

webMethods Composite Application Development 10.2 Readme

April 2018

This is an innovation release. Innovation releases have a much shorter support cycle than standard releases. To learn more, visit <http://empower.softwareag.com/innovationrelease/>.

This file contains important information you must read before using webMethods Composite Application Development 10.2. You can find system requirements, user documentation, and installation and upgrade instructions on the [Documentation website](#) or the [TECHcommunity website](#). At those locations, you can also find suite-related security and globalization information.

Included in this file is information about functionality that has been added, removed, deprecated, or changed for this product. Deprecated functionality continues to work and is supported by Software AG, but may be removed in a future release. Software AG recommends against using deprecated functionality in new projects.

1.0 Critical Information

This section lists any critical issues for the current release that were known when this readme was published. For critical information found later, go to the Knowledge Center on the [Empower website](#).

2.0 Known Issues

This section lists any issues for the current release that were known when this readme was published. For known issues found later, go to the Knowledge Center on the [Empower website](#).

- WMC-4485
When Composite Application Framework (CAF) is installed, the initial startup of Software AG Designer might take longer than usual.
There is currently no workaround for this issue.
- WMC-4486
When Composite Application Framework is installed, other Software AG Designer development plug-ins might report unresolved bundles. This issue does not affect the plug-in functionality.
There is currently no workaround for this issue.
- WMC-4498
Software AG Designer displays incorrect copyright dates for Composite Application Framework plug-ins.
There is currently no workaround for this issue.
- MWS-21070
When using an IS Document type to define the business data for a HPSTRA-enabled task, the Composite Application Framework might duplicate business data fields in the runtime.
There is currently no workaround for this issue.
- WMC-3951
Installing a Composite Application Framework fix fails when the fix applies to multiple components, but the installation does not have all the components installed.
The fix installation rolls back because it expects all components that the fix addresses to be present in the installation directory.
The workaround is to install the missing components before installing the fix.

5.0 Other Resolved Issues

This section lists the issues that were resolved in each release but were not part of the fixes listed in the previous section. A release is listed in this section only if changes occurred in that release.

Release 10.0

- WMC-4039
In Software AG Designer, validation of xmlImport files fails for CAF projects that do not contain portlets.
The Problems tab for a project displays the following error: "Referenced file contains errors (<http://www.webmethods.com/schema/xmlImport.xsd>)."
The issue is resolved.
- WMC-4059
When using My webMethods in Internet Explorer, the CAF Toggle Tab control might cause increasing memory consumption.
The issue is resolved.

Release 9.12

- MWS-16031
The time zone of the CAF Date Range Input control does not match a My webMethods user's

preferred time zone.

When a Date Range Input control is added to a portlet, the time zone of the Date Range Input control does not match the user's preferred time zone when the user's time zone uses daylight savings time.

The issue is resolved.

Release 9.9

- MWS-14667

Converting Composite Application Framework (CAF) applications to OpenCAF does not update navigation rules.

When a CAF application is converted to OpenCAF, the navigation rules in the CAF faces-config.xml files are not updated to reference OpenCAF .xhtml files. The navigation rules still have references to removed .view files.

This issue is now resolved.

- MWS-14666

After converting a Task List Management CAF portlet to OpenCAF, clicking the Return button on the Task List Management page results in a javax.portlet.PortletException with the following message: "Cannot remove the same component twice".

This issue is now resolved.

8.0 Added, Removed, Deprecated, or Changed Items

This section lists functionality, controls, portlets, properties, or other items that have been added, removed, deprecated, or changed. A release is listed in this section only if changes occurred in that release.

Release 10.2

Removed Item	Replacement, if any
Support for Axis 1.4, which is used for exposing web services from My webMethods Server, is removed.	Now My webMethods Server web services use Axis 1.7.7

Release 9.12

Support for Axis 1.x, which is used for exposing web services from My webMethods Server, is deprecated.	
Support for using webMethods Glue to create web service connectors in CAF and OpenCAF applications is deprecated.	WS-Stack Client library

Release 9.10

Added Item	Description
Drag And Drop File Input CAF control	Replaces the Drag And Drop applet.
Client-side validation support for the CAF File Validator	<p>With the recent HTML5 changes in browsers, it is now possible to perform client-side validation of the value specified in the file input element.</p> <p>Client-side validation prevents uploading the wrong type of file to the server or uploading files that are too large.</p> <p>The browsers that support this capability are:</p> <ul style="list-style-type: none">Google Chrome version 6.0 and higherInternet Explorer version 10.0 and higherFirefox version 3.6 and higher <p>For browsers that do not support HTML5, server-side validation would have to be performed instead.</p>

Added Item	Description
Support for the "multiple" attribute in the File Input CAF control	<p>With the "multiple" attribute enabled, you can select and upload more than one file using the File Input control.</p> <p>When the "multiple" attribute is enabled, the value of the control should be bound to a List<Part> object.</p> <p>The browsers that support this capability are:</p> <ul style="list-style-type: none"> Google Chrome version 6.0 and higher Internet Explorer version 10.0 and higher Firefox version 3.6 and higher <p>If using other browsers, you can select only a single file through the File Input control.</p>
Support for standard JavaServer Faces (JSF) 2 methods to do Ajax requests	CAF used a proprietary technique for performing partial page updates (Ajax) before the JSF standard offered support for Ajax requests. Now CAF supports the JSF 2.x standard for doing Ajax requests, replacing the proprietary technique.
webMethods Task Development now supports the String List data type when you configure task assignees with a webMethods Business Rules decision table in Software AG Designer.	You can assign a task to multiple user IDs by using a String List in the assignee field of your IS document type. For more information about working with task assignments, see <i>webMethods BPM Task Development Help</i> .

Changed Item	Description
The Attachments List CAF control has been improved.	The changes to the Attachments List control include replacing the Java applet-based drag and drop panel with an HTML5-based equivalent.
The SOAP Monitor, Color Picker, and File Attachment applets have been converted to CAF components.	In more recent versions of Chrome and Firefox applets are disabled by default and must be manually enabled. Applets represent security risks.

Changed Item	Description
The CAF project classpath has been simplified.	<p>When you create a new portlet application or web application project in Software AG Designer, on the JSF Capabilities page of the new project wizard, selecting the CAF Libraries JSF implementation library now displays the following message: 'The targeted "My webMethods Server" runtime will contribute the libraries required by this facet to the project classpath.'</p> <p>Also, when you specify project properties by right-clicking the project and going to Properties > Project Facets > Java Server Faces > CAF Libraries, the properties wizard displays the same message.</p> <p>To clean up the project classpath for existing projects, right-click the project and go to CAF Tools > Repair CAF Project.</p>

Deprecated Item	Replacement, if any
Applet CAF control	

Release 9.9

Changed Item	Description
The internal structure of the Import Template View CAF control	<p>Instead of being direct children of the Import Template View control, the controls loaded from the imported view are now held in a new "__viewLoaded" facet. However, because a facet can contain only one component, the imported controls are wrapped in a UIPanel control. As a result, the direct parent of the imported controls is the UIPanel wrapper, and the Import Template View control, in turn, is the parent of the UIPanel wrapper.</p>

Release 9.8

Changed Item	Description
Update JSF library to version 2.2.8.	The JSF library is updated to version 2.2.8 to integrate bug fixes from the community.

Changed Item	Description
Switch to new JSF 2.2 tag library namespaces.	In JSF 2.2, the core JSF tag library namespaces that start with <code>http://java.sun.com/jsf/</code> are renamed to <code>http://xmlns.jcp.org/jsf/*</code> . CAF has switched to using the new namespaces for new projects in order to avoid using deprecated items.
