

Build an EntireX RPC Server and Use an Existing XML-based Client with It

This chapter covers the following topics:

- Generation Process
 - Running the Application
-

Generation Process

➤ To generate the application

1. If a WSDL file or an XML Schema file for the XML-based client exists, use the IDL Extractor for XML Schema or the IDL Extractor for WSDL, generating the IDL-XML mapping automatically.

Otherwise, write a suitable IDL file.
2. Select this generated or written IDL file and open the context menu to generate the desired server skeleton, or, if you are using Natural, write a Natural server.

Running the Application

➤ To run the application

1. Start the EntireX Broker (if required).
2. Configure and start the EntireX RPC server or Natural RPC Server.
3. Run the client application.
