For information about the webMethods SAP Process Monitoring Agent and webMethods SAP Adapter, which are components of webMethods Optimize for SAP, see the webMethods Adapter System Requirements.

^{*1} Includes the Base Server and Advanced Platform

^{*2} EntireX and ApplinX support additional operating systems. See the Release Notes of these products.

^{*3} Only 32-Bit product version supported

^{*4} Windows Desktop platforms are supported for webMethods server functionality for development environments only.

^{*5} Supported on VMware vSphere (ESX/ESXi) 5.x and higher

- ^{*6} - Broker C client library supported for both 32-bit and 64-bit Solaris, HP-UX and AIX
- Broker Server and command line utilities are supported on listed platforms
- Broker C# API is supported on Windows only
- Broker Java/JMS API also supported on Mac OSX

^{*8} Please contact your Software AG representative if you plan to install on a Solaris CMT system.

^{*9} Only Windows 7 Professional is supported

^{*10} Solaris 11.3 is not supported.

^{*11} M7 and T7 server systems on Solaris SPARC 64 are not supported.

Language packs are available for webMethods products on all supported operating systems except Mac OS X.

The document will be updated whenever support for additional operating systems is available.

Unless otherwise specified in our documentation, we encourage installing the latest service packs, patch-bundles and fixes for the supported operating systems and products if those are recommended by the respective vendor. Please report defects resulting from 3rd party supplied fixes, patches or service packs to the vendor directly.

Except where otherwise specified by a special arrangement, we support our software operation only on the supported Linux distributions mentioned above. Customers may run webMethods software on Linux distributions like Oracle Linux and other Linux distributions that are stated to be compatible with the Linux distributions supported by webMethods products. If they encounter an issue that might be related to webMethods software, Technical Services may ask the customer to reproduce the issue on the Red Hat or SUSE distributions that are supported before analyzing the issue further.

Software AG tests its software against specific versions of operating systems and supported products (RDBMSs, JDKs, browsers, application servers, directory servers) and not specifically against all possible combinations of patches, fixes and hardware that might comprise that platform. Therefore, Software AG may not use the exact same versions of fixes, patches or service packs for operating systems and supported software products, when troubleshooting a customer issue.

*1 Windows Desktop platforms are supported for webMethods server functionality for development environments only

*2 Supported on VMware vSphere (ESX/ESXi) 5.x and higher

Unless otherwise specified in our documentation, we encourage installing the latest service packs, patch-bundles and fixes for the supported operating systems and products if those are recommended by the respective vendor. Please report defects resulting from 3rd party supplied fixes, patches or service packs to the vendor directly.

Software AG tests its software against specific versions of operating systems and supported products (RDBMSs, JDKs, browsers, application servers, directory servers) and not specifically against all possible combinations of patches, fixes and hardware that might comprise that platform. Therefore, Software AG may not use the exact same versions of fixes, patches or service packs for operating systems and supported software products, when troubleshooting a customer issue.

Supported RDBMSs

webMethods products support their database components on all platforms on which the RDBMS vendor supports the RDBMS. Unless otherwise mentioned all webMethods products come with the client component of the DataDirect Connect JDBC 5.1.1 driver. This driver is a Type 5 JDBC driver that does not have a server component. For information about the database components and the webMethods products that use them, see "*Installing webMethods Products*".

		Oracle		DB2 LUW			MS SQL Server

^{*1} Also supported when implemented as RAC.

^{*2} Database connections use the standard JDBC interface. The required JDBC drivers are database-specific and are either part of the database installation or can be acquired from the database manufacturer. Selecting a suitable JDBC driver is not critical as only standard JDBC features are used.

^{*3} Supported JDBC driver: 11.1.0.6.0 and higher

^{*4} Supported JDBC driver: IBM DB2 JDBC driver 9.7

^{*5} Standard and Enterprise Edition are supported

Supported JDBC driver: 4.0.2206.100 and higher. It is mandatory with Java 1.7 to use the sqjjdbc4.jar driver.

PPM supports SQL Server databases set up for collation Latin1_General_BIN. SQL Server databases with other collations are not supported. You can assign the collation at the database level. If you use MS SQL Server 2008 or 2012 on a single database instance and plan to set up a scaled PPM system with one master server and several sub-servers to connect to that instance, you need to ensure that the individual servers (especially master server and sub-servers) access different databases within the instance.

^{*6} Database connections use the standard JDBC interface. The required JDBC drivers are database-specific and are either part of the database installation or can be acquired from the database manufacturer. The jDTS driver is the recommended driver for use of Presto with a SQL Server database

^{*7} Apama Server and Software AG Presto support additional DBMSs. For details please see the the respective product documentation.

^{*8} Only Oracle 11g R2 is supported

^{*9} Only MS SQL Server 2008 R2 is supported.

Unless otherwise specified in our documentation, we encourage installing the latest service packs, patch-bundles and fixes for the supported operating systems and products if those are recommended by the respective vendor. Please report defects resulting from 3rd party supplied fixes, patches or service packs to the vendor directly.

Software AG tests its software against specific versions of operating systems and supported products (RDBMSs, JDKs, browsers, application servers, directory servers) and not specifically against all possible combinations of patches, fixes and hardware that might comprise that platform. Therefore, Software AG may not use the exact same versions of fixes, patches or service packs for operating systems and supported software products, when troubleshooting a customer issue.

Software AG tests its software against specific versions of operating systems and supported products (RDBMSs, JDKs, browsers, application servers, directory servers) and not specifically against all possible combinations of patches, fixes and hardware that might comprise that platform. Therefore, Software AG may not use the exact same versions of fixes, patches or service packs for operating systems and supported software products, when troubleshooting a customer issue.

Supported Application Servers

Unless otherwise mentioned all products only support the application server that is included with the suite. For additional application server support please contact your Software AG representative.

EntireX and ApplinX support additional Application Servers.
See the Release Notes of these products.

webMethods Broker supports application servers based on Java EE standards by way of the Java EE Connector Architecture (JCA) 1.5 and JMS Application Server Facilities (ASF). webMethods Broker includes a resource adapter that works with JCA 1.5, uses the JMS client library, and integrates well with application servers. You can use webMethods Broker with application servers using either the JCA resource adapter or ASF. webMethods Broker is tested to work with Oracle WebLogic, JBoss enterprise editions, and IBM WebSphere application servers. Software AG Support will handle any issues pertaining to resource adapter operation with JCA 1.5 or ASF. For issues specific to the application server configuration or the JCA container of the application server, report those issues to the respective application server vendors.

Unless otherwise specified in our documentation, we encourage installing the latest service packs, patch-bundles and fixes for the supported operating systems and products if those are recommended by the respective vendor. Please report defects resulting from 3rd party supplied fixes, patches or service packs to the vendor directly.

Software AG tests its software against specific versions of operating systems and supported products (RDBMSs, JDKs, browsers, application servers, directory servers) and not specifically against all possible combinations of patches, fixes and hardware that might comprise that platform.
