webMethods Mobile Administrator 9.8 Readme

April 2015

This file contains important information you must read before using webMethods Mobile Administrator 9.8. You can find webMethods Mobile Administrator 9.8 user documentation on the [Documentation website](#) or the [TECHcommunity website](#). At those locations, you can also find the suite-related information listed below.

webMethods Product Suite Release Notes
webMethods and Intelligent Business Operations System Requirements
webMethods System Cache Specifications
Using the Software AG Installer
Installing webMethods and Intelligent Business Operations Products
Using the Software AG Update Manager (fixes)
Upgrading webMethods and Intelligent Business Operations Products
Security and globalization information

1.0   Critical Information

This section lists the critical issues for the current release that were known when this readme was published. For critical information found later, go to the Knowledge Center on the Empower website.

- MOBILE-831
  The Mobile Administrator Windows build node does not correctly detect and list installed versions of Mobile Designer 9.8.
  As a workaround, place the Mobile Designer 9.7 style _Mobile_Designer_Changelog_ file into the Docs\ folder of the 9.8 installation of Mobile Designer. To make Mobile Administrator use and display the correct version, create a new entry for your Mobile Designer 9.8 version in the _Mobile_Designer_Changelog_ file.

2.0   Known Issues

This section lists issues that were known for the current release when this readme was published. For known issues found later, go to the Knowledge Center on the Empower website.

- MOBILE-38
  Importing of apps fails with duplicate index key error message.
  After exporting an application out of a Mobile Administrator instance, there might be an error when importing the exported package into another Mobile Administrator instance. The error message indicates a duplicate entry for a key.
  There is currently no workaround for this issue.

3.0   Usage Notes

This section provides additional information you need to work with the current release of webMethods Mobile Administrator.

- WF-4932
  Mobile Administrator 9.8 now uses the Software AG license key format. Please make sure to use licenses of the correct format when adding licenses.

- WF-4652
  Similar to the Mobile Administrator Mac build node assistant, the Windows build node now highlights and verifies steps you need to follow to install all SDKs and dependencies correctly in its very own setup assistant. Use the assistant to verify the setup of your build node is working correctly.

- If API consumers of Mobile Administrator, such as Software AG Designer Mobile Development, fail with a "Valid API consumer required" error message, go to the Maintenance menu and then to Cleanup Tasks > Create Default Objects. This will add the missing API consumers.

4.0 Fixes Included in Each Release

This section lists the fixes that have been included in each release. Go to the Knowledge Center on the [Empower website](#) for detailed information about fixes.

Release 9.8

None.

Release 9.7

None.

Release 9.6

None.

5.0 Other Resolved Issues

This section lists the issues that were resolved in each release but were not part of the fixes listed in the previous section.

Release 9.8

- MOBILE-697
  Fix using XSendfilePath on SLES installation.
  The SLES repository used to install xsendfile now has the latest version of xsendfile (0.12), so the XSendfilePath directive should be used in the Apache configuration. Please use SLES 11 SP3 to install Mobile Administrator.

- MOBILE-707
  Resigning build job causes internal server error.
  This issue is resolved.

- MOBILE-626
  Error on installation while creating database: site.rb: create_default_android_cert: "RangeError: bignum too big to convert into 'long'".
  This issue is resolved.

- MOBILE-578
  Viewing of Android crash logs might cause internal errors.
  This issue is resolved.

- MOBILE-530
  Android crash logs might not be delivered by application policy.
  This issue is resolved.

Release 9.7

▪ MAD-2124
Search parameter not being honored in search for applications.
When a search term was entered in the web App Store or the mobile App Store client, the returned list of applications was not filtered according to the search term.
The Mobile Administrator server was updated to correctly filter search results.

Release 9.6

None.

6.0   Documentation Changes

This section describes significant changes to the documentation in each release, such as the addition, relocation, or removal of product guides, online help, chapters, or other major content.

Release 9.8

▪ The *webMethods Mobile Administrator Configuration Guide* was removed, and its information is now included in the new *webMethods Mobile Administrator User's Guide*.

Release 9.7

▪ The document *webMethods Mobile Administrator Installation Supplement* was removed, and its information is now included in the *Installing webMethods and Intelligent Business Operations Products* and *Upgrading webMethods and Intelligent Business Operations Products* guides.

Release 9.6
