

# Database Entity

Available in SOA applications only.

## Folder

The folder where the database is located.

## Username

The username required to connect to the database (optional).

## Password

## URL additional parameters

Additional parameters needed for the database connection (optional).

## Driver

The connection driver used to access the database. You can choose a pre-defined driver using the combo box or supply a custom one. It may be required to supply the driver itself to ApplinX Server.

Database	Driver	Requires Driver Files
Apache Derby	org.apache.derby.jdbc.EmbeddedDriver	
SQL Server	com.Microsoft.jdbc.sqlserver.SQLServerDriver	Yes
Oracle	oracle.jdbc.driver.OracleDriver	Yes
MySQL	org.git.mm.mysql.Driver	Yes
DB2	COM.ibm.db2.jdbc.app.DB2Driver	Yes

## URL

The connection prefix required to connect to the database. Choose a pre-defined prefix from the combo box or supply a custom one.
