

Database Entity

Available in SOA applications only.

Folder

The folder where the database is located.

Username

The username required to connect to the database (optional).

Password

URL additional parameters

Additional parameters needed for the database connection (optional).

Driver

The connection driver used to access the database. You can choose a pre-defined driver using the combo box or supply a custom one. It may be required to supply the driver itself to ApplinX Server.

| Database | Driver | Requires Driver Files |
|--------------|--|-----------------------|
| Apache Derby | org.apache.derby.jdbc.EmbeddedDriver | |
| SQL Server | com.Microsoft.jdbc.sqlserver.SQLServerDriver | Yes |
| Oracle | oracle.jdbc.driver.OracleDriver | Yes |
| MySQL | org.git.mm.mysql.Driver | Yes |
| DB2 | COM.ibm.db2.jdbc.app.DB2Driver | Yes |

URL

The connection prefix required to connect to the database. Choose a pre-defined prefix from the combo box or supply a custom one.
