## 2.0 Known Issues

This section lists any issues for the current release that were known when this readme was published. For known issues found later, go to the Knowledge Center on the [Empower website](#).

- YAM-218  
SSL calls to native service  
When invoking native APIs over SSL Microgateway does not verify the service certificates correctly.
- YAM-202  
No challenge headers in the response for /microgateway context  
When Microgateway administration API is protected with user credentials it does not properly challenge clients. This means it does not add the challenge header to the 401 response.

Added Item	Description
Microgateway provisioning	The Microgateway provisioning allows customers to create multiple Microgateway instances from a single Microgateway installation. The Microgateway provisioning comes in 2 flavors: <ul style="list-style-type: none"><li>- Instance based provisioning</li><li>- Docker based provisioning</li></ul>
Asset provisioning	The Microgateway can be configured with assets including APIs, policies applications and aliases. Assets can be provisioned by reading them from a running API Gateway or by reading API Gateway export archives available on the file system.
Runtime policy enforcement	The Microgateway supports a basic set of runtime policies including: Require HTTP / HTTPS, Inbound Authentication - Transport, Identify & Authorize Application, Straight Through Routing, Log Invocation and Conditional Error Processing.
