

EntireX Message Service Provider

The EntireX Broker is a message server provider that supports Java Message Service (JMS) with both point-to-point and publish and subscribe messaging. This enables JMS-based applications to profit from the reliability and performance of the EntireX Broker.

The following topics are covered:

<i>Writing JMS Applications with the EntireX Broker</i>	Describes how to write JMS applications with the EntireX Broker.
<i>Message Service Administration using System Management Hub</i>	Describes message service administration using the System Management Hub, Software AG's cross-product and cross-platform product management framework.
<i>Monitoring EntireX Message Service Provider</i>	Describes how to monitor items in point-to-point messaging (queues, messages, senders, and receivers) or items in publish-and-subscribe messaging (topics, messages, publishers and subscribers) using the <code>etbinfo</code> tool.
