Broker Agents

A broker agent is a "dummy broker" that acts as a transport protocol converter or relay node for broker calls. The following agents are provided:

TCP Agent

The Broker TCP Agent is a gateway to the broker whenever direct TCP/IP communication with the broker is not possible. More info

SSL Agent

The Broker SSL Agent is a gateway to the broker whenever direct SSL or TLS communication with the broker is not possible. More info

HTTP(S) Agent

The Broker HTTP(S) Agent is a Java-based component that implements a Java servlet for servlet-enabled Web servers. It builds the bridge between a Web server and EntireX Broker in the intranet. This component was formerly referred to as "Tunnel Servlet". More info
