## 1.0 Critical Information

This section lists the critical issues for the current release that were known when this readme was published. For critical information found later, go to the Knowledge Center on the [Empower website](#).

None.

## 2.0 Known Issues

This section lists issues that were known for the current release when this readme was published. For known issues found later, go to the Knowledge Center on the [Empower website](#).

- APX-9686  
When generating a JSP page from a screen group, the class name and the file name are not the same. In Java, the class name and file name have to be the same for the class to pass compilation.
- APX-3605  
The ApplinX HTTP session in Eclipse's internal browser does not support popup windows.
- To run ApplinX under webLogic Application server, you are required to follow these steps: Unpack the WAR file with the Weblogic JAR utility. To deploy the application, in the webLogic Administrator, set the upload directory name the Upload Directory Name attribute to the root directory of the exploded application (instead of the location of the WAR file).
- In IE8, when two different user browsers share the same Web session ID, they will have the same session in ApplinX.
- When a screen is identified as a window, the window title is not displayed in the Session View.
- APX-6104  
Performance Monitoring: When using the Performance Monitor, all sessions are always traced and it is not possible to trace a specific session. The Framework Configuration Editor doesn't save the "Trace Specific Session" field contents and always reverts to "Trace all session" after saving.
- When upgrading a web application, if in the original web application, folders or files were removed, the upgrade process will fail.
- After installing ApplinX on a machine that already has OSGi WSS installed, restart STP Tomcat.
- APX-8522  
In the Mapper, when linking a value from nested arrays, the mapped attribute does not have the parent array's source index. To map from nested arrays use the "Value Of" expression that will provide a source index for each level.
- When the ApplinX server is deployed on Tomcat as a J2EE application, when connecting to the server from within Eclipse, the message box which is displayed, indicating that changes made in the Designer are not saved, should not be displayed and is incorrect.

- The method `setLoadAsWindow(true)` in the `GXChangeNextForm` event doesn't work.
- APX-8411  
In Hitachi, host key actions within Path Procedures do not work.
- APX-5312  
When using the Application Manager, on IIS7/IIS7.5, you need to configure the default application pool and ensure that the Managed Pipeline Mode is set to "Classic" (In the IIS manager, in the Application Pools node, edit the default application pool).
- APX-5312  
When using the Application Manager on IIS7.5, you need to convert your application from a virtual directory to a web application (in the IIS manager, right-click on your application and select Convert to Application).
- When working in Visual Studio 2010 with a console application, when adding a dll to the application, the selected target framework is by default .NET Framework 4 Client Profile and should be changed to .NET Framework 4 (Project Properties, Application tab, Target Framework).

### 3.0 Usage Notes

This section provides additional information you need to work with the current release of webMethods ApplinX.

- In the ApplinX Administrator you can now filter your sessions by Session ID, Application, Device Name, Duration, State, Connection Pool and Type.

### 4.0 Fixes Included in Each Release

This section lists the fixes that have been included in each release. Go to the Knowledge Center on the [Empower website](#) for detailed information about fixes.

#### ***Release 9.8***

None.

#### ***Release 9.7***

None.

#### ***Release 9.6***

None.

## 5.0 Other Resolved Issues

This section lists the issues that were resolved in each release but were not part of the fixes listed in the previous section.

### ***Release 9.8***

None.

### ***Release 9.7***

None.

### ***Release 9.6***

None.

## 6.0 Documentation Changes

This section describes significant changes to the documentation in each release, such as the addition, relocation, or removal of product guides, online help, chapters, or other major content.

### ***Release 9.8***

Product documentation will no longer be installed with the product. It is available in Empower.

### ***Release 9.7***

None.

### ***Release 9.6***

None.

## 7.0 Terminology Changes

### ***Release 9.8***

Old Term	New Term
Read-only repository	Locked repository

## **Release 9.7**

None.

## **Release 9.6**

None.

## **8.0 Added, Removed, Deprecated, or Changed Items**

This section lists features, functionality, controls, portlets, properties, or other items that have been added, removed, deprecated, or changed.

### **Release 9.8**

<b>Added Item</b>	<b>Description</b>
Usability improvements	You no longer need to define a repository, because the application now uses an internal one instead.
Session filtering	In the ApplinX Administrator you can now filter your sessions by Session ID, Application, Device Name, Duration, State, Connection Pool and Type.
Mobile browser support	ApplinX now supports mobile browsers, for example the Safari Browser. The look and feel of the new ApplinX Web applications has been enhanced, in particular for applications specifically designed for easier use on mobile devices.
Property <code>isUsingactivex()</code>	When downloading Natural file, detects whether process is using ActiveX and changes the logic accordingly.

<b>Removed Item</b>	<b>Replacement</b>
Storing ApplinX entities in an external repository is no longer supported.	Use instead the recommended internal repository that is already provided.

<b>Deprecated Item</b>	<b>Replacement</b>
None.	

**Changed Item****Description**

New look and feel for the web applications.

**Release 9.7****Added Item****Description**

None.

**Removed Item****Replacement**

None.

**Deprecated Item****Replacement**

Storing ApplinX entities in an external repository will no longer be supported in a future version.

Use instead the recommended internal repository that is already provided.

**Changed Item****Description**

The license key handling has changed.

The license key format from version 9.6 and earlier is no longer supported. If you are logged on to Empower you can request a new license key from Software AG Logistic Service Center (LSC) under [Order Products/Licenses](#). See *License Key Concept* in the ApplinX User Guide.

**Release 9.6**

None.

**9.0 Added, Removed, Deprecated, or Changed Built-In Services****Release 9.8**

None.

**Release 9.7**

None.

## ***Release 9.6***

None.

## **10.0 Added, Removed, Deprecated, or Changed Parameters**

### ***Release 9.8***

None.

### ***Release 9.7***

None.

### ***Release 9.6***

None.

## **11.0 Added, Removed, Deprecated, or Changed APIs**

### ***Release 9.8***

<b>Added API</b>	<b>Description</b>
Property <code>isUsingactivex()</code>	When downloading Natural file, detects whether process is using ActiveX and changes the logic accordingly.

### ***Release 9.7***

None.

### ***Release 9.6***

<b>Added API</b>	<b>Description</b>
<code>gx_getNdtDefaultDownloadFileName</code>	Use this user exit to manipulate/modify the name of a downloaded Natural file.

<b>Removed API</b>	<b>Replacement</b>
None.	

Deprecated API	Replacement
None.	

Changed API	Description
None.
