Changing the Template

The default appearance of an ApplinX web Application is based on the template selected when creating the web application. However, elements in this template can be customized.

✐ Exercise

- Change the header to appear without links and contain the following three images: *headerright.jpg*, headermid.jpg, headerleft.jpg. The images can be found in the images folder in the InstantDemo Web application directory.

- Designing the Page Footer

  1. Remove the appearance of the screen name in the footer.

  2. Change the color of the footer to pink using the following hexadecimal code: #f26559.

  3. Insert the link menu (Edit Configuration, Logoff, etc.) you removed from the header.

  4. Define the color of the font in the link to be black using the following hexadecimal code: #000000.

  5. Attach a small triangle image (triangle.gif) to each link. You can find the image in the images folder, in the InstantDemo Web application directory.

Question: Why is headermid.jpg necessary?

☑ Solution Steps:

Refer to *template,jsp / template.master* in the InstantDemo web application directory. There you will also find the answer to the above question, by analyzing exactly what the code does with this image.
