

webMethods Task Engine 10.2 Readme

April 2018

This is an innovation release. Innovation releases have a much shorter support cycle than standard releases. To learn more, visit <http://empower.softwareag.com/innovationrelease/>.

This file contains important information you must read before using webMethods Task Engine 10.2. You can find system requirements, user documentation, and installation and upgrade instructions on the [Documentation website](#) or the [TECHcommunity website](#). At those locations, you can also find suite-related security and globalization information.

Included in this file is information about functionality that has been added, removed, deprecated, or changed for this product. Deprecated functionality continues to work and is supported by Software AG, but may be removed in a future release. Software AG recommends against using deprecated functionality in new projects.

This section lists the issues that were resolved in each release but were not part of the fixes listed in the previous section. A release is listed in this section only if changes occurred in that release.

Release 10.2

- WTN-3733
My webMethods does not display details about a step in a collaboration process.
On the Collaboration Processes > Process Details page, when you select a step in a collaboration process, the Step Info, Task Info, Task Audit, and Task Comments tabs on the Details panel do not display any information about the step. Only the Process Info tab contains any information.
The issue is resolved.

Release 10.1

- WTN-4000
A security issue with password masking was discovered in the WmTaskClient package in Integration Server.
The issue is resolved.

Release 10.0

- WTN-2749
The WmTaskClient package does not support case-insensitive index searches.
You cannot use WmTaskClient package services to perform an indexed task search with a search query term that is case-insensitive.
The issue is resolved.

Release 9.12

- WTN-3684
On the Business Data page in My webMethods, the Intrinsic Task Metrics event maps are

improperly set as user-defined.

When you expand the Intrinsic Task Metrics node on the Administration > Analytics > KPIs > Business Data page in My webMethods, the DEFINED BY column for the Intrinsic Task Metrics event maps displays the value of "User". However, intrinsic event map and KPI definitions should be system-defined to prevent users from deleting or modifying the definitions.

The issue is resolved. The DEFINED BY column for the Intrinsic Task Metrics event maps now has a value of "System".
