EntireX Java Wrapper for Natural

The EntireX Java Wrapper for Natural allows you to generate EntireX Java client interface objects from Natural subprograms in a NaturalONE project in Eclipse. The generated Java client interface objects can be used by Java application developers to access Natural server components, using EntireX/Natural RPC.

Using	Step-by-step guide on how to use the Java Wrapper for Natural.
Command-line Mode	Using the Java Wrapper for Natural in command-line mode.
Mapping	Mapping Natural data types to Java data types.
Writing Applications	A simple Java client application that uses a method of the Java interface object generated using the Java Wrapper for Natural.
Examples	Describes the delivered sample programs.
