Table of Contents

1 What's New in Release 9.7 1
New License Key Handling 2
Extended Browser Support 2
Publishing to CentraSite 2
2 Features no Longer Supported from Next Version 3
3 ApplinX Supported Platforms 5

1 What's New in Release 9.7

- New License Key Handling 2
- Extended Browser Support 2
- Publishing to CentraSite 2

New License Key Handling

The license key format from version 9.6 and earlier is no longer supported. If you are logged on to Software AG's Empower site, you can request a new license key from Software AG Logistic Service Center (LSC). See License Key Concept.

Extended Browser Support

The following browsers are now additionally supported:

- Internet Explorer 11.x
- Firefox version 24
- Google Chrome version 32

See Supported Browsers for full list.

Publishing to CentraSite

In earlier versions of ApplinX you could deploy ApplinX assets to a CentraSite installation that was not in the same machine as the ApplinX server. From this version, this is no longer possible; CentraSite must be installed on the same machine as the ApplinX server. See Publishing an Application to CentraSite.

2 Features no Longer Supported from Next Version

The next version of ApplinX is planned to be based on Java 1.8, which no longer supports the JDBC-ODBC bridge functionality that allowed connecting to Access databases and ODBC data sources. This change will affect the following functionality:

- From the next version, external databases will no longer be supported as repositories.
- Currently (ApplinX 9.7 and below) MS Access (MDB) and ODBC (Microsoft) are supported without having to install additional drivers ("out-of-the-box"). From version 9.8, this will no longer be the case: you will need to install and configure additional drivers in order to use these database types with ApplinX. See also *Database Connection* for a list of supported database types.

3 ApplinX Supported Platforms

For a full list of platforms supported by ApplinX see *Product Version Availability* on the Empower website.

Software AG provides ApplinX support for the operating/teleprocessing system versions supported by their respective manufacturers. In general, when an operating/teleprocessing system provider stops supporting a version of an operating/teleprocessing system, Software AG will stop supporting that operating/teleprocessing system version.
