Operating Systems and Supported Platforms

For details regarding supported platforms, refer to the *Release Notes*. For the most updated information refer to the Software AG Empower website at <https://empower.softwareag.com>.

ApplinX server is Java-based and can run on a Java Virtual Machine 1.7. ApplinX can run independently as an independent Java process (this is the default Windows/UNIX installation), or as a J2EE application under one of the following application servers:

- Apache Tomcat 5.5/6.0/7.0
- IBM WebSphere 8.5
- WebLogic 10.3/11g
- JBoss 5.0 (Note that it is not possible to deploy an ApplinX server and a JSP web application in the same war file on JBoss 5.0.)

When running ApplinX as a J2EE application, the ApplinX server needs to be deployed with the Deployment Manager for J2EE (refer to *Deploying with ApplinX* in the *Designing and Developing an Application* documentation. It is possible to run ApplinX as a standalone server.

ApplinX Repository

ApplinX uses an internal database as a repository, based on the H2 database. External databases used as repository are no longer supported and will be migrated to the internal DB configuration. If you are using the JDBC/ODBC bridge, you will need to migrate manually. See Migration of ApplinX Applications with External Database.
