What's New in Release 9.10

- **Platform certifications**
  ApplinX now supports the following:

  - **Java 8**
    The ApplinX code now compiles with Java 8, which means that customers can use Java 8 syntax in their ApplinX web applications.

  - **Windows 10**
    The Windows 10 platform is now supported.

  - **Eclipse 4.5**
    The ApplinX Designer Eclipse is now version 4.5.

  - **Microsoft Edge**
    Microsoft's Edge browser is now supported.

- **Updating to CentraSite**
  You can now update an ApplinX application to CentraSite; this updates the assets that were changed since last registration/update. See *Update the Application to CentraSite*.

- **Font Size**
  The following changes have been made to font size handling in this version:

  - Default font size for web application is 'Dynamic by resolution' instead of 13px.

  - In the fontSize combo box in the Configuration and Emulation windows, you can select font size from 10-24px (10, 12, 14, 16... 24px). See The HTML Emulation Toolbar.

  - In the fontSize combo box in the Emulation window, the new option 'Default' allows you to use the font size defined in Configuration. This is the default value in the Emulation window.

  See Enabling the User to Control the Font Size.

- **Rebranding**
  ApplinX product and documentation have been updated to match the new Software AG look-and-feel.

- **DocType**
  Parameter `DocType` is no longer applicable for Framework Configuration - all pages now have the HTML5 doctype.

  However, the option was retained in the configuration window for reasons of backward compatibility. You can remove this obsolete option if you prefer.
