

Java ACI

EntireX Java ACI is a Java class library that provides access to the EntireX Broker ACI for Java programmers. It covers the whole EntireX Broker ACI which enables you to write both client and server applications in Java. Any of these can then interact with each other and with other applications written in other languages on the same network using EntireX Broker. The EntireX Java ACI also contains the framework necessary for Java RPC requests.

<i>Using</i>	Introduction to the EntireX Java ACI.
<i>Writing Applications</i>	Explains how to write basic applications for client and server.
<i>Writing Advanced Applications</i>	Explains how to write advanced applications for client and server.
