EntireX UDDI Registration

- Introduction

- Registering a Web Service in a UDDI Registry

See also *Web Services Wrapper*.

Introduction

EntireX UDDI Registration is a tool with which you can register a Web service with any UDDI registry for which you have an account.

Registering a Web Service in a UDDI Registry

Once a Web service has been created, it can be registered with any UDDI registry using the UDDI Registration Wizard. The prerequisites are:

- registry supports UDDI version 2.0

- an account with the desired registry (user ID and password)

- at least one Business Entity registered at this account

The EntireX Web service is stored as a Business Service within a Business Entity. If you have previously registered multiple Business Entities with your account, they will be displayed by the UDDI Wizard. One of these must be selected.

≫ To register a Web service with a UDDI registry

1. With **Window > Preferences > Software AG > UDDI Registry** you can enter one or more addresses for the available UDDI registries.

2. From the context menu of the WSDL file, choose **Properties**.

   - Change the EntireX Web service registration settings if necessary (Service Name, Service Description and a valid and accessible WSDL URL).

   - Choose **OK** to leave the Properties Dialog.

3. From the context menu of the WSDL file, choose **Register Web Service**.

   - Select the Registry where you want to register the service.

   - Enter User ID and Password if necessary.

     Press **Next** to continue.

   - A query is sent to the UDDI Registry and a page is displayed from which you can select the Business from the list of businesses available to you (these businesses are set up by the UDDI Registry administrator). Continue with **Next**.

- A page is displayed with the properties defined in step 3. You can change these values. Confirm with **Finish**.

- A page is displayed with the URL of the Web service, which you can modify. Choose **Register** to complete the registration.

Note:
If your registry is CentraSite, you need at least the role CentraSiteUser to publish data to the CentraSite UDDI registry. If you do not have this role and try to get a UDDI authToken, the UDDI `get_authToken` request will fail with an authentication exception.
