>
<b>Explanation</b>	Internal error, while requesting database name information.
<b>Action</b>	Please contact your software supplier.
<b>INODSE5334</b>	<b>Unable to get collator version for locale locale</b>
<b>Explanation</b>	This is an internal error.
<b>Action</b>	Please contact your software supplier.
<b>INODSE5335</b>	<b>Collation version does not match</b>
<b>Explanation</b>	Most probably, a newer version of the ICU library has been installed and old data is not available In this case, all collating indexes must be rebuilt.
<b>Action</b>	Rebuild the collating index.
<b>INODSE5336</b>	<b>Internal ICU error (error_text) occurred while producing collation key</b>
<b>Explanation</b>	This is an internal error.
<b>Action</b>	Please contact your software supplier.
<b>INODSE5337</b>	<b>Unable to determine server state</b>
<b>Explanation</b>	This is an internal error.
<b>Action</b>	Please contact your software supplier.
<b>INODSE5341</b>	<b>Database database name already exists</b>
<b>Explanation</b>	This error can occur during database creation, or when trying to rename an existing database and a database with the same name already exists.
<b>Action</b>	Specify another name.

<b>INODSE5343</b>	<b>External backup failed, reason: reason errcode</b>
<b>Explanation</b>	The attempt to perform an external database backup failed due to the reason specified in the message.
<b>Action</b>	Correct the error indicated and retry the operation.
<b>INODSE5344</b>	<b>External restore failed, reason: reason errcode</b>
<b>Explanation</b>	A database restore with a connected external system failed due to the reason specified in the message.
<b>Action</b>	Correct the error indicated and retry the operation.
<b>INODSE5345</b>	<b>External delete failed, reason: reason errcode</b>
<b>Explanation</b>	The call to delete an external backup failed due to the reason given.
<b>Action</b>	Correct the error indicated and retry the operation.
<b>INODSE5346</b>	<b>EMC request failed: text</b>
<b>Explanation</b>	A call of EMC's SYMAPI failed for the given reason.
<b>Action</b>	Correct the error indicated and retry the operation.
<b>INODSE5354</b>	<b>External backup configuration error, reason: reason</b>
<b>Explanation</b>	Configuring the environment for an external backup failed.
<b>Action</b>	Correct the error indicated and retry the operation.
<b>INODSE5358</b>	<b>Set version already running on this database</b>
<b>Explanation</b>	The "Set version" operation is already running on this database.
<b>Action</b>	Wait for the "set version" operation to complete.
<b>INODSE5359</b>	<b>Function is not permitted because of pending transactions</b>
<b>Explanation</b>	The function cannot be processed because of pending global transactions.
<b>Action</b>	Start the Tamino server in normal mode and close the pending global transactions.
<b>INODSE5360</b>	<b>Function is not permitted because the previous session was abnormally terminated</b>
<b>Explanation</b>	The function cannot be processed because the previous session was abnormally terminated.
<b>Action</b>	Start the Tamino server in normal mode to do an autorepair from the abnormal termination.

---

<b>INODSE5361</b>	<b>Downgrade to version version not supported</b>
<b>Explanation</b>	This message can appear when trying to convert a database to a previous version, but the requested downgrade is not supported.
<b>Action</b>	No action required.
<b>INODSE5402</b>	<b>Maximum number of users exceeded</b>
<b>Explanation</b>	A new user was rejected due to internal reasons.
<b>Action</b>	You can force a memory dump with "inodba database=name trap=9228" for further analysis after reproducing the error.
<b>INODSE5404</b>	<b>Insufficient temporary work space</b>
<b>Explanation</b>	The temporary work space was too small to execute the requested function.
<b>Action</b>	Consider increasing the temporary workspace by adding locations with free space to the temporary working location.
<b>INODSE5405</b>	<b>Insufficient temporary work space</b>
<b>Explanation</b>	The temporary work space was too small to execute the requested function.
<b>Action</b>	Consider increasing the temporary workspace.
<b>INODSE5406</b>	<b>Transaction internally aborted</b>
<b>Explanation</b>	A transaction has been aborted due to internal reasons. All changes of this transaction have been undone.
<b>Action</b>	You can force a memory dump with "inodba database=name trap=9291" for further analysis after reproducing the error.
<b>INODSE5407</b>	<b>Database is corrupt, invalid block block</b>
<b>Explanation</b>	There are structural inconsistencies in the database. The database should not be used any longer.
<b>Action</b>	Restore the database from a backup copy and apply the log files. You can force a memory dump with "inodba database=name trap=9130" for further analysis after reproducing the error.

<b>INODSE5408</b>	<b>buffer pool overflow</b>
<b>Explanation</b>	The current load could not be processed because the buffer pool is too small.
<b>Action</b>	Consider increasing the buffer pool size or force a memory dump with "inodba database=name trap=9138" for further analysis after reproducing the error.
<b>INODSE5410</b>	<b>Database is corrupt, data block damaged</b>
<b>Explanation</b>	There are structural inconsistencies in the database. The database should not be used any longer.
<b>Action</b>	Restore the database from a backup copy and apply the log files. You can force a memory dump with "inodba database=name trap=9127" for further analysis after reproducing the error.
<b>INODSE5411</b>	<b>Database is corrupt</b>
<b>Explanation</b>	There are structural inconsistencies in the database. The database should not be used any longer.
<b>Action</b>	Restore the database from a backup copy and apply the log files. You can force a memory dump with "inodba database=name trap=9123" for further analysis after reproducing the error.
<b>INODSE5416</b>	<b>Database is corrupt, physical structures damaged</b>
<b>Explanation</b>	There are structural inconsistencies in the database. The database should not be used any longer.
<b>Action</b>	Restore the database from a backup copy and apply the log files. You can force a memory dump with "inodba database=name trap=9057" for further analysis after reproducing the error.
<b>INODSE5417</b>	<b>Database is corrupt, allocation error detected</b>
<b>Explanation</b>	There are structural inconsistencies in the database. The database should not be used any longer.
<b>Action</b>	Restore the database from a backup copy and apply the log files. You can force a memory dump with "inodba database=name trap=9058" for further analysis after reproducing the error.
<b>INODSF1008</b>	<b>The location of the license file could not be found</b>
<b>Explanation</b>	The Tamino Server requires a valid license file. The location of the license file could not be determined.
<b>Action</b>	Contact your software supplier.

---

<b>INODSF1011</b>	<b>The license of Tamino has expired</b>
<b>Explanation</b>	The licensing period of Tamino has expired.
<b>Action</b>	Please contact your software supplier for a renewal of your license.
<b>INODSF1012</b>	<b>The version of Tamino and the version used in the license file do not match</b>
<b>Explanation</b>	The Tamino product version and the version used in the license file must match.
<b>Action</b>	Use the license file that has been shipped with your product version.
<b>INODSF1018</b>	<b>Database creation has failed due to license restrictions. Licensed database size is licsize MB, attempted dataspace container size is datasize MB.</b>
<b>Explanation</b>	The dataspace size of a database is limited by the amount given in your current license.
<b>Action</b>	Create a database with a smaller dataspace size.
<b>INODSF1020</b>	<b>Error error accessing the raw section section via mode</b>
<b>Explanation</b>	Accessing the raw section failed due to an unexpected system response.
<b>Action</b>	Please consult your manufacturer's manual.
<b>INODSF1021</b>	<b>Verification error on raw section section (structure level mismatch)</b>
<b>Explanation</b>	An error occurred while verifying the structure level in the raw section management structure.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1022</b>	<b>Verification error on raw section section (wrong architecture byte)</b>
<b>Explanation</b>	An error occurred while verifying the architecture byte in the raw section management structure.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1023</b>	<b>Verification error on raw section section (section management header)</b>
<b>Explanation</b>	An error occurred while verifying the management header in the raw section management structure.
<b>Action</b>	Please contact your software supplier.

<b>INODSF1024</b>	<b>Raw section section is not initialized</b>
<b>Explanation</b>	The raw section is not initialized.
<b>Action</b>	Please initialize the raw section.
<b>INODSF1062</b>	<b>Replacing the license file after expiration failed</b>
<b>Explanation</b>	Replacing the license file after expiration failed.
<b>Action</b>	Provide a valid license to be able to start the server.
<b>INODSF1180</b>	<b>The operating system is not specified within the license file</b>
<b>Explanation</b>	Check operating systems specification in the license file.
<b>Action</b>	Verify that the license file is valid for the operating system used.
<b>INODSF1250</b>	<b>Open of source (path) has failed due to an incompatible file or a compatibility mismatch</b>
<b>Explanation</b>	The file could not be opened because it either does not have the expected compatibility level or a subsequent file extent does not match the previously opened one.
<b>Action</b>	Check that the correct file has been specified for the operation or if 2 physical file extents belong to each other.
<b>INODSF1251</b>	<b>Internal error error occurred</b>
<b>Explanation</b>	An internal error has caused the server to stop.
<b>Action</b>	Please contact your software supplier. Restart the server.
<b>INODSF1254</b>	<b>Unexpected signal signal received in text index procedure call from thread thread</b>
<b>Explanation</b>	An unexpected exception or signal has occurred.
<b>Action</b>	If the exception or the signal was asynchronous (i.e. no access violation etc.), repeat the operation.
<b>INODSF1255</b>	<b>Index too deep</b>
<b>Explanation</b>	The index structure exceeds the maximum levels of indexing supported.
<b>Action</b>	Please contact your software supplier.

---

<b>INODSF1256</b>	<b>Internal error on doctype doctype: second error caused by failed recovery due to the following error: first error</b>
<b>Explanation</b>	An error occurred on the specified doctype. While trying to undo the changes on the doctype, another error has occurred. The server must terminate in order to prevent the database from being corrupted.
<b>Action</b>	Restart the server.
<b>INODSF1257</b>	<b>Log space full</b>
<b>Explanation</b>	The server session has been abnormally terminated because there is no space left for logging.
<b>Action</b>	Provide space for logging and restart the server.
<b>INODSF1259</b>	<b>Error closing a log space: error message</b>
<b>Explanation</b>	The log space could not be closed properly. The server session is aborting.
<b>Action</b>	Try to fix the reason for the error. It is recommended to back up the database. Restart the server.
<b>INODSF1260</b>	<b>Error on doctype doctype during rollback transaction: rspmsg</b>
<b>Explanation</b>	An error occurred during the rollback of a transaction. The server must terminate in order to prevent the database from being corrupted.
<b>Action</b>	Restart the server.
<b>INODSF1261</b>	<b>Assertion failed: assertion</b>
<b>Explanation</b>	A coding error has occurred.
<b>Action</b>	Please inform your software supplier. Restart the server.
<b>INODSF1262</b>	<b>Open of source (path) has failed due to an incorrect file type</b>
<b>Explanation</b>	The file could not be opened because it does not have the expected type. It is possible that the file is internally corrupted. For example there is an index space with entirely binary zeroes in it.
<b>Action</b>	Check that the correct file has been specified for the operation.

<b>INODSF1263</b>	<b>Error error number has occurred in SMP initialization.</b>
<b>Explanation</b>	An internal error has occurred. The server has stopped.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1264</b>	<b>Setting the maximum number of resources to value has failed. Server stopped.</b>
<b>Explanation</b>	The requested system resources were not available.
<b>Action</b>	Check your system configuration.
<b>INODSF1265</b>	<b>Server already active</b>
<b>Explanation</b>	There is another server running for the current database.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1266</b>	<b>Error error number during synchronization call in line line (address address)</b>
<b>Explanation</b>	An internal error has occurred. The server has been stopped.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1267</b>	<b>SMP resource allocation failed with response rsp at line line</b>
<b>Explanation</b>	An internal error has occurred. The server has been stopped.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1268</b>	<b>Error error number during synchronization call in line line</b>
<b>Explanation</b>	An internal error has occurred. The server has been stopped.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1269</b>	<b>Increasing the number of resources by value has failed. Server stopped.</b>
<b>Explanation</b>	The requested system resources were not available.
<b>Action</b>	Check your system configuration.
<b>INODSF1270</b>	<b>Invalid value (value) found at location location</b>
<b>Explanation</b>	An internal error has caused the server to stop.
<b>Action</b>	Please contact your software supplier. Restart the server.

---

<b>INODSF1271</b>	<b>Invalid pointer (value) found at location location</b>
<b>Explanation</b>	An internal error has caused the server to stop.
<b>Action</b>	Please contact your software supplier. Restart the server.
<b>INODSF1272</b>	<b>Internal error error string occurred at location location</b>
<b>Explanation</b>	An internal error has caused the server to stop.
<b>Action</b>	Please contact your software supplier. Restart the server.
<b>INODSF1273</b>	<b>Invalid value (int value) found at location location</b>
<b>Explanation</b>	An internal error has caused the server to stop.
<b>Action</b>	Please contact your software supplier. Restart the server.
<b>INODSF1274</b>	<b>Internal error in block block number occurred at location location</b>
<b>Explanation</b>	An internal error has caused the server to stop.
<b>Action</b>	Please contact your software supplier. Restart the server.
<b>INODSF1275</b>	<b>Invalid value (int value) found on address address at location location</b>
<b>Explanation</b>	An internal error has caused the server to stop.
<b>Action</b>	Please contact your software supplier. Restart the server.
<b>INODSF1276</b>	<b>Invalid values (value 1, value 2) found on address address at location location</b>
<b>Explanation</b>	An internal error has caused the server to stop.
<b>Action</b>	Please contact your software supplier. Restart the server.
<b>INODSF1277</b>	<b>Invalid values (value1, value2) found at location location</b>
<b>Explanation</b>	An internal error has caused the server to stop.
<b>Action</b>	Please contact your software supplier. Restart the server.
<b>INODSF1278</b>	<b>Invalid value (value) found in block block number at location location</b>
<b>Explanation</b>	An internal error has caused the server to stop.
<b>Action</b>	Please contact your software supplier. Restart the server.

<b>INODSF1279</b>	<b>Invalid value (value) found on address address at location location</b>
<b>Explanation</b>	An internal error has caused the server to stop.
<b>Action</b>	Please contact your software supplier. Restart the server.
<b>INODSF1280</b>	<b>Internal error location-c1-c2 occurred</b>
<b>Explanation</b>	An internal error has caused the server to stop.
<b>Action</b>	Please contact your software supplier. Restart the server.
<b>INODSF1282</b>	<b>Received response rsp (intrsp) while loading function(s) for extension point extp</b>
<b>Explanation</b>	Loading a function for an extension point failed.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1283</b>	<b>Internal communication initialization failed</b>
<b>Explanation</b>	The server's internal communication could not be activated.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1284</b>	<b>Internal memory management could not be initialized</b>
<b>Explanation</b>	The initialization of the server's memory management has failed.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1285</b>	<b>Temporary working space could not be allocated</b>
<b>Explanation</b>	The allocation of the working space needed for server operation has failed.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1286</b>	<b>Buffer pool too small. At least minimum value bytes required.</b>
<b>Explanation</b>	The defined buffer pool is too small for the server to start.
<b>Action</b>	Increase the buffer pool parameter and restart the server.
<b>INODSF1287</b>	<b>Buffer pool too small to start the server (internal reason reason)</b>
<b>Explanation</b>	The defined buffer pool is too small for the server to start.
<b>Action</b>	Increase the buffer pool parameter and restart the server.

<b>INODSF1288</b>	<b>Server for this database already active</b>
<b>Explanation</b>	There is already an active server for the same database or at least some resources of the previous server run have not been released yet.
<b>Action</b>	If there is no active server and you cannot determine which resources may cause the conflict, contact your software supplier.
<b>INODSF1291</b>	<b>Not enough memory available to execute process</b>
<b>Explanation</b>	The operating system did not have enough resources to run another process. Possible reasons are too many concurrently active processes or a too small swap/paging space.
<b>Action</b>	Please check the resource usage and the configuration of your computer.
<b>INODSF1296</b>	<b>source (path) is corrupted at offset</b>
<b>Explanation</b>	The data cannot be used.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1297</b>	<b>Creation of source (path) has failed</b>
<b>Explanation</b>	The file could not be created at the specified location.
<b>Action</b>	Look for other error messages to find the reason for the failure.
<b>INODSF1298</b>	<b>source (path) could not be opened: device type not supported</b>
<b>Explanation</b>	An invalid device type was chosen.
<b>Action</b>	Choose a valid device type.
<b>INODSF1299</b>	<b>Open of source (path) has failed due to operating system error errno</b>
<b>Explanation</b>	The file could not be opened.
<b>Action</b>	Please consult the manufacturer's manual.
<b>INODSF1300</b>	<b>Open of source (path) has failed due to an invalid structure</b>
<b>Explanation</b>	The file could not be opened because it does not have the expected structure.
<b>Action</b>	Check if the file origin is the same machine architecture. If you cannot detect the error, please contact your software supplier.

<b>INODSF1301</b>	<b>Open of source (path) has failed. Missing extents or wrong sequence of extents. Please check and retry.</b>
<b>Explanation</b>	The file could not be opened because the sequence in which devices are given (e.g. tapes) is not correct or not all sequences required were specified.
<b>Action</b>	Specify all extents in the correct sequence.
<b>INODSF1302</b>	<b>Open of log space (path) has failed because sequence of log spaces is incorrect</b>
<b>Explanation</b>	The file could not be opened because the sequence in which log spaces are given (e.g. tapes) is not correct.
<b>Action</b>	Use the correct sequence.
<b>INODSF1303</b>	<b>Open of source (path) has failed due to an incorrect file type</b>
<b>Explanation</b>	The file could not be opened because it does not have the expected type.
<b>Action</b>	Check that the correct file has been specified for the operation.
<b>INODSF1305</b>	<b>Open of source has failed due to invalid or missing internal information</b>
<b>Explanation</b>	The file could not be opened because its location was not specified.
<b>Action</b>	Check the database parameters.
<b>INODSF1306</b>	<b>Internal error location occurred: Please report r t h c</b>
<b>Explanation</b>	An internal error has caused the server to stop.
<b>Action</b>	Please contact your software supplier and report the values given with the message. Restart the server.
<b>INODSF1307</b>	<b>Database database name not registered</b>
<b>Explanation</b>	The specified database has not been properly created or the internal entries of this database have been destroyed.
<b>Action</b>	Create the database again.
<b>INODSF1308</b>	<b>Executable name not found</b>
<b>Explanation</b>	The system could not find the executable object specified.
<b>Action</b>	Please check your installation.

---

<b>INODSF1309</b>	<b>System error errno occurred during the creation of another process</b>
<b>Explanation</b>	The system could not create another process. You might have exceeded the amount of available memory or the maximum number of processes.
<b>Action</b>	Please increase the amount of virtual memory available, or increase the number of possible processes. Please refer to the manual of your operating system for details.
<b>INODSF1310</b>	<b>Invalid value (value) found at location location</b>
<b>Explanation</b>	An internal error has caused the server to stop.
<b>Action</b>	Please contact your software supplier. Restart the server.
<b>INODSF1311</b>	<b>Error errno has been signalled during the execution of an asynchronous I/O on log space for id</b>
<b>Explanation</b>	An asynchronous I/O has failed due to an operating system error.
<b>Action</b>	Check for problems with the device. Check whether the device is off-line or read-only. In the case of a logical volume, try to access all of its physical devices by operating system commands. Check the system log file for appropriate error messages.
<b>INODSF1312</b>	<b>Error errno has been signalled during the execution of an asynchronous I/O on journal space for id</b>
<b>Explanation</b>	An asynchronous I/O has failed due to an operating system error.
<b>Action</b>	Check for problems with the device. Check whether the device is off-line or read-only. In the case of a logical volume, try to access all of its physical devices by operating system commands. Check the system log file for appropriate error messages.
<b>INODSF1313</b>	<b>Error errno has been signalled during the execution of an asynchronous I/O for id</b>
<b>Explanation</b>	An asynchronous I/O has failed due to an operating system error.
<b>Action</b>	Check for problems with the device. Check whether the device is off-line or read-only. In the case of a logical volume, try to access all of its physical devices by operating system commands. Check the system log file for appropriate error messages.
<b>INODSF1317</b>	<b>Semaphore could not be created because system limit was reached</b>
<b>Explanation</b>	The system limit for semaphores was reached.
<b>Action</b>	Increase the number of semaphores supported by the operating system.

<b>INODSF1319</b>	<b>Unexpected signal signal received</b>
<b>Explanation</b>	An unexpected exception or signal has occurred.
<b>Action</b>	If the exception or the signal was asynchronous (i.e. no access violation etc.), repeat the operation.
<b>INODSF1321</b>	<b>Error opening sequential file: error</b>
<b>Explanation</b>	An error occurred when opening a sequential file.
<b>Action</b>	Correct the reason for the sequential file open failure and retry the operation.
<b>INODSF1322</b>	<b>Latest savepoint not found</b>
<b>Explanation</b>	Internal information about the latest savepoint could not be found.
<b>Action</b>	Contact your software supplier.
<b>INODSF1323</b>	<b>Path or type of log location not found</b>
<b>Explanation</b>	The internal information for the log location, path or type could not be found.
<b>Action</b>	Contact your software supplier.
<b>INODSF1324</b>	<b>Processing information for a log space is undefined</b>
<b>Explanation</b>	A previous server session process was killed during restore/recover.
<b>Action</b>	Use a later backup if possible or use a recover until a timestamp that is less than the creation date of the log space in question.
<b>INODSF1325</b>	<b>Signal signal number caught. Termination initiated.</b>
<b>Explanation</b>	An unexpected signal was caught. This leads to an immediate termination.
<b>Action</b>	If the signal cannot be explained by the environment (operator initiated or operating system initiated signal), please contact your software supplier.
<b>INODSF1326</b>	<b>database creation not completed</b>
<b>Explanation</b>	The database creation is not finished, or terminated unexpectedly, leaving the database files on disk.
<b>Action</b>	Check if the creation is still in progress. If so, wait until completed. If not, clean up and restart the database creation.

---

<b>INODSF1328</b>	<b>Unexpected buffer pool error</b>
<b>Explanation</b>	An unexpected error has occurred when trying to access the buffer pool.
<b>Action</b>	Repeat the action. If it still fails, contact your support center.
<b>INODSF1329</b>	<b>Unexpected error getting a page from the buffer pool</b>
<b>Explanation</b>	An unexpected error has occurred when trying to get a page from the buffer pool. The operation was cancelled.
<b>Action</b>	Contact your software supplier.
<b>INODSF1330</b>	<b>An unexpected I/O error has occurred</b>
<b>Explanation</b>	An unexpected I/O error has occurred. The operation was cancelled.
<b>Action</b>	Contact your software supplier.
<b>INODSF1331</b>	<b>Unable to extend database space. Reason: ret_code.</b>
<b>Explanation</b>	The specified error has occurred while trying to extend a database space.
<b>Action</b>	Determine the reason for the error code, and retry the operation.
<b>INODSF1332</b>	<b>Index chain is corrupt</b>
<b>Explanation</b>	Corruption has been found for an index on a doctype.
<b>Action</b>	The indexes have to be rebuilt. To rebuild the indexes, choose the "Check and Repair" function for the database in the Tamino Manager, then retry the operation.
<b>INODSF1334</b>	<b>No index summary in input file</b>
<b>Explanation</b>	The input file does not have the required index definitions.
<b>Action</b>	Ensure that the correct input file has been specified.
<b>INODSF1335</b>	<b>No streams available</b>
<b>Explanation</b>	Multi-file mode is being used but no streams are available.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1336</b>	<b>Cannot handle given extent type</b>
<b>Explanation</b>	It is not possible to handle the type of extent specified.
<b>Action</b>	This is an internal error. Please contact your software supplier.

<b>INODSF1337</b>	<b>Shared memory segment of server exists</b>
<b>Explanation</b>	At least one shared memory segment of the server already exists.
<b>Action</b>	Check if the server is already active. If not retry the operation. If the error persists remove the existing shared memory segment and retry.
<b>INODSF1341</b>	<b>Error on temporary storage space</b>
<b>Explanation</b>	An error has occurred when trying to write to a temporary storage space.
<b>Action</b>	Ensure that there are no errors on the device where temporary space is to be used and retry the operation.
<b>INODSF1342</b>	<b>No space for index space</b>
<b>Explanation</b>	There are not enough system resources available for the index space.
<b>Action</b>	Allocate sufficient resources to allow the operation to succeed.
<b>INODSF1343</b>	<b>Error opening data space</b>
<b>Explanation</b>	An error has occurred while opening the data space.
<b>Action</b>	Correct the error and retry the operation.
<b>INODSF1344</b>	<b>Error opening journal space</b>
<b>Explanation</b>	An error has occurred while opening the journal space.
<b>Action</b>	Correct the error and retry the operation.
<b>INODSF1345</b>	<b>Internal error: Provided memory not sufficient</b>
<b>Explanation</b>	An area in memory used as working space was defined too small.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1346</b>	<b>No input slot could be allocated</b>
<b>Explanation</b>	An internal error occurred preventing an input slot being allocated for an index.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1347</b>	<b>No space for preserved slot</b>
<b>Explanation</b>	An internal error occurred preventing a preserved slot being allocated for an index.
<b>Action</b>	Please contact your software supplier.

---

<b>INODSF1348</b>	<b>Invalid database space</b>
<b>Explanation</b>	An internal error occurred.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1349</b>	<b>Error while reading index</b>
<b>Explanation</b>	An internal error occurred while reading the index.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1350</b>	<b>No more temporary space</b>
<b>Explanation</b>	Temporary space has been exhausted.
<b>Action</b>	Ensure that there is enough free space to allocate the required temporary space.
<b>INODSF1351</b>	<b>No slot available</b>
<b>Explanation</b>	An internal error occurred when trying to write to a slot.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1353</b>	<b>More than one block to be written (number)</b>
<b>Explanation</b>	A disk write failed because more than one block was requested to be written. This is an internal error.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1354</b>	<b>Utility not permitted to run</b>
<b>Explanation</b>	This utility is currently not permitted to run.
<b>Action</b>	Wait until the database is available again.
<b>INODSF1355</b>	<b>Internal sort error</b>
<b>Explanation</b>	An internal sort error has occurred.
<b>Action</b>	Please contact your software supplier.
<b>INODSF1356</b>	<b>Internal error occurred: utility entry not found</b>
<b>Explanation</b>	An internal error occurred.
<b>Action</b>	Please contact your software supplier.

<b>INODSF1359</b>	<b>Invalid value (long value) found on address address at location location</b>
<b>Explanation</b>	An internal error has caused the server to stop.
<b>Action</b>	Please contact your software supplier. Restart the server.
<b>INODSF1360</b>	<b>The tape device is not responding, please ensure that a tape is mounted</b>
<b>Explanation</b>	Response EINVAL was returned by the operating system. The most likely cause is that no tape has been mounted.
<b>Action</b>	Ensure that a tape is mounted and the device is switched on.
<b>INODSF1362</b>	<b>Journal space too small (minimum required size is size MBytes)</b>
<b>Explanation</b>	The journal space is not sufficient for the Tamino server.
<b>Action</b>	Create a database with a larger journal space.
<b>INODSF1363</b>	<b>Journal overflow. Server cannot proceed.</b>
<b>Explanation</b>	The journal space was insufficient. The current server session has to be terminated.
<b>Action</b>	Check if more journal space can be provided. Restart the server.
<b>INODSF1364</b>	<b>Log space not found for savepoint savepoint</b>
<b>Explanation</b>	A log space entry for the given savepoint could not be found.
<b>Action</b>	Contact your software supplier.
<b>INODSF1366</b>	<b>License file not found at path</b>
<b>Explanation</b>	Your license is not at the expected place.
<b>Action</b>	Please move the license file to the place indicated.
<b>INODSF1367</b>	<b>License file not valid (error error)</b>
<b>Explanation</b>	Your license is not valid. It is incomplete or has been edited.
<b>Action</b>	Please acquire a correct license file from your software supplier.
<b>INODSF1369</b>	<b>Internal licensing error error</b>
<b>Explanation</b>	There was an internal error in the processing of the licensing information.
<b>Action</b>	Please contact your software supplier.

---

<b>INODSF1373</b>	<b>Database database name not registered</b>
<b>Explanation</b>	The specified database has not been properly created or the internal entries of this database have been destroyed.
<b>Action</b>	Create the database again.
<b>INODSF1431</b>	<b>Error during autorepair. The database is inconsistent.</b>
<b>Explanation</b>	The last server session terminated abnormally. The database autorepair has failed. The database cannot be used.
<b>Action</b>	Send the journal space and all other error information to your software supplier. Then recover your database from the last backup.
<b>INODSF1432</b>	<b>Start of autorepair information cannot be determined</b>
<b>Explanation</b>	The last server session terminated abnormally. The database autorepair has failed. The database cannot be used.
<b>Action</b>	Send the journal space and all other error information to your software supplier. Then recover your database from the last backup.
<b>INODSF1433</b>	<b>Journal overflow during database autorepair. The database is inconsistent.</b>
<b>Explanation</b>	The last server session terminated abnormally. The database autorepair has failed. The database cannot be used.
<b>Action</b>	Send the journal space and all other error information to your software supplier. Then recover your database from the last backup.
<b>INODSF1436</b>	<b>Terminated with errors</b>
<b>Explanation</b>	A previous error has caused the termination of the process.
<b>Action</b>	Please check the event log for detailed information about previous errors that have caused the process to terminate.
<b>INODSF1454</b>	<b>Internal error occurred: location thread module function. Server stopped.</b>
<b>Explanation</b>	An internal error occurred.
<b>Action</b>	Please contact your software supplier and provide the message text.

<b>INODSF1688</b>	<b>Shared memory of size size MB is not available (internal error errno)</b>
<b>Explanation</b>	The server needs a shared memory of the specified size. However, this shared memory could not be created.
<b>Action</b>	View the previous message which describes the operating system error in detail. Check the manufacturer's manual. Consider increasing the operating system limits on shared memory size or decreasing the needs of the server by decreasing parameters such as buffer pool size.
<b>INODSF2002</b>	<b>Error during replication processing, replication stopped</b>
<b>Explanation</b>	Replication cannot be continued due to a previous error during replication processing
<b>Action</b>	If the master database is lost, the Reset Replication function can be used to convert the database for usage as a substitution. In any other case a new backup from the master database should be used to recreate the replication database.
<b>INODSF2005</b>	<b>Internal replication error error/error info detected when processing data of server session session number - block block number, location record number</b>
<b>Explanation</b>	The data required for replication processing could not be supplied by the master database.
<b>Action</b>	Please check that the log space has not yet been deleted by creating new backups of the master database. If the log space still exists keep the error information and contact your software supplier.
<b>INODSF2075</b>	<b>Failure writing to tape device, please ensure that a tape is loaded</b>
<b>Explanation</b>	The response EFAULT was returned by the operating system. The most likely cause is that no tape is loaded in the device.
<b>Action</b>	Ensure that a tape is loaded and the device is switched on.
<b>INODSF2116</b>	<b>Internal command recovery failure (rsp1) on doctype doctype, caused by: rsp2</b>
<b>Explanation</b>	A internal recovery failed and therefore the server cannot resolve a rollback. The server must terminate in order to prevent the database from being corrupted.
<b>Action</b>	Restart the server.
<b>INODSF2119</b>	<b>Invalid compatibility level: DBMS complev1, backup file complev2 (filename)</b>
<b>Explanation</b>	An invalid compatibility level of DBMS and backup file has been detected.
<b>Action</b>	Please use a DBMS version with the same compatibility level as the backup file, or use a backup file with the compatibility of the DBMS.

---

<b>INODSF2120</b>	<b>IO [mod-line] error error</b>
<b>Explanation</b>	An unexpected error occurred in an I/O function.
<b>Action</b>	Please contact your software supplier and provide the message text.
<b>INODSF2122</b>	<b>Invalid compatibility level: DBMS complev1, database complev2</b>
<b>Explanation</b>	An invalid compatibility level has been detected.
<b>Action</b>	Please contact your software supplier.
<b>INODSF2123</b>	<b>CF [mod-line] error error</b>
<b>Explanation</b>	An internal configuration error occurred.
<b>Action</b>	Please contact your software supplier and provide the error message text.
<b>INODSF2128</b>	<b>Invalid data block detected at block blknr (doc doc, cont cont)</b>
<b>Explanation</b>	An invalid data block was detected which refused a database backup. At least one collection has a data fault.
<b>Action</b>	Repair the database with restore/recover from the latest good backup.
<b>INODSF2188</b>	<b>Failed to enter the new compatibility level in the internal configuration store</b>
<b>Explanation</b>	The new compatibility level could not be entered in the internal configuration store.
<b>Action</b>	Please contact your software supplier and provide the message text.
<b>INODSF2227</b>	<b>Internal error error during flush operation</b>
<b>Explanation</b>	The write operation of the internal buffer cache to disk failed. A detailed error message precedes this message.
<b>Action</b>	Analyse the error code, maybe check your disks and restart server.
<b>INODSF2234</b>	<b>SMP resource allocation failed at module[line] because of a lack of available memory</b>
<b>Explanation</b>	The allocation of memory failed. The reason for that is either that the pagefile is too small or that the available virtual memory is exhausted.
<b>Action</b>	Increase the size of the pagefile. If that doesn't help contact your software supplier.

<b>INODSF2235</b>	<b>Database key mismatch, required keyreq, present keypres</b>
<b>Explanation</b>	The index space has an unexpected key within the first index space. The database space obviously comes from another database.
<b>Action</b>	Check the index container spaces.
<b>INODSF2266</b>	<b>Cannot start Tamino utility of version due to system error errno</b>
<b>Explanation</b>	Submitting a Tamino utility as a subprocess failed due to an operating system error.
<b>Action</b>	Analyze the system error and check the installed version.
<b>INODSF2280</b>	<b>Unexpected I/O error (io operation) on database_space</b>
<b>Explanation</b>	An I/O failed and the process cannot continue.
<b>Action</b>	View any previous or related system error messages and analyse why the I/O operation on the given database space could have failed.
<b>INODSF2284</b>	<b>Error errno (errtxt) has been signalled during the execution of an asynchronous I/O on database space for id</b>
<b>Explanation</b>	A severe read/write error has occurred.
<b>Action</b>	Analyse the operating system error.
<b>INODSF2286</b>	<b>Internal replication error error/error info detected when processing data of mass load recovery input filename</b>
<b>Explanation</b>	The mass load input required for replication processing could not be supplied by the master database.
<b>Action</b>	Please check that the recovery input file has not yet been deleted by creating new backups of the master database. If the log space still exists, keep the error information and contact your software supplier.
<b>INODSF2287</b>	<b>Internal error error detected when processing mass load recovery input with key key</b>
<b>Explanation</b>	The recovery of a mass load activity failed.
<b>Action</b>	Please contact your software supplier.

---

<b>INODSF2288</b>	<b>Cannot grant server synchronization semaphore</b>
<b>Explanation</b>	The server synchronization semaphore cannot be granted.
<b>Action</b>	Check if the semaphore already exists and another process has granted it, or if the permission settings of the semaphore do not allow access.
<b>INODSF2294</b>	<b>Filename for database space container could not be determined</b>
<b>Explanation</b>	It was not possible to determine the full filename for the specified database space. It was obviously missing in the internal configuration store.
<b>Action</b>	This is an internal error. Please contact your software supplier.
<b>INODSF2296</b>	<b>Internal error interr on database space (reason)</b>
<b>Explanation</b>	The writing of relevant information to the given database space (Log, Journal) failed due to an internal error.
<b>Action</b>	Check the location where the database space resides and also analyse the previously given operating system error message.
<b>INODSF2299</b>	<b>Internal error number reading dbspace at block blocknumber</b>
<b>Explanation</b>	Reading the given database block resulted in an internal I/O error.
<b>Action</b>	No action required.
<b>INODSF2306</b>	<b>License timer interval too short</b>
<b>Explanation</b>	The license timer detected an unexpected system data and time.
<b>Action</b>	Please contact your software supplier.
<b>INODSF2307</b>	<b>Invalid combination of customer/partner information found in the license file</b>
<b>Explanation</b>	An invalid combination of customer/partner information was found in the license file.
<b>Action</b>	Please contact your software supplier to extend your license.
<b>INODSF2308</b>	<b>Product usage found in the license file is not allowed for an unlimited license</b>
<b>Explanation</b>	The product usage found in the license file is only allowed for a time-limited license.
<b>Action</b>	Please contact your software supplier to correct your license.

<b>INODSF2309</b>	<b>Server abort because of license expiration</b>
<b>Explanation</b>	The grace period after license termination has expired. The server did an abort.
<b>Action</b>	Please contact your software supplier to extend your license.
<b>INODSF2334</b>	<b>The license for name with ID id has expired, server aborts now</b>
<b>Explanation</b>	The license has expired. The server has stopped operation (abort). Operation can be continued upon restart with a renewed license key.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager, then restart the server.
<b>INODSF2335</b>	<b>The license for customername sub-licensed by partnername with ID partnerid has expired, server aborts now</b>
<b>Explanation</b>	The license has expired. The server has stopped operation (abort). Operation can be continued upon restart with a renewed license key.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager, then restart the server.
<b>INODSF2336</b>	<b>The license for customername with ID customerid sub-licensed by partnername has expired, server aborts now</b>
<b>Explanation</b>	The license has expired. The server has stopped operation (abort). Operation can be continued upon restart with a renewed license key.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager, then restart the server.
<b>INODSF2337</b>	<b>The license for customername with ID customerid sub-licensed by partnername with ID partnerid has expired, server aborts now</b>
<b>Explanation</b>	The license has expired. The server has stopped operation (abort). Operation can be continued upon restart with a renewed license key.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager, then restart the server.
<b>INODSF2338</b>	<b>Internal error number writing dbspace at block blocknumber</b>
<b>Explanation</b>	Cannot write database block due to an internal I/O error.
<b>Action</b>	Analyse the error number and check the database.

---

<b>INODSF2339</b>	<b>XTS refuses database connection, reason reason_code</b>
<b>Explanation</b>	It is not possible to reach the database via XTS.
<b>Action</b>	Switch on XTS_TRACE, repeat the function and check the trace file.
<b>INODSF4256</b>	<b>Structure level mismatch on database</b>
<b>Explanation</b>	The version of the server differs from the version of the utility.
<b>Action</b>	Run the correct version of the utility or server, or convert the database.
<b>INODSF4258</b>	<b>The database type and/or version does not match the backup</b>
<b>Explanation</b>	This operation can only be performed against a database of the same type and/or version as the backup.
<b>Action</b>	Ensure that the utility is being run against the correct type and version of database.
<b>INODSF4262</b>	<b>Database server mismatch: present db_name</b>
<b>Explanation</b>	A mismatch occurred between the database server parameter and the database server name of the assigned index space.
<b>Action</b>	Ensure that the correct database name is supplied.
<b>INODSF5331</b>	<b>Version version is not installed</b>
<b>Explanation</b>	The required software version is not installed.
<b>Action</b>	please contact your software supplier.
<b>INODSF5332</b>	<b>Invalid structure level strlev</b>
<b>Explanation</b>	An invalid structure level has been detected.
<b>Action</b>	Please contact your software supplier.
<b>INODSI1004</b>	<b>Stop of database successfully initiated - server is going down now</b>
<b>Explanation</b>	All database activities are terminated - the server process is about to terminate.
<b>Action</b>	No action required.
<b>INODSI1010</b>	<b>Backup file from older version version</b>
<b>Explanation</b>	Indicates that the input backup file is from a previous version.
<b>Action</b>	No action required.

<b>INODSI1013</b>	<b>Read-only database, word fragment index cannot be created</b>
<b>Explanation</b>	Read-only database, no database update permitted.
<b>Action</b>	Ensure that the database upon which you wish to carry out the operation is write-enabled.
<b>INODSI1016</b>	<b>Initializing journal space</b>
<b>Explanation</b>	When the database first starts, the entire journal space must be formatted with binary zeroes.
<b>Action</b>	Wait until the operation finished: This could take several seconds or even several minutes if the file is very large.
<b>INODSI1019</b>	<b>Database of older version version</b>
<b>Explanation</b>	The database used for restore is from a previous version.
<b>Action</b>	No action required.
<b>INODSI1034</b>	<b>The Tamino Server that is provided with this Tamino Developer Edition may be used for educational purposes only. For production purposes, you must use the Tamino Server that is included in the Tamino Server Edition.</b>
<b>Explanation</b>	This is an informational message
<b>Action</b>	None
<b>INODSI1039</b>	<b>Function function executed</b>
<b>Explanation</b>	The specified function was executed.
<b>Action</b>	Information only, no action required.
<b>INODSI1041</b>	<b>Starting mode database backup</b>
<b>Explanation</b>	Indicates the start of database backup processing.
<b>Action</b>	No action required.
<b>INODSI1044</b>	<b>Starting restore database using type backup from timestamp</b>
<b>Explanation</b>	Indicates the backup that was used to start restore processing.
<b>Action</b>	No action required.

---

<b>INODSI1049</b>	<b>Starting mode restore of database</b>
<b>Explanation</b>	Indicates that the restore processing has been started.
<b>Action</b>	No action required.
<b>INODSI1059</b>	<b>The time-limited license for the server has expired, switched to an unlimited Community Edition license</b>
<b>Explanation</b>	The time-limited license for the server has expired. The server automatically switched to an unlimited Community Edition license. Some product features may no longer be available.
<b>Action</b>	No action required.
<b>INODSI1110</b>	<b>Waiting time for count users to start a new transaction - min: min seconds, max: max seconds, average: average seconds seconds</b>
<b>Explanation</b>	This message is used to give information about waiting times for users who want to open a new transaction while other users have not yet finished their transaction. This synchronization of all users who do not have an open transaction is required at the end of a backup.
<b>Action</b>	No action required.
<b>INODSI1113</b>	<b>No real modified data for Incremental Backup</b>
<b>Explanation</b>	There is no modification in the database, so an incremental backup will save no new data. Nevertheless a backup with only global data will be created.
<b>Action</b>	No action required.
<b>INODSI1114</b>	<b>Incremental backup from date deleted</b>
<b>Explanation</b>	A full backup to be deleted causes the deletion of dependent incremental backups as well.
<b>Action</b>	No action required.
<b>INODSI1146</b>	<b>Archive Log Location has been reset</b>
<b>Explanation</b>	An Archive Log Location will not be used.
<b>Action</b>	None.

<b>INODSI1147</b>	<b>path set as location name</b>
<b>Explanation</b>	A path or a set of paths has been set for the specified location type.
<b>Action</b>	None.
<b>INODSI1177</b>	<b>Database database name Session session number (name modifier version on system info, process ID pid)</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INODSI1178</b>	<b>Database database name Replication Session (name modifier version on system info, processID pid)</b>
<b>Explanation</b>	The server started for a replication database.
<b>Action</b>	No action required.
<b>INODSI1179</b>	<b>Database database name Read-Only Session (name modifier version on system info, process ID pid)</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INODSI1183</b>	<b>size MB empty data space found</b>
<b>Explanation</b>	The amount of empty data space assigned to specific doctypes that can be returned to global free space
<b>Action</b>	None.
<b>INODSI1184</b>	<b>No empty data space found</b>
<b>Explanation</b>	Empty data space that can be returned to global free space does not exist
<b>Action</b>	None.
<b>INODSI1188</b>	<b>Creating a temporary backup for free space defragmentation</b>
<b>Explanation</b>	A temporary backup is created to be used for defragmenting free space
<b>Action</b>	Wait until the reorganization is completed.

---

<b>INODSI1190</b>	<b>size MB empty data space converted to global free space</b>
<b>Explanation</b>	The amount of empty data space that was de-allocated from specific doctypes and returned to global free space.
<b>Action</b>	None.
<b>INODSI1191</b>	<b>Free data space in database is size MB (percent %)</b>
<b>Explanation</b>	Information about the amount of global free data space after reorganization.
<b>Action</b>	None.
<b>INODSI1193</b>	<b>Free space less than percent %, no free space defragmentation and data space shrinking</b>
<b>Explanation</b>	The reorganize function converted empty space to global free space, but the amount of free space is less than a minimum value considered as worthwhile performing a free space defragmentation and data space shrinking.
<b>Action</b>	None, if you are satisfied with the minimum value for free space defragmentation and data space shrinking. In any other case, use the reorganize function with a different minimum value.
<b>INODSI1195</b>	<b>Defragmenting free space</b>
<b>Explanation</b>	A temporary backup is used for restore to defragment free space.
<b>Action</b>	Wait until the reorganization is completed.
<b>INODSI1196</b>	<b>Shrinking data space</b>
<b>Explanation</b>	The size of the data space is reduced by de-allocating free space.
<b>Action</b>	Wait until the reorganization is completed.
<b>INODSI1197</b>	<b>No free data space found</b>
<b>Explanation</b>	Free data space does not exist.
<b>Action</b>	None.
<b>INODSI1207</b>	<b>rplname inserted into permission list of dbname</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.

<b>INODSI1208</b>	<b>rplname removed from permission list of dbname</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INODSI1211</b>	<b>dbname set as replication server of master on hostname using port number</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INODSI1218</b>	<b>dbname set as replication server with simultaneous query, master is masterdb</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INODSI1219</b>	<b>dbname set as replication server without simultaneous query, master is masterdb</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INODSI1220</b>	<b>Replication server dbname reset to normal server</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INODSI1246</b>	<b>Read-only database, word fragment index cannot be removed</b>
<b>Explanation</b>	The database is readonly, so no database update is permitted.
<b>Action</b>	Ensure that the database upon which you wish to carry out this operation is write-enabled.
<b>INODSI1248</b>	<b>No backup exists for dbname - create a backup as soon as possible</b>
<b>Explanation</b>	After converting a replication database to a normal database a backup of the database is not available, thus a restore/recover is not possible until a backup exists.
<b>Action</b>	Create a backup of the database.
<b>INODSI1252</b>	<b>Starting restore database using type backup from timestamp</b>
<b>Explanation</b>	Indicates the backup that was used to start restore processing.
<b>Action</b>	No action required.

---

<b>INODSI1253</b>	<b>Incremental backup from date deleted</b>
<b>Explanation</b>	A full backup to be deleted causes the deletion of dependent incremental backups as well.
<b>Action</b>	No action required.
<b>INODSI1294</b>	<b>Log space of server session session number from time opened</b>
<b>Explanation</b>	The log space of the specified server session has been opened.
<b>Action</b>	No action required.
<b>INODSI1304</b>	<b>Read-only database db_name , startup at startup</b>
<b>Explanation</b>	This message shows the time at which the database was started in read-only mode.
<b>Action</b>	No action required.
<b>INODSI1314</b>	<b>Database db_name, startup at startup</b>
<b>Explanation</b>	This message shows the time at which the database was started.
<b>Action</b>	No action required.
<b>INODSI1315</b>	<b>Log space of server session session number processed until time</b>
<b>Explanation</b>	All information generated before the given end timestamp of the log space of the specified server session was processed.
<b>Action</b>	No action required.
<b>INODSI1316</b>	<b>The backup tape from time has been unregistered</b>
<b>Explanation</b>	The information about the availability of the given backup tape has been removed.
<b>Action</b>	The tape may be removed from the archive.
<b>INODSI1327</b>	<b>Database stopped</b>
<b>Explanation</b>	The database has been stopped.
<b>Action</b>	No action required.
<b>INODSI1333</b>	<b>Log space data processing end time stamp is time</b>
<b>Explanation</b>	This is a progress message about the aborted recovery run or an abort of replication processing.
<b>Action</b>	In the case of a recovery run, the information can be used to start a recover until.

<b>INODSI1339</b>	<b>Replication of server session session number suspended replication data processed until timestamp</b>
<b>Explanation</b>	Replication processing is suspended due to a server shutdown request of the replication database.
<b>Action</b>	No action required.
<b>INODSI1352</b>	<b>Replication of server session session number from timestamp started</b>
<b>Explanation</b>	The replication processing has started to process the log space data of the specified server session of the master database.
<b>Action</b>	No action required.
<b>INODSI1361</b>	<b>Replication of server session session number resumed using replication data from timestamp</b>
<b>Explanation</b>	The server continued replication processing after replication database startup.
<b>Action</b>	No action required.
<b>INODSI1365</b>	<b>Server session session number replicated until time stamp</b>
<b>Explanation</b>	This is the current replication status of the database.
<b>Action</b>	No action required.
<b>INODSI1368</b>	<b>Replication of server session session number resumed using replication data from timestamp. Simultaneous query permitted.</b>
<b>Explanation</b>	The server continued replication processing after replication database startup.
<b>Action</b>	No action required.
<b>INODSI1370</b>	<b>Replication of server session session number from timestamp started. Simultaneous query permitted.</b>
<b>Explanation</b>	The replication processing has started to process the log space data of the specified server session of the master database.
<b>Action</b>	No action required.
<b>INODSI1371</b>	<b>sufficient space in locations, continue</b>
<b>Explanation</b>	Now there is sufficient space on the location where the file was waiting for, the operation now continues
<b>Action</b>	Now there is a subsequent file extent

---

<b>INODSI1384</b>	<b>Setting of parname=parval</b>
<b>Explanation</b>	no description available
<b>Action</b>	no action required
<b>INODSI1389</b>	<b>Backup from backup_date deleted</b>
<b>Explanation</b>	After backup, the number of backup generations is updated, i.e older backups are removed. For further information, please refer to the documentation of the server parameter "number of backup generations".
<b>Action</b>	No action required.
<b>INODSI1393</b>	<b>Backup created with backup key 'backupkey' (from)</b>
<b>Explanation</b>	The identification of the last created backup is displayed.
<b>Action</b>	No action required.
<b>INODSI1394</b>	<b>Backup key 'backupkey' (from)</b>
<b>Explanation</b>	This is a display of backup information.
<b>Action</b>	No action required.
<b>INODSI1397</b>	<b>Deleting disabled backup from backup_date</b>
<b>Explanation</b>	A disabled backup file is being deleted.
<b>Action</b>	No action required.
<b>INODSI1399</b>	<b>Dataset dsn created on date</b>
<b>Explanation</b>	The dataset was created on the specified date.
<b>Action</b>	No action required.
<b>INODSI1400</b>	<b>A transaction has been heuristically rolled back at time</b>
<b>Explanation</b>	The database system has rolled back a transaction for which a decision of the transaction manager was pending.
<b>Action</b>	No action required.

<b>INODSI1417</b>	<b>database database name at structure level for version version</b>
<b>Explanation</b>	This informational message states the structure level of the database.
<b>Action</b>	No action required.
<b>INODSI1420</b>	<b>Dump file at version: vers, level level</b>
<b>Explanation</b>	This informational message states the version and level of the dump file.
<b>Action</b>	Select the version displayed.
<b>INODSI1422</b>	<b>Using backup filename</b>
<b>Explanation</b>	Indicates the backup which is used to create the new database.
<b>Action</b>	No action required.
<b>INODSI1423</b>	<b>Using location location</b>
<b>Explanation</b>	Indicates the location which is to be used for the database spaces.
<b>Action</b>	No action required.
<b>INODSI1451</b>	<b>Creation of word fragment index started</b>
<b>Explanation</b>	The creation of the word fragment index has started.
<b>Action</b>	No action required.
<b>INODSI1452</b>	<b>Server session session number started</b>
<b>Explanation</b>	The server started successfully.
<b>Action</b>	No action required.
<b>INODSI1453</b>	<b>Internal event event has occurred</b>
<b>Explanation</b>	This message indicates a certain event in the server processing. It is not relevant to the user.
<b>Action</b>	No action required.
<b>INODSI1456</b>	<b>The Tamino Server that is provided with the Tamino Developer Edition may be used for test purposes only. For production purposes, you must use the Tamino Server that is included in the Tamino Server Edition.</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	Use the correct Tamino Server.

---

<b>INODSI1457</b>	<b>End of tape tape - rewinding</b>
<b>Explanation</b>	The tape is being rewound.
<b>Action</b>	No action required.
<b>INODSI1458</b>	<b>End of diskette path</b>
<b>Explanation</b>	The diskette is full.
<b>Action</b>	No action required.
<b>INODSI1459</b>	<b>Log space of server session session number from time opened</b>
<b>Explanation</b>	The log space of the specified server session has been opened.
<b>Action</b>	No action required.
<b>INODSI1460</b>	<b>Log space of server session session number completed</b>
<b>Explanation</b>	The log space of the specified server session has been completed.
<b>Action</b>	No action required.
<b>INODSI1463</b>	<b>Database 'database_name' accessed online</b>
<b>Explanation</b>	The specified database has been accessed online.
<b>Action</b>	No action required.
<b>INODSI1464</b>	<b>Database 'database_name' accessed offline</b>
<b>Explanation</b>	The specified database has been accessed offline.
<b>Action</b>	No action required.
<b>INODSI1466</b>	<b>Creation of database space space no (location name) has successfully finished</b>
<b>Explanation</b>	The specified database space has been created.
<b>Action</b>	No action required.
<b>INODSI1467</b>	<b>Tamino name modifier version on system info</b>
<b>Explanation</b>	This is a generic message used to identify an activity.
<b>Action</b>	No action required.

<b>INODSI1468</b>	<b>No index found</b>
<b>Explanation</b>	No index found.
<b>Action</b>	No action required.
<b>INODSI1469</b>	<b>The database server is active on a remote node</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INODSI1470</b>	<b>Database spaces for database db_name have been created</b>
<b>Explanation</b>	The database spaces for a database server have been successfully created. The next step of database creation will be restoring the initial contents of the database.
<b>Action</b>	Restore the initial contents of the database.
<b>INODSI1471</b>	<b>Database db_name has been deleted</b>
<b>Explanation</b>	The database with the given name has been successfully deleted.
<b>Action</b>	No action required.
<b>INODSI1474</b>	<b>Read-only database db_name , startup at startup</b>
<b>Explanation</b>	This message shows the time at which the database was started in read-only mode.
<b>Action</b>	No action required.
<b>INODSI1475</b>	<b>Database db_name, startup at startup</b>
<b>Explanation</b>	This message shows the time at which the database was started.
<b>Action</b>	No action required.
<b>INODSI1480</b>	<b>Log space of server session session number processed until time</b>
<b>Explanation</b>	All information generated before the given end timestamp of the log space of the specified server session was processed.
<b>Action</b>	No action required.
<b>INODSI1481</b>	<b>Log space of server session session number skipped</b>
<b>Explanation</b>	The log space of the specified server session was not processed because it contains only information generated after the given end timestamp.
<b>Action</b>	No action required.

---

<b>INODSI1484</b>	<b>No log space information found</b>
<b>Explanation</b>	The initial backup was used for restore, and no log space of another session exists.
<b>Action</b>	No action required.
<b>INODSI1485</b>	<b>Checking finished. No inconsistencies found.</b>
<b>Explanation</b>	The check and repair database action has finished.
<b>Action</b>	No action required.
<b>INODSI1486</b>	<b>Log space of server session session number extent extent number archived</b>
<b>Explanation</b>	A log space extent has been copied to the archive location.
<b>Action</b>	No action required.
<b>INODSI1487</b>	<b>The backup tape from time has been unregistered</b>
<b>Explanation</b>	The information about the availability of the given backup tape has been removed.
<b>Action</b>	The tape may be removed from the archive.
<b>INODSI1488</b>	<b>Previous server session aborted when recovering session session number</b>
<b>Explanation</b>	A previously started restore/recovery run did not complete the recovery phase.
<b>Action</b>	See the instructions within subsequent messages.
<b>INODSI1489</b>	<b>Log space data processing end time stamp is time</b>
<b>Explanation</b>	This is a progress message about the aborted recovery run or an abort of replication processing.
<b>Action</b>	In the case of a recovery run, the information can be used to start a recover until.
<b>INODSI1490</b>	<b>Continuing server startup will disable subsequent backups</b>
<b>Explanation</b>	When the server startup is continued, backups done later than the used one will become invalid.
<b>Action</b>	No action required.
<b>INODSI1491</b>	<b>Due to an unexpected problem, Restore and/or Recover was not successful. Please re-execute the Restore and/or Recover now to ensure data integrity.</b>
<b>Explanation</b>	For reasons stated in the job log, the Restore and/or Recover failed to execute properly. Depending on the reason for the abort, either "restore without recover" or "recover until" can be used to recover your data.
<b>Action</b>	If the reason for the initial recovery abort was a missing or corrupted log space, use "restore without recover" or "recover until".

<b>INODSI1492</b>	<b>Subsequent backups disabled</b>
<b>Explanation</b>	Backups older than the one used for the aborted recovery run are invalid now.
<b>Action</b>	No action possible.
<b>INODSI1493</b>	<b>Tamino server successfully started in read-only mode</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INODSI1494</b>	<b>Destruction of word fragment index started</b>
<b>Explanation</b>	Destruction of word fragment index started
<b>Action</b>	No action required
<b>INODSI1495</b>	<b>Creation of word fragment index successfully finished</b>
<b>Explanation</b>	Creation of the word fragment index successfully finished.
<b>Action</b>	No action required
<b>INODSI1496</b>	<b>Destruction of word fragment index successfully finished</b>
<b>Explanation</b>	Destruction of the word fragment index successfully finished
<b>Action</b>	No action required
<b>INODSI1532</b>	<b>referential constraint name dropped (primary primary, foreign foreign)</b>
<b>Explanation</b>	The specified referential integrity constraint has been dropped.
<b>Action</b>	None.
<b>INODSI1535</b>	<b>file file refreshed</b>
<b>Explanation</b>	The specified file has been refreshed.
<b>Action</b>	None.
<b>INODSI1550</b>	<b>function not permitted, referential constraint defined</b>
<b>Explanation</b>	The function not permitted because a referential constraint is defined.
<b>Action</b>	None.

---

<b>INODSI1631</b>	<b>Autorepair completed without errors</b>
<b>Explanation</b>	The autorepair from the crash of the previous server session was successful.
<b>Action</b>	The database can now be used.
<b>INODSI1632</b>	<b>Recovery terminated successfully</b>
<b>Explanation</b>	The recovery has processed all log spaces. All updates have been re-applied.
<b>Action</b>	The server can now be restarted.
<b>INODSI1634</b>	<b>Successful completion</b>
<b>Explanation</b>	The action has completed without errors.
<b>Action</b>	No action required.
<b>INODSI1635</b>	<b>Crash dump of database finished</b>
<b>Explanation</b>	The crash dump is complete.
<b>Action</b>	No action required.
<b>INODSI1636</b>	<b>Tamino server successfully started</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INODSI1637</b>	<b>Skipping recovery terminated successfully</b>
<b>Explanation</b>	The operation of skipping the recovery has terminated successfully. The update of the log space information has been completed.
<b>Action</b>	The server can now be restarted.
<b>INODSI1691</b>	<b>Mass load recovery files archived</b>
<b>Explanation</b>	The mass load recovery files have been copied to the archive location.
<b>Action</b>	No action required.
<b>INODSI1732</b>	<b>Calculated RESTART point - BLOCK=block,CHECKPOINT=chkpt</b>
<b>Explanation</b>	Recovery has restarted from the position shown.
<b>Action</b>	No action required.

<b>INODSI1986</b>	<b>no file protection enabled</b>
<b>Explanation</b>	File protection is not enabled
<b>Action</b>	No action required.
<b>INODSI1988</b>	<b>PID pid</b>
<b>Explanation</b>	Process ID.
<b>Action</b>	None.
<b>INODSI2003</b>	<b>Replication of server session session number suspended replication data processed until timestamp</b>
<b>Explanation</b>	Replication processing is suspended due to a server shutdown request of the replication database.
<b>Action</b>	No action required.
<b>INODSI2006</b>	<b>No replication data for server session session number</b>
<b>Explanation</b>	No modifications have been made for a server session on the master database.
<b>Action</b>	No action required.
<b>INODSI2007</b>	<b>Replication of server session session number from timestamp started</b>
<b>Explanation</b>	The replication processing has started to process the log space data of the specified server session of the master database.
<b>Action</b>	No action required.
<b>INODSI2008</b>	<b>Replication of server session session number completed</b>
<b>Explanation</b>	The server completed replication of a master database's server session
<b>Action</b>	No action required.
<b>INODSI2009</b>	<b>Replication of server session session number resumed using replication data from timestamp</b>
<b>Explanation</b>	The server continued replication processing after replication database startup.
<b>Action</b>	No action required.

---

<b>INODSI2010</b>	<b>Server session session number replicated until time stamp</b>
<b>Explanation</b>	This is the current replication status of the database.
<b>Action</b>	No action required.
<b>INODSI2011</b>	<b>Starting replication using data from database master dbname</b>
<b>Explanation</b>	Replication processing has started. The master database must be active to supply replication data.
<b>Action</b>	No action required.
<b>INODSI2012</b>	<b>Initial server session session number for new replication database</b>
<b>Explanation</b>	A replication database is started for replication the first time.
<b>Action</b>	No action required.
<b>INODSI2017</b>	<b>Updating backup generations</b>
<b>Explanation</b>	Older backups are being removed if the number of backup generations has been exceeded.
<b>Action</b>	No action required.
<b>INODSI2018</b>	<b>Using hostname as host name for the Software AG XTS Directory Server entries</b>
<b>Explanation</b>	The specified hostname has been assigned to the server property "server host name". This name will be registered in the Software AG XTS Directory Server as the host where the database is located.
<b>Action</b>	No action required.
<b>INODSI2021</b>	<b>The following file type file was not deleted: file name</b>
<b>Explanation</b>	In the case of abnormal server terminations, log and dump files will be written. To be able to analyze several problems, these files could be helpful and will not be deleted. Be aware that dump files could be very large.
<b>Action</b>	It might be useful to keep the dump and log files for further examination. If you want to generate a new database in the same location you should move those files to a different location by hand.

<b>INODSI2040</b>	<b>File 'name' copied to directory</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No activity required.
<b>INODSI2044</b>	<b>Infofile 'path' created</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INODSI2074</b>	<b>Corrupted block repaired on space</b>
<b>Explanation</b>	Due to a previous crash the latest written block may be corrupted (in the journal or log). In some cases this can be detected and repaired.
<b>Action</b>	Check if the previous session was abnormally aborted. Only in this case should this message appear.
<b>INODSI2091</b>	<b>Process can make use of 3GB virtual address space</b>
<b>Explanation</b>	The process can make use of 3GB virtual address space.
<b>Action</b>	No action required.
<b>INODSI2100</b>	<b>Web server configuration changed, server server notified</b>
<b>Explanation</b>	The web server configuration changed and the server was notified.
<b>Action</b>	No action required.
<b>INODSI2115</b>	<b>Execution continues</b>
<b>Explanation</b>	This message is displayed by debug-enabled executables if they have been selected for debugging.
<b>Action</b>	No action required.
<b>INODSI2146</b>	<b>Replication of server session session number resumed using replication data from timestamp. Simultaneous query permitted.</b>
<b>Explanation</b>	The server continued replication processing after replication database startup.
<b>Action</b>	No action required.

---

<b>INODSI2148</b>	<b>At least one replication database allows simultaneous query</b>
<b>Explanation</b>	The replication master writes additional locking information to the log space. A replication database with 'Simultaneous Query' enabled may be accessed with queries while it replicates updates.
<b>Action</b>	No action required.
<b>INODSI2149</b>	<b>No replication databases allow simultaneous query</b>
<b>Explanation</b>	The replication master does not write additional locking information to the log space. A replication database with 'Simultaneous Query' enabled cannot process queries while replicating updates of this session.
<b>Action</b>	No action required.
<b>INODSI2150</b>	<b>Database database name set to replication type with simultaneous query</b>
<b>Explanation</b>	If at least one replication database is defined with 'simultaneous query' the master database writes additional locking information to the log space. If this replication database is the first of this kind, the master switches to a new session.
<b>Action</b>	No action required.
<b>INODSI2151</b>	<b>Database database name set to replication type without simultaneous query</b>
<b>Explanation</b>	If no replication database is defined with 'simultaneous query' the master database does not write additional locking information to the log space. If replication database mentioned is the last of that kind, the master switches to a new session
<b>Action</b>	No action required.
<b>INODSI2154</b>	<b>Replication of server session session number from timestamp started. Simultaneous query permitted.</b>
<b>Explanation</b>	The replication processing has started to process the log space data of the specified server session of the master database.
<b>Action</b>	No action required.
<b>INODSI2158</b>	<b>Backup from backup_date deleted</b>
<b>Explanation</b>	After backup, the number of backup generations is updated, i.e older backups are removed. For further information, please refer to the documentation of the server parameter "number of backup generations".
<b>Action</b>	No action required.

<b>INODSI2166</b>	<b>Initial backup removed</b>
<b>Explanation</b>	After backup, the number of backup generations is updated, i.e older backups are removed. For further information, please refer to the documentation of server parameter "number of backup generations".
<b>Action</b>	No action required.
<b>INODSI2190</b>	<b>Doctype doctype has been loaded</b>
<b>Explanation</b>	The specified doctype has been successfully loaded.
<b>Action</b>	No action required.
<b>INODSI2196</b>	<b>Connection to master database master dbname reestablished</b>
<b>Explanation</b>	The replication database obtained new replication data from its master database.
<b>Action</b>	No action required.
<b>INODSI2199</b>	<b>Replication data of session session was generated with different update or hotfix level of Tamino version version: update level update, hotfix number hotfix</b>
<b>Explanation</b>	At the master database node a new update of a Tamino version was installed.
<b>Action</b>	Install the same update of the Tamino version at the replication database node.
<b>INODSI2239</b>	<b>The backup tape from initial savepoint has been unregistered</b>
<b>Explanation</b>	The information about the availability of the initial backup tape has been removed.
<b>Action</b>	The tape may be removed from the archive.
<b>INODSI2259</b>	<b>Creating / deleting database process active, wait for continue</b>
<b>Explanation</b>	Another job which creates or deletes a database is active on the current node. View running jobs for more information.
<b>Action</b>	Wait until this task has been completed. You should not wait longer than a couple of seconds.
<b>INODSI2267</b>	<b>Convert database to version version</b>
<b>Explanation</b>	The database will be converted to the version displayed.
<b>Action</b>	No action required.

---

<b>INODSI2300</b>	<b>Keep backup file filename</b>
<b>Explanation</b>	The backup file was not deleted because it was selected to be kept by the user.
<b>Action</b>	Keep in mind that there is still a backup file occupying disk space.
<b>INODSI2310</b>	<b>Licensed for name with ID id</b>
<b>Explanation</b>	Display customer/partner information from the license file.
<b>Action</b>	No action required.
<b>INODSI2311</b>	<b>Licensed for customername sub-licensed by partnername with ID partnerid</b>
<b>Explanation</b>	This is a display of customer/partner information from the license file.
<b>Action</b>	No action required.
<b>INODSI2312</b>	<b>Licensed for customername with ID customerid sub-licensed by partnername</b>
<b>Explanation</b>	This is a display of customer/partner information from the license file.
<b>Action</b>	No action required.
<b>INODSI2313</b>	<b>Licensed for customername with ID customerid sub-licensed by partnername with ID partnerid</b>
<b>Explanation</b>	This is a display of customer/partner information from the license file.
<b>Action</b>	No action required.
<b>INODSI2314</b>	<b>Licensed for name with ID id, license expires on date</b>
<b>Explanation</b>	Display customer/partner and expiration information from the license file.
<b>Action</b>	No action required.
<b>INODSI2315</b>	<b>Licensed for customername sub-licensed by partnername with ID partnerid, license expires on date</b>
<b>Explanation</b>	This is a display of customer/partner and expiration information from the license file.
<b>Action</b>	No action required.
<b>INODSI2316</b>	<b>Licensed for customername with ID customerid sub-licensed by partnername, license expires on date</b>
<b>Explanation</b>	This is a display of customer/partner and expiration information from the license file.
<b>Action</b>	No action required.

<b>INODSI2317</b>	<b>Licensed for customername with ID customerid sub-licensed by partnertype with ID partnerid, license expires on date</b>
<b>Explanation</b>	This is a display of customer/partner and expiration information from the license file.
<b>Action</b>	No action required.
<b>INODSI2343</b>	<b>Backup created with backup key 'backupkey' (from)</b>
<b>Explanation</b>	The identification of the last created backup is displayed.
<b>Action</b>	No action required.
<b>INODSI2344</b>	<b>backup key 'backupkey' (from)</b>
<b>Explanation</b>	This is a display of backup information.
<b>Action</b>	No action required.
<b>INODSI2345</b>	<b>backup key 'backupkey' (initial backup)</b>
<b>Explanation</b>	This is a display of backup information.
<b>Action</b>	No action required.
<b>INODSI2346</b>	<b>Deleting disabled backup from backup_date</b>
<b>Explanation</b>	A disabled backup file is being deleted.
<b>Action</b>	No action required.
<b>INODSI3469</b>	<b>Dataset dsn created on date</b>
<b>Explanation</b>	The dataset was created on the specified date.
<b>Action</b>	No action required.
<b>INODSI5263</b>	<b>Restoring pending transactions</b>
<b>Explanation</b>	Pending global transactions are being restored during the server startup processing.
<b>Action</b>	No action required.
<b>INODSI5270</b>	<b>Use parameter "param" to force server registration</b>
<b>Explanation</b>	The server could not register with the XTS directory service, because an entry for the server is already present. If this entry is no longer necessary the specified parameter can be used to overwrite the existing entry.
<b>Action</b>	Set the specified parameter to YES to force server registration.

---

<b>INODSI5282</b>	<b>Overwriting Software AG XTS Directory Server entries</b>
<b>Explanation</b>	The Software AG XTS Directory Server entries already existed. They are overwritten.
<b>Action</b>	No action required.
<b>INODSI5286</b>	<b>New block allocations for database</b>
<b>Explanation</b>	There were container size/blocksize correlations which require new allocations for all files in the database.
<b>Action</b>	No action required.
<b>INODSI5299</b>	<b>Data space container, file file name removed</b>
<b>Explanation</b>	The database space with the qualified type and name has been removed from the file system.
<b>Action</b>	No action required.
<b>INODSI5339</b>	<b>Log space of server session session number from different version - recovery stopped</b>
<b>Explanation</b>	The next log space to be processed was created by another program version.
<b>Action</b>	See the product documentation for further information about migration between program versions.
<b>INODSI5352</b>	<b>Preparing for external backup</b>
<b>Explanation</b>	The database is in synchronized mode, so an external backup can now take place.
<b>Action</b>	No action required.
<b>INODSI5353</b>	<b>Continuing after external backup</b>
<b>Explanation</b>	The synchronized mode of the database has ended. Normal database processing can resume.
<b>Action</b>	No action required
<b>INODSQ1651</b>	<b>The currently inserted tape has been processed</b>
<b>Explanation</b>	The currently inserted tape has been completely filled (backup) or completely read (restore).
<b>Action</b>	Please insert the next tape in the set so that processing may continue.

<b>INODSQ1652</b>	<b>The diskette is full</b>
<b>Explanation</b>	An operation writing to a diskette has completely filled up the diskette.
<b>Action</b>	Provide the information you are prompted for to enable Tamino to switch to a new diskette.
<b>INODSQ1653</b>	<b>Please insert the next sequential tape and verify the selected device name is correct.</b>
<b>Explanation</b>	Another tape is required in the current backup or restore sequence.
<b>Action</b>	Insert the next sequential tape and verify the device name is correct.
<b>INODSQ1654</b>	<b>Please insert diskette diskette number and specify the device name</b>
<b>Explanation</b>	Another diskette is required.
<b>Action</b>	Insert the indicated diskette and specify the device name.
<b>INODSQ1655</b>	<b>First tape required</b>
<b>Explanation</b>	The first tape is required.
<b>Action</b>	Insert the first tape.
<b>INODSQ1656</b>	<b>First diskette required</b>
<b>Explanation</b>	The first diskette is required.
<b>Action</b>	Insert the first diskette.
<b>INODSQ1657</b>	<b>Please insert first tape again and specify the device name</b>
<b>Explanation</b>	The first tape is required.
<b>Action</b>	Insert the first tape and specify the device name.
<b>INODSQ1658</b>	<b>Waiting for space on LOG device</b>
<b>Explanation</b>	The server can no longer perform update operations, because there is no more free space on the LOG device.
<b>Action</b>	Create free space on the LOG device, e.g. by deleting files.
<b>INODSQ1659</b>	<b>Try to get free space on device where LOG is located</b>
<b>Explanation</b>	The server can no longer perform update operations, because there is no more free space on the LOG device.
<b>Action</b>	Create free space on the LOG device, e.g. by deleting files.

---

<b>INODSQ1660</b>	<b>Continue server startup or re-execute restore/recover</b>
<b>Explanation</b>	When you continue the server startup, autorepair will be used. Database modifications not recovered during the recovery run of the previous aborted server session will be lost.
<b>Action</b>	Decide whether to continue or abort the server startup.
<b>INODSQ1661</b>	<b>Please reply "yes" or "no" to continue server startup</b>
<b>Explanation</b>	At this point in time you can continue or abort the server startup.
<b>Action</b>	Enter "yes" to continue the server startup, enter "no" to abort it.
<b>INODSQ2224</b>	<b>Transfer via pipe stalled</b>
<b>Explanation</b>	The backup activity via named pipe is hanging. One reason could be that the partner pipe process died for some reason, for example if the disk is full.
<b>Action</b>	Find out the reason why the pipe processing is hanging and answer 'OK' to continue or 'Abort' to abort the backup processing.
<b>INODSQ2225</b>	<b>Continue or abort ?</b>
<b>Explanation</b>	Continue or abort the processing. If you answer 'abort' the process immediately terminates with an appropriate message. Answer 'OK' to continue processing if you are sure that the pipe process is still active.
<b>Action</b>	no action
<b>INODSQ2256</b>	<b>File extent extnumber missing</b>
<b>Explanation</b>	A physical file extent of e.g. a backup file was not specified.
<b>Action</b>	Enter the file/device name of the required file extent.
<b>INODSQ2257</b>	<b>Enter file/device name</b>
<b>Explanation</b>	Enter here the full qualified file name of the required extent. Pipe or tape devices may be entered as well.
<b>Action</b>	No action required.
<b>INODSQ2295</b>	<b>No location for database space extent no</b>
<b>Explanation</b>	There is no location given for this database space.
<b>Action</b>	Select a valid location.

<b>INODSR1479</b>	<b>Creating database space extent number of number of extents</b>
<b>Explanation</b>	This is an informational message indicating how many extents of a group of extents have been created for the database space.
<b>Action</b>	No action required.
<b>INODSR1483</b>	<b>Deleting database space extent number of number of extents</b>
<b>Explanation</b>	This is an informational message indicating how many extents of a group of extents for the database space have been deleted.
<b>Action</b>	No action required.
<b>INODSR1682</b>	<b>Analyzing journal information</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INODSR1683</b>	<b>Re-applying changes. Processing journal block block number.</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INODSR1684</b>	<b>Reconstructing consistent index structures. Processing journal block block number.</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.

<b>INODSS2025</b>	<b>Creating database ...</b>
<b>Explanation</b>	Tamino is creating a new database.
<b>Action</b>	No action required.
<b>INODSS2076</b>	<b>Performing recovery</b>
<b>Explanation</b>	The restore/recover process is in the recover phase.
<b>Action</b>	No action required.
<b>INODSS2159</b>	<b>Converting database</b>
<b>Explanation</b>	The database is being upgraded or downgraded.
<b>Action</b>	No action required.
<b>INODST1751</b>	<b>Start of Tamino name version modifierversionmodifier2 on system info</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INODST1752</b>	<b>Database database name Session session number (name modifierversion on system info, process ID pid)</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INODST1753</b>	<b>Database database name Read-Only Session (name modifierversion on system info, process ID pid)</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.

<b>INODST1766</b>	<b>Database database name Replication Session (name modifierversion on system info, processID pid)</b>
<b>Explanation</b>	The server started for a replication database.
<b>Action</b>	No action required.
<b>INODST1781</b>	<b>Start of product name on system info</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INODSV1053</b>	<b>Database autorepair suppressed</b>
<b>Explanation</b>	The previous server session terminated abnormally. The server attempted to perform an autorepair, but the autorepair has been suppressed by external manipulation. The database might be in an inconsistent state.
<b>Action</b>	Determine what kind of manipulation has occurred and contact your software supplier.
<b>INODSV1129</b>	<b>System error errno occurred</b>
<b>Explanation</b>	A system error has occurred in the context of the current task.
<b>Action</b>	Check the manufacturer's manual.
<b>INODSV1174</b>	<b>No input data available</b>
<b>Explanation</b>	The specified input file is empty.
<b>Action</b>	Ensure that the correct input file is being used.
<b>INODSV1245</b>	<b>Error information: log space of server session session number - block block, location record</b>
<b>Explanation</b>	The information describes the location of the recently processed log space data
<b>Action</b>	Keep this information when log space data analysis is required.
<b>INODSV1258</b>	<b>Journal overflow. Server cannot proceed.</b>
<b>Explanation</b>	The journal space was insufficient. The current server session has to be terminated.
<b>Action</b>	Check if more journal space can be provided. Restart the server.

---

<b>INODSV1281</b>	<b>Component comp called at extension point extp returned response rsp</b>
<b>Explanation</b>	The Tamino server called an external component which returned an error response.
<b>Action</b>	Please contact your software supplier.
<b>INODSV1473</b>	<b>The database server is active on the local node</b>
<b>Explanation</b>	This is an informational message.
<b>Action</b>	No action required.
<b>INODSV1587</b>	<b>Internal event SCLOST has occurred</b>
<b>Explanation</b>	A sort action has failed due to resource problems. A retry will be started automatically.
<b>Action</b>	No action required.
<b>INODSV1801</b>	<b>Previous server session failed during write operation</b>
<b>Explanation</b>	The previous server session was performing a write operation on modified data when the server session terminated abnormally.
<b>Action</b>	If you can be sure that a single write operation is atomic on your system, you can ignore this warning. You can always assume so if there was no power failure and if the previous server session did not abort due to an I/O error. If you cannot be sure, recover your database from the last backup.
<b>INODSV1806</b>	<b>Aborted by operator</b>
<b>Explanation</b>	The operator has explicitly aborted the operation.
<b>Action</b>	No action required.
<b>INODSV1818</b>	<b>Log space of server session session number is empty</b>
<b>Explanation</b>	An input file to be used for recovery is empty.
<b>Action</b>	Check that the correct log space files are present at the log space location.
<b>INODSV2083</b>	<b>Unlocking port allocation lock failed with response err - int_err</b>
<b>Explanation</b>	An unexpected response was received while trying to unlock the port allocation lock.
<b>Action</b>	Please contact your software supplier.

<b>INODSV2118</b>	<b>Unlocking raw section lock failed with response err - int_err</b>
<b>Explanation</b>	Unexpected response received while trying to unlock the raw section lock.
<b>Action</b>	Please contact your software supplier.
<b>INODSV2139</b>	<b>Unlocking raw section lock failed with response err - int_err</b>
<b>Explanation</b>	Unexpected response received while trying to unlock the container move lock.
<b>Action</b>	Please contact your software supplier.
<b>INODSV2226</b>	<b>System error error (string) occurred</b>
<b>Explanation</b>	An internal system service error occurred.
<b>Action</b>	Analyze the error number and the human readable text.
<b>INODSV2273</b>	<b>The server servername is active</b>
<b>Explanation</b>	The specified server is active.
<b>Action</b>	No action required.
<b>INODSV2276</b>	<b>Aborted by High Availability monitor</b>
<b>Explanation</b>	The High Availability monitor detected that the server did not respond within a specific timeout limit and forced an abnormal crash of this server. There could be two cases: either the server is really hanging or there is something very busy that the check by the High Availability monitor takes a very long time (e.g. a huge buffer flush is in progress).
<b>Action</b>	Check if the HA timeout value is reasonable with the context. One dangerous situation can be a long enduring buffer flush which might block applications for a long time. Maybe it is reasonable to run with small flush limit and/or flush group size parameters.
<b>INODSV2281</b>	<b>System error errno (errtxt) when opening database space space no (path)</b>
<b>Explanation</b>	An internal operating system error has occurred while trying to open a database space.
<b>Action</b>	Analyse the error text and consult the manufacturer's manual.
<b>INODSV5266</b>	<b>Journal overflow. Current activity cancelled.</b>
<b>Explanation</b>	The journal space was insufficient. The current activity has been cancelled. Typically, a transaction has been rolled back internally.
<b>Action</b>	Provide more journal space. Restart the terminated activity.

---

<b>INODSV5269</b>	<b>Server is already registered with the Software AG XTS Directory Server</b>
<b>Explanation</b>	When the server starts it registers with the Software AG XTS Directory Server. It is possible that entries for the server are already present (server already started somewhere else or previous server session failed). If this message comes as a warning message, the entry found exactly matches the one that should be entered. If this message comes as an error message, the entry found did not match the entry that the server wanted to add.
<b>Action</b>	If this message comes as a warning message no action is required. If this message comes as an error message the Software AG XTS Directory Server entry found for the server should be checked and, if no longer necessary, the next server start should be done with the parameter for overwriting the Software AG XTS Directory Server entry activated.
<b>INODSW1014</b>	<b>Creation of word fragment index failed</b>
<b>Explanation</b>	Creation of word fragment index failed, because corresponding index tree is inaccessible.
<b>Action</b>	Use the function "check and repair database" and restart the server.
<b>INODSW1017</b>	<b>Due to license restrictions, recovery of the database will not be possible</b>
<b>Explanation</b>	Your license file does not allow logging to be enabled. Due to this restriction, recovery of the database will not be possible.
<b>Action</b>	Contact your software supplier for an upgrade of your license.
<b>INODSW1035</b>	<b>Synchronization semaphore lost and recreated</b>
<b>Explanation</b>	The synchronization semaphore was deleted from outside and a new one was created.
<b>Action</b>	No action required.
<b>INODSW1115</b>	<b>Incremental backup disabled due to buffer pool allocation failure</b>
<b>Explanation</b>	An incremental backup is not possible because no space was available for the information of modified blocks.
<b>Action</b>	Create the next backup as a full backup. To avoid the allocation failure increase the buffer pool.
<b>INODSW1116</b>	<b>Incremental backup disabled due to error error</b>
<b>Explanation</b>	An incremental backup is not possible due to an error when maintaining the information of modified blocks.
<b>Action</b>	Create the next backup as a full backup. If the error persists, contact your software supplier.

<b>INODSW1151</b>	<b>Further recovery for doctype doctype will not include index</b>
<b>Explanation</b>	Due to an error during recovery the index of the doctype has been disabled.
<b>Action</b>	Even though the index was disabled, data has been recovered. The index can be rebuilt using the "Check and Repair" function.
<b>INODSW1340</b>	<b>The last available backup could not be deleted</b>
<b>Explanation</b>	It doesn't make much sense to delete all backups. To avoid the situation that someone deletes the last backup by mistake, this deletion is not allowed.
<b>Action</b>	If you want to delete this special last backup, you have to create a new one.
<b>INODSW1372</b>	<b>Waiting for space on space location</b>
<b>Explanation</b>	The location where the file wants to grow has no more free space and the current request will wait until space is available.
<b>Action</b>	Either delete unused files from the location that has insufficient space or define a new location with enough space for that file.
<b>INODSW1401</b>	<b>A transaction has been heuristically committed at time</b>
<b>Explanation</b>	The database system has committed a transaction for which a decision of the transaction manager was pending.
<b>Action</b>	No action required.
<b>INODSW1406</b>	<b>Log space of server session session number processed until time</b>
<b>Explanation</b>	None of the information generated after the given end timestamp of the log space of the specified server session was processed.
<b>Action</b>	Verify that the skipped part of the log space is the same as was skipped with a previous recovery.
<b>INODSW1407</b>	<b>Replication of server session session number resumed using replication data from timestamp. Simultaneous query will be enabled when replication database is up-to-date.</b>
<b>Explanation</b>	The server continued replication processing after replication database startup.
<b>Action</b>	No action required. The database server will automatically enable simultaneous read when the locking information becomes available, at the latest when replicating the current master database session.

---

<b>INODSW1409</b>	<b>Error when opening database space space no (at path): size mismatch</b>
<b>Explanation</b>	The size of the database space is not equal to the size expected by the server.
<b>Action</b>	Please contact your software supplier.
<b>INODSW1410</b>	<b>Error when opening database space space number (at path)</b>
<b>Explanation</b>	The database space could not be opened.
<b>Action</b>	Check the affected device: is it on-line, are the permissions correct, can operating system tools access the device? If you cannot find the reason for the read error by yourself, please contact your software supplier.
<b>INODSW1411</b>	<b>Error when opening database space, compressed state is not permitted (at path)</b>
<b>Explanation</b>	The database file has the compressed attribute, which is not permitted, because write errors should be avoided if the device is getting full.
<b>Action</b>	Remove the compressed attribute from the database file.
<b>INODSW1412</b>	<b>System error errno when opening database space space no (path)</b>
<b>Explanation</b>	The specified operating system error has occurred.
<b>Action</b>	Please consult the manufacturer's manual.
<b>INODSW1414</b>	<b>System error errno when opening database space space no (path)</b>
<b>Explanation</b>	The specified operating system error has occurred.
<b>Action</b>	Please consult the manufacturer's manual.
<b>INODSW1415</b>	<b>Replication of server session session number from timestamp started. Simultaneous query will be enabled when replication database is up-to-date.</b>
<b>Explanation</b>	The replication processing has started to process the log space data of the specified server session of the master database.
<b>Action</b>	No action required. The database server will automatically enable simultaneous read when the locking information becomes available, at the latest when replicating the current master database session.
<b>INODSW1418</b>	<b>Replication of server session session number stopped. Replication data processed until timestamp.</b>
<b>Explanation</b>	Replication processing is stopped due to an error as described in previous messages. If simultaneous queries were permitted, then the replication database stays online and may be used for further queries.
<b>Action</b>	Try to solve the problem at the master database's side or recreate the replication database from a new backup of the master.

<b>INODSW1455</b>	<b>Database start not allowed because of pending "set version" operation. Please re-execute "set version".</b>
<b>Explanation</b>	A previous "set version" operation aborted. The database may be inconsistent.
<b>Action</b>	Try "set version" again. If it fails also the second time, report the problem to your software supplier.
<b>INODSW1482</b>	<b>Log space of server session session number not to be processed.</b>
<b>Explanation</b>	The log space of the specified server session was not processed because it was skipped by a previous recovery run.
<b>Action</b>	Verify that the skipped log space has also been skipped by the previous recovery run.
<b>INODSW1529</b>	<b>switch internal I/O mode</b>
<b>Explanation</b>	The I/O mode was switched because an internal I/O function is not supported by given platform. This could happen if a platform does not support the call lio_listio().
<b>Action</b>	No action required.
<b>INODSW1602</b>	<b>Insufficient disk space for journal space, resize to: size MB</b>
<b>Explanation</b>	There is insufficient disk space to create journal space of the required size; a reduced size will be used.
<b>Action</b>	No action required.
<b>INODSW1689</b>	<b>Parallel backup not available on Windows, a sequential backup will be performed.</b>
<b>Explanation</b>	The Windows version of backup does not support 'parallel backup', therefore a sequential backup will be performed.
<b>Action</b>	No action required.
<b>INODSW1784</b>	<b>There is a pending autorepair for the database</b>
<b>Explanation</b>	The database had previously not terminated correctly.
<b>Action</b>	When the database has been restarted, it will perform an autorepair operation.
<b>INODSW1800</b>	<b>This is an emergency restart</b>
<b>Explanation</b>	The server stopped the previous server session due to shortage of journal space. If this restart fails, data may be lost or inconsistent.
<b>Action</b>	If the restart fails, please recover your data from the last backup.

<b>INODSW1802</b>	<b>A transaction has been heuristically rolled back at time</b>
<b>Explanation</b>	The database system has rolled back a transaction for which a decision of the transaction manager was pending.
<b>Action</b>	No action required.
<b>INODSW1803</b>	<b>A transaction has been heuristically committed at time</b>
<b>Explanation</b>	The database system has committed a transaction for which a decision of the transaction manager was pending.
<b>Action</b>	No action required.
<b>INODSW1804</b>	<b>Backup task not responding. Ignoring backup activity.</b>
<b>Explanation</b>	A backup task was running when the server came up. The server synchronization with this backup task has failed. The backup will terminate eventually.
<b>Action</b>	Check if the backup activity is still running. If so, it can be terminated. Redo the backup.
<b>INODSW1805</b>	<b>The server cannot proceed until the backup activity has finished</b>
<b>Explanation</b>	The server will wait for the backup activity to complete. When it has finished, the server will continue.
<b>Action</b>	No action required.
<b>INODSW1807</b>	<b>Switched to read-only mode because a database space is not writable</b>
<b>Explanation</b>	The database will not accept updates.
<b>Action</b>	If this behavior is not intended, make all database spaces write-accessible.
<b>INODSW1808</b>	<b>Read-only database</b>
<b>Explanation</b>	The database is read-only. Some functions are disabled.
<b>Action</b>	No action required.
<b>INODSW1809</b>	<b>Error when opening database space space no (at path): size mismatch, expected bytes bytes</b>
<b>Explanation</b>	The size of the database space is not equal to the size expected by the server.
<b>Action</b>	If the operation does not complete successfully, please contact your software supplier.

<b>INODSW1810</b>	<b>database space space no opened for read-only access</b>
<b>Explanation</b>	The specified database space was opened for read-only access. No updates will be possible on this database space.
<b>Action</b>	No action required.
<b>INODSW1811</b>	<b>Database might be corrupted</b>
<b>Explanation</b>	An inconsistency has been found in the database.
<b>Action</b>	Check the database for consistency.
<b>INODSW1812</b>	<b>Backup process is not responding</b>
<b>Explanation</b>	The synchronization between the backup process and the server has been lost. One possible reason is that the backup process has been killed. The backup will not come to a normal end.
<b>Action</b>	Restart the backup.
<b>INODSW1813</b>	<b>Backup process is not communicating completion</b>
<b>Explanation</b>	The synchronization between the backup process and the server has been lost. One possible reason is that the backup process has been killed. The backup will not come to a normal end.
<b>Action</b>	Restart the backup.
<b>INODSW1814</b>	<b>Backup process is not fetching modified data</b>
<b>Explanation</b>	The synchronization between the backup process and the server has been lost. One possible reason is that the backup process has been killed. The backup will not come to a normal end.
<b>Action</b>	Restart the backup.
<b>INODSW1815</b>	<b>Before image mismatch for number instances on doctype doctype</b>
<b>Explanation</b>	This is an internal error.
<b>Action</b>	Please contact your software supplier.
<b>INODSW1817</b>	<b>Read-only database server accessed</b>
<b>Explanation</b>	A utility is being run against a read-only database server. Certain functions may not be available.
<b>Action</b>	No action required.

---

<b>INODSW1819</b>	<b>Invalid starting block number block number for log space from session session number</b>
<b>Explanation</b>	The log space does not contain correct log information.
<b>Action</b>	Check if files have been moved or copied to the log space location.
<b>INODSW1823</b>	<b>Unable to remove shared memory</b>
<b>Explanation</b>	It has not been possible to remove a shared memory segment.
<b>Action</b>	Remove any allocated shared memory with available system tools.
<b>INODSW1825</b>	<b>Unexpected database error: resp</b>
<b>Explanation</b>	An internal database error has occurred.
<b>Action</b>	Please contact your software supplier.
<b>INODSW1827</b>	<b>Function is deactivated</b>
<b>Explanation</b>	The requested function is not activated at present.
<b>Action</b>	No action required.
<b>INODSW1828</b>	<b>Doctype deleted but de-allocation failed (reason code reason)</b>
<b>Explanation</b>	A doctype has been deleted from the database but it could not be de-allocated.
<b>Action</b>	Determine the cause of the failure from the supplied reason code.
<b>INODSW1829</b>	<b>Unable to remove utility flag and/or write event</b>
<b>Explanation</b>	The utility was in its final cleanup phase but could not complete all required actions.
<b>Action</b>	The utility has terminated successfully, but the cause of the cleanup failure should be determined.
<b>INODSW1830</b>	<b>Event could not be written due to response response</b>
<b>Explanation</b>	The utility has failed to write a final event due to the response reported.
<b>Action</b>	The utility will end successfully. The response code indicates the reason for the failure to write an event.

<b>INODSW1835</b>	<b>Waiting for debugger to attach</b>
<b>Explanation</b>	This message is displayed by debug-enabled executables if they have been selected for debugging.
<b>Action</b>	Please contact your software supplier.
<b>INODSW1836</b>	<b>Mass load recovery files not archived</b>
<b>Explanation</b>	The mass load recovery files could not be copied to the archive location.
<b>Action</b>	Check for a reason why files could not be created at the archive location. Copy the mass load recovery files manually.
<b>INODSW1837</b>	<b>An error occurred during the create index process on doctype doctype</b>
<b>Explanation</b>	The error is caused by an attempt to create a unique index for non-unique data values.
<b>Action</b>	Contact your software supplier.
<b>INODSW1838</b>	<b>Log space of server session session number processed until time</b>
<b>Explanation</b>	None of the information generated after the given end timestamp of the log space of the specified server session was processed.
<b>Action</b>	Verify that the skipped part of the log space is the same as was skipped with a previous recovery.
<b>INODSW1839</b>	<b>Log space of server session session number extent extent number not archived</b>
<b>Explanation</b>	A log space extent could not be copied to the archive location.
<b>Action</b>	Check the log archive location name and for available space.
<b>INODSW1840</b>	<b>Log space of server session session number extent extent number not closed</b>
<b>Explanation</b>	A log space extent could not be closed.
<b>Action</b>	No action required.
<b>INODSW1841</b>	<b>Database successfully checked and repaired. Number of repaired indexes is number.</b>
<b>Explanation</b>	The database has been repaired.
<b>Action</b>	No action required.

---

<b>INODSW1842</b>	<b>Update in internal configuration store could not be logged</b>
<b>Explanation</b>	Configuration was successfully updated, however the update could not be logged. Possible reasons may be - update log file is read-only or there is not enough space on device where Tamino is installed.
<b>Action</b>	In most cases this warning can be ignored. Inform your system administrator about the warning.
<b>INODSW1843</b>	<b>No information about previous recovery processing</b>
<b>Explanation</b>	Recovery processing was aborted without being able to write recovery progress information.
<b>Action</b>	See the instructions within subsequent messages.
<b>INODSW1845</b>	<b>Continuing server startup will disable all existing backups</b>
<b>Explanation</b>	A preceding Restore/Recover operation that specified an "until" date that is earlier than the latest backup was performed. This means that any backup that was performed after the "until" date of the Restore/Recover operation is no longer valid.
<b>Action</b>	Create a new database backup as soon as possible.
<b>INODSW1846</b>	<b>All backups disabled, create a new backup copy</b>
<b>Explanation</b>	No information about previous recovery processing was available, all backups have been disabled.
<b>Action</b>	Create a new database backup as soon as possible.
<b>INODSW1848</b>	<b>Container file could not be extended, but attempt to continue</b>
<b>Explanation</b>	The database could not be extended as the backup file signalled. The restore is continued but later I/O errors are possible.
<b>Action</b>	You can ignore this message if the restore terminates successfully. If the restore fails due to an I/O error you must check why the database could not be extended.
<b>INODSW1980</b>	<b>Skipping recovery terminated with warning status</b>
<b>Explanation</b>	While skipping the recovery a situation occurred that requires further investigation.
<b>Action</b>	Check for additional messages in the event log.

<b>INODSW1981</b>	<b>Recovery terminated with warning status</b>
<b>Explanation</b>	During recovery a situation occurred that requires further investigation.
<b>Action</b>	Check for additional messages in the event log.
<b>INODSW1993</b>	<b>keyword combination not allowed</b>
<b>Explanation</b>	The supplied keyword combination is invalid.
<b>Action</b>	Correct the input parameters.
<b>INODSW1997</b>	<b>Due to license restrictions, the database will be started in readonly mode</b>
<b>Explanation</b>	Your license is restricted to readonly mode. Due to this restriction, updates of the database will not be possible.
<b>Action</b>	Contact your software supplier for an upgrade of your license.
<b>INODSW2047</b>	<b>Version cd database version not installed, using compatible version instead</b>
<b>Explanation</b>	The version of the CD database is not installed on the target system. However a compatible version was found and will be used.
<b>Action</b>	No action required.
<b>INODSW2066</b>	<b>Journal size specified is less than the minimum allowed size of numberMB. Increasing to numberMB.</b>
<b>Explanation</b>	The journal size specified is less than the minimum required to allow correct operation of the server. Tamino is adjusting the journal size up to the minimum size.
<b>Action</b>	No action required.
<b>INODSW2073</b>	<b>Previous log file corrupted (reason: reason). Please perform a database backup as soon as possible.</b>
<b>Explanation</b>	During restart after a database crash it was detected that the log file of the previous session is corrupt. A database recovery may fail, therefore a new backup would resolve this situation. Moreover a further database replication would fail, therefore if the database is or will be a replication master the replication must be newly set up with a new database backup.
<b>Action</b>	Perform a new database backup. Revise replication. Reestablish replication with the new database backup.

---

<b>INODSW2089</b>	<b>Port port already in use as name by server server</b>
<b>Explanation</b>	The port to check is already in use.
<b>Action</b>	Choose another port or be aware that problems with port usage might occur.
<b>INODSW2090</b>	<b>Port port used as name by server server is located in selected dynamic port range</b>
<b>Explanation</b>	An allocated port was found in the dynamic port range.
<b>Action</b>	Specify another dynamic port range or change the allocated port so that it is located outside the dynamic port range.
<b>INODSW2098</b>	<b>Web server webserver assigned to database server</b>
<b>Explanation</b>	The web server is assigned to a database and must not be removed before it is deassigned.
<b>Action</b>	Keep this web server definition or deassign it from all databases.
<b>INODSW2101</b>	<b>Web server configuration changed, notification of server server failed (rc1,rc2,rc3)</b>
<b>Explanation</b>	The web server configuration was changed, but the server notification failed.
<b>Action</b>	The server has to be restarted manually.
<b>INODSW2102</b>	<b>Web server configuration changed for web server webserver, but server notification failed</b>
<b>Explanation</b>	The web server configuration was changed, but the notification of active servers failed.
<b>Action</b>	Restart all active servers which have assigned the web server in question.
<b>INODSW2112</b>	<b>User specified record ID number is not within proposed range</b>
<b>Explanation</b>	The load utility was called with at least one record ID which is within a used range. In the event of a crash the internal doctype may have a corruption.
<b>Action</b>	This is an internal problem. Please contact your software supplier.
<b>INODSW2113</b>	<b>Cleanup of a mass load failed with error</b>
<b>Explanation</b>	The cleanup task, e.g. within a rollback, of a mass load failed for internal reasons.
<b>Action</b>	Please contact your software supplier.

<b>INODSW2133</b>	<b>Nothing to verify, no data available</b>
<b>Explanation</b>	The item only contains index values, therefore no verification is necessary.
<b>Action</b>	No action required.
<b>INODSW2147</b>	<b>Replication of server session session number resumed using replication data from timestamp. Simultaneous query will be enabled when replication database is up-to-date.</b>
<b>Explanation</b>	The server continued replication processing after replication database startup.
<b>Action</b>	No action required. The database server will automatically enable simultaneous read when the locking information becomes available, at the latest when replicating the current master database session.
<b>INODSW2152</b>	<b>Port port is currently active and may not be usable</b>
<b>Explanation</b>	The specified port is currently active and may not be usable by the Tamino server.
<b>Action</b>	Specify another port for the Tamino server or free up the active port before starting the Tamino server.
<b>INODSW2153</b>	<b>Flush limit too high. Value adjusted to new value.</b>
<b>Explanation</b>	The flush limit specified was too high. It has been adjusted to a reasonable value.
<b>Action</b>	To avoid this warning at each startup of the database, configure a lower value.
<b>INODSW2155</b>	<b>Replication of server session session number from timestamp started. Simultaneous query will be enabled when replication database is up-to-date.</b>
<b>Explanation</b>	The replication processing has started to process the log space data of the specified server session of the master database.
<b>Action</b>	No action required. The database server will automatically enable simultaneous read when the locking information becomes available, at the latest when replicating the current master database session.
<b>INODSW2156</b>	<b>Database name1 is fully overlaid with backup from database name2</b>
<b>Explanation</b>	The backup file which was created by a foreign database has been restored into the current database. The previous content of the database has been completely deleted.
<b>Action</b>	No action required.

---

<b>INODSW2161</b>	<b>corrupted data repaired</b>
<b>Explanation</b>	A detected corruption was repaired immediately by Tamino.
<b>Action</b>	No action required.
<b>INODSW2171</b>	<b>Replication data of session session requires new Tamino version version</b>
<b>Explanation</b>	The replication database is using a different Tamino version than the master database.
<b>Action</b>	Install the required Tamino version at the replication database node. If the required version is already installed and the error still exists, re-create the replication database using a backup created from this Tamino version.
<b>INODSW2172</b>	<b>Master database must be restarted before a replication database can be set up</b>
<b>Explanation</b>	The name of the first replication database has been added to the permission list. The database can be set up as a replication database of this master only after the master has been stopped and restarted.
<b>Action</b>	Stop the master database and start it again.
<b>INODSW2180</b>	<b>Connection to server lost, reason reason</b>
<b>Explanation</b>	The working process must be terminated because the server is stopping or has already stopped. There are 2 possible reasons: 0 means the server has stopped, 1 means the server is stopping and has aborted the process.
<b>Action</b>	Check why the server stopped.
<b>INODSW2186</b>	<b>The configured buffer pool size (lbp MB) exceeds the machine's physical memory size (pms MB)</b>
<b>Explanation</b>	The buffer pool size is configured so that it exceeds the physical memory size of the machine. This does not make sense because the buffer pool replacement strategy will collide with the operating systems memory management.
<b>Action</b>	Choose a buffer pool size that is at least smaller than the machine's physical memory size.
<b>INODSW2191</b>	<b>The maximum number of threads allowed per process (max_threads) may not be sufficient to manage the database server</b>
<b>Explanation</b>	The current parameter configuration may not allow the creation of all necessary threads to manage the database server.
<b>Action</b>	Either the system defined maximum number of threads per process is too low and should be increased, or the database parameter configuration should be changed to decrease the number of threads to be created.

<b>INODSW2195</b>	<b>Connection to master database master dbname interrupted</b>
<b>Explanation</b>	The replication database cannot obtain replication data from its master database.
<b>Action</b>	No action required.
<b>INODSW2197</b>	<b>Replication of server session session number stopped. Replication data processed until timestamp.</b>
<b>Explanation</b>	Replication processing is stopped due to an error as described in previous messages. If simultaneous queries were permitted, then the replication database stays online and may be used for further queries.
<b>Action</b>	Try to solve the problem at the master database's side or recreate the replication database from a new backup of the master.
<b>INODSW2198</b>	<b>Update logging in internal configuration store is not active</b>
<b>Explanation</b>	Updates in the internal configuration store are not logged because update logging is not activated in the current process.
<b>Action</b>	Please contact your software supplier.
<b>INODSW2207</b>	<b>No reading process attached to pipe path</b>
<b>Explanation</b>	Backup location is a named pipe and no process has the pipe open for reading. This situation may occur during database backup or database creation, when initial backup is being made.
<b>Action</b>	Start the process that reads from the pipe and perform the backup again.
<b>INODSW2209</b>	<b>Inconsistent location definition (location) - expected type expected, real type real</b>
<b>Explanation</b>	The location type is unexpected. This is typically the result of user intervention , for example the user deletes a location directory and creates a file with the same name.
<b>Action</b>	Make sure that Tamino locations are not modified outside of Tamino.
<b>INODSW2210</b>	<b>Location location is nearly full</b>
<b>Explanation</b>	Not enough disk space is left on the location.
<b>Action</b>	Free some space or use another location.

---

<b>INODSW2230</b>	<b>Logging error in internal configuration store occurred at time, future updates may not be logged</b>
<b>Explanation</b>	The internal configuration store showed an update logging error that occurred in the past. There is a chance that future updates will also not be logged, thus preventing a repair of the internal configuration store after a severe error. This message is displayed at each server startup unless you execute the described actions.
<b>Action</b>	To be sure to be able to recreate all configuration data, you can do the following: Copy your registry (all under the key 'Tamino') to a file. Use the 'export' function of your registry editor. Then clean your registry logging file or use another file. The registry logging file is defined with a string value at the registry key 'Tamino'. Combining both files lets you repair your Tamino registry in the case of a corruption. Finally you can remove the 'registry logging error' string value from the registry either with your registry editor or with the Registry functions of your Tamino manager.
<b>INODSW2238</b>	<b>No space to remove</b>
<b>Explanation</b>	The request to remove database space cannot be performed, because trailing space is in use.
<b>Action</b>	No action required.
<b>INODSW2240</b>	<b>File/path path does not exist or is not accessible</b>
<b>Explanation</b>	The given file/pathname does not exist or is not accessible. It will just be skipped.
<b>Action</b>	Check the file/pathname.
<b>INODSW2244</b>	<b>Cannot create initial backup - reference to original one is not possible; perform backup for the database as soon as possible</b>
<b>Explanation</b>	The initial backup for the new database could not be created. It tries to reference this backup, but the backup is already registered with another active database. So the database is left without a valid backup !
<b>Action</b>	Perform a database backup as soon as possible.
<b>INODSW2245</b>	<b>Cannot create initial backup - but referred to original one</b>
<b>Explanation</b>	The creation of the initial backup of the new database failed. Nevertheless a backup entry was set up pointing to the file/device where the creation-backup comes from. This has the same effect as when the nocopyoption has been used.
<b>Action</b>	No action required.

<b>INODSW2246</b>	<b>Reference to original backup is not possible; perform backup for the database as soon as possible</b>
<b>Explanation</b>	The create from backup was used with the nocopy option, which means that the incoming backup file will just be referenced instead of copied. But it is not permitted to reference a backup file which is already registered with an active database. Now there is no valid backup for the created database
<b>Action</b>	Perform a database backup as soon as possible.
<b>INODSW2247</b>	<b>Location skipped (no space)</b>
<b>Explanation</b>	The given location has not enough space for creating a database file. It skips to the next location if any.
<b>Action</b>	Check the space in this location.
<b>INODSW2248</b>	<b>Location skipped, (internal error err)</b>
<b>Explanation</b>	The current location cannot be used and will be skipped. The internal error displayed gives the detailed reason.
<b>Action</b>	Analyse the error and check the path name of the location.
<b>INODSW2260</b>	<b>create / delete database synchronization failed with (error)</b>
<b>Explanation</b>	The semaphore synchronisation failed with an internal error.
<b>Action</b>	Do not start another create / delete database in parallel.
<b>INODSW2261</b>	<b>Removing backup file (filename) failed due to internal error error</b>
<b>Explanation</b>	The given backup file cannot be removed due to displayed error reason, but it will be unregistered.
<b>Action</b>	Delete the backup file by hand if you decide that it would never be needed any more.
<b>INODSW2262</b>	<b>Problem during referencing initial backup file (file), reason: reason</b>
<b>Explanation</b>	A reference operation (insert/delete) to a backup file failed. A reference will be set up at create database from backup to the source backup file. If the setting of a reference failed, then it may happen that the owner of the backup deletes the backup file although a foreign database has it still registered. If this operation failed at the owner side, it may happen that the backup file remains in the file system although it was logically deleted.
<b>Action</b>	Check the databases where this backup file is registered. Maybe perform a new backup of databases which have this backup file registered.

---

<b>INODSW2269</b>	<b>Failed to load ADABAS interface (library)</b>
<b>Explanation</b>	The Tamino server failed to load the ADABAS interface.
<b>Action</b>	Provide a valid ADABAS interface in one of the locations searched during the library load.
<b>INODSW2277</b>	<b>Buffer pool size set to size MB due to shortage of shared memory</b>
<b>Explanation</b>	The available shared memory was not large enough to allocate the buffer pool with the configured size.
<b>Action</b>	Check whether the configured size of the buffer pool meets the memory resources available within the given environment.
<b>INODSW2297</b>	<b>Perform emergency shutdown, because server is within a space wait situation</b>
<b>Explanation</b>	The server is waiting for space on the log file, therefore a clean shutdown is not possible. It aborts the server with a pending autorepair.
<b>Action</b>	Clean up the log space location and restart the server.
<b>INODSW2318</b>	<b>The license for name with ID id expires in number days</b>
<b>Explanation</b>	The license expires soon. After license expiration the server cannot be used any longer. The server will abort and cannot be restarted.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager.
<b>INODSW2319</b>	<b>The license for customername sub-licensed by partnername with ID partnerid expires in number days</b>
<b>Explanation</b>	The license expires soon. After license expiration the server cannot be used any longer. The server will abort and cannot be restarted.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager.
<b>INODSW2320</b>	<b>The license for customername with ID customerid sub-licensed by partnername expires in number days</b>
<b>Explanation</b>	The license expires soon. After license expiration the server cannot be used any longer. The server will abort and cannot be restarted.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager.

<b>INODSW2321</b>	<b>The license for customername with ID customerid sub-licensed by partnername with ID partnerid expires in number days</b>
<b>Explanation</b>	The license expires soon. After license expiration the server cannot be used any longer. The server will abort and cannot be restarted.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager.
<b>INODSW2322</b>	<b>The license for name with ID id expires in 1 day</b>
<b>Explanation</b>	The license expires soon. After license expiration the server cannot be used any longer. The server will abort and cannot be restarted.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager.
<b>INODSW2323</b>	<b>The license for customername sub-licensed by partnername with ID partnerid expires in 1 day</b>
<b>Explanation</b>	The license expires soon. After license expiration the server cannot be used any longer. The server will abort and cannot be restarted.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager.
<b>INODSW2324</b>	<b>The license for customername with ID customerid sub-licensed by partnername expires in 1 day</b>
<b>Explanation</b>	The license expires soon. After license expiration the server cannot be used any longer. The server will abort and cannot be restarted.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager.
<b>INODSW2325</b>	<b>The license for customername with ID customerid sub-licensed by partnername with ID partnerid expires in 1 day</b>
<b>Explanation</b>	The license expires soon. After license expiration the server cannot be used any longer. The server will abort and cannot be restarted.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager.

---

<b>INODSW2326</b>	<b>The license for name with ID id has expired, server will abort in number days</b>
<b>Explanation</b>	The license has expired. The server will not restart any more. Final abort after a grace period of 10 days after license expiration.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager.
<b>INODSW2327</b>	<b>The license for customername sub-licensed by partnername with ID partnerid has expired, server will abort in number days</b>
<b>Explanation</b>	The license has expired. The server will not restart any more. Final abort after a grace period of 10 days after license expiration.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager.
<b>INODSW2328</b>	<b>The license for customername with ID customerid sub-licensed by partnername has expired, server will abort in number days</b>
<b>Explanation</b>	The license has expired. The server will not restart any more. Final abort after a grace period of 10 days after license expiration.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager.
<b>INODSW2329</b>	<b>The license for customername with ID customerid sub-licensed by partnername with ID partnerid has expired, server will abort in number days</b>
<b>Explanation</b>	The license has expired. The server will not restart any more. Final abort after a grace period of 10 days after license expiration.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager.
<b>INODSW2330</b>	<b>The license for name with ID id has expired, server will abort in 1 day</b>
<b>Explanation</b>	The license has expired. The server will not restart any more. Final abort after a grace period of 10 days after license expiration.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager.
<b>INODSW2331</b>	<b>The license for customername sub-licensed by partnername with ID partnerid has expired, server will abort in 1 day</b>
<b>Explanation</b>	The license has expired. The server will not restart any more. Final abort after a grace period of 10 days after license expiration.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager.

<b>INODSW2332</b>	<b>The license for customername with ID customerid sub-licensed by partnername has expired, server will abort in 1 day</b>
<b>Explanation</b>	The license has expired. The server will not restart any more. Final abort after a grace period of 10 days after license expiration.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager.
<b>INODSW2333</b>	<b>The license for customername with ID customerid sub-licensed by partnername with ID partnerid has expired, server will abort in 1 day</b>
<b>Explanation</b>	The license has expired. The server will not restart any more. Final abort after a grace period of 10 days after license expiration.
<b>Action</b>	Please contact your software supplier to extend your license. Activate the new license with the Tamino Manager.
<b>INODSW5255</b>	<b>Internal parameter error (param), using default</b>
<b>Explanation</b>	An invalid internal parameter value was found. The default parameter value is used.
<b>Action</b>	Please contact your software supplier.
<b>INODSW5274</b>	<b>number updates excluded on doctype doctype</b>
<b>Explanation</b>	Due to an error during recovery, not all updates have been re-applied.
<b>Action</b>	Check the previous error messages to find more information about the error.
<b>INODSW5275</b>	<b>Updates performed between server startup and recovery start</b>
<b>Explanation</b>	Updates between server startup and recovery start are not allowed.
<b>Action</b>	Please check subsequent messages for more information.
<b>INODSW5294</b>	<b>waiting for buffer flush end</b>
<b>Explanation</b>	The dump utility must wait until the Tamino server completes the buffer flush action.
<b>Action</b>	No action required.
<b>INODSW5329</b>	<b>Sort request couldn't be specified, reason subc</b>
<b>Explanation</b>	A sort request failed, for the reason specified in the message
<b>Action</b>	Contact your software supplier.

---

<b>INODSW5340</b>	<b>Collating key truncated to size bytes</b>
<b>Explanation</b>	The collation key was truncated due to the size limit for index values. Only less important information was truncated.
<b>Action</b>	Normally, collation should be defined only for small pieces of data ( e.g. words), not for the large texts. Consider reviewing your collation definitions.
<b>INODSW5355</b>	<b>File system UNMOUNT problem, reason reason errtxt</b>
<b>Explanation</b>	Restoring an external backup may require the remounting of the file system. This is necessary to flush the file system cache.
<b>Action</b>	Remount the file system manually and contact your software supplier.
<b>INODSW5356</b>	<b>File system MOUNT problem, reason reason errtxt</b>
<b>Explanation</b>	Restoring an external backup may require the remounting of the file system. This is necessary to flush the file system cache
<b>Action</b>	Remount the file system manually and contact your software supplier.
<b>INODSW5400</b>	<b>Internal sort order lost</b>
<b>Explanation</b>	A sort request could not be satisfied due to internal reasons.
<b>Action</b>	You can force a memory dump with "inodba database=name trap=9299" for further analysis after reproducing the error.
<b>INODSW5401</b>	<b>Function not completely executed</b>
<b>Explanation</b>	A request failed due to internal reasons.
<b>Action</b>	You can force a memory dump with "inodba database=name trap=9298" for further analysis after reproducing the error.
<b>INOINE2051</b>	<b>Resetting the unique status on all indices</b>
<b>Explanation</b>	Duplicate values were detected. Therefore the unique status could not be set for the indices.
<b>Action</b>	Resolve any uniqueness conflicts before trying to set the unique status.
<b>INOINE2053</b>	<b>Index name already in use</b>
<b>Explanation</b>	The specified index name is already in use for this doctype.
<b>Action</b>	Retry the required operation with an unused index name.

<b>INOINF2251</b>	<b>Sort file too small or work pool too large</b>
<b>Explanation</b>	The sort file used is too small or the specified work pool is too large for the given sort file.
<b>Action</b>	Ensure that a sufficiently large sort file is available.
<b>INOINF2252</b>	<b>Sort file too small</b>
<b>Explanation</b>	The sort file used is too small.
<b>Action</b>	Ensure that a sufficiently large sort file is available.
<b>INOINF2253</b>	<b>Corrupt index found</b>
<b>Explanation</b>	Corrupt information has been found in the index.
<b>Action</b>	Please contact your software supplier, and/or reload the data to repair the damage.
<b>INOINI2174</b>	<b>Index processing completed on doctype doctype</b>
<b>Explanation</b>	The requested index operation has ended.
<b>Action</b>	No action required.
<b>INOINI2452</b>	<b>Index modification started</b>
<b>Explanation</b>	The database index modification process has started.
<b>Action</b>	No action required.
<b>INOINI2453</b>	<b>Index modification completed</b>
<b>Explanation</b>	The index modification process has completed.
<b>Action</b>	No action required.
<b>INOINI2454</b>	<b>Index cannot be sorted in main memory</b>
<b>Explanation</b>	The index process cannot perform the sort in main memory. This is an informational message. An external sort will be performed.
<b>Action</b>	No action required.
<b>INOINI2455</b>	<b>Index cannot be sorted</b>
<b>Explanation</b>	It is not possible to sort the index, probably due to a lack of space.
<b>Action</b>	Allow more space to be allocated for a main memory sort of the index, if possible.

---

<b>INOINI2456</b>	<b>Index cannot be processed in two passes</b>
<b>Explanation</b>	It is not possible to process the index in two passes due to insufficient temporary storage.
<b>Action</b>	Allocate more temporary storage to allow the index to be processed in two passes.
<b>INOINI2457</b>	<b>Index cannot be processed in one pass</b>
<b>Explanation</b>	It is not possible to process the index in one pass due to a lack of temporary storage.
<b>Action</b>	Allocate more temporary storage to allow the index to be processed in one pass.
<b>INOINI2459</b>	<b>Index verification limit has been reached</b>
<b>Explanation</b>	The number of errors found while verifying the index has reached the allowed limit.
<b>Action</b>	Correct the errors in the index, and run the certification process again.
<b>INOINI2460</b>	<b>Data space passes required: count</b>
<b>Explanation</b>	This is the number of passes of the data space required to perform the index operation.
<b>Action</b>	No action required.
<b>INOINI2461</b>	<b>Sort file efficiency: sorteфф %</b>
<b>Explanation</b>	This is the calculated efficiency of the sort file during the index process.
<b>Action</b>	No action required.
<b>INOINI2462</b>	<b>Work pool efficiency: workeфф %</b>
<b>Explanation</b>	This is the calculated efficiency of the work pool during the index process.
<b>Action</b>	No action required.
<b>INOINI2467</b>	<b>Recommended minimum temporary storage size = size KB</b>
<b>Explanation</b>	This is the recommended (minimum) temporary storage size that will be allocated for the process.
<b>Action</b>	No action required.
<b>INOINI2471</b>	<b>Temporary storage size = size KB</b>
<b>Explanation</b>	This is the size of the required temporary storage.
<b>Action</b>	No action required.

<b>INOINI2472</b>	<b>Temporary storage size (1 pass) = size MB</b>
<b>Explanation</b>	This is the temporary storage size required for 1 pass processing.
<b>Action</b>	No action required.
<b>INOINI2473</b>	<b>Temporary storage size (2 passes) = size MB</b>
<b>Explanation</b>	This is the temporary storage size required for 2 pass processing.
<b>Action</b>	No action required.
<b>INOINI2474</b>	<b>Sorting index</b>
<b>Explanation</b>	The index field is being sorted.
<b>Action</b>	No action required.
<b>INOINI2475</b>	<b>No values for index (desc)</b>
<b>Explanation</b>	No values are present for the index field.
<b>Action</b>	No action required.
<b>INOINI2476</b>	<b>Loading index</b>
<b>Explanation</b>	The index field specified is being loaded.
<b>Action</b>	No action required.
<b>INOINI2477</b>	<b>Verifying index (desc)</b>
<b>Explanation</b>	The index field specified is being verified.
<b>Action</b>	No action required.
<b>INOINI2478</b>	<b>Unique status for specified index is being set</b>
<b>Explanation</b>	The unique status for the specified index field is being set.
<b>Action</b>	No action required.
<b>INOINI2479</b>	<b>Unique status for specified index is being reset</b>
<b>Explanation</b>	The unique status for the specified index field is being reset.
<b>Action</b>	No action required.

---

<b>INOINI2480</b>	<b>Unique status removed for index</b>
<b>Explanation</b>	The unique status of an index field has been removed.
<b>Action</b>	No action required.
<b>INOINI2481</b>	<b>No index fields were found for the specified doctype</b>
<b>Explanation</b>	The index function could not be performed because no index fields were found in the specified doctype.
<b>Action</b>	Check that the correct doctype was specified for the index operation.
<b>INOINI2482</b>	<b>Index processing started on doctype doctype</b>
<b>Explanation</b>	The requested index operation has started.
<b>Action</b>	No action required.
<b>INOINW2800</b>	<b>Errors found for count indices</b>
<b>Explanation</b>	A number of indices were found to be in error during the index process.
<b>Action</b>	Correct the errors and attempt to perform the index process again.
<b>INOINW2801</b>	<b>Number of errors found in index: indexerr</b>
<b>Explanation</b>	This message shows the number of indices found to be in error during index processing.
<b>Action</b>	Correct the indices in error and perform the index operation again.
<b>INOINW2802</b>	<b>Unique conflict detected</b>
<b>Explanation</b>	Duplicate values were detected when trying to create a unique index.
<b>Action</b>	Remove any unique conflicts in the data.
<b>INOLDE3010</b>	<b>Invalid combination of keywords</b>
<b>Explanation</b>	The combination of keywords supplied is not allowed.
<b>Action</b>	Check the keyword combination and retry the operation.
<b>INOLDE3016</b>	<b>FIELDS may be specified only once</b>
<b>Explanation</b>	The parameter FIELDS may be specified only once.
<b>Action</b>	Continue with other parameter settings.

<b>INOLDE3051</b>	<b>Invalid output status returned by user exit</b>
<b>Explanation</b>	A user exit has returned an invalid output status to the load process.
<b>Action</b>	Ensure that the user exit always returns a valid output status.
<b>INOLDE3054</b>	<b>Invalid range of sequence numbers</b>
<b>Explanation</b>	The range of sequence numbers to be deleted is invalid.
<b>Action</b>	Please contact your software supplier.
<b>INOLDE3055</b>	<b>Value must be less than or equal to value</b>
<b>Explanation</b>	A value has exceeded the specified maximum.
<b>Action</b>	Decrease the value specified.
<b>INOLDE3056</b>	<b>Invalid record length</b>
<b>Explanation</b>	The input record length must be a multiple of four for binary data.
<b>Action</b>	Check the input file.
<b>INOLDE3057</b>	<b>Sequence number to be deleted is not present</b>
<b>Explanation</b>	The sequence number to be deleted is either not present or outside the specified doctype's limits.
<b>Action</b>	Ensure that the sequence numbers to be deleted were specified correctly.
<b>INOLDE3058</b>	<b>Dataset dataset, record record, offset offset</b>
<b>Explanation</b>	An error has occurred in the specified dataset at the position indicated.
<b>Action</b>	Correct the input and retry the operation.
<b>INOLDE3059</b>	<b>Index index not defined for doctype doctype</b>
<b>Explanation</b>	The specified index is defined in the load description file but is not present in the doctype to be updated.
<b>Action</b>	Ensure that the load description file contains the correct information and that the correct doctype is specified.

---

<b>INOLDE3060</b>	<b>Read-only database, function not permitted to run</b>
<b>Explanation</b>	The specified database is read-only and the requested function is not allowed for a read-only database.
<b>Action</b>	Ensure that the database being accessed is not read-only for this type of operation.
<b>INOLDF3018</b>	<b>The requested doctype is locked, load aborted</b>
<b>Explanation</b>	The doctype referenced is locked and the load is unable to proceed.
<b>Action</b>	Wait until the doctype is available. If the lock is due to a previous problem or corrupt doctype, a server restart may clear the lock and return the doctype to a usable state.
<b>INOLDF3251</b>	<b>Load aborted in user exit at record number: record</b>
<b>Explanation</b>	The load process has been aborted by a user exit while processing the specified record number.
<b>Action</b>	Check the user exit for the reason for aborting the load process.
<b>INOLDF3252</b>	<b>Record too big for data storage device</b>
<b>Explanation</b>	The record is too large for the data storage device used.
<b>Action</b>	Decrease the size of the input record, or use a data storage device with a larger block size.
<b>INOLDF3253</b>	<b>Incomplete load definition file</b>
<b>Explanation</b>	The input file containing the load definitions is incomplete.
<b>Action</b>	Check the load definition file and ensure that it contains the correct information.
<b>INOLDF3254</b>	<b>Internal buffer overflow</b>
<b>Explanation</b>	An unexpected overflow of an internal buffer has occurred.
<b>Action</b>	Please contact your software supplier.
<b>INOLDF3255</b>	<b>Sort I/O error</b>
<b>Explanation</b>	An I/O error has occurred on the sort data space.
<b>Action</b>	Check the sort data space for system errors.

<b>INOLDF3256</b>	<b>Selection not yet implemented</b>
<b>Explanation</b>	The selection of sequence numbers to be deleted is not yet implemented.
<b>Action</b>	No action possible.
<b>INOLDF3257</b>	<b>Unexpected error while connecting</b>
<b>Explanation</b>	An unexpected error has occurred while trying to connect to the server.
<b>Action</b>	Please contact your software supplier.
<b>INOLDF3260</b>	<b>Error in user store function</b>
<b>Explanation</b>	An error has occurred in a user-supplied store function.
<b>Action</b>	Check and correct any user-supplied store functions.
<b>INOLDF3261</b>	<b>No free sequence numbers</b>
<b>Explanation</b>	An internal shortage of sequence numbers has occurred.
<b>Action</b>	Please contact your software supplier.
<b>INOLDF3263</b>	<b>No free sequence numbers</b>
<b>Explanation</b>	There are no more free sequence numbers available.
<b>Action</b>	Please contact your software supplier.
<b>INOLDF3264</b>	<b>Cannot allocate user-defined sequence number</b>
<b>Explanation</b>	An error has occurred when trying to allocate a user-defined sequence number.
<b>Action</b>	Check that the user routine that allocates sequence numbers is correct.
<b>INOLDF3265</b>	<b>No index read slots</b>
<b>Explanation</b>	An internal error has occurred because there are no read slots available for the index.
<b>Action</b>	Please contact your software supplier.
<b>INOLDF3266</b>	<b>Error while generating index</b>
<b>Explanation</b>	An internal error has occurred while generating an index.
<b>Action</b>	Please contact your software supplier.

---

<b>INOLDF3267</b>	<b>Temp stream overflow</b>
<b>Explanation</b>	A stream overflow has occurred while processing the temporary data space.
<b>Action</b>	Please contact your software supplier.
<b>INOLDF3268</b>	<b>Doctype locking failed</b>
<b>Explanation</b>	It was not possible to lock a doctype for access.
<b>Action</b>	Ensure that nothing else is accessing the doctype to be locked.
<b>INOLDF3269</b>	<b>Unexpected error while removing utility entry</b>
<b>Explanation</b>	An unexpected internal error has occurred while removing a utility entry.
<b>Action</b>	Please contact your software supplier.
<b>INOLDF3270</b>	<b>Unexpected error while opening sort space</b>
<b>Explanation</b>	An unexpected internal error has occurred while opening the sort space.
<b>Action</b>	Ensure that there is enough sort space available.
<b>INOLDF3271</b>	<b>Load description does not match</b>
<b>Explanation</b>	The definitions in the load description file do not match those of the current doctype.
<b>Action</b>	Check that the specifications in the load description file are correct.
<b>INOLDI3002</b>	<b>Preparing documents for load</b>
<b>Explanation</b>	Preparing documents for load.
<b>Action</b>	No action required.
<b>INOLDI3019</b>	<b>Loading documents in collection</b>
<b>Explanation</b>	The collection is being modified.
<b>Action</b>	No action required.
<b>INOLDI3451</b>	<b>Termination forced by user exit</b>
<b>Explanation</b>	A user exit has forced the load process to terminate.
<b>Action</b>	If the termination was unexpected, check the user exit for the reason.

<b>INOLDI3452</b>	<b>Number of records read: records</b>
<b>Explanation</b>	This is the number of input records read during the load process.
<b>Action</b>	No action required.
<b>INOLDI3456</b>	<b>Number of documents added to doctype doctype: number</b>
<b>Explanation</b>	The load process has added the given number of documents to the specified doctype.
<b>Action</b>	No action required.
<b>INOLDI3457</b>	<b>Number of documents deleted from doctype doctype: number</b>
<b>Explanation</b>	The load process has deleted the given number of documents from the specified doctype.
<b>Action</b>	No action required.
<b>INOLDI3458</b>	<b>Number of documents unloaded from doctype doctype: number</b>
<b>Explanation</b>	The load process has unloaded the given number of documents from the specified doctype.
<b>Action</b>	No action required.
<b>INOLDI3459</b>	<b>The specified number of records have been loaded</b>
<b>Explanation</b>	The number of records to be loaded has been reached.
<b>Action</b>	No action required.
<b>INOLDI3460</b>	<b>Preparing existing indices for merge</b>
<b>Explanation</b>	Existing indices are being backed up before creating new ones.
<b>Action</b>	No action required.
<b>INOLDI3461</b>	<b>No index modification</b>
<b>Explanation</b>	No modifications have been made to any indices.
<b>Action</b>	No action required.
<b>INOLDI3464</b>	<b>Data space is being modified</b>
<b>Explanation</b>	The data space is being modified.
<b>Action</b>	No action required.

---

<b>INOLDI3465</b>	<b>Data space prepared for delete</b>
<b>Explanation</b>	The data space will be prepared for deleting records.
<b>Action</b>	No action required.
<b>INOLDI3467</b>	<b>Number of referential integrity violations: number</b>
<b>Explanation</b>	This message indicates the number of referential integrity violations encountered during the load process.
<b>Action</b>	No action required.
<b>INOLDI3468</b>	<b>Erase from referenced doctype is not supported</b>
<b>Explanation</b>	It is not possible to erase from the referenced doctype.
<b>Action</b>	No action possible.
<b>INOLDI3474</b>	<b>Sorting and loading indices</b>
<b>Explanation</b>	The indices are being sorted and loaded.
<b>Action</b>	No action required.
<b>INORBE4002</b>	<b>Function only permitted if restore database</b>
<b>Explanation</b>	A function was chosen that is not permitted in the current context.
<b>Action</b>	Use the function while restoring the database.
<b>INORBE4005</b>	<b>Backup not currently possible; parts of database are locked</b>
<b>Explanation</b>	It is not currently possible to start a backup because parts of the database are locked by other users or operations.
<b>Action</b>	Retry the backup when there are no longer any users or operations locking any parts of the database.
<b>INORBE4006</b>	<b>This function is not permitted on a system file while Tamino server is active</b>
<b>Explanation</b>	To preserve data consistency, the Tamino server should not be active while restoring the database.
<b>Action</b>	Shut down the Tamino server.

<b>INORBE4007</b>	<b>Restore database is not permitted while Tamino server is active</b>
<b>Explanation</b>	To preserve data consistency, the Tamino server should not be active while restoring the database.
<b>Action</b>	Shut down the Tamino server.
<b>INORBE4053</b>	<b>Terminator of backup copy not found</b>
<b>Explanation</b>	The terminator of the backup copy could not be found. The error can occur if the backup was modified outside of Tamino.
<b>Action</b>	Make sure that the backup copy was not modified outside of Tamino. If the problem persists , contact your software supplier.
<b>INORBE4056</b>	<b>Invalid database space size change</b>
<b>Explanation</b>	The value for changing the database space size is invalid.
<b>Action</b>	Specify a valid value.
<b>INORBE4057</b>	<b>No space for database block allocation at database space (number KB at block)</b>
<b>Explanation</b>	The restore requires more space for the database, but it failed. There are two possible reasons: either the database cannot be extended because there is no more space on the disk, or there are internal structure problems.
<b>Action</b>	Make sure that there is enough space for the database to be enlarged.
<b>INORBE4060</b>	<b>Input file is empty</b>
<b>Explanation</b>	The input file specified for the operation is empty.
<b>Action</b>	Check that the correct input file has been specified.
<b>INORBE4061</b>	<b>Invalid sequence of backup copy files</b>
<b>Explanation</b>	The sequence of the specified backup copy files is incorrect.
<b>Action</b>	Check that the correct backup copy files have been specified.
<b>INORBE4064</b>	<b>Synchronization with database server lost</b>
<b>Explanation</b>	The synchronization with the database server has been lost.
<b>Action</b>	Retry the backup operation. If the problem persists, contact your software supplier.

<b>INORBE4065</b>	<b>Invalid block type type</b>
<b>Explanation</b>	I/O from an unexpected database space is going to be logged so command logging has been deactivated.
<b>Action</b>	This is an unexpected error. Please contact your software supplier.
<b>INORBE4067</b>	<b>Unable to open journal space</b>
<b>Explanation</b>	An error has occurred when trying to open the journal space.
<b>Action</b>	Check that the journal space exists and is correctly defined.
<b>INORBE4068</b>	<b>Reference to missing doctype detected</b>
<b>Explanation</b>	A doctype that does not exist has been referenced.
<b>Action</b>	This is an internal error. Please contact your software supplier.
<b>INORBF4013</b>	<b>Server is in startup phase, backup not possible.</b>
<b>Explanation</b>	The server is still in the startup phase and therefore a backup is not possible. This is probably caused by another (offline) backup running, or the server being started.
<b>Action</b>	Wait until the other backup has finished, or the server has started, and run the backup again.
<b>INORBF4251</b>	<b>Invalid block allocation detected (blocks are shared between different doctypes)</b>
<b>Explanation</b>	The database server is in an inconsistent state.
<b>Action</b>	This is an internal error. Please contact your software supplier.
<b>INORBF4253</b>	<b>Error error number during backup: error message</b>
<b>Explanation</b>	A fatal error occurred during backup.
<b>Action</b>	Try to solve the problem based on the text of the error message. Otherwise, contact your software supplier.
<b>INORBF4255</b>	<b>An error occurred when updating the internal configuration store</b>
<b>Explanation</b>	The operation has been terminated because an error occurred while trying to update the internal configuration store.
<b>Action</b>	Please contact your software supplier and provide the message text of all messages displayed.

<b>INORBF4257</b>	<b>Corrupt structure on backup copy</b>
<b>Explanation</b>	The backup copy does not contain the correct structure.
<b>Action</b>	Check your input file assignments, and ensure that the correct backup copy is being used.
<b>INORBF4259</b>	<b>Error occurred in I/O block blockno</b>
<b>Explanation</b>	An I/O error has occurred on the specified block.
<b>Action</b>	The backup copy is corrupt; back up the database again to create another backup copy.
<b>INORBF4260</b>	<b>Online backup already active</b>
<b>Explanation</b>	Another backup function is active. Only one online backup is possible at one time.
<b>Action</b>	No action required.
<b>INORBF4263</b>	<b>Utility not permitted to run</b>
<b>Explanation</b>	This utility is currently not permitted to run.
<b>Action</b>	Wait until the database is available.
<b>INORBF4265</b>	<b>Internal error found in backup copy</b>
<b>Explanation</b>	An internal structure error has occurred in the backup copy. The backup copy may be corrupt. A possible cause of the error is that the backup copy was modified outside of Tamino.
<b>Action</b>	Check that the backup copy was not modified outside of Tamino. If the problem persists, please contact your software supplier.
<b>INORBF4266</b>	<b>Block size of output file too small</b>
<b>Explanation</b>	The block size of the output file is too small.
<b>Action</b>	Use an output device with a larger block size.
<b>INORBF4267</b>	<b>Invalid record detected, block blockno</b>
<b>Explanation</b>	The backup copy file has a structure error with printed information. This backup copy file cannot be used as input for a restore.
<b>Action</b>	Run the backup function again.

---

<b>INORBF4268</b>	<b>Internal configuration delete by Tamino utility failed</b>
<b>Explanation</b>	The final stage of saveset processing failed; the internal configuration is incorrect.
<b>Action</b>	Retry the operation.
<b>INORBF4269</b>	<b>Internal configuration update by Tamino utility failed because key could not be moved</b>
<b>Explanation</b>	A utility attempted to create an internal configuration entry, but this call failed for the stated reason. The utility will now terminate, and the administration agent will carry out any necessary recovery tasks.
<b>Action</b>	No action required. Please contact your system administrator for further information.
<b>INORBF4270</b>	<b>Internal configuration get by Tamino utility failed because value could not be read</b>
<b>Explanation</b>	A utility attempted to read the values for an internal configuration entry, but this call failed for the stated reason. The utility will now terminate, and the administration agent will carry out any necessary recovery tasks.
<b>Action</b>	No action required. Please contact your system administrator for further information.
<b>INORBF4271</b>	<b>Internal configuration set by Tamino utility failed because value could not be set</b>
<b>Explanation</b>	A utility attempted to set the value for an internal configuration entry, but this call failed for the stated reason. The utility will now terminate, and the administration agent will carry out any necessary recovery tasks.
<b>Action</b>	No action required. Please contact your system administrator for further information.
<b>INORBF4272</b>	<b>Internal configuration get by Tamino utility failed because values could not be enumerated</b>
<b>Explanation</b>	A utility attempted to count the number of values for an internal configuration entry, but this call failed for the stated reason. The utility will now terminate, and the administration agent will carry out any necessary recovery tasks.
<b>Action</b>	No action required. Please contact your system administrator for further information.
<b>INORBF4273</b>	<b>Internal configuration create by Tamino utility failed</b>
<b>Explanation</b>	A utility attempted to create a new internal configuration, but this call failed. The utility will now terminate, and the administration agent will carry out any necessary recovery tasks.
<b>Action</b>	No action required. Please contact your system administrator for further information.

<b>INORBF4276</b>	<b>This operation is not allowed while the Tamino server is active</b>
<b>Explanation</b>	The operation cannot be executed when the database has been started.
<b>Action</b>	Stop the database and retry the operation.
<b>INORBI4063</b>	<b>Access to the Tamino server's shared memory is not possible</b>
<b>Explanation</b>	It is not possible to access shared memory of the Tamino server. Synchronization with the server is lost. A possible cause is that the Tamino server has been shut down in the meantime.
<b>Action</b>	Retry the backup operation. If the problem persists, please contact your software supplier.
<b>INORBI4452</b>	<b>Waiting for autorestart</b>
<b>Explanation</b>	The utility action cannot be performed until the database has completed an autorestart.
<b>Action</b>	No action required.
<b>INORBI4453</b>	<b>Initialization phase</b>
<b>Explanation</b>	This is an informational message indicating that a utility is initializing.
<b>Action</b>	No action required.
<b>INORBI4454</b>	<b>Waiting for transactions to commit</b>
<b>Explanation</b>	The requested operation is waiting for all transactions to commit.
<b>Action</b>	No action required.
<b>INORBI4455</b>	<b>Backup copy successfully checked</b>
<b>Explanation</b>	The backup copy has been successfully checked.
<b>Action</b>	No action required.
<b>INORBI4456</b>	<b>No doctype in backup copy</b>
<b>Explanation</b>	The backup copy used for this operation does not contain any doctypes.
<b>Action</b>	No action required.

---

<b>INORBI4457</b>	<b>Restore of database completed successfully</b>
<b>Explanation</b>	The database has been successfully restored.
<b>Action</b>	No action required.
<b>INORBI4459</b>	<b>Within allocation</b>
<b>Explanation</b>	This informational message occurs when a utility is allocating space.
<b>Action</b>	No action required.
<b>INORBI4464</b>	<b>Formatting of database_space completed</b>
<b>Explanation</b>	This informational message indicates the completion time of the formatting operation.
<b>Action</b>	No action required.
<b>INORBI4465</b>	<b>Formatting of database_space started</b>
<b>Explanation</b>	This informational message indicates that the formatting operation has started.
<b>Action</b>	No action required.
<b>INORBI4466</b>	<b>Database identification set to 'database_name'</b>
<b>Explanation</b>	The database identification has been set to the specified name.
<b>Action</b>	No action required.
<b>INORBI4468</b>	<b>Backup of database_space completed</b>
<b>Explanation</b>	The indicated database space has been backed up.
<b>Action</b>	No action required
<b>INORBI4469</b>	<b>Terminator block: type</b>
<b>Explanation</b>	This message shows the value of the terminator block.
<b>Action</b>	No action required.
<b>INORBI4475</b>	<b>New block allocations for doctype doctype</b>
<b>Explanation</b>	New blocks have been allocated for the specified doctype.
<b>Action</b>	No action required.

<b>INORBI4478</b>	<b>Doctype doctype contained in saveset</b>
<b>Explanation</b>	The doctype specified is contained in the backup saveset.
<b>Action</b>	No action required.
<b>INORBI4631</b>	<b>Backup of database completed successfully</b>
<b>Explanation</b>	A database copy has been backed up successfully.
<b>Action</b>	No action required.
<b>INORBQ4000</b>	<b>Error accessing database space extent no at location restore location</b>
<b>Explanation</b>	The database space was not found at the specified location. There are many possible causes for this. The container may be corrupt or missing, the defined 'Location' may be missing or corrupt or you may not have sufficient access privileges for the specified location. If you have replaced a location and/or container that was previously missing, this error appears because the database server did not expect the container to re-appear after it detected it was missing.
<b>Action</b>	Verify that the container exists in the correct location. If you have replaced a previously missing container, please move it out of the way to allow the database server to recreate the container and allow the restore process to continue. If the problem persists, please contact your software supplier.
<b>INORBQ4001</b>	<b>Confirm location for recreation of database space extent no</b>
<b>Explanation</b>	Confirm the location for recreation of the database space.
<b>Action</b>	Enter the location name.
<b>INORBR4681</b>	<b>Backing up database_space</b>
<b>Explanation</b>	The specified server space is being backed up.
<b>Action</b>	No action required.
<b>INORBS4009</b>	<b>Restoring database with reorganization ...</b>
<b>Explanation</b>	The database is being restored and a data reorganization will be done..
<b>Action</b>	No action required.

---

<b>INORBS4458</b>	<b>Restoring database ...</b>
<b>Explanation</b>	The database is being restored.
<b>Action</b>	No action required.
<b>INORBV4012</b>	<b>Doctype loaded = loaded_doctypes; actual number of doctypes = actual_doctypes</b>
<b>Explanation</b>	The number of doctypes loaded differs from the number of doctypes in the backup copy.
<b>Action</b>	Please contact your software supplier with an exact description of the functions that caused the error.
<b>INORBW4010</b>	<b>External backup/restore request failed, detailed info in file filename</b>
